PANAMA—Panama's independence has not yet been formally recognized by Colombia. The eighteenth anniversary of the separation was celebrated in New York on Nov. 3 by many residents of South and Central America. The Panama Treasury has a surplus of nearly \$4,000,000, accumulated in the last three years, besides a fund of \$6,000,000. The need of immigrants to Panama was emphasized by Dr. E. A. Morales, Minister of Finance, on his arrival in Washington early in November. A memorial in honor of the late Surgeon General Gorgas is to be erected in Panama City as a recognition of his sanitation work on the Isthmus.

CANAL ZONE—Secretary Weeks, on Oct. 22, approved most of the recommendations made by the Zone Commission. He adopts the open-shop principle, and puts the Panama wage scale, which is higher than that of the United States, on an independent basis. All labor agreements are to be terminable within thirty days. Free housing, light and fuel are to be abolished.

SOUTH AMERICA AND DISARMAMENT

ALTHOUGH not actively participating in the proceedings of the Conference for the Limitation of Armament at Washington, the South American countries are taking a lively interest in the momentous questions involved. The generous offer of the Pan-American Union Building, in which the private sessions of the conference are being held, is only one indication of the attitude of Latin America. The South American press appears to be in full sympathy with the purposes outlined by President Harding, but the editors are not unanimous in forecasting favorable results. Authoritative organs like *La Nación* of Argentina and *El Mercurio* of Chile take the opportunity to point out that these two countries led the way to just such an agreement as that being discussed in Washington, when in 1904 they signed the so-called May Compact in accordance with which both Governments pledged themselves to stop competitive armaments and to limit their active forces to the needs of maintaining public order.

Invited by the American Federation of Labor, several workmen's organizations throughout South America have arranged demonstrations to spread the sentiment of international harmony thereby influencing their respective Governments to take steps leading to such results. Students and women's organizations have launched similar movements.

ARGENTINA—As a result of the revision of the Criminal Code by Congress, capital punish-

ment has been abolished. During the discussion over this reform the House of Representatives was almost unanimous for the repeal, while the Senate twice insisted on maintenance of capital punishment for certain crimes; but the insistence of the Lower House had such a majority in its favor that it overruled the opposition. * * * A law to aid the railroad employees to become owners of their homes has been enacted. * * * A minimum salary for Government employes has also been prescribed by law, fixing as the bottom figure the sum of 1 peso, 60 centavos, equivalent to 68 American cents, a day. * * * A company with 2,000,000 pesos capital has been formed for the purpose of establishing a daily airplane passenger service between Buenos Aires and Montevideo, across the Plata River. The giant Caproni type, with three and a half tons cargo capacity and twenty-eight passengers, will be employed. Although the three airplanes to be used in this service are of the well-known Italian make, they are to be equipped each with three Liberty-Packard motors of 300 horsepower. * * * In spite of the general depression in foreign trade, the imports of American agricultural implements have broken all records. The last harvest was greater by a third than the preceding one. The cultivated area is growing rapidly, new methods are being introduced, the circulation of farm magazines is increasing considerably, and as a consequence of all this, a better market for farm-

ing implements is being opened. * * * The spreading protest from foreign radical circles over the conviction of Sacco and Vanzetti in Boston has reached simultaneously Buenos Aires, Montevideo and other South American capitals. The medical students of the University of La Plata have joined in the protest growing in certain labor circles by temporarily suspending attendance at classes.

BRAZIL—The plans have been officially approved for a great International Exposition to be held in Rio de Janeiro in 1922, on the centennial anniversary of the independence of the country. The resolution of the American Government to make an appropriation of \$1,000,000 for participation in the celebrations at Rio next year has been received with great satisfaction. * * * The Brazilian and Italian Governments have ratified their treaty on labor and immigration of Italians to Brazil. The *Jornal do Commercio* congratulates the Government on the action of the Foreign Secretary, Dr. Azevedo Marques. The same paper publishes eight articles of the treaty, noting the favorable conditions secured by them for the Italian immigrant. * * * A delegation of aldermen of the city of Buenos Aires has just finished a tour of the principal Brazilian cities, carrying the expression of the good wishes of the Argentine capital and receiving in return the warmest welcome from their Brazilian colleague and the people.

CHILE—With the ambiguous title of Association of Labor (*Asociación del Trabajo*), an organization has been started by leading producers, merchants and other employers of labor for the purpose of dealing more adequately with the labor organizations. The Government has lately enacted legislation for an extensive improvement of public roads, having for its primary object the relief of the unemployment situation. * * * The Chilean Cabinet has been reconstructed, with Mr. Ismael Tocornal at its head and the majority of the former secretaries keeping their places. The prestige and moderation of Mr. Tocornal have made themselves felt from the start in political and parliamentary circles. The Democratic (Labor) Party has withdrawn its representation from the Cabinet without withdrawing its support from the Government. * * * The new long-term loan of \$10,000,000 negotiated with Blair & Co. of New York will be employed in purchasing railroad equipment and implements for the electrification of the central zone of the State lines. * * * Two important branches have been added to the Government railway plan with the inclusion of the Petorca-Pedegua line and the one from Lebu to Los Sauces, in the coal territory. * * * The price of oil has caused a vigorous increase in the production of native coal in South America,

especially in Chile. The mines in the Coronel district have reached the two million ton mark for the last ten months. * * * The blowing up of the great Oppau (Germany) fertilizing plant, with its capacity of 80,000 tons a year, will cause a shortage of the product equivalent to 500,000 tons of nitrate of soda. The Chilean producers count on a proportionally greater demand for their fertilizer on the strength of the curtailment of production of air nitrate in Germany.

COLOMBIA—With the proclamation of the candidacy of Dr. Concha for the Presidency the contest has been clearly defined between his Liberal Party and the Conservatives, aligned behind Señor Del Ospina. * * * Congress has considered the appointment of General Jorge Olguin, former Foreign Minister, for the post of Provisional President, following the resignation of Señor Marcos Fidel Suarez in face of the opposition he met in the House of Representatives. * * * The Standard Oil Company of California is acquiring a majority interest in the holdings of the Transcontinental Oil Company, the Midland Colombian and the Arkansas Natural Gas, all owning extensive property in Colombia. About a million acres are involved in the negotiations. Other acreage going into the deal is represented by holdings of the Latin American Company.

ECUADOR—Negotiations for a loan for 100,000,000 sucres have been authorized by Congress for the purpose of financing the construction of a railroad from the capital to the Colombian boundary line, passing through Sibaua and Cuenca. * * * A law has been enacted by which the introduction of machinery and raw material for industrial purposes, as well as capital for investment in industries that are introduced into Ecuador, are declared free of any Government or municipal tax or duty.

PARAGUAY—President Gondra has handed his resignation to Vice President Felix Paiva, owing to a revolutionary movement by the followers of ex-President Schaerer. The movement was due to the failure of Minister of the Interior Guggiari to resign at the demand of Señor Schaerer's friends, who insisted upon certain Cabinet changes, and also the resignation of President Gondra. Quiet has prevailed all through the political changes, as the military and police forces were in full sympathy with the revolution.

PERU—The situation in Peru has improved, and the outstanding commercial and financial factors are the proposed loan of \$50,000,000, guaranteed by the receipts from the custom houses, which will be under American supervision. A committee of New York bankers is in Lima to conclude negotiations.

PERSIA FREE OF FOREIGN TROOPS

THE Bolshevik troops in November evacuated Enzeli, Persia, on the Caspian Sea, according to agreement. The British troops had previously left the country entirely, so that by Nov. 1 Persia was free of foreign troops. The Government was reorganized by the admission

of two new men, Amir Aalam and Naib-es-Saltaneh, with Kawam-es-Saltaneh as Prime Minister.

Rabbi Joseph Saul Kornfeld of Columbus, Ohio, was nominated Oct. 29 to be United States Minister to Persia.

TRIBULATIONS OF THE WEST INDIES

COURT proceedings instituted against the municipal government of Havana on Nov. 5 came as a great surprise to the general public. The city administration had been under judicial investigation, but the wholesale indictments issued against Mayor Marcelino Diaz de Villegas for maladministration were unexpected and aroused great excitement. The indicted officials were released on bail. They declared that they were the victims of a political plot to drive them from office. Threats against General Crowder and the American Legation in Havana were contained in posters distributed on Oct. 29 in connection with the Sacco-Vanzetti case. The Havana police made ten arrests at the headquarters of a syndicalist labor organization and confiscated a number of terrorist proclamations.

An emergency treaty between Cuba and the United States was proposed by Sebastian Gelabert in a memorandum submitted on Oct. 18 to the State Department at Washington. His plan was for a preferential of 50 per cent. on all Cuban products imported into the United States, in return for which Cuba would grant a similar reduced rate on imports from the United States. This would take the place of the reciprocity treaty of 1903, which grants a preferential of 20 per cent. to Cuba, and 20 to 40 per cent. to the United States on goods shipped to Cuba. Meanwhile American trade with the island languishes, and the Cuban customs collections for October were only \$1,700,537 compared with \$5,025,075 for the same month last year.

HAITI—The United States Senate continued its investigation of conditions in Haiti. It learned from Major T. C. Turner of the Marine Corps that since the occupation of Haiti, about six years ago, 2,500 natives have been killed "in action," of whom 1,732 were killed in the year following Oct. 1, 1919. "That there were kill-

ings," he said, "is undoubtedly true, and many of them can be directly traced to Major Clark H. Wells, but these were not prisoners, but natives trying to escape from the corvee, or enforced road work." In a report submitted in 1919, Lieut. Col. Hooker of the Marine Corps stated that many natives had joined the bandits because of brutal treatment by the gendarmes, and that one officer, Lieutenant B. D. Williams, had "admitted that he had killed several persons when they had attempted to escape." General Butler of the Marine Corps, Major Gen. George Barnett and Lieut. Col. Alexander S. Williams gave testimony favorable to the American administration.

PORTO RICO—Governor E. Mont Reilly of Porto Rico has reappointed José E. Benedicto Treasurer, and Ramon Siazza Pacheco Executive Secretary, both of the Unionist Party. Further appointments were: Carlos Toro, Commissioner of Agriculture; Dr. W. F. Lippitt, Commissioner of Health, both Republicans; John A. Wilson, Democrat, Commissioner of the Interior, and P. Rivera Martinez, Socialist, Commissioner of Labor. These officials will replace an all-Unionist executive body.

BRITISH WEST INDIES—In order to encourage ships passing through the Panama Canal to call at Kingston, Jamaica, regular services from Australia and New Zealand have been exempted from tonnage and light dues. American shipping interests are contemplating measures of reprisal in the case of British vessels bringing shipments from outside British territories. * * * Preferential agreement between the West Indies and Canada has been put into effect after formal ratification by proclamation by all the presidencies of the colony of the Leeward Islands, of which Sir Eustace Fiennes is the new Governor.

SPAIN RECOVERING MOROCCO

THE Spanish forces recaptured the important strategic point, Mount Arruit, Oct. 24, where they found 2,000 unburied corpses of Spanish soldiers, including the body of General Primo de Rivea. The Spaniards made considerable progress in Morocco, recovering their most important positions which had been previously lost. The Cortes decided Nov. 10 that military operations should cease when the armies

reached the bank of the Kert. The military juntas met a serious setback. Their interference with the operations of the army resulted in an announcement by the King that if they continued to meddle he would dissolve the Cortes. The King's threat subdued them. The charge is openly made—and not denied—that their interference with the troops in Morocco was responsible for the disasters.

ITALY'S UNKNOWN SOLDIER

ITALY's "unknown" military hero was entombed on Nov. 4 at the magnificent monument erected to Victor Emmanuel II. A general amnesty was declared, and among those freed was Antonio Alba, who attempted to assassinate Victor Emmanuel III. in 1912. The selection of the dead soldier was made at Gorizia on Oct. 27, and the journey through Italy was the occasion of great demonstrations.

The Fascista Congress met at Rome, and as a protest the workmen declared a general strike, which continued for several days.

The Catholic Party also held a congress at Milan. The Moderates, who were in control, denounced both the Socialists and the Fascisti.

The Socialist Congress, which also met in October, was dominated by the Maximalists, but the movement to expel the Reformists failed.

WORLD FINANCES AFTER THREE YEARS OF PEACE

Growing conviction in business circles that the delay in trade revival is due primarily to lack of American co-operation with European nations—Revival abroad must precede prosperity at home

THE third year since the signing of the armistice—terminating the great war—ended last month, and the world started off on the fourth year of what all nations have sought to make a period of recovery from the effects of the long conflict. It is pertinent to inquire, therefore, as to the extent of this progress and to try to determine the degree of improvement which three full years have worked.

No comparison may be made until the present state of world affairs shall have been fixed definitely, and it may be stated at once that this cannot be done. There was never a time, indeed, when it was more difficult to judge the trend of business, let alone definitely to determine the point at which it had arrived, and so no true comparison can be made.

Nevertheless, there are certain indices to which appeal may be had, certain outstanding events to which reference may be made; and, by consideration of these available factors, it becomes possible to state with some assurance that the world has been going ahead along the road of recovery, and that today it is better off, although we may not know just how much better off, than it has been at any other time since the cessation of hostilities.

Pre-eminent among important events, of course, is the disarmament conference now in session in Washington. Whatever might be the condition of the world in other respects, such a meeting as is now being attended by the leading statesmen of great and less nations would mark a progressive, forward movement toward world welfare, which, probably, has never before been equaled. The prospective peaceful settlement of the Irish question in Great Britain, the failure of the Silesian decision to be followed by the long threatened Bolshevism in Germany, the apparent approaching collapse of Bolshevism in its great stronghold: all these are factors which, rightly considered, testify to the progress which the world has made since the conclusion of the war.

If it be complained that these are political phases of the situation and so butter no parsnips it may be answered that, while economic laws, in the long run, will coerce the strongest political rule and guide the world to the destiny they proclaim, nevertheless the arrival at an economic goal of well-being will be much expedited by co-operative rather than obstructive political factors.

The war rent the world into opposing factions but it welded together the nations comprising these factions as they had never before been united. It emphasized the truth of a principle

which had had too little acceptance: that no nation is strong enough and big enough to be self-contained. It turned the minds of American business men and financiers from national to international problems; the former were suddenly disclosed as integral parts of the latter and a broadened vision supplanted the narrow view, which previously had encompassed American affairs.

President Harding's call for a disarmament conference is an exemplification of this new attitude toward universal welfare, and already there is talk of a financial conference to follow the council of arms. Not rapidly, perhaps, but certainly steadily, the notion is gaining ground that we cannot prosper if other nations do not prosper; that we alone cannot enjoy thriving business and good times. There is an economic relationship among the nations of the world which will not be denied. Politics can cast it aside for a time, as politics has done in the past, but it will assert itself again and again until its persistency wins recognition. All for one and one for all may be too altruistic a slogan for a world composed as it is at present, but something approaching this must direct the policies of the various nations, if all are not to suffer together in a common distress.

Recognition of this, though the recognition may not be consciously arrived at, is shown in such plans as the Ter Meulen scheme to finance world trade, in the idea back of the Edge law banks in this country, and in the proposals recently put forth by the Executive Committee of the Federation of British Industries, which includes such members as Sir W. Peter Rylands, of Armstrong, Whitworth & Co., Ltd., and Sir V. Vassar Smith, Chairman of Lloyd's Bank.

In a study of conditions affecting Great Britain they found that the trade position was due to three direct results of the war: the general impoverishment of the world, the destruction of the world's standard of value, due to inflation of currencies, and an alteration of the world's channels of trade. They foresaw two periods of difficulties to be faced: one a period during which the exchanges and tariff policies would form a hindrance to trade, and a longer period lasting until the world, by hard work and saving, had replenished the production lost in the war. Of the first period they said:

"It is evident that the measures taken must be directed to restoring stable conditions as rapidly as possible. The first point obviously is to reach stability in the exchanges. Here both national and international action will be

required. So far as trade—that is to say, interchange of goods—is concerned, it is important to remember that stability is of far greater importance than the re-establishment of any pre-war ratio with gold or any other standard of value. From this point of view deflation can be made as potent a source of instability as inflation. It seems, therefore, that we should first carefully reconsider our own currency policy which, involving as it does a period of continued inflation, must surely perpetuate instability for an indefinite period. There are strong arguments in favor of maintaining the volume of our currency at or about its present figure until prices have reached a more stable level.

"Our own currency policy cannot be decided without regard to what is being done in other countries. The experience of the last year has made this abundantly clear. Moreover, there is little doubt that international action will be required before certain countries can be induced to adopt a sound currency policy. The difficulties and sacrifices which some countries will have to face to secure stability, even at a low value of their currency, will be so great that it is probable that they will not face these difficulties unless and until external pressure is applied.

"It would, therefore, seem useless to seek for universal agreement on this point, and—as time is of the greatest importance—wiser to approach one or more of the other great commercial powers and endeavor, in agreement with them, to impose a common currency policy on the rest of the world. The means of influence which would be at the disposal of two great commercial powers acting in agreement would be enormous, and would include, among others, the inducement provided by the extension or withholding of credit, the manipulation of the existing international debts in the case of some countries, the reparation payments, and, finally, in extreme recalcitrancy, an economic boycott."

This idea of co-operation is disclosed further in the committee's report under the heading of an attempt to develop the markets which had not been severely affected by the war by a carefully adjusted scheme of import credits worked as far as possible through ordinary commercial and financial channels. Of this the report said:

"It is obvious that such credits should be extended, in the first place, to those countries which are potential producers in the near future of goods which could be exchanged for ours, but where some temporary dislocation is preventing the purchase of our goods.

"In some cases this temporary dislocation is largely due to tariff barriers and, in these cases, the grant of credits should be made contingent upon a satisfactory preliminary settlement of such difficulties. It seems obvious that these credit facilities should not be granted in respect of countries whose productive power has been seriously impaired by the war and whose financial position is such that repayment of the credits or a real revival of trade cannot be expected within a comparatively short period.

"Credits should only be extended to countries

in this condition very carefully, and for specific objects calculated to restore their productive power, and they should not be granted, even to this limited extent, until the country concerned has taken steps to stabilize its currency and balance its budget.

"We are not in an economic condition in which we can afford to throw money away on forlorn hopes, and even if we were it is probable that we should do more harm than good to the countries concerned. Such a scheme of export credits might relieve immediate unemployment by stimulating immediate orders and assist trade through a difficult period by the development of markets to replace those temporarily or permanently lost to us in Europe, and, by this means, would also strengthen our position in the eventual competition for a restricted world trade, when more normal conditions return."

Statistical testimony of the slowly improving condition of the world can be found in the trade records of the commercial nations. Figures compiled by the First Federal Foreign Banking Association of New York illustrate the point well. Three such tables are presented [see next page], and of them the corporation says:

"England's export in September, measured in gold values, was 25 per cent. better than in June. Roughly calculating the volume of merchandise, it was a third larger. It will be seen that England's imports and exports have both increased since the middle of the year and, what is perhaps an even better indication of the trend in world trade, the re-export business has increased. This is the merchant-trade England does between other countries. Its volume is concededly dependent to some extent on other general trade, but rises and falls primarily for reasons of its own. Matching England's commerce during recent months, and showing very nearly the same tendencies, is our own. It is not easy to avoid some disappointment over the September figures of the sales of our own products abroad. Analysis of the preliminary figures of foreign sales of cereals, cotton, meat, mineral oil, &c., shows that the quantity of these sold by us in September was 4 per cent. greater than in January. Taking all of these together, we sold for \$171,450,271 what would have brought \$253,993,480 if they had brought the same price as the January shipments brought. What we sold in January brought \$243,432,706. The rest of our exports were, therefore, \$398,930,303 in January and \$147,848,751 in September. We have to recognize the continuous fall in the export of the products of American industry since the first of the year, due not only to the decline of all international demands, to exchange difficulties, and to the continued high average of prices of our manufactures, but to the fact that many manufacturing and financial concerns that were active in foreign markets, with sales organizations and facilities of banking, have practically abandoned that field.

"If a part of the great aggregates shown above for 'loss of business' was not due to the decrease in the dollar totals of trade through fall in prices we would see that they would

mean a drop in sales equal to the ordinary production of at least 350,000 men in the manufacturing industries and nearly 500,000 in all our production, which unemployment of that seriousness plainly indicated. Even allowing for fall in prices, we can see 300,000 to 425,000 persons out of work because of the drop in our

exports, and our national business situation crippled not only by the loss of the foreign sales but by the decrease in retail purchasing by them, and concurrent disorganization of prosperity in our home markets. It is a plain demonstration of what foreign trade means to the country. We, for our part,

do not look for any sustained and substantial rally (beyond the seasonal increase of activity which get special emphasis during a period of depression) until we in America either benefit by a revival of whole world conditions or arrive at some adjustment, which it is hard to figure out now, to a condition of permanently reduced exportation. Such an adjustment might be practically equivalent to decadence.

"Anything that shows a revival of the whole world's economic wealth is especially hopeful for this country. It might be regarded as a kind of absurdity to raise the question whether, as a matter of fact, the United States is not, at the moment, averaging a little behind most of the world in recovery. We have thought ourselves the best positioned country of all, and in a positive comparison we probably are. We have great wealth and great potentialities of production power. But the dynamic economies of business organization in this era of the world have to be considered relatively always. Many countries that are on a much lower, weaker and more primitive level of business organizations depended on moment be nearer their normal than we are to ours. Highly organized business communities suffer more from depression than others. The normal working of their organizations depend on the others. It is entirely possible that, relatively, we are at this moment lagging in recovery. The wish is father to the thought, in a way, because our situation is much more hopeful as we see foreign recovery, upon which we can base steady future gains."

TABLE A—ENGLAND'S TRADE IN DOLLARS

	All Imports	Home Products Exports	Volume Index	Imports Resold
July	\$627,000,000	\$527,000,000	100.0	\$68,714,000
August	557,000,000	418,000,000	80.6	48,659,000
September	535,000,000	412,000,000	80.4	46,858,000
October	517,000,000	387,000,000	79.5	55,662,000
November	499,000,000	412,000,000	92.8	45,377,000
December	500,000,000	339,000,000	84.7	44,577,000
January	431,000,000	342,000,000	90.8	35,257,000
February	374,000,000	263,000,000	77.8	30,895,000
March	364,000,000	250,000,000	75.6	34,574,000
April	354,000,000	235,000,000	71.2	33,580,000
May	338,000,000	168,000,000	51.0	28,345,000
June	335,000,000	145,000,000	45.1	26,982,000
July	293,000,000	156,000,000	48.5	35,540,000
August	322,000,000	186,000,000	57.5	36,389,000
September	324,000,000	205,000,000	62.2	31,972,075

Note: The "Volume Index" is based on the figure for "Home Products Exported" divided by one of the recognized British indexes of wholesale prices.

TABLE B—TRADE OF THE UNITED STATES

	All Imports	Our Own Exports	Volume Index	Imports Resold
July	\$537,170,351	\$640,417,274	..	\$10,964,553
August	513,550,615	571,615,522	..	7,437,085
September	363,666,710	595,072,602	..	10,218,655
October	334,263,803	742,050,664	..	9,677,906
November	321,181,080	666,749,693	..	9,956,318
December	266,112,819	708,659,292	..	12,193,223
January	208,814,382	642,363,009	100	12,377,149
February	214,525,137	473,692,855	82	15,604,212
March	251,988,741	369,462,711	69	17,348,424
April	254,571,024	329,854,124	66	19,060,863
May	204,910,865	322,467,960	76	7,278,419
June	185,679,893	329,773,625	82	7,184,787
July	178,636,711	314,204,393	..	6,504,181
August	194,767,564	365,559,604	..	6,375,695
September	179,282,568	319,299,022	..	10,148,133

Note: The "Volume Index" above is a carefully worked-out comparison, based on January, for about two-thirds of this country's exports.

TABLE C—WHERE THE UNITED STATES HAS BEEN LOSING

	Monthly Exports All Our Products	Products of Our Manufacturing Industries	Monthly Loss of Business, All Products	Monthly Loss of Business Manufactures
January..	\$642,363,009	\$367,991,716
February	473,692,855	263,554,236	\$168,670,154	\$104,337,480
March ..	369,462,711	190,263,647	272,900,288	177,728,069
April ..	329,854,124	170,923,254	312,508,875	197,068,460
May	322,467,960	140,507,330	319,895,049	227,484,383
June	229,773,625	140,040,408	312,589,374	227,951,308
July	314,204,393	121,590,277	328,158,616	246,401,439
August....	365,559,604	123,105,277	276,803,405	244,886,439
September	319,299,022	119,591,007	323,063,987	248,400,709

Total..\$3,462,337,654 \$1,637,361,501 \$2,314,589,748 \$1,674,258,287

Note: The figures of "Monthly Exports of All Our Products" will not agree with trade totals as usually given because they include only products of the United States, while trade totals usually include re-exported stuff.

THE ARMS CONFERENCE

Full record of the month's sessions dealing with important problems of the Far East—Text of the four-power treaty that assures the status quo in the Pacific—Progress toward withdrawal of foreign powers from China—Naval agreement on 5-5-3 ratio

[PERIOD ENDED DEC. 20, 1921]

THE Washington Conference for Limitation of Armament made memorable strides during the month under review, especially in reference to the settlement of Pacific problems. The Committee on Naval Armaments also was in constant session, and on Dec. 15 the State Department gave out details of the results. The announced agreement between the delegates of Great Britain, the United States and Japan on a 5-5-3 ratio for capital ships was considered—apart from the four-power treaty on the Pacific—to be the most important result achieved by the conference. Though Japan had accepted in principle the sweeping plan for naval reduction which had electrified the world, she had been unwilling to sacrifice one of her capital ships—the Mutsu—which under the American plan was scheduled for scrapping, and the Japanese attitude, partly due to sentimental reasons (the Mutsu had been built in part by popular subscriptions), had been the main obstacle to agreement in the committee.

The official announcement giving the main provisions of the accepted compact explained how this obstacle had been finally overcome. Japan was to retain the Mutsu; to offset this she had consented to scrap the Setsu, one of her older ships. This change left Japan with a total capital ship allotment of 313,000 tons, as compared with 299,700 tons under the original proposal, or an increase of 13,600 tons. The retention of the Mutsu, moreover, gave Japan two post-Jutland ships of the latest de-

sign. To preserve the ratio with the other powers, it had been agreed that the United States should complete two ships—the Colorado and the Washington—still in process of construction, and should scrap two older vessels—the North Dakota and the Delaware. This would leave the United States with the same number of ships—eighteen—first assigned by the agreed ratio, but representing a total of 525,850 tons, as against the 500,650 previously suggested. Three of the ships would be post-Jutland ships of the Maryland type. The British Government was to construct two new vessels, not to exceed 35,000 tons each, English measurement (37,000, American measurement), to offset the fact that she possessed no post-Jutland ships except one Hood. She was, however, to scrap four more of the King George V. type, leaving her twenty capital ships, as against twenty-two under the first American proposal. This arrangement would place the British capital ship tonnage at 582,050 instead of 604,450, and would give Britain an excess of 56,200 tons over the United States; but that difference was deemed to be fair in view of the age of some of the British ships retained. The 5-5-3 ratio in replacement tonnage stands thus: United States, 525,000 tons; Great Britain, 525,000 tons; Japan, 315,000 tons. A further feature of the new agreement is that the status quo in respect to fortifications and naval bases in the Pacific is to be maintained.

The foregoing agreement was ex-

plicitly stated to be contingent on a suitable arrangement with France and Italy. An unexpected obstacle, however, arose in the case of France, whose delegates asked a ratio virtually double that proposed. Secretary Hughes had proposed a ratio of 1.75 for France and Italy (Italy having already agreed to the same ratio as that determined for France), and this had been backed by the British, Japanese and Italian delegates. M. Albert Sarraut, however, held out for an aggregate of 350,000 tons, to be constructed on a replacement basis from 1925 on, with a view to completing ten ships of 35,000 tons each by the end of the ten-year naval holiday proposed. To this plan Secretary Hughes found strong objection, and a virtual deadlock followed. The American Government at length decided to lay the issue before Premier Briand himself. Long cablegrams were exchanged between Hughes and Briand, with the result that the latter accepted the 1.75 ratio suggested by Mr. Hughes, but only on condition that France should have a strong quota of submarines and auxiliary craft. The complete replacement ratio for all the five powers as thus adjusted was:

Country.	Replacement		Per-
	Tonnage.	Ratio.	centage.
United States	525,000	5	100
Great Britain	525,000	5	100
Japan	315,000	3	60
France	175,000	1.75	35
Italy	175,000	1.75	35

Fully equal in importance to the naval ratio agreement was the conclusion of the four-power treaty between the United States, Great Britain, France and Japan on their respective positions in the Pacific. This treaty was announced and read by Senator Lodge at the session of the Far Eastern Committee on Dec. 10. It pledged the four powers named to accept mediation in case of dispute regarding any of their Pacific possessions, and to take concerted action in case of any threat or aggression made by an outside power. The new pact was to remain in force for ten years. Under its terms the Anglo-Japanese alliance was automatically abrogated.

The treaty was formally signed on Dec. 13, after the signing, on the preceding day, of a special agreement between the United States and Japan on mandate islands, especially Yap.

The many vexed problems affecting China were thoroughly thrashed out before the Far Eastern Committee in continuing sessions. Fiscal affairs, notably customs revenues, were referred to a subcommittee for study and report, following a plea by Dr. Wellington Koo for an increase of China's customs tariff from 5 to 12½ per cent. The thorny problem of extraterritoriality was referred to an International Commission to study intensively and report upon within one year. The Chinese delegation won a tangible victory in the case of foreign Post Offices on Chinese soil, a resolution for withdrawal by all the powers concerned, including Japan, being passed at the session of Dec. 12. The question of leased territories proved to be beset with special difficulties. After a long argument by Dr. Koo, Great Britain, France and Japan all agreed to withdraw in part; Great Britain, however, insisted on retaining Kowloon, to protect Hongkong, and Japan on holding Dairen and Port Arthur.

A separate conference between the Chinese and Japanese on the question of the return of Shantung to China began Dec. 1 and continued in almost complete privacy for weeks. The crux of the whole controversy—the return of the Shantung Railway—brought a final deadlock. The Chinese refused the Japanese offer of joint control; on the other hand, their proposal to buy back the railroad on a three-year payment basis was refused by the Japanese. On Dec. 19 the Japanese agreed to a ten-year payment plan, but made other demands that China could not accept. At the seventeenth session, on Dec. 20, the two delegations adjourned sine die to await further instructions from their Governments. The official proceedings of the conference, from Nov. 22 to the time when these pages went to press, were as follows:

CHINESE QUESTIONS

The Committee of the Whole on the Pacific and Far East decided on Nov. 2 to appoint a subcommittee to study Chinese fiscal affairs, notably the question of China's customs revenue. When the full committee met on Nov. 23, Dr. Wellington Koo gave a brief summary of the history of the Chinese tariff treaties and set forth the reason why China wished to have her customs quota raised from the established 5 per cent. to 12½ per cent. He made it clear, however, that China had no wish to interfere with the existing administration of

maritime customs, or with the application of customs revenue to the liquidation of foreign loans guaranteed by this revenue. The official report of the Chinese representations, which were referred to the subcommittee above mentioned, is as follows:

The Committee on Pacific and Far Eastern Questions met [Nov. 23] in the Columbus Room of the Pan American Building. All the members were present except Signor Meda and Baron Shidehara. Mr. Hanihara was present for the first time as one of the Japanese delegates.

The topic of discussion was the customs revenue of China. Mr. Koo, on behalf of the Chinese delegation, made a statement as follows:

First of all, he emphasized that the Chinese Government had no desire to interfere with the present administration of maritime customs or with devotion of the proceeds of the customs revenue to the liquidation of various foreign loans secured thereon. A brief account was given by him of the origin and history of the Chinese treaty tariffs. Prior to 1842, he said, China enjoyed the full right of levying customs duties. In 1842, however, and in the subsequent years after having made treaties with Great Britain, France and the United States, a limitation upon this right was for the first time imposed.

The rule of 5 per cent. ad valorem was thereby established, and the rates were based upon the current prices then prevailing. In 1858, as prices of commodities began to drop and the 5 per cent. actually collected appeared to be somewhat in excess of the 5 per cent. prescribed, a revision was asked for by the treaty powers. A revision was accordingly made. Later, however, as prices mounted, no request for a revision was forthcoming, and the Chinese Government on its part did not press for a revision, seeing that the revenue then collected from other sources was not inadequate to meet its requirements.

But the fact was that the customs rate then prevailing was much less than the 5 per cent. stipulated for. It was only in 1902 that a revision was made in order to afford sufficient funds to meet the Chinese obligations arising out of the Boxer protocol. In that tariff the rate was calculated on the basis of the average prices of 1897 to 1899. In 1912 an attempt was made by the Chinese Government to have another revision, but it failed, owing to the

Map of section of China involved in the Arms Conference discussion. The railway from Tsinan-fu to Kiao-chau is the portion of the Shantung concession which the Japanese are least willing to hand over to China.

difficulty of securing the unanimous consent of sixteen or seventeen powers. It was only after six years of long negotiations that in 1918 another revision was effected. The tariff of 1918 is in force and yields only 3½ per cent.

Mr. Koo proposed to restore to China the right to fix and to differentiate the import tariff rates, but as it appeared hardly possible to establish a new régime all at once, he said that full autonomy should be restored to China after a certain period to be agreed upon. In the meantime China would impose a maximum rate and would like to enjoy full freedom within a maximum, such as the right of differentiation among the different classes of commodities. But as the present financial condition of the Chinese Government was such as to require some immediate relief, it was proposed that on and after Jan. 1, 1922, the Chinese import tariff be raised to 12½ per cent., as it was stipulated for in the treaty with the United States, Great Britain and Japan.

Among the reasons he gave in support of the proposals of the Chinese delegation, the following is the gist:

1. The existing customs régime in China constitutes an infringement of China's sovereign right to fix the tariff rates at her own discretion.

2. It deprives China of the power to make reciprocity arrangements with the foreign powers. While all foreign goods imported into China pay only 5 per cent., Chinese goods exported to foreign countries have to pay duties of a maximum rate. Examples were given to show this lack of reciprocity.

3. It constitutes a serious impediment upon the economic development of China.

4. As the system now stands, there is only one uniform rate and no differentiation of rates. The disadvantage is obvious, because it does not take into account the economic and social needs of the Chinese people. China is in need of machinery and metals for which China would like to impose a tariff rate even lower than the 5 per cent. For luxuries, such as cigars and cigarettes, the tax ought, perhaps, to be heavy in order to prevent their injurious effects upon the morals and social habits of the people. As it stands, therefore, the Chinese tariff is not scientific at all.

5. The present tariff has occasioned a serious loss of revenue upon the Chinese Exchequer. The item of customs duties is an important one in the budget of nearly all countries. For instance, Great Britain raises 12 per cent. of its revenue from customs duties; France, 15 per cent., and the United States raised 35 per cent. from this source before the World War. But the customs revenue in the Chinese budget as it now stands becomes a comparatively insignificant factor.

6. The present régime makes it exceedingly difficult for the Chinese Government

to ask for a revision, as was shown in past experiences in 1912 and in 1918.

7. Even if the effective 5 per cent. should be levied, the revenue resulting therefrom will still be hardly adequate to meet the requirements of the Chinese Government, as the Government has many functions to perform in matters of modern education, sanitation, public utilities, &c.

After general discussion of the customs tariff question, this subject was transferred to the subcommittee agreed upon at the meeting held Nov. 22, the members of which were announced to be as follows:

Chairman—Senator Underwood, United States of America.

Belgium—Baron de Cartier; M. Cattier, alternate.

British Empire—Sir Robert Borden; Mr. Lampson, alternate.

China—Dr. Wellington Koo.

France—M. Sarraut.

Italy—Senator Albertini; Signor Vincenzo Felletti, alternate.

Japan—Mr. Hanihara.

Netherlands—Jonkheer Beelaerts van Blokland.

Portugal—Captain Ernesto Vasconcellos.

The meeting of the full Committee on Pacific and Far Eastern Questions adjourned until Nov. 25, 1921. The subcommittee will meet upon the call of Senator Underwood as Chairman.

IMPORTANT COMMITTEE MEETING

At the meeting of the Pacific and Far Eastern Committee held on the morning of Nov. 25, two momentous topics arose for discussion, namely, extraterritorial courts and the alien Post Office system established by various powers in China. The official communique opened with a categorical denial by Chairman Hughes of a reported clash between Mr. Balfour and the American delegation over an American proposal to keep a record of the committee's proceedings. The communique ran thus:

The Committee on Pacific and Far Eastern Questions met in the Pan American Building Friday, Nov. 25, at 11 A. M. All the delegates were present except Signor Meda, Baron Shidehara, M. Sarraut and Lord Lee.

At the opening of the session Mr. Hughes expressed his great regret at the appearance of a report in a Washington paper this morning of alleged happenings at the last meeting of the committee. The report of antagonism with Mr. Balfour was not only untrue, but grotesque, and did him the grossest injustice; Mr. Hughes could not imagine how such a rumor got into circulation. Mr. Balfour expressed his great appreciation of

CROWN PRINCE HIROHITO

Proclaimed Regent of Japan on account of his father's failing health

Mr. Hughes's statement. He had never doubted that Mr. Hughes would take the view he had just stated, but the manner and words in which that view had been put before the committee had deeply moved him and he wished to express his thanks.

After a discussion it was decided to appoint a subcommittee to investigate and report in regard to the question of extraterritoriality in China. In regard to this subject Dr. Chung Hui-wang, Chief Justice of the Supreme Court of China, made a statement which will appear later.

The committee then discussed the question of foreign Post Office in China, the Chinese Minister, Mr. Sze, making a statement which will subsequently be made public.

The committee then adjourned to meet on Saturday morning, Nov. 26.

DR. CHUNG ON EXTRATERRITORIALITY

The statement presented at this meeting by Dr. Chung Hui-wang on extraterritoriality detailed the conditions created by that system, and ended with a plea that action be taken to improve and eventually to abolish this embarrassing application of foreign privilege. Dr. Chung said:

Extraterritoriality in China dates back almost to the beginning of treaty relations with foreign countries. It was clearly laid down in the Treaty of 1844 between the United States and China, and a similar provision has since been inserted in the treaties with other powers. Extraterritorial rights were granted at a time when there were only five treaty ports—that is, places where foreigners could trade and reside. Now there are fifty such places and an equal number of places open to foreign trade on China's own initiative.

This means an ever-increasing number of persons within her territory over whom she is almost powerless. This anomalous condition has become a serious problem with which the local administration is confronted, and if the impairment of the territorial and administrative integrity of China is not to be continued the matter demands immediate solution. I should like to point out a few of the serious objections to the extraterritorial system. In the first place, it is in derogation of China's sovereign rights and is regarded by the Chinese people as a national humiliation.

There is a multiplicity of courts in one and the same locality and the interrelation of such courts has given rise to a legal situation which is perplexing both to the trained lawyer and to the layman.

The disadvantage arising from the uncertainty of the law: The general rule is that the law to be applied in a given case is the law of the defendant's nationality, and so

in a commercial transaction between, say, X and Y of different nationalities, the rights and liabilities of the parties vary according as X sues Y first or Y sues X first.

When causes of action, civil or criminal, arise in which foreigners are defendants, it is necessary for adjudication that they shall be carried to the nearest consular court, which may be many miles away, and so it often happens that it is practically impossible to obtain the attendance of the necessary witnesses or to produce other necessary evidence.

Finally, it is a further disadvantage to the Chinese that the foreigners in China under cover of extraterritoriality claim immunity from local taxes and excises which the Chinese are required to pay. Sir Robert Hart, who worked and lived in China for many years, has this to say in his work, "These From the Land of Sinim": "The extraterritoriality stipulation may have relieved the native official of some troublesome duties, but it has always been felt to be offensive and humiliating and has ever a disintegrating effect, leading the people on one hand to despise their own Government and officials, and on the other to envy and dislike the foreigner withdrawn from native control."

PROGRESS TOWARD REFORM

Until the system is abolished or substantially modified it is inexpedient for China to open her entire territory to foreign trade and commerce. The evils of the existing system have been so obvious that Great Britain in 1902, Japan and the United States in 1903 and Sweden in 1908 agreed, subject to certain conditions, to relinquish their extraterritorial rights. Twenty years have elapsed since the conclusion of these treaties, and while it is a matter of opinion as to whether or not the state of China's laws has attained the standard to which she is expected to conform, it is impossible to deny that China has made great progress on the path of legal reform.

A few facts will suffice for the present. A law codification committee for the compilation and revision of laws has been sitting since 1904. Five codes have been prepared, some of which have already been put into force. First, the civil code (still in course of revision). Second, criminal code (in force since 1912). Third, code of civil procedure. Fourth, code of criminal procedure, both of which have just been promulgated. Fifth, commercial code, part of which has been put into force. These codes have been prepared with the assistance of foreign experts and are based mainly on the principles of modern jurisprudence. Among the numerous supplementary laws may be especially mentioned a law of 1918, called "Rules for the Application of Foreign Law," which deals with matters relating to private international law. Under these rules foreign law is given ample application.

Then there is a new system of law courts established in 1910. The Judges are all modern trained lawyers, and no one can be appointed a Judge unless he has attained the requisite legal training. These are some of the reforms which have been carried out on our part. I venture to say that the China of today is not what she was twenty years ago, when Great Britain encouraged her to reform her judicial system, and a fortiori she is not what she was eighty years ago, when she first granted extraterritorial rights to the treaty powers.

I have made these observations not for the purpose of asking for an immediate and complete abolition of extraterritoriality, but for the purpose of inviting the powers to co-operate with China in taking initial steps toward improving and eventually abolishing the existing system, which is admitted on all hands to be unsatisfactory both to foreigners and to Chinese. It is gratifying to learn of the sympathetic attitude of the powers toward this question, as expressed by the various delegations at a previous meeting of this committee.

The Chinese delegation, therefore, asks that the powers now represented in the conference agree to relinquish their extraterritorial rights in China at the end of a definite period. Meanwhile, the Chinese delegation proposes that the powers represented at this conference will at a date to be agreed upon designate representatives to enter into negotiations with China for the adoption of a plan for a progressive modification and ultimate abolition of the system of extraterritoriality in China, the carrying out of which plan is to be distributed over the above-mentioned period.

PLEA FOR POSTAL CONTROL

The official text of Dr. Sze's appeal for abolishing the alien postal system in China—presented at the committee meeting of Nov. 25—is as follows:

As was referred to by Mr. Koo the other day in his remarks before the committee, China has suffered and is now suffering not only from limitations upon her territorial and administrative integrity, to which she has been led to consent, but also from open violations of her rights as a territorial sovereign, for which not even a color of contractual right can be claimed.

Among these violations are the stationing of foreign troops and railway guards at various points, the installations of wire and wireless electrical communications, the maintenance of foreign Post Offices, and so-called police boxes. I shall first speak of the foreign postal services maintained upon Chinese soil.

China requests that the powers assembled in the conference agree at once to abolish all postal services now maintained by them in China. She bases her request upon the following propositions:

1. That China has organized and is now conducting a postal system covering the entire country and maintaining relations with all foreign countries adequate to meet all requirements. The transmission of postal matter is a Government monopoly, the first paragraph of the postal statutes of Oct.

MASANAO HANIHARA

Japanese Vice Minister of Foreign Affairs,
who has taken Baron Shidehara's
place in the conference

2, 1921, reading: "The postal business is exclusively conducted by the Government."
2. That the existence of these foreign Post Offices interferes with and makes more difficult the development of this system, and deprives the system of a revenue which legally and equitably should belong to it.

3. That the maintenance by foreign Governments of Post Offices in China is in direct violation of the latter's territorial and administrative integrity, and rests upon no treaty or other legal rights.

Early in the '60s of the last century foreign Post Offices began to open branches and agencies in the particular treaty ports of China. The opening of these offices was not based on any treaty provision or concession. Their existence and gradual in-

crease was merely tolerated by the Chinese Government.

About the same time a regular service for the carriage of mails was established on foreign lines in connection with the customs, operating chiefly between the numerous ports on the coast of China and those far up the Yangtse River. This service continued to work and improved its machinery year by year. By imperial decree of March 20, 1896, this system was erected into a distinct Chinese postal system, and placed under the general direction of the Inspector General of Customs. Finally, by imperial decree of May 28, 1911, the system was taken from under the administration of the Inspector General of Customs and erected into an independent system operating directly under the Minister of Posts and Communications. Since that date the system has operated wholly as one of the administrative services of the Chinese Government.

On March 1, 1914, China gave her adherence to the Universal Postal Convention, and since Sept. 1 of that year China has continued as a member in good standing of the Universal Postal Union.

As the Universal Postal Union does not recognize the right of any country to maintain Post Offices in another country which is a member of the postal union, the Chinese delegation brought up the question of alien establishments in China at the Universal Postal Congress, opened at Madrid on Oct. 1, 1920. The question of their withdrawal was, however, regarded as within the purview of their respective Foreign Offices, and no definite decision was reached. A measure was passed, however, to the effect that only those foreign postal agencies could be considered as within the union as were established in a foreign country not itself within the Universal Postal Union, of which China has been a member since Sept. 1, 1914.

CHINESE POSTAL SYSTEM

The Chinese Post Office maintains the cheapest general service in the world. In spite of these very cheap rates and very high transportation costs of maintaining long courier lines where no modern facilities are available, the surplus of receipts over expenditures has been steadily increasing. All profits are being put into improvements on the service, particularly in new offices and extension of the service to the smaller villages inland. Its income in 1920 was \$12,679,121.98 and its expenditures \$10,467,053.07, thus leaving a surplus for the year's operation of \$2,212,068.91.

Senders of registered articles, parcels, insured letters and express articles are entitled to claim indemnity in case of loss by the Post Office. Although in 1920 over 37,000,000 of such articles were posted, less than 400 claims for indemnity were made, the percentage being about 1 in 90,000.

There has been a decrease of 30 per cent.

in the number of insured letters posted in the last four years, though other mail matter has increased by 50 per cent. in the same time. This is considered as indicating a growing public confidence in the other non-insured services.

The Chinese Post Office has over 3,000 linguist employees, and every office serving places of foreign residence in China is amply supplied from this large number of linguists to cope with all foreign correspondence.

The efficiency of the Chinese postal service is further guaranteed by sturdy civil service methods in appointments of staff. Employees enter only after a fair examination, both mental and physical. Postmasters, even in the larger cities, are selected from the most efficient of the employees, never from outside the service. The penalty for invoking political aid is dismissal and in practice is never done.

The Post Office functions under the same leadership over the entire country. In time of local disturbance and revolution the revolutionists have recognized the Post Office as a necessity to the welfare of the community and have always permitted it to continue its functions without change of staff or control.

Notwithstanding the disturbed condition of affairs in China during recent years, this system has been steadily developed since it was placed wholly under the direction and control of Chinese authorities.

Mail matter posted has increased approximately 300 per cent. since 1911 (from 126,539,228 to 400,886,935 in 1920). Parcels posted have increased from 154,740 in 1911 to 4,216,200 in 1920.

There is now scarcely a Chinese village which is not served either by a Post Office, agency or minor postal establishment. Major establishments (offices and agencies) have increased from 9,103 in 1917 to 10,469 in 1920. Minor establishments (town box offices and rural stations) have increased from 4,890 in 1917 to 20,856 in 1920. This makes a total of 31,325 places now provided with postal facilities, more than double the number of places served four years ago.

Mr. Willoughby, in his careful study, "Foreign Rights and Interests in China," in speaking of this system says:

"At the present time (1920) the postal service in China is one for which the Government deserves great credit. Generally speaking, the service is efficiently operated and with reasonable financial success, notwithstanding the fact that China has been obliged to acquiesce in the operation within her borders of some sixty or more foreign Post Offices."

FOREIGN POST OFFICES

Notwithstanding the fact that China now has an efficient postal system, certain foreign Governments continue to maintain

Post Offices of this order in China. At the present time Great Britain, France, America and Japan are maintaining and operating offices of this kind at a large number of places. The alien postal establishments

[American Cartoon]

WITH CARE!

in China as they stand at present are as follows: Great Britain, 12; Japan, 124; France, 13; the United States, 1. The Japanese establishments are classed as follows: First class offices, 7; second class offices, 23; third class offices, 4; unclassified offices, 10; suboffices, 3; box offices, 1; agencies, 33; letter boxes, 33; field Post Offices, 10.

These Post Offices have their own postage stamps and operate in every respect in direct competition with the Chinese system. It is to be noted, moreover, that these foreign offices are located at the chief centres of population, industry and commerce. They are thus in a position where they can so to speak, skim the cream of the postal business, since they are under no obligations to, and, in fact, do not maintain offices at unimportant points.

It is submitted that if the necessity ever existed for the maintenance of foreign Post Offices in China, this necessity has now passed away. As early as April 20, 1902, the American Minister at Peking reported to his Government (United States foreign relations, 1902, p. 225):

"I have given such investigation as have been able and report that in my judgment foreign Post Offices in China, except in Shanghai, are not a necessity, because the Chinese postal service, under the imperial maritime customs, is everywhere giving satisfactory service and is rapid

ad effectively increasing and extending to the interior."

More recently the Commercial Hand Book of China, from which we have already quoted, says: "The developments of the

—New York World

"SOMETHING JUST AS GOOD, SIR"

sents a most direct violation of her territorial and administrative integrity. It is one, moreover, that is peculiarly objectionable, since it is a constant, visible reminder to the Chinese people that they are not accorded the consideration given to other peoples. This necessarily has a tendency to lower the prestige of the Chinese Government in the eyes of her people and to make more difficult the already difficult problem of maintaining a Government that will command the respect and ready obedience of her population. From whatever standpoint viewed, the continuance of these foreign Post Offices upon Chinese soil should, therefore, be disapproved.

The personnel of the subcommittee appointed to study the question of extraterritoriality was embodied in the communique of Nov. 26. The members of this subcommittee as announced were: United States, Senator Lodge; British Empire, Senator Pearce (the Australian delegate); France, M. Sarraut; Italy, Senator Ricci; Japan, Mr. Hanihara; Belgium, Chevalier de Wouters; China, Dr. Chung Hui-wang; Holland, Jonkheer van Karnebeek; Portugal, Captain Vasconcellos.

TO WITHDRAW POST OFFICES

While the subcommittee named above was still studying the problems connected with the elimination or modification of extraterritoriality the full committee met again on Nov. 26 and agreed in principle that the Chinese plea for withdrawal of the alien Post Office system should be granted as soon as such a change was justified by the conditions. The official communique read as follows:

The Committee on Pacific and Far Eastern Questions met in the Pan American Building Saturday, Nov. 26, 1921. The committee discussed the matter of foreign Post Offices in China, and it was the sense of the committee that there should be a withdrawal of the foreign Post Offices in China as soon as it appeared that conditions warranted. A subcommittee composed of Senator Lodge, Sir Auckland Geddes, Mr. Viviani, Mr. Hanihara and Mr. Sze was constituted to draw up a resolution to this effect for submission to the full committee at its next session.

In conclusion China wishes to point out that, wholly apart from the financial loss suffered by her as a result of the existence of foreign Post Offices on her soil and the obstacles thereby placed in the way of the development of her own postal system, the maintenance of such offices repre-

This decision was further confirmed by the committee at its session of Nov. 28. The report of the subcommittee empowered to consider

the postal situation was discussed and unanimously adopted. The only hitch that occurred was the Japanese delegates' inability to subscribe to any definite date for the agreed withdrawal until after consultation with the Japanese Government. In the final resolution, which sanctioned withdrawal, therefore, the date was temporarily left blank. The official communique reporting the action taken is given herewith:

The committee received the report of the Subcommittee on Foreign Post Offices in China and adopted it unanimously, the date on which it shall come into force and effect being deferred for public announcement in the near future. The report as adopted is as follows:

"Recognizing the justice of the desire expressed by the Chinese Government to secure the abolition of foreign postal agencies in China, save or except in leased territories or as otherwise specifically provided by treaty, it is resolved:

"1. The four powers having such postal agencies agree to their abandonment, subject to the following conditions:

"(a) That an efficient Chinese postal service is maintained.

"(b) That an assurance is given by the Chinese Government that they contemplate no change in the present postal administration so far as the status of the foreign Co-Director General is concerned.

"2. (a) To enable China and the powers concerned to make the necessary dispositions, this arrangement shall come into force and effect not later than _____.

"(b) Pending the complete withdrawal of foreign postal agencies, the four powers concerned severally undertake to afford full facilities to the Chinese customs authorities to examine in those agencies all postal matter (excepting ordinary letters, whether registered or not, which upon examination appear plainly to contain only written matter) passing through them, with a view to ascertaining whether they contain articles which are dutiable or contraband or which otherwise contravene the customs regulations or laws of China."

The committee received the statement of the subcommittee on extraterritoriality, reporting progress, and a statement from the Chinese delegation asking for the removal of the various establishments placed in China

by foreign powers without treaty sanction, such as foreign troops, police boxes and telegraph and wireless stations. The committee decided to begin the discussion of these questions at its next meeting. The committee also decided that there should be constituted a standing subcommittee on drafting to be composed of a delegate appointed by each power. The committee then adjourned to meet Nov. 29, 1921.

INTERNATIONAL COMMISSION ON EXTRATERRITORIALITY

At the session of Nov. 29 the Chinese delegation had the satisfaction of seeing the whole vexed question of extraterritoriality referred to an international commission for intensive study and report within one year. Though this was far from being as sweeping a victory as that won in the case of alien Post Offices, it gave earnest of an eventual solution on terms of equity, and it was subscribed to heartily by the Chinese representatives. The action taken by the committee was embodied in the official communique printed below:

The committee on Pacific and Far Eastern questions met in the Pan American

Oh, look what's growing out of the junk pile!

Building, Washington, D. C., Tuesday Nov. 29, 1921. All the delegates were present except Sir Robert Borden, Ambassador Ricci, Signor Meda and Ambassador Shi-dehara.

Senator Lodge, whose report on behalf of the Subcommittee on Foreign Post Offices in China was accepted yesterday, today presented resolutions of the Subcommittee on Extraterritorial Rights in China, which were unanimously adopted by the committee, as follows:

Resolution for the establishment of a commission to investigate and report upon extraterritoriality and the administration of justice in China.

The representatives of the powers herein-after named, participating in the discussion of Pacific and Far Eastern questions in the Conference on the Limitation of Armament—to wit, the United States of America, Belgium, the British Empire, France, Italy, Japan, the Netherlands and Portugal—

Having taken note of the fact that in the treaty between Great Britain and China, dated Sept. 5, 1902, in the treaty between the United States of America and China, dated Oct. 8, 1903, and in the treaty between Japan and China, dated Oct. 8, 1903, these several powers have agreed to give every assistance toward the attainment by the Chinese Government of its expressed desire to reform its judicial system and to bring it into accord with that of Western nations, and have declared that they are also "prepared to relinquish extraterritorial rights when satisfied that the state

of the Chinese laws, the arrangements for their administration, and other conditions warrant" them in so doing;

Being sympathetically disposed toward furthering in this regard the aspiration to which the Chinese delegation gave expression on Nov. 16, 1921, to the effect that "immediately, or as soon as circumstances will permit, existing limitations upon China's political, jurisdictional and administrative freedom of action are to be removed";

Considering that any determination in regard to such action as might be appropriate to this end must depend upon ascertainment and appreciation of complicated states of fact in regard to the laws and the judicial system and the methods of judicial administration of China, which the conference is not in a position to determine;

Have resolved,

That the Governments of the powers above named shall establish a commission (to which each of such Governments shall appoint one member) to inquire into the present practice of extraterritorial jurisdiction in China, and into the laws and the judicial system and the methods of judicial administration of China, with a view to reporting to the Governments of the several powers above named in their findings of fact in regard to these matters, and their recommendations as to such means as they may find suitable to improve the existing conditions of the administration of justice in China, and to assist and further the efforts of the Chinese Government to effect such legislation and judicial reforms as would warrant the several powers in relinquishing, either progressively or otherwise, their respective rights of extraterritoriality;

That the commission herein contemplated shall be constituted within three months after the adjournment of the conference, with detailed arrangements to be hereafter agreed upon by the Governments of the powers above named, and shall be instructed to submit its report and resolutions within one year after the first meeting of the committee;

That each of the powers above named shall be deemed free to accept or to reject all or any portion of the recommendations of the committee herein contemplated, but that in no case shall any of the said powers make its acceptance of all or any part of such recommendations either directly or indirectly dependent on the granting by China of any special concession, favor, benefit or immunity, whether political or economic.

Additional resolution:

That the non-signatory powers, having by treaty extraterritorial rights in China, may accede to the resolution affecting extraterritoriality and the administration of justice in China by depositing within three months after the adjournment of the conference a written notice of accession with the Government of the United States for

communication by it to each of the signatory powers.

Additional resolution:

That China, having taken note of the resolutions affecting the establishment of a commission to investigate and report upon extraterritoriality and the administration of justice in China, expresses its satisfaction with the sympathetic disposition of the powers hereinbefore named in regard to the aspirations of the Chinese Government to secure the abolition of extraterritoriality from China, and declares its intention to appoint a representative who shall have the right to sit as a member of the said committee, it being understood that China shall be deemed free to accept or to reject any or all of the recommendations of the commission. Furthermore, China is prepared to co-operate in the work of this commission and to afford to it every possible facility for the successful accomplishment of its tasks.

The foregoing action of the Far East committee regarding extraterritoriality was taken in conformity with the so-called "Root formula"—the resolution drafted by Elihu Root at an earlier session expressing the main powers' desire and intention to work for China's sovereignty and welfare. Basing his arguments upon this formula, Dr. Sze, the Chinese Minister, went one step further at the same session in proposing to the committee that all foreign troops and foreign telegraph, wireless and police wire systems be withdrawn from Chinese soil. Dr. Sze presented a long summary, part of which he had already given at the preceding session, of the whole situation in China regarding the presence of alien troops and communications.

ALIEN TROOPS IN CHINA

It is estimated that the foreign troops in China at present number about 10,000, distributed in part as follows:

In Peking: United States, 14 officers, 270 men; Belgians, 1 officer, 19 men; British, 8 officers, 170 men; French, 4 officers, 105 men; Italians, 1 officer, 30 men; Japanese, 14 officers, 273 men; Netherlands, 1 officer, 76 men.

In Tientsin: United States, 38 officers, 910 men; British, 24 officers, 707 men; French, 20 officers, 945 men; Japanese, 40 officers, 666 men.

In Shanghai: British, 1 officer, 20 men; French, 1 officer, 91 men; Japanese, 6 officers and 123 men.

In Chingwangtao: British, 1 officer, 19 men; French, 38 men.

In Shanghai: Foreign police in foreign settlement.

In Tongshan: British, 4 officers, 142 men.

In Leichwang: British, 4 officers, 142 men.

In Fongtai: French, 1 officer, 40 men.

In Laofa: French, 1 officer, 20 men.

In Weihaiwei: British, 3 officers, 60 men.

In Yangtsun: Japanese, 1 officer, 50 men.

In Tangku: French, 35 men; Japanese, 5 men.

Japanese forces are also maintained in Manchuria and Shantung, while a small garrison has been kept in Hankow in recent years. One full division is usually maintained in Manchuria by Japan. In Shantung there are four battalions, of an average numerical strength of 525 men, stationed along the Tsingtao-Tsinan Railway, headquarters being at Tsingtao, Kaomi, Fangtze and Tsinanfu. There is also a force of Japanese gendarmerie in Shantung. Mr. Hanihara of the Japanese delegation

DR. SZE'S ADDRESS

The full text of Dr. Sze's speech, exclusive of his readings of statistics, is as follows:

Gentlemen: At the session held on Nov. 21 the conference declared that it was the firm intention of the powers represented to respect the sovereignty, the independence and the territorial and administrative integrity of China; and to provide the fullest and most unembarrassed opportunity to China to develop and maintain for herself an effective and stable Government.

It will have already appeared that, in application of these two principles, China is asking not merely that existing treaty or conventional limitations upon the autonomous and unembarrassed exercise by her of her territorial and administrative powers should be removed as rapidly and as completely as circumstances will justify, but that conditions shall be corrected which now constitute a continuing violation of her rights as an independent State. The prop-

osition that these limitations upon the exercise of her sovereign powers should be progressively removed was stated in Principle No. 5 which the Chinese delegation presented to the conference on Nov. 16, and applications are seen in the propositions that have been made to the conference with reference to extraterritorial rights and to tariff autonomy.

A specific illustration of a violation of China's sovereignty and territorial and administrative integrity, as distinguished from limitations based upon agreements to which China has been a party, was presented to the conference for correction last week and had to do with the maintenance of foreign postal services upon Chinese soil.

This morning it is the desire of the Chinese delegation to bring before you, for correction in accord with the controlling principles which you have already affirmed, several other instances of subsisting violations of China's sovereignty and territorial and administrative integrity.

These relate to the maintenance upon the Chinese territory, without China's consent and against her protests, of foreign troops, railway guards, police boxes and electrical wire and wireless communication installations.

I shall not exhaust your patience by enumerating all of the specific instances of these violations, for I shall not ask merely that each of these violations be specifically

discountenanced, for this would not give complete relief to China since it would not prevent other similar violations in the future. In behalf of the Chinese Government, I therefore ask that this conference declare, as a comprehensive proposition, that no one of the powers here represented—China, of course, not included—shall maintain electrical communication installations, or troops, or railway guards, or police boxes upon Chinese soil, except in those specific cases in which the powers desiring to do so may be able to show by affirmative and preponderant evidence and argument that it has a right so to do such as can be defended upon the basis of accepted principles of international law and practice and with the consent of the Chinese Government.

No argument by me is needed to show that this conference stands committed to the declaration which I now ask, by the principles which were adopted on Nov. 21. Should any one of you consider the possibility of foreign troops or railway guards, or police boxes, or electrical communication installations being maintained upon the soil of your own country without the consent of the Government which you represent, your feelings of justice and your sense of the dignity due to your own State would make evident to you the propriety of the joint declaration which China now asks you to make in her behalf. The proposition surely stands self-evident that, if a nation asserts a right to maintain troops or guards, or police, or to erect and operate systems of communication upon the soil of another State, whose sovereignty and independence and territorial and administrative integrity it has just solemnly affirmed and obligated itself to respect, upon that State should lie a heavy burden of proof to justify so grievous an infringement of the rights of exclusive territorial jurisdiction which international law as well as a general sense of international comity and justice recognize as attaching to the status of sovereignty and independence.

In behalf of my Government and the people whom I represent, I therefore ask that the conference give its approval to the following proposition:

Each of the powers attending this conference hereinafter mentioned, to wit, the United States of America, Belgium, the British Empire, France, Italy, Japan, the Netherlands and Portugal, severally declare that, without the consent of the Government of China, expressly and specifically given in each case, it will not station troops or railway guards or establish and maintain police boxes, or erect or operate electrical communication installations, upon the soil of China; and that if there now exists upon the soil of China such troops or railway guards or police boxes or electrical installations without

sure to go"

aggressive purpose or any desire to encroach "illegitimately" upon Chinese sovereignty in sending her garrisons to China—notably to Hankow, North China, along the Chinese Eastern Railway, to Shantung and Manchuria—and made it plain that Japan was willing to agree to the withdrawal of such troops as were no longer necessary, but did not consider the time ripe for withdrawing her forces from the leased zone along the South Manchurian Railway. Dr. Sze, on behalf of China, stated that his delegation would not attempt to answer the Japanese memorandum until it had had full opportunity to study it. Subsequently the Chinese delegation issued to the press a statement of the Chinese Government's attitude toward the presence of foreign troops in China, tracing the causes that led to their establishment there and giving detailed reasons why they should be withdrawn.

Secretary Hughes announced officially at this session that China and Japan had agreed to discussions looking to the settlement of the Shantung controversy and the leased territory of Kiao-Chau. It was further announced that Secretary Hughes and Arthur J. Balfour, head of the British delegation, had tendered their good offices to the delegates of the two countries in dispute, and that they had been accepted. Here is the official communique covering these developments:

The Committee on Far Eastern and Pacific Affairs met Nov. 30, 1921, in the Pan-American Building. All the delegates were present except Ambassador Shidehara and Signor Meda. Mr. Hanihara for the Japanese delegation presented the following statement:

JAPAN'S ATTITUDE IN REGARD TO THE FOREIGN GARRISONS IN CHINA

"The Japanese delegation wishes to explain, as succinctly as possible, why and how the Japanese garrisons in various parts of China have come to be stationed there. At the outset, however, I desire to disclaim most emphatically that Japan has ever entertained any aggressive purposes or any desire to encroach illegitimately upon Chinese sovereignty in sending or maintaining these garrisons in China.

"1. Japanese railway guards are actually maintained along the South Man-

churian Railway and the Shantung Railway.

"With regard to the Shantung railway guards, Japan believes that she has on more than one occasion made her position sufficiently clear. She has declared and now reaffirms her intention of withdrawing such guards as soon as China shall have notified her that a Chinese police force has been duly organized and is ready to take over the charge of the railway protection.

"The maintenance of troops along the South Manchurian Railway stands on a different footing. This is conceded and recognized by China under the Treaty of Peking of 1905. (Additional agreement, Art. II.) It is a measure of absolute necessity under the existing state of affairs in Manchuria—a region which has been made notorious by the activity of mounted bandits. Even in the presence of Japanese troops those bandits have made repeated attempts to raid the railway zone. In a large number of cases they have cut telegraph lines and committed other acts of ravage.

"Their lawless activity on an extended scale has, however, been efficiently checked by Japanese railway guards, and general security has been maintained for civilian residents in and around the railway zone. The efficiency of such guards will be made all the more significant by a comparison of the conditions prevailing in the railway zone with those prevailing in the districts remote from the railway. The withdrawal of railway guards from the zone of the South Manchurian Railway will no doubt leave those districts at the mercy of bandits, and the same conditions of unrest will there prevail as in remote corners of Manchuria. In such a situation it is not possible for China to forego the right, or rather the duty, of maintaining railway guards in Manchuria, whose presence is duly recognized by treaty.

"2. Toward the end of 1911 the first revolution broke out in China and there was complete disorder in the Hupeh district, which formed the base of the revolutionary operations. As the lives and property of foreigners were exposed to danger, Japan, together with Great Britain, Russia, Germany and other principal powers, dispatched troops to Hankow for the protection of her people. This is how a small number of troops have come to be stationed at Hankow. The region has since been the scene of frequent disturbances. There was recently a clash between the North and South at Changsha, pillage by troops at Ichang and a mutiny of soldiers at Hankow. Such conditions of unrest have naturally retarded the withdrawal of Japanese troops from Hankow.

"It has never been intended that these troops should remain permanently at Hankow, and the Japanese Government have been looking forward to an early opportunity of effecting complete withdrawal of the Hankow garrison. They must be assured, however, that China will immediately

take effective measures for the maintenance of peace and that she will fully assume the responsibility for the damage that may be or may have been done to foreigners.

"3. The stationing of the garrisons of foreign countries in North China is recognized by the Chinese Government under the protocol relating to the Boxer revolution in 1900. Provided there is no objection from the other countries concerned, Japan will be ready, acting in unison with them, to withdraw her garrison as soon as the actual conditions warrant it.

"4. The Japanese troops scattered along the lines of the Chinese Eastern Railway have been stationed in connection with an interallied agreement concluded at Vladivostok in 1919. Their duties are to establish communication between the Japanese contingents in Siberia and South Manchuria. It goes without saying, therefore, that these troops will be withdrawn as soon as the evacuation of Siberia by the Japanese troops is effected.

"MEMORANDUM—At the present time Japan maintains in China proper approximately 4,500 troops, located as follows:

"At Tientsin, two battalions, approximately 1,200 men.

"At Hankow, one battalion, approximately 600 men.

"In Shantung: At Tsinan, two companies, approximately 300 men; along the Tsinan-Tsing-tao railway and at Tsing-tao, four battalions, approximately 2,400 men.

"Total, 4,500 men.

"STATEMENT REGARDING THE MAINTENANCE OF JAPANESE POLICE IN MANCHURIA AND THE TREATY PORTS OF CHINA:

"In considering the question of Japanese consular police in China, two points must be taken into account:

"1. Such police do not interfere with Chinese or other foreign nationals. Their functions are strictly confined to the protection and control of Japanese subjects.

"2. The most important duties with which the Japanese police are charged are: First, to prevent the commission of crimes by Japanese, and, second, to find and prosecute Japanese criminals when crimes are committed.

"In view of the geographical proximity of the two countries, it is natural that certain disorderly elements in Japan should move to China and, taking advantage of the present conditions in that country, should there undertake unlawful activities. When these lawless persons are caught in the act of crime by the Chinese police, it is not difficult for that police force to deal with the case. The culprits are handed over as early as possible to the Japanese authorities for prosecution and trial. But when the criminals flee from the scene of their acts, it is in many cases hard to discover who committed the crimes and what were the causes and circumstances that led up to their commission. This is more dif-

[American Cartoon]

—Central Press Association, Cleveland

WHAT WILL THE HATCHING BE?

difficult for the Chinese authorities, as they have no power to make domiciliary visits to the homes of foreigners, who enjoy extra-territorial rights, or to obtain judicial testimony in due form from such foreigners.

"Without the full co-operation of the Japanese police, therefore, the punishment of crime is, in a great many cases, an impossibility, and those who are responsible for lawbreaking escape trial and punishment.

"This tendency is especially evident in Manchuria, in which region hundreds of thousands of Japanese are resident. In places where the Japanese police are stationed there are far fewer criminal cases

among Japanese than in places without Japanese police. Lawless elements constantly move to districts beyond the reach of Japanese police supervision.

"Apart from the theoretical side of the question, it will thus be observed that the stationing of Japanese police in the interior of China has proved to be of much practical usefulness in the prevention of crimes among Japanese residents, without interfering with the daily life of the Chinese or of other foreign nationals. The Japanese policing provides a protection for the Chinese communities which at present their own organization fails to provide.

"The Japanese delegation is in possession of knowledge and information as to the actual conditions prevailing in China, and especially in Manchuria. However, it is unnecessary to go into details at the present stage."

Mr. Sze, on behalf of the Chinese delegation, stated that he would reserve the right to answer in detail the Japanese statements after he had had an opportunity of studying them.

The committee discussed the matter of wireless stations in China and decided to refer it to the Subcommittee on Draft, to report their recommendations as to the expression of the sense of the full committee with respect to these stations, with authority to include in their recommendation such suggestion for the constitution of special committees of experts in relation to any phase of the subject as may be deemed advisable.

The Committee on Draft is composed of the following members of the delegations: United States of America, Senator Root; Belgium, Baron Cartier, with M. Cattier as alternate; British Empire, Sir Auckland Geddes, Sir John Jordon or Mr. Lampson as alternates, and Mr. Malkin as drafting adviser; China, Mr. Koo; France, M. Viviani; Italy, Ambassador Ricci; Japan, Mr. Hanihara; Netherlands, Jonkheer Van Karnebeek; Portugal, Viscount d'Alte.

It was stated to the meeting by the Chairman that Mr. Hughes and Mr. Balfour had offered their good offices to the representatives of China and Japan in the suggestion that there should be conversations between these representatives looking to the settlement of the questions relating to Shantung and the leased territory of Kiao-Chau, that these good offices were accepted by the representatives of both Governments, and that the conversations were to proceed accordingly, the first meeting for that purpose to be held Thursday afternoon.

In order to provide opportunity for the special committees to continue their work, the meeting of the full committee was adjourned until Friday, Dec. 2.

The Draft Committee, headed by Mr. Root, met on Dec. 2 and discussed the withdrawal of foreign troops

[American Cartoon]

—Sioux City Tribune

JUST CAN'T GET AWAY FROM IT!

from China; the subject was referred to a special subcommittee, with instructions to report definite recommendations to the committee at a later date.

LEASED TERRITORIES

Another phase of the complex Chinese problem was discussed by the Far East Committee at its session of Dec. 3, namely, the leased territories still held and administered by Japan, Great Britain and France. Dr. Wellington Koo, the Chinese representative, opened the debate by summarizing the causes which had led to the granting of these leased areas, and, after showing that the Shantung lease to Germany was really the *causa causans* of the other concessions, declared that the changed conditions following Germany's defeat now argued in favor of the withdrawal of all the leases.

Dr. Koo was followed by M. Viviani, speaking for France; Mr. Hanihara, spokesman for Japan, and Mr. Balfour, representing Great Britain, all of whom expressed the willingness of their Governments to withdraw from certain of the leased areas held by them. France was willing to withdraw from Kwang-chouan, in Kwangtung Province; Great Britain from Wei-hai-Wei, in South Manchuria, and Japan from Shantung. The British delegate, however, made it plain that Great Britain was unwilling to withdraw from Kowloon, protecting Hongkong, and Mr. Hanihara made it equally clear that Japan was unwilling to relinquish Port Arthur, her concession in Manchuria. Even this partial agreement, however, was considered both by the Chinese delegation and American Government officials as of "the greatest importance"

[American Cartoon]

—New York Times

A SHOCK TO THE FAMILY

"Hey, Mom! Look what Pop's got!"

in the concerted movement toward restoring China's sovereignty.

The full history of the leased areas, which Dr. Koo referred to but briefly, goes back to the forcible occupation by Germany of Shantung Province in retaliation for the murder of two German missionaries in 1906. This constrained China on March 6, 1898, to grant Germany on a ninety-nine-year lease the bay and territory of Kiao-Chau, the finest harbor on the coast of China. Besides this concession, totaling in land area about 195 square miles, the construction of two lines of railway in Shantung was sanctioned. A similar agreement, dated March 27, 1898, leased to Russia for twenty-five years Port Arthur and Talienwan (Dalny). Kwang-chouan, in Kwangtung, was leased to France on April 22, 1898, and Wei-hai-Wei, an area of 285 square miles, to Great Britain on July 1, 1898. Kowloon, which had been ceded to Great Britain as far back as 1860, was extended in 1898.

China lost Port Arthur in the Sino-

[Drawn by Cleon Larson, a Salt Lake City school boy]

Japanese war of 1904, but Germany, France and Russia, moving at the appeal of Russia, who held it on a twenty-five-year lease, compelled Japan to return it to China. Shortly afterward Russia took it over, and made it a Russian fortress, with Dalny, now called Dairen, as a commercial port. Great Britain then seized Wei-hai-Wei to compensate herself strategically for the Russian occupation of Port Arthur. Japan, as a result of the Russo-Japanese war, took over Port Arthur, succeeding to the Russian leasehold, and later extended the term of its duration, together with that of the railway concession.

Because of the threat involved to Japan, Great Britain has never been able to fortify Wei-hai-Wei, which

faces Port Arthur, commanding with the latter port the entrance to the Gulf of Pechihli, which controls Peking and vast hinterlands. At the present time British law is administered in the concession, and the Chinese there owe allegiance to Great Britain rather than to China. It comprises the Islands of Liukung, all the islands in the Bay of Wei-hai-Wei, and a belt of land ten miles wide along the entire coast line. In addition to the leased territory there is a sphere of influence extending over an area of 1,500 square miles of Shantung Province. The concession is of little strategic importance to Great Britain, because of her inability to fortify it.

The case is different with Kowloon, the other British concession. This strip of territory on the mainland opposite Hongkong had its 1860 area considerably extended in 1898, which added the peninsula south of a line drawn between Deep Bay and the Mirs Bay, together

with the Islands of Lantau and Lammas. The whole concession now covers an area of 390 square miles, including the Island of Hongkong, which embraces twenty-nine square miles, and has a population of 436,000, of whom from 8,000 to 9,000 are Europeans. The total tonnage entering Hongkong Harbor in 1918 was 8,543,496 tons, comprising 21,803 vessels. The British objection to withdrawing from the Kowloon concession was based on the view that this territory was necessary to the protection of Hongkong.

A similar view was expressed by the Japanese in the case of Port Arthur, in Southern Manchuria. Mr. Hanihara made it clear that this region was too closely bound up with

Japan's national safety to consider relinquishing "the important rights she has lawfully acquired and at no small sacrifice." As to Kwangchouan, M. Viviani made it clear that France was willing to withdraw from this concession as part of a collective agreement and in common action with other powers. Kwangchouan, or Kwang-chow, a mere strip of territory on the coast of Kwangtung, taking in the Islands of Tunghai and Nanchou, is under the administration of the Governor of French Indo-China.

SUBSTANCE OF THE SPEECHES.

The text of the official communiqué issued by the committee read as follows:

The Committee on Pacific and Far Eastern Questions met Dec. 3 in the Pan-American Building. All the delegates were present except Ambassador Shidehara and Baron Kato. The committee discussed the question of leased areas in China.

Mr. Koo stated that the existence of the leased territories in China was due in the original instance to the aggressions of Germany, whose forcible occupation of part of Shantung Province constrained the Chinese Government to grant a lease for ninety-nine years of the Bay of Kiao-Chau in the Shantung Province on March 6, 1898. This was closely followed by a demand on the part of Russia for the lease of the Liaotung Peninsula, in which are found the ports of Port Arthur and Dalny, along with the demand for the right of building a railway to be guarded by Russian soldiers traversing the Manchurian Province from Port Arthur and Dalny to join the Trans-siberian Railroad and Vladivostok. This was later the cause of the Russo-Japanese War, which resulted in 1905 in the transfer of those territories to Japan with the consent of China. Following the lease of Kiao-Chau Bay to Germany and that of Port Arthur and Dalny to Russia, France obtained from China on April 22, 1898, the lease of Kwangchouan on the coast of Kwangtung Province for ninety-nine years, and Great Britain the lease also for ninety-nine years of an extension of Kowloon and the adjoining territory and waters close to Hongkong on June 9, 1898, and the lease "for so long a period as Port Arthur should remain in the occupation of Russia" of the port of Wei-hai-Wei on the coast of Shantung on July 1, 1898. Both Great Britain and France based their claims for the leases on the ground of the necessity

of preserving the balance of power in the Far East.

If he might be permitted to go into the history of the question, he might add that while the measures and extent of control by the lessee powers over the lease territories vary in different cases the leases themselves are all limited to a fixed period of years, expressly or impliedly; they are not transferable to a third power without the consent of China. Though the exercise of administrative rights over the territories leased is relinquished by China to the lessee power during the period of the lease, the sovereignty of China over them is reserved in all cases. As is stated in the beginning, these leaseholds were granted by China with the sole purpose of maintaining the balance of power in the Far East, not so much between China and the other powers, but between other powers themselves concerning China. These are all creatures of compact different from cessions both in fact and in law.

Twenty years had elapsed since then and conditions had entirely altered. With the elimination of the German menace, in particular, an important disturbing factor had been removed. Russia had equally disappeared from the scene, and it could be hoped with confidence that she would eventually return, not as the former aggressive power, but as a great democratic nation. The misrule of the Manchu dynasty, which had aggravated the situation, had also disappeared. The very fact that this conference was being held at Washington for the purpose of arriving at a mutual understanding on the part of the powers indicates an added reason for dispensing with the necessity of maintaining the balance of power in the Far East, which was the principal ground of the original claims of the different powers. In the absence of that necessity, the Chinese delegation believed that the time had come for the interested powers to relinquish their control over the territories leased to them.

The existence of such leased territories had greatly prejudiced China's territorial and administrative integrity because they were all situated upon the strategical points along the Chinese territory. These foreign leaseholds had besides hampered her work of national defense by constituting in China a virtual imperium in imperio, that is, an empire within the same empire. There was another reason which the Chinese delegation desired to point out. The shifting conflict of interests of the different lessee powers had involved China more than once in complications of their own. It would be sufficient to refer here to the Russo-Japanese war, which was caused by the Russian occupation of Port Arthur and Dalny. The Kiao-Chau leasehold brought upon the Far East the hostilities of the European war. Furthermore, some of those territories were utilized with a view to economic domination over the vast adjoining regions as points

d'appui for developing spheres of interest to the detriment of the principle of equal opportunity for the commerce and industry of all nations in China. In the interest not only of China but of all nations, especially for the peace of the Far East, the Chinese delegation asked for the annulment and an early termination of these leases. But pending their termination they would be demilitarized; that is, their fortifications dismantled and the lessee nations to undertake that they will not make use of their several leased areas for military purposes, either as naval bases or for military operations of any kind whatsoever.

The Chinese delegates were, however, fully conscious of the obligations which would fall upon China after the termination of the leaseholds. The Chinese Government would be prepared to respect and safeguard the legitimately vested interests of the different powers within those territories.

ATTITUDE OF FRANCE

Mr. Viviani spoke for France as follows: "After having taken note of the request made by the Chinese delegation, Dec. 1, 1921, the French delegation states that the Government of the republic is ready to join in the collective restitution of territories leased to various powers in China, it being understood that, this principle being once admitted and all private rights being safeguarded, the conditions and time limits of the restitution shall be determined by agreement between the Chinese Government and each of the Governments concerned."

JAPAN'S DECLARATION

Mr. Hanihara stated the position of Japan as follows:

"The leased territories held by Japan at present are Kiao-Chau and Kwangtung Province, namely—Port Arthur and Dairen. It is characteristic of Japan's leased territories that she obtained them, not directly from China, but as successor to other powers at considerable sacrifice in men and treasure. She succeeded Russia in the leasehold of Kwangtung Province with the express consent of China, and she succeeded Germany in the leasehold of Kiao-Chau under the Treaty of Versailles.

"As to Kiao-Chau, the Japanese Government has already declared on several occasions that it would restore that leased territory to China. We are prepared to come to an agreement with China on this basis. In fact, there are now going on conversations between representatives of Japan and China regarding this question, initiated through the good offices of Mr. Hughes and Mr. Balfour, the result of which it is hoped will be a happy solution of the problem. Therefore, the question of the leased territory of Kiao-Chau is one which properly calls for separate treatment.

"The only leased territory, therefore, which remains to be discussed at the con-

ference, so far as Japan is concerned, is Kwangtung Province, namely, Port Arthur and Dairen. As to that territory, the Japanese delegates desire to make it clear that Japan has no intention at present to relinquish the important rights she has lawfully acquired and at no small sacrifice. The territory in question forms a part of Manchuria—a region where, by reason of its close propinquity to Japan's territory more than anything else, she has vital interests in that which relates to her economic life and national safety.

"This fact was recognized and assurance was given by the American, British and French Governments at the time of the formation of the international consortium that these vital interests of Japan in the region in question shall be safeguarded.

"In the leased territory of Kwangtung Province there reside no less than 65,000 Japanese, and the commercial and industrial interests they have established there are of such importance and magnitude to Japan that they are regarded as an essential part of her economic life.

"It is believed that this attitude of the Japanese delegation toward the leased territory of Kwangtung is not against the principle of the resolution of Sept. 21."

ANALYSIS OF BRITISH ATTITUDE

Mr. Balfour pointed out that leased territories, though nominally all described under the same title, were held under very different and varying circumstances. The Japanese delegation had already indicated that Shantung and Manchuria, respectively, were held on entirely different bases and must be considered from different points of view. Great Britain had two different kinds of leases, and these, as he thought the Chinese delegation itself would admit, must be held to stand on a different footing one from the other. Mr. Balfour referred first to the leased territory of the Kowloon extension. Why, he asked, was it considered necessary that the leased territory of Kowloon should come under the same administration as Hongkong? The reason was that without the leased territory, Hongkong was perfectly indefensible and would be at the mercy of any enemy possessing modern artillery. He hoped that he would carry the conference with him when he asserted that the safeguarding of the position of Hongkong was not merely a British interest but one in which the whole world was concerned. He was informed that Hongkong was easily first among the ports of the world, exceeding in this respect Hamburg before the war, Antwerp and New York. Mr. Balfour then read the following extract from the United States Government Commercial Handbook of China:

"The position of the British colony of Hongkong in the world's trade is unique and without parallel. It is a free port except for a duty on wine and spirits; it has rela-

tively few important industries; it is one of the greatest shipping centres in the world; it is the distributing point for all the enormous trade of South China, and about 30 per cent. of the entire foreign commerce of China. The conditions of Hongkong in its relations to commerce are in every way excellent, and the Government centres all its efforts on fostering trade, while the future is being anticipated by increased dock facilities, the dredging of the fairways and other improvements. The merchants, both native and foreign, give special attention to the assembling and transshipping of merchandise to and from all the ports of the world, and with the world-wide steamship connections at Hongkong the necessity of retransshipment at other ports is reduced to a minimum. Hongkong is the financial centre of the East."

Mr. Balfour said he could not add anything to this perfectly impartial testimony to the conditions of absolute equality of nations under which the affairs of Hongkong are administered and the motives on which they are conducted. The lease of the Kowloon extension had been obtained for no other reason except to give security to the Port of Hongkong, and it would be a great misfortune if anything should occur which was calculated to shake the confidence of the nations using this great open port in its security. He hoped he need say no more to explain that the Kowloon extension was in a different category and must be dealt with in a different spirit from those leased territories which had been acquired for totally different motives.

Mr. Balfour then passed to the question of Wei-hai-wei. The acquisition by Great Britain of this lease had been part of the general movement for obtaining leased territories in 1898, in which Russia, Germany and France, as well as Great Britain, had been concerned. The motive which had animated the Germans in acquiring Kiaochau had been largely to secure economic domination. The motive of the British Government, on the other hand, in acquiring the lease of Wei-hai-wei had been connected with resistance to the economic domination of China by other powers; in fact, it had been based on a desire for the maintenance of the balance of power in the Far East, with a view to the maintenance of the policy of the open door, and had been intended as a check to the predatory action of Germany and Russia. Mr. Balfour laid emphasis on the fact that the convention of July 1, 1898, confirming the lease, gave no economic rights or advantages to Great Britain. There had been no question of its being a privileged port of entry for British commerce, nor for the establishment of British commercial rights to the exclusion or diminution of the rights of any other power. In fact, on April 20, 1898, Great Britain had announced that "England will not construct any

THE KEYNOTE

railroad communication from Wei-hai-wei and the district leased therewith into the interior of the province of Shantung." As regards the attitude of the British Government to the request of the Chinese delegation for an abrogation of these leases, Mr. Balfour stated that he had very little to add to, and he did not wish to qualify, the conditions contained in the statement just made by M. Viviani, which represented very much the spirit in which the British Government approached the question. The British Government would be perfectly ready to return Wei-hai-wei to China as part of a general arrangement intended to confirm the sovereignty of China and to give effect to the principle of the open door. This surrender, however, could only be undertaken as part of some such general arrangement, and he spoke with his Government behind him when he said that on these conditions he was prepared to give up the rights which had been acquired. The British Government's policy was to make use of the surrender of Wei-hai-wei to assist in securing a settlement of the question of Shantung. If agreement could be reached on this question, the British Government would not hesitate to do their best to promote a general settlement by restoring Wei-hai-wei to the Central Government of China.

After he had heard the sentiments expressed by M. Viviani, Mr. Balfour and Mr. Hanihara, Mr. Koo expressed on behalf of the Chinese delegation his sincere thanks to them for the spirit which had guided

WELL, THERE'S THE AXE!

them, and he hoped that this question would be discussed at another opportunity.

CHINA FIRM ON LEASEHOLDS

At the session of the committee held on Dec. 7 two resolutions affecting the sovereignty of China were unanimously adopted: one giving over to Chinese administration all unauthorized radio stations, and the other pledging the powers to respect China's rights as a neutral in case of "future wars to which she is not a party." The most important feature of the session, however, was the memorandum presented by Dr. Wellington Koo on foreign leaseholds. At the session of Dec. 3 the powers had offered to relinquish their leaseholds, with certain exceptions; Dr. Koo, replying specifically to these exceptions, was especially emphatic regarding South Manchuria. Japan's possession of Port Arthur and the Kwangtung territory, he pointed out, rested upon the Russo-Japanese war and the original lease, which will expire in 1925. The continuation of that lease for ninety-nine years, he said, was ob-

tained by Japan in 1915 as part of the famous twenty-one demands, and its legality, like that of all the other demands, "remains one of the gravest outstanding questions between China and Japan."

The official communique of the session was in part as follows:

The Committee on Pacific and Far Eastern Questions met at 11 o'clock this morning, Dec. 7, in the Pan American Building. All the delegates were present except Ambassador Shidehara and Senator Underwood. The following report of the subcommittee on draft in regard to radio stations in China was submitted:

"The subcommittee on draft begs to report the following resolution regarding radio stations in China:

"The representatives of the powers hereinafter named participating in the discussion of Pacific and Far Eastern questions in the Conference for Limitation of Armament, to wit: The United States of America, Belgium, the British Empire, China, France, Italy, Japan, the Netherlands and Portugal, have resolved:

"1. That all radio stations in China, whether maintained under the provisions of the international protocol of Sept. 7, 1901, or in fact maintained in the grounds of any of the foreign legations in China, shall be limited in their use to sending and receiving Government messages and shall not receive or send personal or unofficial messages, including press matter, provided, however, that in case all other telegraphic communication is interrupted, then upon official notification, accompanied by proof of such interruption to the Chinese Ministry of Communications, such stations may afford temporary facilities for commercial, personal or unofficial messages, including press matter, until the Chinese Government has given notice of the termination of the interruption.

"2. All radio stations operated within the territory of China by a foreign Government or the citizens or subjects thereof under treaties or concessions of the Government of China shall limit the messages sent and received by the terms of the treaties or concessions under which the respective stations are maintained.

"3. In case there be any radio station maintained in the territory of China by a foreign Government or citizen or subjects thereof without the authority of the Chinese Government, such station and all the plant apparatus and material thereof shall be transferred to and taken over by the Government of China to be operated under the direction of the Chinese Ministry of Communications upon fair and full compensation to the owners for the value of the installation, as soon as the Chinese Ministry of Communications is prepared to

operate the same effectively for the general public benefit.

"4. If any questions shall arise as to the radio stations in leased territories, in the South Manchuria Railway zone or in the French concession at Shanghai, they shall be regarded as matters for discussion between the Chinese Government and the Government concerned.

"5. The owners or managers of all radio stations maintained in the territory of China by foreign powers or citizens or subjects thereof shall confer with the Chinese Ministry of Communications for the purpose of seeking a common arrangement to avoid interference in the use of wave lengths by wireless stations in China, subject to such general arrangements as may be made by an international conference convened for the revision of the rules established by the International Radio Telegraph Convention signed at London, July 5, 1912."

DR. KOO'S STATEMENT

The committee further discussed the question of leased territories in China. Dr. Koo made the following statement:

"At the meeting of the Committee on Pacific and Far Eastern questions on Dec. 3, Mr. Hanihara read a statement outlining the position of Japan with reference to the leased territory of Kiao-Chau and Kwangtung Peninsula, namely, Port Arthur and Dalny. The Chinese delegation desire to offer a few observations on the statement in the hope that the position of China on this question may be equally well understood. The declaration that Japan succeeded Germany in the leasehold of Kiao-Chau under the Treaty of Versailles is obviously one-sided, and China, not being a party to that treaty, cannot be expected to subscribe to it.

"It is, however, gratifying to note the statement that Japan obtained her leased territories in China not directly from her but from other powers at considerable sacrifice in men and treasure, because this assurance appears to confirm the views of the Chinese delegation that the maintenance of foreign leased territories in China jeopardizes the peace in the Far East. It will be recalled that Russia's possession of Port Arthur and Dalny and Germany's possession of Kiao-Chau eventually brought two wars on Chinese territory and resulted in the installation of Japan herself in these leased areas.

"As to the leased territory of Kwangtung Province, namely, Port Arthur and Dalny, its original term will expire in 1925, and while an extension to ninety-nine years was obtained by Japan in 1915, it was obtained in such circumstances that the dispute about its validity remains one of the gravest outstanding questions between China and Japan.

"Both Port Arthur and Dalny are situated in Manchuria, which is an important

[American Cartoon]

THE TURNSTILE

part of Chinese territory. Not only does the national safety of China rely upon the safeguarding of Manchuria as an integral portion of the Chinese Republic because these three eastern provinces, as the Chinese call Manchuria, have been the historic road of invasion into China throughout the past centuries, but also the security of the economic life of the Chinese people depends in a very vital measure upon the conservation and development with the surplus capital of the world of the natural and agricultural resources in Manchuria, a region where today an abundance of raw material and food supplies is already accessible to all nations, on fair terms and through the normal operation of economic law of supply and demand. Moreover, Manchuria is an important outlet for the surplus population from the congested provinces in other parts of China.

"In view of the foregoing fact, it is clear that China has such truly vital interests in Manchuria that the interests of any foreign power therein, however important they may be in themselves, cannot compare with them. The fact of close propinquity of Manchuria to Korea, if it justifies any claim to consideration, can be equitably appealed to only on the condition of reciprocity.

"As to the statement that assurance was given by the American, British and French Governments at the time of the formation of the international consortium that the vital interests of Japan in Manchuria shall be safeguarded, the Chinese delegation do

[American Cartoon]

THE ALTOGETHER TOO FRIENDLY COP!

not feel in a position, since China was not consulted at the time, to express an opinion as to the question of its accuracy. Should such assurance have been given, they could not, however, conceal their feeling that it cannot be reconciled with the principle which was adopted by the conference on Nov. 21, of respect for the sovereignty, the independence and the territorial and administrative integrity of China.

"As to the leased territory of Kowloon, leased to Great Britain, much is to be said for the importance of Hongkong to the trade of nations and for the way in which its facilities are made accessible to the traders of the world, and while there may be a necessity to provide for the protection of the Hongkong harbor in the interests of such trade, the retention of Kowloon may not necessarily be, in the view of the Chinese delegation, the sole solution of this problem.

"In making the foregoing statement, however, the Chinese delegation have desired only to make their position clear, and unless the committee wish to continue discussion at this meeting the Chinese delegation desire to reserve for the future further observations on the question of the leased territories." * * *

The proposal of the Chinese delegation that "China's rights as a neutral are to be fully respected in future wars to which she is not a party" was unanimously adopted after a statement made by Dr. Wang as follows:

"The proposition advanced by the Chinese delegation is an obvious one; it is in substance a corollary of the first of the four resolutions adopted by this committee on Nov. 21. This subject would not be presented for discussion except for the fact that in the past China's rights in this respect have been grievously disregarded. I need only refer you to the Russo-Japanese War which, so far as land operations are concerned, was fought wholly upon Chinese soil. Again, at the time of the military expedition against Tsing-tao in the late war, belligerent troops landed at a point 150 miles from the leased territory of Kiaochau.

"It is clear that should similar incidents occur, there would be furnished just cause of complaint by the non-offending belligerent power not only against the offending belligerent power but also against China herself. Furthermore, they would tend to weaken throughout the world the respect due, in time of war, to neutral powers. With these preliminary remarks, I leave this question to the pleasure of this committee."

OPEN DIPLOMACY PLEDGED

China's fight for "open diplomacy" was virtually won at the session of Dec. 8, when, after a long debate, a resolution was passed pledging the nine powers not to enter into any agreement or understanding which would impair the force of the four principles on China formulated by Elihu Root. The resolution was offered by Sir Auckland Geddes, British Ambassador to the United States, and was adopted in a slightly modified form.

The discussion of which the resolution was the culmination followed Dr. Wellington Koo's argument in favor of the third point on the full list of China's proposals, viz., the principle that the powers should enter into no agreements without consulting the Chinese Government. Dr. Koo insisted on China's right to be consulted in every such instance. Mr. Balfour, head of the British delegation, took exception to Dr. Koo's demand as far too sweeping, and declared that the Root resolution would cover it. Secretary Hughes pointed out that there might be treaties affecting China, but not adverse to her; he declared that the powers could guarantee that there would be no

more secret engagements, and suggested a reaffirmation of the Root resolution in connection with treaties. Mr. Hanihara, the Japanese delegate, agreed with Mr. Balfour that the proposal of Dr. Koo would put a serious limitation on the sovereignty of the powers, and believed that any unjust or oppressive treaty, from China's point of view, would fall of its own accord under the growing influence of public opinion and international law.

To surmount the difficulty Sir Auckland Geddes proposed the resolution which, with slight modification, was finally adopted. China herself was included in the resolution, in accordance with an amendment offered by the Japanese. Speeches made by Mr. Hanihara for Japan, by M. Viviani for France, by Signor Schanzer for Italy, by Sir Robert Borden for Canada, showed a general feeling that Dr. Koo's resolution was too broad in its scope, and unnecessary, and the final resolution followed the suggestion of Secretary Hughes to reaffirm the intention of the powers to maintain the principle of the Root resolution in regard to treaties.

OFFICIAL SUMMARY

The communique issued by the committee read in part as follows:

The Committee on Pacific and Far Eastern Questions met Dec. 8, 1921, at the Pan American Building.

Discussing the third Chinese proposal, Mr. Koo said that the essential principle laid down in Point 3 of the Chinese proposals, which reads as follows, "With a view to strengthening mutual confidence and maintaining peace in the Pacific and the Far East, the powers agree not to conclude between themselves any treaty or agreement directly affecting China or the general peace in these regions without previously notifying China and giving to her an opportunity to participate," is that the Chinese Government should have previous notification of the negotiation of any treaty or agreement which will affect Chinese interests.

Agreements have in the past frequently been made, relating to the Far East, or to China particularly, without participation on the part of China or previous notice to the Chinese Government. In agreements of this kind the nations concerned were presumably

disposing of rights and interests belonging to them, or they were giving mutual promises with regard to action which they would take or from which they would abstain. Taking any one of those agreements by itself, it might be argued that its subject matter was composed entirely of rights, interests and actions of the parties to the agreement.

This kind of agreement falls roughly into two divisions, one being in the nature of mutual engagements to abstain from certain action in special parts of China, the other being engagements for mutual assistance in support of the general interests of all foreign powers in China, or of the special interests claimed by the parties to the agreements.

As to these treaties and agreements, Mr. Koo said he felt that they were all so well known to the members of the committee that the complete enumeration or specific illustrations would be unnecessary.

The first kind of agreement usually was in the nature of an engagement on the part of one contracting party not to seek any railway concessions in one part of China in return for a similar promise on the part of the other contracting parties not to seek railway concessions in another part of China.

At first sight it might seem as if a nation were within its rights in promising to another to forego certain opportunities within a specific region. But any deeper examination of this matter will immediately show that there are a great many objections to such a method of arranging the action of one nation upon the territory of another. In the first place, it involves an incipient national monopoly or preference within the region affected, because the nation which has secured a promise of abstention from one power will then proceed with efforts to secure it from others. By the making of only one agreement, two nations are already backing a system of artificial limitation of economic activities.

The rights of China are involved both because she must wish that all the parts of her territory shall be open on equal terms, or on such terms as she herself shall determine, to foreign capitalists, merchants and residents. As soon as such treaties as the above are made, without consultation with China, her territory is divided into distinct spheres for foreign enterprise. To this she can by no means be indifferent.

The other group of treaties deals with the safeguarding and defending of territorial rights or special interests in the Far East, including or specially mentioning China.

These all have one or more of the following three features:

(1) A declaration that the contracting parties have a special interest in having a pacific state of things guaranteed in the regions of China adjacent to the territories where the contracting powers have rights of sovereignty, protection or occupation, and

[American Cartoon]

—Dayton News

"Why drink from a rain barrel when we have a good well?"

engage to support each other for assuring the peace and security in these regions; or

(2) A declaration to support the independence and integrity of China and the maintenance of the open door for foreign commerce and to aid each other for the defense of the contracting parties' special interests in said regions; or

(3) The recognition by one contracting power to the effect that, since propinquity creates special relations, the other contracting power has special interests in China.

It was clear that any one of the foregoing three features must be of vital interest to China. The assurance of peace and order in any part of Chinese territory was a matter of great concern to China herself. The maintenance of the independence and territorial integrity of China touched the supreme rights of China. As to the recognition of propinquity as creating special interests in China, it was equally obvious that such recognition could not be valid, because special interests on Chinese territory could not be created without the consent of China, and China has always contested the soundness of the doctrine of propinquity.

The effect of all such treaties and agreements has been to maintain in China con-

ditions which intimately affected the rights, prospects and liberty of action of China herself.

It appeared, therefore, that the Chinese Government has an equitable right to be consulted in all agreements which deal with or pretend to deal with the general situation in the Far East, including China. Even if such treaties should be animated by an entirely friendly spirit toward China, yet their bearing is such that they may involve consequences which would impose limitations on Chinese freedom of action, and even they should therefore not be made without consultation with China.

It may, of course, be said that China, not being a party to such treaties, need in no way recognize them nor consider herself bound by any of their provisions. That is legally true, but the political effect produced by a group of such treaties, just as in the case of spheres of influence, tends so to modify the political and economic situation in China that no efforts on the part of her Government can succeed in preserving liberty of action. We must look at the total results of a group of such cases, if the practice should be recognized that China need not be consulted. In that case it is plain that vital interests of China would be affected and the nature of activities and interests within China determined entirely by the action of outside powers. The Chinese Government would then find itself obliged to move along grooves laid down by others without having once had an opportunity of insisting upon her own life needs as seen by herself.

We must, therefore, conclude that though an individual agreement may on the face of it concern only the action of outside powers, if that action relates to China, the Chinese Government cannot remain indifferent to it, because of the effect which continued action in making agreements of this kind would have upon the liberty of movement and development of the Chinese Government and nation itself.

MR. BALFOUR'S OBJECTIONS

Mr. Balfour said that * * * with the broad aspirations expressed by Mr. Koo all must be in sympathy. The whole tenor of the discussion on China's affairs proved the desire to remove as far as possible the abnormal conditions existing in China into that normal course of policy which regulates the relations between civilized States. He was not sure, however, that Mr. Koo's method was the best means of achieving this. One of the most important passages in Mr. Koo's speech had referred to spheres of influence. So far as Great Britain was concerned, spheres of influence were a thing of the past. * * * How did spheres of influence come into existence? Because at a certain period of Russian

and German aggression in China, other powers, in order to prevent China from being cut up before their eyes, had to do for each other what China could not do for herself. In China's interest, as well as their own, they had to guard against their exclusion from legitimate opportunities of enterprise. This was due not so much to their own policy as to China's want of policy; not in consequence of their own strength, but of China's weakness.

Mr. Balfour thought it was the hope of all those present to place China in a position to defend her interests, to protect her neutrality, and no longer to be the prey of acquisitive powers. He did not think that this end was likely to be obtained by adopting the broad principle proposed by the Chinese delegation, but rather by dealing with the difficulties that beset China one by one, as the committee was actually doing. * * * He could not see that the position was helped by this principle, which went a good deal beyond any existing principle of international law. He could not believe that the powers would accept it, more especially as China was not in possession of material forces to enable her to carry out any policy outside her own frontiers. * * * Translated into international language, this (Dr. Koo's proposal) would prevent France and Belgium from entering into a defensive treaty of any kind without consulting Germany. All agreed that treaties had been entered into not only in regard to China, but also in regard to other nations, which reflected no credit on those who had concluded them. For this evil the great remedy was publicity. Most of the nations represented at this conference were members of the League of Nations, and were bound to register their treaties with the League. The United States was not a member of the League of Nations, but its Constitution necessitated wide publicity in regard to treaties. That was the real protection for China. The whole world would become the judge of future treaties. * * * Mr. Balfour then quoted the first of the resolutions drafted by Mr. Root and adopted by the committee on Nov. 21, 1921: "To respect the sovereignty, the independence and the territorial and administrative integrity of China." This resolution, if sincerely carried out, would do all that the too wide proposal made by Mr. Koo could effect, without raising the difficulties inseparable from his scheme.

The Chairman, Mr. Hughes, desired to offer a few suggestions in order to find a point upon which the committee might agree. * * * It had been agreed, he said, to respect the integrity and sovereignty of China, and this naturally implied agreement by China to respect the integrity of other powers. Each power should be free to make the agreements necessary for the preservation of its proper interests; any general proposition going so far

as to derogate or limit the right to make agreements relative to fundamental legitimate interests would be one not easily defended. * * * There might be treaties affecting China not adverse to China, but it could be said that there would be no secret agreements. More than that could be done, however; there could be recorded an expression of a desire to be helpful to China in the preservation of the legitimate field of her administrative autonomy, and a reassertion, in connection with Paragraph 1 of the Root resolution, of the determination to do nothing in derogation of the sovereignty, independence and territorial and administrative integrity of China. * * * If there were embodied in the resolution relating to treaties the principles underlying the Chinese proposal, and an expression of the intention to do nothing in derogation of those principles, and to make no treaties or engagements in derogation of the sovereignty and administrative integrity of China, all that China desired would be attained.

The subsequent discussion followed the lines thus indicated. The resolution, as finally passed, was as follows:

That the powers attending this conference, hereinafter mentioned, to wit, the United States of America, Belgium, the British Empire, China, France, Italy, Japan, the Netherlands and Portugal, declare that it is their intention not to enter into any treaty, agreement, arrangement or understanding, either with one another or individually or collectively with any power or powers, which would infringe or impair the principles which have been declared by the resolution adopted Nov. 21 by this committee [i. e., the Root resolution].

THE FOUR-POWER TREATY

The fourth plenary session of the conference, held on Dec. 10, was one of the most important since the conference opened. The conclusion of a new four-power treaty between the United States, Great Britain, France and Japan was announced by Senator Lodge, who read the text of the treaty and delivered an address on its import. The agreement pledged the four powers to respect each other's insular possessions, to accept mediation in case disputes arose over those possessions, and to take concerted action if their rights in these island areas were threatened by any outside power. The compact was to run for ten years, and on its ratification the Anglo-Japanese

Alliance was to be automatically terminated. Senator Lodge stated that the treaty was subject to the signing of a separate compact between the United States and Japan concerning the Pacific mandate islands, especially Yap, and emphasized the fact that the treaty concluded did not affect questions within the domestic jurisdiction of any of the four signatory powers. A reservation note accompanying the treaty embodied these special provisions. Following Senator Lodge's speech of presentation, each of the heads of the respective delegations rose in turn to confirm formally their approval of the new compact, the importance of which was stressed by all. Dr. Sze, the Chinese delegate, expressed China's hearty approval of the agreement, and voiced his hope that a final nine-power agreement, including China, would crown the conference's work in bringing about a final adjustment of conditions in the Far East "on the basis of justice."

Secretary Hughes, as Chairman of the conference, opened the session. His whole address was devoted to a recapitulation of the progress of the conference, working through the Committee on the Far East, toward agreements tending to secure the territorial integrity and sovereignty of China. As he finished his review of each of the decisions reached by the Committee of the Whole (all of which have been given in detail in these pages), he called upon the delegations for a formal confirmatory vote, and the Chairman of each of the nine powers represented on the full committee rose in turn and signified his delegation's assent.

Secretary Hughes then called upon Senator Lodge to address the conference, stating that the Senator had an announcement to make.

TEXT OF THE TREATY

Prolonged applause greeted Senator Lodge as he rose and announced the conclusion of a treaty between the four great powers in regard to their

Pacific island possessions. He proceeded to read the text of the new treaty, which, as officially given out three days later, when it was signed, is as follows:

The United States of America, the British Empire, France and Japan, with a view to the preservation of the general peace and the maintenance of their rights in relation to their insular possessions and insular dominions in the region of the Pacific Ocean, have determined to conclude a treaty to this effect and have appointed as their plenipotentiaries [here follows list of delegates], who, having communicated their full powers, found in good and due form, have agreed as follows:

Article 1—*The high contracting parties agree as between themselves to respect their rights in relation to their insular possessions and insular dominions in the region of the Pacific Ocean.*

If there should develop between any of the high contracting parties a controversy arising out of any Pacific question and involving their said rights which is not satisfactorily settled by diplomacy and is likely to affect the harmonious accord now happily subsisting between them, they shall invite the other high contracting parties to a joint conference to which the whole subject will be referred for consideration and adjustment.

Article 2—*If the said rights are threatened by the aggressive action of any other power, the high contracting parties shall communicate with one another fully and frankly in order to arrive at an understanding as to the most efficient measures to be taken, jointly or separately, to meet the exigencies of the particular situation.*

Article 3—*This treaty shall remain in force for ten years from the time it shall take effect, and after the expiration of said period it shall continue to be in force, subject to the right of any of the high contracting parties to terminate it upon twelve months' notice.*

Article 4—*This treaty shall be ratified as soon as possible in accordance with the constitutional methods of the high contracting parties, and shall take effect on the deposit of ratifications, which shall take place at Washington, and thereupon the agreement between Great Britain and Japan which was concluded at London on July 13, 1911, shall terminate.*

The Government of the United States will transmit to all the signatory powers a certified copy of the procès-verbal of the deposit of ratifications.

The present treaty, in French and in

English, shall be deposited in the archives of the Government of the United States, and duly certified copies thereof will be transmitted by that Government to each of the signatory powers.

In faith whereof the above-named plenipotentiaries have signed the present treaty.

Done at the City of Washington, the thirteenth day of December, one thousand nine hundred and twenty-one.

THE RESERVATIONS

Following is the text of the reservation note, prepared by the American delegates and accepted by the other powers:

In signing the treaty this day between the United States of America, the British Empire, France and Japan, it is declared to be the understanding and intent of the signatory powers:

1. That the treaty shall apply to the mandated islands in the Pacific Ocean, provided, however, that the making of the treaty shall not be deemed to be an assent on the part of the United States of America to the mandates and shall not preclude agreements between the United States of America and the mandatory powers, respectively, in relation to the mandated islands.

2. That the controversies to which the second paragraph of Article 1 refers shall not be taken to embrace questions which according to principles of international law lie exclusively within the domestic jurisdiction of the respective powers.

Washington, D. C., Dec. 13, 1921.

SENATOR LODGE'S SPEECH

But to return to the conference proceedings of Dec. 10: After reading the treaty, Senator Lodge spoke in part as follows:

The signing of this treaty on the part of the United States is subject to the making of a convention with Japan concerning the status of the Island of Yap, and what are termed the mandated islands in the Pacific Ocean north of the equator, the negotiations in regard to which are almost concluded; and also to the reservations with respect to what are termed the mandated islands in the Pacific Ocean south of the equator.

It should also be observed that the controversies to which the proposed treaty refers do not embrace questions which, according to principles of international law, lie exclusively within the domestic jurisdiction of the respective powers. * * * Each signer is bound to respect the rights of the others, and before taking action in any controversy to consult with them. There is no provision for the use of force to carry out any of the terms of the agreement, and no military or naval sanction

lurks anywhere in the background or under cover of these plain and direct clauses.

The surest way to prevent war is to remove the causes of war. This is an attempt to remove causes of war over a great area of the globe's surface by reliance upon the good faith and honest intentions of the nations which sign the treaty, solving all differences through the processes of diplomacy and joint consideration and conciliation. No doubt we shall hear it said that the region to which this agreement applies is one most likely to give birth to serious disputes and that therefore an agreement of this character is of little consequence. History unhappily has shown that there is no corner of the earth so remote or so valueless that it is not capable of giving cause for controversy or even for war between the tribes and the nations of mankind. But the islands of the Pacific, although remote from the dwelling places of the mass of humanity, are far from valueless. The islands of the Southwestern Pacific extend over a vast space in that great ocean. They reach from the Marquesas on the east to the Philippines on the west; from the Aleutian Islands on the north nearly to the Antarctic Circle on the south. They are far more numerous than is generally realized. I do not know what the total number is, but I am informed as to the Philippines, and it appears that this group alone contains over 3,100 islands, of which 1,600 have names. We have probably heard of the remark of Robert Louis Stevenson, who, on leaving one of the Pacific islands, was asked how he was going to Samoa. He replied that he should just go out and turn to the left. These islands are, comparatively speaking, so dense that we might describe them in the words of Browning as the "sprinkled isles, lily on lily, that o'erlace the sea." And yet the region through which they are scattered is so vast that the isles of Greece and the Aegean Sea, so famous in history and in poetry, could easily be lost therein and continue unnoticed except by wandering seamen or stray adventurers. They range from Australia, continental in magnitude, to atolls, where there are no dwellers but the builders of the coral reefs or lonely rocks marking the peaks of mountains which rise up from the ocean's floor through miles of water before they touch the air. To the Western and Eastern world alike most of the islands on the Southwestern Pacific are little known, and there still lingers about them the charm so compelling and so fascinating which an undiscovered country has for the sons of men who are weary of main traveled roads and the trampled highways of trade and commerce which cover the surface of the patient earth.

Upon these islands still shines the drama of romance in the stories of Melville and the writings of Robert Louis Stevenson, to whom the South Seas gave both a grave and a monument imperishable as his own fame. But the Pacific islands are much

more than this. They possess certain qualities other than natural beauty and romantic charm which to many minds are more enticing. The larger ones are rich in many ways, fertile in the gifts of soil and climate, and in other forms of riches desired by men, which extend from the untold mineral resources of Australia to the pearls which are brought from the depths of the ocean. There are among them all great areas of forest and of plain fit for the support and prosperity of civilized man. In a word, they have a very great material value, largely undeveloped, and where this condition exists the desires of men will enter, and conflicting human desires have throughout recorded history been breeders of war. Thus far the wastes of the Pacific Ocean with all the crowding islands, except on the edges of the continents, have not been the scene of great wars; and yet not many years have passed since three great nations sent their warships to Samoa because there was a dispute in regard to those distant islands. Therefore an agreement among the nations controlling these islands has a very serious importance to the peace of the world.

We make the experiment here in this treaty of trying to assure peace in that immense region by trusting the preservation of its tranquillity to the good faith of the nations responsible for it. The world has just passed through a war the very memory of which makes us shudder. We all believe deep in our hearts that this hideous destruction of life, this suffering and ruin which still beset us, must not be permitted to come again if we can prevent it. If the nations of the earth are still in the innermost recesses of their consciousness planning or dreaming of coming wars and longing for conquests, no treaties of partition and no alliance can stay them; but if, as I firmly hope, the world has learned a frightful lesson from the awful experiences of the great war of 1914, then our surest appeal in order to prevent wars in the future must be to the hearts, the sympathies, the reason and the higher impulses of mankind.

Such an appeal we make today by this agreement among four great nations. We rely upon their good faith to carry out the terms of this instrument, knowing that by so doing they will prevent war should controversies ever arise among them. If this spirit prevails and rules we can have no better support than the faith of nations. For one I devoutly believe the spirit of the world is such that we can trust to the good faith and the high purposes which the treaty I have laid before you embodies and enshrines. Agreements of this kind, I know, have often been made before, only to fail. But there has been a far-reaching change in the mental condition of men and women everywhere. That which really counts is the intention of the nations who make the agreement. In this hour of trial and dark-

ness which has followed the war with Germany the spirit of the world is no longer the same.

If we enter upon this agreement, which rests only upon the will and honor of those who sign it, we at least make the great experiment and appeal to the men and women of the nation to help us sustain it in spirit and in truth.

ADDRESSES OF OTHER DELEGATES.

The heads of the various delegations then rose in turn to express approval, in the name of their respective Governments, of the treaty presented by Senator Lodge. M. Viviani, in speaking for France, declared:

In the name of the Government of the French Republic, whose authority I am borrowing now, and which speaks through my voice, I am glad to bring here, in its full amplitude, without any reticence or any reservations, our full adhesion to the pact that has just been read. * * * The day after the ratifications have been exchanged France will assume all the obligations that fall upon her by virtue of this pact, just as she will exercise the rights that she derives from the agreement. * * * After having listened to the documents, after having thus proved our willingness to work together, I think I am entitled to say that this conference, in which we have had the honor to participate and in which we have been proud to help, has fully and entirely succeeded.

M. Viviani ended with a plea for patience in dealing with the troubled situation of the present time, pointing out the importance of this "solemn oath" to establish peace entered into by the men whose Governments had fought side by side in the war, and declaring his belief "that peace will prevail in the world when justice has been satisfied."

Mr. Balfour, speaking for Great Britain, stressed particularly that part of the new agreement providing for the abrogation of the Anglo-Japanese alliance. He pointed out that he had been at the head of the British Administration which twenty years before had brought this alliance into being. Great Britain, he said, had been aware of all the suspicions and animadversions to which this alliance had given rise in the United States, and declared emphatically that nothing had been further from the thoughts of the original framers of

that alliance than any intention to touch, for good or evil, any of the interests of the United States. He admitted that the original motive of the alliance—the aggressive attitude taken by Russia and Germany in the Far East—had disappeared, and granted America's right to ask why the treaty was continued after its *raison d'être* had vanished. There was, however, another viewpoint which he cited as explanatory:

After all, that treaty or its predecessors had been in existence within a few days of twenty years. It had served a great purpose in two great wars. It had stood the strain of common sacrifices, common anxieties, common efforts, common triumphs.

When two nations have been united in that fiery ordeal they cannot at the end of it take off their hats one to the other and politely part, as two strangers part who travel together for a few hours in a railway train. Something more, something closer, unites them than the mere words of the treaty, and as it were gratuitously and without a cause to tear up the written contract, although it serves no longer any valid or effective purpose, may lead to misunderstandings in one nation just as much as the maintenance of that treaty has led to misunderstandings in another.

Thus, said Mr. Balfour, Great Britain found herself between two difficulties—the possibility of misunderstanding if she retained the alliance, and of misunderstanding if she abrogated it. She had long ago reached the belief that the only solution, like that offered by the present four-power treaty, was “that we should annul, merge, destroy, as it were, this ancient and outward and unnecessary agreement, and replace it by something new, something effective, which should embrace all the powers concerned in the vast area of the Pacific.”

Prince Tokugawa, speaking in the name of Japan, said:

It is needless for me to say that all Japan will approve the consummation of this work. Japan will rejoice in this pledge of peace upon the Pacific Ocean. As to the Anglo-Japanese agreement which is soon to terminate, I desire to associate myself with the words of appreciation expressed by our distinguished colleague, Mr. Balfour, with respect to the glorious service which that agreement has done for the preservation of peace and liberty.

The chief delegates of the other countries included in the Committee of the Whole, but not represented among the powers signatory to the treaty, all expressed their cordial approval of its terms. After Signor Schanzer for Italy, Jonkheer van Karnebeek for Holland, Dr. Alfred Sze for China, Baron de Cartier de Marchienne for Belgium and Viscount d'Alte for Portugal, had all signified their unreserved support, Secretary Hughes closed the session with the following words:

Gentlemen, we have been dealing with a very simple paper. Probably you would not be able to find an international document couched in more simple or even briefer terms, but we are again reminded that the great things are the simple ones. I firmly believe that when this agreement takes effect we shall have gone further in the direction of securing an enduring peace than by anything that has yet been done.

The treaty was formally signed without ceremony at Washington on Dec. 13, 1921, by each of the delegates from the four powers concerned. The debate over its ratification had already begun in the United States Senate the day before.

FOREIGN POST OFFICES TO BE WITHDRAWN.

Meanwhile, on Dec. 12, another important meeting of the Far Eastern Committee was held, at which a resolution was adopted for the voluntary withdrawal of foreign Post Offices from China on Jan. 1, 1923. Unanimity of the four chief powers was made possible by the formal assent of Japan. The agreement is conditioned on China's maintaining efficient service and continuing the supervision of the foreign Co-Director General of the Post Office Department. It gives China facilities for examining the mails to prevent opium smuggling and other contraband pending the coming into force of the agreement. Dr. Wang of the Chinese delegation explained the origin and rise of spheres of influence, and asked the powers represented to disavow their spheres. The communique issued by the committee is as follows:

The Committee on Foreign and Far Eastern Questions met Dec. 12, 1921, in the Pan American Building. The committee adopted the resolution on Chinese Post Offices as follows:

"(A) Recognizing the justice of the desire expressed by the Chinese Government to secure the abolition of foreign postal agencies in China, save or except in leased territories or as otherwise specifically provided by treaty, it is resolved:

"1. The four powers having such postal agencies agree to their abandonment subject to the following conditions:

"(a) That an efficient Chinese postal service is maintained;

"(b) That an assurance is given by the Chinese Government that they contemplate no change in the present postal administration so far as the status of the foreign Co-Director General is concerned.

"2. To enable China and the powers concerned to make the necessary disposition, this arrangement shall come into force and effect not later than Jan. 1, 1923.

"(B) Pending the complete withdrawal of foreign postal agencies, the four powers concerned severally undertake to afford full facilities to the Chinese customs authorities to examine in those agencies all postal matter (excepting ordinary letters, whether registered or not, which upon external examination appear plainly to contain only written matter) passing through them, with a view to ascertaining whether they contain articles which are dutiable or contraband or which otherwise contravene the customs regulations or laws of China."

Senator Lodge read the following letter:

"Japanese Delegation, Washington.

"Dec. 9, 1921.

"Dear Sir: With regard to the proposed abolition of foreign postal agencies, I am happy to inform you that my Government have no objection to the initiation of the arrangement as from the date in the draft resolution, that is, not later than Jan. 1, 1923.

"In announcing this agreement of my Government, I am instructed to state before the committee their desire concerning the maintenance of efficient Chinese postal service substantially to the following effect:

"Taking into account the fact that the proposed change in the postal régime in China cannot fail practically to affect the Japanese to a much greater extent than any other nationals, the Japanese Government wish to place on record their desire that a suitable number of experienced Japanese postal officers be engaged by China in the interest of the efficiency of the Chinese postal administration. The reasonableness of this desire will readily be appreciated when it is considered that the powers concerned have recognized the need of effective foreign assistance in the Chinese postal administration, and that no less than seventy British subjects and twenty Frenchmen are

in that service, while only two Japanese experts are employed in it. Yours respectfully

M. HANIHARA.

"Hon. Henry Cabot Lodge, Chairman Subcommittee for Foreign Post Offices in China."

Mr. Sze made the following statement:

"Since the establishment of her national postal service China has at all times handled with efficiency all foreign mail. She appreciates that, with the withdrawal of foreign Post Offices from her soil, the amount of foreign mail to be handled by her own postal system will be increased. This increase she undertakes to handle with the same efficiency by making such additions to the personnel and equipment of her postal service as will be required. As soon as the Siberian route is reopened for the transportation of foreign mail matter between Asia and Europe, steps will be taken to make arrangements for the transportation of such mail matter as was formerly transported by this route. As regards actual railway transportation of such mail, China will hold herself responsible for uninterrupted service upon those railways or sections of railways within her jurisdiction which are under her own control and operation."

The committee also entered upon the discussion of matters relating to radio stations in China, which was postponed for further consideration. It then took up the matter of spheres of influence in China, in connection with which Dr. Wang made the following statement, and the discussion was postponed until the next session of the committee:

"The phrase 'sphere of interest' or 'sphere of influence,' as it is sometimes called, is a more or less vague term which implies that the powers making such claims in China are entitled within their respective 'spheres' to enjoy reserved, preferential, exclusive or special rights and privileges for trade, investment and other purposes.

"Germany was the first to claim a sphere of influence or of interest in its crystallized form over the Province of Shantung; later the other powers made similar claims over other portions of the territory of China.

"These claims are either based on agreements between the powers themselves to which China is not a party, such as the agreement of Sept. 2, 1898, relative to railway construction concluded between British and German banking groups and sanctioned by their respective Governments, or based on treaties or agreements made with China under circumstances precluding the free exercise of her will, such as the convention with Germany for a lease of Kiao-Chau of March 6, 1898, and the treaties and notes of May 25, 1915, made with Japan in consequence of the latter's twenty-one demands on China.

"A tentative list of the various treaties relating to this matter and the so-called

spheres of interest of the various powers has already been circulated for your information. I need not, therefore, enter into a detailed examination of them at present.

"That China should have been thus divided into different spheres of interest is a most unfortunate state of affairs. In the first place, these spheres of interest seriously hamper the economic development of China. The powers claiming these spheres seem to take the view that certain portions of China's territory are reserved for their exclusive exploitation, without regard to the economic needs of the Chinese people. There have been instances where a nation is unwilling or unable to finance a particular enterprise, and yet refuses to allow it to be financed or carried out by other nations.

"In the second place, the whole system is contrary to the policy of equal opportunity for the commerce and industry of all nations—a policy which, so far as the common interests of the powers are concerned, is fair and equitable, and which has been adopted by this committee.

"A further objection to the spheres of interest is that there has been a tendency, under cover of economic claims, to further political ends, thus threatening the political integrity of China and giving rise to international jealousy or friction.

"It is gratifying to know that the United States and Great Britain have placed themselves strongly upon record as opposed to the continuance of spheres of interest in China. At the last meeting Mr. Balfour was good enough to say that spheres of interest in China are a thing of the past.

"The claims by the powers to spheres of interest have given rise to many misunderstandings and misgivings on the part of the Chinese people, and in view of the considerations which I have just advanced the Chinese delegation asks that the powers represented in this conference disavow all claims to a sphere or spheres of interest or of influence or any special interests within the territory of China."

Mr. Hughes then stated that he desired to announce an important matter to the committee, although it was outside the proceedings of the conference. It was a matter that had almost been concluded before the conference convened. He was happy to state that it had now been completely settled and an agreement reached between the United States and Japan. He referred to the matter of Yap and the mandated islands north of the equator. A convention would be put in final shape and signed by the two Governments shortly.

In closing the session, Secretary Hughes voiced the regret of the conference over the impending departure of M. Viviani, head of the French delegation after Premier Briand's return to France. M. Viviani replied

appropriately. After signing the four-power agreement on the Pacific, M. Viviani made his personal farewells to President Harding. He sailed on the same steamship which bore Marshal Foch back to France, on Wednesday, Dec. 14. "The Washington conference is a brilliant success," said M. Viviani just prior to his departure. "I am glad I have had a part in it." M. Albert Sarraut, the French Minister of Colonies, who is an authority on Far Eastern affairs, succeeded M. Viviani as head of the French delegation.

THE YAP AGREEMENT

The provisions of the agreement on mandates, referred to by Secretary Hughes, including the island of Yap, were given out by the State Department at Washington on Dec. 13. They were as follows:

The United States and Japan have reached an agreement with respect to the Island of Yap and the other mandated islands in the Pacific Ocean north of the equator. The negotiations have been in progress since last June and the terms of settlement were almost entirely agreed upon before the meeting of the Conference on Limitation of Armament. The last steps in the negotiations have now been taken. The points of the agreement are as follows:

1—It is agreed that the United States shall have free access to the Island of Yap on the footing of entire equality with Japan or any other nation, in all that relates to the landing and operation of the existing Yap-Guam cable or of any cable which may hereafter be laid by the United States or its nationals.

2—It is also agreed that the United States and its nationals are to be accorded the same rights and privileges with respect to radio-telegraphic service as with regard to cables. It is provided that so long as the Japanese Government shall maintain on the Island of Yap an adequate radio-telegraphic station, co-operating effectively with the cables and with other radio stations on ships and shore, without discriminatory exactions or preferences, the exercise of the right to establish radio-telegraphic stations at Yap by the United States or its nationals shall be suspended.

3—It is further agreed that the United States shall enjoy in the Island of Yap the following rights, privileges and exemptions in relation to electrical communications:

(a) Rights of residence without restriction, and rights of acquisition and enjoy-

ment and undisturbed possession, upon a footing of entire equality with Japan or any other nation or their respective nationals, of all property and interests, both personal and real, including lands, buildings, residences, offices, works and appurtenances.

(b) No permit or license to be required for the enjoyment of any of these rights and privileges.

(c) Each country to be free to operate both ends of its cables, either directly or through its nationals, including corporations or associations.

(d) No cable censorship or supervision of operation or messages.

(e) Free entry and exit for persons and property.

(f) No taxes, port, harbor or landing charges or exactions, either with respect to operation of cables or to property, persons or vessels.

(g) No discriminatory police regulations.

4—Japan agrees that it will use its power of expropriation to secure to the United States needed property and facilities for the purpose of electrical communication in the island, if such property or facilities cannot otherwise be obtained. It is understood that the location and area of land to be so expropriated shall be arranged each time between the two Governments, according to the requirements of each case. American property and facilities for the purpose of electrical communication in the island are to be exempt from the process of expropriation.

AS TO MANDATED ISLANDS

5—The United States consents to the administration by Japan of the mandated islands in the Pacific Ocean north of the equator, subject to the above provisions with respect to the Island of Yap, and also subject to the following conditions:

(a) The United States is to have the benefit of the engagements of Japan set forth in the mandate, particularly those as follows:

"Article III.—The mandatory shall see that the slave trade is prohibited and that no forced labor is permitted, except for essential public work and services, and then only for adequate remuneration.

"The mandatory shall also see that the traffic in arms and ammunition is controlled in accordance with principles analogous to those laid down in the convention relating to the control of the arms traffic, signed on Sept. 10, 1919, or in any convention amending same.

"The supplying of intoxicating spirits and beverages to the natives shall be prohibited.

"Article IV.—The military training of the natives, otherwise than for purposes of internal police and the local defense of the territory, shall be prohibited.

"Furthermore, no military or naval bases shall be established or fortifications erected in the territory."

(b) With respect to missionaries, it is agreed that Japan shall insure complete freedom of conscience and the free exercise of all forms of worship which are consonant with public order and morality, and that missionaries of all such religions shall be free to enter the territory, and to travel and reside therein, to acquire and possess property, to erect religious buildings, and to open schools throughout the territory. Japan shall, however, have the right to exercise such control as may be necessary for the maintenance of public order and good government, and to take all measures required for such control.

(c) Japan agrees that vested American property rights will be maintained and respected.

(d) It is agreed that the treaties between the United States and Japan, now in force, shall apply to the mandated islands.

(e) It is agreed that any modifications in the mandate are to be subject to the consent of the United States, and, further, that Japan will address to the United States a duplicate report on the administration of the mandate.

A formal convention embodying these provisions will be drawn up for signature and will be subject to ratification by the Senate.

The foregoing clause regarding missionaries will reopen more than a hundred Christian schools in the mandated islands, and will mean the continuation of seventy years of American Protestant and thirty-five years of Roman Catholic missionary work in that region of the Pacific. Under a ruling of the League of Nations the Japanese had closed these mission schools and established their own secular instruction in accordance with the educational laws of Japan.

AGAINST FOREIGN LEASEHOLDS

At the session held on Dec. 14, Dr. Wang for China continued his argument against foreign concessions on Chinese soil. Japan was ready to return her Shantung holdings under certain conditions, which the special Chinese and Japanese negotiators were still discussing, but she had declared that she would not withdraw from Kwangtung Province in South Manchuria, including Port Arthur and Dairen, because she had obtained these concessions by treaty. At this session of the Far Eastern Committee Dr. Wang undertook to combat Japan's retention of these leaseholds, and insisted that the treaty of re-

newal for ninety-nine years and other treaties were obtained by Japan under duress of the famous twenty-one demands in 1915, and that Japan was not entitled to the Kwangtung leasehold after the expiration of the original treaty in 1925. He argued that this and all the treaties resulting from the twenty-one demands should be abrogated. At this point Chairman Hughes, in view of the situation regarding Shantung and naval armaments, deemed it advisable to adjourn subject to the call of the Chairman. The official communique merely stated that "the committee took up the question of spheres of influence and special interests in China," and made no mention of the Chinese argument hinging on the abrogation of the twenty-one demands. The text of the official communique was as follows:

The Committee on Pacific and Far Eastern Questions met Dec. 14. The committee took up the question of "spheres of influence" and special interests in China, and the Chairman stated that, in view of the situation with regard to the matter of naval armament, it seemed advisable to give an opportunity for necessary conversations and discussions and also for meetings of the subcommittee on naval armament in order that an agreement on this subject should be reached at the earliest possible moment. It was also a fact that at this time the Chinese and Japanese delegations were concerned with the Shantung conversations, and in order that the greatest progress should be made in the conference, the Chairman took the liberty of suggesting that the General Committee on Pacific and Far Eastern Questions should have a short session this morning, and then should take a recess subject to the call of the Chairman. This suggestion was unanimously approved.

SEPARATE SHANTUNG PARLEY

China, through her delegation at the disarmament conference at Washington, consented on Dec. 1 to a discussion of her long dispute with Japan over the return of Shantung to Chinese sovereignty.

This dispute was precipitated by the clauses of the Versailles Treaty (Section VIII., Articles 156-158), which gave to Japan all the rights and privileges possessed by Germany before the war. Against this settle-

ment China vigorously protested, and when her protests proved vain, her delegates left the Paris Peace Conference, and refused to sign the peace treaty with Germany. Since that time, up to the opening of the Washington conference, the Chinese Government has steadfastly refused to open negotiations with Japan over Shantung, taking the ground that by China's declaration of war on the Central Powers, all the former German rights in Shantung, held on lease from the Chinese Government, automatically reverted to China, and that negotiations with Japan were superfluous.

The clauses of the Versailles Treaty embodying Germany's renunciation of her Shantung rights in favor of Japan were as follows:

Article 156—Germany renounces, in favor of Japan, all her rights, titles and privileges—particularly those concerning the territory of Kiao-Chau, railways, mines and submarine cables, which she acquired in virtue of the treaty concluded by her with China on March 6, 1898, and of all other arrangements relative to the Province of Shantung.

All German rights in the Tsing-tao-Tsinan-fu Railway, including its branch lines, together with its subsidiary property of all kinds, stations, shops, fixed and rolling stock, mines, plant and materials for the exploitation of the mines are and remain acquired by Japan, together with all rights and privileges attaching thereto.

The German State submarine cables from Tsing-tao to Shanghai and from Tsing-tao to Che-fu, with all the rights, privileges and properties attaching thereto, are similarly acquired by Japan, free and clear of all charges and incumbrances.

Article 157—The movable and immovable property owned by the German State in the territory of Kiao-Chau, as well as all the rights which Germany might claim in consequence of the works of improvement made or of the expenses incurred by her, directly or indirectly, in connection with this territory, are and remain acquired by Japan, free and clear of all charges and incumbrances.

On repeated occasions the Japanese Government, alleging its sincere intention to return to China, of its own accord, full sovereignty in Shantung, made overtures to the Chinese Government to open negotiations with it to this effect. To each overture the Peking Government returned a re-

fusal, reiterating the contention that Shantung belonged to China, and that she could not enter any parleys to fix conditions on which Japan would be willing to make the offered restitution. Meanwhile the Chinese people maintained a vigorous boycott of Japanese goods.

On the eve of the Washington conference, the Japanese Government again proposed—and the Chinese Government refused—a settlement of the controversy. The Chinese reply, transmitted to Tokio on Oct. 6, dealt in detail with the whole Japanese proposal and rejected every part of it in toto. In this reply China declared that the reason why she had found herself unable to enter negotiations was that "the bases upon which Japan claims to negotiate are all of a nature either highly objectionable to the Chinese Government and the Chinese people, or such to which they have never given their recognition." Kiaochau must be returned unconditionally; China would open Kiaochau Bay herself for trade and commerce to all friendly powers, and objected to the establishment of a purely Japanese settlement there; she declined joint operation with Japan of the Shantung Railway; the Custom House at Tsing-tao and other properties in Shantung should be handed back by Japan unconditionally, and Japan should withdraw her troops from the territory without delay. Such, in substance, was the tenor of this new refusal. To a further note from Tokio, urging a reconsideration, the Peking Government returned a no less emphatic refusal.

Such was the status of the controversy when the Washington conference assembled on Nov. 12. After Secretary Hughes's startling proposal of naval disarmament, the conference appointed its committees to take up and study in detail all matters relating to disarmament and the Far East. China appeared at session after session of the Committee on the Far East to state her case with regard to encroachments on her sovereignty, and vigorously attacked the system

of foreign Post Offices on Chinese soil, the regime of extraterritoriality, and the maintenance by various powers, including Japan, of military and police forces in China. Her delegation, however, made no move to bring the Shantung controversy before the conference.

The agreement of the Chinese delegates to open discussions with Japan was announced officially by Secretary Hughes at the session of the Far East Committee on Nov. 30. It was further announced that this acceptance had come as the result of proposals made by Secretary Hughes and Mr. Balfour, who had tendered their "good offices" to the delegates of the two countries.

The first separate meeting of the Chinese and Japanese delegates was held in the Pan American Building on Dec. 1. Members of the American and British delegations were present. The Chinese delegation was headed by Dr. Sze and Dr. Wellington Koo; the Japanese by Baron Kato. Secretary Hughes and Mr. Balfour opened the proceedings, expressing their gratification at the acceptance of their good offices, and their wish to extend these as far as necessary to aid the two countries to reach a final understanding. After the two Asiatic delegations had agreed to eliminate points of agreement, and to proceed at once to matters still in dispute, Secretary Hughes and Mr. Balfour retired, and the Chinese and Japanese negotiators then drew up plans of procedure, the remaining American and British delegates assisting as friendly observers. The results of the session were recorded in this official communiqué:

The conversations between the Chinese and Japanese delegates relating to the Shantung question arranged through the good offices of Mr. Hughes and Mr. Balfour commenced this afternoon [Dec. 1] in the Conference Room of the Pan American Building.

The meeting on the part of China was attended by Dr. Sze, Dr. Koo and Dr. Wang, accompanied by Mr. Tyau, General Wang, Mr. Hsu, Mr. Chao and Mr. Kuo; and on the part of Japan by Baron Kato, Mr. Hanihara, Mr. Debuchi, accompanied by

Mr. Saburi, Mr. Kimura, Mr. Saito and Mr. Shiratori. Mr. Hughes and Mr. Bal-four, accompanied by Sir John Jordon, Mr. Miles Lampson, Mr. J. V. A. MacMurray and Mr. Edward Bell, opened the meeting and retired, leaving the above-named American and British representatives to assist at the session.

The meeting discussed questions of procedure and decided to issue a communiqué at the end of each meeting.

POINTS OF AGREEMENT

The points on which the two conflicting powers were already in complete agreement, as shown by both Chinese and Japanese memorandums, were as follows:

1. The whole of Kiao-Chau shall be returned to China, which shall voluntarily open Tsing-tao as a port for foreign commerce and on conditions that are more or less in accordance with the special area system at Tientsin and Hankow.

2. German public property at Tsing-tao shall be turned over to the Chinese for administration, the Japanese proposal including guarantees by China for maintenance and operation. The Chinese formula takes such maintenance and operation for granted.

3. The former German railway rights, exclusive of the trunk line now in operation, shall be transferred to the International Consortium, under which the proposed extensions are to be constructed.

4. The mines along the railway are to be operated as joint Sino-Japanese enterprises.

Points on which there was substantial agreement were these:

1. The Japanese forces in Shantung are to be withdrawn as soon as possible. The Chinese condition is that the troops shall be withdrawn "within the shortest limited period." The Japanese proposal is that the troops shall be withdrawn at once, except for those guarding the railroad, which shall be withdrawn "upon organization by China of a police force to assume protection of the railroad," the question of the organization of this railway guard to be reserved "for future consideration between Japan and China." The Chinese stand is that the right of organizing a railway guard "shall be exercised exclusively by China."

2. The shares in the Shantung Railroad are to be divided equally between Japan and China, with China responsible for the indemnification of the private German owners.

3. Following an agreed settlement, Japan shall renounce all further rights in Shantung in the Chinese formula. The Japanese basis of agreement is that Japan specifically renounces "all preferential rights with

regard to foreign assistance in persons, capital and material, stipulated in the Sino-German treaty of March 6, 1898," but requires that China "undertake to respect the vested rights of all foreigners," and leaves the matter of the railroad guard open for arrangements with Japan.

POINTS IN DISPUTE

The differences at the outset were found to lie in the following points:

China makes the following stipulations that are not referred to in any way in the Japanese memorandum:

- "1. That Japan must surrender to China, as a part of the salt monopoly, the salt works established by the Japanese at Tsing-tao, Japan being given the right to make certain purchases of salt for a certain period.

- "2. That Japan share with China the surplus earned by the Shantung Railway during the period of Japanese operation.

- "3. That all the cable lines running out of Tsing-tao, being in Chinese territorial waters, be returned to China, as well as the Japanese wireless station at Tsing-tao, for the cost of which China will pay."

The Japanese memorandum lays down the following conditions which are not taken up in the Chinese formula:

- "1. China agrees to carry out the opening of suitable inland cities and towns in Shantung for foreign trade, regulations regarding such to be made by China after consultation with the powers.

- "2. China to name Commissioners empowered to arrange a settlement of the question along the lines laid down by Japan."

The sharp cleavage comes in the matter of the trunk line of the Shantung Railroad. The Japanese hold that this should be managed as a joint Sino-Japanese enterprise; the Chinese claim is that the line "should be solely operated by China."

Another distinct difference is included in the Chinese claim that the "sales of land by Chinese to Japanese through force and compulsion of the Japanese military command during the period of military operation shall be nullified."

The intensity of Chinese feeling regarding negotiation with Japan over Shantung was shown by the attempt made by delegations of Chinese merchants and students in Washington to prevent the Chinese delegates from attending this meeting. They met Dr. Wellington Koo and Dr. Shung Hui-wang, but Dr. Sze had already left. The objectors in their converse with the officials were orderly, but used emphatic language in denunciation of the agreement by the Chinese.

representatives to negotiate. Dr. Shung explained that the Chinese delegation was not entering into a direct negotiation with Japan, pointing out the difference between "mediation" and "good offices." In case of a deadlock, he added, the American and British delegates might offer suggestions, but these suggestions would not be as binding as in the case of actual mediation or arbitration.

Hsu Mel-tang and Shu Jen-shu, delegates in Washington of the Shantung People's Union, declared that all China wished "to have Shantung returned unconditionally." In a formal statement they said:

The Chinese delegation may accept the invitation by the American State Department to enter direct negotiations with Japan over the Shantung controversy, but unless the terms are such as to meet the demand of the people at home, any decision that may be reached will not be approved by them. * * * We wish to reiterate that no effort will be spared to obstruct any conclusion contrary to the wishes of the 38,000,000 souls involved in this famous award.

Mr. Hsu, who is the departmental chief of the Foreign Office of the Shantung Provincial Government, described his departure from Shantung as follows:

The scene of my departure was most pathetic. About 3,000 people saw me off at the station. Each of them carried a white flag, which meant that we need not return to China until Shantung returns with us to China.

SHANTUNG RAILWAY DISCUSSED

The discussions were continued on the afternoon of Dec. 2, when the delegates at once attacked the heart of the dispute, namely, the disposition of the Kiao-Chau-Tsinan Railway. The Chinese reiterated the view presented at the Paris Peace Conference—that both the ownership and administration of the railroad must be given to China. Japan insisted on the view expressed in her note to China dated Sept. 7, in which she offered joint control and administration of the railroad. The conversations went no further than a definition of the real issue. In the course of the session both delegations fre-

quently appealed to the American and British observers. The attitude on both sides was frank and conciliatory. The spokesman for the Japanese declared later that Japan, for economic reasons, was prepared to deal generously with China in order to break down the boycott of Japanese goods. Dr. Koo, for China, re-emphasized the Chinese view that these conversations could not be interpreted as "direct negotiations," and defined them rather as "an informal conference around the table, collateral with the Washington conference proper."

The official communique issued on Dec. 2 preceded the report of that day's session by the full statements made by the heads of delegations the day before. The communique in full was as follows:

At the first meeting of the Chinese and Japanese delegates, held Dec. 1, at the Pan American Building, relative to the question of Shantung, and in response to the opening remarks of Mr. Hughes and Mr. Balfour expressing their gratification in the acceptance on the part of China and Japan of their good offices and their desire to extend their friendly intervention with a view to securing a fair and satisfactory arrangement of this question, Baron Kato and Dr. Sze replied as follows:

"JAPANESE STATEMENT ON THE SHANTUNG QUESTION, DELIVERED AT THE MEETING OF THE JAPANESE AND CHINESE DELEGATES ON DEC. 1:

"We are sincerely gratified by the opportunity which has been afforded us to meet with the representatives of China in an attempt to arrive at a satisfactory adjustment of the Shantung question. We cannot let this occasion pass without expressing our deep appreciation of the good offices of Secretary Hughes and Mr. Balfour, which have made the present meeting possible.

"It is needless for us to assure you that Japan is eagerly looking forward to an early settlement of this long-pending controversy. We may add that it is the desire of the Japanese people to eliminate all cause of misunderstanding between China and Japan, in order that these two neighboring nations in the Far East may live in future in perfect harmony and accord. And we have no doubt that this sentiment is fully shared by our Chinese friends.

"We are not unmindful of the difficulties with which the Chinese Government is being confronted in entering into direct negotiations on the subject. We are, however, confident that, if approached from a broader perspective, the question should be susceptible of a speedy solution. The true and

vital interests of the two nations are in no way conflicting.

"It is unfortunate that the real issues involved have been very largely misunderstood in the popular mind. The term 'Shantung question' is itself a misnomer. The question is not one which affects the whole Province of Shantung. The important points now awaiting adjustment relate only to the manner of restoring to China an area of territory less than one-half of 1 per cent. of the Shantung Province, and also to the disposition of a railway 290 miles long, and its appurtenant mines, formerly under exclusive possession and management of the Germans. There is absolutely no question of full territorial sovereignty; that is being exercised by China throughout the length and breadth of the province.

"Careful examination of the correspondence recently exchanged between Japan and China will show that the divergencies of opinion between the two Governments are more apparent than real. We are hopeful that this meeting will be able to determine in common accord the essential terms of settlement, leaving the matters of detail or of local nature for arrangement by the Commissioners of the two Governments to be specially appointed for that purpose.

"STATEMENT BY MR. SZE ON BEHALF OF THE CHINESE DELEGATION:

"Mr. Hughes and Mr. Balfour: I desire first of all to express on behalf of the Chinese delegation the sincere thanks and appreciation for the friendly and good offices that you two gentlemen have offered on behalf of your two countries in bringing about conversations with a view to a fair settlement of the Shantung question. I need not add anything more to what I said yesterday at the general meeting of the full committee.

"The Shantung question is one of vital importance to China. Its importance to China and the difficulties connected therewith are too well known to all to need any remarks by me today. It is universally admitted that the condition is unsatisfactory and that an early and speedy solution, fair and just and satisfactory to the desires and aspirations of the Chinese people, is necessary.

"I join with you all in the hope that our conversations will be fruitful of results, resulting in a fair and just settlement.

"With reference to the observation of Baron Kato that the Japanese Government was not unmindful of the difficulties which have confronted the Chinese Government in regard to the method of settling this question, the Chinese delegation is gratified that these difficulties have been perceived by the Japanese delegation—difficulties which have made necessary the resort to the present procedure, which, under the good offices of Mr. Hughes and Mr. Balfour in behalf of their respective Governments, has been initiated."

This conversation was resumed this afternoon, together with the American and British representatives. Prince Tokugawa replaced Baron Kato in representing Japan at this session.

It was agreed on the part of the two delegations that in discussing the Shantung question they would take the actual facts and not the academic viewpoints as the basis of discussion, which will be for the sole purpose of promoting mutual understanding and good neighborhood between China and Japan and without giving ground for the least inference that the discussion will be based on the treaty arrangements which have been in dispute between these two countries or others.

An interchange of views on the question of Kiao-Chau-Tsinan Railway then took place and this discussion will be continued at another meeting.

CUSTOMS AND PREFERENTIAL RIGHTS

The representatives of China and Japan continued their separate negotiations regarding Shantung on Dec. 5. The Chinese acceded to the Japanese proposal that the Shantung Railway matter be postponed, and that they proceed at once to discussion of customs and preferential rights in Shantung. Japan consented to waive all such preferential rights (which passed from Germany to Japan under the Treaty of Versailles), and further agreed that the maritime customs of Tsing-tao, the port of Kiao-Chau, should become an integral part of the Chinese maritime customs under certain conditions. The official communique issued after the meeting read as follows:

The Chinese and Japanese delegates met on the afternoon of Dec. 5 at the Pan American Building. Mr. Hanihara made the following declaration:

"Japan will renounce all preferential rights with regard to foreign assistance in persons, capital and material, stipulated in the Sino-German treaty of March 6, 1898."

The question of the maritime customs of Tsing-tao was then discussed. After an interchange of views, the negotiators have decided that the said customs will be made an integral part of the Chinese maritime customs, with the understanding, first, that the Chinese Government will make a recommendation to the Inspector General of the Chinese Maritime Customs, with a view to permitting the Japanese traders at Tsing-tao to communicate with the said customs in the Japanese language; second, the Chinese Government will make a recommendation to the Inspector General of the Chi-

nese Maritime Customs that in the selection of a suitable staff for the Tsing-tao customs consideration be given within the limits of its established service regulations to the divers needs of the trade of Tsing-tao.

With these two understandings, the Japanese delegates waived all the privileges formerly enjoyed by the Germans in relation to the maritime customs at Tsing-tao. The provisional agreement between Japan and China relative to the maritime customs office of Tsing-tao of Aug. 6, 1915, will be automatically abrogated when the above-mentioned decision comes into effect.

Mr. Hanihara, the chief Japanese negotiator, issued a public statement on the same day, in which he explained in some detail the Japanese view in respect to Shantung. The salient points of the statement were as follows:

The American people believe that the Japanese have overrun this Chinese province, that they control the railways, the Government and everything else. This is untrue. The actual condition is this: There is a north and south railway which crosses the province, a section of the main line from Peking to Nanking. A part of that line is controlled and operated by the Chinese themselves and a section by British interests. From that main road runs a line eastward to the port of Tsing-tao, Kiao-Chau Bay. That line, 289 miles long, is now held by the Japanese. Policing it and stationed at the terminals at Tsinan-fu and Tsing-tao, we have 2,700 men guarding the line. The charge that this small force is holding the whole province, with its 40,000,000 Chinese, in subjection pays Japan a great compliment. * * * The leased territory of Kiao-Chau covers an area of only 200 square miles, which is less than one-half of 1 per cent. of the area of the whole province. We took it from Germany, not from China. Not only did we take nothing from our colossal neighbor, we have actually offered to restore the port to her and to give her a half right in the former German railway. We Japanese considered that for the cost we paid in blood and money we had some right to compensation, but we planned that that compensation should come from Germany only. What we have intended is that those mining rights which the Germans held and a half share in the railway—not all the railway, but the 289 miles that run from the port to the provincial capital—should be our compensation. Our way of thinking may be peculiar, but we generally doubt whether Englishmen or Americans, placed as we are in the Far East, in absolute need of raw materials and markets for our manufactures, would have made so generous an offer to China. * * *

We, for our part, have nothing but friendly feelings toward the Chinese, and we are willing to come to an amicable understanding with them. But we do not want the railway or the mines to fail to function. If they did the Chinese in Shantung, who live by means of these enterprises, would suffer equally with the Japanese, who would be deprived of raw materials and of markets. We have already agreed to withdraw 2,700 men as soon as the Chinese authorities provide guards to protect the line. We have agreed to hand back Kiao-Chau, the leased territory, to China, if she will open it and other places along the railway for the trade and commerce of all foreigners—not of Japanese alone. We have agreed in the general conference to the policy of the open door, which we Japanese have not everywhere obtained nor enjoyed up to the present. The other matters in dispute in the question of Shantung are of insignificant importance. The Chinese authorities are in control of Chinese affairs everywhere throughout the province.

The separate negotiations regarding Shantung continued in secrecy for the next two weeks. The main obstacle to agreement lay in the conditions attached by Japan to the return of the Tsing-tao-Tsinan-fu Railway. China rejected a Japanese loan and asked the right to purchase on three years' time; Japan sought to spread payment over twenty years; China finally consented to ten. The Japanese yielded on a five years' option to complete the purchase. The two delegations, however, finally reached a deadlock over initial payments and Japan's demand to put Japanese officials in control of the line. The final communique said:

At the seventeenth meeting of the Chinese and Japanese delegates (Dec. 20) the two delegations discussed the plan of payment in cash of China's liabilities regarding the Shantung Railway properties and also an alternative plan of the payment in Chinese Treasury notes, having special reference to the question of the appointment by China of Japanese experts in the service of the Tsing-tao-Tsinan-fu Railway, as proposed by the Japanese delegation. These questions involved points on which it was found necessary for the Japanese delegation to consult with its home Government.

News reached Washington on Dec. 19 that General Chang-Tso-lin, the powerful military Governor of Manchuria, had entered Peking, and

that the Chinese Cabinet had resigned as a preliminary step toward a complete reorganization of the Government. It was stated that negotiations had already been begun for the reunion of the two warring sections of China under a new President. The overthrow at Peking had no immediate effect upon China's disarmament delegation at Washington.

LAND ARMAMENT

After Premier Briand's address of Nov. 21 setting forth the attitude of France regarding her army, and after the responses of the different nations (all published in the December CURRENT HISTORY), the Committee on Armaments referred the whole subject of land armament to a committee consisting of the plenipotentiary delegates of the five powers. This committee discussed the subject for two hours on Nov. 23, and finally referred it to a subcommittee of five, consisting of a delegate from each of the leading nations. The full committee issued a report of the proceedings, as follows:

The committee on the subject of the limitation of armament met in the Pan American Building on the morning of Nov. 23. All the members were present, except Baron Shidehara and Signor Meda. After a general discussion of the subjects relating to land armament and the agencies of warfare, these were referred to the subcommittee, consisting of the heads of the delegations, with instructions to bring in an order of procedure with regard to these subjects and to appoint subcommittees to deal with the questions relating to poison gas, aircraft and rules of international law.

The subcommittee, which met at 5 o'clock, made public a communiqué outlining the result of its deliberations, as follows:

"The subcommittee decided to create three boards of experts, each member of the subcommittee to nominate the members of these boards as follows:

"1. With respect to aircraft, their quantity, character and use.

"2. With respect to poison gases.

"3. With respect to appropriate rules for the conduct of war.

"The experts are to conduct their inquiries under the direct supervision of the subcommittee, composed of the heads of the five delegations. As each subject is prepared for the discussion of the full committee it will be reported to it."

Mr. Briand took leave of his colleagues,

expressing his regret at being obliged to depart. The other members of the subcommittee expressed their regret that he was obliged to leave them and their appreciation of the great part he had taken in the proceedings.

The committee then adjourned, subject to the call of the chair.

BRIAND'S FAREWELL STATEMENT

Just before his departure from Washington, Premier Briand made a statement before the Committee on Land Armaments supplemental to his public address. In this farewell statement he expressed his views as to the maximum disarmament possible by his country consistent with safety. The official summary of his speech was as follows:

M. Briand asks the floor in order to express his keen regret at being forced to give up his collaboration in the work of the conference, as this day is the last one that he will spend in Washington. He considers it one of the greatest honors of his political life to have been able to participate, even for a time, in the work of the conference, following the noble, generous and courageous initiative taken by the American Government.

He wishes to say once more something which he was unable to express at the last plenary session with all the emotion which he felt; how deep was his gratitude to his colleagues for the words spoken by them and addressed to France. It is certain that the exchange of friendly declarations which has taken place before the whole world has enabled Europe to take a great step forward on the road to peace; it has, in fact, brought about that moral situation without the existence of which it would have been hard, indeed, to reach a positive result.

No longer will any one be able to say that the armaments of France mask offensive intentions. Speaking frankly, it was practically a necessity for France that the words be uttered; she has been so sharply attacked; she has been credited with so many hidden motives that in foreign lands some have ventured to doubt her real purposes.

Tomorrow—and this is one of the reasons for which M. Briand must return to Paris—the French Government and the French Parliament will take up the consideration of the military problem as it presents itself after the war and the victory; they will take it up with a desire to make the greatest possible progress in the realm of the reduction of military burdens. The duration of military service will very probably be reduced by one-half. Thanks to the words spoken at Washington, these decisions will be reached in a serene atmosphere.

M. Briand wishes to add that he departs

without anxiety, since, in his place, he leaves M. Viviani, who, during his previous trips to America, created for himself universal sympathies which have almost made him an American citizen. It is certain that in his hands the interests of France will be well safeguarded.

The French Parliament, as M. Briand indicated in this statement, was then about to act upon a bill decreasing the period of compulsory military service in France from three years to eighteen months and the number of classes from three to one and a half. A class numbers about 250,000 men. This law contemplates the reduction of the French Army by about 50 per cent., in accordance with the program laid down by M. Briand in his speech of Nov. 21 before the Washington conference. Before the war France had an army totaling about 900,000. The present strength of her army, according to a report of the Army Commission laid before the Chamber of Deputies on Nov. 30, is 818,000, made up of 591,000 whites, 117,000 natives of North Africa and 110,000 natives of other colonies and foreigners. M. Briand's program aims to reduce the total to about 525,000, made up of 375,000 Frenchmen resident in France and 150,000 Moroccans, Algerians, Senegalese and Indo-Chinese. The main reduction is in the home forces, which numbered 750,000 before the war. The Army Commission's report, however, made public a few days after M. Briand's speech, estimated that under the Government plan the army would still be 661,000 strong next Summer.

THE CURZON EPISODE

Premier Briand left Washington on the morning of Nov. 24. Members of the French delegation and representatives of the State Department, headed by Secretary Hughes, saw him off. That night at a dinner given by the Lotos Club in New York he made a similar plea for France's need of a comparatively large army, and his words left a deep impression. The Premier sailed from New York on the 25th. Before leaving, he was interviewed regarding the sensational

address delivered by Earl Curzon in London on Nov. 24, in which the British Minister for Foreign Affairs, referring to France's treaty with the Turkish Nationalists and to her large standing army, warned her against a policy of isolation, which, he intimated, would lead her to disaster. Lord Curzon said in part:

In what lies the real strength and protection of our great ally across the Channel? * * * It exists in the fact that the conscience of the world and the combined physical force of the world—and in that I include America—will not tolerate the reappearance in the heart of Europe of a great and dangerous power which is always rattling the sword in the scabbard and which is a perpetual menace to the peace of the world. * * * The sole question of the recovery of the peace of the world is not the old idea of splendid isolation by any individual power—there is not much splendor in isolation, after all—it is harmonious co-operation of powers as a whole.

M. Briand's informal reply to Lord Curzon contained these sentences:

As regards disarmament, France will have gone as far along this road as any other country without exception. In effect, on land, in spite of the dangers which she undergoes, she has already spontaneously reduced her "metropolitan army" by a third. In spite of the law which keeps three classes with the colors, there are actually only two. Furthermore, the Government has introduced a bill into Parliament which reduces the period of service by half, and in consequence the number of effectives in the same proportion. It is much more than the other nations will do as regards navies, since the naval reductions envisaged do not exceed 40 per cent. * * *

France, which has 60,000,000 subjects in her colonies, whose coasts are on three seas, which consequently needs a navy, has seen her capital ships reduced by the effects of the war from three squadrons to a single squadron. She is prepared on this ground to realize an accord with her friends and allies for the same proportional reduction.

Consequently in the sum total of her forces of national defense, land army and sea army, it can be said that France will have made an effort at reduction superior to that of any other nation, and the merit will be greater because she is in veritable danger. Our English friend ought to recognize the fact that the German fleet is at the bottom of the sea, and that consequently it is no longer a menace either for England or for us. But the seven million men of the German armies are still very much alive and available. It is a fact that France must realize and consider.

This incident, together with the belief in allied circles that France would

demand a submarine tonnage equal to Great Britain and a capital ship tonnage equal to Japan's, caused sharp comment. The comment was not made less by Premier Briand's ironical remark that "no doubt England needed her capital ships to fish for herring, and France needed her submarines to study marine flora." The French press at first was filled with hostile references to Lord Curzon and to England, but by the time M. Briand landed at Havre (Dec. 2) its tone had become calmer. The incident apparently was closed, but it left a profound impression of the danger that threatened the Entente.

Premier Briand's speech on France's army had contained charges that Germany was still armed. Chancellor Wirth on Nov. 28 read a note before the Reichstag Committee on Foreign Affairs denying the truth of M. Briand's assertions and protesting against the calumnies in his speech. It was at first intended that this note should be sent to Secretary Hughes at Washington, but after a heated debate the committee decided against sending it.

NAVAL ARMAMENT

Provisional agreement on the question of naval ratios was reached on Dec. 20. The attempt to fix a ratio acceptable to the three main powers—the United States, Great Britain and Japan—and to bring this into a suitable relation with the capital ship proportion to be allotted to France and Italy, proved to be one of the most difficult tasks which the conference was called upon to perform. The Committee on Armaments discussed all phases of the subject in repeated sessions in camera held through the last week in November and the first two weeks in December. The details of how the committee solved the problem of satisfying the Japanese desire to retain her new large battle cruiser—the Mutsu—by a readjustment of the original American plan, will be found in the introductory pages of this article. The established ratio (5-5-3) for the United States, Great

Britain and Japan was preserved—after allowing the last named country to retain the Mutsu—by Japan's consenting to scrap the Settsu, a ship of an older type, while the United States and Great Britain were similarly allowed to retain certain capital ships originally to have been destroyed, and to scrap others that were to have been retained.

This whole agreement, however, was made contingent on the reaching of a proportionate ratio for France and Italy. The French delegation, headed by M. Albert Sarraut, held out for a proportionate ratio of 3.5, to be represented by a squadron of ten capital ships of 35,000 tons each, construction on which was to be begun in 1925, and which were to be fully completed by the end of the ten-year naval holiday accepted by all five powers. The French argument was that a naval armament of this size was necessary for France's protection against Germany. Secretary Hughes, however, supported by the British and Italian delegates in the Naval Armament Committee, opposed such a large ratio for France, and when his counterproposal of 1.75 was rejected by the French delegation, laid the whole controversy before Premier Briand through Mr. Harvey, the American Ambassador at London. Premier Briand, following his interview with Mr. Harvey, cabled to the French delegation at Washington accepting the 1.75 ratio on condition that France be allowed a strong proportion of auxiliary craft and submarines. At the meeting of the Subcommittee on Naval Limitation held on Dec. 20, Secretary Hughes read the text of a long cable message which he had sent to Premier Briand, explaining in detail why acceptance by France of the 1.75 ratio was absolutely necessary; he also read M. Briand's reply consenting to this ratio with the reservations stated above.

HUGHES'S FORCEFUL LOGIC

After sketching the revised plan, Mr. Hughes pointed out that the change from the original plan was

slight, but that the sacrifices agreed to were substantially the same. Sixty-eight capital fighting ships were to be scrapped by the three chief naval powers—a total of 1,861,000 tons—as against the sixty-six ships of the original proposal, representing a total of 1,878,000 tons. Secretary Hughes then emphasized the fact that this final agreement depended on “an appropriate agreement with France and Italy.” Italy, however, was anxious to reduce her capital ships because of the requirements of her economic life, and would make no opposition to the new scheme if France agreed; hence, the note added, the success or failure of the plan depended on the attitude of France. Secretary Hughes thus

marshaled the reasons why France should agree:

France has seven dreadnoughts, with a tonnage of 164,500. Reducing in the same proportion as the United States has reduced, her tonnage of capital ships would be fixed at 102,000, or if the pre-dreadnoughts of France were taken into calculation on her side, although omitted on the side of the United States, the total tonnage of France's capital ships being taken at 221,000, a reduction on the same basis would reduce France to 136,000 tons.

This would be the sacrifice of France if she made the same sacrifice that has been made by the other powers. We do not ask this. We are entirely willing that France should have the benefit of an increased tonnage, which would preclude the necessity of her scrapping her dreadnoughts; that is to say, her present strength in dreadnoughts is about 164,000 tons, and there is not the slightest objection to allowing this and an

“Keep your eye on that conference, my boy; they may save you from becoming a hero”

increase over this, or a total of 175,000 tons, which would be more than 70,000 tons over what she would have on the basis of relative strength as it exists.

If it be said that France desires a greater relative strength, the obvious answer is that this would be impossible of attainment. If such an agreement as we are now proposing were not made, the United States and Great Britain would very shortly have navies of over a million tons, more than 6 to 1, as compared with France, and France would not be in a position to better herself, much less by any possible endeavor to obtain such a relative strength as has been suggested.

In short, the proposed agreement is tremendously in favor of France by reducing the navies of powers who not only are able to build, but whose ships are actually in course of construction, to a basis far more favorable to France than would otherwise be attainable. The proposed agreement really doubles the relative strength of the French Navy.

Under these circumstances, said Secretary Hughes, the French proposal to construct a new fleet aggregating 350,000 tons, was excessive, and, he was convinced, impossible of realization. He further cited France's economic needs, and deprecated the placing of hundreds of millions in battleships, ending with an earnest request that the French Premier give careful consideration to the points cited.

FRENCH PREMIER'S REPLY

Premier Briand in his reply assured Secretary Hughes that France wished

to do all in her power to reconcile the conflicting viewpoints compatible "with the vital interests of France." He then stated that he had "given instructions to our delegates in the sense that you desire." But though France thus accepted the 1.75 ratio for capital ships, he stated, this acceptance must be conditional on the obtaining of a larger proportion of auxiliary craft and submarines. The salient part of his argument was as follows:

In the question of naval armament, the reoccupation of France is not the offensive point of view, but uniquely the defensive point of view. * * * So far as the defensive ships are concerned (light cruisers, torpedo boats and submarines), it would be impossible for the French Government, without putting itself in contradiction with the vote of the Chambers, to accept reductions corresponding to those which we accept for capital ships under this formal reserve which you will certainly understand.

The idea which dominates the Washington conference is to restrict naval armaments which are offensive and costly. But I do not believe that it is the program to deny to a nation like France, which has a large extent of coasts and a great number of distant colonies, the essential means of defending its communications and its security.

This correspondence left the problem still far from a solution, and a meeting of the Committee of the Whole was called for Dec. 22 to wrestle with it.

THE SCAPEGOAT OF THE MARNE

FIELD MARSHAL KARL VON BUELOW, who commanded the German Second Army in France in 1914, died in Berlin on Aug. 31, 1921, aged 75. He had been on the retired list since June, 1916. Born in 1846, he won distinction in the wars of 1866 and 1870. On the outbreak of the World War in 1914 he entered Belgium in command of the Second Army, a brigade of which occupied Liège on Aug. 7, and pressed on to the Marne.

His own explanation of Germany's defeat, published by him in 1920,

was that von Kluck had removed two of von Buelow's corps on Sept. 7. During the retreat that followed, which was really the beginning of the end for Germany, and during the battle of the Aisne, the First and Seventh Armies were placed under von Buelow's charge by the German High Command, and the venerable Field Marshal was thus made the scapegoat for von Kluck's incompetent handling of the advance on Paris, as a result of which all Germany's hopes of a swift termination of the war were dashed to the ground.

GREAT PERSONALITIES AT THE ARMS CONFERENCE

BY CORNELIUS VANDERBILT JR.

Eyewitness descriptions of the dominant figures of the various delegations—Pen portraits of Balfour, Briand, Viviani, and the enigmatic Japanese delegates, Kato and Tokugawa—Young China represented by Dr. Sze and Dr. Wellington Koo

WHEN President Harding issued his historic invitation to the great powers, not overlooking China, the event was considered by them of sufficient importance to justify them in sending their foremost statesmen to Washington. War rumblings were being heard over the earth. Naval armaments were piling up.

Aside from the question of great dreadnoughts, the vital importance of a congress of nations to the world's economic interests was realized. With Europe an economic desert, world interest was centring on the Pacific and the Far East. China loomed as the great prize of the nations. She lay under the ominous shadow of Japan's far-flung ambitions. The "Open Door" to the Orient, as defined by Hay and Roosevelt, was well on its way to being shut. Its further closing would create a serious obstacle to Occidental trade with the Orient. Other questions were involved, but they were secondary to the two great outstanding ones—naval armaments and the "Open Door."

The world's foremost personalities came to Washington to thrash out these intricate problems. They arrived with an apparent unanimity of purpose that spoke well for the success of our President's great adventure into a new field of diplomacy. The Monroe Doctrine has stood steadfastly for a hundred years. History will probably refer to the great principle governing this conference as the "Harding Doctrine," a great instru-

ment for peace welded into definite form by our twentieth century statesmen, Hughes, Root, Lodge and Underwood, and given the stamp of world ratification at the hands of Balfour, Geddes, Briand, Viviani, Kato, Tokugawa and Schanzer.

To obtain a clear perspective of these powerful personalities it will be necessary to view them actually at work in the foreground of the conference and under the arc light of world observation. Let us imagine ourselves present at one of the plenary sessions of the conference. At one end of the council table sit the Americans in whose keeping our forty-eight States have placed a sacred trust. The dominant figure is Hughes, who became the statesman of the hour when he sent his famous "Naval Armaments Must Cease Now" address thundering round the world—Hughes, the dignified and imperturbable lawyer-statesman, spokesman of new world diplomacy and frank Americanism. Tall, straight, legal-minded, doubly determined, icy cold in temperament—that is Hughes, the Secretary of State, conceded by all to be the right man for the place.

Next to him sits the scholarly and oratorical Massachusetts Senator, Henry Cabot Lodge, frail of body, but with a wisdom in statecraft that would guarantee safety to any ship of State. He is very much the Boston gentleman. Lodge has a peculiarly individualistic relation with this conference. Mainly through his opposition the Versailles Treaty went

to the Senatorial guillotine; his influence helped to conceive another great experiment, the "Four Powers Pact," which must go through the same treadmill. He is, perhaps, a greater aristocrat than Hughes, and his classical oratory is generally far above the heads of college undergraduates, and further above the heads of the people. Nevertheless, he is a statesman through and through.

Beside him sits the venerable Elihu Root, who has trod every parliamentarian path in Washington and Europe, besides being an ex-Secretary of State, ex-Secretary of War, and this country's representative at The Hague Tribunal. In his face are the iron-willed qualities that make for successful statesmanship. Though he does not address the conference, he commands the greatest respect from the foreign delegates, most of whom have had diplomatic dealings with him in the past. He carries his years somewhat heavily—he is 76 years old—but his brain is as keen as an eagle's eye. Watching his movements and mannerisms, one says to one's self that Roosevelt knew his man when he chose Root for his Cabinet. Harding did well to seat him at this conference.

Oscar W. Underwood is the sole Democrat of the delegation. This rotund Alabaman, with a face as set as the features of a Rodin statue, is by no means the least of the delegates. Like Root, he is the essence of silence, but when he speaks it is with authority. He seems more of the people than his three colleagues.

Britain's ablest statesmen sit at the left of the Americans, and are certainly a match for them. Balfour, Geddes, Beatty, Lee and Cavan form a group of interesting but noticeably diverse personalities.

The famous Balfour, of towering stature and commanding personality, is acknowledgedly one of the outstanding figures of the conference. He is the essence of smiling urbanity; he is the British aristocrat to the nth degree; every word and movement of his denotes the noble Cecil

stock from which he sprang. Despite these qualifications of birth, he seems to lean more toward the people than our statesmen—or is it by virtue of transatlantic diplomacy that he does so? His features, softened by age, are really spiritual. As an orator Mr. Balfour is not a Briand, or a Lodge, or a Viviani. His delivery is somewhat hesitant, but it sounds wholesome and extemporaneous and does not appear to detract from the forcefulness of his argument. There is a warmth and an air of unaffected democracy surrounding this old fighter for the British Empire that pleases Americans.

The heavy-limbed, rugged-faced Briand looms above the French delegation like a Teneriffe. Out in Arizona or New Mexico he would be taken for one of the prosperous citizens of the town—a product of hard work and extreme frugality. Like most of his countrymen, however, he is emotional and given to gestures. He is by far the most convincing speaker at the table. Watching him, one gains the conviction that Briand is a man who would shrink from no effort, no sacrifice, which would be for the good of France.

Viviani has not the magnetism of the French Premier, though he is Briand's equal in speech. Their personalities are as far apart as the poles. Briand is slow in action, Viviani as quick as thought. Both statesmen constitute a perfect balance in bringing out the French viewpoint. Briand is carefully groomed; Viviani more carelessly so. France did well in sending these two statesmen to the conference.

What of the mystifying and paradoxical personalities of the Orient? The clannishness and self-isolation of the Japanese are noted by every one. Are these mannerisms due to difference in thought and language or to shyness and supermodesty? This question puzzles the Occidental. The British, French, Americans—even the Chinese—are "mixers," more or less, but the Japanese have a pen-

chant for keeping to themselves. None of the Oriental delegates matches the average Westerner in stature; in fact, all appear as if their chairs were much too low for comfort at the table. There is one noticeable feature concerning them: they are eternally busy, either studying cryptic messages or whispering like chain-lightning among themselves. They realize the importance of this conference. They realize that they are its pivotal centre.

The best known among them to Americans is Kato, Admiral and Minister of the Japanese Navy. His features are startlingly gaunt; his body frail as a youth not yet arrived at maturity; his sea-tanned complexion darker than that of most Japanese. Though short in stature, he has an abnormally large head, sheltering a brain well able to cope with Occidental diplomacy. He speaks no English beyond "I thank you."

Then there is the polished Tokugawa, Prince, President of the House of Peers, and last of a long line of feudal Shoguns whose imperial rule ended with the restoration of the present dynasty in 1868. He is an English scholar of more than ordinary merit. He is the antithesis of Kato, being short but physically massive, and having more the bodily appearance of those famed, great-bodied wrestlers of Nippon. These two emissaries constitute the backbone of the delegation from the land of the Rising Sun.

China's delegation, metaphorically speaking, is one of "many voices." Not a few of the delegates are in sympathy with the South China Government. Apparently "Young China" is at the helm in Washington in the persons of Dr. Sao-Ke Alfred Sze and Dr. Wellington Koo, while "Old China" holds the actual reins of Government in Peking. Sze and Koo are graduates of American universities, and have absorbed much of our democracy, which they hope to implant in China if those of the old Mandarin school will permit

them. Sze is modeled along the lines of frank American statesmanship, while Koo would feel more at home in the secret councils of Europe than in Washington. In Paris Koo was outspokenly pro-Chinese, while in Washington he seems to have applied the brakes, with respect to the larger questions, quite noticeably. Neither is a match for Kato, or Shidehara, or Hanihara.

Without underrating the value of Sze and Koo, the Chinese delegation may be said to contain many others who are their equals, if not their superiors. Particularly does this apply to General Hwang-fu, who abruptly resigned early in December through a disagreement regarding "the principles" of the delegation. Hwang-fu is an out-and-out Chinese, frank to the borders of indiscretion. On the surface Sze and Koo seem to control China's destiny, but there is considerable going on behind the scenes of which the public knows little. For example, there is Dr. Mon-lin Chiang, Acting President of Peking University, who is in Washington as a representative of the Chambers of Commerce and educational institutions of the Chinese Republic. More explicitly, Dr. Chiang is attending the conference as "watch dog" for the Chinese people. He possesses great moral influence with the delegates. In fact, many of the recent resignations were dispatched to Peking on his advice, the Chinese fearing to return home except with a "good conduct" card visaed by Dr. Chiang.

As foreign advisers to the delegation we have Robert Lansing, Dr. John S. Ferguson, Thomas F. Millard, W. W. Willoughby and Lenox Simpson (Putnam Weale).

Senator Carlo Schanzer, President of Italy's delegation, is a successful banker, born in Austria. He is wiry, slight of build, nervous in temperament and frigidly reserved. In fact, his manner is one of Alpine coldness. He speaks English passing well; he addresses the conference in our language.

Belgium is ably represented by Baron de Cartier de Marchienne, Belgian Ambassador to this country for many years, who is really a composite study of the European diplomat. He is a knight of the aristocracy, and, leaving his monacle aside, seems to belong to medieval times. All in all, he is a most agreeable gentleman and highly popular in Washington.

Though Jonkheer H. A. van Karnebeek, the Dutch Minister of Foreign Affairs, is the chief delegate for the Netherlands, Americans have come more in contact with Jonkheer W. H. de Beaufort, present Dutch Minister to Greece and alternate delegate to the conference. He is a powerfully built, extremely handsome gentleman, with all the wholesome

breeziness of our Far Western Americans. Van Karnebeek is a terse-spoken Hollander of our old Knickerbocker type; thoroughly well informed, he is satisfied to "accept" principles that can be safely applied to Holland, and to let it go at that.

Viscount d'Alte, Portuguese Minister in Washington for fourteen years, heads the delegation from that country. Portugal's interest in this conference is altogether centred in her diminutive colony of Macao, close to Hongkong. It contains only four square miles, but as thousands of Eurasians along the China coast have been endowed with Portuguese citizenship, it is obvious that that country could not be left out of the conference.

BELGIUM'S TWO LANGUAGES

THE visitor to Belgium before the war spoke French wherever he went. Everywhere, however, he observed that all public notices, in streets, on buildings, in tramways, were in two languages, one French, the other a language resembling Dutch. If he was well informed, he knew that this was Flemish, the second national language in Belgium. In the parks of Antwerp and other cities, as he sat on a bench enjoying the music of the band, he noted that Flemish was spoken by virtually every one, though, as he very well knew, all these people also spoke French. As the visitor went up north, however, and especially through the country districts, he found that Flemish alone was spoken and understood. The writer on one occasion found that he could make himself better understood by talking English than by talking French. Between a low German dialect and English the likeness is often startling.

This question of a double language has long been a threatened source of political disunion between the two parts of Belgium. Flemish is the language of the north, French is spoken by the Walloons of the south, often in a dialect or patois form which is absolutely incomprehensible to one

who speaks the classic tongue of France. Ever since 1830 French in practice has been the only official language of Belgium, and it is this fact that has aroused bitterness. For many years the "Flamingants" have worked to put Flemish on an official equality with French. Germany tried to exploit this linguistic scission during the war, but Belgian loyalty was too strong in the face of invasion.

The Flemish faction, however, has at last won a victory. The Bulletin Mensuel du Parti Ouvrier Belge, in its issue of Sept. 10, printed in full the new language law, in the passing of which the Belgian Government redeemed its promise made after the war that the two languages should be placed on a national and official equality. Flemish is made the administrative language of Antwerp, Western Flanders, Eastern Flanders, Limourg-Louvain and the region around Brussels; French is the administrative language of Liège, Luxembourg, Namur, Hainault and Nivelles. Both tongues are to be used by the Central Government, by Government officials, and in the Civil Service. The passing of this new law, and its full operation, will have the effect of making Belgium at last a united nation.

THE IRISH FREE STATE

Text of the epoch-making treaty between the British Government and the Sinn Fein leaders, by which the whole of Ireland except Ulster is to become a free nation within the empire.

THE Irish question came nearer to solution during the month of December, 1921, than at any time in all the centuries of warfare and friction between Ireland and England. A treaty, the text of which is appended hereto, was signed at London, Dec. 6, by the British Cabinet and by the conference delegates of the Irish Dail Eireann. This agreement, which was reached in a dramatic manner after an all-night session, was entirely unexpected; the delegates had seemed to be far apart, so that the failure of the conference was believed to be at hand.

The treaty was received with enthusiastic approval by the press of Great Britain and the United States—almost without exception—and it was announced that all the Governments and Parliaments of the Dominions of the British Empire had expressed approval of it and that the Chiefs of State of all the allies during the war had congratulated the British Government on the compact. The one exception to the general approval throughout the United States was the hostile attitude of a small faction known as the Friends of Irish Freedom.

The British Parliament was called in special session to ratify the treaty, and was opened Dec. 14, with great pomp. The King read his speech to the peers in a firm voice, which gave evidence of the deep satisfaction that he felt. "It was with heartfelt joy," he said, "that I learned of the agreement, reached after negotiations protracted through many months, and affecting the welfare not only of Ireland but of the British and Irish races throughout the world. It is my earnest hope that by the articles of agreement now submitted to you the

strife of centuries may be ended, and that Ireland, as a free partner in the commonwealth of nations forming the British Empire, will secure fulfillment of her national ideals." The address to the throne was moved by Sir Samuel Hoare, and was seconded by George W. Barnes, the labor leader. In the upper house the address was moved by the venerable Lord John Morley, the last survivor of the Gladstone period.

The treaty was scathingly denounced in the upper house by Lord Carson, the Ulster leader. Colonel John Gretton, in the House of Commons, moved an amendment to the address, in effect rejecting the treaty. The treaty was supported in the House by Andrew Bonar Law, by former Premier Asquith, and by all the labor leaders; in the Lords, Viscount Bryce, Lord Birkenhead and other leaders spoke for it. The debate lasted two days. The amendment to the address of the King was rejected by the Peers, 156 to 47, and was defeated in the Commons, 401 to 58.

On Dec. 19 the British Parliament was prorogued, without waiting for the decision of the Dail Eireann on ratification of the Irish treaty. It was to meet again before Jan. 31, 1922, to consider legislation with relation to the treaty, in the event that this was ratified by South Ireland.

In Ireland the first note of opposition to the treaty came from Eamon de Valera, "President of the Irish Republic," in a statement in which he intimated that the plenipotentiaries had exceeded their authority in signing the treaty. The Dail Eireann was to meet in special session Dec. 14 to consider the fate of the agreement. On Dec. 13 the hierarchy of Ireland met at Dublin, with Cardinal

Logue in the chair, and the question was discussed. Although, unofficially, all the Cardinals, Archbishops and Bishops had endorsed the treaty, it was considered inadvisable to do so officially. A resolution was passed to the effect that the Bishops of Ireland hold in highest appreciation "the patriotism, ability and honesty of purpose in which the Irish representatives have conducted the struggle for national freedom."

When the Dail Eireann assembled on Dec. 14 the deliberations were secret for the first three days. The first public session was held Dec. 19, when the debate indicated that there was a wide split over the treaty. Mr. de Valera made a bitter attack. The treaty was strongly defended by Arthur Griffith, Michael Collins and Robert Barton. The resolution to approve it was seconded by C. M. McKeown, known as the "Blacksmith of Ballinalee," who had been released after a sentence of death. Speeches of opposition were delivered by Erskine Childers and Count Plunkett, among the leaders. The debate was still in progress when this issue of CURRENT HISTORY went to press.

The Ulster Cabinet, in a letter written to Premier Lloyd George, rejected the invitation to enter the Irish Free State. It was contended that the altered oath meant a lowered standard of loyalty and was not acceptable to Ulster, while the financial provisions of the agreement would introduce tariff wars with England and internal disputes in Ireland. For these and other reasons Ulster chose to retain her British citizenship and refuse to subordinate herself to the Sinn Fein Government. Exception was taken in the reply to the Boundary Commission, it being contended that it was not in accord with British precedent that territory should be removed from the control of any Government without that Government's sanction.

As an evidence of good faith, the British Government on Dec. 10 released all Irishmen interned in Ireland. The British steamship com-

panies resumed their calls at Queens-town. It was announced at London that all British troops would be withdrawn from Ireland as soon as the treaty was ratified.

LAND!

TEXT OF THE AGREEMENT.

The official text of this momentous treaty, which the British and Sinn Fein representatives had signed at the Premier's office, 10 Downing Street, London, on Dec. 6, 1921, was as follows:

Article I.—Ireland shall have the same constitutional status in the community of nations known as the British Empire as the Dominion of Canada, the Commonwealth of Australia, the Dominion of New Zealand and the Union of South Africa, with a Parliament having powers to make laws for peace and order and good government in Ireland, and an executive responsible to that Parliament, and shall be styled and known as the Irish Free State.

Article II.—Subject to provisions hereinafter set out, the position of the Irish Free State, in relation to the Imperial Parliament, the Government and otherwise, shall be that of the Dominion of Canada, and the law, practice and constitutional usage governing the relationship of the Crown or representative of the Crown and the Im-

THE LAST OBSTACLES

LYDD GEORGE: "Now will you gentlemen please help to move those rocks?"

Article IV.—The oath to be taken by the members of the Parliament of the Irish Free State shall be in the following form: "I do solemnly swear true faith and allegiance to the Constitution of the Irish Free State as by law established, and that I will be faithful to his Majesty King George V., and his heirs and successors by law, in virtue of the common citizenship of Ireland with Great Britain and her adherence to and membership of the group of nations forming the British Commonwealth of Nations."

Article V.—The Irish Free State shall assume liability for service of the public debt of the United Kingdom as existing at the date thereof and toward the payment of war pensions as existing on that date in such proportion as may be fair and equitable, having regard for any just claims on the part of Ireland by way of set-off or counter-claim, the amount of such sums being determined, in default of agreement, by the arbitration of one or more independent persons being citizens of the British Empire.

Article VI.—Until an arrangement has been made between the British and Irish Governments whereby the Irish Free State undertakes her own coastal defense, defense by sea of Great Britain and Ireland shall be undertaken by his Majesty's imperial forces, but this shall not prevent the construction or maintenance by the Government of the Irish Free State of such vessels as are necessary for the protection of the revenue or the fisheries. The foregoing provisions of this article shall be reviewed at a conference of representatives of the British and Irish Governments to be held at the expiration of five years from the date hereof with a view to the undertaking by Ireland of a share in her own coastal defense.

Article VII.—The Government of the Irish Free State shall afford to his Majesty's imperial force (a) in time of peace such harbor and other facilities as are indicated in the annex hereto, or such other facilities as may from time to time be agreed between the British Government and the Government of the Irish Free State, and (b) in time of war or of strained relations with a foreign power such harbor and other facilities as the British Government may require for the purposes of such defense, as aforesaid.

Article VIII.—With a view to securing observance of the principle of international limitation of armaments, if the Government of the Irish Free State establishes and maintains a military defense force, the establishment thereof shall not exceed in size such proportion of the military establishments maintained in Great Britain as that which the population of Ireland bears to the population of Great Britain.

Article IX.—The ports of Great Britain and the Irish Free State shall be freely open to the ships of the other country on the payment of the customary port and other dues.

Article X.—The Government of the Irish Free State agrees to pay fair compensation, on terms not less favorable than those accorded by the act of 1920, to Judges, officials, members of the police forces and other public servants who are discharged by it or who retire in consequence of the change of government effected in pursuance of the hereof paragraph.

Provided that this agreement shall not apply to members of the auxiliary police force or persons recruited in Great Britain for the Royal Irish Constabulary during the two years next preceding the date hereof. The British Government will assume responsibility for such compensation or pensions as may be payable to any of these excepted persons.

Article XI.—Until the expiration of one month from the passing of the act of Parliament for the ratification of this instrument, the powers of the Parliament and Government of the Irish Free State shall not be exercisable as respects Northern Ireland, and the provisions of the Government of Ireland act of 1920 shall, so far as they relate to Northern Ireland, remain of full force and effect, and no election shall be

held for the return of members to serve in the Parliament of the Irish Free State for the constituencies of Northern Ireland unless a resolution is passed by both houses of Parliament of Northern Ireland in favor of holding such elections before the end of said month.

Article XII.—If before the expiration of said month an address is presented to his Majesty by both houses of Parliament of Northern Ireland to that effect, the powers of the Parliament and Government of the Irish Free State shall no longer extend to Northern Ireland, and the provisions of the Government of Ireland act of 1920 (including those relating to the Council of Ireland) shall, so far as they relate to Northern Ireland, continue to be of full force and effect, and this instrument shall have effect, subject to the necessary modifications:

Provided, that if such an address is so presented, a commission consisting of three persons, one to be appointed by the Government of the Irish Free State, one to be appointed by the Government of Northern Ireland, and one, who shall be Chairman, to be appointed by the British Government, shall determine in accordance with the wishes of

[English Cartoon]

the inhabitants, so far as may be compatible with economic and geographic conditions, the boundaries between Northern Ireland and the rest of Ireland, and for the purposes of the Government of Ireland act of 1920 and of this instrument the boundary of Northern Ireland shall be such as may be determined by such commission.

Article XIII.—For the purpose of the last foregoing article the powers of the Parliament of Southern Ireland under the Government of Ireland act of 1920, to elect members of the Council of Ireland, shall, after the Parliament of the Irish Free State is constituted, be exercised by that Parliament.

Article XIV.—After the expiration of said month, if no such address as mentioned in Article XII. hereof is presented, the Parliament of the Government of Northern Ireland shall continue to exercise as respects Northern Ireland the powers conferred upon them by the Government of Ireland act of 1920, but the Parliament of the Government of the Irish Free State shall in Northern Ireland have in relation to matters, in respect of which the Parliament of Northern Ireland has not the power to make laws under that act (including matters which, under said act, are within the jurisdiction of the Council of Ireland), the same powers as in the rest of Ireland, subject to such other provisions as may be agreed to in the manner hereinafter appearing.

Article XV.—At any time after the date hereof the Government of Northern Ireland and the Provisional Government of Southern

Ireland, hereinafter constituted, may meet for the purpose of discussing provisions, subject to which the last of the foregoing article is to operate in the event of no such address as is therein mentioned being presented, and these provisions may include: (a) Safeguards with regard to patronage in Northern Ireland; (b) safeguards with regard to the collection of revenue in Northern Ireland; (c) safeguards with regard to import and export duties affecting the trade and industry of Northern Ireland; (d) safeguards for the minorities in Northern Ireland; (e) settlement of financial relations between Northern Ireland and the Irish Free State; (f) establishment and powers of a local militia in Northern Ireland and the relation of the defense forces of the Irish Free State and of Northern Ireland, respectively, and if at any such meeting provisions are agreed to, the same shall have effect as if they were included among the provisions subject to which the powers of Parliament and of the Government of the Irish Free State are to be exercisable in Northern Ireland under Article XIV. hereof.

Article XVI.—Neither the Parliament of the Irish Free State nor the Parliament of Northern Ireland shall make any law so as either directly or indirectly to endow any religion or prohibit or restrict the free exercise thereof or give any preference or impose any disability on the account of religious belief or religious status, or affect prejudicially the right of any child to attend school receiving public money without

attending the religious instruction of the school, or make any discrimination as respects State aid between schools under the management of the different religious denominations, or divert from any religious denomination or any educational institution any of its property except for public utility purposes and on payment of compensation.

Article XVII.—By way of provisional arrangement for the administration of Southern Ireland during the interval which must elapse between the date hereof and the constitution of a Parliament and a Government of the Irish Free State in accordance therewith, steps shall be taken forthwith for summoning a meeting of the Members of Parliament elected for the constituencies in Southern Ireland since the passing of the Government of Ireland act in 1920 and for constituting a Provisional Government. And the British Government shall take steps necessary to transfer to such Provisional Government the powers and machinery requisite for the discharge of its duties, provided that every member of such Provisional Government shall have signified in writing his or her acceptance of this instrument. But this arrangement shall not continue in force beyond the expiration of twelve months from the date hereof.

Article XVIII.—This instrument shall be submitted forthwith by his Majesty's Government for the approval of Parliament and by the Irish signatories to a meeting summoned for the purpose of members elected to sit in the House of Commons of Southern Ireland, and, if approved, it shall be ratified by the necessary legislation.

HAIGH (GEORGE GAVAN DUFFY).

Dated the 6th of December, 1921.

ANNEX

An annex is attached to the treaty. Clause 1 specifies that Admiralty property and rights at the dockyard port of Berehaven are to be retained as at present date and the harbor defenses and facilities for coastal defense by air at Queenstown, Belfast, Lough and Loughswilly to remain under British care, provision also being made for oil, fuel and storage.

Clause 2 provides that a convention shall be made between the two Governments, to give effect to the following conditions: That submarine cables shall not be landed or wireless stations for communication with places outside of Ireland established, except by agreement with the British Government; that existing cable rights and wireless concessions shall not be withdrawn except by agreement with the British Government, and that the British Government shall be entitled to land additional submarine cables or establish additional wireless stations for communication with places outside of Ireland; that lighthouses, buoys, beacons, &c., shall be maintained by the Irish Government and not be removed or added to except by agreement with the British Government; that war signal stations shall be closed down and left in charge of care and maintenance parties, the Government of the Irish Free State being offered the option of taking them over and working them for commercial purposes, subject to Admiralty inspection, and guaranteeing the upkeep of existing telegraphic communication therewith.

Clause 3 provides that a convention shall be made between the two Governments for the regulation of civil communication by air.

ANTIQUITY OF IRISH PROBLEM

The Irish question first appeared dimly on the far horizon of the Middle Ages as born of the rivalry between the native chiefs and the Anglo-Norman nobles settled in Ireland. This early clash of interests was aggravated by the unjust code of laws enforced by the English Kings upon the Irish. It began to take definite form and direction as a national issue with the determination of Henry VIII. to force the Protestant religion upon Ireland, with himself as supreme head of the Church, as defined in the Act of Supremacy of 1534. At the same time the civil power of the King was enhanced by an act declaring Henry "King of Ireland" instead of "Lord of Ireland," as had been customary from the time of King John.

The effect of these measures, together with the tyrannical character of the Dublin Government in striving to impose English customs and preferences upon the Irish, produced the Shane O'Neill rebellion in 1551. This, with varying fortunes and short intervals of peace, continued until the death of O'Neill in 1567. In 1567 re-

ligious differences were mainly responsible for the Geraldine rebellion, in which the great families of Desmond and Ormond took sides, respectively, against and for the English. That rebellion ended with the killing of the Earl of Desmond as a hunted fugitive in 1583. A treacherous act on the part of the Lord Lieutenant, Sir John Perrott, prompted Hugh O'Neill to rise in rebellion in 1595 and to continue fighting until 1599. The first general land confiscation of those even remotely involved followed shortly after. At the same time the settling of Protestants on the lands of dispossessed Roman Catholics was introduced as a Government policy.

The reign of James I. was marked by the revival of the Acts of Supremacy and Uniformity. British Protestant land settlement took place in Ulster, and a first National Parliament was called to extend uniform protection of the law to English and Irish alike. The result of the latter was of hardly more than nominal benefit. Meanwhile, corrupt officials aided the King in obtaining large sums of money by disputing the ownership of landed estates. Intolerable civil and religious abuses against the Catholics moved Roger O'Moore to lead the rebellion of 1641; he was presently joined by the more famous Owen Roe O'Neill, and fighting went on continuously until, by 1651, Cromwell had gained control of the island. Nearly all the land was then confiscated.

With the restoration of Charles II. a Court of Claims made a redistribution of the land in favor of the Protestants, and Anglican Church rule was re-established. These measures, however, were considerably reversed in favor of the Catholics during the short reign of James II. After the flight of the latter monarch from England, the Irish sided with him against William of Orange. They received James as their rightful sovereign in Ireland and supported him in arms. The turning point of the war was at the Boyne, where the army of King James was defeated, July 1,

1690. James promptly fled back to France, and though the struggle was bravely carried on by the Irish, devastation and poverty finally compelled the acceptance of the peace terms offered by King William under the Treaty of Limerick, Oct. 3, 1691.

Though the Catholics were three times as numerous as the Protestants, they remained in possession of only one-seventh of the island. Under the title of the Penal Laws, 1695-97 and 1793-94, and the Test Act of 1728, passed by the Protestant Parliament of Dublin, the Catholics were deprived of all religious freedom and suffered a complete disfranchisement. Moreover, under the blighting influence of oppressive trade laws, industry and commerce sank into ruin. At the same time agriculture was stifled by the grasp of the middleman and the extortions of the "rack-renter."

In the parliamentary contest to obtain redress from this misrule, the names of Swift, Grattan, Flood and Edmund Burke stood out as brilliant leaders of the Patriotic Party, formed in opposition to the Court Party, whose sole aim was to increase despotic English influence. Considerable moral assistance was lent to the Irish patriotic movement by the revolt of the American Colonies in 1775, with which the Irish Protestants sympathized as striving for the same end: "No taxation without representation."

BEGINNING OF REFORM

These efforts resulted in the Act of Renunciation, passed Jan. 22, 1783. By this measure England formally abandoned the claim to make laws for Ireland, relinquishing the same to the King and the Irish Parliament. So desperate, however, had the condition of the peasantry become, so unavailing the demand for parliamentary representation and Catholic emancipation from the British Government-controlled Dublin Parliament, that the rebellion of 1798 broke out. It centred mainly around Wexford, being ably led by Father John Murphy,

a Catholic priest, who did everything in his power to discountenance counter-outrages against the Protestants for the horrible atrocities committed by the Government militia. This rebellion collapsed in the following year, due considerably to the belated arrival of promised help from France. General Lake, the British commander, court-martialed and hanged every leader he could catch, including Father Murphy.

On Aug. 1, 1800, William Pitt, the English Premier, achieved his plan of uniting the two countries under one Parliament in London. This was accomplished by means of unlimited bribery in inducing the Irish Parliament to abolish itself, though all Ireland was bitterly opposed to the act. So far from proving any immediate blessing for Ireland, the combined Parliament at Westminster, when not ignoring that unhappy country, enacted fresh repressive measures. It was at this period that Daniel O'Connell rose to fame as the national leader who forced the concession of the Act of Emancipation, March 30, 1829. Various remedial measures, due to the parliamentary efforts of O'Connell, followed, but came too late to prevent the horrors of the great famine of 1845-47, during which 2,000,000 died of starvation. In the succeeding half century more than 4,000,000 emigrated, chiefly to America.

The English Government was so impressed by the famine that it adopted a more liberal trade policy. The Corn laws were gradually repealed, thus permitting the free entry of wheat into Ireland and a lowering of the price of bread. But remaining discontent developed into the Fenian revolt of 1865-68. While this revolt ended with the rounding up of its leaders, it at least served to awaken England to Ireland's wrongs, and this gave impetus to Gladstone's act for the Disestablishment of the Protestant Episcopal Church in Ireland in 1869. Parnell now came to the front as the champion of the Land League, an agrarian movement with the im-

mediate objects of fair rent, fixed hold and free sale, but with the ultimate aim of the return of the land to the people. Gladstone passed a bill granting the foregoing "Three F's" in 1881, but was halted in further progressive measures by the Phoenix Park murders in May, 1882, which caused a reaction.

On returning to power in 1886, however, Gladstone introduced his first Home Rule bill, but it was lost through a split in the Liberal Party. The first Land Purchase act to enable tenants to buy their farms from the landlords was passed by the Conservatives in 1885, and the second and third bills, fathered by Mr. Balfour, Chief Secretary for Ireland, were passed in 1888 and 1891. Gladstone's second Home Rule bill was rejected in 1893 on the ground that it gave Ireland the right to interfere in English and Scotch affairs. A bill for Irish Local Government through thirty-two County Councils was passed in 1898, and Wyndham's Land Purchase act of 1903 began the restoration of the land to the people.

With material burdens now immeasurably lightened, Irish aspirations turned to an ever-increasing demand for absolute control of domestic affairs. To this, however, Ulster Protestant opposition grew equally apace, so that the grim spectre of rebellion again rose over the land. But this time it was the Protestant minority of the North that, led by Carson and 100,000 volunteers, threatened to revolt, should the Liberal Premier, Asquith, attempt to force his Home Rule bill of 1914 upon them. The bill had been approved by Redmond for the Irish Nationalists, and was before Parliament when the great war broke out and action upon the measure was postponed, with a promise to put it into effect when peace was restored.

Then came Roger Casement's landing from a German submarine, and the vigorous activity of the new Sinn Fein Party of extremists, who, on April 25, 1916, boldly proclaimed a republic, hoisted their flag over the

Dublin Post Office, and designated Patrick H. Pearse as Provisional President. A revolt simultaneously broke out, known as the "Easter Rebellion," which lasted until April 30. During the fighting \$10,000,000 of damage was done to Dublin; many were the casualties, and hundreds of Sinn Fein prisoners were captured. Within a few days 40,000 British troops were poured into Ireland to enforce martial law. Following the execution of Provisional President Pearse, with six other prisoners, Eamon de Valera was elected "President of the Irish Republic."

An attempt to compose the differences between the Irish parties in the Summer of 1917, under the Chairmanship of Sir Horace Plunkett, failed, mainly owing to the absolute refusal of Protestant Ulster to join in an all-Ireland Parliament.

GROWTH OF SINN FEIN

The remarkable growth of the Sinn Fein movement after the "Easter Rebellion" enabled its leaders to supplant the Nationalists entirely as the authority for Southern Ireland; this was manifested by the capture of seventy-three constituencies at the British general elections at the end of the World War, and the organization of the Dail Eireann, or Irish Parliament, in Dublin. In the face of a British order of repression leveled against the Dail Eireann and all other Sinn Fein organizations (Sept. 12, 1919) the great majority of the people of Southern Ireland continued to regard it as their lawful government.

Meanwhile a guerrilla conflict between the Crown and Sinn Fein forces grew in bitter intensity as it spread over the island. Destruction of life and property went on, wholesale, as one side visited reprisals upon the other.

In December, 1920, the British Government passed a new Government of Ireland act. It provided for Northern and Southern Parliaments, and for a Central Council containing representatives of both the North and the South to act as a harmonizing

body with the ultimate purpose of a united Parliament. De Valera promptly denounced the plan in view of the Sinn Fein declaration of a republic independent of the British Crown; but Ulster presently faced about and accepted it, after having, for scores of years, declared she would fight were any such separatist government thrust upon her. In the elections subsequently held the Sinn Feiners again swept the South, winning 124 out of the 128 seats. But they refused to organize under the Home Rule act, declaring the new members elected would constitute a new Dail Eireann.

On June 22, 1921, the Ulster Parliament was opened in state by King George and Queen Mary. In a moving speech the King said:

I appeal to all Irishmen to stretch out the hand of forbearance and conciliation, to forgive and forget, and to join in making for the island which they love a new era of peace, contentment and good-will.

The favorable effect of these words in all places moved Premier Lloyd George to issue an invitation on July 9 to de Valera and Ulster Premier Sir James Craig to confer with him in London. While the invitation was being considered, an agreement was entered into between the Crown and Sinn Fein forces to cease all hostilities in a truce pending the outcome of the London parley. These negotiations lengthened from days into weeks and weeks into months. At last, however, Mr. Lloyd George found a formula to bridge the impasse, and a conference assembled in London for the first meeting on Oct. 11. Again came a period of suspense and frequent crises in the negotiations. Finally, when the night seemed darkest, and the British-Sinn Fein conference hovered again on the verge of civil strife, it was announced at 2:30 A. M., Dec. 6, that an agreement by treaty had been reached to declare Ireland a Free State within the British Empire, the Ulster difficulty having been overcome by leaving her to join in the new State or retain her present status, as she was pleased to decide.

CANADA'S LIBERAL LANDSLIDE

BY JOHN R. BONE

Of The Toronto Star

General election overturns the Meighen Government and places W. L. Mackenzie King in the position of Premier—The Victorious Liberals pledged to a downward revision of tariff duties

CANADA'S first post-war general election, held on Dec. 6, 1921, indicated, in an unexpected degree, a return to normal political conditions. Decline in party spirit, collapse of party organization, widespread unrest, and more specifically the spectacular rise of the Farmers', or Progressive, movement, cutting across both the old parties, had created a conviction that none of the groups could secure a "working majority." It was feared that in the ensuing situation the government of the country could be carried on only by some sort of coalition or bargain which would be at best insecure, and might in other ways be gravely objectionable. Therefore, among moderate elements of the community there was a sense of relief on finding that one of the historic parties had achieved a position to form a Government that could proceed along traditional lines.

While Liberal representation in the new House (apparently 117 seats out of the 235) accounts for only about one-half the total, its position is fortified by the fact that the other half is divided into two sections which are hopelessly incompatible. The Liberals occupy middle ground between the Conservative group on the one side and the radical Progressives on the other. It is difficult to imagine any issue on which these two groups could unite as against the Liberals, unless it be possibly the question of rail-

way nationalization. To this some elements in the Liberal Party have been expressing opposition, whereas both Conservatives and Progressives are committed to existing Government ownership and operation. But on other issues, such as the tariff, there seems no possibility of co-ordinated action between Conservatives and Progressives. If the Liberals find it necessary to oppose free trade proposals put forward by Progressives they can surely depend on support from the protectionist Conservatives. If, on the other hand, Liberals think it wise on their own account to advocate tariff reductions, they cannot only count on support from the Progressives, but can, if necessary, call on them for an advance guard for the campaign, to say nothing of high explosives.

An outstanding feature of the election was the utter collapse of the Government forces known recently as the National Liberal and Conservative Party, successors to the Unionist Coalition formed for war purposes in 1917 by a union of the old Conservative Party with a section of the Liberals. Whereas Sir Robert Borden secured 150 supporters in 1917, his successor was favored in 1921 with only 51 seats in a House of 235. No other party in Canada has ever suffered such a disaster. In five provinces out of nine—Nova Scotia, Prince Edward Island, Quebec, Manitoba and Saskatchewan—not a single

Government supporter was elected, and only one in Alberta.

While few expected so complete a debacle, the defeat of the Government was inevitable from the day that T. A. Crerar, a member of the Union Cabinet, resigned to assume the leadership of the Progressive Party. His defection marked the break-up of the Union. It implied that Western Canada, having helped to bring down the Germans, henceforth proposed to devote its energies to bringing down the tariff. Mr. Crerar declared that at least the three prairie provinces, which had been a unit in supporting the Government's war policy, were fully united in support of his position on a domestic peace policy, and no one then or since has gainsaid him. Sir Robert Borden, weary from his war-time efforts and in impaired health, retired from the Premiership. Mr. Rowell, chief of the Liberal contingent in the Union Cabinet, retired simultaneously, an incident which marked the termination of any distinctive Liberal support for the coalition, though some former Liberals in the meantime had merged permanently with their new colleagues.

CAUSES OF THE LANDSLIDE

Mr. Meighen succeeded to the Premiership. But he had succeeded to the command of a sadly decimated army, and he had no promising recruiting ground. Furthermore, the shadow of the Province of Quebec hung over him like a Nemesis. Quebec had been irrevocably alienated through controversies extending over a long period of years and culminating in issues arising out of the war. With Quebec and the West arrayed solidly against it, the Government was beaten before it began the race. Resentment against unchecked profiteering, against the extortions of monopoly, against all the favoritism and inequality which came to light during that hectic period, showed itself to be awaiting the first opportunity to chastise the Government, even if that

Government's war record, as war records go, was creditable.

Mr. Meighen valiantly tried to save the situation by representing his party as the savior of protection. He was perhaps justified in his declaration that the tariff was in danger, because both the Liberals and the Progressives, in their platforms, had advocated radical reductions. But the people refused to become alarmed. And when Mr. King and even Mr. Crerar declared that the tariff was only one of many issues in the election, and that there was no danger of free trade, the declaration was accepted at its full value. On every side Mr. Meighen found himself against a blank wall, and while he conducted his campaign with rare courage and ability, which deserved a far richer reward than some of his alleged friends were disposed to concede in the bitter hours of defeat, there was for him no possible avenue of escape.

Another feature of the result is the appearance of a new, cohesive and aggressively independent party. In the West, as predicted, the Farmers and Progressives swept everything before them. In Ontario they fell short of their expectations, and instead of electing forty or fifty members there, as some hoped, they secured only half of what they expected. Nevertheless, Mr. Crerar returns to Ottawa at the head of sixty-five enthusiastic followers, fourteen more than the Conservatives have, and constituting more than one-quarter of the House. His group will be formidable not merely from numbers, but because of the zeal and crusading spirit of its members.

Failure of the Farmers to achieve their expectations in the pivotal Province of Ontario has elicited much comment. The record in office of the Farmers who have had control of the government of that province for two years has been cited in explanation, but another view is that this Farmers' government was a source of strength rather than weakness to the

movement. Another suggestion is that even Farmers in Ontario, a province traditionally protectionist, took alarm at the extreme low-tariff proposals of their Western colleagues. It is further claimed that the allegiance of many Farmers to their new organization was not sufficiently rugged to stand the strain of a heated national contest, with the result that as polling day approached numbers of them reverted to type. Another circumstance that may have had some influence was the fact that the business side of the Farmers' organization, its co-operative company, had, in common with many other trading organizations, suffered losses in the past year.

The outstanding handicap on the new party was undoubtedly the fact that it was not nationally organized. East of the Ottawa River it had only a semblance of organization and a handful of candidates, not one of whom was elected. As soon as the realities of the situation were appreciated it became apparent that, with the greatest success possible, the Progressive Party could not hope to win more than ninety seats; and while this number might have been sufficient to make the largest group in the new House, it would not have been sufficient to enable the Progressives to organize a stable government. Toward the close of the campaign this fact undoubtedly had great weight with many electors, who thereupon transferred their allegiance to the Liberal Party.

The causes of the Liberal victory are to some extent indicated in the foregoing description of the weaknesses of the Government and of the immature Progressive Party. But it would be ungracious to withhold credit from W. L. Mackenzie King for a success which was in many respects a personal triumph. It will undoubtedly be represented that Mr. King is to be dominated by Quebec, but the other side of the shield is that Mr. King dominated Quebec, at least to the extent that he attracted its confidence to a degree quite without precedent.

Even Laurier, in the heyday of his ascendancy, never achieved a solid following of sixty-five members from his native province. Nova Scotia and Prince Edward Island, also, elected solid groups in support of Mr. King, and the representation he secured from Ontario is the best showing the Liberal Party has made there since 1908. Only in the western stronghold of the Progressives was he unable to make much impression.

CAREER OF MR. KING

Mr. King represents a type almost unique in Canada, having deliberately designed his life for a career in public service. His *flair* for politics is undoubtedly derived from his grandfather, William Lyon Mackenzie, the leader of the Canadian Rebellion of 1837, which resulted in responsible government and was the beginning of the modern British Empire. Mr. King entered public life by way of the civil service. He was the first Deputy Minister of Labor in Canada, and from this post he was taken directly into the Cabinet by Sir Wilfrid Laurier, who, it is said, forecast his ultimate elevation to the Premiership. Critics express disappointment at the character of Mr. King's campaign speeches, but the calibre of his mentality and his sense of public service may be judged by the fact that at the age of 25 he declined a professorship at Harvard, preferring to remain in his home land at half the salary, in a subordinate position, in the newly organized Labor Department. Sociology, then as later, was his specialty, a fact which after the Liberal disaster of 1911 led to his accepting temporarily a directorship in the Rockefeller Foundation. No Canadian on his first appeal to the public as a national leader has had a more auspicious reception. His further career will be followed with keen interest.

The election, while much more decisive than anticipated, leaves many questions unanswered. What, for example, is the future of the Progressive Party? Has it reached or passed

(© Wide World Photos)

WILLIAM LYON MACKENZIE KING

*Liberal leader and next Premier of Canada,
succeeding Mr. Meighen*

the crest of its wave? And what is to become of the Conservative Party, reduced to unprecedented proportions numerically in Parliament?

Answering the last question first, it may be said at once that there is no prospect of the disappearance of what may appropriately be described as a Conservative Party. The country is full of conservatives, whether they belong to the party of political Conservatives or not.

The victorious Liberal Party includes in its ranks all shades of political opinion. Messrs. Gouin, Lemieux and other Quebec Liberals are outspoken protectionists, opposed to public ownership, and probably antagonistic to many of the social and industrial policies which are advocated in Liberal circles. On the other hand, while undoubtedly many advanced Liberals have thrown their fortunes

in with the new Progressive Party, there still remains in the Liberal Party a considerable leaven of radicalism, particularly in urban communities to which the Farmers' Party has not yet appealed. Mr. King himself is liberal in outlook and on most concrete issues. For example, on the industrial issue he advocates in his book, "Industry and Humanity," the joint control of industry, and develops the idea that modern industrial machinery is as autocratic and as benighted as political machinery was in the days of despotic monarchies. How fast will he be able to make his party step along the path of liberalism, and how far will he be content to sacrifice his convictions to the cause of expediency? It is the problem of liberalism the world over, and Canada's distinction at this juncture is that it has grasped the opportunity to give liberalism in office a chance to show what it will do with the problem.

With respect to the future of the Progressive Party, there are many prophets to declare that already the end of the movement is in sight; that the inevitable fate of nearly all third parties on this continent is approaching. Such judgment may be premature. The West, the home of the Progressives, rejoices that it has at last at Ottawa an independent representation which no longer forms a part of any party which has given hostages to the big interests of the East. This is a spirit which is not likely suddenly to subside. In its less attractive aspects it has developed in Eastern Canada as well as in the West a bitter prejudice against urban dwellers which surpasses the party animosities of former days.

Mr. King was in the Cabinet that advocated reciprocity in 1911, and Mr. Fielding, who negotiated the agreement at Washington, is still with him. But the experience was disastrous from a party standpoint. The reorganized party stands pledged to revise the tariff downward, in the interests both of producers and consumers, and there is little doubt that a serious effort will be made to keep the pledge.

HORTHYISM A MENACE TO CENTRAL EUROPE

By DR. OSCAR JASZI*

Former Minister of National Minorities in Karolyi's Cabinet

Hungary's present Government depicted as a militaristic despotism that is trying, through terrorism and chicanery, to revive the Feudal System and restore medieval bondage—A more serious danger than Red Bolshevism

THE second attempt of Charles of Hapsburg to regain the throne of Hungary has ended in a miserable, ludicrous failure. After playing with the idea of Hapsburg restoration for almost two years, the Entente has decided that it has had enough. Charles is in Madeira, definitely out of the running. But this does not mean that the problem of Hungary is solved. The crisis of that unfortunate country, after all, is but a surface symptom of a deep-seated antagonism underlying the general crisis in Central Europe. To Americans this may sound like an exaggeration; nevertheless, it is literally true that the solution of the Hungarian question will determine whether Europe is to have peace and consolidation or is to drift further toward dissolution. Hungary is the Archimedian fulcrum of Continental politics.

Hapsburgism is defeated, but Horthyism remains; and Horthyism, now strengthened by the victory over its rival, aims to accomplish the *restitutio in integrum* of the big landholders, the magnates and prelates, the host of army officers thrown out of work by the disarmament clauses of the Peace of Trianon and the junker officials forfeiting their places by the nation's territorial losses. Horthyism aims at restoration, in a word, of all the elements that were dispossessed of their former easy and comfortable positions and unearned increments by

the defeat and dismemberment of the country and the contingent economic collapse. To secure for these groups their former opulence at the expense of the workers and peasants—this impracticable, anachronistic, absurd and shameless scheme is the reality behind the "Christian national" regime of Admiral Horthy.

An aim like this cannot be openly championed without being rejected instantly, even by the untutored Magyar masses. Brutal and bloodthirsty anti-Semitism, nationalistic demagoguery, Ku-Kluxism, irredentist conspiracies, semi-officially supported; export of pseudo-Bolshevistic propaganda to trouble the social atmosphere of the neighbor States and to prepare the ground for the advent of Horthy, the Communist Killer—these are the means by which Horthyism tries to deceive the people as to its real purpose.

The psychological situation determines this policy. There are but two paths open for "Rump-Hungary," as the present regime is sardonically nicknamed. On the one hand, it may develop its productive capacity by inaugurating a thoroughgoing land re-

*Professor Oscar Jászi, the foremost sociologist and leader of liberal thought in Hungary, was Minister of National Minorities in the republican Government of President Karolyi. Under the Bolshevik régime he was exiled from Hungary because of his anti-communist views, and has lived since in Vienna. Before the war he was a champion of the oppressed nationalities of Hungary. He has won the friendship and admiration of President Masaryk of Czechoslovakia and of other leaders in Central Europe's fight for liberty.

form, introduce a modern educational system, establish all-round political democracy and enter good relations with the surrounding States on the basis of economic co-operation and cultured interchange. The alternative is to restore pre-war Hungary, to refuse land to the peasants, rights to the workmen, business and professional opportunity to the middle classes—all this in order to save the feudal privileges and unearned increments of the nobility and gentry. The choice of the second alternative necessitates diverting the attention of the masses from its real meaning by aid of the drugs of nationalistic megalomania, revanche and gory anti-Semitism.

This end, however, cannot be attained by merely flogging the dead horse of Bolshevism, which the Hungarian people as a whole have never ridden. The anti-communism of Horthy is a pretext, not a policy. What Horthyism really wants is to destroy the very roots of all those forces and tendencies of the last quarter of a century which in Hungary stood for liberty, democracy, government by and for the people, land reform, separation of Church and State, racial autonomy, a modern school system, anti-militarism, anti-imperialism, a democratic foreign policy—in a word, the soul of modern Hungary, the spirit of the anti-Hapsburg revolution of October, 1918.

INSIDIOUS HORTHYISM.

This is why the national, democratic and liberal October revolution must be identified, by hook or crook, with the Communist March revolution of 1919. This is why Karolyi, President of the Republic, and his collaborators must be slandered all over the world as thieves and murderers; why all progressive intellectuals must be driven from their offices and their lecture-chairs; why the freedom of the press and every civic right must be annulled. Instead of the expropriation of the big landed estates, therefore, a new sort of semi-feudal

system of tenure must be created. For the same reason poor, hard-working and progressive Jews must be murdered, and the usury and profiteering of certain big Jewish financiers must be backed up. Hence, also, treaties on which the ink of signature has not yet dried must be violated and worked against by every device of an unscrupulous Machiavellism and of a sham-Bolshevism exported by official agents provocateurs.

But the inexorable logic of facts drives Horthyism even further. Mere pre-war methods of oppression, such as class suffrage and bureaucratic corruption, no longer suffice. A reduced capacity for production postulates keener instruments for exacting unearned increment from the toiling masses. Nothing short of a return to medieval bondage will serve the purpose of today. A caste of soldiery or of reliable peasant landholders is instituted, bound to perform military service at the call of the feudal lords. Corporal punishment is introduced for merchants, styled, for convenience, profiteers.

The number of Jews admitted to higher educational opportunities is restricted in accordance with their percentage in the population. Highly qualified Jews are excluded from all public offices. Socialist candidates for the National Assembly are imprisoned, and their constituents interned. Progressive writers are arrested and jailed, as, for instance, the excellent Zoltan Szasz, the only journalist in Budapest who had the courage to raise his voice against Bela Kun's despotism. Terror detachments are organized in colleges, universities and municipal offices. The medievalization of public life is carried out consistently along all lines.

It is here that the real danger lies. For even a country of peasants, once impregnated with the needs of modern life and furnished with the means, however rudimentary, to satisfy them, cannot return to stark feudalism. The mere attempt must break up the whole system and lead to the

most hideous forms of organic decay. This is just what happened in Hungary. Practically, political power is wielded exclusively by a secret society of several thousand White officers. Their visible heads are Colonel Pronay and Lieutenant Hejjas, prominent in the recent upheaval as Horthy's supporters. The revival of torture, now generally practiced on suspects and prisoners, attaches to their names. Both have frequently boasted in public of the atrocities committed by them personally. Hejjas is the mass-murderer of Orgovany, where several hundred persons, kidnapped from the prisons at Kecskemet, were violently put to death. Colonel Pronay has recently bullied Mr. Rakovszky, President of the National Assembly, into resignation by threats of violence. For this outrage he was "punished" by Regent Horthy with thirty days' confinement to his rooms. Horthy has publicly called Hejjas and Pronay his best officers. He himself is but a puppet in the hands of the military Mafia in whose bloody crimes he is entangled.

The units of this Mafia are called "detachments" or "battalions" in common parlance; "gendarmierie" or "customs guards" for the benefit of Entente officials, or, whenever they commit a particularly nasty outrage, "irresponsible criminals unlawfully wearing the uniform of the national army." These detachments are in charge of the recruiting, canvassing, irredentist propaganda and secret service. They blackmail rich Jews, rob and murder poor ones, plunder villages, prey upon traffic.

TERRORISM AND CHICANERY

Another terror organization is the Society of Awakening Magyars. They also engage in political murder, religious persecution and general plunder. They silence or spirit away witnesses, browbeat juries, terrorize Judges, whip newspapers into line. The press is obliged to fill up blanks caused by the censorship with irrelevant type. Trade unions are

robbed of their funds. Friendly societies of the workers are expropriated; even the Free Masons are expelled from their clubhouses. Profitable State licenses, such as cinemas, tobacconists' shops, &c., are confiscated and distributed among "the boys." These terror organizations have even their own prisons and torture chambers.

But it is in the field of foreign relations that this general disorganization works its most pernicious effects. The atavistic principles which form the core of White Bolshevism may turn out as fatal to Central Europe as Red Bolshevism threatened to be. Hungary, supposed to be a link in the *cordon sanitaire* intended to localize Red Bolshevism and confine it to Russia, has become the centre of the White Bolshevism of nationalistic-militaristic anarchy, endangering European civilization. In Poland, Bavaria and Hungary this White Bolshevism is uppermost; in Croatia, now a part of Yugoslavia; in the Slovak parts of the Czechoslovak Republic and in Austria it may, fostered by Magyar agents, gain some day the upper hand. The time for a united effort approaches, and Horthy's Hungary will lead the dance. There can be no peace in Central Europe so long as this White incendiarism is at large at Budapest.

The alternative faced by Hungary broadens and extends to Central Europe as a whole. The succession States must embody in their policies without reservations the spirit of democracy and racial equality and succeed in restoring economic and cultural co-operation of the Danubian peoples, thus healing the wounds caused by artificial boundaries. Otherwise, there will come about an alliance of Hapsburg and Wittelsbach monarchists, a reactionary bloc including the Bavarian militarists, the Austrian clericals, the Magyar feudalists, the Polish magnates, possibly the reactionary elements in Slovakia, Croatia and Transylvania as well—in a word, a close-knit mutual insurance

organization of feudal-nationalistic interests in all Central Europe.

This latter scheme would suit the purposes of French chauvinism, which plots to disrupt German unity, and would masquerade as the barbed-wire fence against Bolshevism. But this fence would be more dangerous than the evil against which it is to be erected. The vital energies of peoples kept down by force would later break forth in terrible explosions of anarchistic and national Bolshevism.

STRATEGIC CENTRE OF REACTION

It is this alternative that today renders Hungary the Archimedian point of Europe. If Horthyism is downed, the road is open to liberty, democracy and peace. If Horthyism succeeds, Central Europe—and ultimately Europe as a whole—must proceed on the downhill road to feudalism, militarism and war. Horthy's Hungary is the symbol and the strategic centre of Old World reaction.

Three events in the last few months indicate the fatal implications of Horthyism. At the same time they show its power of growth. The attempt of ex-King Charles to seize the throne last Easter was frustrated only by the energetic and timely intervention of the Little Entente. In the middle of August, the City of Pecs, with the surrounding district of Baranya, important because of its coal mines, was evacuated by the Yugoslavs and entered by Horthy's troops. This was under the provisions of the Treaty of Trianon; but the population, overwhelmingly Magyar, protested against the annexation by Horthy, and asked to be allowed autonomy under Yugoslav protection. To no avail; the White Terror army arrived, but by then over 10,000 Magyar coal miners had fled across the Yugoslav border. The Magyar occupation was followed by the customary outbreak of White Bolshe-

vism, with all its bloody excesses. Thirdly, there is the recent "Kor-fantyade" in the Burgenland, where the Magyar monarchist troops and irregular "bands" have for two months brutally bullied defenseless Austria and defied the will of Europe. The Burgenland events, culminating in Charles's ill-fated coup, have—or ought to have—brought home the reality of the dangers that threaten the general peace on the part of the Magyar reactionary plungers.

But even the Burgenland coup and the subsequent Karlist raid are nothing but symptoms. They signify that the ulcer of White Bolshevism has broken at last. Dethronement of the Hapsburgs by legislative act is a surface remedy. The core of the problem of Hungary is not the Hapsburg issue, but disarmament. Hapsburgism is merely an effect, not a cause. The militaristic and feudalistic forces of White Bolshevism gravitate toward Legitimism in order to find a sanction for their privileges. The essential danger of Hapsburgism can be averted only by a conscious democracy of peasants and workers—those who labor both with hand and with brain. In the absence of such democracy, the magnates, Bishops and other reactionaries will reinstate their Hapsburg puppet at the first opportune moment. But a Hungarian democracy is incompatible with the present system of terrorist detachments and Ku Kluxism. Without a full and relentless execution of the disarmament clauses of the Peace of Trianon, the democratic inner reorganization and pacific foreign reorientation of Hungary are impossible. Disarmament is the remedy; everything else is a mere palliative. Unless the remedy is applied the wound will reopen, possibly in a different form, probably in a much more vicious degree. Central Europe is too small for both Horthyism and peace. One or the other must go.

THE MONTH IN THE UNITED STATES

Proclamations by President Harding declare the former state of war terminated with Germany, Austria and Hungary—Cuts in Army and Government costs—Bills passed by the Extraordinary Session of Congress—President's message at Regular Session

[PERIOD ENDED DEC. 15, 1921]

BY a proclamation signed by President Harding on Nov. 14, war between the United States and Germany was declared to have terminated July 2, 1921, the date on which the President affixed his signature to the joint peace resolution of Congress.

The proclamation did not declare that the legislation adopted for the duration of the war was repealed, that matter having been settled March 3, 1921, by the signature of another joint Congressional resolution. The main effect of the proclamation was that, for the purposes of war claims and other legal affairs connected with the war, it definitely established the fact that war terminated with the signature of the joint resolution July 2 and not with the exchange of ratifications of the Berlin Treaty on Nov. 11.

A similar proclamation dated Nov. 17, 1921, declared the state of war with Austria-Hungary, as formerly constituted, to have terminated on July 2, 1921. This proclamation included the text of the separate treaty with Austria signed at Vienna Aug. 24, 1921.

The Hungarian National Assembly, on Dec. 12, ratified the Treaty of Peace between the United States and Hungary. Count Albert Apponyi, Chairman of the committee in charge of the peace agreement, said, in an address to the Chamber after ratification: "Though we are not yet acquainted with America's future policy, this separate treaty is proof of

her disinterestedness and her sincere wish to help in the reconstruction of Eastern Europe. This single peace, which was not dictated, recognizes Hungary as an equal."

SENATOR WATSON'S CHARGES

Senator Watson of Georgia having made serious charges against officers of the American Expeditionary Forces, the Senate appointed a committee, of which Senator Brandegee of Connecticut was Chairman, to investigate the accusations. Senator Watson had charged that American soldiers were executed without trial, that officers had shot down enlisted men in cold blood, that officers had made courtesans of army nurses and had been guilty of other serious offenses.

At a session of the committee held Dec. 8, Colonel Walter A. Bethel of the Judge Advocate General's Department of the army, who was General Pershing's chief legal adviser in France and who in that capacity reviewed every court-martial record in which a sentence of death was imposed on an American soldier, testified that the death sentence had been carried out in only eleven cases and that in every instance the man who forfeited his life was guilty of a crime the atrociousness of which would be difficult to overestimate. He further stated that in every instance where the death sentence was carried out the condemned man had every possible legal safeguard and that in no instance was a man sent to the gallows

TRYING FOR A SEPARATION

until his case had been thoroughly investigated and passed upon by General Pershing. Of the eleven men executed, two were white, one was Indian and eight were negroes. One was hanged for murder, the other ten for attacks upon women and girls.

At a subsequent session of the committee, Dec. 9, Senator Watson grew greatly excited and berated the testifying witness, Major Cocheu, who, however, retained his self-control. The Senator was quieted with difficulty. The Chairman announced that, if necessary, every ex-soldier or other person who had made an affidavit alleging knowledge of acts such as charged by Senator Watson would be brought to Washington for examination by the committee. Senator Watson, it was stated, would be afforded opportunity to cross-examine all witnesses.

TO BEAUTIFY WAR GRAVES

President Harding on Dec. 14 gave full approval to plans, drawn under supervision of the Fine Arts Commission, for the beautification of American military cemeteries in France, England and Belgium. It was estimated that about \$800,000 would be necessary for the work to be done in 1922. The President was informed that \$11,000,000 had been spent by the Government in returning bodies of the soldier dead to this country.

ARMY COSTS CUT

A difference of \$22,516,941 was shown in the cost report of the Quartermaster General of the army, issued Nov. 15, between the cost for supplies, clothing, food and other Quartermaster properties bought for the quarter ended Sept. 30, 1921, and for the same period of 1920. The report was said to reflect for the first time in official records the reduced cost of supplying the smaller army of 132,000 men, as compared with that of about 200,000 in 1920. Another difference of \$4,301,306 was shown in the net cost of operation of the

Quartermaster depots for the same periods. For the quarter ended September last the cost was only \$3,213,-189, against \$7,514,496 in the same period of 1920.

NAVY PERSONNEL REDUCTION

The New York Navy Yard at Brooklyn, N. Y., received orders Dec. 13, providing for a reduction in the enlisted personnel of the United States Navy of approximately 5,000 men. The orders set forth that any enlistment might be canceled by resignation, with the result that, a few hours after the orders were posted, naval officers were deluged with resignations coming from all classes of the enlisted service. A number of vessels, it was said, would necessarily be laid up as a result of the drastic cut, because full complements would be needed on first-class ships.

FOREIGN TRADE SHIP GROWTH

The tonnage of American vessels registered in foreign trade at the end of the last fiscal year was almost eleven times greater than in 1914, according to the annual report of the Commissioner of Navigation, made public Dec. 15. The report showed a total of 28,012 vessels of all kinds, totaling 18,282,136 gross tons, under American registry on June 30. This was an increase of 1,958,114 gross tons, or 12 per cent., over the preceding fiscal year. Of this total, the report showed that 5,951 vessels of 11,077,398 gross tons were in the foreign trade, 21,478 vessels of 7,163,136 tons in the coastal trade and 583 vessels of 41,600 tons in the fisheries. Vessels built in the course of the fiscal year numbered 1,361, of 2,265,115 gross tons. American ships lost during the year totaled 183,200 tons; these sold to foreign flags, 116,572 tons.

SHIPPING BOARD LOSS CUT

Shipping Board losses for ships in service were reduced by \$850,000 between June and October, according to

a report by Vice President J. B. Smull of the Emergency Fleet Corporation, issued Dec. 12. The reported voyage losses for last June, he stated, approximated \$1,250,000, whereas for October, the last month reported, they were only \$400,000 and were still decreasing.

There were 75 managing agents of the board, operating 674 steel ships, on July 24. Of these, 12 were running tramp services with a total of 125 vessels. It was estimated that on Jan. 1 there would be only 43 active agents of the board, handling a total of 321 ships. By that time all tramp steamers, it was expected, would be withdrawn from service.

HIGH SURTAX PASSED

The President's wishes were overriden in the House on Nov. 17, when nearly one hundred Republicans joined with an almost solid Democratic phalanx in voting to make the maximum income surtax rate 50 per cent.

The President had written to Chairman Fordney of the Ways and Means Committee, suggesting 40 per cent. as a compromise between the maximum rate of 32 per cent. proposed by the House and the 50 per cent. sanctioned by the Senate. Conservative Republican leaders in the House expected to make the rate 40 per cent., but ninety-four recalcitrant Republicans broke from the party leadership and joined with the Democrats in a vote of 201 to 173 for the higher rate. Only three Democrats—Campbell of Pennsylvania, Deal of Virginia and Hawes of Missouri—voted with the Republican majority for the lower surtax.

TAX BILL ADOPTED

The last act of the Senate in the extraordinary session of the Sixty-seventh Congress, which adjourned sine die Nov. 23, was to pass by a vote of 39 to 29 the 1921 Revenue bill in the form in which it was finally agreed to by the conferees of the two Houses of Congress. The Presi-

NEXT!

dent signed the bill on the same day. The chief bills enacted at the extra session were thus listed by Mr. Mondell, the Republican House leader: The Emergency Tariff law, Budget law, Revenue act of 1921; peace resolution, Volstead Anti-beer law, Immigration Restriction act, Veterans' Bureau act, Farm Loan act, Maternity

THE MODERN ST. GEORGE AND HIS DRAGONS

law, Packers' Control law, good roads appropriation of \$80,000,000, act for the Apportionment of Waters of the Colorado River, the War Finance Agricultural Loan act, Grain Exchange Futures law, appropriation for the Shipping Board, naval appropriation measure, army appropriation measure, Cable Control act and the Indian Bureau act.

REGULAR SESSION OF CONGRESS

The first regular session of the Sixty-seventh Congress convened at noon Dec. 5. President Harding addressed Congress in person in a notable message which was a frank expression of the hopes and wishes of the Chief Executive. He had a distinguished audience. Occupying seats of honor directly in front of the House rostrum were statesmen of Europe and the Orient, who were representing their respective countries at the Conference on the Limitation of Armament.

The President proposed flexible tariff and labor regulation and asked Congress to extend the powers of the present Tariff Commission. He was in favor of funding foreign debts. He hoped for changes in the Merchant Marine act. He declared against tax-exempt bonds. He made a strong appeal for the united support of Congress in the accomplishment of legislation that he considered vital to the peace, prosperity and security not only of the United States, but of the world.

CUT IN 1922 EXPENSES

The effort which the Government has been making to get national expenditures within a bearable limit was reflected in the first report of Director of the Budget Dawes, which was sent to Congress on Dec. 5. Mr. Dawes estimated the expenditures for the fiscal year ending June 30, 1922, exclusive of postal expenses paid from postal revenues, at \$3,967,922,366 and for the fiscal year 1923 at \$3,505,754,727. The latter figure is approximately \$500,000,000 below the sum

which Treasury officials recently estimated would be required annually to run the Government for some years to come. It also is \$2,032,285,962 less than the \$5,538,040,689 actually spent in the fiscal year ended June 30, 1921. It was estimated that when all factors relating to war and the maintenance of armed forces on land and sea were taken into consideration the cost to the taxpayers from such sources would total no less than \$2,900,000,000 annually, thus making the cost of government as estimated for 1923 for civil purposes not much in excess of \$600,000,000.

"OPEN SHOP" RAIL DECISION

A decision promulgating 148 new working rules to govern the employment of the six federated railroad shop crafts and supplanting the national agreement entered into by the employes with the United States Railroad Administration on Sept. 20, 1919, was handed down by the United States Railroad Labor Board on Dec. 1. The decision recognized the "open shop" principle as applied to the railroads and meant to them an annual payroll saving of about \$50,000,000. It immediately affected 400,000 employes, and this number, it was thought, would be increased to 850,000. It was believed that the decision would form the groundwork on which the adjudication of further wage disputes between the roads and their employes would be based.

Employees of Armour & Co., Chicago, 26,000 in all, through their Plant Governing Committee, on Nov. 18 agreed with officials of the packing house that a wage reduction was necessary and fixed the amount. The cut was to date from Nov. 28. This was the first time in the history of the industry that a wage reduction was arrived at in such a manner. The reductions ranged from 8 to 3 cents an hour, and applied to plants in Chicago, St. Paul, Sioux City, Omaha, St. Joseph, Kansas City, St. Louis and Denver.

IMPROVEMENT IN BUSINESS

The bi-monthly survey by the National Industrial Conference Board of industrial-economic conditions in the United States, issued Dec. 4, revealed that opportunities for employment were becoming more numerous, especially in the Eastern States. Wage deflation continued, although against considerable organized resistance, and, with lower wage scales, business activity tended to increase.

The cost of living had been affected by seasonal fluctuations, and on Nov. 1 was 63.8 per cent. above the July, 1914, base, according to the board's preliminary estimate. Prices of raw materials were in some cases below those of 1914, and the prices of manufactured articles were generally lower than the peak prices, though they were still maintained from 25 to 120 per cent. above the 1914 level, because of continued high labor costs, high taxes and high costs of transportation. Though at the beginning of the President's unemployment conference the number of unemployed was placed at about 3,500,000, the latest Government figures place the number at about 2,000,000.

The outstanding feature of wage changes in industry had been the effort to reduce wages in trades in which closed union shop conditions had prevailed, or in which a large proportion of the labor was organized in trade unions. Reductions ranged from 10 to 15 per cent., but more radical reductions in individual cases were reported. Preliminary figures of a research study by the board showed reductions in weekly earnings ranging downward from 38 to 5.2 per cent. in industries for which the study had been completed.

RADICALS' INFLUENCE ON LABOR

The first annual report of Attorney General Daugherty, sent to Congress on Dec. 8, stated that "the movement launched by the Third or Communist International at Moscow to gain control of the trade and industrial unions throughout the world" was "meeting

with marked success as far as it related to syndicalist unions in the United States." Communist parties in this country, Mr. Daugherty said, had united to carry on propaganda more effectively, and their policy was to endeavor to gain control of the labor organizations through the control of the Executive Committees or other governing bodies therein. "Many of the leaders of this movement are American citizens," he said, "though they are subject to orders from Moscow as to their action and activities in the United States."

He pointed out that the only remedy available to the Federal Government was the deportation of such agitators as are aliens, and that it could act most effectively by co-operation with State authorities. Ten of the States, he said, had anti-anarchy statutes, seventeen of them criminal syndicalism statutes, four of them anti-syndicalism statutes, eleven of them sedition statutes, ten of them statutes on sabotage, twenty-four of them statutes regarding membership in ultra-radical organizations, twenty-one of them statutes regarding attendance at ultra-radical meetings, twenty-nine of them anti-red flag laws, and six of them laws against seditious conspiracy.

SENATE FOR BEER BAN

The Senate, on Nov. 18, by a vote of 56 to 22, adopted the conference report on the anti-beer bill, despite the fact that the two leaders of the Senate, Messrs. Lodge and Underwood, opposed it. The so-called Stanley amendment, which the Senate adopted, and which forbade the search or seizure of a person's home or property without a warrant, was substantially modified by the conferees. The bill as finally passed required prohibition agents to obtain search warrants only in the case of private residences. Offices, stores, vehicles and the person might be searched without the authority of a warrant. It was stipulated, however, that officers who searched without "probable cause"

or "maliciously" might be penalized. The bill also prohibited the prescription of beer or other malt liquors for medicinal purposes, and limited the quantities in which other spirituous liquors might be prescribed. The bill was signed by the President on Nov. 23.

HELP URGED FOR ALASKA

More liberalized laws with an administration co-ordinated and brought nearer home were stated to be the paramount needs of Alaska in the first annual report of Governor Scott C. Bone, made public Dec. 6. "Capital and people are needed to develop the resources of the Territory," ran part of his message, "and until it is made easier for these two necessary factors to obtain a foothold, the Territory will not progress. Under the present long-range system of government, individual initiative has been halted and the pioneer spirit maimed."

Recommendations made by the Governor were: Liberal mining and land laws, framed to meet distinctive conditions in Alaska; a colonization plan to be worked out in conjunction with the operation of the Government railroad, to bring under cultivation the vast area of agricultural land in the interior; improved transportation facilities and more equitable freight rates, through private enterprise, if obtainable, and under governmental regulation and control; more liberal mail subsidies, to enable the Post Office Department to function better in Alaska.

Governor Bone said that the population had decreased 10,000 during the last decade and that the Territory had not progressed or prospered during the last fiscal year.

"TILE TRUST" MEN SENTENCED

As a result of the activities of the Lockwood committee, four business men, prominent in the so-called "Tile Trust," received prison sentences Nov. 23 from Federal Judge William C. Van Fleet in New York City. They were also fined. Twenty-nine other

individuals and nineteen corporations were fined.

The four business men—Arthur Schilstone, Albert Schalle, Frank H. Nobbe and Herman Petri—had pleaded guilty, so that they were barred from making an appeal. It was therefore practically certain that they would serve their sentences, which were two months in jail for Petri and four months for the three others. In that case they would be the first business men to see the inside of a jail for violating the anti-trust section of the Sherman act during the thirty-one years that it has been on the statute books.

NATIONAL HEALTH

According to the findings of the Committee on Elimination of Waste in Industry of the American Engineering Council, appointed by Secretary Hoover (these findings were made public Dec. 4), the duration of life in America has been increased by five years since 1909. Morbidity surveys, it was stated, showed an economic gain to the nation of many millions through lessened disability and sickness. The report estimated that 2,400,000 people were continuously ill. Tuberculosis was stated to be still the worst epidemic disease, though its ravages were decreasing. Government and State action were included in an elaborate program suggested to minimize illness and prolong lives. There was no reason, it was declared, to believe that the race was physically advancing. But that national vitality was increasing was the general conclusion reached by the investigators.

Pneumonia, influenza and typhoid fever were shown to be the most important communicable diseases among adults. Typhoid fever filled more than 150,000 sick beds annually

SCOTT C. BONE

*Recently appointed Governor of Alaska,
formerly publicity man for the Re-
publican National Committee*

and took about 15,000 lives, mostly in the working ages. Influenza and pneumonia in non-epidemic years took about 35,000 lives in the working ages and thus accounted for at least 350,000 cases of illness. Hookworm infection was present in a large industrial area to the extent of at least 5 per cent. among the laboring population.

KEEPING OUR ARMY READY FOR DEFENSE

BY JOHN W. WEEKS

Secretary of War

How the United States is organizing an efficient citizen army by salvaging the trained personnel left from the World War—Two million real soldiers to be quickly available in an emergency

FOR the first time in the history of the United States we now have an operative as against a merely theoretical military policy. Hence it is my good fortune to be the first Secretary of War able to announce definite plans for establishing in time of peace a national defense organization which follows the traditional military program of the nation, but which has never before been applied in actual practice.

The essence of the country's military policy now, as it always has been, is dependence on the civilian manhood of the country for defense in case of war. It presumes the smallest standing army that practical needs will permit, but one that is capable, in case of emergency, of rapid expansion into a larger non-professional war army.

So far as the standing army goes, we have always adhered to that policy. We are adhering to it now. Three

years ago at this writing, there were approximately 4,000,000 Americans under arms, a force almost twice as large as the country ever knew before. Today we have a standing military force of only about 165,000 officers and men. Demobilization after the last war, all elements considered, was as rapid and as radical as it was after previous wars. While our present standing army may seem large in comparison with the forces main-

tained twenty-five years ago, it is still, in a relative sense, quite as small. For we must consider our growth in population and wealth, the development of our world relations and the requirement of overseas possessions which absorb a considerable part of our Regular Army. Likewise, modern warfare has so extended the range of the professional soldier's peace-time duties and studies that there is little more than elementary similarity between what

(© Harris & Ewing)

JOHN W. WEEKS

Secretary of War in President Harding's
Cabinet

was required of the regular army in the pre-Spanish war period and what is needed from it today by way of preparation for emergencies that still may arise.

In the past, our policy of expanding a small peace establishment into a great war establishment has been a theoretical one only. For we have always deferred its application, or intelligent preparation therefor, until serious emergency arose. That was a serious defect. It greatly and unnecessarily enhanced the cost, the hardships, the difficulties and the dangers of our important wars. To correct that defect without giving any basis for the fear of militarism—indeed, to correct it in such manner as to lessen the danger of militaristic influences—is the intent of the National Defense act now being applied.

That act contemplates a national defense organization to be known simply as the Army of the United States. That term no longer implies only those expert and well-drilled soldiers who make up our regular establishment. Potentially it includes every man, uniformed or not, who might be expected to fight for his country in case of need. In peace-time practice, however, it includes only those brought within some form of organized control or designation for immediate, casual or extreme emergency military operations. While the regular army is the nucleus around which all will revolve, it will be in a numerical sense only a part, and a relatively small part, of the whole—only the key, so to speak, in the arch of national organization for defense, the whole to be known as the Army of the United States.

NEW NATIONAL GUARD

There will be two other main branches, the National Guard and the Organized Reserves, both having to do with the potential defensive strength represented by the civilian manhood of the country. The National Guard practically will be as it has always been; that is to say, chiefly

a State force for use in casual emergency, but effectively organized for prompt employment as a part of the national forces in the event of war. It will be controlled and officered by the States as heretofore, but equipped and technically supervised by the Federal Government. Its present strength is about 126,000, but the plans for its development contemplate gradual and systematic expansion toward the legal maximum of 425,000, to be allotted equitably among the different States. As a part of the Army of the United States, it will constitute eighteen infantry divisions, which will have the designations and so far as possible the territorial identities of the National Guard organizations which took part in the recent war. Most of New York State's National Guard, for example, will continue to comprise the Twenty-seventh Division, Army of the United States, as it did during the World War. Regimental designations will be left to the States, but so far as practicable those under which fame was won during the World War will be retained and perpetuated.

The Organized Reserves likewise will be formed into divisions corresponding, so far as practicable, in both designations and territorial identity, with those evolved from the National Army during the World War. The Organized Reserve forces in New York City and most of its vicinity thus will be in the Seventy-seventh Division of the Army of the United States.

Hence in many respects the A. E. F. goes on. Its traditions, its memories, its experience, will be preserved, and its actual organization perpetuated in at least skeleton form. It is pleasing to note that its commander at the front, General John J. Pershing, as Chief of the General Staff, has the duty of re-energizing it, in so far as may be practicable, and of re-establishing so much of its framework as can be salvaged and preserved for possible future use.

Thus the traditions upon which we build are not in any respect those of

a military class, but rather those of the historic Army of the United States, composed mainly of the citizen soldiery—traditions, too, that will always be safeguarded against changes prejudicial to our institutions.

AVOIDING CENTRALIZATION.

The different branches of the Army of the United States will meet and be tied together, so to speak, into corps area organizations, which will be the intermediate headquarters between them and the War Department in Washington. For we aim to accomplish the very difficult task of decentralizing the organized military activities of the country. Toward centralization and concentration the spirit of militarism trends, and therein may lie its chief danger. Hence we view as among the most constructive features of the new military law the division of the country into nine corps areas of substantially equal population. In each of these areas there will be two divisions of the National Guard and three skeletonized divisions of the Organized Reserves. The commanders of these areas, with their staffs, will constitute the agencies for decentralized administrations.

Each corps area commander—generally an officer of high regular army rank—acting under general policies emanating from the War Department, but with the fullest initiative allowed, will be charged with the duty of developing all units of the Army of the United States within his assigned territory. He will also have supervision of the Reserve Officers' Training Corps, the citizens' training camps, and all other agencies through which patriotic citizens who so desire may be prepared for military service in case of national emergency. These corps areas thus form a permanent machinery for decentralized military administration in peace or war. The establishment of these corps areas, based upon the distribution of military population, is one of the most

far-reaching provisions of the amended National Defense act.

The General Staff, which has general supervision as well as full control of all plans for general strategy and operation in case of war, is no longer an isolated and exclusively regular army institution. Both the National Guard and the Organized Reserves are guaranteed representation upon it. In fact, the law requires that any General Staff board or committee having to do with policies affecting the citizen forces of the country must contain as many National Guard or Reserve officers as regulars. Therefore, no policies affecting the citizen forces can be adopted, except with the participation of representatives of those forces at the centre of control. As practically all military policies will affect the citizen forces, representatives directly from the civilian life of the country will share in virtually all War Department actions that relate to national defense. This obviates any danger of the development of an exclusive army hierarchy in Washington, and gives assurance that all preparation for the national defense will be made along truly democratic lines.

LIKE THE SWISS PLAN

The military policy whose framework is above outlined follows in many essentials the plan of organization adhered to by the democratic army in Switzerland, the army that long has been viewed as a model for countries desiring adequate defense with a minimum permanent establishment. One basic feature of the Swiss system—universal military training—was not accepted by Congress when amending the National Defense act. But voluntary military training in our schools and colleges and in citizens' training camps is authorized by the law. Personally I believe that we can go far toward developing a powerful defensive military organization on the voluntary basis, for we are in a superb position with regard to the first element

entering into army strategy, which is numbers. The World War demonstrated how our young men at need will make sacrifices to defend their country. Our young men, in greater proportion, perhaps, than those of any other major power, love the out-of-doors and appreciate the benefits coming from moderate training along military lines. Hence we have every reason for believing that we can maintain an efficient overhead organization for mobilizing an army of 2,000,000 men in case of war. With adequate organizations fully officered and with initial movements planned in advance, the training of a large army becomes a relatively simple undertaking.

Every business man knows the all-importance of mere organization. The chief directors of a business concern may die, its working force may strike, the plant and even the offices with all records may be destroyed by fire, and yet, if its organization remains fairly intact, the establishment may be quickly revived. It is easier to build plants, to organize and train workmen, even to find and develop markets, than it is to develop efficient organization, which indeed must grow.

OUR WORLD WAR INVESTMENT

What we need most for the military defense of the country is an organization of selected and trained civilians, which, under expert professional guidance, can quickly be ready to function in case of an emergency. With such an organization, including 100,000 reserve officers capable of handling troops or directing the various technical branches of army mobilization and operation, we should be able to have a force of 2,000,000 men under training within a few weeks after the first threat of emergency. With the framework of organization such as we are now developing, many months' time would have been saved in preparing our troops for service in France, and much of the expense would have been saved.

It might be said that, whatever Congress might have decreed, we did not have the material for forming an officers' reserve corps of 100,000 prior to the last war. It would have taken many years' time and large expenditures to create that material. But suppose we had salvaged and organized a portion of the trained personnel that came out of the Civil War, and had used it as the years passed in steadily preparing young men to take its place as age and death removed it from availability. We would have been ready at any time to form a large citizen army within a few weeks from the taking of the first step in the direction of war. Mobilization for the Spanish War would have been a matter of mere selection, and many of the huge problems incident to the organizing of our big army for the World War would have been displaced by processes verging on the automatic.

The training of overhead organization for the Civil War represented an immense investment, which, after the war was over, was permitted to evaporate without an attempt to salvage any part of it. Likewise the training received by thousands of officers and men in the World War represents a huge investment, which can be safely and economically utilized in making such preparations as we may consider necessary for our future protection. Shall we disregard that investment, now that the war is over, rather than preserve and thus economize by reason of it?

That is what, under the National Defense act as amended by Congress last year, the present Administration proposes to do. So far as officers in the World War volunteer for it and are qualified, they will be retained in the reserve forces of the army of the United States. They will be supplemented and gradually superseded, as time passes, by others who in schools or colleges or voluntary training camps, or by technical fitness acquired in their daily life, become qualified for actual war service. Every member of the reserves will

belong to a localized organization. Perhaps in many cases it will be only a paper organization, yet it will exist, and that is the most important factor. Every reservist will have a specific thing to do, in case of call to the colors, and advanced plans will be made for filling out and perfecting every organization.

We already have 64,000 officers enrolled in the Officers' Reserve Corps. Most of them are veterans of the World War, and other veteran officers probably will enroll as the reserve organizations take form. Last year 90,811 young men were enrolled in the Reserve Officers' Training Corps in our colleges and high schools. A considerable number of them will qualify eventually as reserve officers. Last year, also, 11,000 young men attended the citizens' training camps maintained by the War Department in the several corps areas.

SALVAGING A TRAINED PERSONNEL

All training is directed by regular army officers, whose greatest function from now on is to develop, maintain and energize the great framework of reserve organization, through which the forces in case of war can be expanded quickly and automatically, as it were, into a large citizen army.

Selected officers and enlisted men of the regular army will be assigned to the Organized Reserves, to supervise training, organization and equipment and to perform detailed administrative work. Thus civilians who become reservists will not be burdened, in peace time, with work that necessarily will interfere with their daily vocations. Tentative plans provide for calling them out for not to exceed fifteen days' training each year, whenever funds are available. This will enable them to keep abreast of military progress, to identify themselves with their organizations, and to undergo practical tests as to fitness for different duties and assignments and for promotion.

There also will be an enlisted reserve corps subject to expansion. While this is desirable, the greatest desideratum is officers properly selected and assigned.

The Officers' Reserve Corps will be a great reservoir for proved and prepared talent for military leadership. There is no limitation upon the source of that talent. It may come from the World War, from the schools and colleges, from the ranks of the National Guard or the regular army—even, in respect to technical activities, from workshops, offices, or laboratories. Fitness will be the single rule applied to admission to the ranks of the ready and the designated.

It will soon become apparent that only those can hope to lead in war who prepare themselves for responsibility in time of peace. The young man, for example, who thinks that in case of war he should like to be on mobilization something more than a high private in the rear ranks will be impelled to fit himself for leadership before mobilization is needed. There should and will be a gradual development of the idea that it is proper for every self-respecting young American to give a portion of his time during his youth to preparation for effective service, if his country should ever need it. He who relies upon mere potential fitness will trust to a slender thread; for when important assignments are made before war comes, there will be little room for the successful wielding of "influence" after activities begin.

Through the general development of an organized citizen army we can maintain an adequate national defense system at a minimum of expense—at negligible expense as compared with what it would take to keep up a standing force sufficient for any eventuality.

With such a system there will be no need, in case of future war, for long and wasteful delays while selecting and training officers, or for setting up great and expensive can-

tonments solely for purposes of military organization. When the young men of the country are called out, they will be mobilized in or near their own home communities, under officers whom they know and in organizations of local contingents.

LOCALIZED MOBILIZATION

Thus initially, for purposes of organization, there will be no tremendous housing or tantalizing transportation problems to solve. For in almost every community there already are shelters which can be extemporized—armories, court houses and other public or available private buildings—for local contingents. Hence most of the new recruits may remain near their homes and in touch with their home people until they have received their fundamental training. There will be no need for combining them into huge masses until concentration for military purposes becomes necessary. Hence we will avoid many of the troublesome “psychological” problems that went with the method of initial concentration in the big cantonments. These were unavoidable in the World War, because we were forced to concentrate in order to begin organization.

The development of a citizen army affords our regular establishment the greatest field for constructive work it has ever had. Instead of being a close and isolated organization, cut off in large part from the civic activities and general life of the country, its trained officers and men will spread out through the masses of civilian manhood which have always been and shall continue to be our main dependence in case of war.

Because of its isolation and concentration upon and within itself, in no war have we ever utilized to the full the highly trained skill represented by our small army of professional soldiers. General Grant, in his

memoirs, says it would have been better to disband the regular army at the beginning of the Civil War. This would have made it possible to use its expert personnel solely as framework for building the great citizen army which had to be raised. Under the new system which we are now developing, the trained experts, upon whom the success of the citizen army depends, will be identified with the organizations of that army in time of peace.

Also, as heretofore, regular army officers and men will be assigned for duty, as specialists, with the National Guard. On the other hand, both Reserve and National Guard officers will be assigned constantly to temporary duty with the regular army proper.

Thus the various components of the Army of the United States will be interlocked and made interdependent. As the whole, in peace time, will be predominatingly civilian; as the members of the army not in uniform will have means for impressing their views on the regulars in uniform; as the success of the regular establishment will be made to depend upon the success of the Organized Reserves and the National Guard; as all civilian service will be voluntary, and as the civilian forces will be distributed more or less evenly as to population, the very soul of the system will be democratic. Such an army by its very nature cannot be militaristic in the aggressive sense, in the sense of pursuing the science of war as an end sufficient unto itself, in the sense that contradicts democratic institutions and the peaceful instincts of our people. For it will respond readily only to the legitimate demands of national defense. In the words of President Harding, “Every patriotic citizen should encourage the development of these forces, each within its proper sphere.” The plan is economical, democratic—and safe.

MURDER TO MAINTAIN COAL MONOPOLY

BY CHARLES FREDERICK CARTER

Extraordinary situation in West Virginia coal fields revealed in Federal court proceedings—Charge of conspiracy between western operators and miners for the purpose of destroying non-union competitors—Evils ascribed to the check-off system

BY filing in the United States Circuit Court at Indianapolis a suit in equity against the officers and members of the Executive Board of the International Organization of the United Mine Workers of America and all the members thereof—likewise against the Jackson Hill Coke and Coal Company, the Queen Coal and Mining Company, Rowland's Power Consolidated Colliery Company, Lower Vein Coal Company, all Indiana corporations, and P. H. Penna, J. K. Seifert, J. H. McClelland and W. J. Snyder—on behalf of itself and sixty-two other coal companies operating in Mingo County, W. Va., and Pike County, Ky., the Borderland Coal Corporation has at last placed in court records the story of twenty-three years of arson, assault and assassination in West Virginia.

In addition to this civil suit, indictments are also pending in the same court against substantially the same defendants—that is, against the leaders of the United Mine Workers' organization and the coal operators of Ohio, Indiana, Illinois and Western Pennsylvania—for conspiracy to increase the price of coal. No date has been fixed for trial under these indictments, but the Department of Justice is said to be preparing to bring the parties to trial at an early day.

As set forth in plaintiffs' bill, the long series of outrages in West Virginia, including 500 murders, un-

numbered assaults and lesser crimes, amounting on several occasions to nothing less than armed insurrections requiring the intervention of troops, which has cost the coal operators and the taxpayers of the State and of the country at large a good many millions of dollars, is the result of a conspiracy between coal operators in Indiana, Illinois, Ohio and Western

JUDGE ALBERT B. ANDERSON
United States District Judge at Indianapolis

Pennsylvania, known as "the Central Competitive Field," and the officials of the United Mine Workers. The conspiracy was inspired, as recited in the bill, by the operators in the Central Competitive Field, who wanted to retain a monopoly of the coal market in the Central West, freed from the inconvenient competition of West Virginia, and by officials of the United Mine Workers, who wanted the aid of the operators in collecting millions of dollars from miners. By a formal agreement entered into Jan. 26, 1898, and continued in full force and effect to date, the United Mine Workers undertook to unionize the mines of West Virginia as the only effective way to make competition impossible, in consideration of certain concessions from the operators in the Central Competitive Field, including the "check-off" [a system by which assessments are deducted from union men's pay before they receive it].

Judge Albert B. Anderson, in the Federal District Court at Indianapolis, on Oct. 31, 1921, upheld plaintiffs' contention that a conspiracy existed, and therefore granted an injunction forbidding further efforts to unionize West Virginia as an attempt to monopolize the coal industry and as a violation of the Sherman act, and also enjoining further collections of money from miners through the "check-off."

Under their own constitution and by-laws and the agreement with the operators, officials of the United Mine Workers have the power to demand any sum they see fit to be deducted from the wages of miners by their employers and turned over to them. Sometimes the deductions collected by the operators amount to as much as \$3 a month, or at the rate of \$36 a year, per man. As the union claims a membership of 585,000 it will be seen that very interesting possibilities are involved. The actual gross revenues of the organization, including sums spent both by the national organization and by locals, it is alleged amount to \$15,000,000 a year.

Breathing threats of a nation-wide coal strike at every turn of the wheels, the union officials and their attorneys hurried to Chicago, where they applied to the United States Circuit Court of Appeals for relief. It was granted on Nov. 4, the court allowing an order temporarily suspending the injunction against the check-off pending an appeal from the entire injunction to be heard Nov. 16. In all other respects but the check-off, the injunction was allowed to stand until disposed of by the court. On Nov. 16, Judges Baker, Alschuler and Evans of the United States Circuit Court of Appeals devoted the entire day to hearing arguments on the injunction. A decision was promised within sixty days.

THE MOTIVES INVOLVED

In order that this almost incredible story may be understood, it is necessary to explain certain conditions. West Virginia is pre-eminently a coal-mining State, having 9,500 square miles of coal lands, from which it is estimated that 60,800,000,000 tons of coal can be mined. All coal in the State is very high grade; the famous smokeless coal, such as is supplied to the navy, is the best known. Veins are unusually thick. Between Williams-town and Bluefield the Norfolk & Western Railroad passes through a tunnel cut entirely in a vein of coal. Most of the veins worked range from 4 to 11 feet in thickness. Most of the mines, being above water level, have been developed by drifts, the coal being delivered by gravity to the tipples beside the railroad track. Under these unusually favorable conditions the mining industry has developed rapidly, production increasing from 20,220,721 long tons in 1900 to 77,180,060 long tons in 1917, which was a little more than 15½ per cent. of all the bituminous coal mined in the country in that banner year.

Not being an industrial State, more than 90 per cent. of West Virginia's entire output of coal must be shipped through competitive coal fields to distant markets. The most important

(Wide World Photos)

Federal troops disarming miners who have been carrying on a private war for the unionization of the West Virginia mines

fuel market is the Middle West, including that part of the United States and Canada served by the Great Lakes. The bulk of West Virginia coal has always been marketed in the Middle West; but prior to 1897-8 the operators in the Central Competitive Field enjoyed a monopoly of the lake trade, being able to adjust prices to suit themselves.

Coals from the Central Competitive Field are not equal in quality to those from West Virginia, so the latter received the preference when offered in the lake trade. About 1898 West Virginia competition began to be felt. A further disadvantage of a majority of mines in the Central Competitive Field is that, owing to natural conditions, costs of production under any circumstances must be higher than in West Virginia, thus neutralizing the advantage of being nearer to market.

But the controlling factor is that the mines in the Central Competitive Field are virtually in control of the United Mine Workers. It is well known that the policy of labor unions

is to restrict production—to extort the highest possible wage for the smallest possible equivalent in work. Statistics show that the average daily production per man in non-union mines in West Virginia is 18 per cent. higher than in the union mines of Illinois.

To overcome these handicaps two means were open to operators in the Central Competitive Field—the discriminative freight rate and the union agitator. Both have been used, the latter proving by far the more effective.

CHARGES AGAINST THE UNION

Continuing the narrative from allegations set forth in plaintiffs' bill, it is charged that the conspiracy referred to was formulated at a joint conference of operators and miners from Illinois, Indiana, Ohio and Western Pennsylvania at Chicago on Jan. 26, 1898, in an agreement signed by both parties, the eighth paragraph of which was as follows:

That the United Mine Workers' organization, a party to this contract, do hereby

further agree to afford all possible protection to the trade and to the other parties hereto against any unfair competition resulting from a failure to maintain scale rates.

In union parlance "unfair" means "non-union." The only non-union field competing with the four States mentioned is West Virginia. Hence paragraph eight must be interpreted to mean that the United Mine Workers undertook to prevent West Virginia from becoming an effective competitor of the four States. The only way that could be done was by organizing the West Virginia mines, thus making it possible to restrict production and otherwise harass and impede the operators in that State.

It appears that for a number of years the proceedings of the joint conferences of the United Mine Workers and operators in the Central Competitive Field were reported by official stenographers and published—solely for the information of the two parties to the agreement; but the efficient secret service of the West Virginia operators procured copies, until, this fact becoming known, publication was discontinued.

Quoting from these official reports, plaintiffs' bill gives an outline of the progress of the alleged conspiracy. Thus at the joint conference in 1899 Ratchford, retiring President of the United Mine Workers, is alleged to have said:

The West Virginia miners, by reason of the efforts of our organization, have been hampered and injured more within the past year (i. e., since the alleged conspiracy was formed in 1898) than in any year they have been operating.

Quoting from the report of the joint conference of 1910, Mr. Maurer, coal operator from Ohio, is represented as saying:

The chief evil was the fact that districts which did not recognize the United Mine Workers and had no agreement with them produced coal much more cheaply than those districts which sustained contractual relations with that organization. In order to correct these most harmful conditions, a joint convention of operators and miners of Western Pennsylvania, Ohio, Indiana and Illinois, at the solicitation of the miners' officials, was called to meet at Chicago in

1898. At this convention an interstate joint agreement was established. The granting of the eight-hour day by the operators, after making numerous other important concessions, was with the distinct understanding and explicit promise of the miners to give the operators of the four contracting States adequate protection against the competition of the unorganized fields.

It should be noted that while coal is produced much more cheaply in non-union mines, the men actually earn higher pay than union men. This fact is well authenticated.

William Green, Secretary-Treasurer of the United Mine Workers and one of the defendants, is represented as saying in reply to Mr. Maurer's complaint, among other things:

The United Mine Workers of America have diligently and aggressively attempted to carry out the promise made in Chicago in 1898; they have done everything in their power to redeem any promise they may have made to organize West Virginia. Since 1898 our organization has at various times spent hundreds of thousands of dollars trying to unionize West Virginia. We have also sacrificed human life in the attempt to redeem that promise.

At the joint conference of 1912 President John P. White of the United Mine Workers is represented as saying that

Every effort has been put forth to try to break down the conditions that are complained of here on the other side.

One of these efforts, presumably, was the strike on Cabin Creek and Paint Creek in 1912, which resulted in the calling out of the militia and the usual investigation, which carefully avoided revealing any fundamental facts.

At the same conference Duncan McDonald, Secretary-Treasurer of the United Mine Workers of Illinois, is represented as saying in part:

Penitentiary doors have no terrors for us * * * If putting two or three hundred of our men in jail will organize West Virginia, we will send two or three hundred down.

As men are not usually sent to the penitentiary until after conviction of felonies, Mr. McDonald's alleged remarks are suggestive.

The foregoing quotations are fair

samples of many pages of similar material in plaintiffs' bill.

REVOLUTIONARY PURPOSES

Continuing, this amazing narrative recites that in 1912 the United Mine Workers definitely abandoned the trade union movement and became revolutionary, treasonable and anarchistic in character, quoting from the constitution of the organization and from speeches of its members to sustain the assertion. It is alleged that the Mine Workers, after obtaining complete control through unionizing the mines, purpose to seize the properties without compensation to the owners.

This appears to be generally understood throughout West Virginia, for in testifying before the Senate Committee "investigating" conditions in the State recently, W. M. Wiley, Vice President of the Boone County Coal

Corporation, declared that the Mine Workers meant to pull down the Government and put themselves in place of it.

It is charged that the object and aim of the United Mine Workers is to drive out of the market all coal produced by non-union mines; and that owing to the restrictions and unreasonable regulations imposed by the union on all organized mines, and on account of the constant bickerings, disputes and strikes arising therefrom, resulting in the loss of time to employes and loss of production at the mines, the cost of production is so unreasonably and unnecessarily enhanced that union coal cannot compete with non-union.

As an interesting sidelight on these conditions the fact may be noted that one of the grievances aired by operators of the Central Competitive Field at a joint conference was

that the good union miners, irritated beyond endurance by their masters, the union officials, were forsaking the beatitudes of the organized field and emigrating to the non-union fields of West Virginia, where they could work in peace and not be held up at the paymaster's window by the check-off.

Declaring that ever since 1898, when the alleged conspiracy was entered into, the parties thereto had energetically endeavored to bring about the results for which the conspiracy was formed, and that in furtherance of this object the United Mine Workers had used every form of threat, intimidation, violence, murder, insurrection and destruction of property to impose their will upon coal operators and their employes, some of the outstanding outrages in the State are described. These include the march in the Fall of 1919 of 5,000 armed men commanded by officials of District No. 17, United Mine Workers, from the union fields of the Kanawha, Cabin and Paint Creek districts, at a time when there was no strike or other labor trouble in these districts, with the announced intention of invading the non-union field in Logan County, fifty miles away, where also there was no labor controversy, to compel by force of arms the unionization of the field.

A similar invasion was staged in Mingo County about May, 1920, resulting in the declaration of a strike by the union about July 1, although there were no union miners there and the non-union men were satisfied with wages and working conditions.

The President of District No. 17 of the United Mine Workers, embracing Mingo County, West Virginia, testified that in the year ending July 1, 1921, the union had spent \$2,600,000 in the war in Mingo County. During the war they killed 22 men, some of whom were officers of the law. On this showing it costs the United Mine Workers \$118,000 a head to kill non-union men in West Virginia; but money is no object, for it is all collected through the check-off.

It is charged that the defendant companies, parties to the alleged conspiracy, knew at the time the agreement with the United Mine Workers was made that the sums they collected through the check-off and delivered to the union treasurer were to be used for the purchase of arms and ammunition and to maintain an armed force to murder non-union workers employed in West Virginia. They are further charged with the knowledge that the union men, victims of these compulsory collections, would not voluntarily contribute any part of their earnings for such a purpose. Without the check-off the union could not maintain a war chest, and hence the long period of outrages would automatically come to an end.

RESULTS OF OUTRAGES

The ruthless system of intimidation, outrage and murder described has resulted in the unionization of 53,000 out of the 88,000 miners in West Virginia. The operators who were thus involuntarily brought into the union fold have plenty of leisure to contemplate their condition, for most of the union mines in the State are idle. It is said that 90 per cent. of the mines in the unionized New River field are now shut down altogether. Organization has not proved to be the effective antidote for competition it was expected to be.

On the other hand, the non-union fields, since United States soldiers and State police took charge of the districts, are producing coal in peace now, although they are apprehensive of another outbreak just as soon as soldiers and policemen are withdrawn. The United Mine Workers are now maintaining three separate armed camps in the Mingo field with their guns hidden away, but ready at hand to be used as soon as the coast is clear. Those camps are nothing more or less than continuing threats meant to intimidate non-union men and their employers.

MR. VINSON'S CHARGES

Facts being as set forth in the foregoing, and as they are generally

known throughout West Virginia, it may seem incomprehensible to the outsider that legal action was not taken long ago to end an intolerable situation. Replying to a question on this point, Z. T. Vinson of Huntington, W. Va., senior counsel for the coal companies bringing suit, said:

"The war on Paint and Cabin Creeks in 1912 was financed to such an extent that the United Mine Workers had millions of dollars to back them up, to pay expenses and to furnish guns and ammunition. They were able to fight until these mines were practically exhausted and had to submit in 1914 to be unionized. At that time, of course, the war was going on in Europe and the market price of coal had begun to soar to such heights that competition between the coals produced in West Virginia and those mined in the Central Competitive Field no longer existed. The reasons for unionizing West Virginia mines did not come back into play again until the Summer of 1920, when the attacks by the Mine Workers' organization, with money furnished by the check-off system, began on the Mingo fields. The operators in this field felt that the military authorities of the United States as well as the State of West Virginia would restore peace and stop assaults of the Mine Workers' organization upon their mines, and consequently did not go into court until the present Summer. At last the Mingo mine owners decided to bring suit in order to stop the collection of money through the check-off, knowing that if they could accomplish this it would end the war and peace would be restored.

"You will appreciate the fact that the mine owners in the coal fields north of the Ohio River collected all this money from employes and turned it over to the leaders of the Mine Workers' organization to be used in maintaining this war, hiring men, purchasing guns and ammunition and dynamite with which to shoot and blow up the mines of non-union competitors in West Virginia and Kentucky fields. Of course we took the ground that this arrangement was not only illegal, as the money was to be used for an unlawful purpose, but was to the highest degree criminal upon the part of the unionized operators as well as the leaders of the Mine Workers' organization.

"There is not only a basis for criminal prosecution in this respect, but already indictments have been made against the United Mine Workers as well as the mine owners for this conspiracy, which indictments are now pending in the court of Judge Anderson at Indianapolis.

"One of the reasons, and I may say the particular reason, why these conspiracies have not heretofore been proceeded against criminally is because Congress in making appropriations for the Department of Justice always tacks a rider on providing that no part of the money so appropriated shall be used in the prosecution of labor organizations."

Putting Mr. Vinson's words into still plainer English, he charges that Congress, by formal enactment, recognizes a union card as a license to commit murder or any lesser crime.

HOW RESTRICTED IMMIGRATION WORKS OUT

BY WALTER W. HUSBAND
Commissioner General of Immigration

An authoritative study of the effects of the new law limiting immigrants to 3 per cent. of the number in the United States in 1910—Proportion of northern Europeans increased—Facts and figures on the various quotas

NOT only is immigration being kept within reasonable limits by the new immigration act, which became a law on May 19, 1921, but the percentage of immigrants reaching this country from Northern and Western Europe has been increased greatly by its workings; as compared with the percentage under the unrestricted plan in vogue in 1913.

Americans who return from Europe in these days bring back the information that millions from Europe would come here if economic and other conditions made it possible. The disturbances in the political and economic situation abroad are powerful incentives to emigration for the average man. Emigration to South America is said to be rapidly increasing; Germany, in particular, is showing much interest in the future possibilities of that part of the Western Hemisphere. But the United States, as it has been for decades, is still the goal of the average European who plans to begin life anew outside his native land, and the aftermath of war is proving so unbearable in many European countries that the prospect of migration to America seems to offer even more advantages now than in the past.

The depreciation in the value of European currency has done something to check the tide of humanity from swamping us, but that alone would not be sufficient. Congress

realized, when the flood of immigration came upon us a little more than a year ago and when the facilities for receiving the incomers were found completely inadequate, that there would be practically no limit to the movement toward this country unless restrictions were imposed by law. The result was the passage of a bill in the House of Representatives last Winter providing for a temporary suspension of immigration, and the acceptance by the Senate of a plan providing for a per centum limit. The latter proposal was accepted by both houses, and was ready for President Wilson's signature last March. The signature was not obtained, however, and as a consequence the present law was not enacted until last May, when the new Administration was in power.

The new plan is radical and far reaching. The act itself comprises only a few hundred words. It provides that the number of aliens admitted annually from countries covered by the act shall not exceed 3 per cent. of the number from those countries already in the United States in 1910. The 3 per cent. quota applies to all the European nations and to certain others.

There are numerous exceptions under the law, all designed to prevent hardship in individual cases and to facilitate the free movement of travelers. Aliens in transit through this country and aliens lawfully admitted,

who may be in transit through adjacent territory, are not affected by the act. The status of immigration from the Asiatic countries already covered by immigration laws is not affected. Aliens under 18 years of age who are the children of American citizens are likewise excepted from the operations of the law.

Analysis of the provisions of the act shows that it applies only to Europe, Transcaucasia, Turkey in Asia as it existed before the war, Persia, Africa, Australasia, the Atlantic Islands and part of the Pacific Islands. It is, of course, from just these parts of the world that immigrants have been arriving most freely, and the necessity for checking the migration had long been urged by many authorities. Southern and Eastern Europe and Asiatic Turkey

had supplied large numbers of immigrants in the years directly preceding the World War, and it soon became evident, once steamship service was resumed after the armistice, that these regions would send more people than it was believed we could assimilate.

Naturally, the tendency in some cases has been to exceed the quotas, particularly the monthly quotas. Some countries, from which there has been comparatively little immigration, and which are only moderately represented in the cosmopolitan American population, are unfavorably situated as the act now stands. One of these countries is Spain. There were in 1910 comparatively few persons in the United States of Spanish nativity, and Spain's quota is accordingly very low. Yet the unfortunate economic situation in Europe has affected Spain as well as most of the other countries, and this country is, in effect, somewhat discriminated against. In view of the fact, however, that Spanish immigration normally proceeds to countries of Central and South America, which, for the most part, have Spanish-speaking populations, the hardship is less severe than it would be otherwise. Emigrants from Spain can ordinarily adapt themselves better to the life of Argentina, for example, than could those from non-Spanish-speaking countries.

The annual quota of immigrants who may enter this country has been fixed, under the terms of the new law, at 355,825. The greatest number that may be landed in any one month is 71,163—that is, 20 per cent. of the total. There is, of course, a greater tendency toward immigration at certain times of the year than at others.

The quotas assigned certain countries are interesting, and they may even prove somewhat surprising to persons not acquainted with immigration conditions. Austria, for example, is entitled to 7,444 immigrants annually, and Belgium to 1,557. Czechoslovakia may send 14,269 persons here; Denmark, 5,644,

and Finland, 3,890. The quota of France—5,692—seems small compared with these figures. Germany's quota, on the other hand—68,039—appears abnormally large. All these, of course, are based on the numbers of persons resident in the country in 1910, and who were born in the countries mentioned.

Some of the other figures follow: Greece, 3,286; Hungary, 5,635; Italy, 42,021; Jugoslavia, 6,405; Netherlands, 3,602; Norway, 12,116; Poland, 26,019; Eastern Galicia, 5,781; Portugal, 2,269; Rumania, 7,414; Russia, 34,247; Sweden, 19,956; Switzerland, 3,745; United Kingdom, 77,206; Armenia, 1,588. The quota of Spain is only 663 annually.

The unexpected action of this country in adopting restrictions would have led to great hardship in the case of many immigrants who were unaware of what had happened had not the Secretary of Labor, James J. Davis, handled the situation in a most humane and sympathetic way. Large numbers of immigrants were on the way here at the time the

act went into effect; they had not been informed of the changed status, and many were coming here at the express desire of relatives who had lived in America for years. Deportation would not only have wrought hardship to the new arrivals, but might have led to permanent separation of families.

There are certain exceptions specified in the immigration laws, in addition to those mentioned; actors and other professional people, for instance, are admissible under conditions quite apart from the per centum requirements. The number of immigrants actually admitted in July was 30,441 and in August 32,795; the quotas for those months were 28,496 and 30,315, respectively. The quotas, therefore, correspond quite accurately with the numbers actually admitted, and the numerous classes of exceptions do not bring any considerable number of persons into the country.

The actual excess of arrivals over the quota from June 3, when the act went into operation, up to June 30,

Fruit market in a border town of the Caucasus region, where Persian, Turkish, Armenian and Russian types are intermingled. Some of America's immigration problems have to do with nationalities from that part of the world

was 11,741. This excess has, of course, been charged to the quotas of succeeding months. These immigrants were, as has been explained, temporarily admitted on recommendation of Secretary Davis, and subsequently Congress legalized this action; so that the June excess immigrants admitted to the United States temporarily on bond will be allowed to remain.

Complete figures covering immigration charged to the quotas are available up to and including Nov. 23, 1921, about five and a half months from the time the act went into operation. Charges against the quota in that period were 155,604, leaving 201,505 admissible during the remainder of the year. The total admissions in excess of the quota to that time numbered 1,284, indicating that the surplus of 11,471 on June 30 had been largely reduced. Since immigration during the Winter months

is not very heavy, it is probable that the admissions charged against quotas for the first six months of the act's operation—that is, up to Dec. 3—will quite closely approximate one-half the total for the year, or 177,913, for that would imply the admission of only 22,309, to be charged against quotas, from Nov. 23 to Dec. 3. This figure is reasonable, for most of the immigrants affected by the act come through the Port of New York—probably more than 90 per cent. of them, at this time of the year—and total admissions during the weeks ending Nov. 9, Nov. 16 and Nov. 23, respectively, were 11,975, 7,744 and 5,533. The immigrants arriving at New York were, in each of these weeks, more than 90 per cent. of the total.

Naturally, the percentages of quotas admitted from various countries exhibit wide variations. Several countries have already exceeded

their quotas for the year; but these, for the most part, are countries whose quotas are exceptionally low in proportion to their population.

From those parts of Asia not comprised in the zone from which immigration is prohibited the excess over the quotas has been most notable. Turkey's annual quota, for example, was 141.8 per cent., filled in four months; that of Palestine 355 per cent., and certain other parts of Asia 537 per cent. The number of persons born in those regions and resident in the United States in 1910 was small. Other countries in excess of their quota were Spain and New Zealand. Spain's quota for the year has been filled in four months, with 9.5 per cent. over, and New Zealand's with 10 per cent. over. The admissions in excess of the yearly quota were all temporary, mainly in June, and their status will be determined later.

Countries which are approaching the limits of their quotas include Portugal, 81 per cent.; Yugoslavia, 82.5 per cent., and Greece, 86.7 per cent. Austria, Finland and Russia are the only countries of Southern and Eastern Europe that have not sent at least 50 per cent. of their quotas, but the Russian quota is so large that restrictions on movement from that country keep the average down for Southern and Eastern Europe as a whole.

In compiling immigration statistics, distinction is usually made between the countries of Southern and Eastern Europe and those of Northern and Western Europe. The former are mainly Latin or Slav, and the latter mainly Nordic or Teutonic types. Immigration from Southern and Eastern Europe was generally considered excessive before the war, and restriction applying to that area was continually agitated. On the other hand, the movement of aliens from the United Kingdom, Scandinavia and Germany had been decreasing for several decades.

The countries of southern and Eastern Europe, as has been shown,

exhibit a tendency to overflow their quotas. Immigration from Russia has, of course, been practically impossible, and as for Austria, it has been difficult for would-be immigrants to consider payment of transportation rates to this country in the depreciated Austrian money.

While the southern and eastern countries are showing this excess over their quota, however, the nations of Northern and Western Europe, except for Belgium and Luxemburg, have not exceeded 50 per cent. of the total annually admissible. Immigration from the United Kingdom in the first four months reached only 26.5 per cent. of the quota; Denmark, 25.9 per cent.; Norway, 18.7 per cent.; Sweden, 18 per cent., and Germany, 8 per cent. Figures for six months will approximate 30, 30, 23, 25 and 12 per cent. respectively. The exchange situation in Germany has probably had some effect on the movement from that country, though there was a steady increase during the Summer months. In July there were 697 German immigrants to America; in August, 966; in September, 1,756, and in October, 2,569. November figures will exceed 2,000. The northern and western countries of Europe, however, had exhausted only 20.3 per cent. of their quotas for the year in the first four months, and probably the figure will not reach much more than 25 per cent. now.

The effect of the law, of course, will be to restrict immigration largely to those countries which were well represented in the population of the United States in 1910, before the number of immigrants from Southern and Eastern Europe became so great. In 1913, the last year of unrestricted immigration, only 14.91 per cent. of the total immigration from Europe to this country came from the northern and western countries, and 84.88 per cent. from the southern and eastern countries. The percentages under the new law to Oct. 1 were 33.76 and 95.96 respectively, and these figures probably have not

been materially changed since then. The relatively satisfactory political and economic conditions in northern and western countries of Europe which were less affected by war than the others tend to keep the inhabitants of these countries within their own borders. The operation of the

law to date, however, seems to indicate that it will not only prove effective in keeping immigration down to an amount that the United States can absorb, but will tend to introduce to this country people who, as past experience has shown, assimilate very readily.

EASTERN EUROPE'S JEWISH REFUGEES

LULLED by the strenuous activities of the American Relief Administration in Europe, and especially in recent weeks in Russia, the world, which on the whole knows compassion, has given little heed to a gigantic sum of human suffering on Europe's southeastern frontiers—that, namely, of the dispossessed and exiled Jews in the Ukraine, Bessarabia, Poland and near-lying territories. The nature of this suffering is indicated in a report made by Mr. Bender-sky, in charge of the Central Ukrainian Relief Committee at Kishinev. In Bessarabia, alone, he says, some 30,000 Jewish refugees are homeless and temporarily quartered; 6,000 pogrom orphans are in the Rovno (Poland) region; 28,951 had to be cared for by the Warsaw Bureau in the first seven months of 1921.

Dr. Noah Prelutzki, a former member of the Warsaw Diet, who came to America as a representative of the Central Relief Committee of Warsaw, declared in New York in November that there were upward of 50,000 registered Jewish refugees in Poland, and between 60,000 and 70,000 more in Rumania. He continued:

They have reached those countries after hardship and suffering almost indescribable. They represent practically every class of the population; there are those who were people of wealth and social position, but who are now reduced to beggary; there are teachers, lawyers and physicians; there are the middle bourgeoisie and there are artisans and the unskilled laborers and small tradesmen. They have suffered alike and are alike penniless. * * * How heavily the Jews have suffered can scarcely be realized. Villages in which Jews constituted from 80 to 90 per cent. of the population simply no longer exist. There is scarcely a single Jewish child less than 7 years of age left in the Ukraine. A few of the children have escaped to other countries; the rest have perished. I think it is safe to say that for every

Ukrainian Jew who has died of violence, two have died from exposure or disease incident to their flight. Emigration is prohibited by the authorities. This means that the refugees travel by night, hiding during the day in the forests. Few have enough food for their journey. They must go through the forests, and are the prey of banditti, who steal not only their goods, but their papers of identification, and even their clothes, leaving them half naked. * * * They come to us starving and shivering, barefooted and with only a few rags to cover their nudity. They pour into the already overcrowded cities, only to be herded into barracks. There is every chance for the rapid spread of typhus and other diseases. The mortality is consequently high, and the refugees are a distinct menace to the health of the community in which they find shelter.

Mr. Prelutzki appeared before the Executive Committee of the Joint Distribution Committee at the home of the Chairman, Felix Warburg, and made a plea for an increased appropriation from the Jewish Relief Committee funds (which the Joint Distribution Committee disburses) for work among these refugees in Poland.

Louis Marshall, President of the Jewish Relief Committee, made a public statement on Nov. 27, in which he stressed particularly the tragedy of the refugee children. He made it plain that the appeal for \$14,000,000 which is being made by the committee was a direct answer to the cry of 300,000 orphans, robbed by the war of their natural protectors, and now perishing from hunger and cold. Although Mr. Marshall placed what he termed "the children's tragedy" in the first category, he pointed out that it was, after all, only a part of the whole Jewish problem in Europe. Fifty per cent. of all houses belonging to Jews in Eastern Europe had been destroyed. In Rumania, Galicia, Eastern Poland, Southern Russia and Lithuania the destroyed houses approximated 90 per cent.

PORTO RICO'S PLAYFUL POLITICS

By H. P. KRIPPENE

A friendly glance at the persistent demand for independence, in view of the marked advantages which Porto Ricans enjoy under American rule—Industries and products of the is and

IT may be reasonable to assume that Santo Domingo has a claim to independence, for this little republic was somewhat brusquely deprived of its sovereign rights by a military government of the United States; but the insistent clamor for "this panacea of all social evils" which comes from the Island of Porto Rico more than passes human understanding. It has, perhaps, an explanation—petty politics.

Porto Rico was rightfully acquired from Spain by treaty and payment. At the time of the acquisition, the Porto Ricans welcomed the Americans with the greatest profession of friendship, and it must be said to the credit of the American Government that few nations have done more for any one of their possessions than the United States has done for Porto Rico. A little more than twenty years ago, when the American troops first landed in San Juan, they found the island as undeveloped as Santo Domingo is today, with perhaps one exception—the bases for the excellent roads which they now have had already been laid by the Spaniards. San Juan, the capital, was a squalid village, lying low on a marshy waterfront; the land in the interior for the most part was uncultivated or low in fertility because of centuries of planting; business was poor, and the people, as a whole, were impoverished.

Today Porto Rico is the pearl of the West Indies. As one enters the picturesque harbor of San Juan, one is impressed at once with its beauty. To the left looms up impressively against

the deep blue of the tropical sky the old fortress of El Morro; long stretches of mellow white buildings on the waterfront stand out sharply in relief against the green background of feathery palms; gleaming white roads wind out from the city and are lost in the luxuriant foliage of scarlet-flowered flamboyants; it is an artist's Arcadia, and an Arcadia tempered by trade winds. Within the city itself, narrow streets, a few low, heavy buildings with filigree balconies flung up against the sky, here and there a beggar or goat, competitive scavengers of tropical streets, are all that remain to mark a fading Spanish influence; all but the romance of effect which even modernism will never destroy.

The Porto Ricans of today are the descendants of the Spanish colonists who came to the island after it was discovered by Columbus and of the Borinquen Indians whom they found living there. The latter died rapidly under the harsh treatment accorded them by their conquerors, and negro slaves were eventually imported to relieve the labor shortage. These, too, by intermarriage—usually into the lower class—gradually became a part of the Porto Rican race. The country people, as a rule, constitute the lower class. They are simple, trusting, naturally courteous, charming to strangers, and usually honest, though not industrious. The upper class is composed of refined, cultured, and progressive men and women. Many of them have been educated in American colleges and universities, have

traveled extensively, and are cosmopolitan in ideas and customs. Very often the women are strikingly beautiful, their Spanish characteristics, combined with the American woman's independence, which they are rapidly acquiring, making them extremely attractive. What is especially pertinent at this juncture is that they have become, as a whole, thorough American citizens.

Spanish customs have prevailed for centuries in Porto Rico, but during this last generation a great change, essentially accelerated by the late war, has been taking place. Today the young women of Porto Rico ride their horses astride, à la Americana, though occasionally the shutters of some staid old Spanish home still rattle as they pass; suitors no longer watch wistfully the balconies of their novias, promoting flirtations from afar; an American sojourning in San Juan for the purpose of improving his Spanish is apt to forget the little he already knows. It is still possible to see here and there, as one loiters in the parks, passing delightful evenings, the brilliant colors of Spanish mantillas artistically thrown over heads and shoulders, and on warmer evenings to hear the ris-ras of fans as they, Castilianlike, are snapped open and shut; the poetry of Porto Rico still exists in effects, but the fundamentals are all American.

PORTO RICO AND THE WAR

During the war, after Camp Las Casas had been established on the outskirts of San Juan, about 17,000 men either volunteered or were drafted to the American colors. Most of the recruits came in from the country, and the majority of them were extremely illiterate, undernourished, and poorly clothed. Eighty per cent. of them, perhaps, had never worn shoes, and had eaten only rice and plantains since childhood. Three weeks after these men had been organized into companies they were taken on a short march, carrying no equipment, and they came back, a straggling, disordered, exhausted mass. Three months

later, under a hot tropical sun, they were taken on a twenty-mile hike with full packs, and not one of them dropped by the wayside. Expert medical and dental care, the daily army ration, and scientific physical exercise daily had changed weak men to workers, failures to fighters. The work did not stop here. The healthful camp life, constant medical inspections, good food, the daily bath, athletics and amusements, all contributed not only to a vigorous physical reaction, but to a quickening of the mental processes which also became noticeable. Peons who had entered camp with dazed, uncomprehending eyes, ignorant even of their own language, began to appear on the field with polished boots and well-pressed uniforms, carrying their heads erect, saluting with alacrity, and snapping to orders in a foreign tongue. They seemed to awaken to the fact that, they, too, were men, and the American uniform gave them the courage of their convictions. Eventually they began to express a desire to learn to read and write, and classes were formed and taught by non-commissioned officers.

It must not be assumed, however, that the bulk of the enlisted men who made up the Porto Rican army were necessarily typical Porto Ricans. American schools had been extending education to thousands of children since the time of the occupation, and the teachers had been building bodies as well as minds. Of about 800 officers, 80 per cent. were Porto Ricans, and they were, as a whole, strong, intelligent men, representative of the city type of the island. The enlisted man, however, was representative of the lower class living out in the hills; people, who, up to the time of the war, had scarcely felt the influence of American schools and their ideals. It may appear singular that the bulk of the army was made up of this type, but it can be explained, perhaps, by the fact that Porto Rico was passing through a period of exceptional business activity, and the educated and skilled workers were able to avoid the

draft to a great extent because they were extremely necessary in their various occupations, whereas the peon had little or no responsibility.

When the men finally returned to their fields and to their employers it was generally conceded that their efficiency had been increased tremendously, but the far-reaching result of their life as American soldiers will be shown in the next generation, for their children will certainly be better and stronger citizens. They carried home with them, also, the idea that they were Americans. The majority of Porto Rican families had a son as officer or soldier in the camp during the war, so that the interest in the troops was general. The civilians gradually became infected with the spirit of Americanism. Perhaps some of them were not entirely sure that they wanted the Germans defeated, until the Carolina, carrying Porto Rican passengers to New York from San Juan, was sunk by a German submarine; but then, "Hacia Berlin" (Forward to Berlin), a song written by a Porto Rican officer, was on the lips of thousands of men, women and children in the country.

AMERICAN DEVELOPMENT

When the Americans entered upon the task of developing Porto Rico they put into execution at once a well-conceived plan for public improvement. In the larger cities of San Juan, Mayaguez and Ponce hundreds of unsightly huts, considered dangerous from the standpoint of fire and disease, were condemned and destroyed. Sewers were constructed to carry away the filth which ran openly in the streets. Exquisite public buildings of reinforced concrete replaced the old mortar structures of the Spanish regime. Roads were quickly completed and efficient schools constructed. The sanitary commission, facing a problem of smallpox, malaria and bubonic plague, began the tremendous work of exterminating epidemic diseases. The plague was controlled by a persistent and scientific campaign of rat exter-

E. MONTGOMERY REILY

Governor of Porto Rico, whose administration has met with organized opposition

mination; malarial swamps were drained, and a general public clean-up was ordered. Within a period of five years Porto Rico became a healthful winter resort.

Public improvements developed civic pride. Individuals began constructing homes and buildings with a view to beauty as well as service. An architect, who has lived in Porto Rico for years, has eventually developed a style which, though based primarily on Greek lines, has a decided Porto Rican atmosphere. During the year of 1918 a series of earthquakes affecting the whole island destroyed a greater part of Mayaguez, and many of the old mortar-type buildings in Ponce and San Juan also crumbled under the shocks. In nearly all cases the ruined buildings have been replaced by structures of reinforced concrete, for it was found that buildings of this type had not been affected by

(Wide World Photos)

ANTONIO R. BARCELO*President of the Porto Rican Senate and
leader of the Majority Party*

the shocks. As Porto Rico produces no timber, lumber is expensive, and it is natural to assume that concrete will be the building medium of the future. From the standpoint of beauty, this is especially fortunate, for the homes so built are usually not only more artistic in design, but the color of the cement mellowed quickly under the tropical sun and never blackens in the soot-free air.

In the matter of schools, Porto Rico has been especially fortunate. Before the arrival of the Americans scattered Catholic missions furnished a grammar education to the few who could afford it, but the masses had no opportunity of self-improvement. Today Porto Rico boasts of the most beautiful schools in the West Indies. Fine, large concrete buildings with appropriate playgrounds can now be found in all parts of the island. The University of Rio Piedras, situated

on the outskirts of San Juan, not only offers letters and science, but it also has a Normal Department in which Porto Ricans are trained for grade work on the island, and efficient commercial, manual training and domestic science departments. The University of Mayaguez, on the other end of the island, with its modern experimental and agricultural stations, works in conjunction with the University of Rio Piedras.

Compulsory education, a modern curriculum, and a corps of American teachers, who almost without exception have been graduated from colleges and universities in the United States, offer to the young people of Porto Rico opportunities which no other people in the West Indies enjoy. The Normal Department of the university is making teachers of young Porto Ricans with the idea of eventually replacing the American teachers, who today still hold the higher grade, high school and university positions. Paul G. Miller, Commissioner of Education, a former professor in the University of Wisconsin, is largely responsible for the rapid progress which has been made in all branches of education in Porto Rico.

PRODUCTS OF THE ISLAND

Porto Rico is still an agricultural State, though this is true partly because of her peculiar relationship to the United States, for the exhausted state of her land does not warrant this condition. Cocoanuts, fruits—chiefly oranges, bananas and grapefruit—and coffee are produced in large quantities, though thousands of tons of fertilizer are necessary annually to produce fruits of good quality. Fruit growers, as a whole, have not found fruit-growing a profitable occupation, for the high cost of fertilizer, coupled with the fact that the average grapefruit tree lives only about sixteen years in Porto Rico, reduces possible profits to a minimum, and this minimum is usually absorbed by the brokers in New York through the manipulation of the fruit market.

Tobacco production has been devel-

oped to a state of perfection. Most of it is now shade-grown, and brings usually a high price in the tobacco market. Two years ago Porto Rican tobacco was selling for \$1.25 a pound in New York, though now, because of the disorganized condition of the market, it is worth very little in comparison. Although approximately 25,000,000 pounds of an inferior class of tobacco are produced annually in Santo Domingo, the low price of this tobacco—it usually sells for about 8 cents a pound f. o. b. Santo Domingo—would make it attractive to some American purchasers but for the fact that because of Porto Rico's peculiar status Porto Rican tobacco pays no duty into the United States, while Dominican tobacco pays 35 cents for leaf and 50 cents a pound for stripped tobacco. One of the large American corporations interested in tobacco in Santo Domingo last year stripped and fermented thousands of pounds of the finest Dominican leaf, and was able to place it in the Custom House in New York at 50 cents a pound at a profit, but the high duty of 50 cents a pound made it impossible to compete with Porto Rican tobacco, which was selling slightly under \$1 a pound.

Dominican tobacco, up to the present time, has not been cultivated to any extent, and as a result it has never been considered a high-grade tobacco. The land is still so rich that the tobacco grows rank; the seed is usually planted and the tobacco then receives no care until it is ready for market, the fermentation taking place within the seroon in which it is packed, instead of being considered a process in itself. Some of the planters, however, have of late been importing Cuban seed and growing it under shade. This tobacco, carefully tended during the growing season, and later fermented and stripped, is being used by several cigar manufacturers on the island, and in many cases the cigars are considered superior to those of Porto Rican make. It is reasonable to assume that it is only a question of time before Santo Do-

mingo will be producing a leaf which will compare favorably with Porto Rican tobacco, and if Porto Rico, in the meantime, should gain the independence which she is constantly demanding, she may as well relegate her tobacco industry to the burial ground where her sugar industry should long have been, had it not been for the protection of the American tariff wall. Santo Domingo will always be able to produce tobacco and sugar much more cheaply than Porto Rico.

Perhaps the largest industry in Porto Rico is sugar production. Porto Rico cannot be considered a first or even a second class sugar country, and were it not again for the fact that her sugar enters the United States free of duty, whereas the Dominican and Cuban sugars do not enjoy this privilege, it is doubtful whether Porto Rico could continue to produce sugar at a profit. Though large quantities of fertilizer are used in Porto Rico, it is necessary to replant the cane every third season, whereas, in Santo Domingo, without the use of fertilizer, the cane continues growing as long as fifteen years without replanting. Field labor in the latter island is obtainable for 40 cents a day; in Porto Rico a man doing the same work receives approximately \$2 a day. In Porto Rico an expensive chemical control is necessary. A high sugar content is essential since it is not permissible to produce alcohol from the molasses residue. In Santo Domingo, however, most of the mills are not operated under chemical control, for the molasses is distilled into alcohol and rum, both of which bring good prices. It is obvious that if Porto Rico is to hold her commercial position in the West Indies she must retain the privileges she now receives from the American Government.

WHY "INDEPENDENCE"?

Viewing, as a whole, the advantages the Porto Ricans now enjoy because they have become American citizens, it is pertinent at this point to question their motives in constant-

ly clamoring for independence. It is significant to note that only about 270 people registered to retain Spanish and other citizenship when the Jones Act made American citizens of the people. This bill did not force American citizenship upon the people. Any one who did not wish to become an American citizen had only to register his desires at the proper consulate, and it is also important to note that of the few who did so very few were Porto Ricans.

The Jones act, though it granted citizenship to the natives, did not define the status of Porto Rico itself, and there has been much discussion as to whether the island should be considered a territory or a possession. It is possible that the State Department has not considered it opportune to define her status, for, as she is neither a territory nor a possession, Porto Rico has been able to retain a very much needed half million dollars annually in the form of internal revenue which, under normal conditions, would revert to the National Treasury.

A singular situation arises when it is considered that in the face of the universal acceptance of American citizenship the Unionists, who have always led the cry for independence, control practically every political office in the island. Since this question has arisen the Republican Party has always advocated statehood, but from the recent elections it appears that it has lost rather than gained adherents. Porto Rico today practically enjoys home rule, for, with the exception of the Governor, who holds his office by Presidential appointment, every political office is in the hands of the Porto Ricans.

There can be but one explanation—petty politics—or in other words, the insistent cry for independence is merely political propaganda, for it is conceivable that the intelligent leaders of the Unionist Party realize that Porto Rico, without the aid of the United States, from the economic standpoint would die overnight. Among the Latin-Americans the cry

“independencia” has always exerted a magic influence, and in the case of Porto Rico it appears to be the wand which the politicians wave over the masses to produce political offices.

EDITORIAL NOTE—Since this article was written the following additional developments have taken place (up to Dec. 10): Representatives of the Unionist Party of Porto Rico arrived in Washington on Dec. 1 to demand the removal of the Governor, E. Montgomery Reily of Kansas City, who was appointed by the President last Spring. They charge maladministration in office by arbitrarily removing Judges and court officials without trial. They say Governor Reily took with him from Kansas City six politicians whom he appointed to responsible positions in the island and went out of his way to give offense by appearing in public with Senator Santo Iglesias, a Socialist and alleged supporter of the Russian Bolshevik régime.

Antonio R. Barcelo, President of the Senate, headed the delegation and stated that Governor Reily had sought to give the impression that the Unionist Party demanded independence; this, he said, was far from the truth, as the party only wanted self-government under the United States. The Unionists polled 120,000 votes in the last election, against 63,000 Republican and 61,000 Socialist ballots. They elected 15 of the 19 Senators. Thirty-nine of the 58 members of the Porto Rican Assembly sent a cable dispatch on Nov. 22 to Felix Cordova-Davila, Resident Porto Rican Commissioner in Washington, asking for the Governor's removal and containing the same charges as those brought later by Senator Iglesias. A resolution in the San Juan Chamber of Commerce to support the Governor's policy was overwhelmingly defeated. The extraordinary number of Americans in Government jobs in Porto Rico since Governor Reily's advent caused the Senate on Dec. 7 to adopt a resolution calling for a list giving the number and names of Americans employed by the Government of Porto Rico.

Governor Reily himself arrived in the United States on the steamer Tanamo, which entered New York harbor on Nov. 20 with fire in her hold and sank at her pier the next day. Members of the Governor's party charged that the fire was the result of a plot against his life. On the other hand, the Unionists denied there was any conspiracy and said the Governor's sympathizers were trying to make political capital out of an accidental fire. About a hundred of his opponents awaited the Governor at the steamer pier, hooting and denouncing him and displaying derogatory placards on taxicabs. The Governor eluded them by taking a launch and landing at another pier. He arrived in Washington on Nov. 23 and was later entertained at luncheon by President Harding. He conferred with Secretary Weeks on Dec. 1, defending his administration and suggesting the advisability of constitutional changes in Porto Rico, especially in regard to elections.

HOW THE CENTRAL AMERICAN UNION WAS BORN

BY THOMAS R. DAWLEY JR.

A dramatic chapter of recent history, as related by an American eyewitness in Guatemala City—How a good Bishop's sermon overthrew Cabrera—Social conditions that raise doubts as to the new republic's ability to survive—Fall of Herrera

TO a salute of twenty-one guns, on the morning of Oct. 1, 1921, the flag of the Central American Union was raised in Guatemala. To another salute at 10 o'clock the cathedral bells pealed forth, and the President of Guatemala, Don Carlos Herrera, read before a crowded auditorium in the Centennial Palace a proclamation—signed at Tegucigalpa on Sept. 9—of adhesion to the Constitution of the new republic formed of three of the five Central American States. From a rostrum at the side of the stage an oration was read, a cadet from the Polytechnic School in scarlet cap, scarlet trousers, gray coat and drab leggings bore upon the stage a new silken flag of blue and white, and Don Carlos, stepping to the other side of the stage, unveiled a painted shield with five volcanoes rising out of a sea of green, with a red liberty cap sending out rays of light above them. The spectators cheered, bugles sounded and the band played. Government officials, members of the President's Cabinet, Generals and staff officers took the oath of allegiance to the new flag and the Constitution; more cheering, more music and more bugles followed; the army, marching in review, swore its fealty, and the federation of the Central American States was declared a fact. Both the flag and the escutcheon with its five volcanoes, emblematic of the country's turbulent state after its declaration of independence one hundred years ago, are

the flag and escutcheon of the republic before its breaking up into five independent oligarchies called republics.

According to the new Constitution, the use of Guatemala's flag and coat of arms, with the scroll and emblematic bird, the quezal, is prohibited. Carlos Herrera becomes Chief of State, or, as we would say, Governor, of the State of Guatemala. The Presidency of the republic is vested in a council of representatives, one for each State forming the union, the legislative authority in a congress of Senators and Deputies, and the judicial authority in a supreme court. The seat of the new Government is to be at Tegucigalpa, five days' journey from the Atlantic seaboard by muleback, and the armies of the States forming the union, with all arms and ammunition, must be turned over to this Government. In the future no State can make any purchase of arms or munitions, except such as may be necessary for the use of the police.

Theoretically, the idea of the union of the five little oligarchies into a nation of federated States is a sound and healthy one, worthy of every encouragement, but that should not inhibit a fair presentation of facts and the discussion of them, in order that an opinion may be formed concerning the probability of the federation's ever becoming anything more than a theory.

For nearly three centuries the an-

cient kingdom known as Guatemala, consisting of six intendencias or provinces, Chiapas, Honduras, Salvador, Nicaragua, Costa Rica and Guatemala, extending from the frontier of Mexico to that of Panama, embracing a territory of nearly a quarter of a million square miles, was governed by a Captain General at Guatemala City, and peace was maintained with an army of only 300 soldiers. The people, although poor, were industrious, self-supporting, simple in their habits and requirements, enjoyed complete autonomy in their municipal affairs, and were quite independent both politically and economically. But the flame of insurrection was started on one side in South America, and on the other side in Mexico, and on April 10, 1821, the aged Captain General, Gaivino Gainza, issued a proclamation denouncing the insurrection in Mexico under Iturbide. Iturbide's movement, however, became successful, and he set up an empire. The news filtering through to Guatemala, three

municipalities in Chiapas declared for independence, and by the middle of September an assembly of the dignitaries of Guatemala had declared for separation from Spain. The revolution spread to the other Central American countries, and they regained their independence, but only to plunge into a century of local wars and general chaos. Chiapas joined Mexico, and the other republics went through a seemingly endless series of upheavals, tyrannies and sufferings.

THE COMMON PEOPLE

It is not because the people of Central America are intrinsically bad that they have suffered these abuses for the last hundred years. On the contrary, they are a simple, childlike, inoffensive people. Their conception of right and wrong is vague, to say the least. They do not reason. They know only the power of the strong, of those in authority, of those who are well to do, who wear shoes

President Carlos Herrera and His Cabinet: Around the President, who is seated, are standing Señor Mendoza, Minister of War; Padilla, Minister of Agriculture; Escomilla, the Interior; Orla, Public Instruction; Zacina, Estates; Orlas, Administration; Aguirre, Foreign Relations

and good clothes. The environment in which they are raised is such, and such their fear of independent action, or even of expressing themselves sincerely, that they simply agree with everything that is **done** to them or told to them. It is the prevailing spirit of the Toltec, the aboriginal inhabitant, whose submissiveness to the tyranny of his rulers existed long before the coming of the Spaniards.

That the conditions may better be understood it should be borne in mind that two-thirds of Guatemala's population consists of this aboriginal element. The other third is classed as "ladino," the name given to the creole element, the major part of which is also Indian. For example, the Indian who casts aside his ancestral garb and adopts the clothes and language of the creole element enters the ladino class. The ladino class may again be divided into two distinct elements, the proletariat and an upper element, which consists of the wealthy, landed proprietors, professional men, merchants, the educated, the would-be rich and the military men and oligarchs who govern.

A glance at the social and economic conditions of these three elements is illuminating. First we have the Indian population, which, taking the total number of inhabitants as 2,100,000, according to the only census available, gives us a population of 1,400,000 Indians. This population has not only been reduced to a condition of servitude, but for the most part is little better than so many beasts of burden. The Indians' lot is so hard that when one of their number dies, and the body is prepared for its long journey, it is spun around several times in order that the departed soul may not find its way back to this hard old earth.

The proletariat is formed for the most part of the indigent. They are illiterate and own no property, as a rule; few if any of them wear shoes, and they generally lead a hand-to-mouth existence. Nearly all of the artisan class belong to this element. Such homes as they may have, with

the exception of a few of the more advanced type of artisans in Guatemala City, consist of a roof over four mud walls, or an empaling of stakes driven into the ground, with the earth for a floor. They are fortunate if they

CARLOS HERRERA

Former President of Guatemala, whose Government has been overturned by a sudden revolution

have a table at which to eat, and an extra plate or two for their food. Knives, forks and spoons rarely form any part of their domestic economy. Their cooking arrangements in the city usually consist of an elevated hearth of mud; in the country the fire is on the ground; their cooking utensils are of clay, the entire outfit, perhaps, purchasable in the market place for less than the equivalent of 50 cents.

THE UPPER CLASS

Although the dividing line between this proletariat and the upper class is indistinct, the difference in conditions of life is remarkable. While the proletariat is barefooted, meanly clothed, indigent, the upper class, especially in Guatemala City, has homes which may be truly termed commodious if not elegant. The houses usually sur-

round an open court, with flowers, shrubs and trees. Their furnishings and decorations are the best that money can buy, and, what is more remarkable still, considering that I cannot say it of some of the other Latin-

(National Photo Co.)

and member of Federal Council of
Central American Union*

American countries that I am familiar with, these homes are excellently well kept, neat and clean. Nothing is lacking for the requirements and comforts of a regulated household. And the same may be said of the occupants. The señoritas and señoritos are powdered and perfumed, and the parents, with few exceptions, are dressed in the latest New York or Paris fashion.

There is no racial difference separating these two elements of Guatemalan society. The son of my friend's washerwoman of a generation ago, a poor woman washing clothes for a living at a public font, is today a Minister in the President's Cabinet, and, of course, belongs to the upper stratum. While education furnishes a

means to the end, the lack of it is not necessarily a bar to one's entering this stratum of society; neither is the individual's moral turpitude, a fact that might be illustrated by numerous instances. In general, the moral status of the country is reflected in the low esteem in which women are held. Exclusive of the Indian population, whose moral status is better, I should say that 75 per cent. of the children born are illegitimate.

While a literacy test is not always a safe guide in judging individual intelligence, it serves as a very good medium for judging the state of culture at which a people may have arrived. According to a recent report of the Minister of Public Instruction, 93 per cent. of the population of Guatemala are unable to read and write. A casual perusal of the last published census returns, coupled with this information, may give some idea not only of the people's culture but of the numerical difference in the two elements forming Guatemala's population, exclusive of the Indian. Taking 2,100,000 as the total number of inhabitants, 93 per cent. of which are illiterate, we have only 147,000 persons in the entire country able to read and write. Eliminating the 1,400,000 Indians, we have left a ladino or mixed population of 700,000. As we know that the Indians are illiterate, the 147,000 literates are among the ladino class, which gives 21 per cent. of this population able to read.

It may be laid down as a pretty safe rule, although I know many exceptions to it, that when the individual is able to read he wears shoes. After taking the exceptions into account, I estimate that there are 1,953,000 inhabitants who are habitually without shoes. We have, therefore—eliminating the Indians, who have no part in politics—a population of mixed races numbering 700,000, of which 553,000 are habitually barefooted as well as illiterate, and which can be safely classed as belonging to the proletariat. Of the remaining 147,000 able to read and perhaps write, and wearing

A busy morning in the market place of Guatemala City, back of the Cathedral. The white walled building on the left is the permanent market, but the street also is lined with fruit vendors and others

shoes—judging from observation in Guatemala City alone, which is the centre of the country's culture—fully one-half can be classed as belonging to the proletariat.

By this analysis an idea may be formed not only of the degree of culture attained in Central America but of the small element numerically constituting the ruling class. Nor is that class even as large as it seems, for the men of inherited wealth, the planters, merchants and foreigners, take no part in politics. Eliminating these, we have left the politicians, the governing class, the oligarchs who rise to power through chicanery, intrigue, by hook or crook or force of circumstances, and are supported by a military of the type referred to by Salvador Mendieta in his "Sickness of Central America," where he tells of an "old veteran of African origin, as faithful to the Government as a bloodhound to his master," who knew nothing about the Constitution, but who announced in the legislative halls that if the President ordered him to "cotch" all the members of Congress he would "cotch" them.

A BIT OF INSIDE HISTORY

With this sketch of social and political conditions in Central America, the reader may draw his own conclusions regarding the probable success of the union of three of the five oligarchies of which the vast territory extending from the frontier of Mexico to Panama is composed. But there is another side to the picture which shows what may be done with proper direction, proper handling, proper management.

In May, 1919, the Bishop of Faselli, Dr. Pinol y Batres, a member of one of the oldest families, after a long absence from Guatemala, delivered a series of sermons or lectures in the San Francisco church. The simple announcement of these sermons was sufficient to pack the temple with listeners. The sermons were not political. They were on morality and one's duty as a citizen and patriot.

There were nine of these sermons preached consecutively from May 1 to May 9. The eighth was on patriotism. The Bishop took for his text, "Happy are the people whose Lord is God." Though he did not name

President Herrera and the other Government officials are in the balcony. The photograph was made a few minutes after the army had passed in review and taken the oath.

Estrada Cabrera. his sermon was an indictment of the dictator, who for twenty-odd years had misgoverned Guatemala. "One's country," said he, "is not the inheritance, is not the mine nor the fountain of wealth of one person alone, but it is the birth-right of all; every one has the same right to its benefits, the same right of supreme aspiration to its progress and prosperity, and when one says, 'I am the country!' and converts to his own interests the efforts of all the others, and when one's only desire is to dominate, then the sentiment of patriotism becomes destroyed, resulting in a slave country, no longer the country of all, but the inheritance of one." Asking how many real patriots there were in the country, he answered the question himself by saying that perhaps there were not even six. "Every one," said he, "interests himself in his own personal welfare alone. If he can have a good house and maintain its com-

forts without danger to himself, he cares nothing about the welfare of others." But he counseled against any armed revolution; his remedy was protest and the molding of public opinion.

The Bishop was sent to prison. There were those who said he should have been shot. If Justo Rufino Barrios had been the President instead of Cabrera the Bishop probably would have been shot, for he had set some of the people to thinking. They hardly dared to think aloud, but a tailor, a tinker, a printer and a few others representing the working class got together and talked.

Eduardo Zamacois, the Spanish author, in his sketches of travels in Latin America, relates that late one night an excited individual, presenting himself before the guard at the Presidential residence, demanded to see Estrada Cabrera at all hazards, because the life of the President depended on his seeing him. The vis-

itor, being admitted before the President, exclaimed:

"Your Excellency! There are eight men in Guatemala who have sworn to assassinate you! I am one of the eight! But at the last moment my conscience reproached me, and I have come to give you the names of the others!"

The President, regarding the informer deprecatorily, pushed a button, and a guard of soldiers appeared immediately.

"Tie this man," he ordered, "and give him fifty lashes."

"But, sir. Why?" exclaimed the frightened individual.

"Because you are the last of the eight conspirators to inform me. All the rest, one after the other, have been here."

Another version of the same story is related as having occurred during the regime of Rafael Carrera, seventy or eighty years ago. Whether or not either of the stories be true, they serve to illustrate the character of the people. But in the case of the tailor, the tinker, the printer and their other companions—it is admitted as most remarkable—not one turned informer, although later the printer was accused. Contrary to the counsel of the Bishop, they talked armed revolution.

BIRTH OF THE UNION

On the other hand, five citizens, who had never taken any part in politics—five perhaps of the six possible patriots referred to by the Bishop—got together in the suburbs of the city, and discussed the Bishop's advice. The problem before them was how to stop the existing abuse of power without breaking the law and without incurring the usual penalty of imprisonment, flogging and exile, if not death. A solution was finally decided upon. It was to form a political organization ostensibly to bring about the union of the five Central American republics. No one could object to that!

In the meantime a woman, it is said, brought together the two con-

The old man is spinning in the market place while waiting to sell his pottery. The other has a bunch of wool in his hand

spiring elements, and on Christmas morning, nearly eight months after the Bishop's sermons, a neatly printed folder made its appearance boldly signed by the conspirators, with the names of some others who had been taken into the fold, announcing the formation of the Unionist Party, and declaring its purpose to obtain by pacific methods the restoration of the former Central American nation.

The folder caused a sensation. For nearly half a century any political party other than the so-called Liberal had been non-existent. Furthermore, the little folder stated the party's purpose "to work within the strictest compliance with the law, because the exercise of rights and the fulfillment of obligations on the part of the authorities as well as on the part of the citizens is the sincere and efficacious requirement of a

democratic republic, without which the union is an impossibility." That statement was a direct challenge to the despot who had ruled the country so long and so criminally.

As part of an effective propaganda a leaflet began to make its appearance as the official organ of the party, printed on a small hand press, found somewhere, for not a printing

pearance of another announced than there were a dozen or more ready to take his place. Cabrera could not arrest them all. At the end of two months the National Assembly, composed of representatives always selected by Cabrera himself, went over to the Unionists.

At the end of another month the Assembly attempted to impeach Cabrera by declaring him insane. Since the earthquakes which had ruined the capital, Cabrera had made his official residence at La Palma, a point dominating the city, which he had entrenched and fortified with artillery. He also had possession of two forts, with guns trained on the city and all the arms and ammunition. On the morning after his attempted impeachment he began the bombardment of the city, which was defenseless. The only conceivable reason for his

Burning incense to his pagan god in the public square, near a Christian church, in a Guatemalan village

press could be brought into the country or material bought without Cabrera's consent. As Cabrera controlled the press and newspapers, he at first attempted to combat the Unionist propaganda through this medium. These attempts were contested in the leaflets, and he was openly defied. The usual imprisonments, banishments, floggings and murders then followed; but no sooner was the imprisonment of one man or the disap-

not having marched a battalion of his soldiers to the Central Plaza, which would have given him control of the situation, was his lack of military knowledge, personal cowardice and the decadency of the army itself.

AN ORDERLY REVOLUTION

Within the city the leaders of the movement, supported by the best element, both men and women, gave an unprecedented example of executive ability, courage and self-devotion. The proletariat not only behaved with fortitude, but demonstrated the ease with which it can be handled. Whatever police force had existed disappeared immediately with the commencement of the bombardment, and the city was left without police protection; but there were no disorders, robberies or anything of the kind requiring police interference. Furthermore, there was not a case of drunkenness, which is more remarkable still, considering that one of the most immediate sources of the wretchedness and consequent degradation of the lower classes is their prevailing habit of intoxication. This was due to the constant admonitions which had been preached to them during the organization of the movement.

No sooner had hostilities commenced than a printed circular was issued from the headquarters of the party, which said in part:

During the three long months of peaceful campaign during which we have not departed one iota from the law, each and every member of the Unionist Party has been the admiration of both our own people and foreigners alike. Today the contumacy of Estrada Cabrera obliges us to leave the peaceful struggle in order to defend the Constitutional Government of the Republic with arms in our hands, and as our country will exact the extreme sacrifice of many of its sons on the altar of liberty, Constitution and right, the country also exacts that its sons conduct themselves with the decency of soldiers fighting for liberty, and not as undisciplined mobs of wrongdoers.

True Unionists! Conduct yourselves in the rational manner that your title of soldiers for the right rigorously demands. Abstain from all unnecessary acts of violence, of rapine, looting and any other acts of which you may later be ashamed. Especially refrain from the use of alcoholic

drinks, which cloud the intellect and cause men to descend to the position of irresponsible beings. Those who require alcohol to be brave are not brave!

The thoughts expressed in this circular not only show the sentiments of the few resolute men who brought about the situation, but the strict compliance with the same gives the lie to those who represent the people as unruly and incapable of being governed by any other methods than those employed by the tyrants who have ruled the country almost consecutively since its independence.

I witnessed the events that followed. As the barefooted, ill-clad, badly fed proletariat gathered in defense of the cause that had been shown them as a just one, armed with a few guns, rusty old machetes, knives tied on the ends of poles, and even sticks of firewood; my sympathy went out to them, and all I could do was to help them by directing their efforts in such manner as my knowledge and experience dictated. I found them not only willing but appreciative of my interest in their affairs, which were of supreme moment to them. It seemed a contradiction of human nature that a people displaying the calm, fearless spirit of self-devotion that they exhibited when it came to the test should have suffered all their lives from a despotism that had kept them in penury.

FALL OF CABRERA

The bombardment continued intermittently day and night from the morning of April 9 until the evening of the 14th (1920), during which time the people rose throughout the country, the defenses of the capital grew stronger, and Cabrera weakened accordingly. On the 14th his stronghold was completely invested and he agreed to capitulate. The morning following he surrendered himself to various members of the diplomatic corps, who escorted him and the immediate members of his family to the prison prepared for him. And now occurred the blot that marred the whole revolution.

During the hostilities uniformed military men anywhere within the city were conspicuously absent. The only pretense of a government, further than the direction of affairs assumed by the Unionist Party, consisted of the Provisional President selected by the Assembly on its attempted impeachment of Cabrera and his Cabinet, which quartered itself immediately after the beginning of the bombardment in a private house next to the Mexican Legation. On the preceding evening the commandant of the city garrison had gone over to this Government, and later he was quartered in an edifice used as a school, adjoining the cathedral. About the same time that Cabrera gave himself up several of his officers and others were brought in as prisoners and were turned over to the commandant, who, like a number of other military men caught within the city at the commencement of hostilities, did not show himself during the bombardment; but when the prisoners were turned over to his care he allowed the commanding officer of the Matamoros fort to be stripped of his uniform and turned out into the street with only his underclothing on; there, naturally, a large concourse of people had gathered, after following the prisoners. Among the crowd was a notorious woman who, mistaking the unfortunate officer for an influential member of Cabrera's Government, shot him, whereupon others in the crowd fell upon him, shouting and yelling until satisfied that life was extinct. This act turned the otherwise peaceful gathering of spectators into a frenzied mob, which, like beasts of prey, having once tasted blood, howled for more. Thereupon the commandant, like his military prototype in Mendieta's "Sickness of Central America," turned prisoner after prisoner out to the mob, until eight in all had been massacred. The massacre was stopped by the sudden appearance of José Azmitia, who had been directing affairs from the headquarters of the Unionist Party all through the bombardment. Address-

ing the multitude in a passionate speech, he told them that their behavior was a stain upon the good name that they had previously made for themselves, and, hanging their heads with shame, they dispersed.

THE PRESENT SITUATION

The revolution over, what happened? Don Carlos Herrera was nominated for the Presidency because of his known integrity, his financial standing and his goodness. He was elected by an overwhelming majority of votes, and by the only fair, popular election that had ever taken place. But Don Carlos was no politician. He began his administration by trying to form a Coalition Government of the two antagonistic parties that have existed since the independence—the Liberals and the Conservatives. It was as though Mr. Harding, after taking his oath of office, had placed in his Cabinet William Jennings Bryan, Charles Murphy and ex-Governor Blease, and then, on meeting with the natural protest of the party that had elected him, he had substituted for the unsatisfactory appointments an ex-bandit, an impeached ex-Governor, and a convicted ex-boss. And the other appointments made by Don Carlos were along about the same lines. The Unionist Party was relegated to a secondary position, and the result has been only what might have been expected: Not only the return to power of some of the Cabrera element, but a breaking away from the Unionist Party of the Liberals that had joined in the movement for the overthrow of the Cabrera despotism. The Liberals now refused to recognize the Unionists as anything but Conservatives, and the old animosities between the two parties are revived with all the bitterness and hatred of former times. Each is struggling for the Government control, while the masses are like grains of corn between the upper and lower millstones.

As for the union of the five States which the small group had devised as the remedy for the political evils

from which they had suffered so long, only three of the oligarchies have agreed to it. And now that it has been agreed to by Guatemala, the Liberals have already made an effort to destroy it by alleging that the National Assembly which ratified the pact for the union, signed at San Jose, Costa Rica, was composed of Unionists whose elections were unfair, and that consequently the whole business is unconstitutional. In the meantime the Minister of Foreign Relations, the Minister of War, and all the other Ministers, military Governors, diplomats, consuls and chiefs, big and little, are holding their jobs as usual, while a congress at Tegucigalpa is continuing in session, drawing up laws for the internal government of the States, regardless of the views of the people who are to be governed by them.

Guatemala, Oct. 12, 1921.

PRESIDENT HERRERA OVERTHROWN

[By a sudden revolution, quickly successful, the Government of Carlos Herrera, President of Guatemala (or Governor of the State of Guatemala under the new Federal Union), was overthrown in the early morning hours of Dec. 5. Twenty-five persons were killed and scores wounded in the brief fighting with the police of Guatemala City, the capital. This threatens a disruption of the Central American Union, of which Guatemala, Honduras and Salvador are constituent States.

President Herrera and the members of

his Cabinet were made prisoners, and a Provisional Government was proclaimed, headed by General José Maria Lima, General Orellana and Miguel Larrave, former Under Secretary of War. Estrada Cabrera, President from 1898 until ousted by a revolution in April, 1920, who had been in prison since then, was released, but not restored to the Presidency, which was assumed by General Orellana.

Dr. Julio Bianchi, Guatemalan Minister to the United States, who had been elected to the Federal Council of the Central American Union, finds himself without the backing of his State, unless Honduras and Salvador should intervene to restore the constitutional Government—a proceeding of doubtful legality, considering that the permanent authorities of the federation will not take office until Feb. 1. The position of the revolutionists is similar to that of the people of West Virginia in the Civil War before its recognition as a new State. The Central American mission, seeking recognition for the federation by the United States, also loses the support of the Guatemalan delegate. The State Department, however, had decided not to recognize the new Government at this time. Delegates of the 3,000 Central Americans in New York met on Dec. 9, decided to oppose the coup d'état and chose Dr. Bianchi to act for them in making representations to the State Department at Washington.

The Guatemalan Congress, which was dissolved during the previous revolution, was recalled and met on Dec. 8, ratifying the selection of General Orellana as Provisional President, and declaring null and void all acts of the Guatemalan Legislature passed since the dissolution of the old Congress; that is, during President Herrera's Administration.]

TELEPHONE EXPANSION IN CHINA

MODERN methods of communication, especially by the telephone, are being boomed in the Flowery Kingdom, according to Clark H. Minor, former manager of the China Electric Company of Peking. The Chinese, he says, have grown weary of the difficulties of intercity communication by telegraph, as all messages, owing to the cumbersomeness of the Chinese alphabet, have to be sent in code and then decoded. The only intercity telephone line existing runs between Peking and Tientsin—a distance of about 100 miles. Under the stimulus of China's younger generation of business men, a long-distance line between Peking and Shanghai is nearing completion

at a total cost of \$500,000. Furthermore, new telephone exchanges are being erected in most of the larger cities to augment the 5,000 subscriber lines already in use. Hitherto all connection work has been done by men, but girls are now being trained in Shanghai. In the three years since its organization, says Mr. Minor, the China Electric Company, which is really a joint undertaking of the International Western Electric Company and the Ministry of Communications at Peking, has raised its capitalization from \$250,000 to \$1,000,000, a growth fostered by the increasing demand for telephones and other electrical material in the capital.

AMERICAN RELIEF FOR STARVING RUSSIA

BY VERNON KELLOGG

Extent and causes of the famine, and the agreement under which the American Relief Administration undertook to aid the sufferers—How the work is proceeding and what it has already accomplished—The "Food Remittance" system

FAMINE is such a strong word, and is so often used thoughtlessly, that when one hears or reads it in a newspaper the first reaction of the thoughtful man is likely to be one of skepticism. "Famine in China," "famine in India," and now "famine in Russia." But is there really famine in Russia?

I have only recently come away from the Russian famine region, and

I have seen that there is famine there. It is not all of Russia that is truly famishing, though over all that great land there is food shortage, and the first thought of almost all of its many millions of inhabitants is, How shall I get food for today and tomorrow? It is an obsession, an obsession so complete as to exclude almost every other thought.

The part of Russia that is truly in

Three of the leaders in American relief work in Russia: Colonel William N. Haskell (in the middle) and Colonel Lonergan and Mr. Seldards in front of the American Relief Association headquarters in Moscow

the throes of famine is a part that is normally blessed with plenty. It is the great Volga basin from Kazan south to the mouth of the river, stretching also to the north and east, including parts of the Provinces of Vyatka, Perm and Ufa. This is precisely a region to which, under normal circumstances, Russia looks for part of its supply of bread-grain with which to feed other parts of the country—parts that are forested, or largely industrial, including and surrounding Russia's greatest cities. The Volga basin normally produces a considerable surplus of wheat and rye, a surplus that even helps to feed part of Europe outside of Russia. Now it is this very region that is crying aloud for food.

The centre of the famine area is that including the Volga Provinces of Kazan, now called the Tartar Republic, the eastern half of Simbirsk, and Samara and Saratov.

In this famine area there are at least 15,000,000 people, and, in the region of acute food shortage adjacent to it another 15,000,000. The extent of the area affected and the great number suffering make of the situation a veritable catastrophe.

Perhaps the province (or "government") of Samara presents the most critical situation. Under normal circumstances Samara regularly produces a considerable surplus of grain above the needs of its own population (about three and a third millions). Certain statistics which I have just brought out of Samara, and which are as nearly accurate as can be obtained, will reveal the situation much better than general statements. These figures were assembled by the Samara Government's Bureau of Statistics, in charge of an intelligent, well-educated and, I believe, honest civil engineer. His helpers were field agents of much knowledge of Samara agriculture.

In the years 1912-17, inclusive, the average annual acreage in Samara planted to wheat, rye, oats and barley was approximately a little more than two and a half million dessiatines.

(One dessiatine is about two and a half acres). The specific figures are: 1912, 2,543,398 dessiatines; 1913, 2,738,433; 1914, 2,895,353; 1915, 2,815,647; 1916, 2,417,285; 1917, 2,674,711. In 1918 and 1919 the planted acreage dropped to 1,716,366 and 1,174,866, respectively. In 1920 it was 989,285, and in 1921, 979,921. From the 2,500,000 dessiatines of pre-war and war years up to and including 1917, the acreage dropped to 1,000,000 in 1920 and 1921. Before attempting to explain the causes of this reduction I will give the even more significant figures of production.

PROFESSOR VERNON KELLOGG

Executive Secretary of National Research Council, active in European relief work since 1915, and a trusted aid of Herbert Hoover. He is a member of the Stanford University Faculty

I see three major contributing causes. First, six years of continuous international and civil war, with all its waste and devastation; second, the fatal error of the Soviet Government, openly admitted by them now as a terrible mistake, in requisitioning, or attempting to requisition, in conformity with extreme communist principles, the surplus grain produced by the farmers, and in making private sales of grain illegal; and, finally, in 1921, an act of Providence, or Nature—a drought so absolute that simply no crop at all was produced in a great part of the planted acreage. I have myself seen miles and miles of grain fields in which no attempt at harvest was made. When I asked the peasants what crops they had, the answer was, simply and positively, "No crops."

The significance of such a situation for Samara province and for the other provinces in the drought region—as also for the rest of Russia—is obvious. The grain consumption of Samara province is estimated by the local Government bureau to be about 2,000,000 poods a month, or a little less than one pound a day per person of the population. This is certainly not an overestimate of bread needs, especially when we remember how large a part of the Russian dietary bread is. What Samara produced in 1921 is about enough to provide its whole population with bread for a month and a half!

The situation as regards grain is little, if any, better in Kazan, Eastern Simbirsk or Saratov, all famous grain-producing provinces. But cannot grain be brought from other regions of Russia not drought-stricken into the famine region? Yes, a little, but not much. The Soviet Government has made, apparently, an earnest effort to do this. Some grain and other food have actually been sent into the famine region. Some children, gathered into children's detention homes from the streets and country roads, from the farm villages and the pathetic

For the pre-war years 1912 and 1913 the grain production of Samara Province was 119,101,000 and 132,515,000 poods, respectively. (One pood is about 36 pounds.) In 1914, a bad crop year, the production was 84,983,000 poods. In 1915, a good year, it rose again to 132,254,000 poods. Then began a significant reduction. In 1916 it was only 58,354,000 poods, in 1917 only 33,769,000 poods. In 1918 it rose to 91,184,000, but in 1919 it fell to 49,941,000, and in 1920 as low as 18,803,000. Then came, in 1921, a year of extreme drought, the awful break to but 3,000,000 poods (as carefully estimated by the bureau). Only three-tenths of an inch of rain fell in the Volga basin during the grain-growing months of April, May and June.

refugees' camps along the railways and the banks of the Volga and Kama Rivers, have been fed by the Government. Some of these children are orphans in fact, others orphans in effect, abandoned by their parents, helpless to keep them alive. The homes are dreadful sights: cold and bare rooms, crowded with emaciated and weak little ones, some with the horrible, protuberant "hunger belly" resultant from eating the bark and moss and chaff and "clay" (humus) bread, which is now the staple in the famine region.

I was in one of these homes in Samara at noon meal time. The meal consisted of sticky black bread, horse-meat—the peasants are killing and selling their farm animals—and "kasha," a brown porridge of grits of various grains and seeds. Many of the children were ill of malaria—and there was no quinine for them. The doctors and caretakers were helpless. The children were dying in these homes at an appalling rate.

To understand why the relief of the famine region is not "simply one

of better distribution of Russian grain," we must look to the first and second of the three contributing causes just mentioned. The waste and devastation of war, and the requisitioning by the Soviet Government of the farmers' surplus production, thus destroying all incentive to surplus production, have combined to produce a food shortage all over Russia in the last two or three years, whatever the rainfall. There is food shortage, or at least no food surplus, in other grain-producing regions outside of the drought area. There is no food, or but very little, to spare from elsewhere in Russia for the starving people along the Volga. Relief must come, if it come at all, from the outside. What is being done in this way?

RELIEF ACTIVITIES

There has been much talk and some action along relief lines. The talk has considered relief measures on a very large scale; the action, in comparison with the degree of the catastrophe, must be looked on as small; it is small,

(© Underwood & Underwood)

Russian families of the famine-stricken Volga district carrying their own dead to the cemetery

(Photo International)

Russian famine refugees being fed at the Relief Administration train at Samara. Starving children wait patiently in line for hours for their rations

relatively, although one part of it, entirely American in initiative and maintenance, is, taken absolutely, no small matter.

There has been much talk of a large international effort, essentially of the character of an extension of large credits to the Soviet Government, for the purchase of grain, of which there exist available surplus supplies in America, Rumania and Bulgaria, and perhaps elsewhere. An International Relief Commission, representing several European Governments, has been formed to consider and support, if found advisable, a combined international undertaking to provide credits to the extent of, perhaps, \$150,000,000 for the purchase of grain for food and seed. Dr. Fridtjof Nansen is to be the managing director of the undertaking, if anything comes of it, and he has outlined a formal project to distribute the

grain so provided through the co-operation of the Soviet Government—in fact, to turn over, in effect, the grain to the Soviet Government for distribution.

This feature of the proposed international undertaking has been severely criticised by many men and by a large part of the European press, so that Nansen, despite his strong appeals at the Geneva and Brussels meetings of the International Commission, has not much hope of seeing such an arrangement made. On the other hand, the Soviet Government has expressed its strong objection to the presence of M. Noulens, who was the French Ambassador to the Czar's Government at the time of the first revolution, as head of the commission. Altogether, there seems to be little encouragement to expect practical results from the International Relief Commission in the near future.

The relief that has been, and is con-

tinuing to be, actually extended to the famine region comes principally from the Soviet Government and, quite distinct from this and wholly independently, from the American Relief Administration. The American Friends Service Committee has a number of representatives in Russia and has provided relief to some families and individuals and to certain orphanages. This committee has been able so far to help about 50,000 children. The Swedish Red Cross has announced its intention of sending in a relief group with a certain quantity of food and medicines. Norway has promised Nansen a gift of about 1,000,000 kroner, and, more important than any other outside relief except that of the American Relief Administration, the Save the Children League of England has (according to Nansen's statement to me in London on Oct. 14) put at his disposal enough funds to provide food for 250,000 children for six months. The first food obtained in this way was sent by Nansen to Saratov. The relief afforded by the Central Soviet Government, either directly or acting through the Provincial Governments in the famine region, has been of value, but entirely insufficient to meet the situation. It has taken the form of sending in certain quantities of grain for food and for seed, some other food, and a number of sanitary trains with doctors, nurses and medical supplies, with also some special food for children, such as white flour and cocoa. These trains have been few and the medical supplies sadly deficient in amount and variety. For example, despite the serious ravages of malaria in the Volga Basin, almost no quinine has been sent.

AMERICAN RELIEF ORGANIZATION

The American Relief Administration, under the Chairmanship of Herbert Hoover, was organized immediately after the armistice, under the patronage and financial support of the United States Government, to extend aid and credits for needed food to the suffering peoples of Central

and Eastern Europe. It is now, and has been for the last two years, wholly a private organization supported by free contributions of the American public. The \$100,000,000 originally put into its hands by Congressional action was almost entirely used for the extension of credits to various needy Governments for the purchase of food in America; these credits are now represented in the United States Treasury to the extent of about \$90,000,000 by obligations of those Governments. After that fund was exhausted Mr. Hoover appealed to the American public for money to enable his organization to carry on the feeding of about 2,000,000 undernourished children in the Baltic States, Poland, Czechoslovakia, Austria and Hungary. Certain special funds also were obtained for child-feeding in Germany, this feeding being intrusted to the American Friends Service Committee.

Such child-feeding has been carried on by the American Relief Administration from the armistice period up to the present date. And it is still going on in certain of the countries already mentioned—most extensively in Poland and Austria, in which two countries about 500,000 needy children are now being given a supplementary daily meal in the schools and relief "kitchens."

Thus, when the Russian food catastrophe began to attract the attention of the world, and an appeal was made to Mr. Hoover by Maxim Gorky to bring help to the starving people of the famine region, the American Relief Administration had an already active working organization and some funds available, so that a relief work of limited scope could be extended at once to Russia. It was decided by Mr. Hoover and his chief assistants and advisors that this relief, considering the limits made necessary by the funds available, should be restricted to giving to as many children as possible, until the harvest of 1922, a daily supplementary meal of the food value of about 800 calories. In other words, if a satisfactory arrangement could be

made with the Soviet Government whereby adequate transportation and protection of the food within Russia would be assured, relief work for the children would be undertaken along the same lines as in other Eastern European countries.

THE LITVINOV-BROWN AGREEMENT

A meeting at Riga in August, 1921, between Max Litvinov, Assistant Soviet Commissary for Foreign Affairs, and Walter L. Brown, the European Director of the American Relief Administration, was arranged, and an agreement was signed on Aug. 20. This agreement covers many details set out in twenty-seven numbered paragraphs. Its salient features are as follows:

A full recognition by the Soviet Government of the ownership and control of all food brought in by the American organization from the time of its entrance until it is actually fed to the children, with specific guarantees by the Soviet Government not to requisition or interfere in the distribution of any of the food. The American Relief Administration is guaranteed full liberty and protection of its personnel while in Russia, including the extension of diplomatic privileges and all facilities for the entry into and exit from Russia, of the said personnel. In securing Russian and other local personnel the American Relief Administration shall have complete freedom as to selection, and the Soviet authorities will, on request, assist the American Relief Administration in securing such personnel.

All internal expenses of transportation, warehousing and storage, and distribution of the introduced food is to be borne by the Soviet Government. The introduced food is to be given free import, and the American Relief Administration is guaranteed the privilege of free re-export if for any reason it cares to send any of this food out of the country. It is provided that no individual receiving American Relief Administration rations shall be deprived of such local supplies as are given by the Soviet authorities to the rest of the population. The Soviet Government gives special guarantee to take every step to insure that relief supplies belonging to the American Relief Administration shall not go to the general adult population or to the army, navy or Government employes, but only to the children and sick designated by the American officials in Russia. It is guaranteed that the American Relief Administration shall be allowed to set up all necessary internal organizations and committees for carrying out its relief work

free from Governmental or other interference. The Soviet authorities shall provide, on demand of the American Relief Administration, all necessary premises for bakeries, kitchens, dining rooms, dispensaries, &c. All railway, motor, water or other transportation for the movement of the relief supplies and relief workers and such local personnel as may be necessary to guard the supplies, and necessary offices, garages, store rooms and residential quarters for the American personnel, shall be furnished and paid for by the Soviet authorities. The American Relief Administration shall have complete freedom and priority without cost in the use of existing radio, telephone, telegraph, cable, postal and courier service in Russia. The Soviet Government shall acquaint the Russian people with the aims and methods of the American Relief Administration.

The American Relief Administration agrees to supply, as rapidly as suitable organization can be effected and within the limits of its resources and facilities, food, clothing and medical relief to the children and sick. It guarantees that its relief distribution will be made without regard to the race, religion or political status of the beneficiaries. Its personnel in Russia will confine themselves strictly to the ministration of relief, and will engage in no political or commercial activity whatever. In view of the freedom of the American personnel in Russia from personal search, arrest and detention, any members of the personnel engaging in political or commercial activity will be withdrawn or discharged on the request of the Central Soviet authorities after submission by these authorities of the reasons for the request and the evidence substantiating them.

On Aug. 24, 1921, officials of the American Relief Administration met in Washington, together with representatives of the American Red Cross, American Friends Service Committee, Jewish Joint Distribution Committee, Federal Council of the Churches of Christ in America, Young Men's Christian Association, Young Women's Christian Association, Knights of Columbus and Catholic Welfare Committee, all of which organizations had been associated with the American Relief Administration in collecting money in America for the feeding of children in Europe and for providing medical supplies and care. It was decided at this meeting that part of the funds collected and in hand should be used for Russian relief, but that as the whole need was apparently beyond

the resources of private charity the work immediately to be undertaken would be primarily the feeding of children and the provision of medical supplies. A memorandum was adopted, of which the following are the principal items:

The agreement between the Soviet Government and the American Relief Administration is accepted by the affiliated associations, and all relief activities will be conducted according to the terms of this agreement. A special area for the work of the American Friends Service Committee will be assigned, in which this Committee will keep its own identity and work according to its own ideals, but in conformity with the Litvinov-Brown agreement. One or more representatives of each affiliated association will be appointed on the staff of the Director in Russia of the American Relief Administration; this for the sake of assuring complete co-operation and co-ordination among the affiliated associations and the American Relief Administration. These associations shall conduct any and all relations with the Central Soviet authorities through or with the approval of the Director in Russia of the American Relief Administration. The affiliated associations shall be individually guided by their own views as to the collection of funds in America.

A week later a further special agreement was made between representatives of the American Relief Administration and the American Red Cross, the essential points of which were as follows:

Financial responsibility up to the amount of funds (about \$3,000,000) set aside by the Red Cross for medical relief in Russia is to be in the hands of the Red Cross, but the expenses inside of Russia incidental to the handling of transportation and distribution of the medical and hospital supplies are to be borne by the American Relief Administration. The Medical Director for Russia is to be a member of the A. R. A. Russian unit, and his staff is to be paid and cared for by the A. R. A. The distribution of the medical supplies is to be made by the A. R. A., which will submit frequent reports to the American Red Cross Headquarters in Washington, so that the A. R. C. may keep its membership fully informed of the work.

AMERICA'S SWIFT ACTION

Immediately after the signing of the Litvinov-Brown agreement, the American Relief Administration began sending supplies from its Ham-

burg and Danzig warehouses to Petrograd and to Riga, and from Riga to Moscow. The first American Relief Administration party, consisting of seven Americans in charge of Major Philip Carroll, left Riga for Moscow in the last week of August, and the first food train from Riga followed closely after. The first food train for the Volga, in charge of E. G. Burland, left Moscow on Sept. 15 for Kazan, and others to Kazan, Samara, Simbirsk and Saratov followed rapidly. The first train, which I had the privilege of accompanying, arrived in Kazan at 11 P. M. on Saturday, Sept. 17; it was unloaded and warehoused the next day, and the first meal was given the children of one of the detention homes on the following day. I shall never forget the excitement and joy of the children as they ate the white bread and rice with milk and sugar, so different from the coarse "kasha" (grits) and horse meat they had had before.

The work of organizing local committees to work under American supervision, and of setting up special kitchens and dining rooms and arranging with bakers was pushed as rapidly as possible. By Nov. 1 over 202,000 children were being fed, and by Dec. 1 the number had reached 750,000. It was certain that over a million children would be receiving food by New Year's Day, 1922. The present program calls for feeding 1,200,000 children, and probably early in January this whole number will be getting a daily meal of American food. If no breakdown in the shipping and rail transportation program occurs, 35,000 tons of food will have been sent from America to Russia by Jan. 1, and partly eaten and partly stored in the large American-controlled warehouses in Petrograd, Moscow, Kazan, Simbirsk, Samara, Saratov and other cities and towns of the famine region. Up to Dec. 1, 30,000 tons had actually reached Russia.

There has been, so far, a complete co-operation of the Soviet central and provincial Governments in providing transportation, warehouses, guards,

quarters for kitchens, dining rooms and offices and living rooms for the American workers. Not a single case of seizure or large robbery of the imported food has occurred. Small pilfering always happens in the course of relief work anywhere. In addition, the assistance of local doctors, nurses and helpers of all kinds has been readily obtained without interference by the Soviet authorities in the selection of these assistants.

The special food sent into Russia for child-feeding includes white flour, rice, beans, sugar, tinned milk, cocoa and fats. It is cooked in bakeries and kitchens which are controlled by the Americans and not allowed to do any other cooking. It is fed to the children daily in special dining rooms and in children's homes on the basis of a weekly ration which provides for daily variety. The food is eaten by the children in the controlled dining rooms and not allowed to be taken home, except in the case of children too sick or weak to come to the dining rooms. Food is also furnished to nursing women and to women about to become mothers, for this is also, in effect, child feeding.

The methods of accounting for the food in detail in trains, warehouses, bakeries and kitchens are elaborate and are the same as those which have been developed through the long experience of the administration in other countries. The Americans are in complete control of the food from the time it enters Russia until it goes into the children's mouths.*

THE MEN IN CHARGE

The American Relief Administration's Russian unit now numbers

* The British Parliament acted favorably in November on a bill granting £100,000 (normally \$500,000) to cover the cost of sending medical stores to Russian famine sufferers. About the same time the French Parliament voted 6,000,000 francs (normally \$1,200,000) for Russian famine relief. President Harding's annual message to Congress on Dec. 6 recommended unreservedly an appropriation to supply the American Relief Administration with 10,000,000 bushels of corn and 1,000,000 bushels of seed grains for the famine victims in the Valley of the Volga. The Soviet Government has co-operated fully in facilitating the work of the American medical and food relief units.—EDITOR.

about eighty men, with Moscow as headquarters. The unit is in charge of Colonel William N. Haskell, who has had much experience in similar relief operations in Rumania, Serbia and Armenia. The heads of the principal divisions of the unit are J. J. Mangar, administrative division; P. H. Carroll, supply division; Dr. Henry Beenkes, medical director; A. C. Coolidge, liaison division; Elmer J. Burland, warehouses; J. P. Gregg, central local committees, and A. Tordy, accounting division. The men in charge of field work in the various provinces and large cities on Dec. 1 were: Petrograd, Carlton G. Bowden; Moscow, Donald Henshaw; Kazan, Iver W. Wahren; Simbirsk, Edward Fox; Samara, Will Shaffroth; Saratov, David R. Kinne; Tzaritzin, Preston Kumler. Lincoln Hutchinson is chief general investigator and statistician. As fast as the work is extended to other hungry provinces, such as Orenburg, Ufa, Perm and Vyatka, new chiefs will be assigned to have local charge.

Through all the famine region, warehouses and special kitchens and dining rooms, to which the children come for their food (consumed on the premises) are being rapidly established. In Kazan province, for example, 1,766 dining rooms were in use on Nov. 19, in addition to which meals were being provided in 296 child institutions (orphanages, temporary detention homes, &c.). In Samara province on the same date, 500 dining rooms and 89 child institutions were providing meals.

Besides arrangements and provisions for the feeding of 1,200,000 children, the American Relief Administration has arranged to supply food to both children and adults by means of special "food remittances," much like the "food draft" system used by the administration for other European countries. By this system any individual or group of individuals in America or any other country can, by the payment of \$10 (or more, in units of \$10), have that value in food—purchased at wholesale in America

—delivered to any individual or group of individuals in Russia. A food order is purchased in America by applying with cash, to the American Relief Administration, Food Remittance Department, 42 Broadway, New York; the order is made out to a specific beneficiary, with name and address, and is sent to this beneficiary, to be presented by him to the nearest American Relief Administration warehouse in Russia. If no warehouse is within easy reach, he sends the order by mail to the nearest warehouse. Here the food is delivered directly or sent by mail to the beneficiary, and a receipt is taken from him, which is returned to America and notice sent to the donor that the food has been delivered. If any remittance cannot be met by actual food delivery within ninety days, the

money paid for the remittance is returned to the donor. These deliveries by the food remittance system are now being made in large numbers. All the Moscow deliveries called for by the first lot of 1,400 remittances, and begun on Nov. 21, have been completed. Moscow reports that "consignees were overjoyed and astounded actually to receive packages containing American flour, fat, rice, sugar, tea." The average time of delivery from date of food remittance receipt was three weeks. Similar deliveries are now being made in Odessa, Kiev, and many other central Russian points. With the gradual perfection of the system the time between receipt of the remittance by the Moscow office and actual delivery to beneficiaries at central warehouses will probably be about two weeks.

WHY RUSSIA'S GREAT ARMY FAILED

A TRAGIC story is told by Major Gen. Sir Alfred Knox in his book, "With the Russian Army, 1914-1917," recently published in London. General Knox was military attaché at Petrograd before hostilities began; he was with the Russian Army practically throughout the war; he was an eyewitness of the first revolution, which placed Kerensky in power, and of the second or Bolshevik revolution, which drove Kerensky into exile. The Bolshevik success he attributes more to the weakness of Kerensky than to the energy of the Bolsheviks, to which, however, he gives full credit.

The book reveals the inherent defects of the vast army of imperial Russia, an army which, in allied circles at the beginning of the war, was regarded with such confident hope that it was dubbed the Russian "steam roller." Estimates given by General Knox indicate that Russia mobilized more than 15,000,000 soldiers. If victory could have been won merely by marshalling overpowering numbers, Russia would have ended the war. But the Russians lacked everything necessary in modern warfare; their railways were inadequate, the roads were obstructed by congested horse transport, and their army itself was so cum-

brous that it was like a muscle-bound prize fighter. Lack of modern equipment, combined with inherent national characteristics, brought about the inevitable downfall.

Everything about the Russian Army, or almost everything, says General Knox, was wrong. The Tartar domination and serfdom had robbed the peasants—that is, 75 per cent. of soldiers—of all initiative, of everything except the quality of patient endurance. The men were careless, inefficient and incapable of understanding why they fought. "A higher type of human animal was required to persevere through the monotony of disaster. For the fact that the Russian type was so low the Russian Government was largely to blame, for it had discouraged education and had allowed the brandy monopoly for many years to sap the character and grit of the people." Elsewhere General Knox says: "The Russians were just big-hearted children, who had thought out nothing, and had stumbled half-asleep into a wasps' nest." Even if the soldiers had been experts, moreover, they would still have been doomed because of the graft and corruption in the War Office at Petrograd, which sent them to the battle front barehanded, without weapons, to be massacred by tens of thousands.

WHAT SOUTH CHINA IS FIGHTING FOR

By JOHN C. GRIGGS,
Of the Canton Christian College

*How the South China Government was set up in Canton, and how Dr. Sun Yat-sen, its President, and the Civil Governor co-operate—
State Rights in Kwangtung and Hupeh a sign of the new China*

THE next province north of us here in Canton is Hunan—"South of the Lake"—and beyond that is Hupeh—"North of the Lake." These two provinces, or rather certain purely local elements within them, are trying to throw off the dominance of outside force, to expel the military Governors and their armies, and to take the matter of governing into their own hands.

Hupeh, where the fighting has been going on, is mid-China. Astride of the great river, it contains the larger part of the Yangtse basin, and more important still the three closely clustered Wu-Han cities, Hankow, Wuchang and Hanyang, where among other new industries that of iron already begins to rival Pittsburgh. Although these enterprises seem to foreign eyes simply the result of Western industrialism, to the Chinese they are proving a revelation to themselves of the potentialities of their own capital and their own natural resources. To both foreigner and Chinese the new industrialism looms large as a factor in the new political system. At Hankow, moreover, the two great axes of the country intersect; east and west is the river with its oceangoing steamers; north and south from Peking to Canton is the immemorial route of conquest, administration and trade, and the site of the railroad of tomorrow. In terms of both geography and communication, therefore, Hupeh is China's centre, as in industrialism it is a leader.

Thus it is with unusual interest that we in September, 1921, are

watching the struggle for self-government going on in the central provinces. And this both because in Kwangtung the same effort for State rights has within the past year come to a successful issue, and because State rights seem to many to be the most promising source to which we can look for a substantial national sovereignty and eventual unity. It is a paradox that the very doctrine which in the United States has usually seemed the antithesis of union is now in China, as it was in the thirteen colonies of 1776, the only enduring basis on which a union can be erected.

It should be noted that in Hupeh, as elsewhere, the war for local sovereignty is only incidentally a revolt against Peking. Primarily the revolt is against the "Tuchun" or despotic militarist, who, either as the direct agent of Peking or with its connivance, is oppressing the province. Forces are being rushed to Hupeh from North and from West, and the Government of the South has announced its purpose to enter the fight. The old Tuchun was forced to resign and leave at the first shock of rebellion in July. Entered Wu Pei-fu, the man of mystery, who only a year ago was the idol of the students of the North because of his advocacy of local freedom and local control for all parts of China. Reluctantly accepting the overlordship of the whole troubled region, he hesitated a few days and then by proclamation and by ruthless destruction showed himself the implacable foe of disunion. For the moment

hostilities have been slackened by a partial truce whose outcome can only be surmised. The picture is still not clear. As on a film which has had two exposures, we see clearly Wu Pei-fu as the relentless militarist, yet almost equally clearly he is also seen as a declared home ruler and the life-long intimate of one of the leading Generals of the opposing popular forces. Conferences are being held. Apparently there has been as yet no personal estrangement between the two. If they were playing only the accustomed military chess for power they might strike hands, call it a day and divide the spoils. But this cannot be done in the case of a popular uprising, and indeed these two men are commonly rated above a merely mercenary game.

THE CANTON LEADERS

Professor John Dewey says every one has for China a panacea beginning with "if." But there is certainly no "if" in what has been accomplished here in Kwangtung in the past year in the matter of local sovereignty. While the voice of the *demos* has been raised in no uncertain tone in Hupeh, hurling defiance at alien governorship and at the remote officialdom of Peking, this south province of Kwangtung has found not only the voice but the power to oust every alien officer and soldier, to set up and maintain from Canton and beyond an administration strictly native in personnel, in aim and in control. The Sun Yat-sen Government, indeed, in its local aspect, has already become a great achievement in self-realization. The erection of a well organized and orderly home soldiery under local and responsible leaders, the suppression of open gambling, the curbing of robbery in outlying districts with the demand that the authorities there shall assume responsibility for the elimination of all disorder, freedom from official extortion and graft, and the abolishing of execution for political offense, are all in sharp contrast to conditions a year ago under an outside military Governor and an alien

army. There can of course be no prediction that such things will supervene elsewhere in China in the near future, nor certainty that they will have permanence even here in Kwangtung. However satisfactory

DR. SUN YAT-SEN
*President of the rival Government of China,
located at Canton*

their aspect, their significance lies rather in the basis of altruistic idealism than in present accomplishment. Right here and now, however, there already exists a considerable realization of "social integration," new, real and spontaneous.

It is too long a story to tell how it all happened, if indeed any one person could know all the circumstances; but happen it did, and results are so apparent that they are not ignored even by the most hostile critics of the present regime. A Kwangtung army led by Kwangtung commanders in sympathy with the veteran "big three" leaders, Dr. Sun Yat-sen, Dr. Wu Ting-fang and former Prime Minister Tong Shao-yi, and helped by contributions from emigrant Cantonese the world over, invaded the province, threw out the usurpers and

established in city and province a Government of, by and for their own people. This was war, of course—bloodshed—but the whole affair was managed with as much gentleness

GENERAL CHAN CHIUNG-MING
Civil Governor of Kwangtung, South China

and reason as was consistent with force. Looting and cruelty were not practiced by the incoming army, and so far as appeal, threat or bargain could manage it, the outgoing defeated army was kept from the ravaging and plunder which in most factional fights has been counted the soldier's dearest prerogative.

GENERAL CHAN'S WISDOM

To General Chan Chiung-ming, Commander-in-Chief, the greatest credit is due for his moderation and wisdom both during and since the campaign. It is noteworthy that he allowed himself to be elected civil Governor, instead of retaining the old title and autocratic power of military Governor. In a country where the military man still has unlimited

power over life and property, and where a civil Governor has been too often but a figurehead, it is no small thing for a man who in the flush of victory returns to his native province as an acclaimed deliverer to relinquish any of the traditional opportunity and popular glamour of a military hero, and to comprehend and assert the greater dignity and legality of the civil Governorship. General Chan is foremost in reform, in providing for the disbanded army of the former Administration, and in every constructive move.

With him came the three experienced advisers above mentioned. The proclamation of a national Government here as the only rightful central authority for the whole country, with the inauguration of Dr. Sun Yat-sen as President of China, soon followed. All the world knows the arguments upon which the claims of this Government are based. They are familiar to American readers and need not be here discussed, further than to say that the civil Governorship and the Sun Yet-sen regime are in their working out undeniably interdependent. The co-operation of General Chan with President Sun—at so many points where it was confidently predicted they would split—is sufficient refutation of the statements in foreign papers, both north and south, that these two men were at cross-purposes, and even bitter enemies.

Canton now has as Mayor the son of President Sun; a Board of Public Works which is carrying out municipal improvements worthy of the palmy days of city building in Budapest or Birmingham; a Board of Health which is attacking with vigor and success the insanitary conditions of markets, streets and housing. The police force in the city and on the river is admirable. In the interest of fairness, however, it must be said that some of these features were present even before the home rule restoration. An enthusiastic American friend, long resident here, told me two years ago that Canton was the most efficiently policed city in the

world; that street widening, bund building and other improvements had already well progressed, but that all local initiative labored heavily under the opposition, or greed, or false promises of a non-Cantonese Governor, who even in his best moods was indifferent and uninterested. The revoking of gambling licenses, with their millions of revenue, would have been then unthinkable.

THE LOCAL BATTLEFRONT

So far a fairly straight and understandable story. But in China more than elsewhere is it difficult to see through to the bottom of any affair. Last November, when the returning Kwangtung army was approaching from the east, and an attack on the city was daily expected, machine guns and sand-bag defenses were set up at important street corners, manned, of course, by the Kwangsi troops of the Governor then in power. But the anomalous thing was that the city's police force, strongly Kwangtung in personnel and sentiment and still nominally under the command of Ngai Bong-ping, remained on duty. Ngai Bong-ping himself, however, was one of the first instigators of the Kwangtung return and one of the right-hand men of General Chan, and actually at the moment in personal command of a large section of the attacking force. Though he himself had withdrawn from the city and was taking part in the attack, his own admirably disciplined police were still on duty. How could this be? Why did not the hordes of Kwangsi soldiers turn upon and overwhelm them, and then pillage the city and run? We foreigners could not understand, and never will know. Hundreds were being killed in the fighting so near the city that the guns were often heard, and wounded from both sides were being brought in to city hospitals. Occasional half-hearted attempts were made to disarm the police, and once some of our ladies got so near the altercation involved in the process that they had to dodge into a doorway to escape the bullets, but in general the city was quiet as

usual. We were at some pains to persuade the ladies to stay at home, but we ourselves, in necessary trips into the city, bravely mounted our prancing rickshaws and charged sandbags and machine guns without the slightest annoyance. It was a little disconcerting to whisk around a corner and come face to face with trenches and rifles, but on the sandbags would be Kwangsi soldiers and Kwangtung police unconcernedly chatting and swapping cigarettes. Probably it was a case of "dicker," for the evacuation was eventually carried out quietly, to the great relief both of foreigners and of a thoroughly terrified populace.

The new Government has stood, has carried out its next necessary move of overcoming the usurping troops in Kwangsi, the next province to the west, instituting there a similar home rule Government, and propping up a limp and wilted currency. It has also vindicated itself anew in establishing a broad-minded and cultured non-military man, Dr. Ma Chung-wu, as civil Governor of that province.

POPULAR SUPPORT

The question in all this, which has been brought about by force of arms, is whether the citizens of wealth and influence in the two provinces have enough self-realization and courage to furnish the moral background for its maintenance. To the peasantry, the farmers and poor villagers, of course, it means absolutely nothing except as they see results, for all soldiers are to them as tigers or invading insect pests, something to be put up with as a part of fate. The vote and citizenship in anything above village affairs can for the present mean little to them.

Two views obtain. The first is that high talk about reform and honest officials is but a part of the all-compelling military power, and whether trustworthy or not, will not be believed. The officer who arrests you for selling insanitary food in your restaurant is just as bad as the soldier who plunders your house, and is

but oppression in a new guise. Taxes are only plunder, and will be evaded. The other view, and the one which is to a degree correct here in Canton, is that there is recognition and support of these better things. Popular sentiment is certainly roused to an extent which in America might be considered pitifully slight, but enough to be already a dominant factor. The similar effort in Hupeh had its rise, whatever its outcome may be, in a strongly aroused popular protest. The mutiny in Ichang of a few months ago, and the pillaging and butcheries by alien soldiers, were the culmination of a series of outrages which at last have goaded the people of wealth and power to take matters into their own hands. And these gentry and rich merchants, with their vast clientele of dependents, are the tremendous potentiality which if once energized can do its will with anything, whether in Hupeh or any other province, if they but once become possessed with the idea that public affairs are their affairs, and that the possibilities lie in their hands. The days of the pretorian army, of the satrap government imposed from above for revenue only, are numbered through all China if—and here we must resort to the “if”—if local self-government be but once established. Here in Kwangtung the “if” has been eliminated, for this movement has come about entirely through local leaders, local soldiers and, although military means have been used, through successful appeal to local sentiment.

In several other provinces a similar appeal and effort is being made, not unmixed, to be sure, with selfishness, political corruption, greed and cruelty. Of all the many “awakenings of China” this is one of the most significant. Such an awakening in the Yangtse valley, which has already been reflected in the intervening Hunan province, can result only in a community of interest with us in the South and in the great strengthening of Dr. Sun’s claim as the leader of all China. Whether his present determination to take a hand

in that fight is wise, time only can determine. His opinion of the possible issue of the movement is as follows: “There is little doubt that with the Southern provinces enjoying good government and prosperity under honest administration and a constructive program, other provinces will be only too ready to throw off the yoke of militarism and misrule, and, acknowledging the authority of this Government, bring about the much-desired unification of the country.”

The relation of all this to Peking, and to the tremendous power of the Manchurian war lord Chan Tso-lin in the North, is exceedingly complex. It would seem that the day is far distant when such a fortified power could be unseated. But the same might have been said of the An-fu Club two years ago. Things move quickly out here. No leader rides so fast and high that he may not be in a moment thrown. We are wondering whether that fabulously expensive armored Packard car of Chan Tso-lin’s is really invulnerable.

No one can understand the cross-currents that move events contrary to tide and wind. Prophecy is a delusion, and of all prophecies that of your “old China hand”—the foreign merchant who has lived a lifetime in Shanghai or any of the treaty ports—is the most absurd and fallacious. He always bets on the wrong horse in matters of Chinese politics, and is rivaled only by the book-writing tourist, who comes with pomp and flourish, interviews officials, and returns to predict and publish. The first is usually British and the second, I regret to say, often American.

In contrast with these proud people, Professor Dewey is as fine an interpreter of China as we have had since the revolution. His protracted stay in the country, his many contacts, his broad mind and eminently sane and pragmatic view of things, have resulted in an exposition of the situation which is unique and as complete as any one man might achieve. Noteworthy in his many

articles is the entire absence of cocksureness or of advocacy of any one panacea, combined with his essential idealism.

THE REAL CHINA

But the pity of it all is that China must be interpreted to the world so largely by foreigners. We know Russia through Russian novels rather than through Wells. Gorky has told us things that no visitor or foreign sojourner could tell, but it is only rarely that a Chinese writer tells us of his country. Loquacious, intelligent and well-informed as the Chinese are, they seldom write what all the world may read. The Canton Government, sensitive to this reproach, has established a publicity bureau which we are watching with interest. Some of the editorials in the Canton Times, written by a son of Dr. Wu and by other Chinese, are not only models of clear English, but give a point of view and understanding which no foreigner can attain. Westerners can never expound freely to the world what China is and what China is doing. China must get the ear of the world and speak in her own voice before the world can know her.

It is the vitality, the vigor, the fixedness of purpose of the common people that give one a feeling of China's strength and promise, something which cannot be expressed by an alien, which is neither the China of the newspapers nor of the diplomatic table. Spheres of influence, partition of the country, the supremacy of the prophesied "one strong man" or the return of the monarchy—all or any of these may supervene, but unless there should be wholesale devastation and extermination by some colossal and long-continued war the real China must persist in her present vigor, and bring up on the surface of events a national personality which, building from below, will reach a national unity commensurate with the marvelous racial unity of the Chinese people.

China is a topsy-turvy world indeed, as much upside down as we

ever, in childhood, imagined it to be, with perfectly smashing contradictions and perfectly hopeless conditions, some of which are charming in their inconsistency, and some repellent and abject. But beyond these there are so many other conditions betokening progress, intelligence and kindness, and withal a sort of national grace and graciousness, that China must some time win out in spite of her immemorial ineptitudes. It may be said without Western conceit or religious self-righteousness that the question is now whether the cross-fertilization of Western culture and Christianity will help turn the trick quickly or not. Japan with her astounding successes and confusing failures is not a complete answer, but a helpful commentary which China would do well to study with a more open mind.

Educational work in China is certainly most stimulating to those carrying it on, and, it is to be hoped, to the students also. There is no question about the Chinese receiving and assimilating information eagerly. There is no lack of intelligence or of willingness to discuss high principles of conduct and action. But the problem of helping them to gain a fine, strong moral fibre, which shall stand them in good stead in the tumult and warped conditions of social and political life, is another matter. One of them rather plaintively remarked, "It is easy enough to be a good boy inside this college." To help them discover and see clearly moral standards by which they can live after leaving college requires more than we sometimes can see. That which seems easy and clear to us is sometimes surprisingly obscure to them. Mere denunciation of evil and dishonesty doesn't accomplish much. Go as far as you please in condemnation, they will cap it with something more sweeping. All China stands waiting at this moment for superfluous denunciation to be translated into sane, intelligent uprightness. The dragon kite of idealism must be brought to earth. The psychology of the thing is somewhat obscure when you have

passed the crude distinctions between vice and virtue, between theft and honesty. An active morality is something more than blue-penciling out the wickedness of the world.

It is in this region beyond that educated leaders must find their great sphere of activity, whether in morals, in commerce, or in civil life. The two great needs are personal initiative and perseverance. At precisely this point the Chinese is weakest, and here also the Westerner finds it most difficult to meet his necessity. Perseverance of a certain kind the Chinese have in abundance; it is proverbial the world over. But it is the perseverance of habit along familiar lines. In this quality they excel us by far. It is the perseverance which goes hand in hand with initiative that is essential. This is new to their national mental habit. The most encouraging moral symptom in China today is found in those novel commercial or productive enterprises which have been initiated by Chinese unaided, and which are being successfully carried on. Though the way is strewn with faint-hearted and abortive attempts, there are some ventures that are being successfully

pushed. Here a man is making internal combustion engines, and doing it without foreign help; there a factory is turning out a high grade of Russia leather, and so it goes. There is progress here.

But though the Chinese work finely in all these particulars which involve mere faithfulness, the big objective is to help them to get wound up so that they will run by themselves, along new courses, or in case of emergency will be able to rewind themselves. It goes without saying that the same need is felt in America or wherever teaching is more than inculcation of formula. Here the need is emphasized by almost entire absence of such qualities.

Periodicals and books bring a flood of theory about China's needs, much of it wise and helpful, some of it acrimonious and hasty. Not without occasional bitterness of dismay do we try to see this great country's problems, but without undue optimism we cherish an abounding faith in its eventual emergence and self-mastery, and in its great future. Among the symptoms of self-mastery is the present assertion of State rights in Kwangtung and Hupeh.

Canton, China, Sept. 26, 1921.

HOW SHERLOCK HOLMES FOOLED GERMANY

IN the German prison at Magdeburg during the war there were a number of English officers who yearned for news of the war and of England, but who could get no word. One of them one day was called by the authorities and told that an English book had been sent to him from England which he would be allowed to receive. Gratefully he took the book, together with a letter from its donor, no less a person than Sir Arthur Conan Doyle, whom the officer knew personally.

Unwrapped, the book proved to be a familiar volume of the famous Sherlock Holmes tales. The officer was disappointed, as he had already read the adventures of the subtle Holmes as recorded by his devoted Boswell, Mr. Watson, and wondered why the author had not sent him something new. The letter said: "It is slow, but per-

haps you might find the third chapter of a little more interest."

The officer glanced through the book, skimmed the third chapter, and did not find it either more or less interesting than before. A brother prisoner, Captain Keppel, however, was more successful; he borrowed the book, read the third chapter word for word and discovered its ingenious cipher message. Letter by letter Sir Conan Doyle had pricked out all the latest news from England, and the British prisoners had the joy of hearing from home. Their message of thanks, which the prison authorities innocently forwarded, simply said, "Please send us another Sherlock Holmes story." This piquant story was related by Sir Arthur at a dinner held in London on Sept. 28, 1921, and was greeted with laughter by the assembled guests.

THE GREEK CAMPAIGN OF 1921

BY ADAMANTIOS TH. POLYZOIDES

Editor of the Greek daily, Atlantis

Review of the war between Greece and the Turkish Nationalists, the present situation on both sides, and the problem that faces the Greeks

THE year 1921 was an eventful and a hard one for Greece, with the Asia Minor campaign holding the centre of the stage. This campaign, which began in May, 1919, when the first Greek troops landed in Smyrna, was intensified and extended with the advent of the new popular Government to power. Thus, whereas under the Venizelos regime the Greek Army was restricted in both numbers and objectives, under the new regime it took the field in a more businesslike fashion with the purpose of dealing a body blow to all Turkish resistance along the only railroad connecting Constantinople with Angora and Konieh. It was felt by the Supreme Hellenic command that as long as Mustapha Kemal was the master of that railroad, no large-scale movements were possible for the Greek Army; therefore occupation of that line, with the capital junctions of Eski-Shehr and Afiun-Kara-Hissar, appeared to the Greek command as an absolute necessity.

It was with this intention that the 1921 campaign started in March from Ushak and Brusa, only to retreat almost immediately, when 40,000 Turkish troops, released through the Franco-Turkish armistice in Cilicia, came quite unexpectedly to strengthen the Kemalist forces facing the Greek Army. The operation was repeated a few months afterward, and was crowned with success on July 21, when Eski-Shehr was occupied by the victorious Greek Army.

When this was done, the question of going beyond the railroad line Ismid-Biledgik-Eski-Shehr, Afiun-Kara-Hissar-Konieh, was discussed at length by the Greek command, inasmuch as it was connected with an

advance toward the enemy capital of Angora.

The leaders of the Greek Army figured that by taking Angora they would secure a first-class moral, diplomatic and political victory, although in a military sense they knew that as long as Kemal's army would be able to retreat further to the east, the Greek campaign would become correspondingly more difficult and costly.

On the other hand, if Angora did not fall, the Greeks would still have much to gain by the destruction of the only railroad in possession of the enemy, and by the strengthening of their old positions resting on Brusa, Eski-Shehr and Afiun-Kara-Hissar. The Greek command thought that as long as Kemal held the railroad centres there was no safety for the Greek zone of Smyrna; and as long as Kemal could attack the Greek positions of Eski-Shehr and Kara-Hissar, the safety of these two vital points of the Greek front was, at best, doubtful.

Mustapha Kemal, on the other hand, fully realizing the bad effect that the loss of Angora would have on his army and people, strengthened that city to the extent of making a miniature Verdun out of it. This, combined with the fact that Angora is by nature a formidable fortress, protected on the north by a mountain chain almost inaccessible, and on the south by what is known as the Salt Desert, made it possible if not easy for the Turkish Nationalists to defend their capital successfully against the Greek onslaught. Nevertheless, the Turkish Army suffered such tremendous losses that its offensive power was definitely broken, as evidenced in a subsequent attempt to turn the Greek flank beyond Afiun-

Kara-Hissar, which ended in a dismal failure. In addition to this, Kemal lost the benefit of rail communication between his front and his only base, Angora—a stretch of 150 miles—as

Map of the region of Asia Minor in which the Greek Armies fought against the Turkish Nationalists under Kemal

the Greek Army in its leisurely retreat destroyed the entire length of that road.

To what extent the Greek positions were strengthened, after the Angora campaign, may be shown from the fact that on Oct. 1 the Turkish command, believing the Greeks to be demoralized and weak, launched a violent attack against Afium-Kara-Hissar, in which five infantry divisions and three cavalry brigades, with adequate artillery, the total force being more than 40,000 men, took part. The battle, the last in the 1921 campaign, lasted nine days and ended in the utter rout of the Turks.

The net results of the campaign were stated by the Prime Minister of Greece, D. Gounaris, in the National Assembly of Athens on Oct. 15. In the first place, the territory allotted to Greece by the Sevres Treaty, comprising an area of 16,000 square kilometers, was increased to almost 100,000 square kilometers. The population of the former district was barely 1,000,000, whereas in the area at present occupied by the Greek Army 3,000,000 people are living contentedly under an administration that

has won the endorsement of even the bitterest enemies of Greece.

This campaign has cost Greece a sum equivalent to \$100,000,000 at the present rate of exchange. It has kept under the colors an army of over 300,000 men, fully equipped, fed and clothed as well as any first-rate army of its size.

At the close of the campaign, the Prime Minister of Greece, accompanied by his Minister of Foreign Affairs, left Athens and visited the Premiers of France and Great Britain to lay before them the situation in Asia Minor. On meeting Premier Briand, previous to the latter's departure for the Washington conference, Mr. Gounaris was officially informed of the Angora treaty between the French Government and the Government of Mustapha Kemal. Reduced to its essentials, this Franco-Turkish treaty is equivalent to the strengthening of Kemal's army by no less than 80,000 troops, such being, according to Premier Briand, the number of French troops hitherto facing an equal number of Turks in Cilicia. In addition to this, the French command of the Cilician forces left to the Turks enough supplies and ammunition to equip an army of 40,000 men. In order to counterbalance these reinforcements to the Turkish Army, Greece will have to call more reserves to the colors and organize a Spring offensive.

At this point the question of allied intervention came up for discussion. The Greco-Turkish war, to a certain extent, is a matter to be settled between the two belligerents; but to a greater extent it is a question in which not only Europe, but the world at large is interested. As long as conditions are not definitely settled in the Near East, the peace of Europe is not secure. A new Greek offensive probably will break the Turkish power completely; the expense, however, will be great, and the process will inflict new hardships upon a nation that has been at war almost continuously since 1912.

To say that Greece ought to abandon Asia Minor in the same way as the British have abandoned Mesopotamia, the Italians Southern Asia Minor and the French Cilicia, is to ignore the fundamental difference between these allied enterprises and the struggle of Hellas. Smyrna, for the Greeks, is not the same thing that Bagdad, or Adalia or Mersina is for the British, the Italians, the French; and what is true of Smyrna is true of the territory occupied by the Greek forces—even of the territory* of Constantinople and the Straits. A single boat of the Khedivial Mail Line, or of the Italian Royal Mail or of the Messageries Maritimes of France, can very easily accommodate all the British, Italian or French population in Mesopotamia, or Adalia or Cilicia. But when the French troops the other day were ordered out of Cilicia, fully 170,000 Greek civilians sought shelter on the Greek mainland. This figure alone suf-

fices to show what would happen in Asia Minor should the Greek Army be asked to withdraw. Rather than do this, the Greek Government and the entire Greek people would stake their all in a new campaign, because to act otherwise would be tantamount to signing the death warrant of between two and three million Greeks, who have made their homes in the area that would fall under the sway of Kemalism.

Greece, although exhausted financially, has still the means of fighting her war to a complete success. It should be kept in mind, however, that the actual opponent of Greece is not Kemal's organization, but those powers and those influences that keep encouraging and strengthening Turkish resistance, and prevent a rational solution of the Near Eastern question. Therein lies the real difficulty that faces the Greek Nation in its struggle.

THE SCENIC CHARM OF CHINA

IT is strange," says John C. Griggs of the Christian College at Canton, author of an article elsewhere in these pages, "that travelers have allowed the squalor of China's cities to blot from their vision and description the charm of Chinese landscapes. Hongkong is an apocalyptic revelation, its tossing 'Peak' trailing the glory of supernal vistas down along slopes of loveliness to a harbor and islands unexampled. And this mighty river, the Yangtse Kiang, with its myriad wanderings, reflects Nature in one of her most impressive moods. Across the miles of emerald rice, brown junk sails moving up some unperceived channel lure the sight and thought to unknown nooks of this multiform delta, to monastery and lychee groves, to pagodas and remote dialects. The serrated skyline of tawny volcanic mountains and the ever-present lesser hills make the river trip up to Canton but a continuation and fulfillment of the exquisite beauty of Utah and Hawaii. * * * The wealth of flowers we have here, and the birds, the tufted crests of

bamboo groves, and the great secular trees, that stand guard over the huddled brick villages to ward off devils. * * * Passing the seagoing salt junks anchored above our landing, one goes up the river two miles and across to the eastern suburb end of the bund, among hundreds of freight boats, ferry boats, sewage boats, gambling boats, naval boats, black, cavernous cooking boats, red light boats, paddling boats, coal boats—two miles of boats on the river and two miles of solid yellow humanity surging by on the land. Then on foot into the cloistered quiet of Shameen, the foreign concession—the climax and quintessence of all living China changed in a moment to some fabled fairyland of cooing doves, grass-grown streets, Parsee names on old massive buildings of romance, false banyans vainly striving with their dangling web of roots high overhead to be true ones, and out in the harbor the still ships, tramps, gaudy passage boats, the hot Tarantula, British, broad, low, with white sides yet aglow from its blistering journey up the Euphrates!"

DANGERS IN THE NEAR EAST

BY CONSTANTINE D. KOJOUHAROFF

Member of the Bulgarian National Scientific, Archeological, Historical and Geographic Societies

A Bulgarian view of the injustice wrought to Macedonia, Thrace and Turkey by the decisions of the Paris Peace Conference—The dangers arising from these settlements, which breed hate and resentment

THE Peace Conference at Paris was expected to solve all the questions out of which the great war arose, and to do it in a satisfactory manner, i. e., one by which the future tranquillity of Europe would be assured. This expectation has not been realized, for many differences continue to exist, a dangerous proportion of which have taken the form of open conflict.

Among the questions imperatively demanding a permanent solution was the distribution and disposition of the territories composing the countries of the Near East, and the attendant problems presented by Constantinople, the Straits, Thrace and Macedonia. On the successful solution of these depend, to a very great extent, the relations between the great powers and the Balkans—relations of paramount interest in the development of peaceful progress in Europe.

What was the attitude of the Peace Conference, however, when confronted with these serious problems? To what extent were the principles enunciated by President Wilson actually applied? It would be, I think, a waste of time to examine the questions in general. The decisions of the conference have already been appraised at their intrinsic value. It would be useless to submit them to further criticism, for the consensus of opinion is that, in general, they cannot stand criticism. They cannot be considered as anything other than the taking advantage of victory by the allied and associated powers to force on their defeated enemies conditions which they believe will insure them the realization of their territorial ambitions and imperialistic dreams. This is above all the case in the decisions in the Near East.

The geographical position of the coun-

tries of the Near East, their history, their ethnography, their international importance were, and still are, of such a nature that any one possessed of a sound understanding of the real interests of Europe sees clearly that all territorial questions affecting these areas must be decided according to their basic principles, and that those ambitions which favor misunderstanding, and which represent a constant source of armed conflicts, must be discarded, if permanent order is to be reached.

The conference was a stranger to every well-considered policy, which was based on Europe's real interest. It was but the medium of expression for the imperialistic desires of interested powers of the Entente. To rise above such inclinations and to reach solutions which would hold out to the peoples of the Near East the promise of future prosperity and progress, which moreover would tend to the elimination of occasions of misunderstanding and strife, seems to be at present unthought of by them. Instead of giving pre-eminence to ethnic and economic rules, instead of allowing to the populations in the contested localities the right of self-determination in the matter of their allegiance, the conference, by its decisions, determined the status of these peoples beyond possibility of appeal. And this was done because, had self-determination been allowed them, its manifestations would have frustrated the aspirations of those who, as victors, considered that they had the right to enforce their own wishes and to participate as largely as possible in the spoils of war.

The treatment accorded Macedonia, Thrace, the Zone of the Straits and Constantinople was anything but enviable. Macedonia was the booty of Greece and Serbia; Thrace was delivered into the hands

of Greece—geography, ethnography and economic importance to the surrounding countries notwithstanding, and the Zone of the Straits and Constantinople were placed under a régime which, though at first sight appearing to be a satisfactory solution, is in reality only a masked occupation, effected chiefly through British influence.

Sooner than might have been expected, we are witnessing some of the results of the work of the Paris Peace Conference. We are seeing the beginning of those systematic embroglios of which the decisions of the conference are the source. In Macedonia the population is placed under unbearable conditions—conditions far harder and more cruel than those imposed by the Turks. The rule of Greece and Serbia is merciless. Treated with injustice, subjected to brutal and systematic persecutions, the aim of which is to kill all national spirit, the population, utterly exasperated, is forced into one of two alternatives—either to abandon their homes and seek refuge in Bulgaria or to undertake a rebellious struggle against their oppressors. The same is also true of Thrace. By all means, legal and illegal, the people are fighting against the same oppression—oppression most brutally inflicted for the purpose of killing the national spirit or forcing it into submission.

The Macedonians and Thracians, seeing that the clauses of the treaty which should protect the rights of minorities remain nothing but so many written words, in their desperation have resorted to conspiracies against the existing authorities. And these are far more dangerous, far more inimical to peace than those which were formerly fomented against Turkey.

Even more complicated is the situation in the Straits and Asia Minor. There these difficulties, to which I have previously referred, have taken the shape of open warfare between the Turkish Nationalists and Greece. This conflict is the forefront of reaction; the beginning of an organized revolt against the cruelties inherent in the Peace Treaty, which will ultimately play a decisive part in the destinies of Europe. The bloc formed by Russia, Germany and Turkey hardly exists today in any perceptible degree. But presently it will take a far more conspicuous shape in a lasting alliance of common interests, opposed to the Entente, which is seemingly losing its prestige in a gradual process of disorgani-

zation, the fruit of rival territorial policies. With regard to the Straits in particular, Great Britain, who apparently does not possess the means of imposing and maintaining there the status created by the Peace Treaty, will be still less able to do so when she is confronted with the bloc headed by Russia, at last organized and holding all the points of strategic importance, and when the tremendous force of that bloc is directed to the overthrow of the present state of affairs. The belief in London was, and still seems to be, that the present chaotic condition of Russia, combined with the goodwill of Greece, would insure England of the advantage, whenever the present solution in her favor is called into question. To this end, and to safeguard her interests otherwise, she makes use of Greece. But however much she was mistaken in her conception of Russia's powerlessness, she was still more so when she intrusted to Greece tasks beyond the realization of a country that can hardly protect its own interests. To set such hopes on Greece indicated either that the country setting her on was in no wise acquainted with her, or that it took no account of her impotency, seeing only and caring only for the fact that her long expanse of coast line enabled her very easily to be kept under the influence and persuasions of a great sea power. Present events show clearly to what extent British policy was in error when it conceived the idea of making Greece a tool in the Balkans or the guardian of the Straits. And future events will most certainly exemplify this.

No one who is at all conversant with the past history of Greece will deny that Venizelos has deserved well of his country. When he came into power he directed all his efforts to create a State out of the financially bankrupt, politically corrupt and hopelessly disorganized Greek nation. Until Greece was involved in the great war, Venizelos continued to display great moderation as to any territorial aggrandizement. But at the Peace Conference his former wisdom was forgotten. The demands he made disclosed a policy the ruling spirit of which was a desire for further territories for Greece, and which relied for its success upon the fact that Great Britain would safeguard from attack any new Greek acquisitions. Perhaps in his heart Venizelos was conscious that he might be mak-

ing a mistake; but knowing the greed that is unfortunately only too well marked a characteristic of the Greek Nation, he was willing to risk it. If he could obtain a large and imposing booty, with which to satisfy this imperialistic appetite, he would thus maintain his own prestige and even further strengthen his position and his hold on power. But whatever the cause, he made the blunder that is now history, and Greece bears and will bear its disastrous consequences. She will lose, sooner or later, the majority of those raw territories which she now possesses, to say nothing of those to which on paper she is entitled. Her naïve and unrestrained enthusiasm has carried her headlong into an adventure which cannot in any way be understood as compatible with her true interests. For this, if for no other, reason, she will learn a lesson for which she will have to pay.

But the questions involved in the Balkans and Asia Minor are by no means exhausted by the outcome of this conflict between Greece and Kemal. Even if that conflict should be settled in the immediate future, there is nothing to lead one to suppose that an era of perfect security would immediately result. Macedonia, Thrace, the Straits, the mandates in Asia Minor are but a few

of the questions which remain to form centres of that Near Eastern policy which will be inevitably evolved from the conflicting interest of the Russo-German-Turkey bloc and Great Britain. And herein is a danger, too vast to be visualized in all its details, which the Peace Conference should have foreseen, and, foreseeing, should have endeavored to avoid. And yet far from seeking to minimize this menace of the future, the conference by its very decisions set up conditions which can breed only new rivalries and hates. And out of them will arise dangers to European peace far more to be feared than all the sum total of her pre-war jealousies and bickerings. It is sufficient to point out that from the ruins of Bolshevik Russia a democratic Russia has been born, and has fallen heir to that old need of her forefathers—a free outlet to the open sea. When one considers where alone this outlet can be found, and where in relation to it are located the countries whose trials and tribulations I have been discussing, it will readily be seen how the full weight of the mistake made by the Peace Conference may ultimately be brought home; brought home when it will be too late to try and undo it.

*1,412 Massachusetts Avenue, Washington, D. C.,
Sept. 19, 1921.*

THE INVENTOR OF THE GAS MASK

THE name of Lieut. Col. Edward Frank Harrison, the inventor of the gas mask, was honored officially by Great Britain on Nov. 2, 1921, when a memorial plaque to the late Controller of Chemical Warfare was unveiled at the Pharmaceutical Society in London by Sir L. Worthington-Evans, Secretary of State for War. The President of the society, in an opening address, told how Colonel Harrison entered the war in 1915 as a private at 47 years of age, how he was transferred to the Royal Engineers when the first German gas attack was made, and how, in 1916, as a result of his ceaseless research and hard work, the small box gas-respirator was produced, which saved the lives of hundreds of thousands of soldiers before the end of the war. No fewer than 20,000,000 of these gas masks were manufactured for the use of the British and allied armies. In recognition of his work, Colonel Harrison was made Deputy

Controller, and finally Controller of Chemical Warfare, which post he held up to his death in November, 1918, from pneumonia.

The Minister of War, in unveiling the memorial, paid high tribute to the inventor's devotion and spirit of self-sacrifice. The problem that Colonel Harrison was called on to solve, he said, was perhaps one of the most dramatic in warfare—to provide in the middle of a war, almost in the middle of a battle, an armor that would be proof against a new and sinister weapon, deadly to a degree hitherto unimagined in warfare. It was said to the honor of ancient Kings that they slew their thousands and their tens of thousands. It would be Harrison's memorial that he saved them, for not a man was sent to the front in the later years of the war who might not have to depend for his life at some unexpected moment on the skill and knowledge of the scientist they commemorated that day.

KING CONSTANTINE'S GUILT

BY EFTHYMIUS A. GREGORY

*Answer to charges against the Greek King's actions during the war—
Hitherto unpublished letter from General Callaris*

To the Editor of Current History:

One of your correspondents holds that it is unnecessary to prove the Greek King's guilt, so far as the alleged violation of the Greco-Serbian treaty alliance is concerned, since "it was established by the tribunal of mankind's foremost students of international agreements." I challenge any one to name the newspaper, magazine or book in which the official text of the Greco-Serbian treaty was published in full, also the date of its publication. I am convinced the readers of CURRENT HISTORY will duly appreciate the value of the verdict of "mankind's foremost students of international agreements" on the guilt of Greece in regard to the alleged violation of a treaty, the official text of which was never made public in its entirety. Most of the Venizelist assertions are on a par with the one above referred to.

The conflict of the allied marines with the Greeks at Athens has been characterized as a "cold-blooded assassination of French marines," and it has been charged that the Greek authorities are responsible for the conduct of the men who took part in this deplorable affair. At the outset, it was not a case of Greek Army or Greek civilians butchering innocent women and children. Allied marines, well equipped, fought with Greek soldiers and civilians, and the latter had approximately as many casualties as the former. But "where were the Athenian police? How did the mob get the uniforms, the machine guns and the Greek army rifles? Could a mob have terrorized officers? And were the mob leaders punished?"

In the Southern States, in the Western States and in practically every State of the Union we witness every day the utter inability of the authorities successfully to face infuriated crowds. Some years ago the inhabitants of the city of Omaha, Neb., virtually wrecked every Greek store in that city. Never, however, did the Greek Lega-

tion in Washington deem it wise to accuse the American Government of having ordered the attacking crowds to act in this manner.

In my previous communication I stated that "the fact that most of the persons involved in the conflict wore the uniform of the Greek soldier does not render Constantine responsible for their conduct." It was never my object to dispute the fact that most of the men were regular soldiers of Greece, though civilians, too, took part in the struggle. My purpose was to show that even soldiers, after all, are human beings, subject to the same passions as other human creatures. On the "battle of Athens" I will say nothing beyond this, as I feel that national interests are scarcely advanced by the pouring of oil on the fire of prejudice.

On the subject of Fort Rupel I will limit myself to presenting below the translation of a letter which was published in several of the Athens journals over the signature of General Callaris, than whom there is no more honest or more patriotic man in Greece, as even the Venizelists will admit. I quote from the Athenian Politeia of Oct. 6, 1921, page 1, column 3:

Athens, Oct. 4, 1921.

Dear Mr. Editor: In connection with what is published by Admiral Carr in The Westminster Gazette on the disposition of General Sarrail (who was at the time allied Commander in Chief at the Macedonian front) regarding the surrender of Fort Rupel, it is well to recall another fact, for the enlightenment of French public opinion.

When, in the Summer of 1916, demobilization and disarmament were imposed upon us by the Allies, it became virtually impossible for us, irrespective of our neutrality, to defend Eastern Macedonia, owing to the limitation of our forces there to the minimum and the cutting off of our communications, on land and sea, by the Allies themselves.

The Greek Government deemed it necessary (*) to inform General Sarrail in due time of its inability to protect Eastern Macedonia, and to ask him if he was not willing to occupy the fortifications along the Greco-Bulgarian boundary line which we were to abandon.

(*) In view of the imminence of a German attack after the completion of our demobilization.

General Sarrail then replied that "the Greeks may act in accordance with their best interests, but it is not my intention to announce to them my disposition and the plans of my operations," thus rejecting our offer out of distrust of us.

GENERAL CALLARIS.

It is not unusual to see a fact disputed, but never have I seen before the results of an election disputed. In my previous communication I invoked the verdict of the four largest cities of Greece, i. e., Athens, Saloniki, Piraeus and Patras, in order to prove the absurdity of the Venizelist claim that the politicians opposing Mr. Venizelos exploited the ignorance of the rural population, &c. Your correspondent asserts that the above-listed names, as well as some villages of little importance, which he names, supported Mr. Venizelos and his candidates.

I challenge him to name one single Venizelist Deputy representing any of the above-listed cities, or, rather, a department of which any of the above-mentioned cities is a part. He also asserts that the majorities of the rural districts neutralized the results of elections in the larger cities. Permit me to state that the Department of Attica and Boeotia, for instance, has a population hardly in excess of half a million. Its two largest cities are Athens and Piraeus, with a population, according to the official census of 1921, of 300,000 and 135,000, respectively; making

a total of 435,000. Whether it is probable that the votes of 65,000 inhabitants could have offset the majority that is alleged to have been given by 435,000 I leave to CURRENT HISTORY readers to decide.

I stated on another occasion that my object was, and is, to defend the good judgment of the Hellenic people rather than the person of the King, and that, while Constantine may be guilty of the moral crimes ascribed to him, the evidence so far submitted is not conclusive. I reiterate those statements. Every man is innocent until proved guilty. The Greek voters, composing a huge jury, examined the evidence, and by their verdict, presented on Nov. 14, 1920, declared that it was not such as to warrant the charges against Constantine. The judges were competent. If all the anti-Constantine evidence was not presented to the jurors of Nov. 14, then it is the prosecution, the Venizelist régime, which is incompetent. Nothing is more natural than one's reluctance to form an opinion until one has examined all the documents related to the question on which one is invited to render an opinion. It would be possible for me to know whether the Greek King is guilty or innocent only if I had access to the files of the Greek Foreign Office.

If the attitude of the Venizelists here and in Greece is in harmony with the spirit of democracy, then we, in South Carolina, have a peculiar conception of the term.

Aiken, S. C., Dec. 7, 1921.

PROGRAM OF THE NEW ALBANIAN GOVERNMENT

BY AN ALBANIAN

FOLLOWING the resignation on Oct. 17, 1921, of the Coalition Cabinet headed by M. Ilias Vrioni, the Regency Council of Albania called upon the Foreign Minister in that Cabinet, M. Pandeli Evangheli, to form a new Ministry. The result is as follows:

Premier and Minister of Foreign Affairs—M. Pandeli Evangheli.

Minister of the Interior—Major Bajram Fevzi.

Minister of Justice—Dr. Constantine Tasi.

Minister of Public Instruction—Michael Mosi.

Minister of Finances—Amet Dakli.

Minister of Public Works—Zia Dibra.

Minister of War—M. Maksut.

The War portfolio was first offered to Isuf Gjénali, but he declined it, and the Under Secretary of War, Major M. Maksut, took his place.

This Cabinet came into being by a fusion into a "National Group" of the majority of the members of the Popular Party, of the Independence, and of a part of the Progress-

sive Party, with the effect that a new partisan alignment of forces took place. In consequence, the existence of the new Ministry is assured for some time, and, besides being composed of liberal elements headed by the first Christian Premier of the Greek Orthodox faith, M. Pandeli Evangheli, it promises to do a lot of cleaning up in the affairs of Albania. It should be interesting, therefore, to see what the new Cabinet proposes to do, as set forth before the Parliament by the Premier on Oct. 20, when it received its vote of confidence. (Three days later the Parliament adjourned until Jan. 4, 1922.) M. Evangheli said:

Gentlemen of the Parliament: I have the honor of informing you that, following the call on the part of the Regency Council, I accepted the grave responsibility of taking over the administration of Albania during these strenuous times, and that I have formed a new Cabinet. [Here he read the names of members as set forth above.] And we have undertaken this serious responsibility in these critical times through reliance on your confidence and on the support of the whole people of Albania.

In every field of governmental activity, gentlemen, we are confronted by very serious problems, the solution of which requires diligence, unity, energy and peace. The principal point in the program of the new Cabinet is to take care of the territorial integrity and the independence of the Albanian State. We will endeavor to obtain as soon as possible the formal recognition of our State on the part of the powers, and to establish diplomatic and friendly relations with the other States, especially with our neighbors. When we have secured peace from outside we shall turn our attention to internal matters, in order to put our country on the road to prosperity and progress, so that through the carrying out of such activities our nation shall furnish the proof of its being an element of peace and progress in the Balkans and of deserving the place it has taken among civilized nations.

In matters of internal policy the new Cabinet will carry out the necessary administrative reforms by establishing the principle of a "Government resting on the approval of the gov-

erned," by modernizing the administration, which we will put on sound bases. * * *

We will exert our utmost energy in the opening and constructing of roads, the importance of which escapes none; the solution of this problem is the first step toward the solution of the economic, financial and cultural problems of our national solidarity, which will justify us in foreseeing a clear horizon for the future of our country.

These are the major points of the program of the new Government, the rest being detailed accounts of the different reforms that are necessary in the various departments. As a matter of fact, this is the first authoritative, comprehensive and reasoned statement of the wants of the country, just as it is the first time that a definite pledge is given for their satisfaction.

And it would seem that the new Government has already inaugurated the carrying out of these promises, for it has actually fulfilled the principal point of its program, that of preserving the independence and territorial integrity of the State, as well as the pledge to obtain recognition from the powers. The new Ministry was less than a month old when it secured recognition from the powers. Among the first to extend formal recognition to the Government of Tirana as the de facto and de jure Government of Albania was Great Britain (Nov. 9, 1921), to be followed two days later by France and Italy. And on the 18th the Council of the League of Nations met at Paris to devise ways and means for enforcing the decision of the Allied Council of Ambassadors in fixing definitely the frontiers of Albania as against her Balkan neighbors, Yugoslavia and Greece. The matter has been settled by the two latter powers' acceptance of the frontier verdict and by their promise to live in peace with Albania, although Yugoslavia had been on the warpath for months.

TOLSTOY'S HOME IN RUINS

ADVICES from Russia state that the famous home of Count Tolstoy at Yasnaya Polyana is falling into ruins. Free weekly pilgrimages have been run by the Soviet Government to the estate of the great writer, but nothing has been done for its upkeep. The Tolstoy family is now planning to start a world-wide restoration fund

of \$100,000, and also is working toward the foundation of a Tolstoyan University, the funds for which the members and friends of the family hope to obtain through the publication of a memorial edition of eighty volumes of Tolstoy's works. The novelist's daughter, Alexandra, is now preparing the first volume.

ANGLO-FRENCH DISCORD IN TURKEY

BY HENRY WOODHOUSE

Text of two secret treaties, hitherto unpublished, which reveal the inside reasons which led to Lord Curzon's severe strictures on France for concluding her agreement with Mustapha Kemal at Angora—Threat to British oil interests

THE world read with amazement the public statements made in London on Nov.

24, 1921, by Lord Curzon, the British Secretary for Foreign Affairs, in which he condemned France's action in signing an agreement with the Turkish Nationalist Government and stated that peace will never be achieved "if one power tries to steal a march on another and concludes arrangements on its own account."

Lord Curzon's public arraignment of France created consternation in Washington diplomatic circles the next day. I noted the effect on the members of the armament delegations as I visited them at their hotels. "What does Lord Curzon mean?" was the general query. The faces of the delegates and advisers at the conference table that day were visibly disturbed.

Premier Briand, who was known to have directed the bringing about of the French-Turkish agreement, was sailing that morning from New York, and no one else seemed to know why a Near East matter was permitted to offset the progress made at the disarmament conference. Then I remembered that I had a copy of the peace treaty signed at Sèvres on Aug. 10, 1920, between Turkey on one side and Great Britain, France, Italy, Japan, Belgium, Greece, Portugal, Armenia, Poland, Rumania, Czechoslovakia and Hedjaz on the other. I had taken this document and copies of a number of other treaties and agreements, including the secret San Remo and other Anglo-French agreements, to Washington to verify certain matters relative to questions which I expected would rise when the mandate question came up for discussion. The hundred large printed pages of the Sèvres treaty and the accompanying maps showing the southern

frontier of Turkey and Asia were quickly scanned. By comparing the southern frontier of Turkey in Asia, agreed upon at Sèvres, with the frontier defined in the new Franco-Turkish agreement, the first possible cause for British complaint appeared in the fact that France had agreed to grant the Turks certain territorial concessions, and that upon the ratification of the Angora agreement France had proceeded to withdraw over 50,000 French soldiers from her Anatolian army of occupation. The concessions do not represent a loss to France, while the ending of the Anatolian military operations brings definite relief. To Great Britain both represent a definite loss, the nature of the loss being expressed in terms of land producing oil and other minerals, and reduction in protection through withdrawal of French troops.

The full text of the San Remo agreement, heretofore withheld from publication, only a résumé having been made public, indicates the extent of the operations planned on former Turkish territories by the British Government. The uncompromising attitude of the British Foreign Office in replying to the American notes regarding Mesopotamian oil rights indicates the importance placed by the British Government on these oil resources, which Great Britain would control under both the mandate and the San Remo agreement.

TEXT OF SAN REMO PACT

The full text of the San Remo agreement, which is illuminating, is as follows:

MEMORANDUM OF AGREEMENT between M. Philippe Berthelot, Directeur des Affaires politiques et commerciales au Ministère des Affaires Étrangères, and Professor Sir John

Cadman, K. C. M. G., Director in Charge of his Majesty's Petroleum Department:

1. By order of the two Governments of France and Great Britain, the undersigned representatives have resumed, by mutual consent, the consideration of an agreement regarding petroleum.

2. This agreement is based on the principles of cordial co-operation and reciprocity in those countries where the oil interests of the two nations can be usefully united.

This memorandum relates to the following States or countries: Rumania, Asia Minor, territories of the old Russian Empire, Galicia, French colonies and British Crown colonies.

3. The agreement may be extended to other countries by mutual consent.

4. RUMANIA—The British and French Governments shall support their respective nationals in any common negotiations to be entered into with the Government of Rumania, for

(a) The acquisition of oil concessions, shares or other interests belonging to former enemy subjects or bodies in Rumania which have been sequestered, e. g., the Steaua Romana, Concordia, Vega, &c., which constituted in that country the oil groups of the Deutsche Bank and of the Disconto Gesellschaft, together with any other interests that may be obtainable.

(b) Concessions over oil lands belonging to the Rumanian State.

5. All shares belonging to former enemy concessions which can be secured, and all other advantages derived from these negotiations shall be divided, 50 per cent. to British interests and 50 per cent. to French interests. It is understood that in the company or companies to be formed to undertake the management and the exploitation of the said shares, concessions and other advantages, the two countries shall have the same proportion of 50 per cent. in all capital subscribed, as well as in representatives on the board, and voting power.

6. TERRITORIES OF THE LATE RUSSIAN EMPIRE—In the territories which belong to the late Russian Empire, the two Governments will give their joint support to their respective nationals in their joint efforts to obtain petroleum concessions and facilities to export and to arrange delivery of petroleum supplies.

7. MESOPOTAMIA—The British Government undertake to grant to the French Government or its nominee 25 per cent. of the net output of crude oil, at current market rates which his Majesty's Government may secure from the Mesopotamian oil fields, in the event of their being developed by Government action; or in the event of a private petroleum company being used to develop the Mesopotamian oil fields, the British Government will place at the disposal of the French Government a share of 25 per cent. in such company. The price to be paid for such participation to be no more than that paid by any of the other participants to the said petroleum company. It is also understood that the said petroleum company shall be under permanent British control.

8. It is agreed that, should the private pe-

troleum company be constituted as aforesaid, the native Government or other native interests shall be allowed, if they so desire, to participate up to a maximum of 20 per cent. of the share capital of the said participation, and the additional participation shall be provided by each participant in proportion to his holdings.

9. The British Government agree to support arrangements by which the French Government may procure from the Anglo-Persian Company supplies of oil, which may be piped from Persia to the Mediterranean through any pipe line which may have been constructed within the French mandated territory, and in regard to which France has given special facilities, up to the extent of 25 per cent. of the oil so piped, on such terms and conditions as may be mutually agreed between the French Government and the Anglo-Persian Company.

10. In consideration of the above-mentioned arrangements the French Government shall agree, if it is desired and as soon as application is made, to the construction of two separate pipe lines and railways necessary for the construction and maintenance, and for the transport of oil from Mesopotamia and Persia through French spheres of influence to one or ports on the Eastern Mediterranean. The port or ports shall be chosen in agreement between the two Governments.

11. Should such pipe line and railways be constructed within a French sphere of influence, France undertakes to give every facility for the rights of crossing without any royalty or leave on the oil transported. Nevertheless compensation shall be payable to the landowner for the surface occupied.

12. In the same way France will give facilities at the terminal port for the acquisition of land necessary for the erection of depots, railways, refineries, loading wharves, &c. Oil so exported shall be exempt from export transit dues. The material necessary for the construction of the pipe lines, railways, refineries and other equipment shall also be free from import duties and wayleaves.

13. Should the said petroleum company desire to lay a pipe line and a railway to the Persian Gulf, the British Government will use its good offices to secure similar facilities for that purpose.

14. NORTH AFRICA AND OTHER COLONIES—The French Government will give facilities to any Franco-British group or groups of good standing, which furnish the necessary guarantees and comply with French laws, for the acquisition of oil concessions in the French colonies, protectorates and zones of influence, including Algeria, Tunis and Morocco. It should be noted that the French Parliament has resolved that groups so formed must contain at least 67 per cent. French interests.

15. The French Government will facilitate the granting of any concessions in Algeria which are now under consideration, as soon as the applicants have complied with all the requirements of the French laws.

16. BRITISH CROWN COLONIES—In so far as existing regulations allow, the British Gov-

ernment will give to French subjects who may wish to prospect and exploit petroliferous lands in the Crown colonies, similar advantages to those which France is granting to British subjects in the French colonies.

17. Nothing in this agreement shall apply to concessions which may be the subject of negotiations initiated by French or British interests.

18. This agreement had today been initialed by M. Philippe Berthelot and Professor Sir John Cadman, subject to confirmation by the French and British Prime Ministers, respectively.

San Remo, April 24, 1920. J. CADMAN,
P. BERTHELOT.

Confirmed—D. LLOYD GEORGE,
A. MILLERAND.

April 25, 1920.

WHY ENGLAND OBJECTS

The San Remo agreement explains in part what Lord Curzon, the British Secretary for Foreign Affairs, meant by his statements of Nov. 24, upbraiding France for having concluded an agreement with the Angora Government, and especially by his pointed statement that peace will never be achieved "if any one power tries to steal a march on another and concludes arrangements on its own account," but to understand his statements fully we must review the Turkish situation and also read another heretofore unpublished Anglo-French agreement, dated Dec. 23, 1920.

The world knows that a peace treaty was entered into at Sèvres between the allied and associated powers and Turkey on Aug. 10, 1920, and that by that treaty Turkey gave up certain territories, including Mesopotamia, Kurdistan, Syria and Palestine, which territories, according to the decisions of the Peace Conference, were to be placed under the mandate form of government. Subsequently the world learned that the United States had objected to the award of mandates by the League of Nations to Great Britain and Japan without the approval of the United States, and that as a result the League of Nations had notified the United States that the mandates would be submitted to the Washington Government for approval before awarding them.

The world also learned that the United States had protested to the powers against the secret agreement entered into at San Remo in April, 1920, between England and France, to pool and divide among themselves certain oil resources in the Near East, but the details of this agreement remained a secret, the references to the San

Remo agreement contained in the protests of the United States being general protests against what appeared to the American Government to be a monopolistic grab of the former Turkish oil fields by Great Britain, and the barring of Americans from their legal rights to Turkish oil fields acquired before the war, it being known that these former Turkish territories are rich in oil lands, capable of yielding probably over five billion barrels of oil, or as much as the total estimated oil resources of the United States.

The signing of the Sèvres Treaty was to terminate the state of war between Turkey and the signatory nations, but it did not produce this result. The Kemalists and other Turkish Nationalists and independents proceeded to fight the British, the French and the Greeks, with varied success. The Turks proved to be stronger than had been expected; they drove back the Greeks, and made it desirable to the French to make territorial concessions for the sake of their peaceable possession of the territory on the southern frontier of Asiatic Turkey. By the agreement recently concluded at Angora by the French representative, Henry Franklin-Bouillon, France made considerable concessions to the Kemalists, to which the British object strenuously.

ANOTHER SECRET PACT

The inside reason why Lord Curzon objects to the French concessions is that they endanger the British oil monopoly on former Turkish territory established by means of the secret San Remo agreement, supported by the Sèvres treaty, and further strengthened by an agreement dated Dec. 23, 1920. The text of this additional agreement, hitherto unpublished, reads as follows:

FRANCO-BRITISH CONVENTION OF DEC. 23, 1920, ON CERTAIN POINTS CONNECTED WITH THE MANDATES FOR SYRIA AND THE LEBANON, PALESTINE AND MESOPOTAMIA.

The British and French Governments, respectively represented by the undersigned plenipotentiaries, wishing to settle completely the problems raised by the attribution to Great Britain of the mandates for Palestine and Mesopotamia, and by the attribution to France of the mandate over Syria and the Lebanon, all three conferred by the Supreme Council at San Remo, have agreed on the following provisions:

ARTICLE I.—The boundaries between the territories under the French mandate of Syria and

the Lebanon, on the one hand, and the British mandates of Mesopotamia and Palestine, on the other, are determined as follows:

On the east, the Tigris from Jezireh-ibn-Omar to the boundaries of the former vilayets of Diarbekir and Mosul.

On the southeast and south, the aforesaid boundary of the former vilayets southward as far as Rumelan Koeul; thence a line leaving in the territory under the French mandate the entire basin of the Western Kabur, and passing in a straight line toward the Euphrates, which it crosses at Abu Kemal; thence a straight line to Intar to the south of Jebul Druse, then a line to the south of Masib on the Hedjaz Railway, then a line to Semakh on the Lake of Tiberias, traced to the south of the railway, which descends toward the lake and parallel to the railway. Deraa and its environs will remain in the territory under the French mandate; the frontier will in principle leave the valley of the Yarmuk in the territory under the French mandate, but will be drawn as close as possible to the railway in such a manner as to allow the construction in the valley of the Yarmuk of a railway entirely situated in the territory under the British mandate. At Semakh the frontier will be fixed in such a manner as to allow each of the two high contracting parties to construct and establish a harbor and railway station giving free access to the Lake of Tiberias.

On the west the frontier will pass from Semakh across the Lake of Tiberias to the mouth of the Wadi Massadye. It will then follow the course of this river upstream, and then the Wadi Jeraba to its source. From that point it will reach the track from El Kuneitra to Banias at the point marked Ssek; thence it will follow the said track, which will remain in the territory under the French mandate as far as Banias. Thence the frontier will be drawn westward as far as Metullah, which will remain in Palestinian territory. This portion of the frontier will be traced in detail in such a manner as to insure for the territory under the French mandate easy communication entirely within such territory with the regions of Tyre and Sidon, as well as continuity of road communication to the west and to the east of Banias.

From Metullah the frontier will reach the watershed of the valley of the Jordan and the basin of the Litani. Thence it will follow this watershed southward. Thereafter it will follow in principle the watershed between the Wadis Farah-Houroun and Kerkera, which will remain in the territory under the British mandate, and the Wadis El Doubleh, El Aloun and Es Zerka, which will remain in the territory under the French mandate. The frontier will reach the Mediterranean Sea at the port of Ras-el-Nakura, which will remain in the territory under the French mandate.

ARTICLE II.—A commission shall be established within three months from the signature of the present convention to trace on the spot the boundary line laid down in Article I., and shall be composed of four members. Two of these members shall be nominated by the British and French Governments, respectively, the two others shall be nominated, with the

consent of the mandatory power, by the local Governments concerned in the French and British mandatory territories, respectively.

In case any dispute should arise in connection with the work of the commission, the question shall be referred to the Council of the League of Nations, whose decision shall be final.

The final reports by the commission shall give the definite description of the boundary as it has been actually demarcated on the ground; the necessary maps shall be annexed thereto and signed by the commission. The reports, with their annexes, shall be made in triplicate; one copy shall be deposited in the archives of the League of Nations, one copy shall be kept by the mandatory, and one by the other Government concerned.

ARTICLE III.—The British and French Governments shall come to an agreement regarding the nomination of a commission, whose duty it will be to make a preliminary examination of any plan of irrigation formed by the Government of the French mandatory territory, the execution of which would be of a nature to diminish in any considerable degree the waters of the Tigris and Euphrates at the point where they enter the area of the British mandate in Mesopotamia.

ARTICLE IV.—In virtue of the geographic and strategic position of the Island of Cyprus, off the Gulf of Alexandretta, the British Government agrees not to open any negotiations for the cession or alienation of the said Island of Cyprus without the previous consent of the French Government.

ARTICLE V.—(1) The French Government agrees to facilitate by a liberal arrangement the joint use of the section of the existing railway between the Lake of Tiberias and Nasib. This arrangement shall be concluded between the railway administrations of the areas under the French and British mandates, respectively, as soon as possible after the coming into force of the mandates for Palestine and Syria. In particular the agreement shall allow the administration in the British zone to run their own trains, with their own traction and train crews, over the above section of the railway in both directions for all purposes other than the local traffic of the territory under the French mandate. The agreement shall determine at the same time the financial, administrative and technical conditions governing the running of the British trains. In the event of the two administrations being unable to reach an agreement within three months from the coming into force of the two above-mentioned mandates, an arbitrator shall be appointed by the Council of the League of Nations to settle the points as to which a difference of opinion exists, and immediate effect shall be given as far as possible to those parts of the agreement on which an understanding has already been reached.

The said agreement shall be concluded for an indefinite period and shall be subject to periodical revision as need arises.

(2) The British Government may carry a pipe line along the existing railway track, and shall have in perpetuity and at any moment, the right to transport troops by the railway.

(3) The French Government consents to the nomination of a special commission, which, after having examined the ground, may readjust the above-mentioned frontier line in the valley of the Yarmuk as far as Nasib, in such a manner as to render possible the construction of the British railway and pipe line connecting Palestine with the Hedjaz Railway and the valley of the Euphrates, and running entirely within the limits of the areas under the British mandate. It is agreed, however, that the existing railway in the Yarmuk Valley is to remain entirely in the territory under the French mandate. The right provided by the present paragraph for the benefit of the British Government must be utilized within a maximum period of ten years.

The above-mentioned commission shall be composed of a representative of the French Government and a representative of the British Government, to whom may be added representatives of the local Governments and experts as technical advisers to the extent considered necessary by the British and French Governments.

(4) In the event of the track of the British railway being compelled for technical reasons to enter in certain places into the territory under French mandate, the French Government will recognize the full and complete extra-territoriality of the sections thus lying in the territory under the French mandate, and will give the British Government or its technical agents full and easy access for all railway purposes.

(5) In the event of the British Government making use of the right mentioned in paragraph 3 to construct a railway in the valley of the Yarmuk, the obligations assumed by the French Government in accordance with paragraphs 1 and 2 of the present article will determine three months after the completion of the construction of the said railway.

(6) The French Government agrees to arrange that the rights provided for above for the benefit of the British Government shall be recognized by the local Governments in the territory under the French mandate.

ARTICLE VI.—It is expressly stipulated that the facilities accorded to the British Government by the preceding articles imply the maintenance for the benefit of France of the provisions of the Franco-British Agreement of San Remo regarding oil.

ARTICLE VII.—The French and British Governments, in their respective mandatory areas, will put no obstacle in the way of the recruitment of railway staff for any section of the Hedjaz Railway. Every facility will be given for the passage of employees of the Hadjaz Railway over the British and French mandatory areas in order that the working of the said railway may be in no way prejudiced. The French and British Governments agree, where necessary, and in eventual agreement with the local Governments, to conclude an arrangement whereby the stores and railway material passing from one mandatory area to another and intended for the use of the Hedjaz Railway, will not for this reason be submitted to any additional customs dues, and will be exempted so far as possible, from customs formalities.

ARTICLE VIII.—Experts nominated respec-

tively by the Administrations of Syria and Palestine shall examine in common within six months after the signature of the present convention the employment, for the purposes of irrigation and the production of hydro-electric power, of the waters of the Upper Jordan and the Yarmuk and of their tributaries, after satisfaction of the needs of the territories under the French mandate. In connection with this examination the French Government will give its representatives the most liberal instructions for the employment of the surplus of these waters for the benefit of Palestine. In the event that no agreement is reached, these questions shall be referred to the French and British Governments for decision.

To the extent to which the contemplated works are to benefit Palestine, the Administration of Palestine shall defray the expenses of the construction of all canals, weirs, dams, tunnels, pipe lines and reservoirs or other works of a similar nature, or measures taken with the object of reafforestation and the management of forests.

ARTICLE IX.—Subject to the provisions of Articles 15 and 16 of the mandate for Palestine, of Articles 8 and 10 of the mandate for Mesopotamia, and of Article 8 of the mandate for Syria and the Lebanon, and subject also to the general right of control in relation to education and public instruction, of the local Administrations concerned, the British and French Governments agree to allow the schools which the French and British nations possess and direct at the present moment in their respective mandatory area to continue their work freely; the teaching of French and English will be freely permitted in these schools. This article does not in any way imply the right of nationals of either of the two parties to open new schools in the mandatory area of the other.

The present convention has been drawn up in English and French, each of the two texts having equal force. Done at Paris, Dec. 23, 1920, in two copies, one of which will remain deposited in the archives of the Government of the French Republic, and the other in those of the Government of his Britannic Majesty.

HARDINGE OF PENSHURST.

G. LEYGUES.

This secret Franco-British convention entered into on Dec. 23, 1920, to strengthen the San Remo agreement and provide for joint British and French co-operation in certain points connected with the mandates for Mesopotamia, Palestine, Syria and Lebanon, was entered into after the signing of the Sèvres Treaty and after the receipt by Great Britain of the United States notes, including the Colby note of Nov. 20, 1920, protesting against the San Remo agreement and against the establishing of a British oil monopoly in Mesopotamia and other mandated territories.

The British Foreign Office had assured

the United States in earlier notes that the reports of British oil operations in Mesopotamia were unfounded, but the United States Government found evidence to the contrary, and so stated in the letters and notes transmitted to the British Foreign Office by Ambassador John W. Davis, under date of May 12, 1920, July 28, 1920, and Nov. 20, 1920. To strengthen her position in establishing an oil monopoly in mandated countries Great Britain entered into the new convention, the text of which has just been given.

TURKEY'S FIGHTING GOVERNMENT

Turkey has a passive Government in Constantinople and a fighting Government at Angora. Great Britain would confine dealings entirely to the passive Sultan Government in Constantinople, and would shun Mustapha Kemal's Nationalist fighting Government at Angora. But the army of the Turkish fighting Government has pushed its way past the southern frontier of Turkey in Asia established by the Treaty of Sèvres, has proved very troublesome to both the French and Greek forces in Syria, and has threatened the Anatolia-Bagdad Railway. The Kemalist forces have also threatened the British in Mesopotamia, but the British Royal Air Force, under command of Lieut. Gen. Sir J. A. L. Haldane, officer commanding-in-chief the Mesopotamia Expeditionary Force, has successfully dealt from the air with the situation and has discouraged attacks.

Strict British censorship has prevented the world from learning the extent of the operations conducted by the British Air Force in connection with what is termed the "Mesopotamia insurrection." But it is known that the "area of insurrection," though large at various times in the last two years, has been successfully reduced by the British Air Force.

The French did not consider the campaigns of Mustapha Kemal as insurrection, but rather as a continuation of war. From 75,000 to 100,000 French soldiers were required in that area, and several thousand French soldiers were killed in engagements. The cost of maintaining so large an army so far from France was large, and the French nation grumbled about it.

Though France is interested in protecting the Anatolia-Bagdad Railway, she is

not as concerned as England is in holding and protecting the oil fields of former Turkish territory. On the other hand, the British Foreign Office knows that the Turkish Nationalists have never approved or recognized the British claims to Turkish oil fields, and that, if they should be victorious, the British oil monopoly on former Turkish territory would be in danger.

Since the allied nations had recognized the Kemalist Government to the extent of receiving the Kemal representatives at the London Session in March, 1921, listening to their proposals to modify the Sèvres Treaty, and submitting to the Turkish Nationalist representatives a number of plans containing better terms than those of the Sèvres Treaty, the recognition of the Angora Government by France was not as radical a step as it appears to be on first consideration. As a matter of fact, the Franco-Turkish agreement signed at Angora, and ratified by the Nationalist Assembly, is apt to endure, where a similar agreement executed by the Constantinople Government would not.

[For text of that agreement see article on "France's Pact With Mustapha Kemal."]

THE SULTAN'S GOVERNMENT

In the absence of a Turkish Parliament at Constantinople, the last Chamber of Deputies having been dissolved on April 11, 1920, after only three months of existence, the Great National Assembly at Angora exercises the functions of a Parliament and makes the de facto Government established by Mustapha Kemal Pasha a dominant factor, much stronger than the Government of Mohammed VI., the reigning Sultan of Turkey. The Sultan is, of course, the only legitimate head of the Government. Entitled to the Ottoman throne as the successor of his elder brother, Sultan Mohammed V., following the latter's death on July 3, 1918, he lost power with the Turkish Nationalists through his apparent approval of the Treaty of Sèvres, which surrendered to the allied powers and newly created countries a considerable amount of Turkish territory.

Had this Peace Treaty, signed at Sèvres on Aug. 20, 1920, been ratified, or recognized by the United States, the leading signatory nations outside of Great Britain—France, Italy and Greece—would no doubt

have felt obliged to carry out to the letter the decisions of the Council of the League of Nations embodied in that treaty, and would not have recognized the Kemal Government at Angora. But, even with the support given him by the landing of the Anglo-French-Italian army at Constantinople on March 16, 1920, the Sultan was unable to gather sufficient power to form a Cabinet with enough stability and influence to offset the Kemalist Party.

Mustapha Kemal and his following succeeded in turn in causing the downfall of the Ministry headed by Grand Vizier Damad Pasha, notwithstanding the Sultan's refusal to remove him when requested by the Young Turks; the Nationalist Ministry headed by Grand Vizier General Ali Riza Pasha went down on account of the establishing of the rival Government at Angora; and the Ministry of Grand Vizier Salih Pasha went down because it was openly favorable to the allied powers, and was succeeded by the Cabinet headed by Grand Vizier Damad Pasha, which also fell through lack of support.

The Cabinet headed by Grand Vizier Tewfik Pasha, which took office on Oct. 21, 1920, weathered many storms, but found itself unable to act, due to the absence of a Turkish Parliament, it having proved impossible to constitute another Parliament since April 11, 1920, when the new Chamber, which had been assembled on Jan. 12, 1920, was dissolved. The turbulent situation prevented the holding of the elections provided for by the Turkish Constitution,

and that left the Constantinople Turkish Government without a Parliament. This deficiency on the part of the Constantinople Government added strength to the rival Government at Angora, and the Great National Assembly at Angora has exercised the function of a Parliament, thereby giving the de facto Government set up by Mustapha Kemal practically supreme executive authority over internal Turkish affairs as well as foreign affairs.

Mustapha Kemal Pasha and his followers want the Treaty of Sèvres revised; they want all the concessions made to Turkey by the allied countries at the London (March, 1921) session retained, and additional concessions made in the Straits and Smyrna zones; they also want concessions in the financial clauses of the peace treaty. France has been in favor of making these concessions, and the other nations practically acquiesced in them at the London sessions.

France, therefore, felt at liberty to enter into the agreement with the Angora Government, which cost her but little in concessions and made it possible to release about 75,000 French soldiers in Anatolia. The British, however, see in this French compact with Angora a danger to the provisions of the San Remo agreement and of the Franco-British agreement of Dec. 23, 1920, and an undermining of the British oil monopoly on former Turkish territory, which the British had established and strengthened by these agreements.

AMERICAN INDIANS IN THE WAR

STATISTICS collected in Europe by Dr. Joseph K. Dixon, a specialist on the history of the American Indian, show that more than 17,000 Indians fought in France, and made for themselves a brilliant record, attested by the official statements of the leading Generals of the allied armies. Their service embraced twenty-eight battle sectors, all of which Dr. Dixon visited. One hundred and fifty Indians received decorations for conspicuous bravery. One of the hundred bravest soldiers selected by General Pershing was an Indian named Sevalia. The crosses over the Indian graves in France, says Dr. Dixon, bear such pictur-

esque names as "Takes the Shield," "Good Bear," "Fights the Enemy," and "Goes Forth."

Dr. Dixon urges proper measures for the improvement of the lot of the Indians living on American reservations. From 1,200,000, he says, they have been reduced by hardships and repressions to 332,000. "The Indians fought for democracy," he adds, "in the battles of the Revolutionary War, in the battles of the Civil War and in the battles for the freedom of France and Belgium. They fought for a freedom which is denied them in the land of their birth. How will America now treat the question?"

FRANCE'S PACT WITH MUSTAPHA KEMAL

Terms of the treaty concluded by the French Government with the Turkish Nationalists at Angora—France recognizes the Mustapha Kemal regime, obtains a fixation of boundaries with French Syria and gets important concessions—British and Greek reactions

THE situation in Asia Minor is badly tangled. The Greeks are still at war with the Nationalist Turks of Mustapha Kemal, who is entrenched in his capital at Angora, and who declares his Government to be the de facto Government of Turkey. The British, who are in control of Constantinople, assert that the Sultan's Government, localized in that city, is the true one, whereas the French, who are in Syria and Cilicia, are pinning their faith on the Nationalists. The situation took on new complications in October, when the French Government made a new treaty of peace with the Angora Government.

This treaty, the text of which is published below, was signed at Angora on Oct. 20, 1921, and was ratified by the Angora Grand Parliament a few days later. M. Henry Franklin-Bouillon, head of the French mission that negotiated the compact, returned with it to Paris shortly afterward. Its conclusion gave France important advantages, notably the ability to withdraw her troops from Cilicia (leaving Greece isolated); the fixing of boundaries between Turkey and French Syria, and the obtaining of important railway concessions for French interests. The new agreement followed the lines of the treaty negotiated by M. Briand, the French Premier, with Bekir Sami Bey in London last March. [Printed in CURRENT HISTORY for May,

1921.] It contained, however, two new clauses—Articles 8 and 10—which caused Lord Curzon, the British Secretary for Foreign Affairs, to censure it severely, declaring that France had no right to make such concessions, as they disposed of territory which France held only as a mandatory. Article 8 fixed a boundary line between Turkey and French Syria; Article 10 recorded the consent of the Angora Government to the concession of the Bagdad Railway between Bozanti and Nisibin and the branch lines in the Province of Adana.

The British Embassy in Paris issued an official statement on Nov. 11, objecting specifically to these clauses, and also to Article 1, implying France's recognition of the Angora Government as the sovereign power in Turkey, and to Article 6, embodying France's admission of the Turkish Nationalist demand for minority provisions differing widely from those contained in the Sèvres Treaty. The statement also declared that the covering letter addressed to M. Franklin-Bouillon by Yussuf Kemal Bey, the Nationalist Foreign Minister and negotiator for Mustapha Kemal, gave pledges of concessions that went far beyond the London Treaty. Even that treaty, the British note said, had been protested against by Lord Curzon. The British Foreign Secretary himself returned to the attack just prior to M. Briand's departure

Map showing the new boundary under the Franco-Turkish agreement, and the region thus restored to Turkey, as compared with the boundary fixed by the Treaty of Sèvres

from the Arms Conference, and took the treaty as a text for warning France against the danger of political isolation. In a speech delivered at a luncheon in London on Nov. 24, Lord Curzon declared that, so far as Germany was concerned, the adoption by France of "an isolated or individual policy" would neither injure Germany nor help France herself. Referring specifically to the position in the Near East and the conclusion of the Franco-Turkish Treaty, he said:

Much more important than the victory of either party is that there shall be no victory, but that there shall be peace. This will never be arrived at if any power tries to steal a march on others and to conclude independent reforms on its own account. Such plans take us to a blind alley and find us landed in a cul-de-sac unless all the great powers come together in perfect loyalty and bend their shoulders to the common task.

There was hope, he continued, that a new attempt to bring about peace in the Near East might be successful if the suspicion that prevailed among all the parties concerned could be destroyed. If they could be persuaded that there was room for both Greece and Turkey in the Near East, and if the Turks could be persuaded that, since they were beaten, there was every desire to give them scope for the resuscitation of their national life, this hope might be cherished. "But," he concluded, "our hope will materialize only if we go into this affair, as I hope we may, with a single policy, a single aim and a single plan."

Greece was even more displeased by the new treaty. M. Gounaris, the Greek Premier, made a special journey to Paris and London to prevent its ratification, but his efforts proved vain. One of the last official acts of Premier Briand before sailing for the United States was to ratify the pact. In the French Senate, in the course of the debate on foreign policy which preceded his departure, he took the view that the conclusion of such a treaty was necessary and that France had spared no efforts to keep her allies, including Great Britain, loyally informed of her intentions and actions in this regard. Premier Briand said:

As to our Eastern policy, matters were badly tangled. We might have been led very far from our traditions and have created terrible difficulties in our Moslem possessions. * * * It was, therefore, essential to regard events from the French viewpoint. It was a duty of loyalty to remember that we had allies, to do nothing

calculated to break our word to them, and to prejudice the general interests of the alliance. This we tried to do. In London we attempted to deal with the whole question. It was not our fault if the attempt did not succeed. More recently, in Paris, on the initiative of Lord Curzon, who was also anxious to restore peace in the East, we renewed the attempt. Again it did not succeed. We informed our allies—and they fully understood our point of view—that after such great sacrifices we could not exhaust ourselves in a Cilician war against the Turks, that we were bound by the very terms of our mandate to evacuate those areas where we were only mandataries and where we were willing to remain only with a minimum of expense and without maintaining armies. We stated that we must fix the frontiers, evacuate our troops, and facilitate the immediate exchange of prisoners. Several attempts were made. The first time we came up against the intransigence of the Angora Assembly. Then, quite recently, through one of our fellow-countrymen [M. Franklin-Bouillon] who was willing to place himself at the disposal of the Government, which made use of the leisure the electors had left him, and who, I make a point of saying, has rendered great service to our country, the conversations were resumed. We found in Turkey warm sympathies for France, a lively desire to make good an error, which, moreover, was to a great extent forced upon the people, and to restore ancient traditions. The agreement has been signed. In the course of long discussions in which the representatives of Angora defended their national standpoint and their ideas of independence, concessions have been made and an agreement has been reached regarding a frontier, the conditions of evacuation and guarantees for the protection of the minority. We are no longer at war in the East, and all this has been accomplished in perfect accord with our allies. We have kept them informed, and they will receive the text of our agreements, which are in no way detrimental to their interests. Thus, French policy has taken shape in detail in the midst of real difficulties and yet our good relations with our allies are not disturbed.

TEXT OF THE TREATY

The official text of the treaty, as translated for CURRENT HISTORY from the Paris Temps of Nov. 21, is as follows:

ARTICLE 1—The high contracting parties declare that from the date of the signature of the present agreement the state of war will cease between them, and that the armies, the civil authorities and the inhabitants shall be so informed.

ARTICLE 2—From the date of the signature of the present agreement, the respective prisoners of war, as well as all French or Turkish nationals detained or imprisoned, shall be set at liberty, and shall be brought, at the expense of the power that holds them, to the nearest town designated to this effect. The scope of this article extends to all persons detained or imprisoned by either party, whatever may

be the date or the place of detention, imprisonment or capture.

ARTICLE 3—Within a maximum period of two months following the signature of this agreement, the Turkish troops will withdraw to the north, and the French troops to the south of the line laid down in Article 8.

ARTICLE 4—The respective withdrawal and taking over, within the time limit laid down by Article 3, shall be effected in accordance with provisions to be agreed upon by a mixed commission named by the military commanders of the two parties.

ARTICLE 5—Full amnesty shall be granted by the two contracting parties in the regions evacuated as soon as they shall have been taken over.

ARTICLE 6—The Government of the Grand National Assembly of Turkey declares that the minority rights solemnly recognized in the national treaty shall be confirmed by it on the same basis as that established by the agreements in this regard reached between the Entente powers, their adversaries and certain of their allies.

ARTICLE 7—A special administrative régime shall be established for the Alexandretta region. The Turkish inhabitants of this region shall enjoy every facility for the development of their cultural needs. Turkish shall be made the official language.

ARTICLE 8—The boundary line mentioned in Article 3 is fixed and specified as follows: The frontier line will start from a point to be chosen on the Gulf of Alexandretta, immediately to the south of the region of Bayas, and will be clearly oriented toward Meiden-Ekbes (the railway station and the region remaining to Syria). Thence it will turn southeast, leaving to Syria the region of Marsova, and to Turkey the region of Karnaba, and also the town of Killis; thence it will join the railway at the station of Tchoban Bey. From there it will follow the Bagdad Railway, whose roadbed shall remain on Turkish territory as far as Nisibin; thence it will follow the old road between Nisibin and Jasireh-Ibn-Omer, where it will rejoin the Tigris. The region of Nisibin and Jasireh-Ibn-Omer, as well as the road, will remain to Turkey; but both countries will have the right to use this road. The stations and branch stations of the section between Tchoban Bey and Nisibin shall belong to Turkey as a part of the railway line.

A commission composed of delegates from both parties shall be formed within one month from the signature of this agreement to fix the line laid down above. This commission shall begin to function within the same period.

ARTICLE 9—The tomb of Suleiman Shah, the grandfather of the Sultan Osman, founder of the Ottoman dynasty (the tomb is known under the name of Turq-Mezari), situated at Djaber-Kalessi, and its appurtenances shall remain in the possession of Turkey, whose right it shall be to establish attendants there and to fly over the tomb the Turkish flag.

ARTICLE 10—The Government of the Grand National Assembly of Turkey accepts the transfer of the concession of the section of the

Bagdad Railway between Bozanti and Nisibin, as well as of divers branches situated in the vilayet of Adana, to a French group designated by the French Government, with all rights, privileges and advantages attached to conces-

(© Underwood & Underwood)

MUSTAPHA KEMAL PASHA

Leader of the Turkish Nationalists and head of Angora Government

sions, particularly as concerns exploitation and traffic.

Turkey will have the right to send its military transports by railway from Meiden-Ekbes to Tchoban Bey, in the Syrian region, and Syria will have the right to send its military transports by railway from Tchoban Bey as far as Nisibin, in Turkish territory. Over this section and its branches no preferential tariff shall be established in principle. Each Government, however, reserves the right to study in concert with the other any exception to this rule which may become necessary. In case agreement proves impossible, each party will be free to act as he thinks best.

ARTICLE 11—A mixed commission shall be organized after the ratification of the present agreement; its object shall be to conclude a customs convention between Turkey and Syria. Both the conditions and the duration of this convention shall be determined by the commission. Both countries shall be free to act as they think best until this convention is concluded.

ARTICLE 12—The waters of Kouveik shall be divided between the town of Aleppo and the

northern region which has remained Turkish in such wise as to be equitable and satisfactory to the two parties. Aleppo shall also be authorized to construct works to draw water, at its own expense, from the Euphrates on Turkish

the time of the signing of the treaty. Certain passages in this letter also gave offense to the British Government:

ANGORA, Oct. 20, 1921.

Excellency:

I venture to hope that the agreement concluded between the Government and the Grand National Assembly of Turkey, on the one hand, and the French Republic on the other, with a view to bringing about a definite and enduring peace, will have the effect of renewing and consolidating the close relations which have existed in the past between the two nations, inasmuch as the Government of the French Republic is striving to settle in a spirit of cordial harmony all questions concerned with the independence and sovereignty of Turkey.

The Government and the Grand Assembly wishing, on the other hand, to favor the development of material interests between the two countries, empower me to assure you that they are disposed to grant the concession of the iron, chrome and silver mines located in the Harchite Valley, on a ninety-nine-year lease, to a French group, it being understood that this group shall, within five years from the signature of this agreement, begin the working of this concession through a company organized according to Turkish law, and that Turkish capital up to a total of 50 per cent. shall be allowed to participate in its funding.

Furthermore, the Turkish Government is ready to examine in the most favorable spirit all other desires that may be expressed by French groups relative to mine, railway, harbor and river concessions, on condition that such desires shall conform to the reciprocal interests of Turkey and France.

On its own part, Turkey wishes to profit by the collaboration of French technical instructors in her professional schools, and accordingly will later inform the French Government of its needs in this respect.

In conclusion, Turkey hopes that from the date of this agreement the French Government will authorize French capitalists to enter into economic and financial relations with the Government of the Grand National Assembly of Turkey.

YUSSUF KEMAL BEY.

M. Franklin-Bouillon appeared before the Foreign Affairs Committee of the French Chamber on Nov. 12 and explained the conditions under which this pact was negotiated. The French Government at that time took the position that the Angora agreement was not technically a treaty—which would have to be ratified by Parliament—but “an arrangement intended to put an end to a state of war on a common frontier.” M. Franklin-Bouillon told the Committee on Military Affairs on the same day that the safety of French interests in Syria still required an army of about 40,000.

(Photo Underwood & Underwood)

HENRY FRANKLIN-BOUILLON

French Minister of Missions Abroad, who negotiated the pact with the Turkish Nationalist Government

territory, in order to meet the needs of the region.

ARTICLE 13—Settlers or semi-nomads possessing rights of pasturage or owning land on either side of the line fixed by Article 8 will remain in possession of these rights. To meet their cultivation needs they shall be permitted freely, and without paying any customs or pasturage dues, to transport from one side of this line to the other their cattle, inclusive of birth increments, their instruments, tools, seeds and other agricultural products, it being clearly understood that they shall be bound to pay all taxes and duties relative thereto in the region where they are domiciled.

TURKISH COVERING LETTER

Below is the covering letter from Yussuf Kemal Bey, Turkish Minister for Foreign Affairs, to M. Franklin-Bouillon, sent at

NEWS OF THE NATIONS

Recent events and developments of importance in all the larger countries of the world and most of the smaller ones, arranged alphabetically, with cross-references to longer articles—A birdseye view of the world's political and social progress

[PERIOD ENDED DEC. 12, 1921]

AFGHANISTAN—A treaty was signed at Kabul, Nov. 22, in which Great Britain recognizes the full independence of Afghanistan, and which, by the promise of the Afghan Government not to receive Russian diplomats, practically repudiates the Soviet-Afghan treaty signed last Winter. On Nov. 30 Fakhri Pasha of the Angora Government arrived at Kabul with the draft of a Turkish Afghan treaty.

ARGENTINA

Representatives Mora and Araujo asked Congress for a law for the expropriation of the foreign packing houses, as a measure of protection in favor of the national meat interests, but the Argentine Rural Society sent in at the same time a report to the House of Representatives ascribing the critical condition of the meat industry to the world-wide depression following the artificial boom period of the war.

* * * The Government has decided on the acquisition of eight submarines of 800 tons; the contracts will in all likelihood be awarded to American firms. The preparation of the personnel has begun already in the Electrical Department at Puerto Militar (Bahia Blanca).

* * * The lawlessness in the Territory of Santa Cruz has been suppressed with a regiment of cavalry in the most dangerous zone. The uprising is believed to have been caused by the demoralization of the wool market.

* * * Immigrants are beginning to flow into Argentina in numbers not equaled since the period before the war. In one week of November there came through the Port of Buenos Aires 4,600 passengers from Europe, of which more than 3,500 were of the working class, mainly from Spain and Italy.

* * * Article 9 of the Budget for 1922, as passed in the Senate, carries an important provision declaring free of duty for three years the woolen cloth made in foreign countries with raw material imported from Argentina; such cloth must be made to the order of Argentine concerns, and these concerns, at the end of the three-year period, must have erected plants for the weaving of at least half a million pounds of wool a year.

* * * The Executive has sent out a circular to the Postmasters of the republic urging the utmost expedition and zeal in the distribution of the printed material for political propaganda which the several parties are sending out in view of the approaching general elections. The move is significant in the face of the bitter

political fight going on for and against the present Government. * * * M. T. Meadows, Chairman of the American Chamber of Commerce at Buenos Aires, signs a manifesto in which he expresses as his opinion that the American interests so far established in Argentina are in jeopardy through the apathy and carelessness of industrial and financial interests in the United States. He charges that American enterprise is surrendering to a baseless pessimism, without taking into consideration the immense resources of Argentina, and especially the fact that that country at present ranks fifth in the amount of its gold reserve.

ARMENIA

Conditions of hunger and disease prevail in Armenia, as in the other Caucasus republics. The Soviet grip continues strong, though the fighting Armenians—men like General Andranik and General Torcom—are still working abroad for deliverance from Turk and Russian alike.

A letter addressed by General Torcom to the League of Nations declares that Armenia will never rest until her account with Turkey is settled. Prominent Armenians of all countries have denounced the new Armenian massacres in Cilicia, and grave fears are entertained of the consequences of the withdrawal of French troops in accordance with the terms of France's treaty with Angora. [See text of treaty, Page 660.] It is estimated that the Turks have slain 25,000 Armenians in Cilicia since 1920. Near East Relief advices indicate that fully 50,000 Armenians at home are facing cold, starvation and disease this Winter.

* * * Meanwhile, by an agreement signed between the Nationalist Turkish Government at Angora, on the one hand, and the Soviet republics of Azerbaijan, Armenia, Georgia, and the Mountain Republic (Daghestan) at Kars, Armenia, on Oct. 13, a small autonomous State, to be known as the State of Nakhitchevan, was set up on Armenian territory under the protection of Azerbaijan. By this agreement about half of Caucasian Armenia was given to the Turks, as well as large tracts of territory in Georgia. The treaty abolished all existing Caucasian treaties except the Russo-Turkish agreement concluded at Moscow in 1920. Its preamble recognized the rights of peoples to self-determination.

AUSTRALIA

Australia is about to extend her rule over the

New Hebrides, a chain of islands lying south-west of the Fijian and Samoan groups. Their joint administration by Great Britain and France under the agreement of 1906 has proved unsatisfactory, especially to the Australian Government, which was not represented at the Anglo-French conference on the subject or consulted in the negotiations. Among the original settlers were many freed or escaped convicts from Australia or New Caledonia. The Australian Parliament favors the purchase of the islands and offers £500,000 to be paid to Great Britain for them, the share belonging to France to be appropriated to the extinction of a portion of France's war debt to England. * * * Mark Sheldon, Australian Commissioner in the United States, left New York on Dec. 3 on his return home via Vancouver, declaring as he bade farewell that the chief problem in his country was one of immigration. He pointed out that the Australian Continent, one-tenth larger than the United States, had a population only about as great as that of New York City, while Asia, on the north, had a population of 750,000,000 of different race and color. The Australians naturally desired to keep their country for themselves. Mr. Sheldon emphasized the need of selective immigration. * * * Senator George F. Pearce, Australian Minister of Defense, who will temporarily fill Mr. Sheldon's place, discussing the administration of former German New Guinea, said that Asiatic Immigration was prevented there, except for the occasional replacement of Japanese laborers already in the country. Shipping with Australia is treated as coastal. "Australia is the only continent peopled by one race," he added, "and must forever remain a white man's country." No Asiatic can now enter Australia, unless he is a student, merchant or traveler. There is no written law that discriminates against Asiatics, but there is an elastic educational test that may be stretched to exclude any, no matter how learned they may be.

AUSTRIA

The occupation of Burgenland by Austrian officials and troops began on Nov. 13, in accordance with the Agreement of Venice, concluded with Hungary through Italian mediation. The Hungarian gendarmerie and irregular bands evacuated the area formerly disputed. The districts where, under the agreement, a plebiscite should decide the sovereignty remained under the administration of Entente representatives. * * * Serious rioting took place in Vienna on Dec. 1, when thousands of unemployed attacked the Stock Exchange, a large number of shops and the fashionable hotels. Well-dressed people in the streets were ill-handled and robbed. The police were unable to cope with the emergency, and no resistance to the mob was attempted. Restaurants, stores and the lobbies of some of the leading hotels were plundered and utterly demolished. Several American and British visitors, among the latter Sir William Goodé, British Reparation Commissioner, were attacked in their apartments and robbed of all valuables,

including most of their clothing. The damage done by the riots is estimated at \$700,000, mounting to billions in Austrian crowns. The rioting was ended the next day by the advent of the Winter's first blizzard. * * * The American mission at Vienna has been transformed into a legation and Commissioner Frazier appointed Chargé d'Affaires. The United States Government has notified the Austrian Government of the acceptance of E. A. G. Prochnik as Austrian Chargé at Washington. * * * A treaty of commerce between Austria and Soviet Russia was signed on Dec. 8. Consular service between the two countries was resumed.

AZERBAIJAN

Azerbaijan, like the other Caucasus States, remains under Soviet control. In October patriotic forces were fighting to regain independence, while inside Baku the native organizations were passing resolutions condemning the severity of the Soviet rule. Azerbaijan, like the other Caucasus States, was suffering from famine and disease. Dr. Narimanov, President of the Baku Soviet, had antagonized the Moscow representatives by refusing to allow the Soviet to export the country's last food supplies to Russia to relieve the famine situation there. Concerts and other entertainments were organized in Baku, as well as at Tiflis, the capital of Georgia, the funds from which were applied to the relief of the famine situation. * * * The Soviet officials of Azerbaijan decided at the end of October to restore to their former owners certain factories and other property. Mills, cotton manufactories, fisheries and naphtha mines were included in this restitution. * * * It was announced on Nov. 13 that the Caucasus Commission at Constantinople, charged with the exchange of goods between Europe and the Caucasus, was to be continued under the leadership of M. Serebrovski, a Russian sent to replace the former Azerbaijan Minister, Prince Djevanchir, who had been assassinated. Although most of the Caucasus products came from Azerbaijan, no representatives of that country were included in this committee. * * * The treaty between the Turkish Nationalists and Azerbaijan, signed Oct. 13, placed the newly created Armenian State of Nakhitchevan under the protection of Azerbaijan. [See Armenia.]

BELGIUM

The Parliamentary elections were held on Nov. 20 and 28, under universal male suffrage, after a hard-fought campaign on the questions of language, national defense, and the reduction of the period of military service to six months. Returns for the Chamber of Deputies, elected directly, showed the new membership to be: Catholics 82, a gain of 9 over what they had in the Chamber recently dissolved; Liberals 33, a loss of 1; the Combatants 1, a loss of 1. The other parties were wiped out. Election to the Senate is partly direct, these candidates, 22

in all, being limited to ex-Ministers, ex-civil servants, secretaries of trade unions, and other categories specified in the Constitution of 1919. Some other Senators are elected by provincial councils, and the rest by co-optation in the Senate. To the new Senate were elected: Catholics 73, Socialists 52, and Liberals 28. In the old Senate, the Catholics had a majority of 13 over all. This time the Catholics were divided on the Flemish question. The twenty Senators chosen by co-optation in the Senate are from among the personages most eminent for intellectual, moral and economic services to the country. King Albert has requested M. de Jaspar, Foreign Minister in the Cabinet of M. Carton de Wiart, to form a new Cabinet, M. de Wiart having declined to continue as Premier.

BOLIVIA

The Bolivian Government is negotiating with the Stifel-Nicolaus Investment Company of Saint Louis and associated bankers a loan of \$25,000,000, with a view to stabilizing foreign exchange and to consolidating both the internal and the external debt. An advantageous settlement of its present indebtedness is offered to the Bolivian Treasury, by which it can refund its 9 and 10 per cent. bonds in a single type of more moderate interest. It is announced in this connection that Bolivia will employ, as in the instance of Peru, an American financial adviser to take care that the taxes and custom duties attached to the service of the foreign debt shall be promptly and fully collected. * * * The investigation ordered by the American Minister, Mr. Maginnis, has revealed that the death of the American citizen, Hart Mix, caused by a clash with the police in which two officers met death also, was due to the fact that the men entering Mr. Mix's house, searching for the hiding place of some robbers, were mistaken by him for bandits. The Government expressed its regrets to the American representative.

BRAZIL

The improvement in the export and import trade registered during the last few months has been checked, and a period of depression in exports has taken place, with larger but unsteady purchases abroad. This increase in Brazilian imports is due directly to the falling off of goods in the warehouses and in the market, after so many months of restricted foreign business. * * * The pronounced rapprochement between the Governments and peoples of Brazil and Paraguay is materializing in a series of conferences held lately by the Secretaries of State of both countries, in which practical measures, such as the speeding up of the construction of the railway from Santos to Asuncion, which will open to the Paraguayan capital a direct rail route to the Atlantic, have been readily agreed upon. Another measure recommended by the Brazilian Foreign Secretary, Dr. Azevedo-Marques, is the establishing of wireless communication between Rio de Janeiro and Asuncion of Paraguay. * * * The State of

[American Cartoon]

—New York Evening Mail

THE ACT ISN'T GOING SO WELL

Rio Grande do Sul will invest the proceedings of the \$10,000,000 loan negotiated in the United States toward the improvement of public roads. Three contracts, totaling \$6,000,000, have been awarded by the Brazilian Government, one to an American company and the other two to English concerns, for irrigation works in the northeastern part of the country.

CANADA

By the Liberal landslide which characterized the Canadian general elections of Dec. 6, William Lyon Mackenzie King of North York, Ontario, who was made the Liberal standard-bearer when Sir Wilfrid Laurier died, was designated to succeed the defeated Arthur Meighen as Prime Minister, and to command the votes of the largest party in the new Parliament. Premier Meighen was defeated even in his home constituency, Portage La Prairie, Manitoba, and his protection policy was repudiated. Defeated also were ten members of his Cabinet—F. B. McCurdy, Minister of Public Works; E. K. Spinney, Minister without portfolio; L. P. Normand, President of the Privy Council; C. C. Ballantyne, Minister of Marine and Fisheries; A. Fauteux, Solicitor General; L. G. Beilley, Postmaster General; Rudolphe Monty, Secretary of State; Dr. Edwards, Minister of Immigration and Colonization; R. J. Manion, Minister of Soldiers' Civil Re-establishment. Figures available on Nov. 13 gave the Liberal Party 117 seats in the new Parliament, the Progressives 65, the Conservatives 51 (the party of the outgoing anti-reciprocity Ministry), and the Labor Party 2. For the first time there was full woman suffrage. The first woman to hold a seat in the Canadian House of Commons is Miss Agnes McPhail, Progress-

sive, elected from the Southeast Grey District of Ontario. The election is considered a victory for tariff reform, looking toward reciprocity with the United States. The Liberal and Progressive platforms were agreed upon reciprocity in natural products with the United States, and upon free trade with Great Britain for five years.

CANAL ZONE

Late returns of the Panama Canal show the enormous increase of traffic, which has raised the question of enlarging the canal or building a second waterway through Nicaragua. The most important trade route, considering total cargo both ways, was that between the Atlantic coast of the United States and the west coast of South America, but the heaviest one-way shipments were those from the Atlantic to the Far East. Commerce of the United States with Australasia is at the bottom of the list, that between Australasia and Europe being double the amount. In the first nine months of the calendar year cargoes totaling 7,912,737 tons passed through the canal, or more than 200,000 tons in excess of the total for any single war year. * * * A battleship of 80,000 tons, armored and armed to an extent never yet projected for any navy, could easily pass through the locks of the canal, according to a report issued by the Navy Department, thus showing that the size of the locks played no part in Secretary Hughes's proposal to the disarmament confer-

ence that capital ships in future be limited to 35,000 tons.

CHILE

The Chilean Government has announced its intention of calling for September, 1922, the fifth Pan-American Conference, which would have been held at Santiago seven years ago had not the great war disturbed all international plans. * * * The press and the public have commented freely on the visit made to Santiago by the Uruguayan Minister for Foreign Affairs, Dr. Buero, but no one seems in a position to say what really took place in the conferences between the Uruguayan Chancellor and the Chilean President and his Secretary of State. To a newspaper correspondent Dr. Buero declared that his visit to Santiago was made in the same spirit of Pan American co-operation which prompted similar personal calls on the part of the Brazilian and Argentinian Chancellors in former years. * * * The Antofagasta-Bolivia Railroad is laying a double track in certain sections of its lines, which will be of great benefit for this important artery of international communication. In other sections a third rail is being laid down to make the line available for wide-gauged traffic. * * * The great possibilities of the Chinese market, especially for the Chilean fertilizer, nitrate of soda, after the experiences of the last famine in Northern China, have resulted in the creation of a first-class Consulate in that country. * * *

[German Cartoon—By a Russian Artist]

GREETINGS FROM RUSSIA

"German workers, do not let yourselves be harnessed to this car!"

—Wahre Jakob, Stuttgart

There has arrived in Santiago the new Minister of Bolivia to Chile, the first appointment since the revolution that overthrew the Government of Dr. Gutierrez-Guerra. Dr. Macario Pinilla is one of the outstanding figures in Bolivian political life; on reaching Chile he expressed his confidence in the amicable settlement of disputed points. "Chile and Bolivia are mutual friends; they must be, they need to be," Dr. Pinilla said to an interviewer. * * * Chile addressed a note to Peru on Dec. 12 proposing that the plebiscite provided for under the Treaty of Ancon—to determine the sovereignty of Tacna and Arica—be immediately held. It was reported on Dec. 14 that Peruvian troops had crossed the Chilean frontier.

CUBA

President Zayas, in a special message to the Cuban Congress on Dec. 1, asked postponement of consideration of the Government program until the regular session next April. Revenues for the fiscal year 1922-23 are estimated at \$72,000,000 and expenditures at \$64,422,664. Estimates for the War and Navy Department were \$14,189,541, the largest item on the budget, with public instruction next at \$9,529,717. * * * Employers on Dec. 5 inaugurated the open-shop principle in wharfage and lighterage operations at Havana, despite the threat of the stevedores' union to strike. * * * The Cuban House of Representatives on Dec. 7 adopted a resolution declaring it would be "a friendly act if the United States would withdraw troops stationed in Cuban territory since the beginning of the war," and asking that negotiations be begun to effect the evacuation.

CZECHOSLOVAKIA

The President of the republic ordered demobilization of the Czechoslovak Army on Nov. 10, as the emergency which had necessitated a war footing—the Hapsburg coup in Hungary—had passed. * * * Following the conclusion of a commercial treaty, a political agreement between Czechoslovakia and Poland has been signed at Prague by Premier Benes, in behalf of the former, and Foreign Minister Skirmunt in behalf of the latter State. It was stated officially that the treaty is directed against no third country, but is merely a sanction of the friendly relations existing between the contracting parties. It was emphasized, however, that the agreement expresses the joint determination of the Czechoslovak and Polish Republics to resist Hapsburg restoration anywhere and under any circumstances. * * * Discovery of a rich deposit of uranium ore, containing considerable radium, is reported in the mines at Jachymov, owned by the Czechoslovak Government. The supply of ore with radium contents is estimated to last twenty years. Rich seams of coal have been found at Velka Torona, in Slovakia. * * * Paul Orszagh Hviezdoslav, the greatest contemporary Slovak poet, died at the age of 72 years.

[American Cartoon]

—Central Press Association, Cleveland

IT'S A HARD CLIMB TO REACH THE PEAK,
BUT THEY'RE MAKING PROGRESS

DENMARK

Owing to the high-handed treatment given by Kerzentsseff to the Danish trade delegation that went to Stockholm in the middle of November, the negotiations for a Danish-Russian trade agreement failed. The Soviet claimed the right to appoint representatives in Denmark other than Russian subjects. This was taken to mean Danish Bolshevik leaders. The Soviet claim also for freedom to export Russian literature to Denmark smacked too much of a propaganda campaign to please Denmark. * * * King Christian X. received for an hour's audience the new American Minister, Dr. John D. Prince, when the latter called with his credentials, Nov. 23, and presented him to Queen Alexandrine. * * * Denmark's foreign trade statistics show a credit balance. Imports declined for the first six months of 1921, while exports held their own, marking a considerable improvement over the first half of 1920.

ECUADOR

By parliamentary decree, sumptuous funeral ceremonies were held in Quito to honor the memory of General Eloy Alfaro, President of the republic, who was assassinated by a mob in January, 1910. Among the speakers at the burial in the metropolitan cemetery were President Dr. José Luis Tamayo and representatives of the House and the Senate. * * * The National Merchants' Association, recently formed, aims to create a single body of business men throughout the republic, with the purpose of protecting its associates in foreign trade, to

improve and modernize commercial legislation and to create in Guayaquil an information office for the service of persons or firms abroad interested in entering the Ecuadorian market. * * * A syndicate to take charge of the collection of taxes on brandy, salt, tobacco and other articles has been formed by private capitalists with the help of a limited company offering shares to the public. The initial capital is 3,000,000 pesos, of which 2,000,000 will be advanced to the State Treasury.

ENGLAND

The most engrossing developments of the month—the settlement of the Irish question and the progress of the disarmament conference at Washington—are treated at length elsewhere in these pages. * * * During a temporary absence of Mr. Lloyd George on Nov. 10, a labor deputation consisting of thirty Mayors, Alder-

men and Councillors of London boroughs made a bold though fruitless effort to interview him on the subject of relief for the unemployed, by forcing their way into his official residence at 10 Downing Street. In the same connection the revised registers of Employment Exchanges in the United Kingdom showed that on Nov. 4 there were approximately 1,722,800 persons wholly unemployed, as compared with 1,611,476 during the previous week. * * * An authority of forty years' standing on estate management declares that the recent turnover in the ownership of land in England has made its influence felt on glebe, or church land, especially in partly disposing of the vexed question of "ecclesiastical dilapidations." He estimates that from the first general return of glebes in the possession of parochial incumbents in 1887, when 9,500 livings reported 659,000 acres, some 326,300 have been sold, thus producing an income of £500,000 to the incumbents from first-class securities instead of land. The passage of ecclesiastical landed property into other hands is further marked by the announcement of the sale of 50,000 acres, of which by far the greater part has been purchased by the tenants.

BAVARIAN SEPARATISM

"Let him try! He will never get up there! The pole is too well greased!"

FINLAND

The relations between Finland and Soviet Russia, which have been tense for some time, reached a crisis in the last month, owing to the uprising of the Finnish population of Eastern Karelia, a province that was confirmed to Russia's possession and administration by the Finno-Russian Treaty, signed several months ago. The Finns denied all complicity with the new Government set up by the Karelians. [See Russia.] (The economic conference between all the Baltic States and Soviet Russia, held at Riga, is treated in the article on Latvia.)

FRANCE

Premier Briand, on his return to France from the Washington conference, received votes of confidence from both the Senate and the Chamber of Deputies on Dec. 6. In both houses he found a number of interpellations awaiting him on the results of the conference, so far as they affected France. The interpellations in the House were put off because of the continuance of the budget debate. Only a small group in the Senate insisted on a public statement. In replying, the Premier pointed out that as the Washington conference had not yet ended, it was inadvisable to speak freely at that time. He had told the conference and the American people of the danger in which France still stood, and to the full extent of his power he had denounced the pernicious propaganda which was being carried on against France. M. Briand also referred to Germany's reparation payments, regarding which he showed optimism. France, he said, was in a solid position; the sums fixed upon by the Reparation Commission must be paid, and the German Government had been notified to put its finances in such order that they would be paid. He ended with an elo-

quent plea for the continuance of the Entente. The effect of his speech was seen in the subsequent votes of confidence passed by both houses, the Senate approving his policy by 249 votes against 12, the Chamber by 460 against 100. In each case the vote was conditioned on the acceptance by the Premier of a subsequent wide debate on foreign policy, following the conclusion of the 1922 budget discussions and the adoption of the resolutions of the Washington conference. * * * By a large majority vote the Chamber favored the calling up of the 1922 class of the army in May and November. It was explained that this would introduce the new system of eighteen months' service by 1923. The Chamber of Deputies adopted unanimously on Dec. 9 the measure providing for the building of three light cruisers, six destroyers, twelve torpedo boats and twelve submarines, during the period from 1922 to 1925, the total expense being estimated at 755,000,000 francs.

GEORGIA

The situation in Georgia, occupied by the Bolsheviks several months ago, is depicted as distressing by the exiled leaders of the dispossessed Government. The various appeals to the outside world emanating from Benjamin Tchikbichari, former Mayor of Tiflis, from M. Noé Jordania, the former President, and from M. Tcheldze, President of the former Constituent Assembly, paint a sombre picture of famine, disease and oppression, of the stripping of the country by the Russian invaders, of wholesale imprisonments and executions. Their statements were confirmed by the story told by M. Louis Vernerey, a former member of the French Commercial Bureau in Russia, on his return to Paris in November. Executions by scores and hundreds were described by M. Vernerey, who escaped after three months' imprisonment. Many Georgians had fled before the Bolshevik invasion, he said. The sentiment of the remaining population was intensely hostile to the Soviet régime. He also stressed the wholesale requisitions of grain by the Bolsheviks, and the resulting distress among the people, already decimated by famine. * * * A dispatch from Constantinople to the Paris Temps, dated Nov. 18, described in detail the arrest by the Extraordinary Commission of a delegation of workmen which went to present a protest to the President of the Russian Revolutionary Committee, M. Mdivani, against the aggravation of the economic situation and the increased severity of the Soviet rule. They were imprisoned in the fortress of Metheki. The news of their arrest created a storm of resentment. All the workmen of Tiflis went out on strike and all public utilities were suspended. The students of Tiflis University joined the movement, to repress which the Bolshevik authorities made fully 2,000 arrests. The Russian press advocated that all those arrested and all persons convicted of opposing the Soviet rule be deported to Soviet Russia.

GERMANY

The final steps for the resumption of diplomatic relations with Germany were taken on Nov. 21, when the shields of the United States Consular offices were set up outside the buildings at Berlin, Munich, Hamburg, Frankfurt, Dresden, Leipzig, Stuttgart, Bremen, Coblenz, Cologne, Stettin, Breslau, Königsberg. Ellis Loring Dresel became Chargé d'Affaires at Berlin, Arthur Hugh Frazier at Vienna. The following are the United States Consuls at the more important points: William Coffin, Berlin; William Dawson, Munich; Hernando de Soto, Leipzig; John E. Kahl, Breslau; Louis G. Dreyfus, Dresden; Francis R. Stewart, Bremen; E. C. A. Reed, Stettin; J. K. Suddle, Hamburg. * * * Baron Edmund von Thermann, the son of a judge in Saxony, arrived at Washington on Nov. 21 to open the German Embassy, where he will become counselor after the Ambassador is named. He is 37 years of age.

During November and December, Hugo Stinnes, the leading financier and industrialist of Germany, and Dr. Walter Rathenau, former Minister of Reconstruction in the German Cabinet, were in consultation at London with the British member of the Reparation Commission and other British authorities, to discuss some new adjustment for Germany's reparation payments. Later, Louis Loucheur, the French Minister of Reconstruction, discussed the question with the Chancellor of the British Exchequer. As a result, it was announced that a meeting would be held between Premier Lloyd George and Premier

FALLING EXCHANGE VALUE

"Only they who have fallen themselves can realize what I now suffer"

Briand with a view to arriving at a definite decision with regard to the payments. These negotiations caused wide fluctuations in the value of the German paper mark, which at one time fell as low as 300 marks to the dollar, but rose, within a few days after the conferences, to 160 to the dollar, and was fluctuating around that figure at the time these pages went to press.

The Berlin correspondent of The New York Times cabled on Dec. 11 that after visiting every part of Germany and studying all the information derived from official investigations, he could report that Germany's disarmament, under the military terms of the Versailles Treaty, was 97 per cent. complete as regards artillery, and 93 per cent. complete as regards machine guns and rifles. Factories known to have been engaged in manufacturing war materials were industrially disarmed at that date to a degree of 90 per cent. Dr. Wirth, the German Chancellor, in a public statement made Dec. 10, categorically denied the charges made in France that Germany had not disarmed. He stated that all free corps in Germany were dissolved, that all large armament was destroyed or surrendered, and that for Germany to dream of attacking any one would now be insane folly.

The Federal Council passed a measure raising all postal telegraph and telephone rates 2,000

per cent. above pre-war rates. Railroad rates, freight and passenger rates also will be raised 2,000 per cent. to 3,000 per cent. above pre-war charges. The National Economic Council approved a bill enabling the Government to impose compulsory credit on all Germany's trades and industries for the purpose of enabling the Government to use the so-called compulsory credit association as a collateral against foreign loans.

GUATEMALA

A revolution in Guatemala, which threatens to break up the Central American Union recently formed by Guatemala, Honduras and Salvador, overthrew the Government of President Carlos Herrera in an early morning battle on Dec. 5. Twenty-five persons were killed, scores wounded, President Herrera and his Cabinet taken prisoners, and a provisional Government was proclaimed, with General Orellana as President. [Further details on page 615.]

HAITI

A special committee appointed by the United States Senate to investigate conditions in Haiti left Philadelphia on Nov. 24 for Port au Prince. Witnesses had previously been examined in Washington, among them General Eli K. Cole, who testified that under American occupation the Haitians enjoyed a peace and security never known before. In a given period of ten days there were fewer murders in Haiti than in the American State of Georgia, and it had never been necessary to detail marines to guard the mails. Martial law, General Cole said, would be necessary as long as American troops remained; the judiciary system was venal, and no white man could receive justice from the native courts. On the other hand, Max Zuckerman of Boston said that third-degree practices were inflicted on native prisoners, who were pelted with sandbags and lifted until their toes only touched the ground in order to wring from them information concerning bandits. P. M. Pilkington of New York, a technical expert, who spent two years in Haiti, described the torturing and eating of Private Lawrence and the killing and mutilation of Lieutenant Muth by bandits. The natives, he said, were in the main docile and amenable, and the higher classes were competent to conduct an independent Government. They objected to foreigners, fearing that the strangers would take control of the Government. Lack of security for foreign capital and failure of the United States to make the treaty effective were criticised by Mr. Pilkington.

HUNGARY

The crisis following the frustrated attempt of Charles Hapsburg to regain the Hungarian throne precipitated the resignation of Premier Count Bethlen and his Cabinet. However, pending the appointment of a new Ministry, the Bethlen Cabinet remained in office. After several weeks of uncertainty Count Bethlen obtained from the leaders of the National Assembly a

pledge of their support. This enabled him to remain at the helm. * * * Ex-King Charles and ex-Queen Zita arrived at their place of exile, Funchal, Madeira, on Nov. 19, on board the British cruiser Cardiff, accompanied by the Count and Countess Hunyadi. * * * At Budapest the idea prevailed that as the exile was enforced by Britain, the British Government should cover its costs. In consequence of the British refusal, the Hungarian Government has approached Austria and the three succession States with a request to contribute to the expenses, which amount to about \$50,000. * * * The Swiss Federal Government has granted permission to ex-Queen Zita to go to Switzerland for a limited period and attend the operation on her son Robert for appendicitis. * * * Thousands of posters and handbills demanding the election of Regent Horthy as King of Hungary have been distributed at Budapest by officers belonging to the military league known as the Move. * * * The National Assembly ratified the separate peace treaty between the United States and Hungary on Dec. 12.

ICELAND

Olafur Fridriksson, editor of the Bolshevik newspaper, Althyddubladid, in Reykjavik, returned from Russia, Nov. 18, with a fourteen-year-old Russian boy. The authorities refused to admit the boy because his eyes were inflamed with trachoma, a contagious disease not found in Iceland before. Fridriksson ensconced himself with the boy and fifty followers in a house and defeated the Reykjavik police in a hand-to-hand fight. Minister of Justice Jon Magnusson canceled a trip to Denmark to confer with the King, and called a Cabinet meeting on this case. Bolshevism is reported not strong outside of Reykjavik. Fridriksson had made much trouble in Denmark, where he was a prominent Bolshevik leader.

INDIA

The outstanding feature of the month in India was the visit of the Prince of Wales to the far-flung Asiatic empire of his royal father. The Prince's arrival at Bombay on Friday, Nov. 17, was marked by impressive ceremonies of welcome, on the one hand, and by serious riotings in the native quarter, due to the incitement of Mahatma Gandhi, leader of the "non-co-operationists," on the other. The Prince, dressed in naval uniform, landed at the still unfinished gate of India on the Apollo Bunder. He was received by the highest officials of the Bombay municipality, and replied felicitously to the memorandum of welcome which was presented to him. He then read a message from his royal father, addressed to the princes and people of India. A great procession was subsequently formed, with which the Prince proceeded through five miles of brilliantly decorated streets to Government House on Malabar Point. The large and cheering crowds, made up of every caste and color, gave no hint of what was going on behind the scenes, namely, in the native

quarter. Gandhi had arrived in Bombay that day and had declared a "hartal," or strike, and had harangued the people. Though no disturbance marred the procession, serious rioting began in that quarter as the procession was passing on its way, and these riotings continued that day and the next. It was later estimated that fully 20,000 natives participated in the disorders. Tramways were stoned and burned, the police were assaulted, police posts attacked, constables killed, liquor shops looted and burned, British and Parsee men and women, returning from welcoming the Prince, were insulted and assaulted. Bitter fights were precipitated between the rioters and the military police, and also with the Anglo-Indian and Parsee elements. A number of lives were lost. On hearing the news Gandhi covered his face with his hands, and wept, admitting his inability to control the masses stirred up to resistance by his words, and declaring that his agony during the days just past had been indescribable. The Prince left Bombay for Poona on Nov. 20. On Nov. 23 he received a magnificent welcome from the Gaekwar of Baroda. His full itinerary included many cities of India. * * * The trial of the two Ali brothers, Gandhi's chief lieutenants, was concluded on Nov. 2. They were acquitted of treason, but received a sentence of two years' imprisonment for speeches inciting "public mischief." Other non-co-operationists were arrested and the non-co-operationist organization was outlawed, but Gandhi himself was not interfered with.

[American Cartoon:]

—Rochester Democrat and Chronicle

A. D. 2,000

* * * The Moplah war in the Malabar district (Southeast India) was still going on in December. * * * The long-hoped-for treaty with Afghanistan was signed on Nov. 22. Its two main features were the exclusion of Bolshevik Consulates from the Afghan frontier and the omission of any mention of the subsidy which the Indian Government has paid the Afghans in the past. The clause excluding Bolshevik Consulates is a violation of the treaty already signed by the Amir with Soviet Russia.

IRELAND

A test of the British Government's Irish policy, as challenged by the opposition "die-hards," was made at the annual conference of the Unionist Party at Liverpool on Nov. 17, when a supporting amendment to a motion of want of confidence was carried by the overwhelming majority of 1,900 to 70. The triangular peace negotiations carried on in London between the British and Sinn Fein delegates and Premier Lloyd George and Ulster Premier Sir James Craig resulted in a memorable advance toward peace. Ulster, it is true, rejected all terms that were offered, but the Sinn Fein representatives came to a satisfactory agreement. Early in the morning a treaty was signed by which Southern Ireland was declared to be a Free State within the British Empire, on a Dominion basis. The treaty, which left Ulster outside its provisions to choose her own path, was subsequently denounced by Eamon de Valera as being "in violent conflict with the wishes of a majority of the Irish people." His action caused a breach among the Sinn Fein leaders. * * * Belfast was again the scene of riotous factional disorder, Nov. 20-26, during which period twenty-seven persons were killed and ninety-two wounded. The first important vote in the Ulster Lower House of Parliament took place on Dec. 1, when the Government accepted a majority vote of 20 to 11 on fixing ministerial salaries. [See article on Irish Free State.]

ITALY

The printers' strike in Rome ended on Nov. 14, after four days of more or less terrorism, in which six persons were killed and over 100 wounded. Regarding the various conflicts between the Communists and Fascisti the *Messaggero* sums up public opinion in these words: "A plague on both your houses." * * * The impending Russo-Italian treaty received a setback in its hitherto most favorable quarters when, on Nov. 15, the Executive Commission of the Moscow Third International denounced the recent Socialist Congress at Milan because it had failed to proscribe Turati and Serrati. * * * The Chamber opened on Nov. 24 with every appearance of a strengthened Bonomi Government. On the same day news came from Angora of a successful treaty concluded by Signor Tuozzi with the Government of Mustapha Kemal Pasha similar to the treaty negotiated with Dekir Samy Bey at London last

Spring, but unratified at Angora. * * * On Nov. 25, the centenary of Manzoni's "I Promessi Sposi" was observed at Lugano. * * * Demonstrations were made before the French Embassy at Rome and the French consulates at Turin, Naples and other places (Nov. 25-28) on the receipt of news from the Washington Conference that Premier Briand had insulted the Italian Army—an insult to which Signor Schanzer, head of the Italian delegation, had failed to reply. The incident was denied by competent authority at Washington. The source of the story was a dispatch sent by Pertinax, correspondent at Washington of the *Echo de Paris*, to The Daily Telegraph of London, saying that in the private sitting of the Land Disarmament Committee, on Nov. 24, M. Briand had said: "As to the great army reduction of which you [Signor Schanzer] boast, is it not a fact that it was not brought about by law, but carried out as a result of the moral disintegration of the army? Do not make a merit of necessity."

JAPAN

By an imperial rescript issued on Nov. 24, Crown Prince Hirohito was designated Regent of Japan to take the place of his father, Emperor Yoshihito, incapacitated by long-continued illness. The rescript read thus: "We are unable to attend in person to the affairs of State, on account of protracted illness, and accordingly appoint Crown Prince Hirohito Regent with the approval of the Council of Princes, the imperial family and the Privy Councillors." Simultaneously a bulletin was issued attributing the Emperor's mental state to an affliction of his infancy. The Crown Prince, who now assumes the ruling power of Japan, is only 20 years of age. Born in April, 1901, he was proclaimed heir apparent in 1912, when his father acceded to the throne, and he was formally consecrated Crown Prince in 1916. In May, 1920, the illness of the Emperor had already become so grave that he relinquished some of his functions to the Crown Prince, who received foreign diplomats at important State functions. In the Spring of 1921 the Emperor broke an ancient Japanese tradition by sending the Crown Prince on a visit to Europe. On his return to Tokio, after seven months' absence, Hirohito was welcomed with enthusiastic popular acclaim—this being as much of a break in Japanese tradition as the Prince's tour of Europe. He issued a message to the nation, in which he told of the hospitality and honor shown him by Europe, and expressed his belief that his trip would be helpful to Japan. * * * Though the Japanese Government, now headed by Premier Takahashi, maintained silence regarding the negotiations at the Washington conference, both the Japanese press and prominent business men were discussing throughout November and December the announced slash of naval armaments as an accomplished fact, though two new warships were launched—the Kaga on Nov. 18 and the destroyer Hachisu on Dec. 9. * * * Premier Takahashi on Nov. 8 reported a deficit of 30,000,000 yen for the present fiscal year.

JUGOSLAVIA

After trying in vain for a month to reorganize his Cabinet, Premier Pashitch acknowledged his failure on Dec. 9, and King Alexander designated former Premier Davidovitch, leader of the Democratic Party, to assume the task.

LATVIA

The economic conference between Finland, Esthonia, Latvia and Lithuania on the one hand, and the Soviet Government on the other, ended its long session at Riga, the capital of Latvia, in the first week of November. The basis for future agreements on transportation between these Baltic States and Russia was laid. It was also decided to establish at Riga a permanent economic bureau in which all the countries mentioned would be represented, whose duty it should be to study the financial problems which confront them all.

LITHUANIA

The long-protracted and bitter dispute between Lithuania and Poland over the Vilna territory was settled at last by the vote of the Polish Diet accepting the plan proposed by President Pilsudski on Nov. 16. The negotiations between the Lithuanian and Polish representatives at Brussels under the auspices of the League of Nations had failed anew, mainly because the Lithuanians insisted that any agreement must be preceded by the resignation of General Zeligowski, the irregular Polish commander, who many months ago seized Vilna and held it for Polish possession. The Polish President took up the matter personally, and elaborated a plan including the establishment of a Central Lithuanian State, the resignation of Zeligowski and the holding of elections in the disputed area. On encountering opposition by the "Annexationists" in the Diet, M. Pilsudski insisted that his resignation as Chief of State be accepted, and though he was persuaded to withdraw his resignation his uncompromising attitude did much to influence the favorable decision in the Diet, reached, it is true, only after an acrimonious and hostile debate. The Pilsudski plan in its broad lines follows the project favored by M. Paul Hymans, the representative of the League of Nations, whose proposals had been rejected at Brussels. The hostility of the Lithuanians to the League plan was evidenced by the attempt to assassinate the Lithuanian Premier, M. Galvanauskas, on Nov. 25. General Zeligowski withdrew from Vilna at the end of November, turning over the administration of the district to his provisional successor, Alexander Meysztowicz, a native of Vilna, a man of moderate views and of great local influence. Before leaving Vilna, General Zeligowski delivered a farewell address, in which he pointed out the great benefits of his rule. M. Meysztowicz in replying declared that the forthcoming elections would give the fullest expression to the national aspirations. The date set for the elections was Dec. 11. According to the census of 1919 the whole Vilna population numbered 732,000.

MESOPOTAMIA

On Nov. 18 the Council of the League of Nations, sitting in Paris, was formally notified of the conclusion of a treaty between the new monarchy of King Faisal [Iraq or Mesopotamia] and the British Empire. "Great Britain," said the document, "had been unable to resist the persistent solicitations on the part of the subjects of King Faisal for such a treaty."

MEXICO

General Obregon's first year as President of Mexico ended on Nov. 30 with rehabilitation in full swing. Peace reigns throughout the republic; public instruction is taking first place in the Government program under the new post of Secretary of Education; the railroads have been reorganized, port congestion is relieved and hundreds of thousands of acres of land have been expropriated from the large haciendas and given to the peasants. The army is being reduced to 50,000 men, and the soldiers are given opportunity to settle on reclaimed lands. President Obregon plans the construction of cheap homes for Mexico City workmen, to be sold on easy payments, and has enlisted the aid of General Goethals in the undertaking. * * * General Francisco R. Serrano was sworn in on Dec. 10 as Secretary of War, succeeding Enrique Estrada, who took the Agriculture portfolio, following the resignation of Antonia Villareal. * * * Spain, Holland, France, Great Britain and Italy, according to a dispatch from Mexico City, have accepted Mexico's invitation to appoint members of a mixed claims commission to assess damages to foreigners during the revolution. * * * The novel suggestion has been made to American oil men that they pay their taxes, now amounting to some 22,000,000 pesos, in Mexican Government bonds bought in New York, thus settling the tax question and reducing Mexico's debt at the same time. * * * A tax of 4 per cent. levied on one month's income to meet expenses incident to the Centennial celebration was very successful, yielding more than \$1,500,000, which covered the cost of the affair. * * * An event that shocked the religious sentiment of most Mexicans was the wrecking by a bomb on Nov. 14 of the famous shrine of the Virgin of Guadalupe, Mexico's patron saint, which was the most richly adorned shrine in Mexico, if not in the world, being covered with pearls, diamonds and all kinds of jewels. The greater part of the altar was overthrown. A vast "pilgrimage of atonement" from Mexico City took place on Nov. 19.

NEW ZEALAND

Administration of former German Samoa by New Zealand is under consideration at Washington, owing to the new law passed by the nominated legislative council set up there, which provides for an additional tariff on foreign imports over and above those from New Zealand itself. The treaty of 1899 dividing the Samoan group between Germany, the United States and

Great Britain barred preferential treatment in the islands for commerce and shipment of each of the three powers. As one-third of the imports into mandated Samoa in 1919 was of American origin, the result has led to protests against New Zealand's action.

NICARAGUA

Sporadic outbreaks on the Honduran frontier of Nicaragua continued during November, the most important of which was an attack by revolutionaries on the town of Samotillo on the morning of Nov. 11, which was repulsed after an hour of hard fighting. * * * On Dec. 5 the Nicaraguan Government received a large consignment of arms and ammunition from the United States, bought to replace the very antiquated military equipment Nicaragua possessed. * * * A serious clash between American marines and civilians in Managua, similar to that of some months ago, occurred on Dec. 10. In breaking up the fight four policemen were killed and one wounded and two of the marines were wounded.

NORWAY

Norway's refusal to recognize the extension of Denmark's sovereignty to the whole of Greenland is causing considerable tension, because the shutting out of Norway's traditional hunting rights there would entail a loss of millions a year in whale, seal, walrus, polar bear, musk-oxen, bottlenose whale and white and blue foxes. * * * The Nobel Peace Prize for 1921 was awarded to Premier Hjalmar Branting of Sweden and Christian L. Lange of Norway, Secretary of the Interparliamentary Union, at a representative assembly in Christiania on Dec. 10 in the presence of the Norwegian King and Cabinet. Premier Branting was not present, being represented by the Swedish Minister to Norway. The prize was presented by Councilor of State Loveland. * * * Great indignation was created in Norwegian labor circles by a demand from the executive of the Third International for the expulsion of seventy Norwegian trade union leaders, who, at the last labor congress in Christiania, voted against adherence to the Red International or for postponement of a decision. A Norwegian trade union delegation went to Moscow to try to settle the conflict. * * * The matriculation of Crown Prince Olaf as a student at the University of Christiania was made the occasion of an impressive ceremony in which the King and several Cabinet officers participated. * * * Dr. Fridtjof Nansen, head of the International Commission for Relief in Russia, was received by the Pope in November and thanked the Pontiff for his gift of 500,000 lire for use in the famine districts. Dr. Nansen explained its intended use in a plan to relieve the Russian children. * * * The Norsk Hydro-Elektrisk Kvaelfstofaktieselskab recently made the first offer from a foreign industrial corporation in the American market since the armistice, except French railroad securities. This Norwegian firm for manufacturing nitrates

by hydro-electricity offered an issue of 50,000,000 kroner fifty-year first mortgage 7 per cent. bonds. Organized in 1905, the company operates the largest hydro-electric plant in Norway under permanent Government grants.

PANAMA

A boycott has been instituted in Panama against West Indian labor and the unemployed are flocking back to the cities of Panama and Colon, where soup kitchens have been set up. The Panama Federation of Labor on Nov. 18 appointed a committee to negotiate with Great Britain for the return home of the islanders.

PERU

Congress has passed a bill authorizing the Executive to contract a foreign loan of £700,000, giving as guarantee the oil export tax. * * * An English company has secured a concession for the construction of 1,500 miles of railroad, for which the necessary capital is being raised in London and other European places. * * * The merchandise left in customs warehouses is at present less than in former months. The pending collections are about \$5,000,000, but most of this sum is represented by goods already in the hands of the consignees.

POLAND

Diplomatic relations between Poland and Soviet Russia continue to be marked by respective charges and countercharges of support of hostile propaganda. The Warsaw Government on Nov. 2, in reply to a Soviet note received at the end of October, denied emphatically all complicity in the recent Ukrainian uprisings of which the Soviet complained, and charged that the Soviet was supporting armed invasions of the Polish frontier. * * * Poland on Nov. 8 sent a new note to Moscow, demanding that the terms of the Riga treaty be finally carried out. * * * Drastic anti-Communist legislation passed its first reading by the Sejm (Parliament) on Nov. 27. Every attempt against the Government under this new bill is to be punished by death; every preparation for such attempts by imprisonment for twenty years. * * * The Vilna controversy was finally settled on Nov. 16, when the Assembly adopted Premier Pilsudski's plan providing for the resignation of General Zeligowski and the incorporation of Vilna into a Middle Lithuanian State. Early in November M. Pilsudski handed in his resignation owing to opposition to this measure among the annexationist advocates in the Diet, and withdrew it only after earnest persuasions. [See Lithuania.] * * * Mr. Plucinski, the Polish diplomatic representative at Danzig, stated on Nov. 4 that the agreement signed Oct. 25 between Poland and the Free City of Danzig was being harmoniously and successfully applied. Goods between Poland and Danzig were circulating freely back and forth under a common customs régime. * * * It was announced from Katowice, Upper Silesia, on

Nov. 11, that local German papers were printing appeals to the German residents urging them to remain in the districts assigned to Poland by the League of Nations, supporting these appeals by quotations from the Polish Constitution guaranteeing the rights of minorities. The city officials had decided to retain their positions. The German Judges and judicial officials of Polish districts had been asked by the Polish Minister of Justice to apply to be retained in Polish service. * * * A treaty between Poland and Czechoslovakia was signed at Prague, Czechoslovakia, on Nov. 7. Each of the two nations guaranteed benevolent neutrality in case the other was attacked; Poland promised to refrain from interference in the case of Slovakia, and Czechoslovakia made a similar pledge in the case of Galicia, now administered by Poland.

PORTO RICO

Representatives of the Unionist Party, headed by the President of the Senate, Mr. Antonio R. Barcelo, arrived in Washington on Dec. 1 to demand the removal of the Governor of Porto Rico, E. Mont Relly. Mr. Relly had already reached Washington to consult President Harding and Secretary Weeks. [See details on Page 615.] Both Mr. Harding and Mr. Weeks were reported to be averse to considering the charges against Governor Relly unless they were submitted in official form by the Porto Rican Legislature.

PORTUGAL

Ex-Emperor Charles of Hapsburg and his consort arrived at Funchal, Madeira, Nov. 19, on board the British cruiser Cardiff. They took up their residence at the Villa Victoria, an annex of Reid's Palace Hotel, on the cliff to the west of the town, and the next day attended mass at the Cathedral. The British Government having declined to pay any part of the Hapsburg's expenses at Madeira, the Council of Ambassadors has set his budget at \$50,000 and is trying to get the other allied and associated nations to pledge that amount.

RUMANIA

On Dec. 10, with a view to consolidating the Rumanian national debt, the holders of all bonds, all over the world, were requested to send in full information as to their holdings within thirty days from that date.

RUSSIA

Soviet Russia celebrated the fourth year of its existence with appropriate ceremonies on Nov. 7, 1921. * * * The Government continued its energetic campaign for staff and budget economy. Ration cards were abolished generally from Nov. 10. The Finance Committee adopted in November the pre-war gold ruble as the standard for future budgets and a system was devised to adjust this standard with the paper

ruble in an attempt to equalize Government salaries. * * * The new State Bank was opened in Moscow on Nov. 18. Exactly four years before (Nov. 18, 1918), the Bolsheviks had nationalized all Russian banks. The payment of interest on accounts, and the decision to make loans to corporations and individuals, marked a forward step to the new system of limited capitalism. * * * The Soviet Government was confronted through November and the first weeks of December with an Ukrainian uprising. Pitched battles were fought near Kiev. * * * Another uprising broke out at the beginning of November in Eastern Karelia, a region mainly populated by Finns, which was left under Russian administration by the terms of the Finno-Russian treaty. The Karelians set up and maintained through November an independent Government. A sharp note was sent by M. Tchitcherin to Finland on Dec. 5, demanding that the Finnish Government expel all Karelian plotters from its territory. * * * Foreign relations continued to be unsatisfactory. Lord Curzon on Nov. 15 replied to the Soviet note of Sept. 26 with a categorical denial that the British charges of anti-British propaganda in Persia, Afghanistan and Central Asia were based on forgeries, as Tchitcherin had declared. * * * The Soviet Government's offer (Oct. 20) to recognize the former Russian debt under certain conditions made little headway. France on Nov. 9 sent a note to the British Government repeating her firm refusal to have any dealings with the Moscow Government until it ceased its attempts at foreign propaganda. * * * Marquis della Torretta, the Italian Foreign Minister, announced in the Italian Chamber on Dec. 5 that the proposed Italo-Russian trade agreement had failed because of the Soviet representatives' refusal to include pledges to refrain from propaganda and their insistence on the injection of political clauses.

SPAIN

The conflict continued between the military juntas at Madrid and the commanders in the field in Morocco, the latter objecting to occupation of positions on the new General Staff by members of the juntas. In retaliation, the juntas attempted to usurp power by creating a Committee of Defense. On Nov. 22 General Sanjurjo occupied the position of Rasmedura, the last refuge of the Moors in the Melilla zone. The release of the Spanish prisoners captured in July continued. General Berenguer, the High Commissioner of Spanish Morocco, arrived in Madrid on Dec. 1 and began to consult with the War Ministry.

SWEDEN

Premier and Foreign Minister Hjalmar Branting received at Stockholm Nov. 17 a note from Soviet Foreign Minister Tchitcherin, through the Soviet trade representative, Kerzentseff, refusing to recognize the recent Geneva agreement (signed by ten powers Oct. 22) establishing the neutrality of the Aland Islands. The Aland

[English Cartoon]

—Whitehall Gazette, London

WHERE MARXISM IS SUPREME

question, wrote Tchitcherin, cannot be settled without consulting Russia, and Sweden's signature to this agreement is regarded as a hostile act, in violation of reciprocal agreements between Sweden and the Soviet. The unconscious jest in this message seemed changed to earnest on Dec. 7 by Tchitcherin's sharp, peremptory note to the Finnish Government demanding the liquidation of all Karelian insurgent organizations, the cessation of Finnish financial, military and moral support of "the muntineers" and expulsion from Finland of all Russian counter-revolutionists. Tchitcherin declared Finland's proposal on Dec. 1 to submit the Karelian question to the League of Nations an unfriendly act against Russian sovereignty. The reported dispatch of 15,000 picked Red troops to Petrozavodsk against the Karelian adventure was taken as indicating a determination to bring all Russo-Finnish disputes, including the Aland settlement, to an issue. * * * The Swedish Academy awarded the Nobel Prize for Chemistry for 1920 to Professor Walther Nernst of Berlin, inventor of poison gas and one of the signers of

the professorial manifesto of 1914 justifying the violation of Belgium. The Literary Prize for 1921 was bestowed on the French author, Anatole France. * * * Prince William of Sweden Nov. 18 wrote for The London Times an account of his recent Central African expedition, in which he collected for the National Museum at Stockholm about 1,000 mammals, 2,000 birds and between 5,000 and 6,000 insects. * * * Christine Nilsson, the operatic soprano, famous as the second Swedish nightingale, died Nov. 22 in Copenhagen at the age of 78.

TURKEY

The French evacuation of Cilicia began on Nov. 28, in accordance with the terms of the French-Angora Treaty. At once came news from Armenian and Greek sources of renewed atrocities on the part of the Turks, and news from Angora that the Nationalists expected to recruit 50,000 men from the evacuated region and replenish their munitions from the "dumps" abandoned by the French. Several notes were exchanged between Downing Street and the Quai d'Orsay in regard to the treaty, while its ratification hung fire in the French Senate. * * * On Nov. 28 Sir Adam Block, chief Administrator of the Ottoman Public Debt, made his annual report showing that the net receipts for the last fiscal year had increased about \$9,000,000 over the previous year.

UNITED STATES

The chief interest in this country centred about the Disarmament Conference, which is treated in full elsewhere in these pages. Other matters of moment will be found recorded in the article entitled "The Month in the United States."

WEST INDIES (BRITISH)

The citizens of Kingston, Jamaica, have asked the home Government to transfer to Jamaica the body of an unknown Jamaican soldier for burial at the foot of a cenotaph erected in the public square of the city. * * * The Jamaican Government has authorized the expenditure of \$700,000 on a fifteen-mile extension of the Government railroad beyond Chapeltown, adding to the branch line feeding the main road, which crosses the island from Kingston on the southeast to Montego Bay on the northwest.

REPORT OF THE PHILIPPINE COMMISSION

Full text of the official report of General Wood and Governor Forbes regarding immediate independence for the people of the Philippine Islands—A careful study of conditions, resulting in a negative verdict

PRESIDENT WILSON'S message to Congress on Dec. 7, 1920, called attention to the fact that the people of the Philippine Islands had "fulfilled the condition set by Congress precedent to a consideration of granting independence to the islands," and added: "It is now our liberty and our duty to keep our promise to the people of those islands by granting them the independence which they so honorably covet." Because of conflicting evidence on the existing conditions in the islands, Congress failed to act on the recommendation. President Harding, with a view to getting more decisive evidence on one side or the other, wrote a letter to the Secretary of War on March 20, 1921, in which he recited the foregoing facts and continued: "I have, therefore, selected General Leonard Wood and W. Cameron Forbes to go to the Philippine Islands and to make there a study of the situation and to report thereon, in order that I may have a judgment on which I can base my action and my recommendations with a consciousness that I am dealing justly with the Philippine people and pursuing a policy which the American people will sanction and support." Secretary Weeks wrote to General Wood two days later, outlining the nature of his undertaking, and stating the crux of the problem in these words:

It is asserted with positiveness by persons who have had every reasonable opportunity to know the conditions whereof they speak that the Philippine Government is now in a position to warrant its total separation from the United States Government and that the Philippine people are in a position to continue to operate the Philippine Government without aid of any kind from the United States and that the Government so conducted would be one in which the American people could take pride because of the assistance heretofore given it.

All of this is quite as positively denied by other persons having similar opportunities to

study the situation and to know the exact conditions existing in the Philippine Islands.

Between these conflicting views you are to render judgment.

The decision of the question thus arising is of momentous importance, involving, as it may, the very life of the Philippine people as a people and the reputation and credit of our own country. * * * Certainly it would be a vain thing to turn the Philippine Islands over to the Philippine people without reasonable assurance that the resources of the islands would remain the heritage of the people of the islands. The pleasing of the Filipinos of this generation would be a minor satisfaction if it were believed that it would result in the bondage or destruction of the Philippine people for all time hereafter.

The report of the special commission thus created has now been made public, and because of its exhaustiveness and its importance it is presented in its entirety by CURRENT HISTORY. The final judgment of the investigators is that the time has not yet come for granting independence—that "it would be a betrayal of the Philippine people, a misfortune to the American people, a distinct step backward in the path of progress, and a discreditable neglect of our national duty were we to withdraw from the islands" at the present stage of their development toward stable self-government. Since the report was written General Wood has become Governor General of the Philippines, having assumed that office on Oct. 15, 1921. Mr. Forbes, the other member of the mission, was Governor General from 1909 to 1913. The complete personnel of the commission, whose report is here presented, was:

MAJ. GEN. LEONARD WOOD, Chairman.
HON. W. CAMERON FORBES.

ATTACHED

Colonel FRANK R. MCCOY, Chief of Staff.
RAY ATHERTON, Department of State.
Lieut. Col. GORDON JOHNSTON.
Major EDWARD BOWDITCH JR.
Lieut. Commander STEWART F. BRYANT.

Professor H. OTLEY BEYER, University of the Philippines.

Major ROBERT C. CANDEE, Aide-de-camp.

First Lieutenant OSBORNE C. WOOD, Aide-de-camp.

TEXT OF THE REPORT

The full text of the official report of this "Special Mission of Investigation to the Philippine Islands"—with the exception of the preliminary correspondence already summarized—is as follows:

The special mission, as above constituted, arrived in Manila on May 4, 1921. Attached to and assisting the mission was a representative of the State Department, Secretary of the Legation in Peking, who had also served for some years in the embassy in Japan and is generally familiar with international affairs in the Orient; a staff officer of the Admiral commanding the Asiatic Fleet, who had served some years in the Orient; and Spanish-speaking officers of the army experienced in Cuban, Philippine and foreign affairs generally, three of whom had had prior and long service in the islands, both in civil and military establishments, in executive and administrative work and as members of legislative councils. Two of these officers had also accompanied the Harbord mission to the Near East.

During the travels of the mission throughout the islands it was accompanied by an experienced correspondent of The Associated Press, a special correspondent of one of the leading American dailies committed to giving independence to the Philippine people; and, as the representative of the Philippine press, one of the editors of the leading Manila journals, who, during the insurrection against Spain and the United States, had been an officer in Aguinaldo's army.

The attached members of the mission and the correspondents represented a wide variety of opinions.

From the moment of its arrival in Manila, the mission received every assistance from the Acting Governor General, the commanding General, the Admiral, and their staffs; also from Americans throughout the islands; and from the Philippine people and their political leaders generally, many of whom gave the benefit of advice and suggestion in the most cordial and friendly spirit. Their assistance has been coupled with a sincere and charming hospitality which continued to the last moment of the mission's stay.

During these four months in the islands the routine of the mission consisted of periods of about a week in Manila, during which conferences were held with officials of the Central Government, with representative Americans, Filipinos, and foreigners of every walk of life. Investigations were undertaken looking to a thorough analysis of the Government and its activities, followed by periods of from two to four weeks of investigation in the provinces. During these trips forty-eight of the forty-nine

provinces into which the islands are divided were visited. The mission has aggregated eleven weeks of travel by sea, auto, horse and rail, and has held conferences in 449 cities and towns. All parts of the archipelago were visited, and your mission feels it has placed itself in intimate touch with the great mass of the Philippine people—Christian, Moro and pagan—and with practically all Americans and foreigners domiciled and doing business in the principal cities and towns of the islands.

Too often there has been a marked disinclination on the part of individuals, especially Filipinos not in sympathy with immediate or absolute independence, to state their opinion openly, for the reason that they feared loss of standing or persecution if they did so. Their fears were very genuine and, unhappily, there is evidence that their apprehensions were well grounded.

When practicable, important administrative investigations were made, with the knowledge and assistance of the Acting Governor General and his assistants. The mission and its attached members, however, personally visited administrative and judicial offices, the courts (including Justices of the Peace), schools, hospitals, jails, and other public institutions throughout the islands, and feel they have completed a thorough and careful survey of the Government, the people and their institutions. As a result, it has been able to form definite conclusions on the general subjects and upon the conduct of the Government.

The date of the arrival of the mission at the various towns and cities was made known well in advance, in order that there might be ample time for the preparation of petitions, memorials, and addresses. Almost without exception, the officials and people of the regions visited paid great attention to the reception of the mission. The roads and streets were decorated with arches, generally bearing the word "Welcome," followed by a statement that the people desired their independence.

The public assemblies to greet the mission and present addresses and memorials were usually of a size which indicated a keen interest in the question of independence. The people were attentive and quiet, but there was a lack, due in part to racial reserve, of that exuberant enthusiasm which so often marks the public discussion of questions of national import.

The proportion of speakers representing business and agriculture was relatively small. The majority were from the younger generation.

HISTORICAL SKETCH

In considering the question of granting independence to the Philippine Islands, it is of interest to note that they have always been a dependent group under the influence of a stronger power. It is appropriate to review briefly their history. Previous to 1400 the islands had been subject to Hindu-Malayan empires in Sumatra, Indo-China, and Borneo; at that date they ceased to form an integral part of the Javanese Majapahit Empire.

Shortly after 1400 Mohammedanism was introduced, but politically the islands were subject

to China during the reign of the ambitious Ming Emperors.

The first Europeans who visited the Philippines were Portuguese, about 1517, and Spaniards, in 1521. The century preceding the European discovery had been one of the most eventful periods in the history of the islands. In addition to the Chinese attempt at political as well as commercial domination, the Japanese entered the islands in the north and the Mohammedans of Brunei (Borneo) in the south. At the time the first permanent European colony under Spain was established, in 1565, all of the islands as far north as Manila were subject to Borneo and, it is said, paid tribute equal to about 1½ liters of gold per annum. While the Japanese and Chinese were also settled in Manila, the strongest Japanese influence was in the North of Luzon, from which they were driven by the Spaniards in 1582, with the conquest of their fortified trading stronghold in the Cagayan Valley.

The chief cause of Japanese interest in the islands was their search for rare pottery, gold and pearls.

The first permanent Spanish colony was founded in Cebu in 1565, and Manila was conquered in 1570. Spanish records state that in 1600 there were some 25,000 Chinese and 1,500 Japanese in Manila alone, but of these 2,300 Chinese were massacred in the year 1603 by the Spaniards, fearful of their numbers. There were three subsequent massacres of Chinese by the Spaniards for the same reason. During the next two decades the coastal regions of almost the entire archipelago were brought under Spanish control.

The Spanish Government of the Philippines was placed under the Viceroy of New Spain (Mexico) and all communications were through him. A Captain General was at the same time military commander and head of the Civil Government. The main purpose of the Spaniards in the Philippines was the search for treasure, commerce and the spread of Christianity; but they soon discovered that the amount of treasure obtainable in the islands was limited, and, although a constant expense to both the Governments of New Spain and Spain, they were retained to spread the Christian religion.

In 1592 the Shogun Hideyoshi of Japan demanded that the Spanish Government of the Philippine Islands pay annual tribute and acknowledge the sovereignty of Japan. The Spanish Government was loath to do this, but due to shortage of men and ships and lack of support from New Spain, was forced to acquiesce to the extent of paying tribute, which was actually paid on several occasions during a period of from fifteen to twenty years.

Spanish control continued in the Philippines until 1898, although the Portuguese, Dutch and British tried at various times to overthrow the Spanish power. All these efforts were unsuccessful, though the British captured Manila and ruled it for three years under Alexander Dalrymple, in the middle of the eighteenth century.

From these various partial conquests of the Philippine Islands there remains today a strong

influence on the native customs, language and religion—the Mohammedan religion, from Indian and Arabic sources, a dominant Chinese influence in commerce and trade, Christianity, Roman law, and many features of Occidental civilization from Spanish sources.

American control in the Philippines began during the war with Spain, but was not firmly established until 1900.

Racially, the mass of the Philippine population is of Malayan stock, though other types are to be found, especially among the 10 per cent. of non-Christians. Chinese and Spanish race mixtures are common among the wealthy and better educated classes, this mixture seeming to strengthen the native stock. The inhabitants of Borneo, Sumatra, Java, Formosa, and, to some measure, Indo-China (the Malay groups), are racially the most nearly related to the Filipinos.

Whatever may be said of Spain's methods (and too much is said without knowledge), the fact remains that she implanted the Christian religion and European ideas and methods of administration in these islands and laid the foundations which have been of far-reaching value in our work here. From a number of warring tribes, Spain succeeded in welding the Philippine people into a fairly homogeneous group, sufficiently allied in blood and physical characteristics to be capable of becoming a people with distinctive and uniform characteristics.

Spain did not, however, seriously undertake to give them a common language, and although most of the more progressive and intelligent people managed to learn Spanish, no effective effort was made to make it a common language for the different groups, who continue to this day speaking many distinct dialects. There are eight languages in the islands, each of which is used by not less than 500,000 people, and some seventy-odd more which are used by smaller groups. Some differences between these dialects are slight enough, so that people using different ones can make themselves understood, but many are so radically different that they are mutually unintelligible.

UNDER AMERICAN RULE

The United States obtained possession of the islands by conquest in 1898. The islands were formally transferred to the United States by Spain in the Treaty of Paris.

Almost immediately President McKinley announced that the Philippine Islands were not to be exploited for the aggrandizement of the American people:

"The Philippines are ours not to exploit, but to develop, to civilize, to educate, to train in the science of self-government. This is the path which we must follow or be recreant to a mighty trust committed to us."

The twenty-three years of American occupation may be divided into the following four distinct periods:

First, the military period, from Aug. 13, 1898, to July 1, 1901. During this period the islands were under a military Governor, and the insurrection against the United States, headed by

General Aguinaldo, was being suppressed. United States troops went to the Philippines in large numbers, and the first problem confronting the Government was the establishment of public order.

In spite of the continuance of military operations, substantial beginnings were made in the establishment and maintenance of a Civil Government; particularly in establishing respect for the authority of the United States; in the opening of schools, in which the first teachers were noncommissioned officers of the army; in the establishment of the judiciary, and also in the matter of public health and public works. Organization Order No. 58 of 1900 of General Otis laid broad and secure foundations for the establishment of civil government.

Second, the organization period, from July 1, 1901, to Oct. 16, 1907, in which the sole legislative body of the islands was the Philippine Commission, appointed by the President of the United States. In this period much constructive work was done—the creation of a working Government was undertaken, a public school system organized, 5,000 schools were opened with 7,671 teachers and an enrolment of 400,000 children, about one-fifth of the children of school age in the Philippine Islands; a census taken, the judicial system organized and the procedure adopted, a currency system established, public works started on a systematic basis, health service reorganized and put in more effective condition, and in general the structure of Government built on secure foundations. Governors Taft and Wright, members of the original commission, were the Governors responsible for most of this work.

Third, the constructive period, from 1907 to 1913. In this period one-half the legislative powers, namely, the lower house, were turned over to a body of elected Filipinos, known as

the Philippine Assembly, the commission becoming the upper house, or Senate. This, with the proviso that in case of disagreement between the two bodies as to appropriations the previous appropriation bill should carry over. On three occasions the two houses failed to agree on the appropriation bill and the previous bill was carried over without any great injury accruing to the public service. During this period a broad and practical public works program was laid down and carried out, involving the construction of roads, bridges, port improvements, irrigation works, schoolhouses, markets and other public buildings. Artesian wells were driven. Practical and effective negotiations were entered into for the financing and construction of railroads and for encouraging inter-island transportation. Steamship subsidies were established, and a large number of lighthouses were built. A comprehensive cadastral survey of the islands was undertaken, and many other constructive enterprises, which met with the cordial appreciation of the Philippine people. In this period the University of the Philippines was founded, also many professional schools, and the policy of the general extension of education was continued.

Throughout these three periods the policy was established and followed of utilizing Filipinos in the Government, on the general principle of putting them in the less responsible positions—which was proper, as they had little experience—and carefully training them for promotion and working them up as rapidly as their efficiency and training proved, through protracted periods, justified. At the end of this period the proportion of Filipinos in the service was 72 per cent., as against 28 per cent. Americans.

Fourth, the period of Filipinization, 1914 to 1921. The first step taken by the new administration was to give the Filipinos a majority of the commission, or upper house. The second was the passage of what is now the fundamental law of the islands, known as the Jones bill, Sixty-fourth Congress, Act. 240, approved August, 1916. Under it the Christian and civilized provinces were permitted to elect a Senate and a House, and the Governor General authorized to appoint representatives for the non-Christian portions of the islands, the Legislature having legislative control over the whole archipelago. During this period the administration deliberately adopted the policy of getting rid of most of the Americans in the service, competent and otherwise, and made the service so unattractive that very few remained, until at this writing the percentage of Americans in the service is only 4 per cent., 96 per cent. being Filipinos. The orderly process of promotion of proved efficiency from the less important positions was changed to a hurried Filipinization, placing Filipinos in nearly all of the higher positions. Many, including some of those selected for Judges, were chosen apparently without due reference to their training or experience.

Great emphasis was laid during this period, particularly toward the end, on the extension of education, many new schools of all grades

SKETCH MAP OF THE PHILIPPINE ISLANDS

being established and the enrolment in the public schools being brought up to the present high figure of 945,000, or double what it had been at the beginning of the period, more children of school age finding an opportunity to go to school than ever before. There are also about 75,000 children in standard private schools, or a total of over 1,020,000 in school.

Further progress was made in public works, particularly public buildings, extensive boring of artesian wells, construction of new hospitals, &c.

The period was marked, however, by a deterioration in the quality of public service by the creation of top-heavy personnel, the too frequent placing of influence above efficiency, by the beginning of a political bureaucracy. In this period, taxation and expenditures were very greatly increased.

THE PHILIPPINE PEOPLE

The Philippine people possess many fine and attractive qualities—dignity and self-respect, as shown by deportment, complete absence of beggars, personal neatness and cleanliness, courtesy and consideration to strangers and guests, boundless hospitality, willingness to do favors for those with whom they come in contact, which amounts almost to inability to say "No" to a friend. They are happy and care-free to an extent seldom found among other peoples, keen to own their land, strongly attached to their homes and their children, proud of and devoted to their beloved Philippines; they are free from worries arising from international difficulties and responsibilities, they are refined in manner, filled with racial pride, light-hearted and inclined to be improvident, as are all people who live in lands where nature does so much and people require so little. In many positions they have shown marked capacity and have done better than could reasonably be expected of an inexperienced and untried people. There are many holding high positions in the judicial, executive and educational departments who would be a credit to any Government. They are proud, as they well may be, of the advance they have made since the beginning of American control of the islands, for it can be safely stated that no people, under the friendly tutelage of another, have made so great a progress in so short a time; for twenty-three years is but a brief time in the development of a people.

They possess active minds, their children are bright and precocious and learn rapidly. The whole people have a consuming thirst for education, and, as is common among those who have had little opportunity and much hard work, there is a leaning toward the learned professions or occupations which do not involve severe manual labor, and a tendency to underestimate the importance of agriculture and the dignity of labor, and to overestimate the standing given by the learned professions.

Their support and aid in the building up of public education are beyond praise. They have sacrificed much that their children might be able to go to school, and the interests of an

entire family are often subordinated to sending the selected member to a higher school or university. Schoolhouses are often constructed by voluntary contributions of labor, money and material.

There is a serious lack of educated public opinion, for as yet the Philippine public is not a reading public, and there is a lack of a strong, independent press, although there has been a great advance in this respect during recent years, and there are several outstanding independent papers of great local influence. The daily total circulation of all island papers is a little less than 140,000, and in the remote provinces people still depend largely upon the circulation of news by word of mouth.

The Philippine people are readily led by those who understand them. They make brave soldiers, and under good leaders make excellent troops. Due to the lack of a well-informed public opinion they are easily swayed by their leaders.

As a result of generations of disregard for sanitary measures, they are still rather Oriental in their attitude toward disease and questions of public health and sanitation. This indifference is being rapidly corrected.

The Philippine woman is a strong and dominating influence in every home and community; she is modest, loyal and hard working, and while not much in evidence she is nevertheless always to be reckoned with. She is the strong conservative influence which keeps together the home, saves the money, and is the foundation of the success of many families. The establishment of large numbers of women's clubs, that concern themselves with hygiene and other

W. CAMERON FORBES

Former Governor General of the Philippines and member of Special Commission to the islands

civic matters, is a most encouraging sign of the times.

The mass of the Philippine people are and always have been agriculturists or fishermen. They have not in the past been active in commerce, except in small stores principally run

the building up of a common tongue with the resulting spirit of solidarity.

They possess marked ability in many fields of effort, an ability which is not as apparent as it would have been had not all the intricacies of a highly organized representative form of government been imposed upon them with too great rapidity.

The Philippine people represent the most advanced experiment in the establishment of representative government in the East, and in our endeavor to establish it, complete in all its details, we have in many instances, by the rapidity of our procedure, overtaxed the ability of the people to absorb, digest and make efficient practical use of what it has taken other nations generations to absorb and apply, and in our critical impatience we forget the centuries of struggle through which our own race passed before it attained well-balanced government.

PRESENT CONDITIONS

There has been a progressive transfer of government to the people of the islands, and at the present time it is very largely in their hands. So extensive has been the transfer that many fail to realize that there still continues in the islands a decisive American control that assures the maintenance of an orderly government, secure against disturbing influences from within and without.

In view of the difficult situation which existed after the insurrection, the difference in language, customs and in conceptions of citizenship obligation, the progress which has been made in the twenty-three years of

American occupation is extraordinary. It is a high tribute to Americans and Filipinos alike. The animosities have disappeared and there remains a spirit of confidence and friendliness for the American people throughout the archipelago. Much has been done, but much remains to be done.

While there has been retrogression in the efficiency of most departments of the Government during the past few years, we do not feel that the responsibility for this rests solely upon the Filipinos or that they should be unduly blamed for such failures as have occurred, as the ultimate responsibility for the selection of responsible officers and for the exercise of proper supervision was in the hands of the American Governor General, whose duty it was to exercise due care to appoint competent men at the heads of departments and bureaus, and, above all, to exercise proper supervision over them.

A reversal of policy is not needed now, but time for the Filipinos, under careful but friendly supervision, to absorb and master what is already in their hands. We must remember that the good qualities of the people, their enthusiasm

GENERAL LEONARD WOOD

Newly appointed Governor General of the Philippine Islands

by the women, although at the present time they are taking a constantly increasing part in the commercial affairs of the islands.

They have, however, a long road to travel before the bulk of the business done in the islands is in their hands, as most of the retail stores, the import and export business, financial institutions and corporations are in the hands of Americans and foreigners, especially Chinese.

In many sections the heads of the old families, who were almost feudal in the extent and method of control, still exercise a dominant influence and are able to impose their will upon the people. Happily, as education progresses, this condition is steadily lessening.

The people are mostly Roman Catholic, with predominant Mohammedan groups in the southern islands, and various pagan groups, especially in Luzon, Mindanao and Palawan.

They are naturally an orderly and law-abiding people.

The numerous languages and dialects, the separation of the people into groups living on the islands, the lack of a press of wide circulation, printed in a common language, have delayed

and their determination cannot take the place of experience.

We must build up an informed public opinion, a stronger spirit of civic responsibility and a better appreciation of the obligations of citizenship. In this the island press has a vitally important part to play. The task of building up a truly representative form of government is made much easier by the fact that the great bulk of the people are Christians, that they are free from caste distinctions, that although Oriental in blood and birth they are essentially Western in religion, form of government and in ideals and aspirations, and that their true sympathies and affiliations lie with the great Christian nations.

The influence of our efforts to establish representative self-government in the Philippines extends far beyond the Philippines. It reaches every part of the Orient where free institutions and representative government are the dream of the people.

The great bulk of the Christian Filipinos have a very natural desire for independence; most of them desire independence under the protection of the United States; a very small percentage desire immediate independence with separation from the United States; a very substantial element is opposed to independence, especially at this time. The Moros are a unit against independence and are united for continuance of American control, and, in case of separation of the Philippines from the United States, desire their portion of the islands to be retained as American territory under American control. The pagans and non-Christians, constituting about 10 per cent. of the population, are for continued American control. They want peace and security. These the Americans have given them.

The Americans in the islands are practically a unit for the continuance of American control.

The people, as a whole, are appreciative of the peace and order which prevail throughout the islands. Many do not understand what independence means, or its responsibilities. They are living under the best conditions they have ever known. It is not generally realized that the American Government cannot be expected to assume responsibility for the results of internal disorders, particularly as they affect the nationals of other powers, the treatment of foreign capital, and external political relations, unless the United States retains a certain measure of control.

The great work which the American commercial population and organizations have done in the islands should not be overlooked. It has contributed greatly to the betterment of conditions. They have built up and established business and credit from one end of the islands to the other. They have always been a strong force in the support of law and order, intensely American in sentiment and, on the whole, a good, stabilizing and helpful influence. At times they have been impatient, and justly so, with the discouragement of American business efforts, and there have been conditions which have given rise to strained relations between

individual Americans and Filipinos, but never resulting in any disturbance of public order.

The American and foreign church missions and schools and charitable associations have done much to improve the spiritual and physical condition of the people and to build up better relations between the Filipinos and Americans.

Generally speaking, administrative departments of the Government are top-heavy in personnel and enmeshed in red tape. There is a vast amount of paper work. The methods of the administration are purely bureaucratic. There is a lack of supervision and personal contact.

The general administration of the Philippine Government in 1913, the period of greatest efficiency, was honest, highly efficient, and set a high standard of energy and morality. Inherited tendencies were being largely replaced by American ideals and efficiency throughout the Philippine personnel, but the time and opportunity were both too short to develop experienced leaders and direction in the new English-speaking and American-thinking generation. Both the political and administrative leaders were still Spanish-trained and Spanish-speaking, and many are so today.

It is the general opinion among Filipinos, Americans and foreigners that the public services are now in many particulars relatively inefficient; that there has occurred a slowing down in the dispatch of business, and a distinct relapse toward the standards and administrative habits of former days. This is due in part to bad example, to incompetent direction, to political infection of the services, and above all to lack of competent supervision and inspection. This has been brought about by surrendering, or failing to employ, the executive authority of the Governor General, and has resulted in undue interference and tacit usurpation by the political leaders of the general supervision and control of departments and bureaus of the Government vested by law in the Governor General.

Again, the Legislature has passed laws tending to demoralize and introduce into the civil service the infection of politics. For example, numerous exemptions from the requirements of the civil service and many provisions for temporary employment. All these defects can and—unless we fail to understand the spirit of the Legislature and the leaders—will be corrected in the islands.

CONSTABULARY AND PUBLIC ORDER

Public order is maintained principally by the constabulary, a force of approximately 5,800 officers and men. This organization has proved itself to be dependable and thoroughly efficient. In discipline, morale and appearance it still bears the strong impress of the carefully selected officers of the United States Army who organized, trained and developed it.

This force, excellent as it is, is designed to meet the police needs of the situation in time of peace. There is no adequate local organization of the Philippine people for defense of the islands against aggression. The American Gov-

ernment should at once take the necessary steps to organize, train and equip such a force.

There has been some lowering of standards, due principally to the sudden loss of the bulk of the experienced American officers who left the service to enter the World War, and to the effects of the low rate of pay which resulted in many leaving the service; also to the demoralizing, and at times intimidating, effect of political influence, the detached nature of the duties, infrequent inspections and frequent change of officers. But on the whole this force is a very satisfactory one and is entitled to great credit for its morale, efficiency and orderly and effective performance of duty.

Some years ago a school for constabulary officers was organized and has been in operation with excellent results. No men are now appointed to the constabulary who are not graduates of this school, where they have undergone a careful preparation and training. The quality of the graduates shows what can be accomplished when opportunity for careful training is offered.

Public order is excellent throughout the islands, with the exception of minor disturbances in the Moro regions, due principally to energetic and sometimes overzealous efforts to hasten the placing of Moro children, especially girls, in the public schools, and to the too sudden imposition upon the disarmed Mohammedans of what amounts to an absolute control by Christian Filipinos. It is also due in part to failure to give adequate representation in local governments to Moros.

ADMINISTRATION OF JUSTICE

Justice is administered in the Philippines by a Supreme Court, numerous Courts of First Instance, Justice of the Peace Courts and Municipal Courts.

The Supreme Court has the respect and confidence of the Philippine people. The other tribunals do not enjoy an equal degree of confidence. In the lower tribunals, generally speaking, the administration of justice is unsatisfactory, slow and halting, and there is a widespread feeling among the people that political, family and other influences have undue weight in determining issues.

During the existence of the Philippine Commission a most serious effort was made to secure the best available men for the bench, without regard to party affiliation, and the men appointed at that time as a rule enjoyed public confidence. In later years the same care has not been exercised.

There are pending in the courts of the islands today, in round numbers, approximately 50,000 cases, including some 8,000 probate and guardianship cases. Conditions are growing steadily worse, and with the present personnel and methods the dockets will never be cleared.

The condition of the Courts of First Instance is generally deplorable. The number of cases filed has steadily increased from year to year. The number of Judges has not been increased proportionately and is insufficient to dispose of, promptly and efficiently, the great volume

of business that they are called upon to transact. The abolition of the Court of Land Registration imposed a heavy additional burden upon these courts. The Judges in too many courts do not realize the necessity of reaching early and prompt decisions and are too ready to postpone hearings and trials. The clerks of the Courts of First Instance are too often without the necessary experience. There is no uniform system of filing records, and in many cases it is difficult for attorneys to secure records promptly.

The Justice of the Peace Courts are the weakest point in the judicial establishment. Complaints against these courts are numerous and come from all parts of the archipelago. Because of the remoteness and isolation of many of these tribunals, the want of frequent and effective supervision and inspection, many abuses are perpetrated.

A frequent cause of complaint is against extreme action taken under the provisions of Act 2098, which enables employers of labor to prosecute their laborers for breach of contract, and in many cases to hold them against their will, resulting in a kind of legalized peonage. The laborers are kept in debt through the advance of money and supplies, and in return for these advances agree to work for definite periods of time and under certain conditions. Under the provisions of this act, should they leave before completion of contract they can be arrested and tried for violation of contract and for obtaining money or supplies under false pretenses. During the fiscal year 1918 there was a total of 3,266 cases of this nature, of which 1,456 were convicted.

Another common cause of complaint is the initiation of proceedings resulting in the arrest and confinement at remote places of people who are unable to give bond. This procedure results often in holding of men in confinement for months before the cases are acted upon by the Judge of the Court of First Instance.

The present condition results first and above all from the lack of proper inspection and prompt corrective action where inefficiency and negligence have been shown, from an insufficient number of Judges, insufficient pay and no provisions for retirement, and in some instances to lack of careful selection.

Investigation also indicates very clearly that more care should be exercised in the selection of the fiscals, or prosecuting attorneys.

The unsatisfactory condition in the administration of justice can be corrected by the insular authorities. In doing this it is important to build up a strong public opinion in support of a prompt, effective and impartial administration of justice. Provisions should be made for the retirement of Judges of the Courts of First Instance and the entire administration of justice must be placed outside the scope of political and other improper influences. In brief, the independence and stability of the Judiciary must be established. It lies at the foundation of stable government.

Land Titles—The land title situation in the Philippines is a serious one. It should be the policy of the Government to push forward the

cadastral survey, determine titles to land as quickly as possible, and to facilitate in every possible manner the acquisition of titles by homesteaders. Nothing is more conducive to good government than having the people secure in the ownership of their land and possessing titles guaranteed by the Government, as is the practice under the Torrens system. Filipinos have the excellent trait of a strong, inherent desire to own their own land.

The present unfortunate land title situation is largely due to an inefficient administration of the Land Office in recent years and to an increase in the number of problems which the Government has to handle.

In 1913 the Insular Government had a thoroughly efficient and trained Bureau of Lands and an experienced and effective Court of Land Registration. Today the inefficiency of the Bureau of Lands is due, in part, to lack of experienced and trained personnel, to inefficient management and lack of funds. Delay in obtaining titles is also due to the abolition of the Court of Land Registration and to the transfer of land cases to the overloaded Courts of First Instance. This has resulted in an increase in the number of abuses by which the poor farmer and homesteader, ignorant of his rights, is forced off his land by his richer and unscrupulous neighbor. The situation tends to serious discontent and must be corrected.

An adequate Court of Land Registration should be re-established.

Prisons—The Insular Government maintains Bilbid Prison in Manila, the San Ramon Prison and Penal Colony combined near Zamboanga, the Iwahig Penal Colony near Puerto Princesa, on the island of Palawan; the Fort Mills Prison on Corregidor, and a prison at Bontok in the Mountain Province. The total number confined in all these prisons for 1920 was 5,254.

Bilbid is the receiving station and distributing point of all classes of criminals, except those of the Moro and Mountain Provinces, which are held at San Ramon and Bontok, respectively. Bilbid retains convicts which cannot be worked outside and about 1,500 employed in industrial work.

Treatment of Prisoners—Prisoners, upon arrival in any of these prisons, are physically examined, treated if found necessary, given a period of training in drill and exercise movements and, if possible, assigned to work for which preference is expressed. The time of confinement in prisons under guard is determined by character and length of sentence and expressed desire of prisoners, governed by good conduct. Incentives are provided for good conduct in additional privileges, gratuities, by

additional liberty through classification as "trusties" or penal colonists, and by automatic reduction of the time of sentence by reason of good behavior.

Prisoners of excellent conduct who have served one-fifth of their sentence at Bilbid may be sent to Iwahig, where five additional days per month are allowed for good time credit. Also, life sentence is commuted to thirty years in the cases of convicts who are sent to Iwahig, and good behavior counts so that life sentences can be served in about twenty-two years. Furthermore, at Iwahig, a convict by good conduct may become a settler and receive one-half of what he produces, the land, tools, animals, &c., being provided for him.

The Iwahig Penal Colony has a reservation of over 100,000 acres on the Island of Palawan. It is a partially self-governing community, founded originally somewhat upon the principle of the George Junior Republic. It has a popula-

MAJOR GENERAL LEONARD WOOD AND THE PROVINCIAL GOVERNORS OF THE PHILIPPINE ISLANDS AT THEIR FIRST CONFERENCE IN THE MALACANANG PALACE, MANILA

tion of about 1,200 colonists and has proved to be a most successful institution, far advanced in reformatory methods and results, the number of convicts returned to prison after release from the colony being extremely small.

Provincial and Municipal Jails—Besides the above-mentioned prisons, most of the provincial and municipal jails in the islands were carefully

[American Cartoon]

—New York Evening Mail

CONFIDENCE RATHER ONE-SIDED

inspected. The provincial jails were generally overcrowded. There are little or no provisions for taking care of the sick. Marked favoritism is often shown to prisoners with influential friends. The food is generally good and sufficient. The condition of the clothing is fair. The prison guards are poorly trained and poorly disciplined.

The municipal jails are, as a general rule, unsatisfactory. They are small, dark, usually poorly ventilated and insanitary. The municipal prisoners are poorly fed, poorly clad, and generally poorly cared for. In the great majority of municipal jails no proper provision is made for female prisoners.

It was observed generally throughout the islands that there were a great number of prisoners awaiting trial for unusually long periods.

PUBLIC EDUCATION

The Filipinos are deeply interested in public education. Their enthusiasm, their keenness to secure education for their children is beyond praise. The progressive development of the school system has been phenomenal. Indeed, enthusiasm has at times outrun prudence, and expansion has taken place so rapidly that efficiency has not been able to keep pace. However, such mistakes as have been made have resulted from enthusiasm in a noble cause—the education of the youth of the islands.

The following gives an idea of the progress in this department:

ENROLMENT IN SCHOOLS

	1898.	1902.	1907.	1914.	1920.
Pupils	4,504	*200,000	479,978	489,070	925,678
American teachers...	847	746	658	341	316
Filipino teachers ...	1,914	6,141	7,013	7,234	20,691
*Estimated.					

In 1920 the public owned 4,063 and rented 1,163 school buildings.

The total expenditures for administration and instruction were about \$6,869,654.50 for 1920. The university had, in 1920, an enrolment of 4,130, with a teaching force of 379 professors and assistants. The cost of operation was \$755,926.57.

As before stated, the self-sacrifice of the parents has been great. They have willingly deprived themselves of many necessities in order that they might aid in the voluntary building of schools and properly equip their children for school attendance. The percentage of the population in the schools is about 10, an excellent showing for a new Government (the percentage for the United States for 1918 was 20.13). The amount spent for each pupil per year is \$9.50 (the United States annual expenditure is \$36.62). The amount per capita for the entire population of the Philippine Islands is \$0.86.

One of the most difficult problems has been to secure efficient teachers. No class of men and women should be selected with more care, for they are charged not only with the routine education of the children, but inevitably have a great influence in forming their ideas of citizenship obligation, respect for the law and the authorities, and as these teachers do their work today so will the Philippine people of tomorrow be. Too much care cannot be exercised in their selection, for only men and women of capacity can teach children to think straight and to apply their minds to the problems of life intelligently.

The exceedingly rapid expansion of the school system has made it difficult to secure a sufficient number of well-trained teachers. The great majority of the teachers in the primary schools are products of the intermediate schools and have had comparatively little experience in teaching, so that hand in hand with the education of the children has gone the effort to train and build up a competent teaching force.

One of the principal objects of the schools is to teach the children to speak English, so that it may become the language of the people. This is of vital importance, as it will form a bond of union for the numerous and more or less distinct language groups and establish a common medium of communication, which will make for efficiency in government and tend to build up a spirit of solidarity. It will also result in a more widely circulating press and the creation of an instructed public opinion, which is most important.

There is a great shortage of English-speaking teachers. Many of the Filipino teachers who

are instructing in English are themselves far from proficient in it. The force of American teachers is altogether too small and should be increased to approximately 1,000 if instruction in English is to be rapidly and successfully pushed forward.

In order to secure this number of American teachers, in addition to the present salary a liberal allowance will have to be made for transportation to and from the islands. And as a further measure toward better conditions for instruction in English, arrangements should be made for an intensive course in English for the native teachers during the Summer months.

The preparation of the Filipinos to meet the professional and scientific requirements of their country and for the advancement of general culture is in part provided for by the University of the Philippines, the high schools, and certain private schools and colleges.

At present these institutions are not turning out a sufficient number of graduates to meet the needs of the situation. The University of the Philippines is an institution full of promise, but is not meeting the demands upon it in as satisfactory a manner as could reasonably be expected. There is an urgent need of Americans of high standing and capacity for the heads of some departments. A general reorganization is urgently necessary and business management must be put on a sound basis. The medical school should be brought to a par with the best in America and the school of tropical medicine should be re-established and placed under the direction of a thoroughly competent personnel. This school, a few years ago, had attained the highest standing in the East. At present it is not in operation. The college of agriculture, veterinary college, and the college of education should be strengthened and enlarged to meet the needs of the people.

A serious effort has been made on the part of teachers and others to impress upon the children the dignity of labor, and we are glad to say that good progress has been made. There is a very general interest and strong development throughout the school system in the industrial and agricultural training adapted to the needs of the people, in the manual training for boys and domestic science and hygiene for girls. There is a strong interest in athletics throughout the public school system and in the university. This has received the strong encouragement of the Philippine people. Filipino athletes have on two occasions won the championship of the Orient in the Far Eastern Olympiad, in competition with athletes from Japan and China.

THE BUREAU OF SCIENCE

This was probably the most important single institution in the Philippines, and for years it rendered vitally important service not only to the Philippine Government in its various departments but also to the world at large through its scientific research work. It attained a position of great eminence and credit, but on account of the lack of adequate support and adequate personnel it does not occupy the posi-

tion today that it did from 1905 to 1915. Reorganization and the appointment of a personnel in all respects adequate are imperative. The work of this institution is of inestimable value to the Philippines and to the world at large.

HEALTH AND SANITATION

It can be said, without fear of successful contradiction, that the average Filipino is born, lives and dies without medical attendance or nursing. There is a great lack of hospitals and dispensaries. The excellent health service which previously existed has become largely inert. Much of the personnel remains, but it has lost the zeal and vigor which formerly characterized it.

Appropriations for sanitary work and medicines, &c., are insufficient.

The statistics of the Philippine Health Service show that there has been a steady increase in recent years in the number of preventable diseases, especially typhoid, malaria, beriberi and tuberculosis. Before suggestions could be intelligently offered as to remedying this and other shortcomings in health administration, a detailed study would be necessary. It would seem, however, that as a basis for constructive action it is a sound assumption that the health activities and measures for medical relief which are so scattered throughout so many different agencies should be co-ordinated into one department and that an endeavor to correct conditions should work toward the realization of that object.

There is a great shortage of doctors, nurses and properly trained sanitary personnel. Outside of the largest towns hospitals are so few and far between that they are a negligible quantity. There are about 930 nurses for a population of ten and one-half million. The number of nurses should be greatly increased. They are most useful as sanitary inspectors, and visiting nurses. Wherever you find good nurses you find lowered infant mortality and improved sanitary conditions.

Lepers—The Philippine Islands have the largest single leper colony in the world. About 5,000 lepers are assembled at Culion. Excellent work has been done here, and the efforts and results are entitled to much credit; but much remains to be done. The lepers are too congested. There should be a segregation of those who have become negative and of the children who are born free from the disease. At present those whose reaction is negative are living with those who are in the active stage of the disease, and children who are born clean are associating with their leper parents and companions. The establishment of an isolation colony near the main colony is absolutely essential.

Recent discoveries render it almost certain that a large percentage of lepers can be cured. Although the remedy costs but little, funds have not been made available in sufficient amounts to provide this treatment for more than 10 per cent. of the lepers.

In brief, it can be stated that the original work done in Honolulu has now received confirmation to a degree that fully warrants intro-

ducing this treatment on a large scale in the Philippines and abandoning other treatments which have been advocated in the past, as there is every reason to believe that a large percentage of patients would soon recover to a point where they could be paroled. It is obvious that the dictates of humanity demand a very general use of the approved treatment. Furthermore, the economic advantage of relieving the Government from the care of large numbers of cases would be another desirable outcome. In a short time the money saved on patients discharged would more than provide funds for treating the entire number.

Insane—The care of the insane is medieval. Proper accommodations are entirely lacking. Steps should be taken to provide a proper establishment for the treatment of the insane. The present institution lacks practically every feature which should characterize a hospital for the insane and possesses many which can be guaranteed to turn those who are balancing between sanity and insanity in the wrong direction. There are no provisions for the separation of the violently insane from the incipient and mild cases, and conditions are, from the standpoint of proper treatment, exceedingly bad and should have been corrected long ago.

This is a matter which will be presented to the Legislature at the coming session, and, although funds may not be available for the construction of a fitting establishment, steps can be taken to improve greatly present conditions and lay the foundations for the future proper treatment.

Defectives—According to accepted ratios per thousand, there are in the Philippines between 5,000 and 10,000 defective children, deaf, dumb, or blind. So far the Government has provided for the care of only sixty-five of these defectives, to whom it owes a particular duty.

ECONOMIC CONDITIONS

We are pleased to note and record many evidences of progressive development in the islands, as indicated by the following significant figures:

The postal savings bank was started in 1907, and by 1913 it had 40,000 depositors and \$675,000 in deposits. In 1920 these had reached 107,000 depositors and \$1,612,500 in deposits.

The law requires that 1 per cent. of the gross business done in the islands be paid to the Government in the form of taxes. This business was computed to be \$200,000,000 a year in 1907, when the tax was first imposed, and had increased to \$325,000,000 in 1913. In 1920 it had reached the figure of \$863,000,000. For example, the number of cigars manufactured had increased from 300,000,000 to 500,000,000. The total resources of commercial banks rose from \$15,000,000 in 1906 to \$31,000,000 in 1913, and are now estimated to be \$215,000,000; this, however, includes the impaired resources of the Philippine National Bank without reduction for losses. Money orders sold increased from \$8,000,000 in 1913 to \$17,000,000 in 1920, and postage receipts from \$380,000 in 1913 to \$780,000 in 1920. Telegraph receipts show a similar increase. The

gross earnings of the Philippine Railway have risen from \$380,000 in 1913 to \$750,000 in 1920, and the Manila Railroad from \$2,400,000 in 1914 to \$5,900,000 in 1920; this latter, however, is partially to be explained by the sharp increase in the mileage and rates.

All this development is very gratifying and shows how rapidly the Philippine people respond to improved conditions of transportation, finance, public order and markets brought about since the American occupation. The sharpest advances have been made during the war, as was to be expected, as the Filipinos had few additional war burdens placed upon them and were able to take advantage of the great increase in prices, which brought them unexampled prosperity.

The country is suffering from the general world-wide depression at the present time; the prices of products have fallen off very sharply, but even this is less acute than in other countries.

It should be noted, however, that whatever mistakes have been made here, they have not been sufficient to arrest the steady rate of progress which these figures prove to have taken place. Attention is called to the Progress Barometer, which is among the exhibits.

Your mission has had a careful report prepared showing the gross trade of the Philippine Islands. From 1903 to 1909 the figure was almost stationary; 1909 was the year in which the Payne bill was passed, creating free trade between the Philippine Islands and the United States. In the first three years of free trade the trade with all countries nearly doubled. Beginning with 1916 the trade went sharply upward, until in 1920 it reached the remarkable total of \$300,000,000. We have tried to get the figures of tonnage in order to analyze this growth in trade and see how much comes from increase in volume and how much is due to increase in price, but have not been able to get these figures.

An analysis of the trade shows that a curve indicating exports and imports from the United States follows almost the same lines as does that of total trade. Roughly speaking, two-thirds of the business of the country, or \$200,000,000, is trade with the United States, and one-third with all other countries. The proportion of gross business done with the United States has been steadily increasing. As the trade with the United States pays no customs duties and the bulk of the increase has been in that class of trade, the result is that the total revenues of customs has shown a tendency to fall off, while the cost of collection shows a steady increase.

In case free trade were to be taken from the Philippine Islands, it is probable that the closing of the rich markets of the United States to the products of the Philippine Islands would be very sharply felt. While the Philippine Government would receive customs duties on an important part of their imports that now come in free of duty, it is believed that the first effect would be a very serious blow to trade. For example, in 1920 nearly \$40,000,000 of sugar was exported to the United States, the duty on which would

have been 6 or 8 per cent. of its value. It is problematical how well Philippine sugar could have stood the handicap of 8 per cent. added to the high cost of freight from the Philippines to the United States.

The value of cigars exported to the United States was \$10,500,000; the duty on these at the present rate would amount to about \$30,000,000, which would practically have closed the markets of the United States to these cigars. There would have been a similar closing of the United States markets to leaf tobacco. The Collector of Customs estimates that the trade which has grown up in Philippine embroidery now reaches \$7,500,000 a year and would have to pay a duty of \$4,500,000. As there is no other market for this product, he believes the industry would be practically ruined.*

In the main, it is believed that the loss in internal revenue, were the stimulus of free trade to business removed, would be greater than would be the increased collections of customs duties. In this connection it is interesting to note that the increase in internal revenue started when free trade was given and practically offset the drop in customs receipts at the time.

Further analysis of the customs shows the principal articles exported, measured in value, to have been: †Sugar, \$49,619,260; hemp, in which the Philippine Islands have a virtual monopoly, \$35,862,000; coconut oil, \$23,268,886.50; tobacco, \$19,927,391; embroideries, \$7,811,783.50; and copra, \$3,716,870.50.

FINANCES

In 1905 the Philippine Government was put on a thorough business basis. All services rendered by one branch of the Government to others were paid for, and the books were so kept that the appropriations did not include any interbureau or intergovernmental payments.

The law has since been changed, so that the present cost of Government includes items of receipts for services sometimes from other branches of the Government, which makes analysis difficult and exact comparison impossible. The books are so kept that these amounts cannot be ascertained without an analysis of governmental accounts involving prohibitive expense. So that the gross figures of receipts and expense are padded on both sides by intergovernmental charges, which are neither real receipts nor expenditures, as they are payments by the Government to itself. The accounts should be so kept that these fictitious entries would be eliminated, in order to enable the officers of the Government to get a true picture of Government costs.

Certain figures, however, stand out so boldly that they cannot be questioned. The rate of taxation has been sharply advanced. The insular gross revenues from taxation in 1913, before the Filipinos were given virtual control of their Government, were \$12,500,000, as op-

posed to \$28,000,000 in 1920, an increase of 124 per cent. Government expenditures show a still greater proportion of growth. This increase in the general cost of Government has not been accompanied by a proportionate increase in efficiency; on the contrary, as has been noted elsewhere, there has been a general falling off in efficiency.

The per capita revenue from taxation has risen from \$1.32 in 1913 to \$2.50 in 1920. This compares with the per capita taxation of \$23.78 in Great Britain (1914-15), \$9.92 in the United States (1914-15), \$5.57 in Japan (1915-16), \$17.33 in the Argentine Republic (1915), and \$7.79 in Brazil (1915),* from which it will be seen that the Filipino bears a smaller burden of taxation than the natives in any of the above cited countries. One reason, the burden of taxation is so light in the Philippine Islands is because the United States has borne all costs of military and naval establishments necessary for the defense of the islands, and other expenses incident to the maintenance of sovereignty, including international, diplomatic and consular representation.

Of the total revenues of \$40,500,000, †\$28,000,000 is from taxation and \$10,500,000 from operating income and commercial and industrial units; this does not include earnings of the railroad, which the Government owns through ownership of the stock.

An analysis of revenue derived from taxation shows the receipts from internal revenues to be \$18,500,000, or two-thirds of the total. This internal-revenue collection is nearly four times as heavy as the collections of 1913.

The bonded debt of the Philippine Islands in 1920 was \$22,000,000, for the redemption of which is laid aside nearly \$5,000,000, sinking fund, so the net liability is something less than \$17,500,000. A comparison with the debt of other countries demonstrates that the Philippine Islands has a smaller bonded debt than most countries, the per capita being \$1.81, compared with \$25 in Cuba, \$237.07 in the United States, \$853 in England, and \$1,159 in France. The Dutch East Indies with \$1.92, is the nearest, and China next with a little less than double that of the Philippine Islands.† It will be seen that the recent act of Congress increasing the authority of the Philippine Islands to borrow was highly conservative and could be safely further increased without jeopardizing the financial stability of the Government. Bonds and notes of the Philippine Islands have been made exempt from Federal taxation and are received on deposit as currency reserve. Although not directly guaranteed, it is understood that the credit of the United States Government is behind them; this accounts for the high market value of these bonds.

In addition to the insular revenues, there are

*These figures are taken from World Almanac, 1917, and are much heavier since the great war.

†The census shows "income" of \$49,000,000; this, however, is incorrect because analysis proves that it includes moneys derived from the sale of bonds.

‡Figures furnished by the Insular Auditor.

*See among exhibits indorsement, dated Sept. 9, 1921, of the Insular Collector of Customs.

†These figures are all for 1920 and are taken from the report of the Insular Collector of Customs.

the provincial and municipal revenues. These are expended by the provinces and municipalities by vote of their own local authority. An examination of their accounts shows a similar expansion, the receipts and expenditures having increased about 100 per cent. in the last eight years.

The Government expense and cost of materials have shown a tendency to a sharp increase. And it is to be noted that a number of new bureaus and offices have been created.

The Philippine National Bank—The story of the Philippine National Bank is one of the most unfortunate and darkest pages in Philippine history. This bank was started in 1916, and a law was passed* compelling all provincial and municipal Governments to deposit all their funds in it; and at the same time arrangements were made to transfer from other banks all Government funds there deposited, except trust funds, which were held on deposit in the United States; later the bank was put into a position to get control of these moneys and reserve funds. The sum of \$11,500,000, held for the conversion of currency, was transferred to the Philippine Islands, the bank making a large profit in exchange in doing so. Much of it was then loaned out to speculative concerns under circumstances which have led to grave doubt as to the good faith of the transactions.

A man presumed to be experienced in banking was brought from the United States and took the first Presidency, which he held a short time. An American inexperienced in banking was then put in charge, and upon his death a Filipino, also without banking experience, became President. The result of all this has been a series of banking losses, estimated by the Insular Auditor to reach the severe total of \$22,500,000. A partner of Messrs. Haskins & Sells, certified public accountants of New York, after a careful examination of the bank, makes the following comment:

"Our examination thus far reveals the fact that the bank has been operated during almost the entire period of its existence prior to the appointment of Mr. Wilson as manager in violation of every principle which prudence, intelligence, or even honesty, dictate."

As a result of these findings, charges have been filed against General Concepcion, a former President of the bank.

The Government became alarmed at the seriousness of the situation and secured the services of an experienced banking man from the United States, under whose conservative guidance the affairs of the bank are in a fair way to be put on a sound footing. But a large part of the assets of the bank have been loaned to concerns which will be unable to repay for many years—very largely in sugar centrals and coconut-oil factories. These loans were made in excessive amounts during the period of boom prices, and minimum precaution in regard to security was taken, with the result that the bank has allowed its reserves to run down much lower than required by law, is unable

to meet its current obligations, has had to ask other banks not to press for the redemption of its notes, and has further had to ask time for the payment of its obligations to many banks in Shanghai representing many countries, a list of which is among the exhibits, to whom it owes large sums of money as a result of losses incurred in speculation in exchange transactions.

Among the exhibits will be found a copy of the agreement entered into by the Insular Auditor and these banks for the settlement of these claims.

The bank also established branches and agencies throughout the Philippine Islands, in charge of which they placed untrained Filipinos, and without exception these branches have been mismanaged. Of the four branches in which examinations have been completed criminal charges have been preferred against the managers of each one.

These losses have seriously involved the Philippine Government, and the fact that it has not been able to meet its obligations has seriously impaired its credit. We have been informed by representatives of banks in North Borneo and Japan that they have received instructions not to honor the notes or drafts of the Philippine National Bank.

The currency resources have been depleted, the silver on deposit to redeem the currency has been pledged and used for other purposes. The fund for the maintenance of the parity of gold and silver is involved in these losses, with the result that instead of a metallic and cash basis for the currency, its principal support now is the pledge of the Philippine Government and the confidence on the part of the public that the United States will not permit these things to happen again. The currency is now practically a fiat currency.

In view of good earnings, moderate expenses, inherent wealth, a small public debt, and backed by the credit of the United States, the problem of rehabilitating the credit of the Philippine Islands should be an easy one. The lesson has been a bitter one for the Filipinos and the gravity of the mistake is generally appreciated.

One of the functions of the National Bank was to manage Government exchange. Having transferred all the funds usually available for exchange to Manila, and then loaned the money in such a way that it could not be recovered, the Government had to discontinue selling exchange. The rates ran up as high as 15 per cent., which was equivalent to a depreciation of the Philippine currency to almost that amount, which has resulted in great hardship to the inhabitants of the Philippine Islands, especially those engaged in business.

PUBLIC WORKS

In the matter of public works, your mission has to report both favorably and unfavorably.

The Government and people of the islands realize the value and necessity of public works, and large appropriations from current revenues have been made annually for such objects as the construction of roads, bridges, irrigation sys-

*See Section 19 of Act No. 2612 of the Philippine Legislature.

tems, schoolhouses, markets, port works and artesian wells, among others. We find, however, an undue increase in the cost of public works, due in many instances to construction by administration instead of by contract; this has necessitated the purchase of equipment ordinarily furnished by the contractors. There has also been a deterioration in the quality of the work performed in this service. We find also a lack of competent supervision.

On the other hand, there has been a great deal of excellent work done. The director, a Filipino, is a man of unusual capacity and foresight, and he impressed the members of the mission most favorably.

An important proportion of all revenues of the Government are allocated to public works. And in the opinion of this mission this proportion should be increased.

In the last three years there has been notable progress in construction of irrigation systems. Sixteen projects have been undertaken, involving an expenditure of \$1,640,158. Many more projects are under consideration and are awaiting the availability of funds. The completion of these projects is of the utmost importance and it is an encouraging sign of progress that they have advanced as far as they have.

There are now 2,920 miles of roads rated as first class in the islands and 7,500 permanent bridges and culverts. The standard, however, of first class roads has been lowered and we found many roads rated as first class which are not so. There was an earnest effort by the Government to hurry through deferred repairs in order to prepare the roads for inspection.

During the earlier periods a system of road construction and maintenance was adopted and consistently followed. All structures on first-class roads were reinforced concrete and a standard system of road construction was adopted suited to the traffic. Although the work progressed slowly, it was thoroughly well done, adequate provision being made for constant maintenance by a force of laborers. The result was that the road service reached a high degree of perfection, comparing favorably with the roads of any other country and much better than most roads in America. The terrific force of the torrential rainfall in the islands made these precautions necessary.

We have to record that this system has not been consistently maintained; the roads are falling into disrepair, some are impassable and the system of maintenance is carried on spasmodically. In certain districts money has been spent for new roads instead of keeping up the old ones, which is unwise. We regret to say that a tendency has crept in to revert to the old practice of building bridges and other structures of wood, and a uniform policy of permanent construction has not been maintained. This practice, in the long run, is poor economy.

Heavy trucks have been purchased for carrying passengers and freight, and regular routes have been established on the highways. These trucks, in some cases, are much heavier than the roads were designed to carry, and much of the deterioration noted is attributable to this fact. The maintenance service should be re-

stored to old standards and the weight of the loads regulated, and standard sections strengthened to enable the use of heavier vehicles.

The roads are, at first sight, good at the present time, but a great proportion of the wearing surface has been worn off.

In the Mountain Province and non-Christian provinces we find that the service of maintaining roads and trails has been neglected, but it is believed that a better organization can remedy these defects without the necessity of additional revenues.

GOVERNMENT IN BUSINESS

The Government has entered into certain lines of business usually left to private initiative. Among these can be cited the national bank with disastrous results, the purchase of the Manila Railroad Company, now operated at a loss, also the National Development and National Coal Companies, &c. At the request of the mission a thorough examination of the Manila Railroad Company was made by competent army engineers, whose report is among the exhibits. In our judgment the Government should as far as possible get out of and keep out of business.

ELECTIONS

Enough elections have now been held to base an opinion upon results and to note the reaction of the Philippine people in the exercise of this important and fundamental function of a representative Government.

In June, 1919, the first general elections were held under the enlarged suffrage granted by the act of Aug. 29, 1916. The suffrage is still confined to men and to those who can read and write, who hold a certain amount of property or pay a certain tax, or to those who held offices under the Spanish régime.

Interest in the elections was widespread and election day passed without any serious disturbance. There was a general, quiet acceptance by the minority of the results of the popular vote, although the executive bureau was deluged with complaints. The courts, since that time, have been loaded with fraudulent election cases, the legal action on which has been so slow that there are still 350 cases pending in the courts, and many terms of office will be served out by people who were either fraudulently elected or, in some cases, appointed by executive order to the vacancies, even though their claims to the office had been pronounced by the courts as fraudulent. These were caused not only by the local conditions, but by an election law which is undoubtedly defective in providing sufficient safeguards for the ballot and which should be thoroughly revised.

Under the present election law officers known as Inspectors of Election are required to prepare the ballot for illiterate voters. This is a fruitful source of frauds. The election machinery is practically in the hands of the dominant parties and the Inspectors of Election are too often their tools.

It is surprising that the elections have been

conducted as well as they have been, in view of the fact that outside of the larger cities and principal towns the organization of society is very primitive and the people generally are unaware of their civil rights.

Such social organization as exists is of a patriarchal form, characterized by a strong clan feeling and centuries of leadership by a few influential individuals known as "caciques." The subservience of the people to these leaders has not yet been supplanted by new ideals that come with modern education or by a confirmed sense of duty to the State. Whenever representatives of two powerful family groups oppose one another at elections there is sure to be a bitter contest and an unwillingness on the part of the minority to accept the situation.

During the visit of the mission through the provinces the charges and countercharges of fraudulent practices have been widespread and intense. On the whole, this interest is indicative of a certain development of public opinion which will, in the end, right the wrongs.

As a rule, there is little evidence of a party system and program, and the elections are fought out upon personalities rather than on principles. The party in power is so entrenched that under the present election law it would be very difficult for the people to dislodge it if they wanted to change.

LEGISLATION

Legislation in which Filipinos have participated may be fairly divided into three periods:

First, 1907 to 1913. Under the strong, conservative influence of the commission with American majority, the legislation passed was constructive and good, with marked emphasis placed upon the improvement of education and construction of permanent improvements.

Second, 1913 to 1916. The restraining influence was withdrawn with the appearance of a Filipino majority on the commission. Good, constructive legislation was passed, but there were marked tendencies to inject politics into administration and to interfere with administrative efficiency. Injudicious economy by salary cutting and discouragement of Government personnel became marked. The tendency toward Government interference in business and radical Government paternalism began. The legislation also showed a conscious effort to encourage Filipino nationality and independence.*

Third, 1916 to 1921. With an elected House and Senate, the legislation in this period became increasingly radical in its paternalism and Government interference with business. Some constructive legislation was passed, but the trend was toward injection of politics into administration and encroachment of the legislative on the executive. Legislation affecting finance, banking, and currency has been radical and unwise.

Another tendency in recent legislation has been the deliberate effort to take away from the American officers of the Government supervision of the different branches of the Government and put it into the departments controlled by Filipinos. Act 2666 provides that the Secretaries of all departments must be Filipinos. This is discriminatory legislation against

Americans. The so-called Jones bill provides that the Vice Governor and Secretary of Public Instruction must be an American, and it further provides that the health duties should be under this officer. The Philippine Legislature has endeavored to evade this by transferring the management of all Government hospitals to the Department of the Interior and by creating and placing in the same department a board of pharmaceutical officers, a board of optical examiners, &c.

The tendency which is found in all Legislatures of passing the bulk of the legislation in the last two days of the session is noted. By this means, much important legislation is passed with a rush. The forms of budget and currency appropriation bills are good.

GENERAL CONCLUSIONS

We find the people happy, peaceful, and in the main prosperous, and keenly appreciative of the benefits of American rule.

We find everywhere among the Christian Filipinos the desire for independence, generally under the protection of the United States. The non-Christians and Americans are for continuance of American control.

We find a general failure to appreciate the fact that independence under the protection of another nation is not true independence.

We find that the Government is not reasonably free from those underlying causes which result in the destruction of Government.

We find that a reasonable proportion of officials and employees are men of good character and ability, and reasonably faithful to the trust imposed upon them; but that the efficiency of the public services has fallen off, and that they are now relatively inefficient, due to lack of inspection and to the too rapid transfer of control to officials who have not had the necessary time for proper training.

We find that many Filipinos have shown marked capacity for Government service and that the young generation is full of promise; that the civil service laws have in the main been honestly administered, but there is a marked deterioration due to the injection of politics.

*It is to be noted that franchises granted by the Government during this period contain the following clause:

"The concession of the privilege mentioned in the preceding section shall not take effect unless the grantee shall accept in writing and make part of this concession the following condition, to wit, 'That the grantee state in writing that it is informed of the message of the President of the United States addressed to the Filipino people and communicated to said people by the Governor General of the Philippine Islands on the sixth day of October, 1913, and of the reply message of the Philippine Assembly made in the name of the Filipino people and approved and sent on Oct. 16, 1913; that said grantee binds itself not to engage in or aid, by means of contributions in cash or otherwise, any propaganda directed against the policy of the Government of the United States outlined in such message of the President and the aspirations of the Filipino people set forth in said reply message of the Philippine Assembly, whether under the pretext of vested interests or under any other pretext, and that said grantee shall further bind itself to exact a similar engagement from its administrators, agents, successors and assigns.'"

We find there is a disquieting lack of confidence in the administration of justice, to an extent which constitutes a menace to the stability of the Government.

We find that the people are not organized economically nor from the standpoint of national defense to maintain an independent Government.

We find that the legislative chambers are conducted with dignity and decorum and are composed of representative men.

We feel that the lack of success in certain departments should not be considered as proof of essential incapacity on the part of Filipinos, but rather as indicating lack of experience and opportunity, especially lack of inspection.

We find that questions in regard to confirmation of appointments might at any time arise which would make a deadlock between the Governor General and the Philippine Senate.

We feel that with all their many excellent qualities, the experience of the last eight years, during which they have had practical autonomy, has not been such as to justify the people of the United States relinquishing supervision of the Government of the Philippine Islands, withdrawing their army and navy, and leaving the islands a prey to any powerful nation coveting their rich soil and potential commercial advantages.

In conclusion we are convinced that it would be a betrayal of the Philippine people, a misfortune to the American people, a distinct step backward in the path of progress, and a discreditable neglect of our national duty were we to withdraw from the islands and terminate our relationship there without giving the Filipinos the best chance possible to have an orderly and permanently stable Government.

RECOMMENDATIONS

1. We recommend that the present general status of the Philippine Islands continue until the people have had time to absorb and thoroughly master the powers already in their hands.

2. We recommend that the responsible representative of the United States, the Governor General, have authority commensurate with the responsibilities of his position. In case of failure to secure the necessary corrective action by the Philippine Legislature, we recommend that Congress declare null and void legislation which has been enacted diminishing, limiting, or dividing the authority granted the Governor General under act No. 240 of the Sixty-fourth Congress, known as the Jones bill.

3. We recommend that in case of a deadlock between the Governor General and the Philippine Senate in the confirmation of appointments that the President of the United States be authorized to make and render the final decision.

4. We recommend that under no circumstances should the American Government permit to be established in the Philippine Islands a situation which would leave the United States in a position of responsibility without authority.

LEONARD WOOD, *Chairman.*

Historical—About 200-1325 A. D., dependency of various Hindu-Malayan empires in Indo-China, Sumatra, and Borneo; 1325-1405, subject to Javanese Empire of Madjapahit; 1405-1440, governed by China (under Ming Emperors); 1440-1565, Northern Luzon subject to Japan; from Manila south, subject to Mohammedan Borneo; 1565-1762, subject to Spain through Mexico (paid tribute to Japan 1592-1623 to avoid invasion by the Shogun Hideyoshi); 1762-1763, seized by England, but restored to Spain by the treaty ending the Seven Years' War; 1763-1898, subject to Spain (through Mexico until 1821 and to Spain direct after that date); 1898-1921, under American sovereignty; Military Government, 1898-1900; Philippine Commission, 1900-1907; Philippine Commission (American majority) and Assembly, 1907-1913; Philippine Commission (Filipino majority) and Assembly, 1913-1916; elected Assembly and Senate, under Jones bill, 1916-1921.

TREATY OF PEACE WITH AUSTRIA

Official text of the pact signed at Vienna, August 24, 1921, which restored friendly relations between the United States and Austria.

THE UNITED STATES OF AMERICA AND AUSTRIA:

Considering that the United States, acting in conjunction with its co-belligerents, entered into an armistice with Austria-Hungary on Nov. 3, 1918, in order that a treaty of peace might be concluded;

Considering that the former Austro-Hungarian Monarchy ceased to exist and was replaced in Austria by a republican Government;

Considering that the Treaty of St. Germain-en-Laye to which Austria is a party was signed on Sept. 10, 1919, and came into force according to the terms of its Article 381, but has not been ratified by the United States;

Considering that the Congress of the United States passed a joint resolution approved by the President July 2, 1921 [here Articles 4 and 5 of that resolution are quoted];

Being desirous of establishing securely friendly relations between the two nations, have for that purpose appointed their plenipotentiaries:

The President of the United States of America; Arthur Hugh Frazier; and the Federal President of the Republic of Austria, Johann Schober; who, having communicated their full powers, found to be in good and due form, have agreed as follows:

ARTICLE I.—Austria undertakes to accord to the United States and the United States shall have and enjoy all the rights, privileges, indemnities, reparations or advantages specified in the aforesaid joint resolution of the Congress of the United States of July 2, 1921, including all the rights and advantages stipulated for the benefit of the United States in the Treaty of St. Germain-en-Laye which the United States shall fully enjoy notwithstanding the fact that such treaty has not been ratified by the United States. The United States in availing itself of the rights and advantages stipulated in the provisions of that treaty, will do so in a manner consistent with the rights accorded to Austria under such provisions.

ARTICLE II.—With a view to defining more particularly the obligations of Austria under the foregoing article with respect to certain provisions in the Treaty of St. Germain-en-Laye, it is understood and agreed between the high contracting parties:

1. That the rights and advantages stipulated in that treaty for the benefit of the United States

which it is intended the United States shall have and enjoy, are those defined in Parts V., VI., VIII., IX., X., XI., XII. and XIV.

2. That the United States shall not be bound by the provisions of Part I. of that treaty nor by any provisions of that treaty including those mentioned in Paragraph 1 of this article which relate to the Covenant of the League of Nations, nor shall the United States be bound by any action taken by the League of Nations or by the Council or by the Assembly thereof, unless the United States shall expressly give its assent to such action.

3. That the United States assumes no obligations under or with respect to the provisions of Part II., Part III., Part IV. and Part XIII. of that treaty.

4. That, while the United States is privileged to participate in the Reparation Commission, according to the terms of Part VIII. of that treaty and in any other commission established under the treaty or under any agreement supplemental thereto, the United States is not bound to participate in any such commission unless it shall elect to do so.

5. That the periods of time to which reference is made in Article 381 of the Treaty of St. Germain-en-Laye shall run, with respect to any act or election on the part of the United States, from the date of the coming into force of the present treaty.

ARTICLE III.—The present treaty shall be ratified in accordance with the constitutional forms of the high contracting parties and shall take effect immediately on the exchange of ratifications which shall take place as soon as possible at Vienna.

In witness whereof, the respective plenipotentiaries have signed this treaty and have hereunto affixed their seals.

Done in duplicate in Vienna, this 24th day of August, 1921.

ARTHUR HUGH FRAZIER.
SCHOBER.

[This treaty was duly ratified and the ratifications were exchanged at Vienna on Nov. 8, 1921. President Harding, on Nov. 17, 1921, issued a formal proclamation "that the war between the United States and the Imperial and Royal Austro-Hungarian Government, which was declared by the said resolution of Dec. 7, 1917, to exist, terminated on July 2, 1921."]

THE WORLD'S MONEY PROBLEM

Growing conviction that the disturbed condition of trade can be cured only by concerted action through an international economic conference—Professor Cassel's illuminating study of the gold standard and how to get back to it

PROPOSALS for an international economic conference which have been tentatively put forth at the Conference for Limitation of Armament in Washington are in line with the recommendation of Professor Gustav Cassel, who holds the Chair of Economics at the University of Stockholm, and whom Lloyd George has called one of the most brilliant economists in the world. Professor Cassel, by invitation of the League of Nations, submitted a memorandum on the world's monetary problems for consideration of the International Financial Conference at Brussels in 1920, and recently completed a second memorandum, by invitation of the Assembly of the League of Nations, embodying his views on the new complications in international monetary affairs. After a broad survey of the situation Professor Cassel recorded the following conclusions:

"The monetary problem of the world is at present so interwoven with political difficulties that it is vain to expect a definite solution until the chief political prerequisites for stability in economic conditions have been realized.

"It is first of all necessary that the international indebtedness inherited from the war should be settled on such terms as satisfy the world that the debts can really be paid, and make it clear by what concrete means payment can be offered and accepted. It might therefore seem that the whole discussion of monetary questions has to be deferred to some future day. But this would be a grave mistake. The world's monetary problem involves great technical difficulties which require a thorough examination by experts and a certain amount of co-operation between the different nations.

"There are two principal questions to be settled: the question of the stabilization of the internal value of currency and the gold question. How these questions are related to one another, and to what extent they are of an international character, has been shown above. The elucidation of these questions not only is an indispensable condition of the establishment in the future of a sound basis for the world's economic life, but also would be of great immediate utility. The experience of the last year has shown conclusively that some guidance is needed amid the confusion into which the world's monetary affairs have fallen, continued inflation on one side and excessive deflation on the other having deprived the world of every sense of equilibrium in the purchasing power of money and in international exchange.

"The only way to secure such guidance within a reasonable time would seem to be to refer the whole problem, as far as it involves purely monetary questions, to a small committee of

experts. In view of the central position which the United States has come to occupy since the war in all monetary affairs, and particularly in connection with the gold market, the representation of the United States on such a committee is most important. In principle, however, the committee should not represent nationalities, but expert knowledge and experience.

"The creation of such a committee would be a sign of the willingness of the world to solve its monetary difficulties by mutual understanding and action along common lines. The feeling that the time is ripe for such action is visibly growing stronger day by day."

Professor Cassel's study, which is comprehensive and, in general, clearly presented, will be most sympathetically received by adherents of the quantity theory of money, for his conclusions and recommendations are based upon this theory—that the general price level must rise and fall according as there is excess or shortage of the purchasing medium. Accordingly, one of his suggestions is that there should be a more generous extension of credit on the part of the banks and a creation of money for the purpose of checking present deflation and substituting for it a "certain inflation." For, says he, when production has already been artificially stimulated by inflation, every further extension of credit and creation of money means a net increase in the nominal purchasing power of the community without any corresponding increase of the mass of commodities to be sold. The productive capacity of the community being already fully employed, there is no possibility for an extension of production. The fresh purchasing power created can therefore only find something to buy by causing a general rise of prices. Thus prices, as explained in the first memorandum, must rise.

Putting aside for the moment all question as to whether or not an increase of the purchasing medium is bound to be followed by a rising price level, it is pertinent to inquire just how credit might be expanded and money created. Certainly Professor Cassel does not mean to advocate that loans be made freely to undesirable and unworthy borrowers, yet it would seem that such as these would be most likely, if not almost the only class, to apply for loans, since the banks say that there is already plenty of credit for those who can make profitable use of it, and that restrictions have been clapped upon only those whose circumstances in the business world do not justify further extensions of their lines. The real problem seems to be not so much to increase the means of production as to find solvent purchasers for the goods which have been and now can be produced. An expan-

sion of loans and currency would not accomplish this.

Such statements as these give rise to speculation over the probable result of an acceptance of Professor Cassel's dicta, although the subscriber to the quantity theory of money must find in the survey a logical presentation of the case. Professor Cassel begins with the assertion that the collapse of prices which began in May of 1920, and which has been accompanied by a tremendous falling off of business, unemployment and uncertainty of exchanges, warrants a critical study of the whole policy of inflation. He cites the United States as the most outstanding example among nations of the effects of a policy of deflation persistently carried out, and asserts that these effects have been "rather pernicious" upon the United States in checking production, creating "frozen credit" and threatening the liquidity and even the solvency of smaller banks, and upon other nations by driving them to proceed further along the path of deflation than they might have deemed wise or expedient had not the constantly rising purchasing power of the dollar kept them hard put to maintain their exchanges at a steady level.

At the outset Professor Cassel's adherence to the quantity theory seems to lead him into difficulties, for, after stating definitely that "a fall in the general level of prices is always essentially a monetary phenomenon," and "in the preceding period of rising prices the stock of money generally grew in about the same proportion as the price level rose," he is compelled to note that "the subsequent fall of prices has, however, not been followed by a corresponding reduction of the means of payment." He offers the explanation, which many will regard as inadequate, that the anomaly may be due to two causes, one the hoarding of money, and the other the faulty testimony of price index numbers which reflect, in many instances, not true wholesale prices, but bankruptcy prices of demoralized markets, and so give no trustworthy representation of the actual situation in regard to prices. "According," says the professor, "if the present index numbers of wholesale prices give a somewhat exaggerated idea of the fall in the general level of prices, it is natural enough that the stock of money should not have been reduced in the same proportion as these figures indicate."

If the latter explanation be accepted, however, it is hard to see why Professor Cassel has not let himself in for another, though a minor, difficulty. He defines deflation as "a process by which the internal value of the monetary unit is increased," and, of course, prices are lowered. If, then, our index numbers are untrustworthy and exaggerate the fall in prices, it seems evident that deflation has not yet reached the degree which Professor Cassel accepts as the premise of his study.

No one, however, will quarrel with Professor Cassel's opinion that deflation, whatever its degree, has progressed far enough to warrant a study of its effects, and these he finds to be the same for other countries as he has stated them to be for the United States, differences

being accounted for by the degree to which the policy has been enforced. And here again there will be those who will differ with the professor. He asserts:

"The downward movement of prices has not, as is sometimes assumed, been merely a spontaneous result of forces beyond our control. It is essentially the result of a policy deliberately framed with a view to bringing down prices and giving a higher value to the monetary unit."

The merchant who has seen the stock on his shelves go begging at successively reduced prices will be much more inclined to believe that his misfortune has been the result of crowd psychology, the belief that, since prices are falling, they will fall more yet, rather than that any controlled policy directed the actions of his one-time customers.

Internationally Professor Cassel finds that the effects of deflation have been little less serious than upon domestic trade. Of this he says:

"The real disturbance of international trade arises in connection with the movements of the internal values of the different monetary standards. The general uncertainty as to the future of all exchanges caused by these movements is most detrimental to all regular business. The alteration of the rates of exchange, which a process of deflation in one country can bring about in the space of time required for the production in that country of certain commodities for export, may easily mount to such a reduction in the exchange value of the foreign money for which the commodities are sold that the whole transaction becomes a failure from a commercial point of view. True, the money of his own country which the producer receives in exchange has, in the meantime, acquired a correspondingly higher value. But that is generally of no advantage for the producer, who, as a rule, uses this money to pay back debts incurred during the process of production.

"This analysis shows that the real difficulty is, in principle, the same as the difficulty experienced in production for the home market where deflation, by producing a continuous fall of prices, acts as a great drawback to all forms of production that require more than a very short time."

Professor Cassel directs attention to the added burden of the public debt which results from a rise in the value of the purchasing medium, and asserts that stability, no matter at what level, is more to be desired than the present movement of exchanges. He concedes that the desire to restore the old gold standard "is a general and very powerful motive for deflation. This desire involves two different aims. First, it is felt that there is no way out of the present paper money muddle other than the re-establishment of the gold standard. Secondly, it is believed, often without much criticism, that this standard must necessarily be the old gold standard.

"As to the first, it is possibly true that the desire to revert to gold is so general and so strong that every effort, however well founded theoretically, to build up a sound system of money on scientifically regulated paper standards would prove, for the present at least, to be

a failure. But even if this is conceded, it does not by any means follow that the new gold standard must be founded on the same parity with gold as the pre-war standard."

Professor Cassel sees the value of gold practically determined by the value of the dollar, because of the peculiar situation of the market as a result of post-war conditions, and he despairs of the various nations getting back to the old gold standard, certainly within any measurable time, and not, at any rate, until a real stability of the gold market can be obtained. But this, he says, can never be until the gold standard has been restored in several countries and actual gold payments have been resumed in a considerable part of the world. The true basis of a trustworthy gold market "can only be a world-wide international trade carried on on a gold basis. On the other hand, such a restoration of the gold standard is only possible on the condition that the gold market has already acquired some stability. The only way to a solution of a problem which presents such complications seems to lie in a mutual co-operation of the nations, with a view of securing that agreement in policy and that unity of effort which alone promise success where isolated action would necessarily fail. A rational settlement of the question of war debts and their payment is of course a *sine qua non* if any effort to restore stability and reliability to the world's monetary machinery is to be successful. But the co-operation here suggested would be specifically directed at an arrangement with regard to the way in which this machinery should be connected with gold."

Professor Cassel cites the fact that the supply of gold has become insufficient to keep pace with the rate of economic progress "which we used to regard as normal before the war. Assuming that the world is not going to give up this rate of progress, a general restoration of the gold standard, with the consequent progressive development of the monetary demand for

gold, would inevitably result in an increasing scarcity of gold and a continuous rise in its value. This would mean that the world condemned itself, for an unlimited future, to a slow but progressive process of deflation with all its evil effects on enterprise and production as well as on public finance. The program suggested in the first memorandum of a progressive reduction in the monetary demand for gold is, under such circumstances, of very practical importance. In fact, the only reasonable alternative to such a program is the immediate and definite abandonment of the use of gold as a monetary standard."

Accordingly Professor Cassel proposes the fixing of a stable internal value to the monetary standards of different countries, and suggests that the authorities must determine the level at which they will try to stabilize prices, make their determination and their plan public, and adhere rigidly to it, though it will require alternating periods of deflation and inflation, making it essential that the public should be assured of the unity of purpose in the changing phases of action and in the seemingly opposite measures applied.

Professor Cassel acknowledges the difficulties in choosing a level, and suggests that a readjustment of wages will be necessary, since their relative position in different fields of endeavor is not now compatible with a true economic equilibrium. With the nominal level of wages agreed on, the general price level should be fixed at a point where an equilibrium between the price of products and the cost of their production is established with the least disturbance.

The disturbing effects of international war debts and indemnities are recognized by Professor Cassel, who is frankly pessimistic over the outlook in Germany, and feels that among the Allies there must be some reduction of debts if the world is ever to return to anything approaching what was once called "normal."

CHILE MAKES ADVANCES TO PERU

THE Minister of Foreign Affairs of Chile on Dec. 12, 1921, addressed a note to the Peruvian Foreign Office in which was expressed the intention of the Chilean Government to open immediate negotiations with Peru, with the purpose of reaching an agreement on the terms of the additional protocol contemplated in Clause 3 of the Treaty of Ancon, and by which the plebiscite destined to determine the final nationality of Tacna and Arica should be governed.

The Chilean note proposes as a workable basis the very terms advanced by Peru itself during the negotiations of 1912, terms which would have had a chance to succeed at that time had not the Billinghurst Government collapsed in Peru. Should these bases be acceptable to the present Peruvian Government, the plebiscite will be carried out in accordance with the following terms:

1. The plebiscite shall be held under the direction of a commission that shall proceed by majority vote, and shall be composed of five delegates, to wit: Two Chileans, to be appointed by Chile; two Peruvians, to be appointed by Peru, and the President of the Supreme Court of Justice of Chile, who shall preside.
2. Native-born persons in Tacna and Arica, and Chileans and Peruvians who shall have resided three years in the territory, shall vote.
3. All voters must be able to read and write.

The date for the plebiscite was fixed, according to that plan, for the year 1933, but in the present note Chile offers to agree to a nearer date, in fact to effect it "as soon as possible," so as to abolish a cause of international friction and anxiety for the whole of the continent. The Chilean Government is willing to welcome any suggestion on the part of Peru for the purpose of giving the act the highest measure of solemnity and correctness.

PROGRESS OF THE ARMS CONFERENCE

How the British plea to abolish submarines was defeated by France and other nations—Passage of American resolutions curbing submarine methods—No limit placed on aircraft—Poison gas prohibited by a resolution unanimously adopted—Agreement on Chinese tariff—Solving the Shantung controversy

[PERIOD FROM DEC. 20, 1921, TO JAN. 18, 1922]

THE Washington Conference for Limitation of Armament bent its chief efforts during the month under review to the limitation of the submarine and other auxiliary craft, including airplane carriers. The British delegation, through Lord Lee of Fareham and Arthur Balfour, made an unsuccessful onslaught on the submarine as an inhuman agency of warfare. France had made her acceptance of the 1.75 naval ratio for capital ships conditional on a large auxiliary fleet, including 90,000 tons of submarines. Lord Lee seized this opening to make a powerful plea for the complete abolition of that agency of warfare. The report of the American Advisory Committee, combined with the unfavorable attitude of all the other delegations, showed that the British plea had no chance of success. At the session held on Dec. 23 the French and the British delegations came into sharp conflict, Admiral de Bon for France seeking to prove that the submarine had demonstrated its effectiveness as a weapon of defense, Mr. Balfour for Great Britain sustaining Lord Lee's view that it was chiefly an offensive weapon, and essentially inhuman. On Dec. 24 Secretary Hughes proposed to reduce submarine tonnage from 90,000 to 60,000 tons for the United States and Great Britain, and that France, Italy and Japan should retain the status quo, approximately 31,500 tons for France and Japan, and 21,000 for

Italy. This proposal followed another sharp debate between the French and British delegations, in which Mr. Balfour demanded to know the reason for the large submarine fleet insisted on by France. Though all the delegations maintained their view that the submarine should be retained, the result of the three days' debate was felt to have been a moral victory for Great Britain, the arguments of whose chief delegates, especially Mr. Balfour, made a deep impression on all, especially on the American delegation. All hopes of eliminating the submarine, or even limiting its tonnage ratio, came to an end on Dec. 28, when France flatly refused a quota of less than 330,000 tons for auxiliary craft, and less than 90,000 tons for submarines. The announcement of this decision precipitated another clash between the French and British delegations, Mr. Balfour and M. Sarraut academically discussing the possibility of future war between Great Britain and France, and Mr. Balfour making it clear that if France insisted on this large submarine force, Great Britain would accept no limitation for craft adapted to fight the submarine. M. Sarraut made a spirited defense of France, and this first phase of the submarine debate here reached its logical end.

At this same session of Dec. 28, however, a new phase began with Elihu Root's presentation of a series of resolutions formally condemning

the illegal use of the submarine as a weapon of naval warfare. The original proposals restated the existing international law regarding attacks on merchant vessels, declared that submarines were not exempt therefrom, invited all other powers to accept these principles, and then went further in declaring that as it was virtually impossible for submarines in making such attacks to observe the laws of humanity above laid down, their use should be prohibited, and to this end, the five conference nations assented to such prohibition, and invited all other nations to adhere thereto. A further resolution urged that all submarine commanders who violated these rules should be tried for piracy. These proposals led to an animated debate which ended only on Jan. 6 with the passage of the resolutions in an extended form—one of the most momentous results achieved by the conference, the effect of which was to give the British delegation a virtual victory after all in its attempt to outlaw the submarine.

Total tonnage of auxiliary ships could not be limited, owing to the attitude of France, but limits were fixed on individual tonnage and armament, including aircraft carriers. A total tonnage ratio was finally fixed for these last vessels. The conference, basing itself on an exhaustive technical report, rejected any attempt to limit aircraft (Jan. 7). The use of poison gas was prohibited at this same session—an action considered almost as momentous as the passing of the Root submarine resolutions.

The Committee on the Far East resumed its discussion on China on Jan. 5, and reached decisions to raise the Chinese customs tariff and to take steps devised ultimately to lead to the withdrawal of foreign troops from Chinese territory. The special negotiations between the Chinese and Japanese delegates over Shantung continued, important agreements being in sight on Jan. 18.

The official proceedings of the conference, from Dec. 22 to the time

when these pages went to press, were as follows:

THE SUBMARINE DEBATE

The Committee of the Whole on Limitation of Armament and the Sub-committee on the Limitation of Naval Armaments held their second joint meeting on Dec. 22. At a previous session, Dec. 20 [see January **CURRENT HISTORY**], the naval ratio on capital ships had been provisionally settled by the consent of France to a proportion of 1.75 for France, as compared with the 5-5-3 ratio for the United States, Great Britain and Japan. The correspondence between Secretary Hughes and Premier Briand, however, showed that France's assent was contingent on securing a strong auxiliary fleet. This brought the submarine issue prominently to the fore, and Great Britain now seized the opportunity to urge that the use of submarines be entirely abandoned, or, at all events, substan-

(Photo International)

LORD LEE OF FAREHAM
First Lord of the British Admiralty, who
made a memorable speech at Washington
on behalf of abolishing the submarine

during the war showed how expensive the submarine might prove. Great Britain desired not only a decrease of naval armament, but a decrease of expenditure. What would Great Britain gain if the old competition were transferred to submarines? Not much, as the submarine menaced Britain's very life and existence. The submarine was essentially an offensive weapon, not a by-product of any industry, such as poison gas or air bombs, with which it had proved impossible to deal. It was a weapon of murder and piracy and the drowning of non-combatants. It had been used to sink passenger ships, cargo ships and hospital ships. It was technically so constructed that it could not even rescue women and children from sinking ships. That was why he hoped it would be abolished. For defense it was inefficient, and its advantages were outweighed by its disadvantages. It would be a great disappointment if the British delegates failed to persuade this conference to get rid of this weapon, which involved so much evil to peoples who live on or by the sea.

Great Britain, to prove her sincerity, was ready to scrap her whole submarine navy, the largest and most efficient in the world, composed of 100 vessels of 80,000 tons, provided the other nations would do the same. He believed this was a greater contribution to the cause of humanity than even the

limitation of capital ships. It was, however, useless to be blind to the facts, and he realized that he could hardly hope to convince all the powers represented at the conference, though he believed that eventually all civilized nations would accept the British view. In any event, the British delegates did not intend to allow failure of submarine abolition to affect the settlement in regard to capital ships, and they stood ready to welcome any suggestions for the reduction and restriction of submarines—especially from their French colleagues—in case submarines were continued.

REPLIES OF OTHER DELEGATES

Secretary Hughes, following the conclusion of Lord Lee's address, rose to make a statement of correction. The figures supplied by the American naval experts, he said, and upon which the American proposal was based, concerning submarine tonnage built and building, did not appear to coincide with those referred to by Lord Lee. The tonnage from these American figures stood thus:

	Tons.
United States	95,000
Great Britain	82,464
France	42,850
Italy	20,228
Japan	31,400

The United States, therefore, he pointed out, had 95,000 tons, which it was prepared to reduce to 90,000, as set forth in the American proposals. The reduction was slight, but it was a reduction. It was not the intention of the United States to increase, but to reduce. [Later revised figures given by Secretary Hughes at the session of Dec. 24 estimated approximate submarine tonnage for France at 31,500; for Japan at 31,500, and for Italy at a little less than 21,000 tons.]

M. Sarraut, on behalf of France, joined with the other delegations in expressing profound disapproval of the barbarous use which was made of submarines in the late war. Both the Peace Conference and the League of Nations, however, he said, had discussed the question of submarines, and public opinion had showed itself favorable to their continuance. The French delegation believed the submarine was essentially a defensive

(Times Wide World Photos)

V. S. SRINIVASA SASTRI

chief delegate from British India

weapon, especially adapted to nations scantily supplied with capital ships. It could not be considered as a dominating weapon; it was undeniable that it could be used under honorable conditions, and it was certain that these conditions would be examined, discussed and formulated in accord with the lessons of the late war. The French delegation thus felt called upon to approve the use of the submarine under these restrictions. M. Sarraut pointed out that in view of the technical considerations governing their use at sea, it would be necessary for a navy to possess a number of them proportionate to the needs of national defense. He also advocated the use of submarines of the larger type, which he declared to be far more fitted for observing the law of humanity, and further declared that submarines of a large cruising radius were necessary to assure the defense of distant colonies and to maintain the long line of communications which such possessions necessitated.

Signor Schanzer, head of the Italian delegation, though recognizing the humanitarian considerations urged by Lord Lee, stated that Italy did not share the British view regarding the technical efficiency of submarines, and stressed the importance of this weapon to Italy, with its long coast line and sea communications, and the proximity of many of its most important centres to the coast. He also believed that the conference could not settle the question of submarines, in view of the absence of other powers. Italy, therefore, he said, was not in a position to associate itself with the proposal to abolish submarines, and the Italian delegation was not authorized to do so.

Mr. Hanihara said that Japan be-

The beginning of European reconstruction

lieved a legitimate use of submarines was justifiable for the purposes of national defense, but was wholly opposed to their abuse, to guard against which he proposed a modification of the international rules of war so as to embody specific prohibitions.

POINTS OF AGREEMENT

Secretary Hughes rose as Chairman to say that all could not fail to be deeply impressed by the statement made by Lord Lee on submarines. One clear and definite point of view emerged, he said, on which all the delegates present were agreed: there was no disposition to tolerate the illegal use of the submarine, and all were ready to prepare and announce to the world a statement of the intentions of the nations represented at the conference that submarines must observe the well-established principles of international law regarding visit and search in attacks on merchant ships. Mr. Hughes pointed out that even if the delegates were will-

down for United States naval vessels when exercising the right of visit and search, make no exception in favor of the submarine. In the early part of the World War the German submarines exercised this right of visit and search in the same manner as surface vessels. When sunk, the papers and crew of merchant ships so visited were saved. Later, when the cases came up in a German prize court sitting on appeal at Berlin, the responsibility of the German Government was often acknowledged and indemnities paid.

When unlimited submarine warfare commenced, in some cases where necessary evidence was produced by the owners making claim in the prize court, the court decided that the matter was outside the pale of the prize regulations, though it did not deny the justice of the claim.

Assuming that a merchant ship may be halted by a submarine in a legitimate fashion, it becomes difficult, because of limited personnel, for the submarine to complete the inspection, place a prize crew on board and bring her into port. It is also difficult for her to take the passengers and crew of a large prize on board should circumstances warrant sinking the vessel. However, these remarks are applicable to small surface craft as well.

During the World War, on account of the vulnerability of the submarine and on account of the probability of its sinking the vessels it captured, the tendency was for all merchant ships (including neutrals) to arm themselves against the submarine. Such action greatly hampers the activity of the submarine and tends toward illegal acts both by the merchant vessels and by the submarine.

In other words, the general tendency of submarine warfare against commerce, even though starting according to accepted rules, was sharply toward warfare unlimited by international law or any humanitarian rules. This was because the vulnerability of the submarine led the Germans to assume and declare she was entitled to special exemptions from the accepted rules of warfare governing surface craft. The merchant ship sank the submarine if it came near enough; the submarine sought and destroyed the merchant ship without even a knowledge of nationality or guilt.

GROWTH OF LAWLESS METHODS

Submarines were largely responsible for the extensive arming of merchant vessels, neutral and belligerent, during the World War. The average merchant vessel cannot hope to arm effectively against enemy surface combatant vessels, and as a rule submits to visit and search without resistance. Prospects of saving the ship and certainty of safety to personnel have caused them to accept as the lesser risk the visit of belligerent surface vessels.

When, however, as in the World War, they met a belligerent submarine, with a strong probability of being sunk by that submarine, the law of self-preservation operated and the merchant ship resisted by every means in its power. Defensive armament was almost sure to be used offensively in an attempt to strike a first blow. The next step was for each to endeavor to sink the other on sight.

War on commerce by surface combatant craft causes change of ownership of merchant vessels only, provided the surface craft does not sink these ships, but these merchant vessels for the most part remain in service. They are not destroyed. The world does not lose them. The object of war on commerce is not to destroy shipping, but to deprive the enemy of its use. Submarine warfare on commerce, if unlimited in character, injures the enemy and greatly injures the world as well. The world is so highly organized and so dependent on ocean transportation that shipping is essential to livelihood. Without it vast populations would starve.

At present, when war breaks out, belligerent vessels tend to transfer to neutral flags and also to fly false flags. This hampers lawful warfare by submarines, as, owing to their great difficulty in making the proper visit and search, it is thus impossible for them to prevent belligerent commerce from going forward.

The net results of unlimited submarine

[American Cartoon]

—New York Tribune

We hope we may be excused if we just happen to remember an important engagement

warfare in the World War were (a) flagrant violations of international law, (b) destruction of an enormous amount of wealth, (c) unnecessary loss of many innocent lives and (d) to draw into the war many neutrals.

Unlimited submarine warfare should be outlawed. Laws should be drawn up prescribing the methods of procedure of submarines against merchant vessels, both neutral and belligerent. These rules should accord with the rules observed by surface craft. Laws should also be made which prohibit the use of false flags and offensive arming of merchant vessels. The use of false flags has already ceased in land warfare.

No one can prevent an enemy from running "amuck," but immediately he does he outlaws himself and invites sure defeat by bringing down the wrath of the world upon his head. If the submarine is required to operate under the same rule as combatant surface vessels, no objection can be raised as to its use against merchant vessels. The individual captains of submarines are no more likely to violate instructions from their Government upon this point than are captains of any other type of ship acting independently.

SUBMARINES AND WARSHIPS

Against enemy men-of-war the submarine may be likened to the advance guard on land which hides in a tree or uses under-

brush to conceal itself. If the infantry in its advance encounters an ambush, it suffers greatly, even if it is not totally annihilated. However, an ambush is entirely legitimate.

In the same fashion a submarine strikes the advancing enemy from concealment, and no nation cries out against this form of attack as illegal. Its navy simply becomes more vigilant, moves faster and uses its surface scouts to protect itself.

The submarine carries the same weapons as surface vessels, i. e., torpedoes, mines and guns. There is no prohibition of their use on surface craft, and there can be none on submarines. Submarines are particularly well adapted to use mines and torpedoes. They can approach to the desired spot without being seen, lay their mines or discharge their torpedoes and make their escape.

The best defense against them is eternal vigilance and high speed. This causes added fatigue to the personnel and greater wear to the machinery. The continual menace of submarines in the vicinity may so wear down a fleet that when it meets the enemy it will be so exhausted as to make its defeat a simple matter.

The submarine as a man-of-war has a very vital part to play. It has come to stay. It may strike without warning against combatant vessels, as surface ships may do also, but it must be required to observe the prescribed rules of surface craft when opposing merchantmen as at other times.

As a scout the submarine has great possibilities. It is the one type of vessel able to proceed unsupported into distant enemy waters and maintain itself to observe and report enemy movements. At present its principal handicaps are poor habitability and lack of radio power to transmit its information. However, these may be overcome in some degree in the future. Here, again, the submarine has come to stay. It has great value, a legitimate use, and no nation can deny its employment in this fashion.

[Here followed a statement of the proposal of the United States for limitation of naval armament, so far as submarines are concerned, as made at the opening session of the conference.] The report then continued:

A nation possessing a great merchant marine protected by a strong surface navy naturally does not desire the added threat of submarine warfare brought against it. This is particularly the case if that nation gains its livelihood through overseas commerce. If the surface navy of such a nation were required to leave its home waters, it would be greatly to its advantage if the submarine threat were removed. This could be accomplished by limiting the size of the submarine so that it would be restricted to defensive operation in its own home waters.

On the other hand, if a nation has not a large merchant marine, but is dependent

[American Cartoon]

—Rochester Democrat and Chronicle
Something to howl about

upon sea-borne commerce from territory close at hand, it would be necessary to carry war to her. It would be very natural for that nation to desire a large submarine force to attack the approaches on the sea and to attack troop transports, supply ships, &c., of the enemy. Control of the surface of the sea only by the attacking power would not eliminate it from constant exposure and loss by submarine attacks.

ATTITUDE OF UNITED STATES

The United States would never desire its navy to undertake unlimited submarine warfare. In fact, the spirit of fair play of the people would bring about the downfall of the Administration which attempted to sanction its use. However, submarines acting legitimately from bases in our distant possessions would harass and greatly disturb an enemy attempting operations against them. They might even delay the fall of these possessions until our fleet could assemble and commence major operations.

It will be impossible for our fleet to protect our two long coast lines properly at all times. Submarines located at bases along both coasts will be useful as scouts and to attack any enemy who should desire to make raids on exposed positions.

The submarine is particularly an instrument of weak naval powers. The business of the world is carried on upon the surface of the sea. Any navy which is dominant on the surface prefers to rely on that superiority, while navies comparatively weak may but threaten that dominance by developing a new form of attack to attain success through surprise. Hence submarines have offered and secured advantages until the method of successful counter-attack has been developed.

The United States Navy lacks a proper number of cruisers. The few we have would be unable to cover the necessary area to obtain information. Submarines could greatly assist them, as they cannot be driven in by enemy scouts.

The cost per annum of maintaining 100,000 tons of submarines, fully manned and ready, is about thirty million dollars. For the work which will be required of them in an emergency, this cost is small when taken in connection with the entire navy.

The retention of a large submarine force may at some future time result in the United States holding its outlying possessions. If these colonies once fall, the expenditure of men necessary to recapture them will be tremendous and may result in a drawn war which would really be a United States defeat. The United States needs a large submarine force to protect its interests.

The committee is therefore of the opinion that unlimited warfare by submarines on commerce should be outlawed. The right of visit and search must be exercised by submarines under the same rules as for

[American Cartoon]

Not exactly our idea of the dove and the olive branch

surface vessels. It does not approve limitation in size of submarines.

After reading the Advisory Committee's report, Secretary Hughes closed the session with a short statement to the effect that the American delegation would carefully consider the arguments set forth by the British delegation, and would consult American experts.

The report of the Advisory Committee was attacked by the National Council for Limitation of Armament on Dec. 27 as not correctly representing American public opinion regarding submarines. Frederick J. Libby, Executive Secretary of the Council, appealed to the Advisory Committee on that date to revise its opinion that the submarine was a necessary weapon of defense for America, but that its use in violation of recognized rules of visit and search should be outlawed. The appeal asked the committee to reconvene, and to take up the question again in the light of public opinion as recorded by the Subcommittee on Public Information of

[American Cartoon]

The foursome

the Advisory Committee since the Advisory Committee's report was submitted. Mr. Libby declared in his letter that "the statement made by Secretary Hughes before the conference regarding 'the widespread sentiment against the submarine in the United States,' bears out the conviction that your report is not in harmony with opinion in America today, which we are sure you wish faithfully to represent." Hundreds of thousands of names and opinions, it was made known, had been registered with the Subcommittee on Information referred to in favor of the abolition of undersea craft.

FRANCE REJECTS BRITAIN'S PLEA

The debate on submarines was resumed at the third joint session of the two committees, Dec. 23. At this session the difference existing between the French and British views came out into sharp relief. Admiral

de Bon, speaking for the French Government, combated the arguments of Lord Lee as set forth at the preceding session, and presented to the conference, sitting as a committee of the whole, an elaborate statement of the French view in favor of retaining the submarine as a defensive weapon. Briefly stated, his argument was that the submarine had proved its effectiveness as a weapon of defense against warships and the protection of coasts, that it had a right to figure as an integral part of naval forces, that the Germans had abused it during the war, and that the 90,000 tons proposed by the American plan was the minimum submarine strength that any important naval power should have. He advocated, therefore, that this quota be assigned to France.

Mr. Balfour made a strong argument in rebuttal of Admiral de Bon's views, and in support of Lord Lee, reiterating the belief of the British delegation that the suppression of the submarine would be in the national interests of both France and Italy. Signor Schanzer for Italy declared that the arguments employed by the British delegates only justified the Italian position favoring the retention of submarines as a protection for Italy's coasts. Neither the United States nor Japan participated in the debate at this session. Following is a summary of the official report of the session:

Admiral de Bon began the argument for France by declaring that the statement by Lord Lee favoring the abolition of the submarine had presented the most forcible arguments that could be brought to bear upon this side of the question. On the other hand, he pointed out that the report of the American Advisory Committee, as read by Secretary Hughes, had presented arguments of incontestable value for the reverse of the British view and in favor of the preservation of the submarine under due regulation. It would seem, he said, that these two statements had exhausted all arguments that could be used either pro or contra. There were, however, certain differences of opinion regarding the various arguments which it seemed desirable to clarify before the committee.

The first of these was the question of the submarine's effectiveness both as a weapon of offense and defense. During

the war France had lost three battleships and five cruisers and had had several other ships torpedoed, incurring a total loss of 130,000 tons. Great Britain and Italy had also lost a certain number of battleships. Germany had not maintained her coasts intact, moreover, merely by the barrier of mines with which those coasts had been protected. These could have been crossed by any force supplied with mine sweepers had not a force of submarines rendered approach really dangerous. Submarines in the Adriatic, also, had proved one of the most powerful means of action by the enemy. The Allies had felt submarine power in the Dardanelles and during the long months at Gallipoli.

As a means of attack against warships, as well as for scouting and wireless purposes and a means of general weakening of enemy morale, said Admiral de Bon, the submarine had proved its worth. It had showed itself especially effective against the merchant marine. Germany's results in this direction were known to all, and had struck terror to all peoples. But what had inspired this terror was not the fact that

German submarines had attacked merchant shipping; it was that they had violated neutrality, had attacked steamers loaded with noncombatants, even transports bearing the wounded, flying the Red Cross flag. It had always been admissible to attack an enemy's merchant marine as one of the most effective means of seriously crippling one's adversary, and he believed it would always be considered legitimate. Would it not be less cruel and wasteful of human life than direct military force, if one might bring one's adversaries to their knees through use of the submarine? This could be done especially in the blockade, which is a legitimate practice, the effects of which would not be confined to the submarine.

CURBING INHUMAN METHODS

The Admiral then briefly reviewed the origin and motives of the inhuman practices adopted by Germany in her unlimited submarine war, to point his view that if the use of the submarine against enemy shipping were allowed it would have to be confined within certain limits of humanity.

The Germans, by attacking neutral ships and torpedoing passenger ships and hospital ships without warning, had lost the respect of the world for the submarine. The speaker then pointed out how the Germans could have waged this warfare differently, giving warning to a vessel that it would be sunk, bringing it to a place of safety, removing the crew, and not sinking the ship until all these humane preliminaries had been observed. The submarines would not have been exposed to any greater risks by adopting this procedure than the frigate and corsairs of other days.

The underseas craft, in short, must be curbed. A proper set of rules should be drawn up with this object in view and adopted when the rules of international law in application to all life at sea in time of war are made subject to revision. Even under these limitations, submarine warfare could be very effective. Lord Lee had recalled the hours of anguish lived through when Great Britain, and at times France, had been threatened with deprivation of the supplies on which the very life of the nation depended. But this was submarine warfare at its inhumane worst. Within proper limitations, it was legitimate and could be very important. Admiral de Bon then took up the moral argument urged by Lord Lee and combated the view that submarine commanders were bound to in-

[American Cartoon]

—Rochester Democrat and Chronicle
THE CHINESE PUZZLE

fringe the code of humanity in the heat of passions engendered by war. He did not believe that any Government would risk hereafter incurring such a responsibility.

A submarine was useful for fighting war fleets, for fighting merchant marines. It was the opinion of the French delegation that it was especially the weapon of nations not possessing a large navy. Its cheapness made it possible to build a large number at a cost far below that of capital ships. As for the cost of maintaining a counter-submarine fleet referred to by Lord Lee, Admiral de Bon emphasized the fact that France could utilize a considerable number of elements drawn from both the merchant marine and fishing vessels. Defensive measures might thus be considerably reduced. Furthermore, this was a general argument which might be applied to any other naval weapon. In fact, it seemed that henceforth the submarine had the right to figure as an integral part of naval force. Though at first, as with every new weapon, it had come upon its adversaries when they were without sufficient defense, and thus had caused great damage, from now on, as Lord Lee had emphasized, it would be greatly limited, as the risks of its own destruction had greatly increased. The Admiral did not agree that its activities had become ineffective, but it was possible to think that the struggle against the submarine might now be carried on under conditions comparable to that of any action between warships. There was no doubt that further great progress would be made in two directions—in the submarine's power of attack and in the efficiency of methods of combating its operations. The progress of human ingenuity could not be stopped. The Admiral drew a vivid picture of the possibilities of the submarine as an agent of attack and protection in naval warfare of the future and intimated that the submarine had come to stay.

The French spokesman then took up the question of what minimum of submarine tonnage was necessary. The French figures on the number of U-boats kept in service by Germany out of her fleet of 320 underseas vessels were slightly different from those presented by Lord Lee. Not ten, but fifteen or twenty, the French figures showed, were kept available at one time. The American Advisory Committee had estimated 90,000 tons as necessary for the United States

and Great Britain. This would represent about ninety submarines of an average of 1,000 tons, and thus some fifteen or twenty for continuous action. This seemed the minimum possible for any nation desiring to make use of this weapon. The Admiral ended by declaring that he would oppose any attempt to reduce this minimum. In his opinion, it was the absolute minimum for all navies desiring to use a submarine force.

MR. BALFOUR'S REPLY

Mr. Balfour, head of the British delegation, replied to the French argument for continuation of the submarine as a war weapon. He combated the French view that the destruction of commerce by submarines was legitimate, and cited the findings of the Advisory Committee in favor of the British view that such an employment of the submarine was inhumane. It was, he intimated, bound

[Austrian Cartoon]

—Die Musketee, Vienna

FRANCE SOWING HATRED

"All French communications to Germany and Austria bear this postage stamp"

to be inhumane. Mr. Balfour said at this point:

Let me ask upon this question of destruction of commerce on the high seas by means of submarines, is there any man who has listened to this debate, is there any man who knows what occurred in the late war, is there any man who knows what must occur in the course of any future war, who doubts that if submarines are sent on their dangerous and difficult mission on the high seas—one of the most difficult and most dangerous as well as one of the most disagreeable tasks which can be imposed upon a sailor—it is for something more important than the remote chance of destroying some well guarded and efficient ship of war, and that if they are once let loose to deal with merchantmen it is incredible that in the stress of war their powers will not be abused in the future as they have been so grossly abused in the past?

Mr. Balfour did not deny the other useful objects which could be attained through the submarine, its ability to attack warships, its serviceability for scouting, &c. The main object, however, he declared, was clear—the destruction of commerce—and he made clear the attitude of the British delegation on that point. He further declared that Admiral de Bon had exaggerated the utility of submarines for genuine war purposes. He declared of his own personal knowledge that Germany had not enjoyed immunity for her coasts during the war because of her possession of submarines. He further did not believe that submarines were a valid defense against any sudden attack by a ship of war on an unprotected coast. They had not protected the English coast against sudden attacks by German ships sent swiftly across the North Sea. They had not protected the German forces at Zeebrugge against bombardment by British ships. Their effect in the Dardanelles had been insignificant. The real issue, however, he defined as follows:

The question before us now is whether you are going to encourage an instrument of war which, if it be encouraged—if, indeed, permitted at all—will undoubtedly be used in the illegitimate destruction of commerce.

Who, asked Mr. Balfour, is going

to be injured by that? Not Japan, not the United States, self-contained and independent of imports. But what of Italy, which for the purposes of this debate counted almost as an island. He recalled the extreme difficulty experienced by the Allies in the war to supply Italy even with the minimum of coal necessary to keep her arsenals and manufactories going. He doubted if Italy could feed herself, supply herself, or continue as an efficient fighting force if she were really blockaded. The continuance of the submarine would put it in the power of every nation to make itself a formidable enemy. Italy had five maritime neighbors in the Mediterranean. The speaker hoped that eternal peace would reign in those waters, but the cold and calculating point of view of a member of a general staff would lead him to say to Italy: "You have five neighbors, each one of which can, if it so desires, blockade your coast and make your position untenable, without having a single surface ship of war at its disposal."

And what was the case of France? France was nearly self-supporting in point of food, with a great land frontier giving her direct access to all the great markets of the world. She has a position of great military security from the side of the sea. But from the land side M. Briand had pointed out to the conference the existing military danger, against which France required a large army, and might even, in the future, again require assistance from overseas, across the Atlantic or across the Channel. This new French argument, "this encouragement of submarines, this passionate declaration that it would be almost criminal to interfere with the growth of this promising, though at present infantile, weapon of war—how is that going to be met?" Admiral de Bon had said the small craft necessary to deal with submarines could be drawn from merchant ships and from the fishing population. But during the war it was Great Britain, not France, that had furnished the

[American Cartoon]

SHE NEEDS THE SAME REMEDY

bulk of such vessels which finally broke the U-boat blockade. "It was the British craft that did it, not the Italian or French craft," Mr. Balfour declared. He gave the figures to prove his contention: France, 257 ships; Italy, 288 ships; Great Britain, 3,676 ships.

As for Admiral de Bon's declaration that you could not stop the progress of humanity, Mr. Balfour said:

I confess that in so far as the progress of humanity consists in inventing new methods of warfare, I would stop it tomorrow if I could, and this conference cannot set itself to a better work than to stop it as far as it can be stopped. I believe it can be stopped in the matter of submarines, if we all decide to do it. I believe the conscience of mankind would help us. I believe that public opinion would be on our side.

But if we cannot do it, then let us thoroughly realize that permission for submarines is not only an increase to the burdens of the taxpaying world; it not only adds to the cost of the navies, at all events in countries which are threatened by other peoples' submarines; it adds greatly to the cost of those navies by the non-military organization, so to speak, which it requires to have ready, and it adds largely to the number of States which can potentially and without any cost in battleships, and without any huge estimates add themselves not to the list of nations anxious merely for self-

defense, but to the list of those nations who wish to supplement their desire for an aggressive policy upon land by adding to their power on the sea.

Mr. Balfour closed his argument with a reassertion that the motive of Great Britain in proposing the abolition of the submarine was not one of fear. He did not underestimate the difficulties his country had had to struggle against to overcome the submarine menace, but the necessity had brought its own remedy, and England had shown she could prevent her own destruction. It was England's great naval population, its great fishing population, that had ultimately brought protection. No other country could provide that defense against submarines. It was not lodged elsewhere. Britain would have to provide it for France and for Italy under similar circumstances. The position of England was strong. The submarine menace would increase her national expenditure, but it would not imperil her security. He did not know whether all those at that table could speak with equal confidence of their position.

SCHANZER SPEAKS FOR ITALY

Signor Schanzer, head of the Italian delegation, began his reply by expressing his country's gratitude for England's efficient aid during the war. He also wished to express his thanks for Mr. Balfour's important observations on Italy's vulnerability to blockade from the Mediterranean and to offensive action by as many as five maritime neighbors. Nothing he could himself have said could justify better the position that the Italian delegation had assumed in this debate. Mr. Balfour had said submarines constitute no real defense for coasts; that instead of guaranteeing the security of supplies to a country dependent on the sea, they endanger those supplies, and that they could be used by hostile neighbors in blockading her shores. There was here, said Signor Schanzer, a substantial difference in expert opinion. The au-

thority of Lord Lee and Mr. Balfour was undoubtedly great, but there were technical experts of great authority who insisted on the necessity of maintaining the submarine as a defensive weapon, and this opinion was shared by the Italian experts and the Italian Government.

Italy was ready to study the whole subject further, but Signor Schanzer made plain his belief that it was impossible to decide on the abolition of the submarine at present, inasmuch as many of the States that could avail themselves of this dangerous weapon were not represented in the conference. If such a decision were taken, he pointed out, the nations participating would be placing themselves in a position of manifest inferiority in respect to the States not represented. The Italian delegation believed, therefore, that the problem must be examined at another and wider conference. For the present the best course would be to follow the spirit of the American proposal, and to limit submarines to the extent necessary for a purely defensive policy.

Admiral de Bon rose to say, in partial reply to Mr. Balfour, that he had never wished to support the theory, which was neither his Government's nor his own, that submarines had the right to destroy merchant vessels after having saved the crews. Mr. Balfour declared in turn that he had no desire to misrepresent Admiral de Bon, and that what he had attempted to show was that if the submarine was to play the great role in future wars which the Admiral had suggested, it could do so only by resort to extreme methods. It was futile, he declared, to suppose that submarines would make a practice of stopping merchant ships and placing prize crews on board to take them into port.

The session then adjourned, with the submarine debate still unfinished.

NEW PHASE OF THE DEBATE

The fourth joint session of the two naval committees, which occurred on the morning of Dec. 24, was marked

by new proposals made by Secretary Hughes, the Chairman, regarding the limit of submarines acceptable to the United States. The compromise proposed was briefly this: The maximum tonnage for the United States and Great Britain was to be reduced from 90,000 to 60,000 tons; the measure for Japan, France and Italy was to remain roughly at the status quo, estimated for Japan at 31,500 tons, for France at 31,500 tons, and for Italy at 21,000 tons. The British delegation accepted the reduction at the afternoon session, but the Japanese, French and Italian delegations declined to accept the quota allowed to their respective Governments, and no definite result was reached. The Japanese representatives refused to consider any reduction from the 5-5-3 ratio already agreed upon, declaring that the 54,000 tonnage under this ratio was the minimum consistent with Japan's defensive needs. The French declared that the new tonnage assigned to France was below the minimum considered necessary, and that they must await advices from the home Government before any decision was reached. The Italians, on their part, following their announced policy of parity, declined to accept a submarine tonnage less than that allotted to France.

The debate on the British proposal of abolition in the morning session began with another French statement by M. Sarraut. He reiterated the French Government's desire for the retention of the submarine, and pointed out the great danger that nations not represented in the conference might misconstrue any attempt to abolish, and to force them to abolish, a naval weapon considered by them as a valuable means of national defense. The motives of certain members of the conference, particularly those still possessing a large naval armament in capital ships, he pointed out, were more than likely to be impugned. These outside nations could neither be persuaded nor coerced, as had been seen during the

Peace Conference at Paris and in the League of Nations, and it was wholly undesirable that any of the outside nations should gain the impression that they were being dictated to in matters concerning their own sovereignty and theories of defense. Let the tonnage in capital ships be limited—that was well—but as to a defensive navy, each country best knew its own needs.

Mr. Balfour presented again the British side of the argument. His words made a deep impression on all the delegates, although most of them were opposed to the solution which he advocated. Mr. Balfour answered M. Sarraut's arguments in detail. France, he said, having put an end to all chance of even discussing disarmament by land, "now proceeds to develop her sea policy, and her sea policy embraces the creation of a vast submarine fleet." Suppose that the French fears of new German aggression were realized, he said, and that some 60,000,000 or 70,000,000 Germans were supplied with submarines to wage a naval war on France. What could France do to cope with this new situation? No number of submarines—which were, he maintained, a weapon of offense, not of defense—could help her to protect her own merchant ships or the transports of her neighbors and friends. Her only protection would be in that large maritime population of England already referred to, and France would be dependent on England's anti-submarine craft for ultimate protection. How was that consistent with the large fleet of submarines planned by France, which, from a strategical and geographical point of view, might seem directed against no one more than Great Britain herself?

Mr. Balfour knew, he said, that M. Sarraut, in his expressions of friendship for Great Britain, had uttered not one word in excess of the truth. He added, however:

I know it represents what comes from his heart, but no present expression of goodwill, however sincere, can control the future. We must take account of facts, and when

we try to combine the military policy announced by M. Briand with the naval policy announced by Admiral de Bon we cannot fail to see that there is a naval and a military scheme strangely inherent and inconsistent. Men will inevitably ask themselves, "What is the ultimate end underlying all that is being done? Against whom is this submarine fleet being built? What purpose is it to serve? What danger to France is it intended to guard against?" I know of no satisfactory answer to such questions.

The British spokesman also combated the view of M. Sarraut regarding the outside nations. The last thing such smaller powers would do, he declared, was to resent an international arrangement by which the use of submarine fleets was forbidden, or to say that this was an example of "British arrogance, pride and tyranny." If they considered the influence of Great Britain at all, they knew that that influence had always been exercised on the side of liberty. He certainly would not be prevented from doing his best to bring about this great moral reform in the use of weapons of war by fear of "even the bitterest and most unscrupulous calumny."

M. Sarraut in rebuttal pointed out the connection between France's land armaments and her need for submarines, which Mr. Balfour had confessed himself unable to understand. Both were for defense. France was compelled to make a double effort, both military and naval. France had no proud aspirations for naval power; this was proved by her acceptance of the capital ship tonnage which had been allotted to her. She had asked for submarines. For what purpose—to attack her neighbors? Such a suspicion did not merit a reply. France was confronted by a situation of fact. Besides her continental coastlines she possessed also a colonial domain whose ramifications are spread all over the world. She must have the weapon needed to defend those possessions and the safety of her transports and lines of communication. He had had absolutely no desire to impugn the motives of Great Britain, and had only warned against the dan-

ger for all those assembled of any suspicion of having attempted to reduce to vassalage those powers, large or small, which had not participated in the conference. He admitted that the might and safety of Britain constituted one of the essential safeguards of the peace of the world and of the progress of civilization. Great Britain herself, by her course in the war, had largely contributed to the overthrow of any hegemony by any nation in the world. But the susceptibilities of certain peoples must nevertheless be respected. The small ones also had the right to express their views and to make their voices heard. The creation of a will to peace in the world can be based only on confidence and a spirit of justice. This is the deep conviction which must be imparted to all nations, but they must be persuaded of this, not by having it forced on them, but by letting it penetrate gently into their minds.

SECRETARY HUGHES'S STATEMENT

Secretary Hughes followed M. Sarraut. It was clear, he said, that a decision could not be reached on the matter just discussed. He added, however, that the arguments set forth by Mr. Balfour were deeply impressive, both because of the spirit with which they were permeated, and because of "the manifest desire to present and enforce, against apparently hopeless odds, a proposition which was deemed important for the maintenance of the peace of the world and for such an adjustment of weapons of war as might favor the maintenance of conditions of peace." He wished to express his profound sympathy with what Mr. Balfour and Lord Lee had said; their arguments had derived force not only from humanitarian sentiment, not only from abhorrence of the atrocities of submarine warfare, but also because they were buttressed by facts drawn from Great Britain's own experience. The strong American sentiment against the submarine—the feeling that as

an offensive weapon it should be outlawed—would be powerfully reinforced by what had been said. The words of Mr. Balfour and Lord Lee would carry far beyond this conference, and might be ultimately successful in inducing the nations to forego the use of a weapon which, as Mr. Balfour had urged, was valuable only as an aggressive weapon, and then only in the form of aggression condemned by humanity and international law. President Harding, said Mr. Hughes, had been equally impressed by the strength of the arguments for abolition, and the United States was ready to give the problem its most serious consideration when it became feasible to take the matter up again.

What could now be done? The powers participating in the conference were bound, he believed, not to use the conference "to impinge upon the full liberty of discussion of those desiring to be heard in a matter relating to their defense." Full discussion, however, could not but be useful; and he hoped that this discussion would lead the five powers to agree to a denunciation of the illegal methods of submarine warfare and in favor of the application of the principles of international law. The moment had now come for an expression of views on concrete proposals for limitation of submarines.

The only response to this invitation made at this time was by Mr. Balfour, who voiced his thanks, and those of the whole British delegation, for the words that Mr. Hughes had spoken. "We regard your utterance," he said, "as a great step forward, and we do not doubt that it will find an echo in all parts of the civilized world, and will greatly promote the cause we have so much at heart." He then asked to have placed upon the record the views of the entire British delegation, which would take the following shape:

The British Empire delegation desires formally to place on record its opinion that the use of submarines, while of small value for defensive purposes, leads inevitably to acts which are inconsistent with the laws of

war and the dictates of humanity, and the delegation desires that united action should be taken by all nations to forbid their maintenance, construction or employment.

THE NEW AMERICAN PROPOSAL

It was at this point that Chairman Hughes presented to the joint committees the new American proposals for the relative ratios for submarine strength. Instead of the 90,400 tons allowed as a maximum under the original plan, the United States, he said, was now ready to accept a maximum of 60,000 tons, thus scrapping 35,000 tons of the existing submarine tonnage, on the understanding that Great Britain should also accept 60,000 tons for her maximum tonnage, and scrap 22,464 tons—her present amount of submarine tonnage being 82,464 tons, according to the American figures; and that Japan, France and Italy should retain the tonnage they now have. In reply to a query by Lord Lee, Mr. Hughes gave the present submarine tonnage of these last named three countries as follows: Japan, 31,452 tons; France, 31,391 tons; Italy somewhat less than 21,000 tons. A tabulation showing the old plan, in contrast with the new, is given below:

SUBMARINE TONNAGE LIMITS

Country.	Old Plan.	New Plan.
United States	90,000	60,000
Great Britain	90,000	60,000
Japan	54,000	*31,500
France	Not decided	*31,500
Italy	Not decided	*21,000

*The status quo.

The discussion of the new American proposals was reserved for the afternoon session, which was the fifth joint meeting of the main Committee on Limitation of Armament and the Subcommittee on Naval Limitation. The official bulletin stated that "the discussion concerning the limitation of submarine tonnage was continued, and Mr. Balfour accepted, on behalf of the British Empire, the American proposal that the maximum submarine tonnage for the American and British navies should be 60,000 tons." The communique then gave, either verbatim or in

paraphrase, the comments of the other delegations.

Signor Schanzer pointed out that, as Mr. Balfour himself had shown the day before, Italy could make special claims as regards her need of light craft and submarines to protect her exposed coasts and to assure her food supplies from the sea side. He also pointed out the insufficient nature of the existing submarine flotilla. During the war Italy had found her submarines too small to cope with the situation, and had had to rely on the co-operation of French and British submarines. Since the armistice the Italian Government had demolished thirty submarines. It was left with forty-three in active service and four under construction, a total of 20,250 tons. Only ten of the forty-three were of any use. Since the others were of 700-tons displacement, they would have to be successively replaced. Despite these conditions, and despite the view of the Italian naval experts that the quota of 31,500 tons in submarines was not sufficient in its relation to the 175,000 tons in capital ships already accepted, Italy was ready to accept the quota of 31,500 tons, on condition that France received no more. In plain words, Signor Schanzer voiced Italy's rejection of the quota of 21,000 tons proposed by the new plan, and insisted on receiving the same quota as that allowed to France.

Mr. Hanihara for Japan said that although the Japanese delegates had been deeply impressed by the British arguments for abolition, they had not been convinced that the submarine was ineffective or unnecessary as a weapon of defense. Japan had already made it clear that the 5-5-3 ratio, alike for capital ships and submarines, meant to her a sacrifice. In respect to submarines, this ratio would have given her 54,000 tons. This was considered, so far as Japan was concerned, the lowest minimum of submarine tonnage with which the insular position of Japan could be defended. The new proposal, which

meant that Japan would have only 31,500 tons, was wholly inadequate. The delegation, therefore, felt constrained to insist on the tonnage assigned under the first American plan. Mr. Hanihara stressed self-defense as the motive for this attitude, and pointed out that Japan's remote geographical position made it plain that her submarines could not constitute a menace against any other nation.

M. Sarraut, for France, stated that as the new American plan contemplated a considerable reduction from the minimum considered necessary for the French Government, his delegation had no recourse but to await instructions.

Closing the day's program, a suggestion was made by Mr. Balfour that a technical examination be made of the system of naval tons and the measure of tonnage. Every nation represented in the conference, he pointed out, had a different standard, which made for confusion. Chairman Hughes suggested that such an examination be referred to a subcommittee of two experts from each delegation, to determine what constituted a standard ton. The following committee was thus formed:

UNITED STATES—Admiral Taylor and Admiral Pratt.

BRITISH EMPIRE—Real Admiral Sir Ernle Chatfield and Instruction Commander Stanton.

FRANCE—Captain Frochot and Captain Dupuy-Dutemps.

ITALY—Vice Admiral Baron Acton and Commander Prince Fabrizio Ruspoli.

JAPAN—(Not named at this session).

British public opinion strongly tended to the belief that in the three days' debate at Washington the British delegation had won a moral victory. Arthur J. Balfour, as head of that delegation, received warm praise in the British press on Dec. 28. France's claims for a large fleet of submarines were generally attacked, and the French were charged with the ambition of seeking to become the greatest submarine power in the world. In France, on the other hand, the French claims were warmly defended. France's determination to

have a powerful fleet, and French nationalist objections to the submarine limitation efforts of the Washington conference, were vigorously voiced in the French Senate and in the Paris press. During the course of interpellations in the Senate on Dec. 27, an important statement was elicited from Minister of Marine Guisthau by Senator de Kerguezec, who defended the submarine as an essential weapon of defense, though urging that it be confined to military uses instead of being applied to torpedoing commerce. Minister Guisthau, in response to this, declared that nothing had been proposed at Washington that would reduce France's auxiliary naval power. In further answer to intimations that the Senate would ratify no agreement until it had examined and passed on it, the Minister gave assurance that no decisions reached at Washington would be effective until the French Parliament approved them.

On hearing M. Guisthau's statement, the Naval Committee of the Chamber of Deputies on Dec. 28 decided to invite the Minister to uphold energetically the naval interests of France. The resolution passed declared that France required an adequate fleet to assure the defense of her coasts, her colonies and her communications. The committee was presided over by Pierre Dupuy, and the motion was presented by Jules Cels, former Under Secretary for the Navy.

FRANCE REJECTS NEW PLAN

Meanwhile the final decision on submarine limitation waited on the response of the French Government. This response was presented by the French delegation at Washington in the sixth joint session of the two committees, Dec. 28. France, on the ground of her needs for national defense, refused flatly to accept an allotment of submarines less than 90,000 tons, and also refused a quota of less than 330,000 tons for auxiliary craft. She confirmed, however, her acceptance of the 1.75 ratio for capital ships, with slight modifications

regarding replacement. Secretary Hughes, after M. Sarraut, Minister of Colonies for France, had transmitted this decision, expressed his disappointment over this outcome, which seemed to make any agreement on submarine and auxiliary craft limitation impossible. He was, however, gratified by France's acceptance of the ratio laid down for capital ships.

The British delegation, through Mr. Balfour, expressed even keener disappointment, and the session resolved itself into a debate—the most heated the conference had yet had—between M. Sarraut and Mr. Balfour. The discussion reached a point where both delegates were openly discussing what would be done by their respective Governments in case of war between them, and in the event that France carried out her ambitious plan for submarine expansion. Mr. Balfour made it clear that if this program were carried out, Great Britain would accept no limitation for the light craft adapted to fight submarines. This serious turn of the debate hinged on a remark of Mr. Balfour that France wanted a large fleet of submarines to attack merchant vessels, and for no other reason, with the clear implication that the chief party menaced was Great Britain. This M. Sarraut warmly resented. France, he declared, had not charged Great Britain with harboring hostile designs on her neighbor across the Channel because of her retaining 525,000 tons in capital ships. Why, then, should Great Britain suspect France of such designs in connection with her submarine requirements? Lord Lee, Senator Schanzer, Mr. Hanihara and Secretary Hughes also took a hand in the debate, the upshot of which was that France's decision had made all agreement on submarines and auxiliary craft impossible, and that the various delegations deeply regretted this turn of affairs.

The speech in which M. Sarraut had announced the French Government's decision, and which provoked

the historic debate just summarized, was given out as follows—in the official translation:

At the last meeting of the committee and as the outcome of the examination of the submarine question, a proposal was made to fix for each of the nations represented in the conference the submarine tonnage that it might possess. Instead of the 90,000 tons required by France, it was proposed that this tonnage should be limited as far as she is concerned to 31,500 tons. Confronted by such a considerable reduction of the figures which had been given as the minimum of what France considered necessary for herself in future, the French delegation was obliged to refer the matter to its Government.

At a meeting of the Cabinet and of the Supreme Council of National Defense, the situation was examined and discussed with the most earnest desire to do whatever would seem possible to further the aim of the conference and assist in reaching results. This deliberate intention has been carried out in the resolution passed at the meeting as regards capital ships.

As a token of the good-will of France, it has been resolved to accept the reduction to 175,000 tons of her tonnage of capital ships, although it seems nearly impossible with such reduced tonnage to constitute a naval force composed of ships such as those which it is contemplated to build, and one normally organized, according to the tactical principles in force in every fleet.

The conditions of application of the agreement as regards capital ships will be easy of settlement by taking into account such qualifications as it may be useful to introduce in carrying out the naval holiday through the liberty of laying down, beginning in 1927, ships intended to replace, within the limits of the admitted tonnage, French ships as they reached their twentieth year of existence. It will be likewise easy to settle the question still outstanding of the duration of the agreement as to limitation of capital ship tonnage.

After examining, on the other hand, the composition of the forces needed by France in auxiliary craft and submarines, which are specially intended for the protection of the colonies and their communications, the Cabinet and the Supreme Council of National Defense have reached the conclusion that it is impossible to accept a limitation below that of 330,000 tons for auxiliary craft and 90,000 tons for submarines, without imperiling the vital interests of the country and its colonies and the safety of their naval life. The French delegation has been instructed to consent to no concession on the above figures.

To sum up, France accepts, as regards capital ships, the sacrifice which she must face in order to meet the views of the conference, and which represents an important

reduction of her normal sea power. She limits the program of the future constitution of her fleet to 330,000 tons for auxiliary craft and to 90,000 tons for submarines.

Though regretting that she cannot possibly, under the present circumstances, entirely carry out the reductions and limitations contemplated in the American proposal, she at least feels quite certain that she is taking an important share in the work of the conference by reducing the French naval power in capital ships, a weapon specifically offensive and particularly costly, and by accepting a limitation for craft of other categories.

RESPONSE OF MR. HUGHES

Secretary Hughes's speech in reply to the foregoing was given out in the following official summary:

The Chairman said that the committee had heard the statement on behalf of the French Government. It was a definitive statement, made after careful deliberation, and he assumed that it should be accepted as the final expression of the attitude of the French Government in regard to the limitation of naval armament. He was greatly gratified at the willingness of the French Government to limit the tonnage of its capital ships to 175,000 tons. He felt that the importance of this statement should not in any way be minimized.

Capital ships were the chief weapon of offense. If the conference could succeed, as it was now evident that it would, in reducing in a fairly satisfactory manner armament as represented in capital ships, it would have done much to relieve the burden of taxation and would aid in establishing a better basis for a lasting peace. He wished to repeat that he was highly gratified and appreciated the manner in which the problem had been approached by the French Government. He understood that there were, however, certain reservations with respect to replacements and the duration of the agreement. These matters must receive further consideration and be the subject of continued negotiations.

He confessed that he was disappointed with the statement concerning submarines and auxiliary ships. If submarines were to be available for distinctly defensive purposes in connection with the movements of fleets, it would seem that they should bear some definite proportion to the fighting fleets; that is, if they were to be used in connection with the laying of mines, scouting, &c.—the necessities inherent in large defensive preparations—they should bear some relation to the operations of the fleet as a whole. The suggestion that France should have 90,000 tons of submarines would, on any basis of a practicable ratio, involve the assumption that Great Britain and the United States should

greatly increase their submarine tonnage. This could hardly be called a limitation or reduction. Furthermore, if a large number of submarines were to be provided, then cruisers and destroyers, the natural enemies of submarines, would have to be provided in numbers adequate to deal with the situation created by a large submarine fleet. It was a serious question whether there was hope of accomplishing anything like limitation in regard to submarines and auxiliary craft. He understood that the attitude of the French Government was that, regardless of the requirements of other nations, 90,000 tons of submarines were deemed to be the minimum essential for France.

If this was so, the suggestion of 330,000 tons of auxiliary vessels for France would have its bearings on what was considered necessary for the other nations and might make it difficult to arrive at an agreement limiting submarines and auxiliary craft. He did not desire at this time and in view of the existing situation to discuss details, but he wished to say that an agreement for the expansion of armament was not under consideration. The conference was called to consider the limitation of armament. He left it for the committee to decide in the light of the very definite statement of the French Government what was practicable to be done.

In conclusion, he wished to say that in expressing his disappointment in regard to submarines, he did not wish in any way to detract from the importance of the definite acceptance by France of the program for capital ships. This was a matter of the first importance and he could assure his French colleagues that their attitude was cordially and sincerely appreciated.

MR. BALFOUR'S PROTEST

The official paraphrase of Mr. Balfour's British protest was as follows:

Mr. Balfour admitted, as the Chairman had justly pointed out, that there was a side to the statement just made by their French colleagues which profoundly disappointed him. The French position with regard to disarmament on land they already knew. What was their position with regard to disarmament at sea?

They were prepared, and he rejoiced that they were prepared, to accept the ratio which gave them 175,000 tons of capital ships. He was glad that the French Government had accepted that all-important part of the American program, and he agreed that if nothing else was done by the conference in reference to naval disarmament the scheme already in sight with regard to the limitation of capital ships did immensely relieve the burden of armament upon an overburdened world. He did not feel himself that the sacrifice on the part of France was in itself of an over-

whelming character, even as regards capital ships, for he thought that if the naval strength of a nation was to be estimated in relation to the naval strength of other nations it would be found that the relative strength of France under the arrangement already accepted as regards capital ships would be increased. He did not begrudge her that increase. He rejoiced in it.

But when he turned from the matter of capital ships to the matter of other craft, he confessed that a very different picture met the eye. The French proposed to increase the number of submarines threefold. If they carried out that intention, it was evident that they would not only be equal to the other two greatest naval powers, America and Britain, in point of tonnage, but that they would have a very much larger proportion of submarines of a newer type than either of them. He understood the submarine was still in process of development; it was still adding to its powers of offense, and each new model was an improvement on the capacity of its predecessors for commerce destruction.

Thus it was certain that when that program was carried out the French quota of submarines would exceed that of any other power in the world. It had further to be noted that their French colleagues accompanied their views of the necessity of submarines with the announcement that they intended greatly to increase the tonnage of their auxiliary craft. It must be acknowledged that this constituted a somewhat singular contribution to the labors of a conference called for the diminution of armament. Considered in conjunction with refusal of the French delegation to discuss land armament, this position must cause anxiety and disappointment to those who had come to the conference with high hopes regarding the limitation of naval armaments. Furthermore, it had to be observed that the pleasure derived from the agreement with regard to the limitation of capital ships was subject to a qualification.

He understood that the French intended to begin replacing ships in 1927. This seemed to be a serious interference with the principle of a ten-year naval holiday, but that was only a small part of the anxiety and disappointment which the French program had created in his mind. They had now come forward with a great building program of submarines and auxiliary craft. He was perfectly unable to conceive how that could be regarded as a defensive policy.

If submarines were to be used as a strictly military weapon, in the manner contemplated by the American Advisory Committee, how came it that a fleet of capital ships limited to 175,000 tons required 90,000 tons of submarines to scout for it and protect it? And if 90,000 tons of submarines were really required for a fleet of 175,000 tons of capital ships, how many submarines would America and Britain require to build to assist their fleets of 500-

000 tons? It was perfectly obvious that the proposed 90,000 tons of submarines were intended to destroy commerce. They could not be intended for any other purpose.

It therefore appeared that at a moment when we were all assembled to discuss the limitation of armaments we were asked to agree to their increase, and that a country which did not desire to be among the first three naval powers in the world proposed nevertheless to build instruments of illegitimate warfare to an extent equal in numbers and superior in efficiency to those legitimately required by any other fleet in the world. We should therefore have the melancholy spectacle of a conference called for the limitation of armament resulting in a vast increase in the very weapon which the most civilized elements in all civilized countries condemned. For the moment we need say no more. The whole of this controversy would again come up before the public conference. For this occasion he reserved himself.

He must, however, dwell shortly on the effect which the French declaration of naval policy must inevitably produce upon British opinion. It was perfectly clear that if at our very gates a fleet of 90,000 tons of submarines, 60,000 of which were to be of the newest type, was to be constructed, no limitation of any kind of auxiliary vessels capable of dealing with submarines could be admitted by the Government which he represented. Public notice had now been given in the most formal manner that this great fleet was to be built on the shores nearest Britain, and it would necessarily be a very great menace to her. He had no doubt if the occasion ever arose that Britain would be equal to it, but it was on condition that we reserved the full right of Britain to build any auxiliary craft which she considered necessary to deal with the situation.

Signor Schanzer, for Italy, also expressed his deep regret that it was impossible to reach an understanding concerning auxiliary craft and submarines. He feared that the absence of such an understanding would give new impetus to competition in naval armament along these lines, which would have a serious financial effect on all the countries interested. Both economically and politically, he said, the decision of France might prove momentous to Italy, especially because the solution of the land armament problem had been deferred.

Vice Minister Hanihara, for Japan, stressed the importance of the capital ship agreement "as a great step forward" toward relief from the

heavy burden of armament. It was, however, he said, the Japanese view that it would be a great misfortune if the conference failed to agree on the limitation of auxiliary combatant craft. His delegation did not wish to claim freedom for building such craft, but to support the original American proposal of Nov. 12, and to aid in assuring the success of the conference along this line.

It was evident, Mr. Hughes said, that no agreement could be reached on the basis suggested by France, and also apparent that other powers desired freedom of action for the construction of anti-submarine auxiliary craft.

SARRAUT DEFENDS FRANCE

M. Sarraut then took the floor to say that the decisions of his Government had given rise to certain observations which he could not allow to remain unanswered. He spoke as follows:

To tell the truth, gentlemen, I am not here to make comment on the orders of my Government, which possess an authority and a value sufficient in themselves; the decisions which I have just communicated to you have been carefully considered by the highest authorities representing national sovereignty in my country. I have received them respectfully from their hands and have brought them just as they stand to the conference.

It is my duty, however—and I perform this duty in the perfectly friendly spirit which has never ceased to animate the French delegation—to take up the allegations which have just been made, certain ones of which I find wholly unacceptable.

Certain delegations, while testifying to their satisfaction in seeing France accept the reduced proportion of capital ships which has been determined for her, have expressed a real disappointment on learning that the French Government was unable to make similar sacrifices in other classes of vessels. Allow me to say that this disappointment, if it really exists, will call forth a similar feeling in my own country when it is learned there how the amount of tonnage allotted to France has been authoritatively determined without taking any account of her manifest needs and of the absolute necessities of her defense—for the security which no country is justified in trusting to the good offices of its neighbors.

It is this idea, this conception of the true

needs and interests of France and of her colonies, which has inspired the decisions of the French Government; it is this idea which is both the measure and the limit of their demand; and it is in no way influenced by any comparison with what our neighbors are doing or by any anxiety to measure our naval force against theirs.

Herein lies the profound difference between our point of view and those of others. We have not apportioned our needs and our demands by carefully examining the consequences to the French navy of the increase of the naval power of certain neighboring countries with whom we cherish, under the happiest of conditions, relations of friendship, co-operation and alliance. We are not guided by any fear of what their strength may be, precisely because they are friends. Great Britain, with her 525,000 tons of capital ships, will possess a fleet of great vessels stronger than the corresponding fleets of France and Italy put together.

So be it; we ourselves do not take offense. We are not the least in the world haunted by this eventuality, no more than we are apprehensive of the fact that the fleets of the other friendly nations, the United States and Japan, will be considerably increased in comparison with our fleet.

Why, then, they say, is a submarine fleet such as is demanded by France a necessity for her? Do we quibble over the needs of the others? Do we call into question their possible intentions? Do we suspect them? Assuredly we shall not do so. It is not only the right but the duty of each country to assure its safety by its own means, and it is perfectly possible to consider this problem without being haunted by the idea of a possible aggression on the part of a neighbor. That others should apply to us such a method of reasoning while we do not think of applying it to them we cannot permit in any way. This would be still more painful to us, would appear to us more especially inadmissible at this table around which we are gathered in a spirit of the most cordial co-operation, at the very moment when, in bringing the answer of France in the matter of capital ships, we are furnishing the most positive proof of the effective participation of our country in the success of the great ideals of peace aimed at by this conference.

If our answer is not the same for other categories as it is for capital ships, this is because the tonnages which we have indicated correspond to material needs of defense, to necessities of protection which must no longer be denied, for we shall not cease to affirm them strongly. We have no desire to destroy merchant vessels, as Mr. Balfour has said; we have formally declared the contrary here, and this declaration was echoed not later than yesterday in the French Senate. But France has coast lines which she must defend; she has also, and above all, a great colonial domain,

second in importance only to that of Great Britain, which is distributed over all the seas, and concerning which we also may have, I presume, our anxiety as to its defense, its police, and its surveillance.

We have the duty of safeguarding the communications of these colonies with the mother country, and I have already said here that in case of war the safe transport of our troops overseas to the mother country would be among the first of our obligations. This is not a mere theory. Have we not in the last war seen a belligerent transform merchant ships into auxiliary cruisers or into privateers to torpedo our transports; and has not this been done against all the allied navies? And should it cause surprise here to see the Minister of Colonies of France take account of colonial considerations and call to mind that our colonial empire, though some would seem to be ignorant of it, really exists, and that its needs, as well as its interests, must be strongly affirmed, defended, protected, especially in the matter of safe communications with the mother country?

I reiterate that the French delegation is bound by formal instructions from its Government. This is a fact of which it reminds you anew. It cannot deviate from them. I wish to repeat again that it is impossible for me to hear it said, without protesting, without asserting the contrary, that there was an inevitable and necessary correlation between what we are obliged to do and what our neighbors would deem themselves obliged to do.

Nor do we admit that there is an indispensable and logical correlation between the proportion of a country's naval force in capital ships and the proportion of its auxiliary craft and submarines. That is an abstract rule which you thought you ought to lay down here. But we have shown why we could not recognize it. We are guided by our needs, duly stated, proved, legitimized.

It is this rule, and no other thought, which dominate our feelings on the submarine question. We object to having it believed or to having it said that the creation by France of a defensive weapon involving a certain tonnage of submarines could be considered as a menace to any of her friends.

If such a thought were to weigh all too heavily on our deliberations, if I found myself obliged to defend my country here against such a suspicion, this would indeed result in eliminating the hopefulness and the enthusiasm with which I have so far collaborated in the work of relieving the burden of armaments, in accord with the desire of France as clearly manifested by her sacrifice to which she has consented in the matter of capital ships.

But, to tell the truth, I am not likely to be discouraged in this matter. The work is too fine and too generously humanitarian to permit our efforts and our good will to

grow weary. They will remain faithful to the end to the noble project aimed at by this conference.

PERIL TO GREAT BRITAIN

The British answer to this was given out in the following summary:

Mr. Balfour said that M. Sarraut was the last man in the world whom he would suspect of hostile intentions toward his country, but the speech which M. Sarraut had just delivered was sufficient to show that he had not really understood the way in which Britain regarded the question now under consideration.

Mr. Balfour begged him to consider one or two elementary facts without which he would not understand the position of the British Empire. While it was almost unthinkable that their respective countries could be on anything but the most cordial terms, one must not overlook the teaching of history. Britain had had many conflicts with France, though happily in the distant past.

Britain had always been superior in naval armament and always inferior in land forces. Never in the history of France had she had to fear the power of Great Britain to strike a blow at her heart. In the nature of things that must be so. No inferior military power had ever yet been able to invade or seriously imperil a superior military power merely because she had more ships.

Suppose the almost inconceivable happened and close allies became enemies, it was perfectly clear that in that case no British superiority of capital ships would imperil the life of France for an hour. To be fair, he must admit that it might conceivably imperil some remote islands belonging to France; but France, with her land armament, would remain secure in the face of superior sea power.

Now compare the position of France in the face of a superior British surface fleet with the position of Britain in the face of France with the largest submarine fleet in the world. She could use that fleet, if she chose, for commerce destruction, and it was difficult to believe that in time of stress she would not so use it. If Britain were unarmed against submarines, it was evident that France, using that felonious weapon, could destroy her very existence.

Therefore, it was quite impossible for Britain to treat the submarine fleet with the serene and friendly philosophy shown by M. Sarraut in connection with the British fleet of capital ships. M. Sarraut talked of the absolute necessity for France of possessing a fleet of 90,000 tons of submarines. For what purpose? Not to co-operate with a fleet of 175,000 tons of capital ships. It was altogether out of proportion. What did he want the 90,000 tons of

submarines for? According to him, it was not for commerce destruction; it was for the protection of France's lines of communication.

There was no doubt that submarines were powerful for the destruction of lines of communication, but they were powerless to protect them. M. Sarraut would not obtain security for his lines of communication by those means. For those purposes they were useless, or nearly useless. They were powerful weapons for one purpose, and for one purpose only, namely, the destruction of commerce; and it was not unreasonable that Great Britain, when threatened by the establishment within a few miles of her coasts of a vast fleet of submarines which were of no use except to destroy commerce, should say candidly that she could not look with indifference upon the situation that would be thus created.

He regretted that he had been compelled to insist upon an aspect of the question which he would gladly have left undealt with. He did not yield to M. Sarraut in his conviction that the good feeling existing between his own country and their great ally across the Channel would remain unshaken through all the changes which time might bring.

The long and animated debate here reached its logical end. It was stated by Secretary Hughes, and generally acknowledged by the conference, that the refusal by France had made further progress impossible. The discussion then initiated on the subject of tonnage and gun limitation for auxiliary craft will be found treated under the appropriate sub-head further along in these pages. The next large question discussed centred about the resolutions offered by Mr. Elihu Root at this same session of Dec. 28 asking the conference to declare formally that the submarine could not be legally used against merchant shipping. The debate precipitated on this proposal is recorded in the pages that follow.

The London press reacted strongly to France's refusal to modify her submarine and auxiliary craft program, declaring that the world's hope was thus defeated. France was likened to the former Germany in the role she was now playing, and unfavorable omens were drawn as to the future relations between France and Great Britain. The London Times endorsed the view, already expressed by Mr. Balfour, that the French program

would necessitate a counter-building program on the part of Great Britain. The dangers of French isolation were generally emphasized.

The Paris Temps, on the other hand, declared that the French viewpoint was still imperfectly understood. It said in part:

France put forward at Washington a claim which, in the minds of her plenipotentiaries, was purely theoretical, demanding that, when her financial condition permitted, she should take a fitting place in the consortium of great naval powers, which base sea peace on their armored forces, and she sacrificed the demand in the interests of the peace of the world.

Can she agree to further sacrifices? The whole country is behind the Parliament and the Government on this point. She cannot abandon the right to defend herself. If some day soon we have to transport once more our Algerian and Moroccan divisions to the Rhine, it will be under the protection of our dreadnoughts, light cruisers and submarines.

THE ROOT RESOLUTIONS ON SUBMARINES

One of the most momentous results achieved by the arms conference was the passing of a series of resolutions drawn up and presented in their first form by Elihu Root of the American delegation at the joint session of the Committees on Limitation of Armament and Naval Limitation, held on Dec. 28, and finally adopted in their entirety at the sessions of Jan. 5 and Jan. 6, 1922. The resolutions formally condemned the illegal use of the submarine as a weapon of naval warfare. Resolution I. stated the existing law, as universally recognized by the civilized world, and prohibited submarines from attacking merchant vessels unless these laws could be observed. Resolution II. embodied an invitation to all the world powers to give their assent to these proposals. Resolution III. went still further; it recognized the virtual impossibility of using submarines as commerce destroyers without violation of law, and bound the conference powers to prohibit such use among themselves. Resolution IV. made not only all submarine commanders, but the commanders of any ships guilty of such

transgression, liable to punishment for piracy.

Resolutions I., II. and III. were adopted at the session of Jan. 5; Resolution IV. at the session of Jan. 6. The official text of all four resolutions, as finally passed, is as follows:

I.

The signatory powers, desiring to make more effective the rules adopted by civilized nations for the protection of the lives of neutrals and noncombatants at sea in time of war, declare that among those rules the following are to be deemed an established part of international law:

(1) A merchant vessel must be ordered to submit to visit and search to determine its character before it can be seized.

A merchant vessel must not be attacked unless it refuses to submit to visit and search after warning or to proceed as directed after seizure.

A merchant vessel must not be destroyed unless the crew and passengers have been first placed in safety.

(2) Belligerent submarines are not under any circumstances exempt from the universal rules above stated, and if a submarine cannot capture a merchant vessel in conformity with these rules, the existing law of nations requires it to desist from attack and from seizure and to permit the merchant vessel to proceed unmolested.

II.

The signatory powers invite all other civilized powers to express their assent to the foregoing statement of established law so that there may be a clear public understanding throughout the world of the standards of conduct by which the public opinion of the world is to pass judgment upon future belligerents.

III.

The signatory powers recognize the practical impossibility of using submarines as commerce destroyers without violating, as they were violated in the recent war of 1914-1918, the requirements, universally accepted by civilized nations for the protection of the lives of neutrals and noncombatants, and to the end that the prohibition of the use of submarines as commerce destroyers shall be universally accepted as a part of the law of nations they now accept that prohibition as henceforth binding as between themselves and they invite all other nations to adhere thereto.

IV.

The signatory powers, desiring to insure the enforcement of the humane rules of existing law declared by them with respect to attacks upon and the seizure and destruction of merchant ships, further declare that any person in the service of any power who shall violate any of these rules, whether or

not such person is under orders of a governmental superior, shall be deemed to have violated the laws of war and shall be liable to trial and punishment as if for an act of piracy and may be brought to trial before the civil or military authorities of any power within the jurisdiction of which he may be found.

These resolutions, as first presented by Mr. Root at the session of Dec. 28, came as a climax to the three days' debate on submarine limitation, in the course of which Mr. Balfour, as spokesman for the entire British Empire delegation, made a strong but unsuccessful plea for the total abolition of the submarine by all civilized powers. The British plea failed because of the attitude taken by the French, Italian and Japanese delegations backed by instructions from their Governments, and even by the United States, that the submarine had real utility as a defensive weapon, and that the conference powers, by abolishing this agency, would place themselves at a great disadvantage with respect to the nations not represented. The French Government's flat refusal to accept anything less than a submarine fleet of 90,000 tons brought that phase of the conference to an impasse.

All the more electrifying, therefore, were the resolutions offered by Mr. Root on Dec. 28, which, on the very ground urged by Mr. Balfour, namely, the impossibility of using the submarine against merchant shipping without infringing the accepted laws of humanity, asked the conference and the world to agree that such use should be prohibited.

THE ORIGINAL PROPOSALS

In order to understand the stages by which the foregoing document was shaped, it is necessary to examine Mr. Root's original proposals (Dec. 28.), which were as follows:

I.

The signatory powers, desiring to make more effective the rules adopted by civilized nations for the protection of the lives of neutrals and noncombatants at sea in time of war, declare that among those rules the following are to be deemed an established part of international law:

1. A merchant vessel must be ordered to stop for visit and search to determine its character before it can be captured.

A merchant vessel must not be attacked unless it refuses to stop for visit and search after warning.

A merchant vessel must not be destroyed unless the crew and passengers have been first placed in safety.

2. Belligerent submarines are not under any circumstances exempt from the universal rules above stated, and if a submarine cannot capture a merchant vessel in conformity with these rules the existing law of nations requires it to desist from attack and from capture and to permit the merchant vessel to proceed unmolested.

The signatory powers invite the adherence of all the civilized powers to the foregoing statement of established law to the end that there may be a clear public understanding throughout the world of the standards of conduct by which the public opinion of the world is to pass judgment upon future belligerents.

II.

The signatory powers recognize the practical impossibility of using submarines as commerce destroyers without violating the requirements universally accepted by civilized nations for the protection of the lives of the neutrals and noncombatants and, to the end that the prohibition of such use shall be universally accepted as a part of the law of nations, they declare their assent to such prohibition and invite all other nations to adhere thereto.

III.

The signatory powers, desiring to insure the enforcement of the humane rules declared by them with respect to the prohibition of the use of submarines in warfare, further declare that any person in the service of any of the powers adopting these rules who shall violate any of the rules thus adopted, whether or not such person is under orders of a governmental superior, shall be deemed to have violated the laws of war, and shall be liable to trial and punishment as if for an act of piracy, and may be brought to trial before the civil or military authorities of any such powers within the jurisdiction of which he may be found.

OPENING OF THE DEBATE

All the delegations expressed sympathy with the spirit of these resolutions from the outset. The text was distributed for examination and study, and debate upon them was opened at the session of Dec. 29. When that session closed, the first part of the Root proposals had been unanimously accepted in principle.

All the members of the American delegation spoke in its favor.

Secretary Hughes, in opening the morning session of that day, proposed that the discussion at that time be confined to the first part of the Root proposals, which summarized the existing rules of war regarding attacks on merchant ships and declared that the submarine was not exempt from those regulations. Mr. Balfour said that he was in favor of reaffirming those rules. Admiral de Bon for France stated that his delegation would welcome every opportunity to condemn the use Germany had made of her submarines during the war, but he, as well as Signor Schanzer for Italy and Mr. Hanihara for Japan, though favoring the spirit of the proposals, expressed a desire to have the resolutions submitted to a committee of jurists to test the correctness of the international principles laid down by Mr. Root, and to redraft the resolutions if it should prove necessary. Signor Schanzer made the point that the second part of the Root proposal, forbidding all use of submarines against merchant craft, was not in agreement with the first part. He further believed that it would be useful to give a clear definition of merchant craft in order to make them recognizable and to establish plainly in which cases a submarine shall abstain from attacking a ship, and in which cases, on the contrary, attack is to be permitted, as, for example, in the case of a merchantman regularly armed, or of a privateer.

Sir Robert Borden, representing Canada on the British delegation, pointed out that the Root proposal in its second part was intended to mark a notable and most desirable advance on the existing rules governing international warfare. This part urged that the prohibition of illegal use of the submarine should be universally accepted as a part of the law of nations, and asked the conference nations to declare their assent to such prohibition, and to invite all other nations to adhere

thereto. Though he believed that this was wise, he also believed that the exact wording should be carefully examined, and, like the other delegates who had spoken, he favored submitting the proposal to a body of experts, provided that this would not prevent action by the conference. He specially stressed his country's approval of the clause which made a lawless submarine commander liable to punishment for piracy, and cited a case where twenty Canadian nurses had been drowned during the war as the result of the torpedoing of a hospital ship.

MR. ROOT ON HIS OWN RESOLUTIONS

Mr. Root arose to reply specifically to the points made by Signor Schanzer. He said in part:

As to the agreement of Article I. of the resolutions now before the committee with the second article relative to the prohibition of making use of submarines as commerce destroyers, which he deems inconsistent with Article I.:

Article I. is a statement of existing law; Article II., if adopted, would constitute a change from the existing law, and, therefore, it is impossible to say that it is not inconsistent. If it were not inconsistent, there would be no change. Article II. could not be consistent with Article I., and still make a change.

Senator Schanzer also suggests that the resolution be completed, including a definition of "a merchant ship." Throughout all the long history of international law no term has been better understood than the term "a merchant ship." It could not be made clearer by the addition of definitions, which would only serve to weaken and confuse it. The merchant ship, its treatment, its rights, its protection, and its immunities are at the base of the law of nations. Nothing is more clearly or better understood than the subject we call the merchant ship.

Now, with regard to the proposal to refer this matter to a committee of lawyers, far be it from me to say anything derogatory to the members of the profession of which I have been an humble member for more years than I care to remember. They are the salt of the earth; they are the noblest work of God; they are superior in intellect and authority to all other people whatsoever. But both this conference and my own life are approaching their termination. I do not wish these resolutions to be in the hands of a commission even of lawyers after we adjourn.

I supposed when we adjourned yesterday and after what had been said concerning the opportunity for critical examination, that the different delegations would call in their own experts and ask their advice with regard to this resolution, which is now the only one before the committee. I had supposed that the experts in international law brought here for the purpose of advising, would have been asked whether this was a correct statement of the rules and that we would have here today the result of that inquiry.

I would like to say that I am entitled to know whether any delegation questions this statement of existing international law. You are all in favor of the principle of the resolution, if it is correct. Does this or does it not state the law of nations as it exists? If it does, you are all in favor of it. What then hinders its adoption?

Senator Schanzer in describing the action of submarines with regard to merchant vessels repeated on his own behalf the very words of this resolution. The very words—*ipsisimis verbis*—of this resolution may be found in Senator Schanzer's remarks. My respect for the learning, experience and ability of the various delegates around this table forbids me to doubt that every one here is perfectly familiar with the rules and usages as stated in the first clause of Article I. This does not purport to be a codification of the laws of nations as regards merchant vessels or to contain all the rules. It says that the following are to be deemed among the existing rules of international law. The time has come to reaffirm them:

1. A merchant vessel must be ordered to stop for visit and search to determine its character before it can be captured.

Do we not all know that is true? It is a long-established principle.

2. A merchant vessel must not be attacked unless it refuses to stop for visit and search after warning.

3. A merchant vessel must not be destroyed unless the crew and passengers have first been placed in safety.

Is there any question whatever as to the correctness of these statements? * * * This is only elementary. The object of the resolution is to form something which will crystallize public opinion of the world. It was made perfectly simple on purpose.

AN IMPASSIONED APPEAL

Then follows a principle of vital importance, on which I challenge denial. If all the lawyers in the world should get together they could not decide the question more conclusively. The public opinion of the world says that the submarine is not under any circumstances exempt from the rules above stated, and if so, they cannot capture merchant vessels. This is of the greatest importance. That is a negation of the assertion of Germany in the war that

if a submarine could not capture a merchant vessel in accord with established rules the rules must fail and the submarine was entitled to make the capture. The public opinion of the civilized world has denied this and has rendered its judgment in the action that won the war. It was the revolt of humanity against the position of Germany that led to Germany's defeat.

Is that not a true rendering of the opinion of the civilized world which we seek to express? My friends and colleagues, this is real life we are dealing with here. This is no perfunctory business for a committee of lawyers. It is a statement of action and of undisputed principles universally known and not open to discussion, put in such a form that it may crystallize the public opinion of the world, that there may be no doubt in any future war whether the kind of action that sent down the *Lusitania* is legitimate war or piracy.

This conference was called for what? For the limitation of armament. But limitation is not the end, only the means. It is the belief of the world that this conference was convened to promote the peace of the world—to relieve mankind of the horrors and the losses and the intolerable burdens of war.

We cannot justify ourselves in separating without some declaration that will give voice to the humane opinion of the world upon this subject, which was the most vital, the most heartfelt, the most stirring to the conscience and to the feeling of the people of all our countries of anything that occurred during the late war. I feel to the depth of my heart that the man who was responsible for sinking the *Lusitania* committed an act of piracy. I know that all my countrymen with whom I have had intercourse feel the same, and I should be ashamed to go on with this conference without some declaration, some pronouncement, which will give voice to the feeling and furnish an opportunity for the crystallization of the opinion of mankind in the establishment of a rule which will make it plain to all the world that no man can commit such an act again without being stigmatized as a pirate.

ACTION AT THE HAGUE

There are two ways in which this question that Germany raised about the right of submarines to disobey the rules of international law—what they said in the way of destroying a merchant vessel—can be settled. With the whole dominion of the air unregulated by international law, with the score of difficult questions staring us in the face (such as blockade, contraband and other questions in the field of law), there was a recommendation made by the committee of jurists which assembled at The Hague last year, 1920, upon the invitation of the Council of the League of Nations, to devise and report a plan for an international court of justice.

[Mr. Root then described the meeting of that commission, and quoted in full the resolution finally passed by it favoring the calling of a new conference of the nations for the purpose of restating the established rules of international law, especially in the fields affected by the events of the recent war, of amending them where necessary and of considering new regulations not covered by the existing international law. That recommendation, he said, was communicated to the Council of the League of Nations and referred by it in a somewhat modified form to the League Assembly, which rejected it. "The door was closed," said Mr. Root. He continued:]

Where do we stand? Is this not to be a world regulated by law? What are our disarmaments worth if we give our assent to the proposition that the impulse of the moment, the unregulated and unconstrained instincts of brute force, shall rule the world and that there shall be no law? If there is to be a law, somebody must move.

There is no adequate law now with regard to submarines. There is no law now regarding aircraft. There is no law now regarding poisonous gases, and somebody must move. The door to a conference is closed, and here we are met in a solemn conference of the five greatest powers upon the limitation of armaments and charged to do something toward the peace of the world. This resolution proposes to restate the rules of war that have been trampled under foot, flouted and disregarded. This resolution proposes that we assert again the domination of those humane rules for the protection of human life, and that we discredit and condemn the attempt to overturn them. This resolution proposes to tell what we really believe, that we characterize as it ought to be characterized the attempt to overturn the rules impressed by humanity upon the conduct of its Governments.

Mr. Root then urged an immediate vote on his resolutions, declaring: "Either we speak clearly and intelligently the voice of humanity, which has sent us here, and to which we must report, or that voice will speak for itself, and, speaking without us, will be our condemnation." He added one last explanation:

I omitted, in answering Senator Schanzer's question regarding the relations between Articles I. and II., to say that of course, if the second article were adopted by all the world, it would supersede Article I. This, however, would be a long, slow process, and during the interval the law as it stands must apply until an agreement is reached. Article I. also explains in authorized form the existing law, and can be brought forward when the public asks what changes are proposed. In proposing a change it is necessary to make clear what the law now

is. It is very important to link this authoritative statement in Article I. with the new principle proposed in Article II.

ADOPTING THE RESOLUTIONS

The remainder of the morning session was devoted to suggestions for clarifying and developing the resolutions. When the committees met in their ninth joint session that afternoon (Dec. 29) they formally adopted Article I. In the discussion of changes Mr. Root showed entire willingness that the resolutions should go through the process known to parliamentarians as "perfection by amendment." All the heads of delegations took part in the debate, and after Secretary Hughes had spoken again in favor of Article I., he finally put it to the vote of the conference, subject to such verbal changes as might be made by the Drafting Committee still to be appointed. After each delegation had signified its consent, the Chairman announced that the article had been unanimously carried, and requested the delegations to appoint their representatives on the Drafting Committee whose task it would be to shape the phraseology. Mr. Root had been designated to serve in that capacity for the American delegation, he said. The Subcommittee on Drafting, as finally constituted, was made up thus:

United States—Mr. Root.

British Empire—Sir Auckland Geddes.

France—Vice Admiral de Bon and M. Kammerer.

Italy—Signor Ricci.

Japan—Mr. Hanihara.

Article II. was then taken up, but it was found impossible to adopt it formally at this session. It provided for agreement that submarines should not be used against merchant shipping in any way whatsoever, inasmuch as this was impossible without violating the principles of humanity. The delegates showed an inclination to defer action on this until it could be studied further. Secretary Hughes pointed out that it was in effect a proposition to change the law

already restated in Article I.; the law which had been ignored and trampled upon, but which, nevertheless, was still regarded as internationally obligatory. The new resolution would mean that the civilized world was asked to outlaw the submarine as a weapon against commerce. He also pointed out that the assent of the nations present, under the last words of the resolution, would be binding only if the resolution became a part of international law, not if other nations, by their refusal, prevented it from becoming a general international principle.

Mr. Root rose to confirm this interpretation. Mr. Balfour, referring to Mr. Root's statement that the powers here represented were only pledging themselves to induce other nations, if possible, to support a great reform, asked if it was not possible to go a little further; why should the five nations not agree among themselves to act on the rule which Mr. Root proposed? Instead of merely adopting a resolution which would be inoperative until generally adopted, why not adopt immediately the principles which they desired to see eventually embodied in international law?

Mr. Root in reply laid down the broad principles governing the constitution of international law, notably the general rule that international law requires universal acceptance. He saw, however, no objection to the nations represented giving their own prior and individual assent, and cited as a precedent the process by which the Constitution of the United States was amended by a progressive vote of all the States, the amendment not becoming valid until all the States had voted in its favor. Such an assent, preliminary to ratification by the other nations of the world, and providing that the five powers represented at this conference should be bound by such a prohibition as between each other, he declared, would make for security and good understanding.

A SIMPLE RULE THE BEST

Mr. Root further discussed the policy of making the prohibition broad and not detailed. A detailed prohibition could not be enforced, he said. The wisdom of a broad prohibition did not rest on theory, but on their memory of the most painful events of recent times. To the world's indignant protests to the torpedoing of innocent merchant ships and the blowing up of captured vessels the Germans had replied that it was impossible for the submarines to comply with the rules made to govern the actions of surface craft. Germany declared it to be impossible, said Mr. Root, and it was impossible. The submarine could not take a great load of passengers into its small interior, where air had to be furnished artificially. The distress of the passengers and crew left to die was obvious. The United States admitted that the submarine had no alternative, but instead of accepting the decision that the rule must fail it adopted the other alternative, that all such warfare must end. There was no fact more firmly established than that a belligerent nation would not resist the temptation to gain its point at whatever cost, and this would always stand between the submarines and compliance with the rules of civilized procedure. The only way to secure the safety of innocent noncombatants was to pass a simple and enforceable rule like the one proposed, prohibiting an attack which could not be made without breaking the rule. The public opinion of all civilized countries would give it sufficient support; no nation would willingly face the punishment of world condemnation.

Secretary Hughes then restated the proposals before the committee, including Mr. Balfour's separate motion that the five nations present record their individual assent. Mr. Balfour put his motion to amend the last part of Article II. (it later became Article III.) in the following definite form:

They declare their assent to such prohibition and they agree to be bound forthwith thereby, as between themselves, and they invite all other nations to adhere to the present agreement.

NEW FRANCO-BRITISH CLASH

The debate on the Root resolution was resumed at the session held on Dec. 30, the tenth joint meeting. A sensation was produced early in the discussion by Lord Lee. Renewing his attack upon the French attitude on submarines and declaring that the French, by passing the Root resolution, had a splendid opportunity to reassure the British Admiralty regarding France's future use of the submarine weapon, he read in justification of the British apprehensions an article published two years ago in a French naval magazine by one Captain Castex, now Chief of Staff for the Second French Naval Division, who defended the German methods of employing the underseas boats during the war. The seriousness of this lay in the fact that Captain Castex had but recently been designated as principal lecturer to the senior officers' courses for the year 1922, and unless a change of French policy occurred, would be "pouring what we regard as this infamy and this poison into the ears of the serving officers of the French Navy." Lord Lee cited particularly the concluding paragraph:

Thanks to the submarine, after many centuries of effort; thanks to the ingenuity of man, the instrument, the system, the martingale is at hand which will overthrow for good and all the naval power of the British Empire.

After depicting the fears and the bitterness which the British felt over the thought that their late comrades in arms and present allies should contemplate the possibility of such warfare and such designs, Lord Lee closed with a new appeal to the French to pass the Root resolution, and thus regain the ground that France had lost through this misunderstanding.

M. Sarraut and Admiral de Bon

both made vigorous replies, repudiating emphatically the views of Captain Castex as an expression of the policy of the French Navy. M. Sarraut took occasion to deplore the hostile propaganda of which France was continually the victim.

The session had opened with a statement by both the French and Italian delegations to the effect that, pending the receipt of instructions from their home Governments, they thought any present discussion of submarines would be unprofitable. Thereupon Lord Lee launched his verbal broadside, speaking in part as follows:

I quite appreciate the position in which we stand in the absence of complete instructions to two of the most important delegations here. I cannot help feeling that in the minds of the French delegation and Government there exists some misunderstanding as to the attitude of the British Government in regard to submarines which it is desirable to clear up before the French Government commits itself in regard to the second resolution.

I cannot help feeling that here we have a unique opportunity for the French delegation and Government to reassure the British Admiralty and public opinion in regard to this matter, of which I hope they will avail themselves. * * * The difficulty is (and this is a point that our Admiralty and our naval staff have to face), we are not clear what are the views of the French naval staff on this matter of the utilization of submarines in time of war. * * *

M. Briand quoted the other day in his memorable speech the atrocious sentiments expressed by General Ludendorff and by von Moltke, sentiments which still constitute in his view a menace to France and which it is essential that France should guard herself against. It is, therefore, I hope, not improper nor in any sense provocative if I have to call attention to the kind of statement, the kind of suggestion of policy which is openly made in high and responsible quarters of the French Naval General Staff in connection with the use of submarines.

If, as I believe, they do not represent the views of the French Government, if, as I hope and believe, they will be at once repudiated, and in an effective manner, then possibly our apprehensions and the attitude which we are compelled to adopt with regard to the use of submarines in war may be very largely modified. I feel bound to give chapter and verse to illustrate the anxiety we feel in regard to this matter. There was published quite recently in the *Revue Maritime*, a technical and official

publication published in January, 1920, under the direction of the French Naval General Staff, a series of articles now incorporated, I believe, in "*Synthese de la Guerre Sous-Marine*" by Capitaine de Frégate Castex, who at that time was chief of one of the important bureaux of the French Naval Staff; who is now Chief of Staff to the Admiral of the Second Division of the Mediterranean and who has just been designated as principal lecturer to the senior officers' courses for the next year.

VIEWS OF CAPTAIN CASTEX

"Therefore I am not quoting some retired naval officer writing from his club. We all suffer from such gentlemen, who propound extraordinary theories. I am speaking now of a responsible officer of the French Naval Staff in a high position, who wrote in particular an article on "Piracy," in which after some preliminary observations destined to throw ridicule on those who criticised the German methods in the late war and treat them with great contempt, he proceeds to say this:

"In the first place, before throwing stones at the Germans we should have recalled that this war of the torpedo was, like so many other novelties of our planet, the application of an idea, which in its origin was essentially French."

Then he quotes in support of his view the doctrine which had been laid down some years ago by Admiral Aube, who was a very distinguished and celebrated French Minister of Marine, who had used the following words when speaking of the use of the torpedo from a torpedo boat [Captain Castex goes on to point out that they are equally applicable to the submarine today]:

"Will the torpedo boat tell the Captain of the liner that it is there, that it is lying in wait for him, that it can sink him, and in consequence take him prisoner? In one word, will it seize its prize by platonic methods? On the contrary, at an appropriate distance, and unseen, the torpedo boat will follow the liner which it marks out for its victim. In the dead of night, quietly, silently, it will send to the abyss the liner, cargo, passengers and crew. Then with a mind not only serene, but fully satisfied with the results achieved, the Captain of the torpedo boat will continue his cruise."

He continues:

"The Germans, as is their wont, have only appropriated in this case the invention of others. The young French school no doubt only had in mind the torpedo boat as such, but, if the effect of the torpedo is independent of the tube which launches it, it will be agreed that the German submarine war had its germ in the observations quoted above. But approaching the question from a higher standpoint than that of mere inquiry as to who conceived this new

form of warfare, it must be recognized that the Germans were absolutely justified in resorting to it."

He says, indeed, that to neglect to do so would have been to commit a great blunder. Further:

"It is thus that resolute belligerents have acted throughout the course of history when people have been engaged in desperate conflict."

Further:

"To sum up, one can see nothing in the attitude of the Germans which, militarily speaking, is not adequately correct. The failure to give notice before torpedoing has raised a storm of protest, but it is not inadmissible, as at first sight appears. * * *

There is much more of the same kind, but he concludes his article with these words:

"Thanks to the submarine, after many centuries of effort, thanks to the ingenuity of man, the instrument, the system, the martingale is at hand which will overthrow for good and all the naval power of the British Empire."

I have quoted this because, as I say, it is the utterance of a responsible member of the French naval staff who, at the time of writing, was in a high position and was the actual head of a bureau. These things are known to our naval staff, of course; indeed, they were published to the world under the authority of the French naval staff.

Now, this officer, who is appointed principal lecturer to the senior officers' course, will, no doubt, unless a change of policy takes place, be pouring what we regard as this infamy and this poison into the ears of the serving officers of the French Navy.

That is the justification for what I can only describe as the apprehensions and even the bitterness that we must feel in the thought that under any conceivable circumstances our present allies, our late comrades in arms in the greatest war the world has ever known, should contemplate the possibility of warfare of that kind.

It seems to me, now that we have expressed those apprehensions, the way is open for the French delegation and the French Government, as I fervently trust they will, to disavow and repudiate these things. I suggest respectfully that there is only one way in which that can be effectively done, and that is by the adoption of these resolutions which have been moved by Mr. Root, and particularly No. 2, with the amendment suggested by Mr. Balfour attached to it. * * *

ADMIRAL DE BON'S REPLY

Speaking for France, Admiral de Bon made this reply:

I have been deeply gratified by Lord Lee's statement. Since the beginning of this discussion we could not comprehend the misunderstanding which seemed to have

arisen between us, because—I state it openly and declare it most emphatically—there is nothing more foreign to our minds than the idea of attacking a friend. It is not even conceivable to us. Our only regret is that this misunderstanding has lasted so long and that we did not know that it was based on an article like that written by Captain Castex.

He is, it is true, an officer who belonged to the General Staff, but who was attached to a literary section. He was above all a man of letters. His article was published in the *Revue Maritime*, which is, to a certain extent, an organ recognized by the French Navy, but on its title page it bears a statement to the effect that the French Admiralty and General Staff decline to assume any responsibility whatever as regards utterances contained in the articles, which responsibility rests wholly with the authors of the articles. Each writer is free to express his own opinions, but he does so at his own risk.

The charge should be laid at the door of the man who wrote the article, and to him only. The article in no way represents, thank Heaven, the views of the French.

Captain Castex brings up an old argument regarding the torpedo boat. I was telling you only the other day in regard to submarines that we were going through once more the same stages of discussion which marked the appearance of the torpedo boat. There has been no instance in history when the appearance of a new weapon has not unleashed a sort of fanaticism in the ranks of partisans. There are always extremists who wish to impose their ideas and make fantastic statements to that end. But in the end common sense always steps in and public opinion keeps the ultimate judgment within reasonable limits.

At the time when frantic enthusiasts believed that torpedo boats were the noblest of inventions, abominable things appeared in print which had no effect on actual practice or on the doctrines adopted by the various Governments with regard to the use of torpedo boats, I can find no better way of condemning the article in question.

The author of that article has written what we consider to be a monstrosity. The French delegation has repeatedly stated that it unreservedly condemned the practices of the German submarines during the late war and that it desired that a declaration strongly condemning them should issue from the conference and be spread over the entire world.

I beg Lord Lee to believe that the French Navy has never harbored any idea of using methods of war practiced by the German submarines, for which we feel only horror, not only against the British Empire, but against any other country whatever.

I maintain that the honor of the French General Staff and of the French Navy, which have a record of centuries of struggle without a single stain on their escutcheon—

cannot be sullied by the article in question. This article is the work of an officer who is a man of letters rather than a sailor; and I formally repudiate it in the name of the French Navy.

M. Sarraut, as head of the French delegation, solemnly confirmed Admiral de Bon's formal repudiation, adding:

Truly, we have had enough of these misunderstandings; they must be done away with. I, for my part, hope for it with all my strength. Mutual confidence free of all reserves must again prevail among us. In this respect the French Government has given and is ready to give every guarantee; its word, indeed, should suffice.

COMPLETING THE RESOLUTIONS

With the ending of this episode, Secretary Hughes, having noted Japan's general approval of Resolution II. of the Root proposals and also her inability to give formal approval until the receipt of instructions from Tokio, brought Resolution III. before the Joint Committee. Mr. Pearce, representing Australia on the British Empire delegation, rose to say that there was one point connected with this resolution which he believed should be amended forthwith. He referred to the fact that the declaration of outlawry on all transgressors of the international code laid down by Mr. Root included only persons in the service of any of the powers "adopting these rules." This would mean, he said, that the submarine officers of nations not adhering to these resolutions would not be liable. He believed that an amendment should be made to extend the rules so that they might become part of international law in order to make them universally effective. Mr. Root acknowledged the "importance and interest" of the point that Senator Pearce had raised. The session closed with a debate on the limitation of tonnage for auxiliary craft, an account of which will be found further along under the appropriate heading.

The sessions of the joint committees were temporarily discontinued

at this date (Dec. 30) in order to give the heads of the various delegations an opportunity to supervise the work in preparation for the coming agreement on all matters relating to naval armament. The committees did not meet again until Jan. 5. At this session all the five powers represented in the Naval Committee adopted all but the last of the Root resolutions. The form in which the resolutions were adopted differed from the original version in the following respects: Resolution I. was divided into two parts, and renumbered. The new Resolution I. laid down the international rules governing submarine attacks on merchant vessels, and declared that the submarine was not exempt from these rules. The new Resolution II. embodied the invitation to all other powers to subscribe to this statement. Resolution II. of the original proposals, which declared against the destruction of merchant vessels by submarines, then became the new Resolution III.

Because of the divergence of views, the committee did not adopt any definition of a merchant ship, viz., the conditions under which an armed merchantman would become an auxiliary cruiser. Each nation thus remained free to decide for itself what class of ships shall or shall not be immune from attack as commerce ships in time of war.

The third original resolution, now renumbered as IV., made the commanders, not only of submarines, but of all other ships, who transgressed the international laws, subject to punishment on the charge of piracy; this was not adopted until the following session, held on Jan. 6. With the passing of this last resolution, the long debate on the submarine issue reached its logical close, and the five greatest naval powers of the world stood committed to the prohibition of the use of submarines as destroyers of commerce, accepting this prohibition as binding on themselves, and inviting all other nations to adhere thereto.

LIMITING AUXILIARY SHIPS

The question of auxiliary ships was first taken up by Secretary Hughes at the session of Dec. 28, after it had become apparent that no progress could be made toward auxiliary ships and submarine limitation, owing to France's refusal of the American proposals. In answer to Mr. Balfour's declaration that if the French Government insisted on carrying out a large submarine program Great Britain would consider herself free to construct anti-submarine auxiliary craft to the extent she deemed necessary, Mr. Hughes said that he did not understand that Mr. Balfour intended to include capital ships in this freedom of action, and also that it was not the intention to build capital ships under the guise of auxiliary craft. If it was not possible to agree on the total tonnage limitation of auxiliary craft, he continued, some arrangement might be made to define the tonnage limit of individual ships. As a basis for such a definition, he offered the following resolution:

No ship of war other than the capital ships or aircraft carriers hereafter built shall exceed a total tonnage displacement of 10,000 tons, and no guns shall be carried by any such ship with a calibre in excess of eight inches.

The second part of this motion was adopted by the joint committees, but the proposal limiting an auxiliary ship's tonnage was referred to the respective Governments. Such a limitation, Lord Lee said, was a necessary corollary to the agreement to limit capital ships, as it would prevent the building of so-called light cruisers, which would be battleships in disguise. He understood that the experts were in agreement as to the reasonableness of the 10,000-ton limit as proposed by Secretary Hughes, and also as to the 8-inch gun for all such ships. Britain, he said, had no gun in excess of 7½ inches on her auxiliary vessels; France, he understood, had a similar calibre, viz., 7.6 inches. Great Britain, however, he said, would make no objection to the

8-inch maximum proposed in Secretary Hughes's resolution. Believing, however, that the limitation of armament should apply also to the aircraft carrier, which might otherwise be transformed into what would be virtually a capital ship, he proposed the following amendment:

No ship of war other than a capital ship or aircraft carrier hereafter built shall exceed a total tonnage displacement of 10,000 tons, and no gun shall be carried by any such ship, other than a capital ship, with a calibre in excess of eight inches.

The American delegation found no objection to the amendment, and it was in this form that Mr. Hughes brought the resolution up again at the afternoon session—the seventh joint meeting of the two committees. Vice Admiral Acton expressed the consent of the Italian delegation to the 8-inch calibre limitation, but stated that his home Government must be consulted on the question of tonnage replacement. Secretary Hughes, in view of the fact that France and Japan had assumed a similar position, suggested that the resolution be laid over for later discussion.

The subject arose again at the tenth joint session, Dec. 30. The Italian and Japanese delegations accepted both parts of the resolution, but final adoption was delayed by the failure of the French delegation to hear from its Government.

LIMIT ON AIRCRAFT CARRIERS

The question of limitation of aircraft carriers came up for discussion on Dec. 28, after Mr. Root had presented his submarine resolution. It was settled after thorough discussion at the session of Dec. 30. The conference had found it impossible to limit the total tonnage of auxiliary craft, owing to the attitude of France on submarines. In the motion offered by Secretary Hughes (see Auxiliary Ships), capital warships and aircraft carriers had been specially excepted from the 10,000-ton limitation. It had now been generally conceded that

aircraft carriers were in a different category from auxiliary cruisers, and Secretary Hughes attacked the problem of total tonnage limitation for these carriers from the very start. Let the official summary here continue the narrative.

In the American proposals at the opening session, he said, it had been agreed that the total tonnage of aircraft carriers should be fixed as follows:

United States—80,000 tons.

Great Britain—80,000 tons.

Japan—48,000 tons.

If the same ratio provided for capital ships should be applied to aircraft carriers for France and Italy the result would be as follows:

France—28,000 tons.

Italy—28,000 tons.

The American proposition had added a proviso that no country exceeding the quota allowed should be required to scrap such excess tonnage until replacement began, at which time the total tonnage of airplane carriers for each nation should be reduced to the prescribed allowance. Certain other rules had been proposed.

Mr. Hughes added that in view of the fact that aircraft carriers might approach in tonnage to capital ships, it would be wise also to set a limit in this respect. It was now proposed not to lay down any ships of this character whose displacement should exceed 27,000 tons. This was the proposition which was now presented for discussion. He said that he thought he should add that what had appeared in the resolution regarding aircraft carriers should be deemed to be the same as that included in the resolutions respecting all ships of war except capital ships, in that their guns should not have a calibre exceeding eight inches. If added to the resolution regarding aircraft carriers, the latter would read:

"No aircraft carrier shall be laid down during the term of this agreement whose tonnage displacement is in excess of 27,000 tons and no gun shall be carried by any such ship other than a capital ship with a calibre in excess of eight inches."

When these proposals were brought up again for full discussion at the joint session on Dec. 30, Admiral Acton of the Italian delegation pointed out that under the ratio allowed for Italy (28,000 tons) that country would be able to build only one airplane carrier of the 27,000-ton maximum laid down. If this one carrier should be laid up in drydock for repairs or should be sunk, Italy would

be left destitute of this weapon. He therefore presented Italy's request that the allowance be 54,000 instead of 28,000 tons.

The request was approved by Lord Lee of the British delegation, and he seized the opportunity to point out that his own Government stood in similar need of an increase in tonnage in respect to this type of vessel. The tonnage proposed, he said, was felt by his delegation to be inadequate, especially if the British Navy was to have carriers proportional in number to the two ships which Italy had demanded. The airplane carrier was essentially a fleet weapon, and should be adequate and proportional to the size of the fleet it served. In view of the fact that submarines were to be continued, he did not feel that the airplane carriers, which were an equally important weapon of anti-submarine defense, should be reduced. His delegation felt that the ratio of 5-5-3 for capital ships should be applied also here. At the present time Great Britain possessed only five airplane carriers, which included four vessels which were really experimental, three of which were small and inefficient. In view of this, whatever the division might be as to the total tonnage, Great Britain would have to demand that she be allowed to scrap these experimental ships and replace them with new ships designed to meet the requirements of the fleet.

Admiral de Bon for France similarly put forth demands for a higher ratio. The French delegation, he said, considered that France required two airplane carriers for European waters, and a third for use in her colonial possessions. Assuming an average size of 25,000 tons, the French demand would be for an aggregate of 75,000 tons. To meet the general wishes, however, he was willing to agree that 60,000 might be sufficient to meet his country's needs.

Baron Kato for Japan pointed out that under the proposed ratio his country would have the right to construct only one and a half airplane

carriers—an aggregate of 48,000 tons. The insular character of Japan, he pointed out, the extensive line of its coasts and the location of its harbors, as well as the susceptibility of Japanese cities, built of frame houses, to easy destruction by fire if attacked by air bombs, made it necessary for his country to have at least three airplane carriers of 27,000 tons each, or a total tonnage of 80,000. His delegation would make no objection, he added, if the United States and Great Britain received a proportionate increase.

Secretary Hughes then stated the new proposals. He saw no reason, he said, why the increased demands set forth as necessary should not be accepted by the United States, it being understood, however, that the latter country would receive an increase proportionate to that of Great Britain. He then called for a vote on the ratios asked by each power, viz.:

	Number of Carriers.	Total Tonnage.
Great Britain	5	135,000
United States	5	135,000
Japan	3	81,000
France	3	60,000
Italy	2	54,000

The vote was unanimously in the affirmative. Secretary Hughes then pointed out that this included, without separate action, agreement on the 27,000-ton limitation for individual ships and the eight-inch maximum calibre for guns. He also stated, in view of the general feeling that the development, not only of airplanes, but of airplane carriers, was in an experimental stage, that the prohibition stated in Item 24 of the original American proposals, viz., "no new airplane carrier tonnage except replacement tonnage shall be laid down during the period of agreement," would not be applicable to the existing situation. Thus the disadvantageous position of those nations who already possessed such experimental carriers, as compared with those who had not built such ships, and could take advantage of the latest information and inventions, would be equalized, he

said. Each nation would be left free to proceed with replacement to the maximum laid down; but not beyond. This was a liberty of replacement, not of addition. After another vote, the Chairman announced that the proposals as stated had been unanimously adopted.

AIRCRAFT LIMITATION REJECTED

Though the conference had thus decided on Dec. 30 to limit the tonnage and armament of aircraft carriers, it found itself in a different frame of mind regarding the limitation of aircraft itself. The deciding factor in this regard was a long and technical report presented by the Aircraft Limitation Subcommittee to the Naval Committee of the conference at its session of Jan. 7. This report declared that any attempt to restrict airplane development through limitation in numbers, size or military characteristics would be unwise. It was presented by Chairman Hughes immediately after the adoption of the Root resolution declaring against the use of poison gas, and discussion was opened on it as the third new agency of warfare which the conference had to consider from the point of view of limitation, the first two—namely, submarine and chemical warfare—having already been disposed of. [See page 738.]

The report dealt exhaustively with the whole subject under the following categories: (1) commercial aircraft; (2) civil aircraft—meaning aircraft controlled by a State, but not for military purposes; (3) military aircraft. Heavier-than-air and lighter-than-air craft were considered separately, since the conditions governing the two are not in all cases the same. The report was signed by the full Committee on Aircraft, which was composed of the following members:

United States—William A. Moffett, Rear Admiral U. S. N. (Director of the Naval Air Service), Chairman; Mason M. Patrick, Major General, U. S. A.

British Empire—J. F. A. Higgins, Air Vice Marshal, R. A. F.

France—Albert Roper, Capitaine, Pilote aviateur, French Army.

Italy—Riccardo Moizo, Colonel, R. I. A.

Japan—Osami Nagano, Captain, I. J. N.

The findings of the subcommittee may be summarized as follows:

It is the opinion of this committee that the limitation of military air power (as regards heavier-than-air craft) is not practicable at the present time.

Their reasons for this decision are as follows:

1. The difficulty of finding a basis for the proportion of aircraft to be allotted to the various nations.

2. The difficulty of devising technical methods to impose such limitation.

3. The difficulty of enforcing such methods.

4. The interdependence between air power and a commercial aircraft industry, which it is not practicable to limit.

As to lighter-than-air craft, the report said many of these remarks also applied, but that limitation of dirigibles was possible and practicable because, their war power being dependent upon size, infractions of a rule of size as to commercial dirigibles could be learned quickly, and also any limitation of number to be maintained was enforceable. But again the committee held restrictions would be imposed on commercial development of the industry which it deemed unwise to enact.

The committee also took up rules of aerial warfare and urged that this should be made the subject of an international agreement. It pointed out, however, that though the American and Japanese delegations to the present conference were prepared and authorized to take up such discussion, the British, French and Italian groups were not, and that in some cases a national policy on the subject in various countries had not been matured as yet.

For that reason the committee recommended postponement of consideration of the rules of air warfare to a later conference to be called for the purpose.

In a closing paragraph as to use of aircraft, the report said:

"The committee is of the opinion that the use of aircraft in war should be governed by the rules of warfare as adapted to aircraft by a further conference which should be held at a later date."

As an annex to the report, the Italian group stated its belief that one way in which it would be possible to limit the air power of a nation "would be by placing a limit upon the number of pilots in the permanent military establishment, and consequently agrees with the general reasoning of the report in so far as it is not contrary to this opinion."

DEBATE ON THE REPORT.

Formal debate on the report was opened on Jan. 9. All the delegations in turn expressed the view that the experts were right in their belief that aircraft limitation was impossible at present. Chairman Hughes expressed disappointment that the conference was unable to suggest practical limitations on the building of military aircraft, probably the most formidable weapon of the future. The experts had well presented the difficulties. They were dealing with facilities needed in peaceful development. No ban could be put on progress. The question, Secretary Hughes said, resolved itself, not into a limitation of armament, but into a limitation of civil progress, and therefore there seemed to be nothing to do but to accept the experts' report. The report was then formally accepted. Secretary Hughes asked discussion on lighter-than-air craft, which the experts had said might be limited. As none of the delegations wished to urge action along this line, Mr. Hughes proposed the following resolution, covering aircraft in general:

The committee is of the opinion that it is not at present* practicable to impose any effective limitations upon the numbers or characteristics of aircraft, either commercial or military.

INQUIRY COMMISSION APPROVED

The resolution was unanimously adopted.

The Chairman then brought up the recommendation of the experts that rules for the use of airplanes in war might be considered at another conference. Signor Schanzer approved this suggestion, but thought that the present conference could pass a resolution against the bombardment of cities by aircraft, from which practice Italy had greatly suffered during the war. Admiral de Bon then drew attention to the fact that this was provided for by Article 25 of the

*The words "at present" were inserted at the suggestion of Mr. Balfour.

Hague Convention of 1907. Mr. Root, however, pointed out that this article referred only to unfortified cities. Almost all towns in Europe, he said, were fortified to some degree against land attack, but completely defenseless against attack from the air. In view of this, he declared, some definition of what constituted a fortified town should be made.

Chairman Hughes then said it was apparent that a very technical question had been raised, and that long and thorough study would be needed by a commission of jurists on this as on other rules of warfare which seemed to be demanded by the development of new instruments of warfare; he suggested that this commission take the place of a new conference recommended by the experts. Any new conference, he intimated, would be as hampered by lack of the technical knowledge required, and which only highly trained jurists possessed, as the present conference. Mr. Borden of the British Empire delegation approved this suggestion in general, but doubted if the five powers of the conference could establish such a commission without inviting the participation of other nations. To this the Chairman replied that his desire was only that those five powers should have the right of initiation, and suggested that the formulation of an appropriate resolution be referred to the Drafting Committee.

Mr. Balfour approved this, but offered two suggestions. The first was that the commission of inquiry proposed should not be limited to jurists, but should also include technical experts, people who had seen the new agencies of warfare at work, who knew what those agencies had involved in the past and what they would involve in the future, and who, in his view, should have more to say on the framing of such new rules than the most expert jurists. The second suggestion was that the inquiry itself be divided into two parts, (1) revision of the rules of warfare in general, and (2) what had been de-

scribed by the agenda brought forward by the Chairman at the beginning of the conference as "rules for the control of new agencies of warfare," and that the conference should limit the work of the future examining body to the latter strictly limited and specific subject. He pointed out the vastness and complexity of international law as applied to warfare, and declared his belief that even the limited field proposed would be sufficient to occupy the attention of the most powerful committee which the conference would be able to provide.

Mr. Hughes found no objections to these suggestions, and they were referred, together with the shaping of the contemplated resolution, to the Drafting Committee.

POISON GAS PROHIBITED.

Another achievement of the arms conference, considered as almost equal in importance to the resolutions banning the submarine, was the adoption by the Naval Committee on Jan. 7 of a resolution offered by Secretary Hughes in favor of the abolition of the use of poison gas in international warfare. The presentation of this resolution on Jan. 6, immediately after the committee had adopted the last of the Root submarine resolutions, came as a surprise to the other delegations.

Secretary Hughes based his discussion of "chemical warfare" on the reading of three reports: (1) The report of the conference Experts' Committee on poison gas, which declared it unwise to try to prohibit the use of such gas; (2) the report adopted by the Advisory Committee of the American delegation, which favored prohibiting it; and (3) a report by the General Board of the United States Navy, which similarly declared that chemical warfare should be abolished.

EXPERT COMMITTEE'S REPORT

The Experts' Committee, composed as follows: Professor Edgar F. Smith, for the United States, Chairman; Brig. Gen. Fries, United States;

Colonel Bartholomew, Great Britain; Professor Moureau and Professor Mayer, France; Lieut. Col. Penti-malli, Italy, and Major Gen. Hara-guchi, Japan, had reported as follows:

The committee agreed more or less unanimously on the following points:

1. (a) Chemical warfare gases have such power against unprepared armies that no nation dare risk entering into an agreement which an unscrupulous enemy might break if he found his opponents unprepared to use gases, both offensively and defensively.

(b) Since many high explosives produce warfare gases or gases which are the same in their effects on men, any attempt to forbid the use of warfare gases would cause misunderstandings at once. That is, one or both sides would in the first battle find men dead or injured from gas. The doubt would at once arise whether gas was actually being used, as such, or whether the casualties were due to high explosives. This could be made the excuse to launch a heavy attack with warfare bases in every form.

(c) Research which may discover additional warfare gases cannot be prohibited, restricted or supervised.

(d) Due to the increasingly large peace-time use of several warfare gases, it is impossible to restrict the manufacture of any particular gas or gases. Some of the delegates thought that proper laws might limit the quantities of certain gases to be manufactured. The majority of opinion was against the practicability of even such prohibition.

(e) It is possible to confine the action of chemical warfare gases the same as high explosives and other means of carrying on war. The language used in this connection was that "it is possible, but with greater difficulty." On this question, as in the cases of (f) and (g) following, it was evident that among the representatives of the three nations thoroughly acquainted with chemical warfare gases, namely, the United States, Great Britain and France, there was less doubt as to the ability to confine their gases than among the Japanese and Italians, who know less about them.

(f) The kinds of gases and their effects on human beings cannot be taken as a basis for limitation. In other words, the committee felt that the only limitation practicable is to wholly prohibit the use of gases against cities and other large bodies of non-combatants, in the same manner as high explosives may be limited, but that there could be no limitation on their use against the armed forces of the enemy, ashore or afloat.

(g) The committee was divided on the question as to whether or not warfare gases form a method of warfare similar to other methods, such as shrapnel, machine guns,

rifle, bayonet, high explosives, airplanes, bombs, hand grenades and similar older methods. In this, as in (e) and (f), the United States, Great Britain and French members (five in number), who know gas, were emphatic that chemical warfare gases form a method of waging war similar to the older forms.

REPORT OF ADVISORY COMMITTEE

Secretary Hughes then said that he desired to read, on behalf of the American delegation, the report adopted by the American Advisory Committee on the recommendation of its subcommittee which had studied new agencies of warfare. The report follows:

The Committee (of the Advisory Committee) on New Agencies of Warfare, having had a number of meetings, one conjointly with the Committee (of the Advisory Committee) on Land Armaments, has the honor to report that it has given careful consideration to the subject referred to it. Chemical warfare, which is the scientific term to cover use of gases in all their forms, reached very important and significant phases during the World War. The surprise of the first gas attack on the British forces at Ypres shocked the civilized world, but its military effectiveness caused the allied Governments at once to take measures not only of protection against gas attacks, but also of offensive action. In consequence, at the close of the war the use of poison gases, not only temporarily injurious but of a toxic character, became universal.

The committee has found on consultation with experts and reference to scientific study of the subject that there are arguments in favor of the use of gas which ought to be considered. The proportion of deaths from their use when not of a toxic character is much less than from the use of other weapons of warfare. On the other hand, the committee feels that there can be no actual restraint of the use by combatants of this new agency of warfare if it is permitted in any guise.

The frightful consequences of the use of toxic gases if dropped from airplanes on cities stagger the imagination. No military necessity can excuse or extenuate such events as were of frequent occurrence during the recent war, when bombs were dropped on undefended and thickly populated cities, towns and villages for no other purpose apparently than to demoralize the population. If lethal gases were used in such bombs it might well be that much permanent and serious damage would be done, not only of a material character, but in the depopulation of large sections of the country.

The committee is of opinion that the conscience of the American people has been

profoundly shocked by the savage use of scientific discoveries for destruction rather than for construction.

The meeting of the Conference on the Limitation of Armament in the city of Washington affords a peculiarly advantageous opportunity for comparison of views on all questions bearing on the subject. Whatever may be the arguments of technical experts, the committee feels that the American representatives would not be doing their duty in expressing the conscience of the American people were they to fail in insisting upon the total abolition of chemical warfare, whether in the army or the navy, whether against combatant or noncombatant. Should the United States assume this position, it would be an evidence not of weakness but of magnanimity. Probably no nation is better equipped by reason of scientific knowledge among its technicians and by means of its material resources to use chemical warfare effectively.

This committee, therefore, submits the following resolution for adoption by the Advisory Board and to be communicated to the American delegates on the Conference on the Limitation of Armament:

"Resolved, that chemical warfare, including the use of gases, whether toxic or non-toxic, should be prohibited by international agreement, and should be classed with such unfair methods of warfare as poisoning wells, introducing germs of disease and other methods that are abhorrent in modern warfare."

Secretary Hughes then called attention to the fact, stated at the beginning of this report, that the Conference Subcommittee had held a joint meeting with the Advisory Committee's Subcommittee on Land Armaments. This last-named subcommittee had submitted a report which the Advisory Committee had unanimously adopted. This report, signed by General John J. Pershing, as Chairman, had made the following recommendation with regard to chemical warfare:

Chemical warfare should be abolished among nations, as abhorrent to civilization. It is a cruel, unfair, and improper use of science. It is fraught with the gravest danger to noncombatants, and demoralizes the better instincts of humanity.

UNITED STATES NAVY REPORT.

In view of the differences of opinion among experts, and especially of the finding of the Expert Committee of the conference in favor of chemical

warfare, said Secretary Hughes, he wished to read a report by the General Board of the United States Navy upon this question. This report was as follows:

Question: Should gas warfare be prohibited?

Answer: Yes.

Comment: 1. The United States would undoubtedly give up a material advantage if gas warfare were abolished. The resources and scientific development of this country place it in the front ranks of nations in the ability to wage efficient gas warfare and insure an adequate supply of special gases. Nevertheless, its abolition would be popular in this country even though its effectiveness as a weapon in war has been clearly proved when employed under special conditions.

2. The tendency of rules of modern warfare is toward restraint in the employment of weapons that produce unnecessary suffering. The limitations in the employment of the different weapons have that end in view. The dum-dum bullet and the explosive bullet are well-known examples. Following this general principle, gases which produce unnecessary suffering should be prohibited.

3. Gas warfare has a peculiar futility different from any method heretofore employed, in that though directed toward a particular target its destructive effect is not limited to that target, but passes beyond control of the belligerent agent and may involve a sacrifice of innocent lives over a wide area. On account of this peculiarity the use of gas which causes death is objectionable because not only the combatant is killed, a perfectly legitimate target, but many noncombatants may also be victims. And these innocent persons may deliberately be made objects of gas attacks by unscrupulous belligerents. Lethal gases should therefore be prohibited.

4. The two principles in warfare, (1) that unnecessary suffering in the destruction of combatants should be avoided, (2) that innocent noncombatants should not be destroyed, have been accepted by the civilized world for more than 100 years. The use of gases in warfare in so far as they violate these two principles is almost universally condemned today, despite its practice for a certain period during the World War.

5. Certain gases, for example tear gas, could be used without violating the two principles above cited. Other gases will no doubt be invented which could be so employed, but there will be great difficulty in a clear and definite demarcation between the lethal gases and those which produce unnecessary suffering as distinguished from those gases which simply disable temporarily. Among the gases existing today there is undoubtedly a difference of opinion as to which class certain gases belong.

Moreover, the diffusion of all these gases is practically beyond control, and many innocent noncombatants would share in the suffering of war, even if the result did not produce death or a permanent disability.

6. The General Board foresees great difficulty in clearly limiting gases so as to avoid unnecessary suffering in gas warfare and in enforcing rules which will avert suffering or the possible destruction of innocent lives of noncombatants, including women and children. Gas warfare threatens to become so efficient as to endanger the very existence of civilization.

7. The General Board believes it to be sound policy to prohibit gas warfare in every form and against every objective, and so recommends. W. L. RODGERS.

In view of all this expert evidence, Secretary Hughes said that he felt that the American delegation should present the recommendation that the use of asphyxiating or poison gas be absolutely prohibited. He then asked Mr. Root to present the resolution.

MR. ROOT'S EXPLANATION

"There was," said Mr. Root, in moving the resolution, "an expression on this subject which presented the most extraordinary consensus of opinion that one could well find on any international subject." He had based his draft on the Treaty of Versailles, subscribed to by four of the five chief powers represented at the conference, and taken over by the United States and Germany in their peace treaty of Aug. 25, 1921; repeated in the Treaty of St. Germain between the same four powers and Austria; in the Treaty of Neuilly between the same powers and Bulgaria; in the Treaty of the Trianon with Hungary, and in the Treaty of Sèvres with Turkey. He then read from Article 171 of the Treaty of Versailles:

The use in war of asphyxiating, poisonous or other gases, all analogous liquids, materials or devices being prohibited, their manufacture and importation are strictly forbidden in Germany. The same applies to materials specially intended for the manufacture, storage and use of the said products or devices.

That declaration, said Mr. Root, he understood to be a statement of the previous rules which had been adopt-

ed covering the history of The Hague conference. He had therefore followed the language of the Versailles Treaty, which all the subsequent treaties had adopted. He then read the American resolution, which was phrased thus:

The use in war of asphyxiating, poisonous or other gases and all analogous liquids or materials or devices having been justly condemned by the general opinion of the civilized world and a prohibition of such use having been declared in treaties to which a majority of the civilized powers are parties;

Now to the end that this prohibition shall be universally accepted as a part of international law, binding alike the conscience and practice of nations, the signatory powers declare their assent to such prohibition, agree to be bound thereby between themselves and invite all other civilized nations to adhere thereto.

Inasmuch as some thirty or forty powers had assented to this prohibition in the various treaties named, said Mr. Root, there was not much further to go in securing that general consent which changes a rule from contract to law. The session closed with an expression of deep satisfaction by Signor Schanzer of the Italian delegation, who pointed out that the Italian representative in the subcommittee had been the first to propose the abolition of poison gas in warfare. The American proposal, he declared, would constitute one of the conference's greatest claims to honor, and a real step in the path of progress and civilization.

The resolution was unanimously adopted by all the delegates at the session of Jan. 7, after some further debate which brought into strong relief the general feeling that the moral effect of the resolution would be felt throughout the civilized world. Mr. Balfour was especially convinced of this, though he maintained the right of every nation, in case of future use of this inhuman agency in war, to prepare its defense, just as in the case of the submarine. In the latter case, the international law had been extended. In the case of poison gas the conference powers could do no more than reaffirm the existing law,

in view of the difficulty of controlling the production of poison gases. Mr. Balfour believed, however, that such a reaffirmation would "bring home to the consciences of mankind that poison gas was not a form of warfare which civilized nations could tolerate." The resolution was then formally accepted by all five powers.

CHINESE TARIFF AGREEMENT

Important progress was made on Jan. 5 by the committee on the Far East. This was the first public session held by that committee since Dec. 14, when it had adjourned subject to call by the Chairman, in order to allow scope for the discussions on limitation of naval armament. At the session of Jan. 5 decisions were reached on two points previously debated—the raising of the Chinese customs tariff, and the withdrawal of foreign troops from Chinese territory.

The question of China's proportion of customs revenue, reduced by treaties with various powers to a nominal 5 per cent. ad valorem, but practically to only $3\frac{1}{2}$ per cent., had first been raised by Dr. Wellington Koo, head of the Chinese delegation, at the session of Nov. 23. [See January CURRENT HISTORY.] At that meeting Dr. Koo had made a plea for complete autonomy in respect to customs tariff, and had asked at all events that China's quota be raised from 5 per cent. to $12\frac{1}{2}$ per cent. in view of the nation's financial necessities. He made it clear, however, that China had no wish to interfere with the existing administration of maritime customs, or with the application of customs revenue to the liquidation of foreign loans guaranteed by this revenue. The Chinese demands had been debated at length by the subcommittee on this subject, and though the final agreement reached did not grant China her full desires (viz., the immediate increase to $12\frac{1}{2}$ per cent., scientific revision of the tariff within two years, and eventual autonomy), it took a considerable step forward by

raising China's customs revenue by \$46,000,000 annually, and providing for future additional revisions.

This decision was embodied in a report presented by Senator Underwood, as Chairman of the subcommittee, at the Jan. 5 session. The gist of the agreement was briefly as follows:

1. Increase to 5 per cent. effective, an addition of \$17,000,000 silver.
2. Surtax of $2\frac{1}{2}$ per cent., representing \$27,000,000 silver.
3. Surtax not exceeding .5 per cent. on luxuries, \$2,167,000 silver.
4. Total additional revenue, \$46,167,000 silver.
5. Total estimated customs revenues (based on the revenue for 1920, \$64,000,000 silver, plus the \$46,167,000 additional revenue referred to above), \$110,167,000 silver. (A maximum estimate based on the conclusion of all revision measures was subsequently given by Chairman Underwood at \$156,000,000 silver.)

Senator Underwood prefaced the reading of the report with an explanation both of its object and of its purport. The subcommittee had been influenced by the following considerations: The last revision of the tariff took place in 1918. Though this revision had been for the purpose of bringing the rates up to a 5 per cent. effective basis, the basis adopted had been the average of the value of imports during the years 1912-1916. The rates fixed, which became effective in August, 1919, were to last for at least two years after the end of the war. Manifestly, said Senator Underwood, "valuations based on an average of values from 1912 to 1916 no longer represent the true value of importations, and, as a result, the revision of 1918, instead of producing revenue representing 5 per cent. effective, actually produced only about $2\frac{1}{2}$ per cent. effective."

The agreement, he further explained, fell into two parts. The first part related to tariff readjustment measures which may become immediately applicable without taking treaty form and requiring ratification. This would be effected through a committee of revision, which would meet in Shanghai to re-

wise the present tariff on the 5 per cent. basis, its revision to become effective within two months after publication, without ratification. The second part related to subjects to be dealt with by a special conference, which will take measures looking to the speedy abolition of the likin (the transit tax between Chinese provinces and districts), the application of surtaxes, and the realization of the principle of uniformity in the customs rates on all frontiers, whether land or maritime. The surtaxes provided for in the treaty of 1902 between China and Great Britain and in the treaty of 1903 between China and the United States would be brought into effect by this special conference, which would likewise fix a specific surtax of $2\frac{1}{2}$ per cent. ad valorem, calculated to bring in \$27,000,000 silver additional, and a special surtax on luxuries not exceeding 5 per cent., estimated to bring in \$2,167,000 silver. When all these measures had been completed, it was expected that the total revenue would amount to fully \$156,000,000 silver. Senator Underwood declared that the new agreement was "a signal achievement, not only in the interest of China and of each of the treaty powers, but in the interest of trade in general and of peace itself." He especially stressed the effect it would have in removing "the highly unjust and controversial preferences with which the foreign trade of China has heretofore been encumbered."

TEXT OF TARIFF REPORT

The official text of the report, which Senator Underwood then read, was as follows:

The subcommittee on Chinese Customs Duties, having had under consideration the proposals of the Chinese delegates for the restoration of tariff autonomy and the readjustment of maritime customs duties with a view to providing additional revenue to meet the needs of the Chinese Government, reports that it has reached the following agreement:

"The powers attending this conference agree:

"I. That immediate steps be taken through a special conference representing

China and the powers which accept this agreement to prepare the way for the speedy abolition of likin and the fulfillment of the other conditions laid down in Article VIII. of the Anglo-Chinese commercial treaty of Sept. 5, 1902, and the corresponding articles of the United States and Japanese treaties with a view to levying the surtaxes as provided in those articles.

"II. That the present tariff on importations shall be forthwith revised and raised to a basis of 5 per cent. effective. That this revision shall be carried out forthwith by a revision committee at Shanghai on the general lines of the last revision. The revision shall proceed as rapidly as possible, with a view to its completion within four months from the conclusion of the present conference, and the revised tariff shall become effective two months after publication without awaiting ratification.

"III. That the interim provision to be applied until the articles referred to in Paragraph 1 come into operation be considered by the aforesaid special conference, which shall authorize the levying of a surtax on dutiable imports and subject to such conditions as they may determine. The surtax shall be at a uniform rate of $2\frac{1}{2}$ per cent. ad valorem, except in the case of certain articles of luxury which, in the opinion of the conference, can bear a greater increase without unduly impeding trade, and upon which the total surtax shall not exceed 5 per cent.

"IV. (1) That there shall be a further revision of the tariff to take effect at the expiration of four years following the completion of the immediate revision herein authorized, in order to insure that the rates shall correspond to the ad valorem rates fixed.

"(2) That following this revision there shall be periodical revisions of the tariff every seven years for the same purpose.

"(3) That in order to prevent delay such periodical revisions shall be effected in accordance with rules to be settled by the special conference mentioned in Paragraph 1.

"V. That in all matters relating to customs duties there shall be effective equality of treatment and of opportunity for all nations parties to this agreement.

"VI. That the principle of uniformity in the rates of customs duties levied on all the frontiers, land and maritime, of China be recognized, and that it be referred to the special conference mentioned in paragraph 1 to make arrangements to give practical effect to this principle, with power to authorize any adjustments which may appear equitable in cases in which the customs privilege to be abolished was granted in return for some local economic favor. In the meantime any increase in the rates of customs duties or surtax imposed in pursuance of the present agreement shall be levied at a uniform rate ad valorem on all frontiers, land and maritime.

"VII. That the charge for transit passes shall be at the rate of $2\frac{1}{2}$ per cent. ad valorem, except when the arrangements contemplated in paragraph 1 are in force.

"VIII. That the treaty powers not here represented shall be invited to accept the present agreement.

"IX. That this agreement shall override all provisions of treaties between China and the powers which accept it which are inconsistent with its terms."

The delegate for China submitted the following communication, which it was unanimously agreed should form a part of the foregoing agreement as an appendix thereto:

"Declaration of intention not to disturb the present administration of the Chinese maritime customs.

"The Chinese delegation has the honor to inform the Committee on Far Eastern Questions of the Conference on the Limitation of Armament that the Chinese Government have no intention to effect any change which may disturb the present administration of the Chinese maritime customs.

REDUCING CHINA'S ARMY

In addition to this main report, Senator Underwood stated that a special resolution had been adopted on Jan. 2, 1922 (the Chinese delegate not voting), urging that China, in the interests of general disarmament, reduce the large military forces maintained at an enormous cost by the Tuchuns or Military Governors. This was urged also in the interests of China's own financial rehabilitation. The resolution read thus:

The members of the subcommittee in studying the question of increasing the customs tariff rates to meet the urgent needs of the Chinese Government have been deeply impressed with the severe drain on China's public revenue through the maintenance of excessive military forces in various parts of the country. Most of these forces are controlled by the military chiefs of the provinces, and their continued maintenance appears to be mainly responsible for China's present unsettled political conditions.

It is felt that large and prompt reduction of these forces will not only advance the cause of China's political unity and economic development, but hasten her financial rehabilitation. Therefore, without any intention to interfere in the internal problems of China, but animated by the sincere desire to see China develop and maintain for herself an effective and stable Government alike in her own interest and in the general interest of trade, and inspired by

the spirit of this conference whose aim is to reduce, through the limitation of armament, "the enormous disbursements" which "manifestly constitute the greater part of the encumbrance upon enterprise and national prosperity," the subcommittee venture to suggest for the consideration of the committee the advisability of laying before the conference for its adoption a resolution expressing the earnest hope of the conference and embodying recommendation to China that immediate and effective steps be taken by the Chinese Government to reduce the aforesaid military forces and expenditure.

Dr. Koo expressed regret that the committee had not seen fit to grant China the full customs autonomy which she desired, and which, he said, all other countries enjoy respecting the regulation of their customs. He made it clear that China would not relinquish this demand, but would bring the subject up again for consideration on all suitable opportunities. The report was then unanimously adopted, together with the Chinese declaration regarding maritime customs. Senator Underwood answered Dr. Koo's criticism.

I do not think [he said] that there was any doubt in the minds of the men on the subcommittees as to the question that if China at present had the unlimited control of levying taxes at the Custom Houses, in view of the unsettled conditions now existing in China, it would probably work, in the end, to China's detriment and to the injury of the world, and I think that had more to do with the subcommittee not making a full and direct response to Dr. Koo's request than anything else.

I am sure there was no desire on the part of the other powers to be selfish, or not to recognize the full sovereignty of China, and I only rose to say this, that if I am a judge of the situation, a judge of the temper of conditions in the balance of the world, I feel sure that when China herself establishes a Parliamentary Government of all the provinces of China and dispenses with the military control that now exists in many of the provinces of China, so that the outside powers may feel that they are dealing with a Government that has entire and absolute and free control of the situation, China can expect to realize the great ideals of sovereignty that she asks at this table.

[At the eighteenth meeting of this committee, on Jan. 16, final agreement was recorded to the raising of the Chinese customs revenue, already thus approved by representatives of

the nine nations. This was done through the adoption of a resolution presented by Mr. Elihu Root, voicing the assent of the nine powers concerned to the 5 per cent. quota of revenue to be assigned to China; to the abolition of the likin, or transit dues, and to the levying of surtaxes. The United States, as the convener of the conference, pledged itself to communicate the decision to nations not participating, and to invite their adherence, on the obtaining of which the new agreement would override the terms of any existing treaties.]

WITHDRAWAL OF FOREIGN TROOPS

Dr. Koo accepted the special resolution regarding China's reduction of her military forces, and the resolution was recommitted by the Chairman to the subcommittee for formal drafting in a shape to be approved by the committee as a whole.

Secretary Hughes then asked Mr. Root to present the resolution on withdrawal of foreign troops. Mr. Root read the resolution, which embodied an offer by the eight powers—United States, Great Britain, France, Italy, Portugal, Holland, Belgium and Japan—to conduct through their diplomatic representatives at Peking, jointly with China, a thorough investigation of this problem, with a view to its ultimate solution. Mr. Alfred Sze voiced the Chinese delegation's appreciation of this offer, and the resolution, after some discussion, was unanimously adopted, China not voting. Its text follows:

Whereas, The powers have from time to time stationed armed forces, including police and railway guards, in China to protect the lives and property of foreigners lawfully in China; and

Whereas, It appears that certain of these armed forces are maintained in China without the authority of any treaty or agreement; and

Whereas, The powers have declared their intention to withdraw their armed forces now on duty in China without the authority of any treaty or agreement whenever China shall assure the protection of the lives and property of foreigners in China; and

Whereas, China has declared her intention and capacity to assure the protection of the lives and property of foreigners in China;

Now, to the end that there may be clear understanding of the conditions upon which in each case the practical execution of those intentions must depend, it is

Resolved, That the diplomatic representatives in Peking of the powers now in conference at Washington, to wit: the United States of America, Belgium, the British Empire, France, Italy, Japan, the Netherlands and Portugal, will be instructed by their respective Governments, whenever China shall so request, to associate themselves with three representatives of the Chinese Government to conduct collectively a full and impartial inquiry into the issues raised by the foregoing declarations of intention made by the powers and by China, and shall thereafter prepare a full and comprehensive report setting out without reservation their findings of fact and their opinion with regard to the matter hereby referred for inquiry, and shall furnish a copy of their report to each of the nine Governments concerned, which shall severally make public the report with such comment as each may deem appropriate. The representatives of any of the powers may make or join in minority reports stating their differences, if any, from the majority report.

That each of the powers above named shall be deemed free to accept or reject all or any of the findings of fact or opinions expressed in the report, but that in no case shall any of the said powers make its acceptance of all or any of the findings of fact or opinions either directly or indirectly dependent on the granting by China of any special concession, favor, benefit or immunity, whether political or economic.

SHANTUNG DEADLOCK

The Shantung controversy between China and Japan, which had been debated through seventeen sessions of the two delegations, up to Dec. 20 (see January CURRENT HISTORY), had reached a deadlock at that date. The Japanese delegates had declined further discussion until they could communicate with their home Government. The crux of the situation was that China wished to buy back the Shantung railroad outright, and to pay for it out of her own funding, whereas Japan insisted on China's accepting a loan from Japanese financial interests. China also did not wish to have

Japanese officials admitted to the railroad's administration, whereas the Japanese insisted that officials from Japan should control the line.

After a period of delay the Japanese received new instructions and the interrupted parleys were resumed. A bulletin of the twentieth session on Jan. 6 showed that the Japanese negotiators had again refused the Chinese proposals, and that the conversations had again been suspended sine die "pending further developments." The official bulletin said in part:

The Japanese delegates proposed a railway loan agreement plan for the settlement of this question on the basis of the terms of ordinary railway loan agreements entered into by China with various foreign capitalists during recent years, namely, on the following general lines:

1. The term of the loan shall be fixed at fifteen years, while China shall retain an option of redeeming the whole outstanding liabilities upon six months' notice after five years from the date of the agreement.

2. A Japanese traffic manager and chief accountant shall be engaged in the service of the Shantung Railway.

3. The details of the financial arrangement shall be worked out at Peking between the representatives of the two parties to the loan.

This plan was not found acceptable to the Chinese delegation. The Chinese delegates, on their part, proposed the following two alternative plans:

1. China shall make a cash payment for the railway and its appurtenant properties with a single deposit in a bank of a third power at a specified date either before the transfer of the properties or when such transfer is effected.

2. China shall make a deferred payment either in Treasury notes or notes of the Chinese Bankers' Union, secured upon the railway properties, extending over a period of twelve years, with an option on the part of China at any time after three years, upon giving six months' notice, to pay all the outstanding liabilities. The first instalment is to be paid on the day on which the transfer of the railway and properties is completed.

China shall engage that she, upon her own initiative, shall select and employ in the service of the Tsing-tao-Tsinan-fu Railway a district engineer of Japanese nationality.

Neither of these plans was found acceptable to the Japanese delegates in the present form.

Mr. Hanihara, the main Japanese negotiator, made it plain in an inter-

view after the meeting that the Japanese proposals were final. The delegation's instructions from Tokio, he said, were very explicit. He explained the Japanese position thus: Japan had no desire to sell the Shantung Railway at all; what she wished was joint operation on a 50-50 basis, and she even considered that this was a considerable concession, as the Japanese Government looked on the railroad, which it had taken over from Germany after the latter country's defeat in the Far East, as its own property. Japan at least must retain an interest in the railroad, and to do that she must effect the transfer through a Japanese railroad loan, similar to other railroad loans made by China previously with other foreign nations, and the terms must include the acceptance of a Japanese traffic manager and accountant. Japan was unwilling to accept the Chinese proposal of a cash payment.

The Shantung negotiations between the Chinese and Japanese representatives were renewed a few days later with the aid of Mr. Hughes and Mr. Balfour, but were soon again deadlocked over the question of the terms under which Japan should return the Shantung railway; pending further instructions on this main issue from Tokio, the Japanese delegates took up collateral issues. Important discussions on the disposition of the mines situated on the railway marked the twenty-eighth session, held on Jan. 17. Both delegations at that time declared that an ultimate agreement seemed to be in sight.

Just as these pages were going to press a new phase of the conference discussions on China began with proposals made by Secretary Hughes (session of Jan. 16) to assure the principle of the open door. These proposals, including a plan to establish a permanent commission pledged to maintain that principle, was earnestly debated for three hours on Jan. 17. The full debate on this topic must be reserved for the March issue of CURRENT HISTORY.

GANDHI'S WEAPONLESS REVOLT IN INDIA

BY BERNARD SEXTON

Strange power of the saint who is shaping the destinies of three hundred million people—Mohandas Karamchand Gandhi's own explanation of his plan to overthrow British rule by "soul force"

[Serial and book rights reserved]

WE are living in an age of marvels and superlatives. World-shaking events come one after another. Institutions that have endured for centuries are overthrown in a day and forgotten in a year. The war was not yet over when the Russian revolution began, and on the banks of the Neva a group of daring men attempted to build a communist commonwealth out of the ruins of autocracy. Ancient Ireland awoke, and the speech of the Gael was heard once more in camp and council. England came to terms with the Sinn Féin. Then the world, agape at this wonder, was astonished at the news that India had been reborn, that the gentle Aryan of the East was in revolt. Responsible officials stated that the empire was shaken by the uprising of a people who fought without weapons, who conducted a successful revolution without bullet or knife, who made war, according to their own declaration, not upon the bodies but upon the souls of official Englishmen, attempting to conquer by love and gentleness. To India the name of Gandhi is like the morning star. He is the leader of this insurrection in spirit, a man whose title is not General, but Mahatma (Great Soul). Gandhi has invented for war a new explosive, which he names soul-force. This saint, who has never injured a human being or an animal, who knows nothing of war, who forbids violence, has struck a

staggering blow at British rule in India. Sir Michael O'Dwyer wrote some months ago in *The London Fortnightly*:

Since the mutiny the position of our Government was never so weak, its credit never so low * * * Our margin of safety in India was never very large, and in these days of world-wide anxiety and peril it has been reduced almost to the vanishing point.

The man through whose leadership these things have come to pass is evidently one of the great characters of history, one of those "pale thinkers" whom Emerson describes as being let loose on the planet now and then for its purification. A sketch of his life and his words will, therefore, illuminate the purpose of resurgent India.

GANDHI'S CAREER

Mohandas Karamchand Gandhi was born in Porbandar, India, Oct. 2, 1869. His ancestors had held high office under the native princes, generation after generation. A grandfather was Prime Minister. His boyhood and youth were uneventful, and it was not until he undertook the voyage to London in 1888, to study law, that he saw anything of the great world. The first plunge into Western civilization was a rude shock to the sensitive Hindu, but he faced life in London, made valuable acquaintances and spent much time studying Christianity and Western civilization during the years he was at the law school. He returned to India in 1893.

Almost immediately an opening was offered him by a law firm in South Africa. He accepted.

In South Africa he encountered at once the savage prejudice which the Colonials entertained against his people. He was insulted, reviled, beaten. He had to learn that birth and education availed nothing in that violent land where all Hindus were called "coolies." During his years in South Africa his life was more than once in danger from mob violence. Before he left he spent several terms in jail as a convict for conscience' sake. At the date of his arrival, however, the Indians were not subject to the severe legal disabilities which in later years resulted in their passive resistance movement.

When the Boer War broke out Gandhi revealed at once his capacity for infinite tolerance and forgiveness. He organized the Indian Ambulance Corps and worked under fire with his faithful followers, trying to demonstrate to the British the loyalty of the Indian community. In 1906 again, at the time of the Zulu rebellion, Gandhi, with his volunteers, rendered medical service.

In spite of this spirit, the attitude of the white men toward the Indians had grown more menacing. In a lecture at Madras in 1896 Mr. Gandhi said: "The Indian is the most hated being in South Africa. * * * The railway and train officials treat us as beasts. We cannot safely walk on the footpaths. * * * We are 'Asian dirt,' to be 'heartily cursed.' We are 'stinking coolies,' living on 'the smell of an oiled rag.' We are the 'black vermin.' * * * We 'breed like rabbits,' and a gentleman at a meeting lately held in Durban said he 'was sorry we could not be shot like them.'" Matters became steadily worse until, at last, in September, 1906, there was a large gathering of Indians, which, after thoroughly facing the issue, under the inspiration of deep feeling, swore a solemn oath committing themselves to passive resistance.

PASSIVE RESISTANCE

In telling Mr. Doke, his biographer, how the idea of passive resistance originated, Mr. Gandhi said:

I remember how one verse of a Gujarati poem which, as a child, I learned in school, clung to me. In substance it was this:

If a man gives you a drink of water and you give him a drink in return, that is nothing; Real beauty consists of doing good against evil.

As a child this verse had a powerful influence over me, and I tried to carry it into practice. Then came the "Sermon on the Mount."

"But," said the biographer, "surely the Bhagavad Gita came first?"

"No," he replied; "of course I knew the Bhagavad Gita in Sanskrit tolerably well, but I had not made its teaching in that particular a study. It was the New Testament which really awakened me to the rightness and value of passive resistance. When I read in the 'Sermon on the Mount' such passages as 'Resist not him that is evil, but whosoever smiteth thee on the right cheek turn to him the other also,' and 'Love your enemies and pray for them that persecute you, that ye may be the sons of your Father which is in Heaven,' I was simply overjoyed and found my own opinion confirmed where I least expected it. The Bhagavad Gita deepened my impression, and Tolstoy's 'The Kingdom of God Is Within You' gave it permanent form.

"I do not like the term 'passive resistance'; it fails to convey all I mean. It describes a method, but gives no hint of the system of which it is only a part. Real beauty—and that is my aim—is in doing good against evil. Still I adopt that phrase because it is well known and easily understood, and because at present the great majority of my people can only grasp that idea. To me the ideas which underlie the Gujarati hymn and the 'Sermon on the Mount' should revolutionize the whole of life."

SOUL-FORCE

Of the blessings attending the use of soul-force, Gandhi says:

Passive resistance is an all-sided sword; it can be used anyhow; it blesses him who uses it and him against whom it is used without drawing a drop of blood; it produces far-reaching results. It never rusts and cannot be stolen. Competition between passive resisters does not exhaust them. The sword of passive resistance does not require a scabbard and one cannot be forcibly dispossessed of it.

Its equivalent in the vernacular, rendered into English, means truth-force. I think Tolstoy called it also soul-force or love-force. Carried to its utmost limit, this force is independent of pecuniary or other material assistance; certainly in its elementary form, of physical force or violence.

* * * Its universal applicability is a demonstration of its permanence and invincibility. It can be used alike by men, women and children. It is totally untrue to say that it is a force to be used only by the weak so long as they are not capable of meeting violence by violence. * * * It is impossible for those who consider themselves weak to apply this force. Only those who realize that there is something in man which is superior to the brute nature in him, and that the latter always yields to it, can effectively be passive resisters. * * *

The use of this force requires the adoption of poverty, in the sense that we must be indifferent whether we have the wherewithal to feed and clothe ourselves. * * * The exercise of the purest soul-force in its perfect form brings about instantaneous relief. For this exercise prolonged training of the individual soul is an absolute necessity, so that a perfect passive resister has to be almost, if not entirely, a perfect man. We cannot all suddenly become such men, but if my proposition is correct—as I know it to be correct—the greater the spirit of passive resistance in us, the better men we will become. Its use therefore is, I think, indisputable, and it is a force which, if it became universal, would revolutionize social ideals and do away with despotisms and the ever-growing militarism under which the nations of the West are groaning and which fairly promises to overwhelm even the nations of the East. * * *

Thus viewed passive resistance is the noblest and the best education. It should come not after the ordinary education in letters, but should precede it. It will not be denied that a child, before it begins to write its alphabet and to gain worldly knowledge, should know what the soul is, what truth is, what love is, what powers are latent in the soul. It should be an essential of real education that a child should

learn that in the struggle of life it can easily conquer hate by love, untruth by truth, violence by self-suffering.

JAIL EXPERIENCES

Concerning his jail experiences in South Africa, when he was in prison as leader of the Passive Resistance movement, Gandhi wrote:

The greatest good I derived from these sufferings was that gained by undergoing bodily hardships. I could see my mental strength clearly increasing, and it is even now maintained. The experience of the last three months has left me more than ever prepared to undergo all such hardships with ease. I feel that God helps such conscientious objectors, and in putting them to the test He only burdens them with such sufferings as they can bear. [From The Modern Review.]

Gandhi brought the Passive Resistance movement in South Africa to a

 overthrow English rule in India by boycotting
 everything British*

successful conclusion. The more glaring disabilities under which the Indians there had labored were at least legally removed. From that time on they suffered mainly from those social and industrial injustices which are outside the law, and which the dark-skinned Hindus everywhere in the world encounter in countries ruled by the British or American peoples. With the prestige of this great work accomplished, he was in London shortly after the outbreak of the World War and testified to his loyalty by organizing among the Indians and Moslems a Field Ambulance Corps. He was conscious not only of a generous interest in the British cause; he looked toward the near future for a realization among Hindus and Moslems of their common interest in India, the motherland.

On Oct. 1, 1914, Gandhi addressed a crowded meeting at the Polytechnic, Regent Street, London. The occasion was the inauguration of the Indian Field Ambulance Corps, which owed its existence largely to him. Acknowledging a gift of £200 from his Highness the Aga Khan, he said:

We Hindus have to live side by side with Mohammedans. Their sorrows must be our sorrows; their joys must be our joys. I entirely believe in the doctrine that the Hindus and Mohammedans of India are the two eyes of the Mother India. If one is hurt the other is equally affected, and India without Mohammedans or without Hindus would be only a one-eyed mother, and India divided between these two sections, who would war against one another, would only see with one eye and then but faintly and dimly.

CHANGE IN GANDHI'S VIEWS

Gandhi has not always held his present views as to British rule. Only a few years ago he was an ardent advocate of the imperial connection. He hoped then that Britain would recognize the loyalty of India's support during the war and her very material sacrifices of men and money. But the severity with which the expressions of native aspirations were repressed, after the close of the war, drove him and many other loyalists to

take more extreme views. Compare the following speech made in 1915 with his later utterances:

The British Empire has certain ideals with which I have fallen in love, and one of these ideals is that every subject of the British Empire has the freest scope possible for his energies and honor and whatever he thinks is due to his conscience. I think that this is true of the British Empire as it is not true of any other Government. [Speech by Gandhi in April, 1915, at the annual gathering of the Madras Law Dinner.]

Following is an extract from his organ, *Young India*, dated Nov. 17, 1921, in which he answers the questions of a reader who reproaches him for his former pro-British views:

Experience has made me wiser. * * * I consider the existing system of government to be wholly bad and requiring special effort to end or mend it. It does not possess within itself any capacity for self-improvement.

Not only did I offer my services at the time of the Zulu revolt, but before that, at the time of the Boer war; and not only did I raise recruits in India during the late war, but I raised an ambulance corps in 1914 in London. If, therefore, I have sinned, the cup of my sins is full to the brim.

That the British Government in India is now unworthy the allegiance of its former loyal Hindu subjects he holds proved by the events of the last few years—events that have raised Gandhi from the position of a highly-respected Indian barrister, a reformer of moderate demands, to that of leadership in a movement which is regarded by the British as the most menacing in the history of the empire. It can always be said of Gandhi that his words are unpromising. They mean just what they say. In a recent issue of *Young India* he wrote:

When a man deliberately breaks his own laws, the disobedience becomes criminal. For he commits the breach, not against himself, but against some one else, and not only escapes punishment for the breach—for there is none provided against the maker of laws—but he avoids also the inconvenience caused by their observance. What is true of the individual is true of the corporation. At the present moment one observes this criminal breach by the Government of its own laws throughout India. Sections of the Penal Code and the Criminal Procedure Code are being freely abused. And because non-co-operators refrain from

questioning orders issued by officials, barefaced illegalities are being committed by them with impunity. * * * It is against not only the spirit of Lord Reading's pledge but it is against the letter even of his predecessor's communiqué, in which it was declared in solemn tones that so long as non-co-operators remained non-violent there would be no repression. [Young India, Nov. 17, 1921.]

Nevertheless, the door of reconciliation was still held open. In November, 1921, he penned these significant words:

As a non-co-operator I neither own nor disown George as my King. I have disassociated myself from the system administered under the King's name. I keep myself free to give allegiance to him if I can attain my full growth in his kingdom and can secure full redress of the Khalifate and Punjab wrongs. [Young India, Nov. 17, 1921.]

Just as England has held India in subjection and servitude, the Hindus themselves have been guilty of an equally grave offense toward the pariah class—the "untouchables" of their land. Gandhi contends that caste degradation had no place in the virile traditions of ancient India. True, there were castes, which were in essence a mirroring of the four fundamental occupations — manual labor, trading, soldiering, teaching—but men and women of ability could rise into a higher caste, while the incompetent, the immoral, might suffer degradation into a lower group. The whole nation has suffered by Karmic law because of its cruelty toward the untouchables. For this lack of charity Gandhi has the severest censure. He has never hesitated to mix with the lowest castes; indeed, intentionally he used the terrible third-class accommodation while traveling through India, so that he might know by personal experience what the poorer folk endured.

CIVIL DISOBEDIENCE ADVISED

He holds that it is not only the right but the duty of Indians to refuse allegiance to the Government; but he cautions his followers that they must take the consequences of

civil disobedience without a resort to violence. It may safely be asserted that any sporadic outbreak of violence occurring in India is not only contrary to the wishes of Gandhi, but is in every case regarded by him as a disaster, a failure, a defeat. For Gandhi is in all things sincere as a child, lucid in his sincerity, and utterly uncompromising as to principle. He holds that the nation is being tested and tempered, prepared for self-government in political affairs by demonstrating spiritual self-government through the difficult path of non-violent non-co-operation.

Civil disobedience which is entered upon prayerfully, as a sacrifice of selfish interests for the sake of the motherland, must not be confused with unsocial and unlawful actions performed in a selfish spirit. The action of a man practicing civil disobedience may bear some superficial resemblance to that of the unsocially minded self-seeker, but they are as far apart as the poles. Gandhi makes this distinction clear with his usual simplicity:

I was grieved to take notice that at the convocation meeting organized on the 9th instant by the National Board of Education, several people had entered Bradlaugh Hall without tickets and without permission. This is not merely uncivil, but criminal, disobedience. For they entered by force where they knew their force would not be resisted by force. Such men are unfit for civil disobedience, which presupposes a scrupulous and willing observance of all laws which do not hurt the moral sense. Obedience to laws of voluntary associations, as the rule of the manager of the convocation, is only the first step to voluntary and ungrudging obedience to the laws imposed by the State. Thoughtless disobedience means disruption of society. The first thing, therefore, for those who aspire after civil disobedience is to learn the art of willingly obeying laws of voluntary associations, such as congresses, conferences and other bodies, and similarly obeying State laws, whether they like them or not. Civil disobedience is not a state of lawlessness, but presupposes a law-abiding spirit combined with self-restraint. [Young India, Nov. 17, 1921.]

THE BOMBAY RIOTS

In November, 1921, during the visit of the Prince of Wales, rioting

broke out in Bombay. Hindus, Mohammedans, Jews, Parsees and Christians were involved. Gandhi's lieutenants moved among the people, exhorting them to disperse and go to their homes. Several of these peace-makers were severely handled by one of the mobs. A few were beaten so badly that they had to have surgical service. On hearing of the riot, Gandhi came down and exerted his utmost influence to bring about peace. He was infinitely saddened by the results of this brute frenzy. At last he found peace by fasting. After four days of this self-inflicted penance the warring factions became alarmed and promised restraint in future. He then broke his fast amid general rejoicings. Writing a sorrowful message to the men of Bombay, he said:

Swaraj (self-determination) does not lie that way. India does not want Bolshevism. The people are too peaceful to stand anarchy. * * * Swaraj is freedom for every one, the smallest among us, to do as he likes, without any physical interference with his liberty. Non-violent non-co-operation is the method whereby we cultivate the freest opinion and get it enforced. [Young India, Nov. 24, 1921.]

There is only one God for us all, whether we find him through the Koran, the Bible, the Zend Avesta, the Talmud, or the Gita. And He is God of Truth and Love. I have no interest in living save for proving this faith in me. I cannot hate an Englishman or any one else. I have spoken and written much against his institutions, especially the one he has set up in India. I shall continue to do so if I live. But you must not mistake my condemnation of the system for that of the man. My religion requires me to love him as I love myself. I would deny God if I did not attempt to prove it at this critical moment. [Gandhi's appeal to Bombay citizens in Young India, Nov. 24, 1921.]

A CONSTRUCTIVE FORCE

He regrets that there are still those, even among his nominal followers, who misunderstand the movement, who are likely to resort to violence when it seems profitable. These he urges to a deeper, a more spiritual understanding:

It has unfortunately to be confessed that non-co-operation still appears and commends itself to many only in its destructive form. While the latter is absolutely essen-

tial, it is the constructive which is the permanent and best part of it. I am painfully conscious of the fact that to many it appears only to be a preparation for violence, whereas non-violence is not only an integral, but the only sustaining part of non-co-operation. It is by itself the largest part of construction. Non-violence at once makes it a religious movement and throws man on God as his only Rock and Refuge. By non-violence the non-co-operator burns his boats and makes steady headway in all weathers. By non-violence the non-co-operator appears before his Maker in his nakedness and commands divine help. He may not appear before him with his Bible or Koran or the Gita in one hand and his gun in the other. He appears, on the contrary, with hands folded, a humble suppliant before the Great White Throne.

I believe in God working through us, and for or against individuals and nations, as surely as I believe in the sun rising regularly at the appointed hour from day to day.

By this discipline of non-violent non-co-operation, for which the Indians, Gandhi contends, are by nature fitted, Swaraj is obtained. There is no long historic process, there are no petitions, no appeals to Parliament. Swaraj *becomes*, descending from the spiritual and organizing itself on the political and industrial. Swaraj is *there* all the time—only it has to be realized. With its realization the great social abuses disappear. The Hindu-Mohammedan feud is settled. The evils of caste are eliminated. From the point of view of the life of a nation, the change is instantaneous. It all depends on the manliness, the virtue, the nobility of the nation. The British have no real power to prevent it, for it comes from within.

RAILWAYS AND MACHINERY

Since Gandhi is known to be an enemy of modern industrialism, many Americans have expressed curiosity as to his attitude in regard to what they consider the necessary mechanical contrivances on which modern life is based. Here, as on many other questions, his extraordinary sincerity is manifest. There is no other political leader in the world who would dare assert that a great people, aspiring to nationhood on an equality with other powers, should limit its use of

modern machinery—should, for example, abandon, whenever possible, the modern power-driven cotton spindle and revert to the use of the antique hand loom used for thousands of years in the Indian village. Other statesmen declare for limitation of armaments. Will the future assert that Gandhi struck deeper—that he struck at the root of the evil when he proposed a limitation of machinery? Here are his thoughts, written down in answer to an anxious questioner:

The question about railways and telegraphs is really too insignificant in relation to the great doctrine I have just discussed. I am not myself banishing the personal use of these conveniences myself. I certainly do not expect the nation to discard their use, nor do I expect their disuse under Swaraj. But I do expect the nation under Swaraj not to believe that these agencies necessarily advance our moral growth or are indispensable for material progress. I would advise the nation to make a limited use of these agencies and not to be feverishly anxious to connect 750,000 villages of India by telegraph and railway. The nation when it feels the glow of freedom will realize that they were needed by our rulers more for our enslavement than for enlightenment. [Young India, Nov. 17, 1921.]

SWADESHI AND AHIMSA

From the time of his arrival in India in 1915 Gandhi began to preach Swadeshi—the use only of goods made in India. Swadeshi has since become the principal economic weapon of his movement. Its practice has resulted in an appreciable decrease in the sales of British-made goods. But, to Gandhi, Swadeshi has deeper meanings than the economic. Speaking before the missionary conference at Madras on Feb. 14, 1916, he defined Swadeshi as follows:

And now for the last division of Swadeshi: Much of the deep poverty of the masses is due to the ruinous departure from Swadeshi in the economic and industrial life. If not an article of commerce had been brought from outside India she would be today a land flowing with milk and honey. But this was not to be. We were greedy, and so was England. The connection between England and India was clearly based upon an error. But she does not remain in India in error. It is her declared policy that India is to be held in trust for

her people. If this be true, Lancashire must stand aside. And if the Swadeshi doctrine is a sound doctrine, Lancashire can stand aside without much hurt, though it may sustain a shock for the time being. I think of Swadeshi not as a boycott movement undertaken for revenge. I conceive it as a religious principle to be followed by all. * * * I would urge that Swadeshi is the only doctrine consistent with the law of humility and love. It is arrogance to think of launching out to serve the whole of India when I am hardly able to serve my own family. It were better to concentrate my efforts upon the family and consider that through them I was serving the whole nation, and, if you will, the whole of humanity. This is humility and it is love!

The driving force behind Gandhi's political non-resistance is his sincere and passionate belief in the power of Ahimsa, which, as he interprets it, means conquering the enemy by love. In an address delivered at the Y. M. C. A. Auditorium, Madras, Feb. 16, 1917, he defined Ahimsa, thus:

Literally speaking, Ahimsa means non-killing. But to me it has a world of meaning and takes me into realms much higher, infinitely higher, than the realm to which I would go if I merely understood by Ahimsa non-killing. Ahimsa really means that you may not offend anybody; you may not harbor an uncharitable thought even in connection with one who may consider himself to be your enemy. Pray notice the guarded nature of this thought: I do not say "whom you consider to be your enemy," but "who may consider himself to be your enemy." For one who follows the doctrine of Ahimsa there is no room for an enemy; he denies the existence of an enemy. But there are people who consider themselves to be his enemies, and he cannot help that circumstance. So it is held that we may not harbor an evil thought even in connection with such persons. If we return blow for blow, we depart from the doctrine of Ahimsa. But I go further. If we resent a friend's action or the so-called enemies' action, we still fall short of this doctrine. But when I say we should not resent, I do not say that we should acquiesce; but by resenting I mean wishing that some harm should be done to that enemy, or that he should be put out of the way, even by the action of somebody else, or, say, by divine agency. If we harbor even this thought we depart from the doctrine of Ahimsa. And there is no room for any violence, even for the sake of your country, and even for guarding the honor of precious ones that may be under your charge. After all, that would be a poor defense of honor. This doctrine of Ahimsa tells us that we may guard the honor of those who are under our charge by delivering ourselves into the

hands of the man who would commit the sacrilege. And that requires far greater physical and mental courage than the delivering of blows. You may have some degree of physical power—I do not say courage—and you may use that power. But after that is expended, what happens? The other man is filled with wrath and indignation, and you have made him more angry by matching your violence against his; and when he has done you to death the rest of his violence is delivered against your charge. But if you do not retaliate, but stand your ground between your charge and the opponent, simply receiving the blows without retaliating, what happens? I give you my promise that the whole of the violence will be expended on you, and your charge will be left unscathed. Under this plan of life there is no conception of patriotism which justifies such wars as you witness today in Europe.

This is an ancient doctrine, and it is indeed only a great and daring soul who would apply it in world politics. Gandhi intends his words to be taken quite simply and literally. Many in India are doing so—women as well as men. Col. Wedgewood, an Englishman, a political opponent of Gandhi, says:

He is as serious as a child, and as pure. One does not feel it blasphemous to compare him with Christ; and Christ, too, one suspects, gave infinite trouble to reasonable and respectable followers.

Gandhi's followers are in a very simple and literal sense doing what he advises. People have made bonfires of their own foreign-made clothes, lawyers have abandoned lucrative practices, thousands of cases have been taken out of the law courts. The English-speaking schools are adversely affected. Over 25,000 titles have been renounced. The ancient hand-loom is coming into its own, and the sound of the spinning-wheel is again heard in the village. Women have a great part in this movement, for Gandhi is sternly against any thought of repression because of sex. The lowest castes are with him as well as the educated young men. It is a folk movement of all India—a passionate determination to return to that Aryan Way which gave so much to the world long ago when England was a forest and America was undiscovered. It is not

merely a political phenomenon; it is a remembering of that bright dawn of history when the virile Aryans poured down through the Himalayan passes upon the plains of India—these Aryans, who are our own cousins and whose speech we still carry into daily life. In India today they cry in different words the same slogan that was used by our ancestors—the words that fired the English at Runnymede, the Americans at Bunker Hill. It is an ancient word, a word that has ever stirred the Aryan blood—the word Freedom!

[RECENT EVENTS IN INDIA—At present the most interesting aspect of the silent revolt in India is its reaction upon the official tour of the Prince of Wales from one end of the country to the other—a visit that is to last eight months. Thus far no violence has been attempted against the young Prince, though in some cities his presence has been greeted with a hartal, a sort of general strike. His progress through the native States has left nothing undone by the ruling Princes to express their loyalty to the British throne and empire. Those scenes of gorgeous pomp and splendor—associated with great occasions in India—recall the stately ceremonials of bygone centuries, especially in Rajputana, a name synonymous with all that was best in medieval chivalry. But at Allahabad the hartal, or day of mourning, proclaimed by Mr. Gandhi was put into such effect that the flag-bedecked streets were empty of other welcome. Benares proved a more pleasant experience, for in spite of the hartal the populace indulged in a holiday festival. After some days' big game hunting in Nepal the Prince emerged at Patna, where the hartal was but half successful. He arrived in Calcutta on Dec. 24 and received a cordial welcome. On Dec. 28 the Prince opened the Victoria Memorial, a vast marble palace erected to the memory of Queen Victoria. After his arrival at Madras on Jan. 13 there was rioting. Arrests for sedition continue on an increasing scale over a large part of the country. Among many notables sent to prison in December was Mr. Gandhi's son and Lajpat Rai, a prominent Indian Nationalist. The Moplah revolt was reported on Dec. 22 as rapidly approaching a collapse, with only 2,500 active rebels in the field. * * * At a full session of the Indian National Congress at Ahmedabad on Dec. 29, a resolution was adopted declaring Gandhi the sole executive authority, with full powers over the Congress organization, and endorsing his non-violence policy. The apparent result of this is to make Mr. Gandhi the duly-appointed dictator of all Nationalist activities in India.]

THE CARNIVAL OF CRIME IN THE UNITED STATES

BY CHARLES FREDERICK CARTER

Astounding statistics showing the rapid increase of murders and robberies—Encouragement of criminality becoming a national cult—Laxity of laws and maudlin sentimentality the chief causes

EVIDENCE that crime is increasing in the United States in a most alarming way is so abundant and conclusive that it cannot be controverted. But because statistics on crime, so far as they are kept at all, are kept in a desultory, detached and fragmentary way which evokes the openly expressed amazement of foreign criminologists, it is not possible to present a comprehensive statement of facts on the subject. Annual reports of the Police Commissioner of New York City, for example, form huge volumes, from which it is altogether impossible to glean any true idea of crime conditions. Not a single large city in the country issues a clear and comprehensive police report. No two follow the same form; none follows the same form from year to year. Annual periods covered begin at different times of the year, so that comparisons are out of the question. For these reasons such facts as are available are necessarily *understatements*; yet, perhaps, they may suffice to give some idea of the growing menace to life and property which long ago attained the proportions of a national disgrace.

One significant indication of present tendencies is the increase in losses paid by burglary insurance companies, which grew from an aggregate of \$1,686,195 in 1916 to \$5,670,760 in 1919 and to \$10,189,853 in 1920—an increase of 543 per cent. in five years.

From the fragmentary information available the total amount of money and property stolen in the United States in 1921 is estimated at \$302,799,000. This includes only theft with or without violence, and does not include the many millions obtained by fraud.

The most trustworthy statistics on a single phase of crime are those of the American Bankers Association on bank burglaries and hold-ups. Even these are not complete; for, while they cover the 23,632 member banks fully, there is no way of knowing how complete the figures are for the 9,611 non-members. For another thing, these statistics make no mention of the numerous murders committed by bank robbers, such as the double killing at Pearl River, N. Y., last December.

These statistics tell a startling story. In the year ended Aug. 31, 1921, there were 136 hold-ups and 319 burglaries of banks—a *bank robbery in some form every 19 hours and 15 minutes of the year!* The aggregate loss was \$1,224,489, as compared with 122 hold-ups and 393 burglaries, with an aggregate loss of \$1,002,493, in 1920, and 80 hold-ups and 115 burglaries, with a loss of \$301,792, in 1917. In the twenty-three years ended with 1917 the aggregate loss amounted to \$2,609,754, an annual average of \$113,467. An increase from an annual average loss by robbery of \$113,467 to \$301,792, in the last year of the period, and to

\$1,224,489 four years later, may justly be characterized as startling.

The most disquieting thing about bank crimes is the increase in hold-ups. A few years ago the chances of a hold-up were so slight that they were covered in insurance against burglary without extra charge. Now the coverage for hold-ups is charged for. Losses by hold-ups in 1917 were double the losses by burglary; in 1921 the losses, while increasing more than fourfold in the aggregate, were more than three times as great by hold-ups as by burglary. Before the war burglary of safe-deposit boxes was unknown; now that Liberty bonds are as readily negotiable as currency, many boxes are broken open.

W. J. Burns is authority for the statement that thefts from railroads, express companies, steamships, trucks, lighters and piers aggregate \$106,000,000 a year.

It is impossible to ascertain from the report of the Postmaster General the total amount of mail robberies; but he does say that in 1921 the loss from 36 major crimes was \$6,346,407; and in rather ambiguous language he intimates that the department paid for losses by theft of registered and insured mail \$38,000,000. Stamp burglaries added \$100,508 more.

The statistics of automobile thefts are equally incomplete. Such figures as are possessed by the Automobile Chamber of Commerce show that in the principal 28 cities, 30,046 cars were stolen in 1920, as compared with 27,445 in 1918. At an average value of \$500 each this would represent \$15,023,000. One car out of each thirty registered in New York was stolen in 1920; one in each twenty-two in Chicago; one in each thirty-one in Detroit and Cleveland.

THE EVIL AND THE CURE

ENORMOUS TOTAL OF THEFTS

As already pointed out, police statistics are so incomplete and so erratic as to be almost valueless. However, losses aggregating \$1,630,009 were reported to the police of Boston in 1920, as compared with an annual average of \$816,341 for the five years ended with 1920, or an increase of almost 100 per cent. for that year over the five-year average. Thefts reported to the Washington police aggregated \$1,008,875 in 1920, as compared with \$336,067 in 1916. Baltimore reported \$1,347,402 stolen in 1919, as compared with 410,486 in 1912. Chicago reported \$3,974,326 stolen in 1921.

In spite of Chicago's evil reputation it appears that Eastern thieves are the more efficient; for the proceeds of their crimes averaged \$2.11 per capita for the populations of Boston, Baltimore and Washington, as compared with \$1.47 per capita for

[American Cartoon]

—Dallas News

The Judge must be recalled!

Chicago. Applying the per capita rate of theft of these four cities, which may be taken as fairly representative, to the 52 per cent. of population living in cities and towns of 2,500 population or over, and a per capita of 50 cents for the remainder of the population, would give a loss by theft of \$138,605,000. Adding the various items enumerated in the foregoing gives a grand total of \$302,788,000 as the probable approximate loss annually by theft with and without violence. While there may be duplications in these figures, it is equally probable that some important items have been omitted. A gross annual income of \$302,799,000 is hardly enough to support the criminal population estimated hereinafter in the style to which its members have been accustomed.

The losses of property are but a single item in the terrific burden imposed by crime. Police protection,

the ponderous machinery of justice and the maintenance of penal institutions add hundreds of millions to the total. Dividing the police budget by the total number of arrests shows that the arrest of a suspect costs from \$14.60 in Indianapolis to \$90.70 in New York and \$163 in Youngstown, Ohio.

Judge Otto A. Rosalsky of the New York Court of General Sessions, who, for a quarter of a century, has been exclusively engaged in dealing with crime, first as Assistant District Attorney and for the last sixteen years as a Judge, estimates that there are 30,000 professional criminals in New York State. The Chicago Crime Commission estimates that there are 10,000 professional criminals in that city, or, roughly, one-third of 1 per cent. of the population. Applying this ratio to the population of the United States would give a total of 352,000

professional criminals; Judge Rosalsky's ratio would make it 300,000 in round numbers. Whatever its exact number, this army of professional criminals is highly organized and efficient, while the forces of law and order are pathetically inadequate. There are criminal cases that have been on the docket in New York City for two years; the docket as a whole is said to be about a year and a half behind. Such great delay amounts to a denial of justice, as is proved by results. Only one-third of the prisoners arraigned in New York City in the first eleven months of 1921 on the charge of robbery were convicted, while the cases tried represented but 54 per cent. of those reaching the District Attorney's office.

Federal courts deal with an indeterminate, but certainly a small, fraction of felonies; yet the number of cases dealt with there may serve as an indication of general condi-

tions. The Attorney General reports that in the year ended June 30, 1921, 54,487 criminal cases were commenced in the Federal courts, as compared with 47,443 in 1919, an increase of 14 per cent. in two years. But this does not tell the whole story, because these courts are falling steadily behind in their work from year to year. Indictments pending in Federal courts in 1921 numbered 70,000, as compared with 9,503 in 1912. Even after deducting the 30,000 cases arising under the prohibition laws, an increase of 332 per cent. in ten years is alarming, even for a nation given to boasting of big things.

SITUATION IN CHICAGO

As an indication of the increase in crime, the murders in Chicago are disquieting. In 1921 there were 352 murders in that city, almost one a day throughout the year, as compared with 336 in 1919, 255 in 1916, 216 in 1914 and 159 in 1910—an increase of 121 per cent. in twelve years. For years the average annual number of murders in Berlin, a city four-fifths the size of Chicago, was twenty-five. That is, the proportion of murders to population in Chicago is more than eleven times greater than in Berlin. Yet Chicago is not exceptional. Cleveland, with one-tenth the population of London, had twice as many murders as that metropolis in 1918. Los Angeles, one-twentieth the size of London, had 10 more murders than the latter city in 1917.

According to the murder statistics collected by The Chicago Tribune—the only data extant covering the whole country—59,377 murders were committed in the United States in the seven years from 1912 to 1918, inclusive. The total number of battle deaths of American soldiers in the World War was 50,327. That is, the number murdered in seven years was 9,050 greater than the number of American soldiers killed in all their battles in the greatest war in history. In every one of the seven years the number of murders was more than

double, and in one year more than treble, the number of Union soldiers killed at Gettysburg, the bloodiest battle of the Civil War.

First cousin to murder is lynching. In 1921 there were 63 lynchings, as compared with 65 in 1920, 64 in 1918, 38 in 1917, 54 in 1916, 69 in 1915. In the thirty-two years from 1889 to 1921, a grand total of 3,161 persons have been lynched by American mobs.

While the whole story of the increase of crime has not been told, and from the nature of the circumstances cannot be, enough has been said to justify the assertion that the United States is the most lawless nation on the globe, barring only Russia under Bolshevik rule. Even there crimes are not committed so much by individual enemies of society as under the pretext, at least, of official sanction.

WAR NOT THE CAUSE

It is customary to apologize for ever-increasing lawlessness by attributing it to the after-effects of the war. All wars are followed by temporary increases in crime, so we are told. Such an explanation is superficial and worthless. Only the shallowest memory or the most casual research is needed to establish the fact that the tendencies now bearing their perfect fruit began long before the war, and that they have not been accelerated beyond their normal rate of development by anything which honestly can be attributed to the war or its effects. For 30 years, at least, the increase in crime has been the subject of public comment. In 1908, six years before the war began, Chief Justice Taft, in an address before the Civic Forum in New York City, said:

The administration of criminal law in this country is a disgrace to our civilization. The prevalence of crime and fraud, which here is greatly in excess of that in European countries, is due largely to the failure of the law and its administration to bring criminals to justice. * * * Since 1885 there have been 131,915 murders and 2,286 executions. In 1885 the number of murders was 1,808; in 1904 it had grown to 8,482. The number of executions in 1885 was 108; in 1904, 116. This startling increase in the number of murders as compared with the number of executions tells the story. As

murder is on the increase, so are all offenses of the felony class; and there can be no doubt that they will continue to increase unless the criminal laws are enforced with more certainty, more uniformity and more severity than they now are.

But have the laws been enforced with more uniformity, certainty and severity? They have not. In 1915, two years before the United States entered the World War, the number of murders had increased to 9,230, while executions numbered only 119.

In 1885 there was one execution to each 16.7 murders; that is, the odds in favor of the murderer were 16.7 to 1; pretty safe, but still serious enough to give pause to those bent on homicide; for even if they escaped the gallows there was the chance of a long term of imprisonment. In those days prisons were not the pleasant retreats for gentlemen with conscientious objections to hard work that they have since become. By 1904 the odds that the murderer could escape the death penalty had increased to 73 to 1; by 1915 the odds had lengthened to 77.5 to 1; by 1918, to 90 to 1.

In these more enlightened days the murderer does not have to run even one chance in 90 of suffering the extreme penalty. In 1920 the District Attorney of New York City investigated 679 homicide cases. Of these 130 were presented to a Grand Jury, which returned 78 indictments. Of the total just one was convicted of murder in the first degree! The odds had lengthened to 679 to 1 in favor of the murderer, in New York City, at least. Even that does not tell the whole story; for the record does not disclose whether this solitary convicted murderer actually paid the extreme penalty, or whether by numberless legal tricks he was released on bail and eventually turned loose.

CANADA'S BETTER METHODS

In Canada things are done differently. At the United States ratio of murder to population, Canada should have had 460 such crimes in 1913. The actual number was 55. The number of accused brought to trial was 55, of

whom 23 were convicted and sentenced to death; and the sentence was executed without any of the long delays so familiar on our side of the boundary. Of the rest, 5 were sent to insane asylums and the remaining 27 were acquitted. When the crime of murder is accompanied by such grave risk it is small wonder that murders are few.

In Philadelphia there were 501 highway robberies in 1919, as compared with 471 the preceding year and 330 in 1913. In Baltimore there were 319 highway robberies in 1919, as compared with 27 in 1913. In New York City, 1,133 assaults and robberies were reported in 1919, as compared with 864 in 1917. In the whole Dominion of Canada just 20 highway robberies were reported in 1918.

During the construction of the first transcontinental railroad in the United States, the railroad was a temporary camp in which every species of crime flourished with no restraint whatever. Conditions were so outrageous that these temporary towns came to be known as "Hell on Wheels." The only excuse, when anybody took the trouble to offer one, was that these temporary towns were on the frontier beyond the reach of organized society. Every other Western railroad was built under identical conditions. Yet the Canadian Pacific was built entirely without the obligation of crime considered inevitable in this country. The frontier camp was a peaceful community, without disorder and without drunkenness. The few unsophisticated American bootleggers who volunteered to assuage the thirst of the railroad men in Canada were treated by the Northwest Mounted Police with a discourtesy that amounted to rudeness.

As late as the first decade of the twentieth century, when the last of the transcontinental lines, the Chicago, Milwaukee & Puget Sound Railway, was built, the old familiar "Hell on Wheels," a trifle subdued, to be sure, accompanied the van. The same contractor who built a tunnel for this road with the usual accompaniment

of drunkenness, gambling, robbery and murder at his camp, immediately after the job was done obtained a contract to build a tunnel for the Canadian Pacific in the same range of mountains a few hundred miles further north. There was not a single murder, nor even so much as a robbery or assault in or around that Canadian camp from beginning to end.

Canadians are descended from the same ancestral stock as ourselves; they live on the same continent under similar climatic conditions, separated from us, physically, only by an invisible line. Morally the breach seems to be considerably wider; for the Canadians respect their own laws and are prompt to compel respect from the few who need compulsion.

ORGANIZATIONS OF THIEVES

As further evidence that the war has had no more to do with the increase in crime than the eruption of Krakatoa in 1883 had on the ravages of the boll weevil in 1921, observe that criminal depredations which had been steadily increasing in Chicago at least since the world's fair in 1893, became so intolerable that at last on May 18, 1914, ten weeks before the war began, the city council appointed a committee of three to investigate and report on conditions and recommend remedies. This committee's report, submitted March 22, 1915, allowing for differences in volume in proportion to population and perhaps in details of particular varieties of crime, would serve to describe conditions existing in an unpleasantly large number of American cities.

The committee found that the greater part of the stealing, amounting in the aggregate to millions of dollars, was done by organized thieves. In fact, the business of burglary, highway robbery and the like, with incidental murder on occasion, was highly organized. Professional criminals had built up a system which the committee designated as a "crime trust," with roots extending through the police force, the bar, the public

prosecutor's office, bondsmen and political officials. Collusion existed between members of the detective force and professional criminals, while graft, favoritism and political influence tended strongly toward demoralization of the police force and particularly the detective branch.

The burglars' trust had its wholesalers, its jobbers and its retailers with interstate and interurban branches. The committee found 39 fences, 100 "hang-outs" for professional criminals, many of them kept by criminals, and 500 professional criminals. Of course, they did not pretend to have exhausted the possibilities of discovery; but what was found was enough to show how flagrant and unafraid the crime trust had become.

Certain professional bondsmen not only supplied bonds for criminals unfortunate enough to be arrested, but acted as general "fixers," to smooth out misunderstandings with the culprits' associates on the police force. There was also a group of criminal lawyers whose work included dealing with the police, furnishing professional alibis and professional witnesses, jury fixing and spiriting away inconvenient witnesses, procuring exhaustive continuances, and all the underground activities of all-around fixers.

The police organization and methods were found to be wholly inadequate to cope with conditions, even if all had been honest. Crime statistics were incomplete and not assembled or published by authority, and not open to the public. Even at that the committee was able to find and report an increase in criminal complaints from 11,732 in 1905 to 14,340 in 1913—some time before the war; it will be observed. Of 7,342 felony cases 932 resulted in convictions, but only 208 finally received penitentiary or reformatory sentences; that is, only one felony in 69 was punished at all. "Treatment of those sent to penal institutions is pitifully ineffective," said the committee.

From this it will be seen that the risk of punishment for crime in Chicago is hardly great enough to be very effective as a deterrent. To offset this and provide the desirable camouflage of great zeal on the part of the police department and the courts, the committee reported that "the present machinery catches poor, petty and occasional criminals and punishes them severely," while "thousands of innocent persons are annually imprisoned in the county jail, many of them under disgraceful conditions, tending to create criminals."

CRIME IN NEW YORK

New York City employs other methods. New York has even gone so far as to reprimand a convicted burglar! In the two years, 1920-21, there were 6,035 arrests for burglary in New York. Of these, 3,380 were discharged and 2,755 convicted. But, of the 2,755 convicted, 987 received suspended sentences; 94 were paroled or bonded, while 67 were fined, a punishment which involved no loss of liberty, or their bonds were forfeited, which means that they were freed by their own act. And then, of course, there was the one that was reprimanded. Thus, of the grand total of convicted burglars, 41.7 per cent. were able to escape jail altogether; the rest went either to hospitals for the insane or to prison.

Suspended sentences are by no means peculiar to the city. The Secretary of State of New York reports that 34.6 per cent. of all sentences imposed in 1919 by the criminal courts of the State were suspended. Yet 90 per cent. of all convictions were secured on pleas of guilty. The routine seems to be: Commit your crime, wait at the police station until a bail bond can be made out, which frees you to continue operations until your case is reached (and the courts are one to two years behind on their work), then plead guilty, accept a suspended sentence, and repeat.

Sometimes the trial Judge forgets to suspend the sentence. In that case

the Parole Board comes to the rescue of the culprit. In the year ended June 30, 1920, the New York Parole Board placed 19,637 prisoners, one-third of the total prison population of 59,033 for that year, on parole.

The New York law provides that "courts may place defendants on parole for all offenses except those punishable by death or life imprisonment." In Michigan, defendants may be paroled "where it appears to the satisfaction of the court that the defendant is not likely again to engage in an offense or criminal course of conduct, and that the public good does not require that the defendant shall suffer the penalty imposed by law."

PROBATION LAWS ABUSED

Every State in the Union has a probation law along these general lines. In 1919 no fewer than 200,000 delinquents were "dealt with" on parole. And for fear some criminal might suffer the inconvenience of a temporary sojourn in jail, the National Probation Association procured the enactment by Congress of a bill conferring upon the Federal courts the privilege, now enjoyed by State courts, of freeing felons; but President Wilson vetoed the bill, thus putting the National Probation Association to the trouble of going through with its Congressional campaign all over again.

Addressing the National Probation Association in 1920, Edwin J. Cooley, Chief Probation Officer of New York City Magistrates' Court, asserted that the "success of the probation system, which had its origin in America, had been remarkable." Massachusetts, which originated the system, had not built a prison cell in twenty years, he said, while half the existing cells were empty.

Unemotional statistics compiled by the Secretary of State seem to indicate that if Massachusetts has stopped building prisons it is not for the reason that they are not needed. Nor do these statistics tend to encourage the ardent faith in criminal nature

professed by the uplifters; for they show that criminal trials begun in the courts of Massachusetts in 1919 included 181 murder cases, as compared with 161 in 1918; 472 robbery cases, 89 burglary and 971 cases of breaking, entering and larceny, as compared with 288, 50 and 375 cases, respectively, in the preceding year.

In further confirmation of conclusions to be drawn from statistics in preference to the assertion of uplifters, it may be remarked that in 1917 the records showed that 87 per cent. of the prisoners confined in various New York State prisons were repeaters. On this showing it would appear that the 200,000 probationers dealt with in 1919 must have included 174,000 professional criminals who would take advantage of their liberation to resume depredations upon society.

In this connection it should be remembered that a prison sentence is not what it appears to be. Such liberal deductions are provided by law that, for example, a sentence of twenty years, which happens to be the maximum permitted for manslaughter in New York, is automatically reduced to ten years two months and twenty days in the case of an ex-convict. A first offender would receive an indeterminate sentence of ten to twenty years, on which he would receive a reduction of about ten days in each thirty of his minimum sentence.

AMERICAN PEOPLE TO BLAME

Perhaps enough facts have been adduced to show that the administration of justice has been growing steadily worse in the fourteen years since Chief Justice Taft characterized it as a "disgrace to our civilization." It follows, then, that the American people, not the war, are to blame for what amounts to a breakdown of the whole system of administering justice. It has been the people's own chosen representatives who, responding in some instances to explicit demands, in other instances prompted by an ever-growing public spirit of lawlessness, an intolerance of author-

ity and a maudlin sentimentalism regarding those whose misdeeds have brought them into conflict with the law, have enacted statutes restricting Judges, Prosecutors and police in the performance of their duty and conserving the rights of the wrong-doer until the superior rights of society have been altogether lost sight of. In effect, the American people seem to have resolved themselves into a standing committee of the whole to encourage crime and protect the criminal.

Bearing in mind the complacency with which the acquittal of the Matewan murderers was received; the horrible record of lynchings; the spectacle of San Francisco women overwhelming with kisses and flowers a motion picture actor upon his release from jail charged with killing a girl under disgusting circumstances; the oration of the committing magistrate from the bench to justify his refusal to hold this same actor on a charge of murder; the clamor for the release of Debs, who confessed in court that he had done all he could to stab his country in the back while it was at war, and a thousand other kindred incidents which will readily occur to any newspaper reader, it would seem as if the encouragement of crime had become a national cult.

THE REMEDY

The fact is worthy of note that the aforementioned report of the Chicago Council Committee had no effect whatever, because it was not followed by action. Nothing happened until 1919, when the Chicago Association of Commerce, as the result of its own study of crime conditions, appointed a permanent crime committee, led by a former District Attorney, to deal with a condition which seemed almost hopeless. This committee's successor, under the name of the Chicago Crime Commission, is now at work. A part of its program is embodied in these suggested remedies:

A larger police force, free from political taint.

Better Judges, and restrictions on granting new trials.

Repeal of the law permitting change of sentence after it is imposed.

Take the selection of Judges out of the sinkhole of politics.

Dispense with juries in certain criminal cases where it would be to the advantage of the community and not unjust to the defendant.

Begin criminal prosecutions, except capital offenses and conspiracy charges, by filing information, thus eliminating the Grand Jury.

Maintain efficient bureaus of records of criminals.

Amend indeterminate sentence and parole laws.

Study further the problem of mental defectives and secure legislation to segregate this class from normal citizens.

More severe punishment for carrying concealed weapons.

Basing his suggestions on the retention of the present probation system, Judge Rosalsky proposes that in every case involving moral turpitude the State should have control over the delinquent in such a way as to keep him under restraining influence for a long period. Judge Rosalsky would create a board of rehabilitation composed of criminologists and penologists, to whom the delinquent should be responsible after his release. If charged with violation of

his parole, the delinquent, instead of having a trial by jury, should be brought before the Judge who sentenced him—or his successor—with witnesses, and if the charges are sustained the culprit should be sent back to prison. Only if the Judge should be left in doubt should there be trial by jury. Thus ex-convicts could be disposed of with celerity. Instead of two days, the case could be settled in fifteen minutes; and the calendars, now a year and a half behind, would no longer be crowded. A further important point is that the prisoner is not to be released without the consent of the Judge who committed him. Above all, the fact should be emphasized that the commission of crime involves severe punishment.

But the whole present system of penology is wrong, Judge Rosalsky holds. In a hearing before the Assembly Code Committee last February he said:

"It is time for well-meaning reformers who have wasted a good deal of sympathy and given too much consideration to hardened criminals to step aside and permit honest citizens to have the protection the courts want to give them."

FRENCH RULE IN THE CAMEROON

WHEN France took over German Cameroon (in Africa) she was unable to continue the land régime established by the Germans, owing to the impossibility of obtaining all the documents necessary to establish titles and transfers. Organization, or, rather, reorganization was begun only in 1920-21; the German legislation was then taken up and modified so as to give the district a new and individual land system. By a Government decree dated Sept. 15, 1921, the land was classified under four categories, and the conditions of transfer were laid down. Measures were devised to pro-

tect the natives against both speculation and expropriation, a proviso being made that no application for alienation of land belonging to native individual or collective owners shall be acted upon until a full investigation has been conducted by the local authorities. In case eviction from large domains should prove necessary, a fair indemnity is to be paid those evicted, and new lands are to be provided for them. The main object of the French Government in its dealings with the natives is to combine protection with the privilege of owning land, either individually or collectively.

THE ISLAND OF YAP AND ITS PEOPLE

BY WILLIAM HERBERT HOBBS

Professor of Geology in the University of Michigan

An interesting account of a visit to the much-discussed island in the South Seas, which Japan now rules—Stories of O'Keefe and his life among the natives—Curious community houses.

[ILLUSTRATIONS FROM PHOTOGRAPHS BY THE AUTHOR]

ONE might count upon the fingers the place names which now find more frequent mention in American news items than that of the thirty square miles of tropical jungle hidden away on one of the forgotten byways of the Pacific which goes by the name of Yap, Map or Wap. Five times each year the world reaches out to it a slim finger when the Chikuzen Maru touches at its port of Tomil on her way from Japan to the Pelew Islands. The importance of Yap in the world's affairs, and its dominant position in the news of the period, it owes almost exclusively to the fact that it is the junction point of the oceanic cable lines which run to Manila (by way of Guam), to Shanghai and to Menado on the Island of Celebes. As this nerve centre in the international cable system, it figured in the discussions of the Peace Conference at Paris and remained a subject of international difference until the United States and Japan finally reached an agreement on it during the early weeks of the arms conference.

The Island of Yap is on the extreme western margin of that broad band of widely scattered volcanic and coral islands which lies not far south of the route from Honolulu to Manila and is known as the Carolines; a belt which is extended to the eastward in the Marshalls, both groups being now in the possession of Japan as a conse-

quence of the allocations of the Peace Conference.

Like Ponape and Kusai in the Eastern Carolines, and the archipelago of Truk near the centre of the group, Yap is of volcanic origin—a double dome of lava partially dissected by stream erosion, and, like them, given its present form as a result of the progressive settlement of the sea floor on which it rests. As the island has subsided the coral reef, which once closely hugged the shore, has become separated from it by a lagoon which communicates with the open sea through several channels, only one of which is navigable for modern vessels. Within the lagoon the coral growth still goes on and is gradually filling it, here with a broad area of reef, there with the scattered coral heads which rise abruptly to near the surface from depths of a number of fathoms.

The northeastern half of the island has its shores deeply embayed where the lower reaches of the river valleys have been flooded during the process of subsidence. One of these embayments of the eastern side of the island penetrates far inland and is the harbor of Tomil, which, in spite of a rather narrow entrance, a cross-tide near its mouth, and an exposure to easterly winds, is one of the best in this part of the Pacific.

A striking object lesson upon one of the perils to which ships are ex-

posed in this part of the world—during the rainy season—is furnished by the wreck of the Kokura Maru of 3,000 tons burden, which occurred in December, 1920, in the harbor of Tomil. As the ship was leaving the harbor she was suddenly struck, when in the narrowest part of the channel, by one of those tropical rain squalls which, like a child's fickle temper, come without warning and are as quickly gone. All navigation marks were immediately blotted out in the heavy downpour, and the ship was set down upon the reef of the western wall by the strong cross-tide, and there its bones remain, a grim warning to all vessels which enter the port. The number of vessels calling at Yap is extremely small, and the United States gunboat Bittern, which came from Manila to take me aboard for a cruise of geological research, was the first American ship to enter the port in ten years, the last having been the Supply in 1911.

The rain squalls with their gusts of wind have, however, nothing in common with the fierce typhoon which is the grim despoiler of these fair islands. Last November a year ago Yap was visited by one of these hurricanes which wrecked most of the native houses, completely ruined the cocoanut crop, and left the islanders in an impoverished condition. In the southern third of the island, which is low and without protection from the hills, I passed through village after village in which everything had been carried away or overturned. The tall tree columns of the native clubhouses alone remained standing as reminders of the helplessness of the native in the face of these visitations of nature when in her implacable moods.

YAP'S MOST FAMOUS MAN

Two islands within the harbor of Yap, between the anchorage and the landing, are full of memories of that rough but kindly empire-builder, the Irish-American David D. O'Keefe,

the most successful man this part of the Pacific has ever developed. When he disappeared in 1901 his property was reported to be valued at some millions of German marks, mainly real estate in Hongkong and Yap, and cocoanut groves on many coral islands of the Western Pacific.

O'Keefe was the type of man who in Sarawak would have been Rajah, as was Brooke; but here there was already the established civil government of Spain. From the natives he bought the copra (dried cocoanut meat), transported it to Hongkong on his schooner, and returned laden with the goods of which they stood in need. The small army of natives which moved at his command, and on whom he used his fists freely whenever occasion demanded, had been recruited not alone from Yap, but from those isolated islands far to the southwestward—Sonsorol, Warren Hastings, Lord North and St. David's—lands which are still described in the pilot books of navigators as inhabited by natives that are fierce and wild and on no account to be trusted.

Many stories are told of O'Keefe's prowess, how single-handed he arrested a native chieftain noted as a desperate man and a murderer, for which exploit he was officially thanked by the Spanish Government; how when shipwrecked on the Pelew Islands and about to be murdered he was saved by his native wife and other native women throwing themselves about him. It is known that he knocked down his manager and nearly killed him by a blow on the temple and that after trial by the German authorities he was sentenced to two months' imprisonment. It was while out on bail that he disappeared, and though no proofs of his death have ever been supplied, it is known that he sailed out of Hongkong in his schooner, the Santa Cruz, with two of his sons and ran into a typhoon. This was in 1901, when he was 72 years of age. His widow, a native woman, still lives on the little Island

of Tarang, in the harbor of Yap, where O'Keefe had located his trading station; and one of his daughters, Mrs. Alfred Scott, has her home across the channel on the Island of Dunig, somewhat nearer the landing at Colony. Mrs. Scott inherits many of the strong traits of her father,* and speaks a fluent and, for this part of the world, a rather distinguished English. O'Keefe was a native of Savannah, Ga., and deserted a wife and daughter when he took up his residence in the Pacific.

HABITS OF THE NATIVES

The natives of Yap have advanced in civilization somewhat less

*According to a recent cable dispatch from Yap, this daughter of half-native parentage is now managing the large cocoanut groves and shipping interests left by her father, and they are flourishing under her direction; she has the only grand piano in the island. Mrs. Scott's husband, a trader, died in 1918, and since then she has run the business single handed. Though the Japanese flag flies over Yap, and a Japanese Governor makes its laws, Mrs. Scott is said to be "the real boss of the island."—Editor.

than their neighbors in the other Caroline islands lying to the eastward, and they are for that reason so much the more interesting to study. They are of muscular development, with a dark brown skin and curly black hair, the old men frequently wearing beards. The only clothing of the men is the narrow breech cloth, usually red, and the women and girls wear as their only garment a short skirt of grass or leaves, which may be replaced by a woven fabric of excellent workmanship. The love of ornamentation, which is highly developed in these natives, shows itself particularly in the use of combs by the men, these combs being of many forms and generally constructed out of the wood of the white mangrove. Perhaps the commonest form, and certainly the most artistic of them, resembles a fish's tail and projects forward from the forehead for a distance of ten inches or a foot. The favorite earring, worn in one ear only,

Home of Mrs. Alfred Scott on Dunig Island in Tomil Harbor. In the foreground are Mrs. Scott and her little boy, the chief petty officer of the Steamship Bittern, and four of Mrs. Scott's native servants

A group of native women standing in front of the Pa-bai at Tomil with the navigating officer of the Bittern. Note the enormous cylinder of stone money at the right

is made from the pink shell lining which is in use for money, but it is attached to the ear by a very small perforation, so that it does not produce such disfigurement as one sees in the ears of the Mortlock islanders to the eastward.

Both sexes chew the betel or areca nut almost constantly and without removing the bark. Lime obtained by burning the material of the coral reefs is sifted over the nut from a sifter made of a bamboo section, and the nut is wrapped in a leaf of pepper before it is put into the mouth. Natives are seldom seen without their bag of nuts and leaves and the bamboo sifter. Because of this practice of betel chewing their gums and lips are red and swollen and their teeth blackened. But for this disfigurement of their mouths many of the women would be pronounced distinctly good-looking.

The men of Yap are excellent canoemen and at home in the water,

though perhaps inferior in this respect to the natives of Ponape. About the ships in the harbor, if a line which is thrown falls short, it is never pulled in for a second throw. A native is immediately in the water and back again upon the ship before the line could be drawn in for recoiling. When navigating the lagoons in a canoe, it has more than once happened on a single trip that my canoemen have paddled, sailed, poled, waded on the reef, and lifted the canoe, as wind and depth of water have changed.

COMMUNITY HOUSES

Their canoes, their bamboo rafts, and the cleverly constructed homes and clubhouses the natives of Yap put together without the use of anything resembling a nail. Everything is made fast by cords, and it is in part because of this fact that the devastation wrought by the typhoons is so complete. The design, workmanship,

A bachelors' clubhouse, or Fa-lu, occupied only by young men of Yap. It is built without a nail anywhere in the structure

and artistic decoration of the clubhouses entitle these natives to a higher place in the scale of civilization than would be accorded them on the basis of their personal appearance. The community houses are of two types, the *fa-lu*, or bachelors' clubhouse, and the larger and more elaborately decorated *pa-bai*, which, though built especially for the men, is open to the women as well.

These community houses, in external appearance particularly, bear some resemblance to the native houses in Sumatra, having outwardly projecting peaks with gables which also project along the medial plane. They are decorated on the exterior, sometimes by painted logs which project horizontally like exaggerated gargoyles,

sometimes by great colored shells pendent from the peak of the roof. Within, these structures are dark, being lighted only from the low side and end openings, but the great peeled log pillars which support the roof are so placed as to yield a central nave with transepts. Above the high

Community house, or Pa-bai, at the village of Rull, Yap Island. Native houses of this type are occupied by both men and women

Bomb-proof structure built by the Germans near the old Spanish fort on Yap Island. The man in the foreground is a native guide

central nave one can make out in the dim light the squared braces where connections are made to the roof, and these are covered with cord, which is tied in most artistic, interlacing patterns.

All about the *pa-bais* and the *fa-lus*, and in lesser degree about the houses of kings and chieftains, are to be seen the great money wheels of aragonite

which these hardy voyagers or their ancestors have brought on their rafts two hundred miles across the open sea from the Pelew Islands to the southwest. As some of these wheels are fully seven feet in diameter and their weight is measured in tons, their use as money must be looked upon rather as a bank deposit not easily convertible during a panic, and far better to be

reckoned as prestige. In the Pelew Islands, where the wheels were quarried out of an elevated and profoundly altered reef-limestone, a considerable number of larger wheels are still to be seen lying in the shallow water of Malakal Harbor near the trading post. These wheels are exposed at low tide, and none of them is under twelve feet in diameter. An attempt which I made to raise one from its bed and transport it to America was without success because none of our boats

Cable station at Yap, the centre of an international dispute that has finally been adjusted after two years of diplomatic discussion

was large enough to bring it out to the Bittern.

In addition to their stone money the Yap islanders have a shell money which consists of fragments of the colored lining of the beautiful shells brought from Ponape, and a chief's son who served as my canoeman wore some fifteen dollars' worth about his neck. In point of fact, money is used very little, for the natives have not risen above the stage of barter. A pair of dirty overalls, a discarded undershirt, a box of matches, or a few cigarettes—these were the articles most frequently bartered by the sailors of the Bittern for the fruit, coconuts, canoe models or other articles which the natives brought out to the ship in their canoes.

The native villages are replete with interest, and if the visitor desires photographs it is not difficult to secure groups to pose for him. The best ordered of these villages, and the one showing the greatest degree of prosperity, is that of Tomil, on the eastern shore of the harbor. This village is governed by King Tamolin, a native of much ability, who enjoys the distinction of having been O'Keefe's first mate on the Santa Cruz. His breast is tattooed with the flags of the different nations, the Stars and Stripes in greatest prominence, and he speaks English fluently and with distinction, though he must have found little enough opportunity to practice it in recent years. Mrs. Scott, O'Keefe's daughter, paid a high tribute to the fidelity and efficiency of King Tamolin, and she related of him a story which brings out strikingly the weak qualities which were so strangely joined to the stronger traits in her father. On one of his voyages O'Keefe's schooner was caught in a terrific typhoon, and as he saw no possibility of coming out alive, he ordered up all the liquor on board and drank himself and his crew into insensibility. Awakening from this stupor the following day and finding the ship intact, he called Tamolin and asked him what had happened.

The mate replied, "The ship was saved because with my men I did not drink with you, and we worked the ship through the typhoon."

IMPROVEMENTS BY GERMANS

During their occupancy of the islands the Germans carried out extensive public works. An excellent road was built entirely around the island and a canal was dug across a narrow isthmus so as to extend Tomil Harbor and divide the eastern part of the island from the western. This canal permits the passage of canoes from Colony, the port village, to the northern Islands of Map and Rumong. A wireless station, which had been built by the Germans for communication with the other islands in the Caroline group and by relays with the outside world, is another important service which the Germans have to their credit. With the outbreak of the World War a British fleet appeared at Yap and by bombardment destroyed the wireless plant to sever the island's connection with the outside world. The concrete bases for the wireless masts are all that now remain of the German plant at Yap, but a new one has been erected at a different point by the Japanese Government.

The German warship Planet, noted as the surveying vessel which sounded the greatest depth of the ocean—the so-called "Planet Deep" east of the Philippine Islands—was anchored in the harbor when the British fleet appeared in the offing. She was sunk by her Captain to avoid capture, but was later salvaged by the Japanese when they came into possession of the islands.

Owing to O'Keefe's powerful influence, the natives of the island are extremely friendly to Americans. Members of our party were always warmly welcomed in the villages, and King Tamolin expressed to us his regret that so many of his people were away from the village at the time we called. If we would come

again he would see that every one was at home and would make holiday with dancing in our honor. We sailed away on the Bittern loaded with presents of fruit, with chickens and a fat pig for our larder. We have retained a most friendly feeling for the native islanders, as we have for the Japanese officials, who did

everything in their power to promote the geological investigation which was the purpose of my visit. The Japanese Civil Governor was seriously ill, but he got up from his bed in order to receive us and made every provision possible by guides, canoes and natives for rendering access to the places I desired to visit.

PACIFIC CABLES AND THE ARMS CONFERENCE

THE inadequacy of communication between the United States and the Far East was emphasized by the difficulties encountered by the Chinese and Japanese in relaying news of the arms conference to their home lands. Thirteen cables connect the United States with Europe; only one with the Orient, and that one cable is often out of order for long periods, and is wholly inadequate to handle any large volume of news such as that emanating from the conference.

The seriousness of the situation was pointed out recently by V. S. McClatchy, editor of The Sacramento Bee, in an article in The Editor and Publisher. Besides the one cable, the only other means of communication is by wireless, and there is only one private radio firm to serve all the Pacific nations. The wireless facilities of the United States Navy have been given a limited extension to relieve the situation, but the results have shown how inadequate are all the communications taken together. Though Honolulu received promptly full reports of the opening of the Washington conference through navy wireless, China and Japan received some of the first day's proceedings four days late; and afterward the pressure on the inadequate facilities became so great that only very short special messages were sent by cable and by privately-owned radio at "urgent rate" (over \$3 a word).

One consequence of these abridged messages was a grave misunderstanding as to what had actually been done by the conference powers. The danger of this was seen in China, where thousands rioted after a truncated message had announced that the Japanese and Chinese delegates would settle the Shantung controversy by direct negotiations. Had the message included the fact that these negotiations had been brought about by the good offices of Secretary Hughes and Mr. Balfour, this riot would probably not have occurred. Similarly the Japanese were left for days in the belief that only France had agreed to relinquish her Chinese leaseholds, the message having failed to state that the other chief nations had also made offers.

At present the navy radio remains the vital link in the news chain—all too weak—bridging the United States and the Orient. If that link breaks, the situation must inevitably become worse. Congress granted the navy authority to use its wireless facilities for news transmission over the Pacific at a low word rate, in June, 1900. That authority will expire June 5, 1922. Only the navy service has made possible the sending of regular daily reports under normal conditions. The sentiment in Congress regarding such a renewal has not yet been definitely gauged.

CURING LEPROSY IN HAWAII

BY WILLIAM R. COMINGS
of Honolulu

Triumph of science over one of the most ancient and terrible of diseases—Lepers at Kalihi recovering steadily under the new treatment—No more sent to Molokai in the last three years

TECHNICAL science is again justifying its claim as man's most valued servant and also his most effective physician. Leprosy, the loathsome terror of the Orient, antedating all history, found in all lands, is slowly giving way to the combined efforts of skilled chemists and physicians of the Hawaiian Islands. The essential facts in this great victory are brief, but not lacking in vital interest.

The Encyclopaedia Britannica is authority for the supposition that leprosy originated in the thickly populated regions of the lower Nile and was presumably caused by the eating of great quantities of raw fish, sometimes putrid. Be that as it may, the disease was certainly endemic among the Children of Israel when they left that pest-ridden land and began their wanderings in the wilderness. The Books of Moses give us our first familiar accounts of it and of the attempted system of cure and purification. No less than 4,000 words in Leviticus xiii. and xvi. are used to describe the details of procedure. The extremely sacerdotal rites had a few elements of sanity in them—pure running water was required for cleansing, while those not afflicted were enjoined to sleep not in a bed in which a leper had slept, to sit not in a chair in which a leper had sat, and to avoid those who wore the habiliments of the outcast. The whole ceremonial, however, manifests the

stamp of long-established Egyptian custom and priestly officiousness. No more pathetic cry has rung its way down the ages than that of the homeless Hebrew, "Unclean! unclean!"

ISOLATION CAMP AT MOLOKAI

No large country is now or ever has been free from the taint of leprosy. The Caucasian race is relatively free, but during the Crusades and for centuries afterward all Europe was afflicted and every city had its place of segregation. It was not till the seventeenth century that Britain, Scandinavia and the countries of Central Europe could boast a practical elimination of the disease. It is today not uncommon in South America; China and Japan have their villages for segregation of the afflicted; and one who is familiar with the facts states that there are more than a thousand cases of it in the United States, exclusive of Hawaii. Because of its comparative rarity it may often escape recognition. But in its early stages it is insidious and is easily overlooked by those who do not understand its peculiar manifestations. Even reputable physicians in Honolulu, with a leper hospital near them, have treated those having the disease for something entirely different.

The native Hawaiians are said to have been entirely free from leprosy until sailors and workers from the Orient appeared and lived among them. The old-time sex communism

of the race gave it free scope and it became a scourge. In 1866 the Government set off a peninsula on the Island of Molokai as an isolation camp, and it is still used for that purpose. The site was well chosen. It is a fertile and beautiful tract, separated from the rest of the island by an insurmountable wall of volcanic rock. Everything possible was done by the Hawaiian monarchy to make the hopeless victims comfortable. Since the islands became a territory of the United States in 1898 interest and care have not slackened.

The village, with a thousand inhabitants at times, is pleasant and homelike. There are schools, movies, churches, baseball, basketball, tennis, billiards, croquet, political meetings, a good string orchestra, dances, dramatics, and occasionally entertainments and lectures provided by people from Honolulu and other cities. In most ways life is normal; there are gardens, flowers, fruits, shrubs, ordinary occupations and something of family life. There is a Boys' Home under the personal care of Brother Joseph Dutton, who has been a faithful friend and nurse for forty years. During that time he has not left the camp, though at liberty to do so, as he is not a leper. He has never seen a railroad or an automobile. In his devotion he has fallen heir to the good work of Father Damien, who died of the disease. There is a Girls' Home in care of the Sisters, some of whom would never have gone there but for their devotion to suffering humanity.

The few visitors allowed are admonished not to shake hands, not to sit in a chair, nor rest on a couch, nor lean on a table. Often the precaution is taken of changing clothing on leaving the boat. Officials say that with proper care and sanitation there is little danger. Perfect health and an unbroken skin are elements of safety, but sterilization is the never-to-be neglected safeguard of the physician and nurse. The disease is communicable rather than contagious.

On all the islands there is constant

watchfulness on the part of Boards of Health, and every suspected case is tested for bacterial germs. The slightest evidence calls for immediate isolation. New cases, however, are so infrequent that there is little more public concern about danger from this disease than from tuberculosis. A few years ago a writer in a popular magazine asserted that the disease permeated all society, that school teachers habitually wore gloves in school for fear of contamination. A pure fabrication. It never was true when the disease was at its worst. Life goes on in Hawaii precisely as it does in New Orleans or New York.

The new treatment, however, is hailed with joy, especially on the part of the native Hawaiians. They do not now as formerly hide their cases, but bring them instead to the proper officers for examination, seclusion and treatment.

DISCOVERING THE NEW CURE

Credit for initiating a revolutionary method of treatment is generally ascribed to Dr. Victor Heiser of the United States Public Health Service in the Philippines. Instead of giving raw chaulmoogra oil in doses, as had been the custom for centuries, he gave it by injection into the muscles. Mixed with olive oil and drugs, it was efficacious and helped all patients treated. The old method of taking the oil through the mouth, even in capsules, produced such violent nausea that very few could retain it. If retained, it was healing; the best remedy then known. The success of the Heiser treatment led physicians generally to adopt injections as the best method of giving the oil, but it was thick and not easily absorbed. This led Dr. Harry T. Hollman, a member of the Government Medical Corps at Honolulu, to call for a more diluted form of the oil, one freed from extraneous matter, an ethyl ester, or the vital principle, if there was one. The decomposition of the

oil, he said, should be accomplished outside the body.

After securing the approval of his superiors, Drs. McCoy and Currie, he asked the Chemistry Department of the University of Hawaii to liberate this essence from the vegetable compound. President Dean, himself an expert chemist, became greatly interested. He assigned to the task Miss Alice Ball, a young negro woman and an expert chemist, who found the task exceedingly elusive. She gave it all her time and secured a light essence, which Dr. Hollman administered with improved results; but he still insisted it could be improved. Miss Ball's health failed, possibly from chemical poisoning, and she went to California to recuperate. On her return she again took up the task, aided by Dr. Dean, but was again forced to give up the work entirely and soon afterward died in California.

President Dean then entered upon the task with redoubled enthusiasm. He was encouraged from results obtained to give every possible aid to the indomitable and optimistic Dr. Hollman. There were months of persistent effort, the devising of expensive and complicated apparatus, including a special furnace for intense heat. At last the precise ethyl ester desired—with a number of others—was secured. Injections were made as before into the hips of patients—the large muscles were selected to avoid any possible introduction of the medicine into the large veins or arteries. The improvement following in every case was so marked as to cause surprise and decided gratification.

It was not long till several cases were pronounced cured and discharged. But some of those sent away had a recurrence of symptoms and were brought back for further treatment. Years of experimenting since then have convinced Dr. Hollman and his co-workers that a complete cure is a slow process. Germs lie hidden somewhere in the system that wait for some possibly abnormal condition—alcoholic intoxication, perhaps—to

become active again. The rule now followed is to parole, and then only when no bacilli can be found in the blood taken from any portion of the body, and to continue frequent examinations and occasional treatments for a period of two years.

THE PERFECTED TREATMENT.

The experimental work is carried on at Kalihi, an intermediate hospital established near Honolulu in 1865. There is not the air of hopelessness about this institution that is traditional at Molokai. With the success of the new treatment all are now waiting their time of parole, and they take the treatments with decided hope and faith. Injections are made weekly and to all patients. The event has assumed a holiday air; good cheer and raillery are encouraged by the doctors. This lessens the nervousness attending the physical pain of the operation and has a psychological effect also that is desired. So successful has the work been here that no new cases have been sent to Molokai for three years or more. The records show that 150 are now out on parole and going about the ordinary activities of life. Most of these are considered absolutely cured. In many cases not even the characteristic markings are visible.

Treatments upon the historical Molokai are also going on systematically. Few absolute cures there can be expected, but all treated are greatly improved, and many live in hope. Strange as it may seem, about half of the patients refuse to be treated. They are well cared for, are in congenial company and do not wish to face a cold and unsympathetic world. They could not hide their scars and deformities. The total now upon the island is 534, the number under treatment 350. It is hoped by people now living that they will see the complete elimination of this camp.

There is another interesting story, a sort of by-product. It was apparent some years ago that the supply of chaulmoogra seeds was all too small for future needs, and Professor J. F.

Rock, who was then in Southern Asia, was asked to secure seeds and learn something of the trees producing them. He found a small supply in the hands of curio dealers and exporters, but did not have time to find the trees, which, he learned, grew far inland. A year or so later, when in the employ of the United States Government, he made the very difficult personal search for the trees. No one in the towns could locate them, but from one village to another he made his way for hundreds of miles into and through the forests of Siam, Burmah and India. It was a soul-harrowing experience and called for no little fortitude and privation. He found the trees and several allied species. Had he not been a trained botanist and tree expert, he might have made the mistake that was made by some English searchers, who were satisfied with a similar tree and so have wasted years of time. For it was

his mission to get seeds for propagation as well as for direct use as medicine. It is impossible here to recount all his thrilling experiences, both with wild beasts and with natives. He sent enough seeds to Hawaii to meet present demands and to plant an allotment of a hundred acres, set apart for that purpose by the Hawaiian Legislature.

The Dean specific is in no sense proprietary. It is not obtainable for individual use. Hospital treatment and close observation are a necessity. It cannot be self-administered. The United States Treasury Department has issued a "Reprint from Health Reports, No. 607," prepared by Dr. J. T. MacDonald and President A. L. Dean, that gives detailed and technical information about the treatment as now administered in Hawaii. This and the oil are obtainable on application to the Public Health Service, Washington.

FRENCH OFFICIAL HISTORY OF THE WAR

THE French Minister of War announced on Nov. 16, 1921, that a monumental history of France's part in the great conflict was being prepared by the historical section of the French Army Staff. The purpose, he said, was "to give to the public as rapidly as possible, in accordance with a plan scientifically conceived and executed, a narrative describing, (1) in its wide interpretations, the conduct of the war by the French High Command; (2) the main lines of the development of operations."

Work on this official history was begun in 1919. Voluminous Government records of all kinds had first to be carefully sorted out and classified for the five war years from an aggregate of 60,000 separate files;

the documentation desired to meet the objects set forth above had then to be extracted from this mass by study and analysis. To expedite this formidable task the war epoch was divided into periods, and the study of each period was assigned to a special section of writers. The work of each section will be published when completed, and when the whole series is done it will contain volumes on every great campaign and battle of the war, besides tables on the size of the French Army units and their history from mobilization to armistice. The Minister of War hopes that the volumes dealing with the first operations of 1914 will appear before the end of 1922—if the appropriations are granted by Parliament.

VOCATIONAL TRAINING : THE NEW EDUCATION

BY HARRY L. FIDLER

Vice Chairman of the Federal Board for Vocational Education

How the national movement for Vocational Training arose, and how it developed—Agriculture, Trade, Industry and Home Economics taught practically—Vast extension of a new education

IT was in the United States Senate. The Sweet bill had come up from the House proposing the creation of a new Veterans' Bureau. The Finance Committee had steamed through a long night session, and it had tacked a score of amendments to the House measure. Among them appeared a clause abolishing an obscure department known as the Federal Board for Vocational Education. Without a thought of opposition, the amendments were announced to the press.

The announcement had hardly left the wires when a bombardment of protests fell on Washington. They came from Chambers of Commerce, colleges, women's clubs, churches, labor unions. They rained upon the Senators from every State in the union. Their tenor was unanimous. Pass the Sweet bill, by all means, but *strike out that clause abolishing the Federal Board for Vocational Education!* The Finance Committee had stirred up a hornets' nest. Of course, the Senate capitulated to the demand. The Sweet bill went gloriously through, but the Federal Board amendment was significantly missing.

This incident revealed the vast popular support which the Federal Board for Vocational Education had acquired. The board's work during the four years of its existence had been one of the silent and unheralded activities of the Government. Who could have suspected that so many minds were keenly following it, and

that such a nation-wide body of supporters was behind it? And yet there is a great school of men and women in America today who believe that the task which is being done by the Federal Board for Vocational Education is among the most momentous ever conceived by the nation; that it is pointing the way to the future of the race; that it is revolutionizing our educational concepts.

Even the meaning of vocational education is unknown to an incredibly large percentage of readers. Perhaps the simplest characterization of it would be education to earn a living. Vocational education sees the pupil as a prospective wage or salary worker, rather than as a prospective man of leisure. It would shape his studies around a practical employment objective, rather than, as now, around a general ideal of culture. It would reorganize our elementary educational system by adding full time and continuation vocational courses to the traditional curriculum of the "three R's." Thus it would teach the child to *do things* rather than merely to *know things*; and under such a system the pupil would find school a practical stepping-stone to the all-necessary job.

HOW THE MOVEMENT AROSE

The movement for such education first arose ten or fifteen years ago. It came out of the painful realization that our much-vaunted democratic

public school system was becoming neither democratic nor public. The original theory of the American public school was that equal opportunities should be accorded to every child. This worked in theory. Unfortunately, in practice, it developed that all children did not have equal opportunities to attend these schools. Statistics indicated that between 80 and 90 per cent. of public school pupils were forced by poverty to discontinue before or at the completion of the grammar grades. The costly apparatus of high schools and State universities which we had erected was available only to the 10 or 20 per cent. For the 80 or 90 per cent. not even an attempt at continuation education was provided; they were left adrift.

(© Harris & Ewing)

HARRY L. FIDLER

*Vice Chairman of the Federal Board for
Vocational Education*

But this was not all. Even the little education which the children of the poor could gain was inappropriate. Although the majority of grammar school pupils were destined for the factory, they were forced to spend their precious school years in courses preparing them for high school. Although the manifest need of such children was education which would make them successful wage earners, the industrial objective was completely overlooked by the public schools. Instead of individualizing instruction, according to the future needs of the pupils, our schools standardized instruction and took as the standard, not the majority but the minority. Here was a most patent wrong.

The realization of these unpleasant truths inspired the vocational movement. Already the schools had been toying with the industrial idea in the form of manual training. But manual training averaged only one and a half hours a week where employed; it was but a sop. The need was for schools with distinct vocational courses, followed by continuation courses after the child had gone to work.

These schools should aim to turn out pupils well-rounded mechanics. They should teach not mere mechanical dexterity. They should give their pupils what few mechanics possess today — craftsmanship. The boy should learn industry as a whole. He should study all the supplementary subjects technical to his chosen craft. He should learn the inter-relation of industrial processes. All of his textbooks and courses in general subjects as well should be prepared from the vocational slant and should contribute toward a psychology of craftsmanship in his mind.

The further argument for vocational education was supplied by the industrial situation itself. In previous periods young workers were trained into craftsmen by the apprentice system. They could get vocational education after they had "gone on the job." Unfortunately, the coming of the machine system virtually ended apprentice-

Typewriting class in one of the schools of the Federal Board for Vocational Education. Several one-armed veterans of the World War belong to this class

ship. The working-class boy had now no place to which to look for industrial preparation but the public school. And what did the public school offer him?

There were years of agitation after the vocational movement arose. It was up-hill agitation. Educational traditionalism died hard. The defenders of classical education resented the intrusion of the employment objective into their pleasant world of theory, but the democratic logic of the vocation argument was too much for them. The labor unions, above all, contributed their strength to the fight. And so, at long last, cautiously and experimentally, school boards began to create continuation schools and amplify manual training courses. Results began to accumulate.

BACKED BY THE NATION

But it was necessary, above all, that the Federal Government itself be gotten behind the movement to give it official standing. This was accomplished by the Smith-Hughes act of Feb. 23, 1917. Congress not only endorsed the movement, but voted an

annual endowment to continue indefinitely. This endowment, graduated upward from \$1,655,586.72 for the first year to a maximum of \$7,367,000 to be attained in the year 1926 and continued thereafter, was to be expended by State Boards for Vocational Education which each State was called upon to appoint. It was to be given on condition that these State boards match it dollar for dollar. It was to be spent for instruction and teacher training in vocational education exclusively.

To allot these funds among the States a Federal Board for Vocational Education was created. A unique form of organization was instituted for this board. It was recognized that no scheme of vocational education would succeed without the co-operation of the three interested industrial elements — the manufacturers, labor and the farmers. And so the board was made tripartite, with each of these elements represented. The wisdom of the plan has been manifest from the first.

Dr. Prosser, the first Director of the board, described the method of administration as follows:

In the early stages of vocational education the Federal Government enters into a partnership with the State—the State being the resident partner on the ground and doing the actual work, and the Federal Government the non-resident partner, investing from time to time the necessary sums of money.

The funds which the non-resident partner invests, to continue the doctor's analogy, are safeguarded by the board's establishment of standards for schools receiving support, and a systematic inspection of the work of the State boards. In addition to this standardization, the Federal board supplies a national leadership to the whole national vocational movement by the holding of conferences and the continual routing of field agents through the States. In Washington, it also has established a system of research and investigation. It publishes vocational literature and it disseminates vocational data. Thus it

has integrated the whole vocational movement around itself. It has lifted vocational education from a theory and has made it an institution.

THE BOARD'S WAR WORK

But hardly was the Federal board in existence when it found itself swamped with extraneous war duties. On June 27, 1918, Congress enacted the Vocational Rehabilitation act and put upon the new board the task of rehabilitating the army of disabled veterans who were already pouring back from France. It provided that these veterans, when not completely disabled, should be given vocational education, under the direct administration of the board. The job was stupendous, and it is little wonder that the machinery of the board soon began to creak beneath the load.

Beginning with a virgin field,

(© Western Newspaper Union)

Convalescent soldiers learning to paint and draw in an improvised studio at a General Hospital

without precedent to guide them, and without schools or adequate teachers to turn to, the Federal board developed an organization of 2,200 schools, 4,000 trained teachers and 10,000 job placements. It prepared courses around 1,600 employment objectives. It registered 388,225 veterans and placed 108,036 in vocational training. It built up whole new universities. In this immense laboratory of trainees it accumulated vocational data and developed vocational technique which has advanced the whole science of industrial education by at least a generation. And, despite heart-breaking censure and misrepresentation, it did its job for three years; and did it so well that when finally the Veteran Division of the board was consolidated with the War Risk Bureau and the Public Health Division in a new Veterans' Bureau, Congress adopted the Federal board form to govern all three divisions.

This veteran work of the board has been the most discussed, although it was but a temporary duty. The most significant task, however, was yet to be added to the board. On June 20, 1920, Congress enacted the Industrial Rehabilitation act, and placed its administration in the hands of the board. Here was a task almost incalculable in its potentialities. The whole vast field of men and women disabled in industry now became potential beneficiaries of the board. The scope of the field can be imagined when we explain that every year more workers are injured in industry than the total number of the war wounded whom the board has registered up to date. While the original appropriation of Congress for industrial rehabilitation was small and experimental, this activity of the board is destined to grow cumulatively with the years until it eventually far overshadows the veteran rehabilitation task which has so filled the press. It is a bringing of educational therapeutics into the lives of multitudes who, otherwise, would be fatally marred. As such it is both an eco-

nomic and a highly humanitarian work.

With the separation of the veteran work from the board under the Sweet act, there remains to it the two divisions of vocational education and industrial rehabilitation. The officials of the board welcome the change. Now their energies can be concentrated on an intensified campaign for vocational education proper.

VOCATIONAL TRAINING

Just what is the work done by the board in respect to vocational education? This work is divided into three fields—agricultural, trade and industrial, and home economics.

Agricultural instruction is always practical. It is given by three methods, destined to reach all groups of boys and men, in all-day schools for boys still in school; in short-course instruction for those already working on a farm, and in evening classes for older men who are practical farmers, but who wish to learn improved methods. The students operate actual farms under the supervision of their instructors, and are taught stock raising, soil culture, fruit cultivation, business and administration of farms, economics of the market, &c. The total net income from all these experimental farms for the year 1918-19—a total of \$832,487.60—demonstrates eloquently the success of this instruction.

The same division into three classes of schools also operates in trade and industrial instruction. In each community different trades are selected, according to the employment needs of the district. Continuation-school pupils, preparing for the machinist's trade, study in a miniature machine shop, handle tools and do actual machine tasks. In Ohio, for example, where the chief industries include iron and steel, machine and foundry establishments, automobile works, rubber factories, shipbuilding plants, garment-making and jewelry manufacturing, the classes in the public schools are organized around these

The automobile course is one of the most popular with the ex-soldiers and injured workmen in the rehabilitation schools of the Federal Board

objectives. Figures for the fiscal year 1919-20 were as follows: Twenty part-time trade extension centres, with thirty-five schools; four general continuation centres, with six schools; two all-day centres, with five schools; thirty evening class centres, with approximately 250 classes. The part-time trade extension classes enrolled 1,200 students; the general continuation schools 1,000; the all-day schools 150; the evening classes approximately 6,700. These figures are typical, and are borne out proportionately throughout the country. It may be added that the trade vocational instruction teaches the students to understand the whole industrial process, as well as their part of it, and has a broad cultural scope. It teaches elementary economics, civics, and does not neglect the principles of good citizenship.

Home economics is framed for girls to qualify them as homemakers. Cooking, homework and baby care are included. The instruction is all practical. That it is vitally necessary is proved by the census, which reveals

that 60 per cent. of girls eventually marry.

ACHIEVEMENTS OF THE BOARD

Already the field which the board reaches is immense. During the year 1920 as many as 3,155 vocational schools received aid from the board. The enrollment of these schools was 265,143. This is the number which the board now benefits. With increased appropriations and increasingly efficient administrative machinery, this number should be multiplied again and again. Of course the full strength of the vocational work cannot be gauged from this figure, since much of the impetus of the movement has gone into private schools. The Federal funds are available only for the public schools. Though private schools have done magnificent pioneering in this task, it is felt that vocational education can realize its true magnitude only when it is a part of the public school system of the land. Not the least of the weaknesses of

private vocational schools is the fact that the labor unions, which staunchly support public school vocational training, look with suspicion upon private vocational undertakings. Without the support of the labor unions the employment future of the pupil might be doomed, even though he were trained in the most efficient of private trade schools.

The board has been specially fortunate in the able men whom it has enlisted to captain it. Dr. C. A. Prosser, the original director, can be called the father of the organization. It was he who drafted the administrative form of the board. His personality, during the early days, saved the board from the fate of mediocrity. He prepared the organization for the immense task of veteran rehabilitation which followed him. Upon Uel W. Lamkin fell the lion's share of that task. Assuming the directorship at a time of discouragement and criticism, he banished despair and disarmed criticism. When he resigned, he left behind him a splen-

didly ordered rehabilitation machinery which was transferred intact to the Veteran Bureau. The present administrative chief, Lewis H. Carris, has played a leading role in the organization since its inception, and enters his position exceptionally endowed for his work.

From this brief survey, the scope of the work of the Federal board can be glimpsed. Today we are merely laying the foundation for a vocational educational system which within a generation will reach immense proportions. Educational traditionalists only too often attempt to block our progress, but their attempts are futile. Vocational education has arisen out of the crying industrial needs of an essentially industrial nation. Behind it lies the momentum of the inevitable. The future of the Federal board, at this moment, is bright with promise. It has passed the ridge of experiment. Perhaps those enthusiasts are not wrong who acclaim it as one of the Government's most significant departments.

THE SENNAR DAM ON THE BLUE NILE

ON the banks of the Blue Nile, about 200 miles south of historic Khartoum, on the waters that come down from Abyssinia to Soudan, the British are building the largest dam in the world. Twenty thousand natives of the country are employed—men of every shade from deepest black to palest yellow, some garbed elaborately and picturesquely, the majority naked, or nearly so. Hundreds of them have crossed the Red Sea from Arabia, others have walked from Nigeria and the French Congo. All wear a knife strapped to the left arm, a charm containing a few lines from the Koran on their right. The scene, as described by a writer in *The London Telegraph*, has its grandeur: Vast machinery dumped down on the desert sands; cranes and railway trucks, giant canal cutters; a complete factory capable of producing 50,000 tons of cement a year.

The vastness of the undertaking is seen in the fact that over a million tons of granite will be used. All this granite is being

sliced off of Segadi Mountain, near at hand. Assouan has granite in superabundance, but it is too far away for transportation. In ancient days the point of view was different; the Egyptians and Greeks and other peoples of those days went to Assouan for their granite, and brought it hundreds, sometimes thousands, of miles to build temples in Soudan, Egypt, Palestine and even far away Syria. Speed was not necessary. Like a hive of bees the army of modern workers run back and forth to satisfy the British desire for accomplishment.

When the mighty dam—3,330 meters long—is finished, some 300,000 acres of land—eventually 3,000,000 acres—now lying useless, will be brought under cotton cultivation in the Soudan, giving work to thousands, and producing within the British Empire much needed raw material for the mills of Lancashire. The cost is borne by the Soudan Government. A great undertaking, calculated to bring in a great return.

HOPE VERSUS DESPAIR IN CENTRAL EUROPE

BY CHARLES UPSON CLARK

An American educator's personal observations in Rumania, Transylvania and Austria—How the spirit of unity is slowly growing in Transylvania under Rumanian rule—Desperate straits of Viennese intellectuals

[WRITTEN IN THE LAST DAYS OF 1921]

I HAVE recently had an opportunity to study conditions in Central Europe—notably in Rumania and her newly acquired province, Transylvania, and in Austria. The situation in Rumania I found to be increasingly favorable. There is great satisfaction among the Rumanians over the final opening of the great bridge over the Danube at Cernavoda, which may be taken as evidence that the world's transportation is gradually returning to normal. Through trains are now running from Bucharest to Constantza, on the Black Sea, as before the war. An American firm had made a bid for the reconstruction of the bridge, which was destroyed by the Rumanians during the war to prevent its utilization by the Germans; they guaranteed to have it ready a year ago, and their price was reasonable; but for various reasons the contracts were awarded to a big steel firm in the Banat, which utilized two spans from another bridge similarly destroyed. At any rate, it is now possible to go by steamer from New York to Constantza, passing through the Dardanelles and the Bosphorus, and at Constantza to take a through sleeper for Bucharest, where one has immediate connection by through sleeper with Budapest, Prague and Vienna.

Order seems to be returning also

in the Rumanian financial situation. The lei, which had fallen to about 6 centimes, has rebounded to 10. Minister Titulesco, in his recent trip to Paris, states that he has arranged to fund the Treasury notes, and that the French financial authorities are co-operating with him to prevent the reckless speculation in lei on the Paris Bourse which has so greatly contributed to make the situation worse. The Government seems also to be making an earnest effort to cut down the heavy expenses of its diplomatic and consular services abroad, which have to be paid for in francs or other expensive currency. One painful consequence is that many of the Rumanian students in Paris will have to come home. A curious result of the present financial situation is that the education of Central and Eastern European youth is inevitably thrown into German and Austrian hands. At Berlin, Leipsic or Vienna, boys whose parents are paid in lei or crowns or marks—and still more, liras—can live in comparative comfort. Thus, from purely material causes, if for no other, the German universities are forming the minds of the new generation. It is a great pity that we Americans do not take the step, which would be welcomed by all Rumanians, of inaugurating an exchange of professors and students with Rumanian universities. Rumania is the land of

the future in Southeastern Europe—a land of unbelievable wealth and boundless possibilities. They want us to know them; their universities are as veritably homes of learning as our own; and any American professor or student who goes there will have an illuminating experience.

TRANSYLVANIA OF TODAY

We have heard in the United States and England many stories of the hard fate of the Transylvanian Hungarians, whom the Treaty of Trianon has placed under Rumanian rule. There has now been time for both Rumanians and Hungarians to lay aside the bitter feelings of the first few months; and in talking with eminent representatives of both sides, I am glad to note a great advance over the strained relations which I found in 1919. All Transylvanians, whether Rumanian, Hungarian, German or Szekler, are out of patience with the Central Government at Bucharest, which they feel pays too little attention to Transylvania's needs, and their grievances, in many cases identical, are bringing them together. It will not be long before these Hungarians will be primarily Transylvanians rather than Magyars, at least so far as the younger generation is concerned; their elders, I fear, will never be reconciled to separation from Budapest.

It is hard for us, so tolerant in matters of language and religion, to appreciate the situation which prevails in all the sundered members of the former Austro-Hungarian monarchy. Here was Transylvania, a compact little country of over two and a half million inhabitants, with half a dozen different religious confessions (and that counts far more there than with us) and three important languages—German, Hungarian and Rumanian, the latter being spoken by over half the population as their mother-tongue. Since 1867, this territory had been Hungarian. Most of the land belonged to great Hungarian nobles—the Bethlens, Banffys, Telekis, &c., or to

the various churches; nine-tenths of the Rumanian population were peasantry, and few of them owned any land. The Hungarian Government made every effort to impose its language on everybody. I remember how perplexed I was, as a student in Europe twenty-five years ago, to discover labels only in Hungarian in the museums of Budapest, and to find that I was expected to know what was meant by "konyvtar," "egyetem," "urak" and similar linguistic puzzles. If the language were only like some other culture-tongue, one would not object; but it comes from the Asiatic steppes, and one who knows French, German and Italian stands helpless before a door labeled "iroda."

And the Hungarian officials went too far in their efforts to make everybody talk Hungarian. I have a Rumanian-Transylvanian friend who speaks perfect Hungarian, a native of a town where there are about 5,000 Rumanians and less than a hundred Hungarians. The ticket agent at the station, a Hungarian official, spoke good Rumanian—indeed, had to, since most of the townspeople had no knowledge of Hungarian, German being the other colloquial language of that section. One day this friend of mine asked for a railroad ticket in Rumanian; the station agent, knowing that he spoke Hungarian, told him to ask for the ticket in Hungarian; he refused; they would not sell him a ticket and reported him to the police, who arrested him and fined him 200 crowns for an act dangerous to the supremacy of the State! There were many Rumanian students in the university of Kolozvar; but they might not speak even to each other in their native tongue on the university grounds, since there was a by-law expressly forbidding the use of Rumanian, except in the classroom of Rumanian language and literature (taught, by the way, by a Magyarized Rumanian who fled to Budapest when Transylvania became Rumanian). These examples may serve to give an idea of the general Magyar attitude

emphasized by their ownership of the land and consciousness of superiority—a superiority especially irksome to the Germans, who had been in Transylvania since the twelve hundreds, and who considered themselves quite equal to the Magyars. It must also be stated that the Magyars had a bone to pick with the Germans, since under the Austrians—1848-1867—German had been the official language, and the Hungarians felt they had been persecuted by the Austrians and Germans.

It was, therefore, quite a mess which the war found in Transylvania; and, as usual, the war did not improve matters. The Rumanian advance into Transylvania uncovered a great deal of sympathy with the invaders; and when they were driven out the Hungarian Government made it practically impossible for any Rumanian to buy land, and began a great colonizing scheme, like the Prussians in Silesia. The Russian revolution forced them to give more Rumanians the vote; but they arranged a literacy test which would disfranchise most of them.

RUMANIA'S TOLERANCE

Then came the collapse of October, 1918, and the first great mistake of the Transylvanian Hungarians, the evil consequences of which they have only lately realized. Instead of remaining at their posts—I speak particularly of the civil, administrative and school officials—and taking the oath to support the new Government, a large proportion of them refused and left for Budapest in the expectation that the Peace Conference could not possibly leave Kolozsvár, Arad, Grosswardein and Temeshvár to Rumania, and that they would return in triumph after only a few months. Had they all stayed, as some did, and found that the Rumanian Government, with its dearth of a trained official class and of teachers, must necessarily keep them on (as it has done with almost all those who did remain), they would have formed a compact political mass, and would

probably long since have forced the Bucharest politicians to give Transylvania the special attention she needs. They expected that the Rumanian Government would be as intolerant of them as they had been of the Rumanians.

But the Rumanian is singularly tolerant by nature. I have been in all the Succession States since the war; and, with the possible exception of Italy, I think the minorities are nowhere so well treated—and surprisingly well treated—as in Rumania. I have had experiences which I think could happen only in Rumania. In a Hungarian book store in a city not far from Cluj I found exposed for sale, and mailed to friends in America, picture post cards with Hungarian captions of the Emperor Karl and of Kaiser Wilhelm—and this in November, 1921! When I told this to a Hungarian Protestant Bishop, he remarked politely that he would not have believed it possible. It was clear he did not believe it at all. This same Bishop told me that every Government statement or proclamation was made solely in Rumanian, while I had been especially struck by the bilingual character (both Rumanian and Hungarian) of all the posters and door designations in the Post Office, the Prefecture and other Government buildings in Cluj. The truth was that the good Bishop, who goes around very little, had generalized from the fact that the Government proclamations and publications sent directly from Bucharest are exclusively in the State language, Rumanian, as those from Budapest in the old days were purely in Hungarian.

A still more striking experience was one I had in a Hungarian Roman Catholic parochial school in one of the "Saxon" (German) cities of Transylvania. There I found the children reading aloud from readers of 1908 which sang the glories of the Hungarian State, of the Austro-Hungarian Empire, of the Kaiser Francis Joseph, and of the Magyar race. I did not need to have the selections

translated: the illustrations were enough. We are a tolerant people; if we had been struggling with the Germans for a thousand years and finally beaten them, should we allow Milwaukee German schools to continue using readers glorifying the Hohenzollerns? I wonder!

UNIVERSITY OF KOLOZSVAR

With the University of Kolozsvár, the Rumanians were in a puzzling position. They were willing to let the Hungarian Faculty stay on, if they would take the oath of allegiance; but not only did the Hungarian rector and professors refuse to do this, but even in the Spring of 1919 they insisted that all graduates should take the oath of allegiance to the Hungarian Republic! The Rumanian authorities spent two months arguing and corresponding with them on the matter; but as the rector refused to yield, they finally had to close the university, which they reopened as a Rumanian institution. It has now 2,500 students; among them are some Hungarians who speak Rumanian only very brokenly, and they are allowed to use Hungarian in their answers, if the professor understands that language. I met fifteen or twenty of the Faculty, all men who had studied in France or Germany, and who in most cases spoke at least three languages fluently.

Transylvania had an extensive system of schools run by one or another religious denomination. These have little difficulty if their Principals and Faculty have taken the oath of allegiance; but the Hungarian Calvinist, Roman Catholic, and particularly the Unitarian teachers, were very slow to do this, while the German Lutherans (who had had their own troubles with the Hungarians) came over at once, and have constantly been on good terms with the Government; the Principal of the German gymnasium (high school), at Bistritz, told me he was not interfered with in any way by the Rumanians. On the other hand, what the Rumanians considered the ob-

duracy of the Calvinists and the Unitarians led to severe and even unjust measures against them; some forty-five of the Calvinist pastors were imprisoned for terms aggregating forty years, and in several cases were released without ever learning what the charges against them were, while one Unitarian professor of theology was put through the third degree by the secret police, to learn details of a plot of which he claims to know nothing, and bears the scars of this experience on his person today. Undoubtedly there were plots against the Rumanian authorities, and one at least of these pastors has been found guilty; but every good Rumanian I know hangs his head when I refer to those arbitrary acts of the Sigurantz—the secret police—and execrates his country's politicians, who have allowed such things to be.

It is a pleasure to turn from this blot on the Rumanian 'scutcheon and look at the record of the University Librarian. Kolozsvár had one of the finest libraries and most beautifully and thoughtfully appointed library buildings in the world, the creation of its librarian, Dr. Farkas Gyalui, a Hungarian of Jewish parentage. He had been twenty-five years in the library's service when the war broke out; and when the crash came, and orders came for Kolozsvár to be evacuated, the commanding general put fifty freight cars at his disposal to carry his treasures to Budapest. "I simply could not divide or leave my library," he said, "whereupon the General told me: 'You will answer with your head for this if anything happens to the library.'" He stayed; the Rumanians took over the library, with Dr. Gyalui as librarian; and it is today the best arranged and most usable library in Rumania.

Rumanian rule has brought thousands of officeholders, army officers, bank clerks and other Rumanians to Cluj, so that, of the city's 105,000 inhabitants, 40 per cent. are now said to be Rumanian. The Rumanian Government has installed an excellent opera company in the Hungarian

National Theatre. I saw admirable renderings of "Faust" and "Samson and Delilah," and heard wonderful piano playing by Achron, the young Bessarabian Jew who has taken Rumania by storm. The city is frightfully crowded; rooms have had to be commandeered on a large scale, as in Budapest, Vienna and Frankfort, to take only a few examples; but, except for the sudden blossoming forth of Rumanian store signs beside the Hungarian, the city has not changed much in appearance. King Mathias Corvinus still stands triumphant in bronze on the public square; his name is now written in Rumanian, not Hungarian, and the Hungarian crown and coat of arms have been removed, to be replaced by his family's shield; but one of the conquered Princes who does obeisance before him still lowers the Moldavian flag! Not far away stands a new statue, the wolf suckling Romulus and Remus, a gift of the City of Rome to express Italian congratulations on the reincorporation of Transylvania into Rumania, a Latin State like Italy.

VIENNA AFTER THE RIOTS

"You don't mean to say you are going to Vienna in times like these?" was the question I heard on every side in Bucharest; and even in Budapest, a few hours' run away, I was advised not to think of staying in the city over night; indeed, several people had heard that all hotels and restaurants were closed. Only the day before there had been no telephone or telegraphic communication with Vienna. But when I took a carriage (1,000 crowns, about 15 cents) uptown from the station, and saw the people going to their work as usual, and the stores, hotels and restaurants bravely carrying on business behind the barricades of planks which replaced the smashed plate glass, the city made on me the impression of a repentant child who has been breaking up his toys in a fit of passion and is now trying to be good again.

Many of the episodes of the rioting

of Dec. 1, 1921, were really childish and amusing. The mob of fifty or sixty persons, for instance, who broke into Sir William Goode's apartments in the Bristol lost no time in appropriating his personal effects; one man promptly disrobed in the bedroom, put on a suit of Sir William's, and did not bother to carry off his own. To be sure, one rioter did throw a telephone at Sir William's head, and another a pair of boots; nevertheless, he had the general impression, he said, that they were good-natured people, who were simply carried off their feet by excitement and poverty. And his diagnosis seems to be correct.

A parade of several thousand workingmen, demonstrating against the recent enormous rise in prices—during November most prices more than doubled, and some rose to four or five times those of last Summer, while wages and salaries lagged behind—was joined by agitators and Communists; and the patent, not to say blatant, luxury of the great cafes and shops gave them their text. It was a wild and terrific outburst, while it lasted; but the Government got the situation in hand after a few hours, and hundreds of the rioters were sent to jail. Meanwhile, the glass factories of Czechoslovakia were doing a thriving business, and the plate-glass insurance companies were in despair.

The casual visitor to Vienna and the thousands of buyers from more fortunate countries who spend weeks or months there do not come to know the real Vienna. I took a Viennese newspaper friend out to lunch in a leading restaurant. He looked carefully around the crowded room, and then said: "In the old days, there would have been only a few foreigners here; today, I do not see a single Viennese. In fact, in our largest and most fashionable cafes and restaurants, the only Viennese you will see are the waiters. These are all people like yourself, who have dollars or pounds or francs or lire—we are overrun with Italians, who

are buying everything we possess—or even Czechoslovak or Hungarian crowns, which are worth so much more than ours. We can no longer afford to go into a good restaurant. My salary—and I am well paid—is about the equivalent of \$12 a month; and most of the newspaper men of Vienna are getting about \$5.” He said this without bitterness; and a university professor who received me later in the day in an unheated room—and the Summer suit he wore was patently his only suit—had the same grave calm in discussing the desperate condition of the brain-workers of Vienna.

PLIGHT OF INTELLECTUALS

Vienna’s intellectuals see no hope, no way of escape; they have given up any expectation of aid. Something is being done by a local organization—the Verein der Wirtschaftsverbaende geistiger Arbeiter (Union of Economic Associations of Brain-Workers); but they stand aghast at present before the approaching withdrawal of the Government subsidies which have kept down the price of bread. A loaf of bread now costs 74 crowns in Vienna, thanks to this subsidy (which, by the way, is the chief cause of the tremendous Austrian deficit); it is true that 74 crowns is only about one cent in American currency; but to a Viennese brain-worker, getting, say, 1,000 crowns a day, it is one-thirteenth of his income for a loaf of bread a day. What proportion of our daily income does a loaf of bread make? How much do we think about it? Some of us have to look out for carfares; in Vienna, a city of magnificent distances, the trolley-fare is 30 crowns; 3 per cent. of such an income. My cabman charged me a thousand crowns for the trip to the station; a whole day’s income gone for one carriage ride! A pair of indifferent shoes—twelve or fifteen thousand crowns; a suit of clothes—seventy-five or a hundred thousand crowns. How does a professor or an editor or

a doctor or a lawyer feed and clothe his family?

Thanks to the Hoover organization and similar agencies, we are helping somewhat; but a recent school examination in a Vienna suburb showed that about 70 per cent. of the children are undernourished. And the people who are suffering are just those who made the charm of Vienna in the past—the artists, writers, musicians, teachers. Not long ago, they presented a dignified memorial in which they asked, not for money or for aid, but that they might somehow be given means to purchase clothes and food at cost price—and this memorial was signed by twenty-two members of the Vienna Academy of Sciences, the names of three or four of whom are well known to most of us!

Nor are the working people, who have been comparatively well off till the recent rise in prices, any less anxious about the outlook. Vienna is truly in a dreadful dilemma. Austria’s Finance Minister has announced that the bread subsidies will be abolished the first of the year, and the price of bread will rise to its natural level. The manufacturers, bankers, &c., have promised to carry the burden of the increased bread cost for their employes by a corresponding rise in wages; but this aid will be only for a few months, and will not affect the brain-workers who are dependent on their own efforts.

And what do these brain-workers ask of Americans? Everywhere I meet the same request: “If only your people would send us books, magazines, serious reviews—for your prices are such that we cannot afford to get even newspapers.” All over Central Europe college professors, newspaper men, cultivated people in general, would like to get our discarded weeklies and monthlies, our spare books. The Rockefeller Foundation is doing a splendid work in helping the medical schools of these countries to get books at the old rate of exchange. Much more could be

done if friends of learning could combine to help keep up culture over here—for it will perish without aid. The Vienna Academy of Sciences, for instance, has a number of valuable scientific and technical monographs on hand in manuscript, accepted for publication, which cannot be brought out, for the printers want 30,000 crowns for a sixteen-page brochure, in 700 copies, and are shortly going to raise prices 60 per cent.!

Every way you turn in Vienna, you meet a new problem. There is an excess of government employes; how could it be otherwise? Vienna was the headquarters for the Government of an empire of 50,000,000 people; when this empire was cut up, a large share of these employes left to join the administrations of the new States; but a larger number remained or came back from the new States, and were without employment. They could not be left to starve, so places

were found for them. As a result, the Ministry of Railways, which before the war had 728 officials in its building at Vienna for a railroad mileage of 23,000 kilometers (14,000 miles), now has over a thousand for a system of only 5,900 kilometers.

Every one now realizes that the day for such charity is over; that only strict economy and immense sacrifices can convince foreign bankers that the Austrian torso is a safe risk. The first step is being taken with the cancellation of the bread subsidy. Will the cheerful, kindly Viennese have not merely the strength of mind but the physical force necessary for the privations that must ensue? Or will the despair, of which we have already had one example, seize the whole population, and Vienna's stately temples come crashing down upon her children? Time presses. If aid does not arrive soon, a cataclysm must ensue like that of Russia—and it will strike us all.

INTERNATIONAL LABOR CONFERENCE

THE third session of the International Labor Conference, which opened on Oct. 25 and closed on Nov. 19, 1921, was declared by Lord Burnham, the President, to have been a triumphant success. The conference—created by the Treaty of Versailles—adopted seven international conventions and eight recommendations, as follows:

INTERNATIONAL CONVENTIONS

1. *Weekly Rest Day in Industry*—A general rule is prescribed of one day's rest in seven.
2. *White Lead in Painting*—The prohibition of the use of white lead in interior painting (with some few exceptions) and the regulation of its use in exterior painting, is laid down.
3. *Agricultural Workers*—The right of industrial combination is authorized.
4. *Agriculture and Children*—No child under 14 to be employed during compulsory school hours.
5. *Agricultural Workers' Compensation*—Compensation laws at present applying to industrial workers to be extended to agricultural workers.
6. *Juvenile Employment at Sea*—Persons under 18 years of age are not to be employed as trimmers and stokers in ships.
7. *Medical Examination of Young Persons*—Compulsory regular medical examination of

persons under 18 years of age employed in ships is to be instituted.

RECOMMENDATIONS

1. Women employed in agriculture shall be entitled to nine hours' rest, if possible consecutive.
2. Children under 14 to have ten hours' consecutive rest; persons between 14 and 18 to have nine hours' consecutive rest.
3. Maternity protection, in the form of a guarantee of a period of absence from work, before and after child-birth, to be extended to women agricultural workers.
4. Measures are recommended for the improvement of living in conditions of agricultural workers.
5. A series of measures for dealing with agricultural unemployment is suggested.
6. That social insurance laws applying to industrial workers should be extended to agricultural workers.
7. Governments are recommended to develop technical education as much for agricultural workers as for others.
8. For commercial establishments, a weekly rest day is recommended as a general rule.

A resolution was adopted asking the International Labor Office to "institute a special inquiry into the international aspect of the unemployment crisis, and the means of combating it."

SAVING FORTY THOUSAND ARMENIANS

BY DUDLEY S. NORTHCOTE

Late Administrator of Armenian Area, Refugee Camp, Nahr-Umar, Mesopotamia

One bright chapter in the tragic history of the passing of Armenia—How the British housed and fed thousands of refugees in Mesopotamia for three years—Sending them to the Caucasus

BEFORE the war the Armenian subjects of Turkey were for the most part domiciled in different parts of Asia Minor, some being in or near Constantinople, some in Cilicia, others around Erzerum, Bitlis, Diarbekr, &c. They were thus spread over the whole of Asia Minor, but at the same time they clustered more thickly in the eastern districts. One of their chief centres used to be the region of Lake Van, in the north-eastern corner of Turkey, not far from Persia, which lies due east of it, or from Russian Transcaucasia, which is due north. The City of Van is situated on the southern shores of the lake. The country all around is very high and mountainous.

Before the war the population of Van City was partly Turkish and partly Armenian. The villages south and east of the lake were either Kurdish or Armenian. In many cases half the inhabitants of a village would belong to the one, and the remainder to the other race. In the early part of 1915 the Russians invaded Northeastern Turkey, and soon succeeded in occupying Van. The Armenians promptly threw in their lot with the Russians, and were recognized by them as allies and co-belligerents. Battalions of Armenians were formed and placed in the Russian Army.

In 1917, after the revolution, the Russian armies in the Caucasus, as elsewhere, began to disintegrate and

melt away. Soon the Van Armenians found themselves facing the Turks alone. It must be remembered that in those days they were completely cut off from the Allies, as the British Army had not as yet captured Mosul, or even moved very far beyond Bagdad. The Armenians, however, did not surrender, but still attempted to hold their own against the Turks. In this they were greatly encouraged by the attitude of the Allies, and especially of the British Government. They were invited by the latter to hold out, and a picked force of officers and non-commissioned officers, known as the Dunster Force, was formed at Bagdad with a view to getting through to the Caucasus via Persia, and organizing there an army to be recruited from the Armenians and other pro-Ally elements that still existed in those regions. Unfortunately, however, the difficulties in the way were too great. A great part of the Dunster Force did not succeed in getting through to any part of the Caucasus, and none ever went to Van.

The Van Armenians were, however, joined by the Assyrians. These latter are a Semitic race. They possess a language and alphabet somewhat akin to Arabic. They are Christians, and inhabit some very difficult and mountainous country between Mosul and Van. They are divided into tribes, each with its local chief or *malik*, but all acknowledge the Patriarch, or *Mar Shimun*, as

their supreme national leader.* The Assyrians had also thrown in their lot with the Allies, and, after having made a gallant fight, had been driven northward into Van. There they joined hands with the Armenians.

Early in 1918 the Turkish regular army attacked these Armenian and Assyrian peasants. The Turks had artillery and highly trained and educated officers to lead them. The Armenians and Assyrians had none of these advantages. They were driven out of Van, and retreated due eastward, taking with them their wives and families, and such of their belongings as they could carry. They were soon driven over the frontier into Persia, whither the Turks followed them. They made a stand near a town called Dilman, and claim to have repulsed the Turks once there, but, on being attacked again, were compelled to retire southward.

During their retreat southward, they passed through the district around Lake Urmiah, a large lake lying in the northern corner of Persia, nearly due east of Lake Van. A large number of Christians used to live in this district, some of whom were Armenians, but most of whom were Assyrians, the descendants of some of the *Mar Shimun's* followers who had migrated from their native mountains to the fertile plain of Urmiah. The Turkish Army, in pursuit of the Van Armenians and mountain-er Assyrians, began to harass these Urmian Assyrians and to lay waste their villages, thus giving these unhappy people no other alternative than to join the other refugees in their retreat southward toward Mesopotamia.

BRITISH TO THE RESCUE

By this time the British Army had occupied the greater portion of Mesopotamia, as well as a large part of Persia. There were British officers and non-commissioned officers belonging to the Dunster Force at Ham-

adan. It was recognized that, as most of these refugees had been reduced to their sad plight by their faithfulness to the allied cause, something should be done to help them.

The refugees were met, therefore, near Hamadan by British officers and men. Preparations were made for the establishment of a large camp near Bakubah, a small town on the Dialah River, about thirty miles from Bagdad, with which it is connected by a railway constructed during the war. A series of marching posts was formed between Hamadan and Bakubah; at each was stationed a British officer, whose duty it was to purchase as much food as possible from the local Persians, ration successive parties of refugees and pass them on to the next post.

The first batches of refugees began to arrive at Bakubah in the first week of September, 1918. They came in parties of 1,000 or 2,000, partly by road and partly by train, from Kuraitu, all through September and the first half of October, until about 40,000 had been received in all. They were in a deplorable condition and had had to abandon many of their number along the road because of weakness and starvation. Many of them were suffering from dysentery, typhus and relapsing fever, and there was a certain amount of smallpox among the children. As each batch of refugees arrived, it was first of all placed in a segregation camp with barbed wire around it. Those who had infectious diseases were immediately sorted out and sent to hospitals. The remainder were disinfected thoroughly, their clothes being passed through a steam thrasher in order to kill all disease germs. They were then passed out of the segregation camp.

While a portion of the British personnel in the camp were seeing to the disinfection of the newly arrived refugees, the remainder were occupied in organizing them after their disinfection. The camp was placed in charge of a Brigadier General, assisted by a headquarters staff of six oth-

* "Mar" is the word for Lord or Saint, and "Shimun" means Simon or Peter. The Patriarch is thus called because in the eyes of the Assyrians he is St. Peter's successor on earth.

er officers. It was subdivided into three "areas," each area containing about 12,000 persons. The Armenians were placed in "A" area, the Urmian Assyrians in "B" area and the mountaineer Assyrians in "C" area. The areas were further subdivided into thirty-six sections, each containing, roughly, 1,250 persons.

Each area was, to begin with, placed under the command of a Major or Captain, and each section under a subaltern assisted by five British soldiers. Each section had fifty-one tents allotted to it. Of these one was used as a store tent for rations, &c., the remaining fifty as dwelling places for the refugees, who were thus accommodated at the rate of twenty-five per tent. In addition two long cookhouses, open on one side, were erected in each section, the walls being built of mud bricks, which are easily made in Mesopotamia, while the roof was constructed of poles and straw mats covered with an outer layer of mud.

CARING FOR THE REFUGEES

Deaths at first were enormously in excess of births; indeed, during the first six or eight months there were scarcely any births at all. Until about the middle of November there were forty or fifty deaths a day. A huge caldron of hot soup was prepared for each batch of refugees as it entered the camp, and on one occasion I remember an officer standing near the caldron was knocked right into it by the press of hungry people. In order to deal with the enormous percentage of sick cases it was found necessary to establish as many as three hospitals in the camp.

For a long time the refugees received their rations from the army, and a big ration dump, under the charge of an officer of the Supply and Transport Corps, was formed. During the existence of the camp both the amount of the ration and the cost varied slightly. Just before I left in July, 1921, the ration per head was as follows:

Daily: 1 pound flour, 2 ounces rice, 4 ounces fresh vegetables, 2 ounces dates, 2 pounds firewood.

Four times weekly: 4 ounces meat, 4 ounces dhal (a kind of grain). Small quantities of salt, tamarind, tea and sugar (1 ounce a week) were also issued. Children under 12 were given half rations. Milk was issued in small quantities to children between 18 months and 3 years.

When the camp was first formed the war had not ended. Four battalions (two and one-half Assyrian and one and one-half Armenian) were therefore raised from among the refugees, which were to have been used against the Turks. This brigade was quartered close to the camp. Very shortly after the armistice, however, all except one battalion of mountaineer Assyrians were disbanded. Discipline in the camp was maintained by a police force under a British officer.

Upon arrival the refugees were mostly in rags; thirteen yards of cheap cotton cloth per head, with a few needles and buttons and a little thread, were therefore issued. From time to time old army blankets and cast-off tunics were also distributed among them. Old army mess tins were given to those who had no cooking pots of their own.

For the first nine months the camp at Bakubah was entirely under the military, being under the direct command of the army headquarters at Bagdad. In May, 1919, however, it was transferred to the civil administration of Mesopotamia. The British personnel was greatly reduced, each of the three areas retaining but one, or at most two, British officers, with one or two soldiers. The places of the remainder were taken by refugees and each of the three different nationalities was permitted to elect a committee of its own, which settled small disputes among its own nationals.

DIFFICULTIES OF REPATRIATION

On the conclusion of the armistice it was hoped that it would be possible to send the refugees back to their own

country under reasonably safe conditions. For this reason no attempt was made to settle them down in Mesopotamia on any really permanent work. Month after month passed and still peace was not made with the Turks, who remained in unchallenged occupation of the lands from which the refugees came. At length, in the Summer of 1920, it was decided to concentrate the Assyrians around Mosul, with a view to their repatriation by land to Urmiah. Before each party left the camp it was supplied with arms and ammunition. During June and July considerable numbers of Assyrians left for Mosul.

On Aug. 11, 1920, the Arab rebellion suddenly spread to the Dialah Division, and by the night of Aug. 12 Bakubah had been occupied by the rebels, and the refugee camp, distant about three miles from the town, was surrounded on three sides by Arab snipers. At that time the situation in Mesopotamia was critical, and most of the troops were engaged with the main body of the rebels on the Euphrates. No troops could be spared for the Dialah until about Aug. 22, and for ten days the camp remained partially surrounded. All were placed on half rations. On five or six different occasions the refugees took the offensive against various parties of rebels, on each occasion driving them away with complete success. Both Assyrians and Armenians did some very good work on these occasions.

Troops were sent from Bagdad about Aug. 22 to deal with the Dialah Arabs, and the danger to the camp passed away. At the same time, however, orders were received that the camp at Bakubah was to be closed immediately. The remainder of the Assyrians were sent to Mosul, the Armenians to Nahr-Umar, about twenty-four miles upstream from Basrah, the port of Mesopotamia. It was then hoped that it would be at last possible to repatriate them, by sea, to their own republic in the Caucasus.

The transfer of the 12,000 or more

Armenians from Bakubah to Nahr-Umar was done as quickly as possible by rail and boat down the Tigris. By Sept. 7 the last party had arrived at Nahr-Umar and a new camp was constructed on lines similar to the one at Bakubah. In October, 1920, it was decided that it would be possible to repatriate the Armenians, but just as ships were on the verge of being chartered for this purpose news arrived of the collapse of the Armenian Republic in the Caucasus in front of the combined Turkish and Bolshevik assault. Repatriation, therefore, had again to be postponed.

It has now been finally decided to repatriate them to the new Soviet Armenian Republic, which has expressed its willingness to receive them. At the moment of writing (December, 1921) the refugees are once more leaving Mesopotamia, the first boatload of 3,000 being already en route to Batum.

During this long period of three years the bulk of the refugees remained unemployed, owing at first to the desire of the Government to send them home and not to settle them permanently in Mesopotamia, and later on on account of the difficulty of finding work for them. Nearly all the skilled men, however, such as carpenters, masons, &c., have been provided with work under different Government departments. Work of a temporary nature was found at different periods for some of the unskilled, who were employed at various times on the construction of a railway embankment, a wireless station and railway bridge near Bakubah camp, roads near Mosul and Bagdad and, finally, as platelayers and casual laborers under the Railway Directorate.

The cost of maintenance of the refugees in Mesopotamia has been borne directly by the British taxpayer. Nearly all the money has come through the War Office, though lately the Colonial Office has taken charge of the refugees. The total amount of money expended on the Armenian refugees up to the end of

October last was approximately £1,500,000. This figure does not include the amount spent on the Assyrians, who have cost a much larger sum.

The Armenian refugees are now being sent to the Soviet Republic in the Caucasus. The outlook for them, however, is not rosy, owing to the famine conditions that prevail throughout the Caucasus. It is to be hoped that these victims of the great war, who clung to the allied cause in face of the heavy odds so obstinately,

and who, in spite of our victory, have lost so much by their action, somehow or other will be able to ride over their present difficulties and eventually obtain peace and security.

[Since this article was written, the Soviet Government at Moscow has announced the absorption of all the Caucasus republics into Russia. This apparently means that Armenia—even the fragment of it that survived in the Caucasus—is entirely wiped out. These Armenian refugees, therefore, after having been saved by the British from the Turks, seem destined to become Russian subjects.—Editor.]

THE FATE OF MEMEL

MEMEL, the little strip of territory lying between Lithuania and East Prussia, and claimed both by Lithuania and Poland, was placed provisionally under the administration of the allied and associated powers by the Treaty of Versailles. A decision favorable to Lithuania was provided for in the plan proposed by M. Paul Hymans to settle the Polish-Lithuanian controversy over Vilna. According to this plan, Lithuania would have taken over Memel, but would have guaranteed to Poland the right of transit over the Memel territory. This plan, however, was rejected, and though the Vilna problem has now been provisionally settled by the plebiscite solution adopted by the Warsaw Diet, Memel still remains under the provisional régime.

What will become of Memel? Its population is naturally made up of German and Lithuanian elements, the Germans predominating. That the economic and business elements are definitely opposed to Memel's being assigned either to Poland or to Lithuania, and favor the setting up of the district as a Free State under the protection of an Entente power, is demonstrated by a memorandum recently issued by "the Economic Bodies and Associations in favor of the Independence of the Memelland," in which the following considerations are urged:

The overwhelming majority of the population of the Memelland takes the clear decision of Article 99 of the Versailles Treaty into account, by which Germany cedes the Memelland, and desires to preserve the popular character of the Memelland in an independent State. The development of the Memelland hitherto under the protection of the French occupying authorities has shown that the Memelland is financially and

economically perfectly well able to exist, and gives rich promise of development in future, if it retains the further protection of the Entente. We demand unanimously and resolutely:

1. To be consulted in negotiations concerning the Memelland.

2. The complete independence of the Memelland, after we have proved conclusively that it is fully capable of existing, financially and economically.

3. We therefore beg that the Memelland may immediately be declared a free State under the protection of an Entente State.

4. We do not wish to be annexed politically either to Lithuania or Poland. On the other hand, we emphasize our willingness to conclude economic treaties with all neighboring States. We are prepared to admit Germany, Lithuania, Latvia and Poland to the free and unhampered use of our railways, waterways, and the port of Memel, and to promote transit communication in every way.

5. For this purpose preparations are being made to establish a free port and a free zone with the necessary buildings and plant.

The industry, shipping, trade, agriculture, crafts, fishermen and workers of the Memelland definitely expect their wishes to be considered.

Signed on behalf of the Chamber of Commerce, Chamber of Agriculture, Chamber of Craftsmanship, Union of Fishermen's Associations of the Memelland, Employers' Association for Trade, Industry and Crafts, Agricultural Employers' Association, Federation of Free Trade Unions of the Memelland.

Among other arguments used are the following: (1) The allocation of Memel to Lithuania would mean the withdrawal of German trade and high import duties under Lithuanian tariff legislation. Both these eventualities would be a heavy blow to trade; (2) the danger of religious dissensions which would arise from assigning a Protestant community to a Catholic power; (3) the poor educational facilities of Poland and Lithuania and the lower living standard.

CIVIL STRIFE IN ITALY

BY CARLETON BEALS

Origin of Fascisti, and their bitter war on Communism—Real causes of failure of revolution a year ago—Peasant opposition and lack of raw materials—Bonomi Government built on factional discords—Elements of danger in the situation

MILAN may well boast of having more hurdy-gurdies than any other city in the world. Civil strife has not silenced them. A young cavalry officer from my pension was guiding me down a slot of a street near the Porta Venezia in that city when the rollicking, Old World tune of "Funiculi, Funicula," floated around a corner, and we came upon a smeary bambino dancing hilariously in the gutter. The officer pointed with his *bastone* at a small yellowed poster above the frowsy gray head of the woman turning the crank. I read:

"Proletariat: 300 of your comrades were killed in this street during the last fourteen months by Fascisti and Royal Guards."

While I was still marveling, my companion grasped my arm and shoved me unceremoniously through the doorway of an inky charcoal shop. A file of Fascisti with heavy loaded canes swung around the corner singing their quick-step, "Giovanezza, Giovanezza." We stood in a factory workers' section. As though a button had been pressed, the doors of the dark little wineshops and dingy clattering lunchrooms literally exploded Communists, who fell upon the Fascisti with fists, knives and revolvers. The conflict ebbed and flowed and swirled around the barrel organ.

Presently some one raised the cry of "Guardia Regia"! ("Royal Guards!") We herad a few sporadic last shots, the scurrying of many feet, and—like a tropic thunder-shower—the disturbance ended as unexpectedly as it had begun.

Poking my head cautiously out of the charcoal shop, I caught a glimpse of a laughing bambino crawling from under the organ, and a group of battered and disheveled Fascisti beating a retreat around the corner. The only casualty was a donkey that had been hitched to a wine-cart, over whose twitching carcass a runty, raccoon-faced Neapolitan wept copiously. As we passed on I heard the rollicking strains of "Funiculi, Funicula," and glancing back saw the bambino dancing hilariously in the gutter.

THE CIVIL WAR

During the ensuing week the Communists and Fascisti fought a series of pitched battles with casualties in this same Porta Venezia. A few days later occurred the fiendish bomb explosion in the Diana Theatre. The windows of our room overlooking the Porta puffed inward with a mighty roar that brought my wife out of a sound sleep and her feet to the floor. For two hours of indescribable confusion they were carrying out the dead and wounded. The same night the new million-lire Socialist headquarters were burned to the ground, the meeting place of the *sindicati* was invaded, and an attack made upon the Anarchist paper, *La Umanita Nuova*. From Florence, Bologna, Trieste, Pisa and other centres came accounts of equally terrible occurrences. This was in March.

When I went to Bologna several months later to make a first-hand investigation of the agrarian situation, I found myself in the midst of an

open Peasant-Fascisti land war, which has been more intense and sustained than the struggles in any other part of the country. The scenario writer who piloted me around that medieval university town, and through its endless miles of shadowy polychromic arcades, warned me: "If you see a fight start, or hear a revolver shot, dive for the nearest doorway or drop on your face. The blood of Romagna is hot." Twice I had occasion to follow his advice.

Most of this violence, during the last six months, has been unnecessarily provoked by the Fascisti, who are as doctrinaire in their way as the Communists. Many times since I have witnessed smaller frays, and in many a town have heard on clear nights the echo of marching feet across deserted piazzas and beneath medieval arches, and that blood-quickenning song, "Giovanezza," or the old Roman battle-cry, "Eja, eja, alala!" Most of the Fascisti are young men—I have seen the average age given as 24 and again as 23—and this propensity for night prowling and night violence is, in part, an unavoidable legacy of the war, of marches beneath the black windy sky and long wakeful hours in the star-lit trenches; in part, a primeval passion for the dark, the restless wakefulness of overwrought nerves, and the call that the mystery of warm south nights makes to every living creature.

HOW FASCISMO AROSE

The popular mind believes that the Fascisti smothered the general revolutionary movement of last year. In reality the idea of immediate revolution had been abandoned before the Fascisti intervention in internal affairs had passed beyond the stage of sporadic, unco-ordinated violence. The *Fasci di Combattimento* grew logically out of d'Annunzio's whirlwind campaign, which put Italy into the war on the side of the Allies. The program of these bodies was at first concerned with the recovery of Italia

Irredenta: Trieste, Istria, Fiume, Dalmatia and certain ports in Albania, and hence their members were and still are extreme nationalists. They formed the backbone of d'Annunzio's following in Fiume and have since undertaken that violent Italianization of the Slav population in Trieste and Istria which has aroused so much ill-feeling in Zagreb and Belgrade.

The active interest of the Fascisti in the domestic life of Italy was not aroused to any appreciable extent until the menace of revolutionary propaganda and the factory "occupations" threatened to weaken the Government's diplomatic attempts to gain possession of the Adriatic outposts. Fascisti violence, therefore, did not gain general headway until 1921; in fact, the apogee of fury was not reached until the elections in May.

The reality of the crisis the Fascisti encountered is unquestionable. A year ago Italy was in the grip of a revolutionary movement absolutely unique in tactic, but the results of which would doubtless have been, in time, as disastrous as the Bolshevik experiment. To all practical purposes the Government under the leadership of Signor Giolitti had abdicated all control over the industrial life of the nation. A new sovereignty—a Soviet sovereignty—was in process of being erected by the workers, who had occupied and barricaded the factories. The famous European correspondents were hastening south to witness the third experiment in proletarian dictatorship. Italy was already being ostracised by the world; the dollar was quoted at more than thirty lire; trade was collapsing; shipments were being frantically held up; tourists were fleeing to the frontiers.

The reasons for the failure of this revolutionary movement are now becoming more obvious. The arch-priests of the Third International heap the coals of blame upon the head of G. M. Serrati, one of the extreme leaders of the Socialist Party—a bearded, spectacled man who always reminds me of an emaciated Karl Marx. In so doing they reveal an

adolescent conception of Italian conditions quite at variance with their own emphasis upon immutable and impersonal economic determinism. The liberals thank Premier Giolitti for his statesmanlike restraint, and his refusal to aggravate the situation by the use of armed force; and certainly his pacific resistance now appears to have been fully justified, and his insight into the psychology of his people singularly acute. But the Socialist leaders know bitterly that other reasons explain the collapse of the proletarian experiment.

WHY REVOLUTION FAILED

Certain more deeply-rooted and enduring factors operated to make most of these human agents but mere bobbing corks on the stream of events. First of all, Italy is not a geographical, racial, political or industrial unit. Lombardy, Piedmont, Liguria and the Po Valley—Italia Settentrionale—is sharply divided from the rest of the country. Its characteristics, climate and products are those of Central Europe. Its people are born of the melting pot. Mariotti, half a century ago, termed its tall, blond, serene-eyed inhabitants "the Lombard wolves, or the Boeotians of Italy." Physically and temperamentally they constitute a distinct type.

In Northern Italy and Tuscany are to be found the manufactories. Milan is the industrial capital of the country—a *Handelstadt*—and in more ways than one, for the Germans and Swiss once played a large part in its development. The rest of Italy, from Rome south, including the island possessions, is pre-eminently agrarian and pastoral.

These conditions produce corresponding political phenomena. If Italy were chartered—red for the Socialists and Communists, yellow for the Catholic Party (*Partito Popolare*), and blue for the Constitutionals, Liberals and Conservatives—from Rome south the country would be quite bluish, with dots of yellow; to the north—except in the annexed areas—largely red and yellow, deep-

ening to almost sanguinary intensity in Milan.

Thus revolution in Italy would mean, not merely a dictatorship of the proletariat, but a dictatorship of the factory workers of Lombardy. The peasantry, even of Northern Italy, is more Catholic than Socialist. The one noteworthy exception is in the province of Emilia. But though the mass of the peasants there claim to be Socialist, their unique, co-operative "colonies" afford one of the most constructive and commendable examples of voluntary labor association in the world. Revolution would press heavily upon the Italian peasants, who comprise the largest industrial group and produce the bulk of the national wealth. The mass of the peasantry were and are against confiscation of property, and, in case revolution had been carried through, would sooner or later have opposed a solid front against the Milan dictatorship.

The next largest element in the Italian population is the small mercantile class. The ideal of the average poor man of Italy—if he cannot emigrate—is to rake together enough money to open a tiny shop which will gradually expand, while not heavily taxing mentality or energy, and which will permit of many hours of idle guitar-thrumming or easy garrulity. The small merchants and traders were not eager for revolution. They would have been the first to suffer, and would have been more harshly dislocated than any other social group. As one passes down the constricted streets of any city or town and glances into these kerosene-lighted, dusty cubbyholes, with their meagre stocks of fruit or stationery, where the whole family congregates, perhaps even sleeps, and the crawling babies clutch at the dresses and trousers of the customers as though to detain them for another five minutes of vivacious gossip—one vividly realizes the impenetrable silent opposition these individualistic units offered to the on-rolling phalanxes of revolution.

INDUSTRIAL NEEDS DECISIVE

The immediate factor, however, in averting revolution was the actual industrial situation, and the inevitable realization by the workers themselves that they could not run the factories. Oddly enough, the most active opposition to the new movement did not come from the wealthy industrial groups. Their attitude was: "Go ahead and run the factories." They knew that the acute shortage of coal and iron made this an impossibility. At the time of the "occupations," industrial conditions were fast approaching an impasse; the first wave of the industrial depression that has since smothered the world was making itself felt.

The workers—in actual possession of the factories—faced the fact that they could not continue operations without raw supplies, which, once the revolution had taken place—even had the great powers imposed no blockade—would have been even less obtainable. The workers' Government would have been without credit or purchasing power; industry, which has survived in Italy through the treaty stipulations regarding coal, would have collapsed. The ravenous city dwellers would have been forced into a military raping of agricultural products in order to survive.

Zinoviev and other Russian leaders have since argued in connection with their accusations of Serrati that the contagion of revolution would have quickly spread to France and England. But the Italian workers, scanning the horizon, saw no alacrity on the part of labor in those countries to follow their example. All this led to a prompt willingness to compromise on the *Controllo* act—a law that would have created advisory workers' committees in each factory, but was never put in force—hastened the secession of the Socialist Party from the Third International, and has since completely altered the party's tactics.

Perhaps, in any event, the Socialist Party lacked the coherence to carry through a revolutionary program.

The Socialist Party of Italy is not as powerful as its numbers indicate. Since the signing of the armistice the membership of the party has trebled. It became—and it still is—the numerically largest party in the Chamber. Much of this following is sentimental, not class-conscious—a jumbling together of the pacifist sentiment which caused the disastrous military strike of Caporetto, the vague discontent resulting from post-war adjustment, and above all from the precipitate demobilization which flung millions back into civil life almost simultaneously, with no attempt to insure their industrial assimilation. At the very beginning of the "occupations" revolutionary enthusiasm was dissipated in factional bickering.

DISINTEGRATION OF FASCISTI

This led to the first open split since 1911. At the Congress of Leghorn last March, when the twenty-one conditions of Moscow were rejected, the Communists, controlling about a third of the delegated vote, seceded to form a separate party. The Socialist Party has since been receding from its more rabid tactics. Meanwhile the advocates of social reform have consolidated their position. The social-reform wing is led by Filippo Turati, who advocates collaboration in the Cabinet with other parties. His speeches this last session have shown a consistent willingness to enter—perhaps head—a coalition Cabinet. He has argued that voting is collaboration with a bourgeoisie Government, that holding a seat in Parliament is collaboration, that the present tacit support of Premier Bonomi is collaboration; that, therefore, the logical course is "to enter the camp of realization—thus securing a little socialism—without sacrificing the party's independence of thought and action." In the recent Congress of Milan, which threatened to disrupt the party a second time, the collaborationists—*Frazione di Concentrazione*—controlled a third of the vote.

This faction largely dictated the

signing of a peace pact with the Fascisti. That pact has had disastrous effects upon the Fascisti organization. Many local members—especially in the agricultural districts, where the Socialists still exercise practically autonomous colony-control of the land—have refused to abide by the pact. This insubordination caused the resignation of Signor Mussolini, the head of the Fascisti movement. Mussolini is an interesting and volatile character, constantly running before his horse to market. For many years he was editor of *The Avanti*. At the time of the Crispi Government, which vigorously suppressed radical organizations, he fled with Serrati, Matteotti and other extremists to Switzerland. In 1914 he separated from the Socialists and founded *The Popolo d'Italia*, in the columns of which he supported d'Annunzio's efforts to force a declaration of war against Austria. He has resigned on several occasions from the head of the Fascisti, and his latest exploit is the fighting of a duel with one of the leading newspaper editors of Rome.

THE CHANGING SITUATION

The fate of the *Fasci* is still doubtful. Many organizations are desisting from active violence in accordance with the pact; others are disbanding entirely. Mussolini is endeavoring to transform them into a national political organization. But unless some new twist in national affairs occurs, the organization seems fated to disappear. It has no positive program, and its members lack the requisite experience and judgment for consistent political activity.

Far more significant in many respects is the disintegration threatening the *Partito Popolare*. This organization was originally founded as a result of the evangelical enunciation of the "*Rerum Novarum*," and is an offshoot of the vast Christian-Social movement of Ketteler, Manning, De Mun and Toniolo. Not until 1905 did it enter politics, since which time it has shown steady growth. At

present the Catholics occupy 110 seats in the Chamber, and form the second largest group.

The policy of the Popular Party has been tinged with mild nationalism, milder internationalism and vague social reform. It has concerned itself with the mitigation of class-antagonisms through a consistent emphasis upon the rights of the small proprietor—*il piccolo borghese*. The party has thus made its strongest appeal to the shopkeepers and small landowners of the Adriatic delta district. Of recent years much of its phenomenal growth has been due to an increasing emphasis upon material reforms. This has opened the doors to the more radical elements, and injected class virulence into the councils of the party. At the last two National Congresses the strength of the radical elements under the leadership of Miglioli has been growing. These Christian Socialist elements are largely responsible for the disowning of the leaders who have collaborated with Premier Bonomi, and have undoubtedly influenced the position of Turati. In addition, the Catholic *Confederazione Italiana dei Lavoratori* has shown an increasing readiness in times of crisis to follow the lead of the Socialist *Confederazione Generale del Lavoro*.

This general party disintegration is nothing new in Italian political life. For decades Signor Giolitti has manoeuvred to prevent the formation of clearly defined parties, finding the bickering factions of Parliament, all of which were invariably permeated with his adherents, far easier to manipulate. Though this is characteristic of Latin politics, it has led to a peculiarly vicious state of affairs, for in times of crisis any small but active group is enabled to exercise a power quite disproportionate to its actual numerical strength. The lack of consistent party control accounts for much of the governmental impotence in the fact of Socialist, Communist and Fascisti violence.

But the simplest things in Italian national life have always been at-

tained only by the most frenzied waste of emotional energy. Progress has always been measured by the reactions to such emotional debauches. Out of the general turbulence of Italian life emerge certain deeper tendencies. The reaction to war was revolution; the reaction to revolution, Fascisti violence; the reaction to Fascisti violence, a widespread desire for an ordered State. The present majority sentiment of the country clamors for internal peace, bureaucratic reform, rigid economy, and sound, heroic reconstruction.

The political elements for the attainment of these desiderata do not appear to be in existence. The present Bonomi Ministry is built upon the shifting sands of factional discord. Signor Bonomi is himself a clever political manipulator. He began his career as an extreme Socialist. He has been elected to various local offices by Socialist constituencies, and served on the Executive Committee of the Socialist Party. From 1908 to 1910 he was the editor of *The Avanti!* Though expelled from the party in 1911 along with the faction that collaborated with the Government at that time, his sympathies have never been completely alienated from the Socialists, by whom he is addressed familiarly by his first name, "Ivanoe," or "tu."

With the publication of the Dugoni letters and other documents, it has come to light that Premier Bonomi arrived at a secret understanding with certain Socialist leaders before accepting his post, especially with regard to the appointment of a general head of the Prefects who could be depended upon to suppress Fascisti violence. Practically every local Prefect has since been transferred or removed, and the shooting down of Fascisti by Royal Guards in Modena and elsewhere attests to the thorough carrying out of this agreement.

THE ARDITI DEL POPOLO

But the slenderness of the thread by which Signor Bonomi dangles in

the Premiership robs stringency of its dignity. These attacks upon the Fascisti seem ill-advised—a tickling of catastrophe. Fascisti violence was already sputtering to the socket, and the Fascisti organizations which were not already disintegrating were in process of transformation into local political bodies. The last months of 1921 have witnessed a vicious recrudescence of violence—sullenness on the part of the Fascisti and marked boldness on the part of the Communists. The *Arditi del Popolo*, composed of extreme Socialists, Communists and Catholics, and pledged to violent reprisals against the Fascisti, has grown rapidly in numbers and fervor. The rebellion of a company of Royal Guards when ordered to fire on Fascisti has not increased the Government's prestige; nor is the new amnesty to instigators of civil strife likely to appease either faction.

It is true, on the other hand, that the present Cabinet has seriously attempted to curtail expenditure. The budget estimates for 1921-22 have been cut 10,000,000,000 lire. Some tentative reforms have been effected in the bureaucracy, and some slight efforts made toward handling the unemployment crisis.

Until the international industrial and financial situation is clarified an ordered Italian State is impossible. The internal pacification of Italy has been of doubtful, slow growth—a part of the general pacification of Europe. The will to peace and order is in the hearts of the Italian people, but the material sinews are lacking.

"There is only one certainty in politics," said Machiavelli, with his eyes on the tumultuous city-States, "the uncertainty." On this, the six hundredth anniversary of the death of the "enduring" Dante and the sixtieth year of Italian unity, the uncertainty is still certain. As apt as when Horace walked down the *Via Sacra* are those words addressed to the Roman State:

O Ship, new waves will drive you back to sea. Bravely gain the port. O, what are

you doing? Do you not perceive that your sides are destitute of oars, and your mast wounded by the violent south wind, that your main-yards groan and your keel can scarcely withstand the impetus of the waves * * * ? Look to yourself if you do not wish to be the sport of winds.

Yet I shall always see that bambino dancing in the gutter, and the runty, raccoon-faced Neapolitan shedding tears over his donkey; there, at least, was the bed-rock of human nature; and as long as the hurdy-gurdies can

play, as long as in the midst of strife there shall be laughter without fear and tears without hate, one may be sure that the old, casual, cruel, keen-witted Italy that has survived 3,000 years of vicissitude is not dead, the port not lost, and that there must still be brave promise for a nation with sufficient resilience of spirit to give the modern world a Mazzini, a d'Annunzio, a Montessori and a Marconi.

GERMANY'S UNOFFICIAL KAISER: HUGO STINNES

BY BURNET HERSHEY

How the German Rockefeller rose to power during the European war, and the vast extent of his enterprises—Mines, factories, railways, shipping, the press, all falling beneath his sway—His political influence

IN Germany, one sees a one-man power—Hugo Stinnes. He has seized the chief German industries, he has spread the tentacles of his promoting genius to Austria; he is the new Kaiser of industry. The solution of the problem of the billions Germany will pay as war indemnity is believed to be in his hands. Small wonder then that to Stinnes is accorded that deference reserved formerly for the Kaiser. Even in the Reichstag, of which he is a member, he is pointed out in awe. "That is Stinnes," they whisper.

For three months I had the opportunity of studying Stinnes at first hand. During that time he was my next-door neighbor at the Hotel Adlon. The hotel is on the famous Unter den Linden, and the large Stinnes suite faces both this beautiful thoroughfare and the Pariser Platz, where, with its tri-color flying,

stands the French Embassy, of which Stinnes has an unobstructed view. Opening into a corridor are five or six doors leading from one cabinet room to another. This corridor is continually crowded. There is ever a restless surge about the place. Always, patiently and meekly, there waits to see Stinnes a host of business executives. Every time I walked through the corridor I passed them, silent and sitting apart. One thing they had in common. All guarded preciously a portfolio. These men are the Directors of the numerous and far-reaching companies owned and controlled by the mighty Stinnes. From near and far they travel to bring reports for the personal supervision of the financial genius who organized and combined these companies. Bank Presidents, shipping officials, Directors of coal and mining corporations, newspaper editors,

statesmen, politicians—all wait sometimes hours until summoned by the industrial imperator. They form the connecting links in the business chain forged by the master craftsman of commerce.

The Hotel Adlon practically constitutes the new imperial palace in Berlin. On the third floor Stinnes sits on the throne from which he rules Germany. His finger is on the pulse of Germany. At his word the mighty industrial machinery of the nation hums into motion. His office is a seismograph of the fluctuations of the country's commerce. The fall of the House of Hohenzollern brought the rise of the House of Stinnes. Under the cloak of the new republic Stinnes hides his sovereignty.

Stinnes is a veritable Sphinx. Journalists by the score have tried to interview him, and all have failed. Only through his monumental undertakings is he known. Living in such proximity to him as to be able to observe his daily movements, I felt I might tear down this wall of reticence. One morning I sought an interview. The rebuff I met was curt and decisive. I approached Stinnes on one of his hurried walks in the passage way.

"I am your neighbor," I explained, "and an American journalist. I would like your opinion, say, on repatriation."

His eyes snapped menacingly, and he retorted sharply: "I haven't given any interviews as yet, and I don't think I will begin now. Remember that!"

Often he occupied the next table to me in the dining salon. Sitting close by, I watched him eat. He eats gluttonously. As a host he is lavish. At mealtime he is continually surrounded by old friends, whom he entertains sumptuously. The finest of foods and the rarest wines are served. His guests are solely close business associates, and are not chosen for social position. Stinnes doesn't care a snap for society.

In all the time I saw Stinnes I never caught a smile on his stern

face. He is reticent and dour. Music, nevertheless, appeals to him, particularly Viennese melodies. Rudolph Stern, the Austrian virtuoso who plays nightly at the hotel, received many liberal tips from Stinnes. Because of his admirable playing this violinist was quite a favorite with the industrial giant. Hungarian rhapsodies and czardas are very popular with Stinnes, and he shows openly his appreciation.

Stinnes is of the American business type, alert and dynamic. Like the typical New Yorker, he is interminably on the go, always in a hurry. Often he rushes by so suddenly that one barely can identify him. Those with him invariably are hurrying to catch up with him. Whenever Stinnes shoots through the lobby, his passage evokes a hush of awe. Those who bow receive no acknowledgment. The only person whose greeting I ever saw Stinnes return was that of the aged proprietor of the hotel, Lorenz Adlon, a friend of the former Kaiser. Others he passes by. In vain photographers wait for him. He brushes them aside, and sweeps past so rapidly that he is gone before they realize it.

A GERMAN ROCKEFELLER

Stinnes is the champion war profiteer. He has made more money than any other German out of the war. Today he is the wealthiest man in Germany. His holdings exceed in value those even of Bertha Krupp or August Thyssen. As a commercial architect, his monetary companies are unrivaled. He is a trust engineer on a huge scale. The total capitalization of the corporations he has created runs into fabulous figures. The full range of his divers interests defies listing. His commercial appetite seems insatiable.

Revenue reports show that in 1904 Stinnes had to struggle along with an income of from 400,000 to 500,000 marks. In ten years, by 1914, he had accumulated a fortune of from twenty-five to thirty million marks.

Berlin bankers roughly estimate that his obvious fortune today totals more than a billion gold marks.

Stinnes is not wholly self-made. He started with a fortune, which by his financial and industrial genius he has multiplied into a staggering total. Born at Mulheim, in the Rhineland, on Feb. 12, 1870, he inherited an estate which bore upon its soil a forest, and beneath it coal deposits. The report has gone abroad that Stinnes is of Jewish parentage. This is not the case. His father was of pure Teutonic stock, and his mother (nee Coupienne) was a descendant of the French Huguenots. Hugo Stinnes received his early training in a commercial school. He then became an employe in the copper and iron plant of a wealthy family friend. At 19 he entered the Berlin School of Mines, which he left in a short time to enter the employ of his paternal grandfather. When his father died Hugo was not yet 20. He inherited huge coal interests. To learn the business thoroughly, he mined coal himself. He soon became what is known as a "coal baron." Today he controls at least sixty mines. In 1913 the capacity of his mines was 10 per cent. of the entire German production, and Germany at that time ranked third in coal production. Stinnes demonstrated that coal could be profitably exported to England, a remarkable feat. In entering into the field of inland shipping he was following family tradition, for his grandfather, Matthias Stinnes, was one of the first to correct the bed of the Rhine to make it navigable for vessels of greater draught.

Although at the outbreak of the great war he was a figure of growing industrial prominence, he had not achieved a position of national power. Not tall, but bulky, intensely dark, with black beard and mustache, bushy eyebrows, a twisted nose, piercing eyes and a manner harsh and despotic, his looks were never prepossessing. He cared little for dress. In and out of season he wore and still wears a black derby having a

high crown and a peculiarly narrow brim. The Stinnes derby is famous.

STINNES'S RISE TO POWER

It was during the war that Stinnes first showed signs of mastery. He was one of the chief figures in Supreme War Councils. Ludendorff and Hindenburg asked his opinions. The Kaiser took his advice. Stinnes issued orders. As the principal contributor of war materials his aid was sorely needed. He practically controlled the sinews of the war. The Krupps were only a popular legend. It was Stinnes who produced the war munitions and supplies that flowed steadily to the front.

Stinnes played a large part in the spoliation of Belgium and France. It was his plan to wreck these countries industrially during German occupancy. French steel mills and coal mines were the targets for his attack. Competing with his, they had always been a thorn in his side. When he found them at his mercy, he carried on wholesale destruction in the name of war. He set out to damage them irreparably, so that he could snatch up markets while the French were struggling to re-establish their disorganized industries. The hand of Stinnes demolished the industries of Northern France. At that time Germany was still courting victory, and the probability of defeat had not been considered; so Stinnes carried out his deliberate scheme for the annihilation of French industrial life. In 1918, the French Minister of Finance, Klotz, showed that the wanton ruin in the wake of German hordes was not purely a war measure, but the insidious work of an industrial schemer.

With the war lost, Stinnes has recourse to a new stratagem. France having displayed remarkable recuperative powers, the German business lord, for whom business considerations dominate sentiment, desired to strike an industrial alliance. He has succeeded in stimulating the foreign trade of Germany. His advocacy of rapprochement of an economic basis has gained support in French financial

and commercial circles. Stinnes succeeded in convincing Frenchmen that the future of France and Germany as well as that of Continental Europe rests upon an economic understanding between the two great powers. He seeks an economic alliance with France because it ranks second in iron and steel manufacture. The economic agreement on reparations recently concluded between France and Germany at Wiesbaden was the opening wedge of the Stinnes plan.

Insight into the methods of Stinnes employed in the construction of his elaborate commercial edifice reveals him as an industrial buccaneer. In the creation of his vast enterprises he has used every device for coercing rivals and transforming opposing firms into subsidiaries. The history of his rise is a story of commercial expediency. Every move he made was to insure and safeguard his interests and to give him a tighter grip in some particular field. His growth was methodical and systematic. Not by accident, but by steady achievement, he rose to the powerful commanding position he holds in the world.

The tale of what Stinnes did in Belgium is illuminating. It gives an idea of how he accomplishes his ends. Without accepting any risk, Stinnes made enormous profits out of Belgium during the war. He obtained a concession on the industries of Belgium with the understanding that he would pay for them upon annexation. For four years he exploited Belgian industry. Since the country was not acquired by Germany he has paid nothing for the rich privilege of collecting profits from the sale of the products of Belgian factories.

When informed of the inevitable loss of the war, Stinnes took precaution to safeguard his fortune. Ludendorff warned him of the ultimate outcome, and Stinnes immediately made huge investments in Dutch companies. He carried off a good part of his wealth and placed it for safekeeping in solid institutions in Holland. Just as the ex-Kaiser has sought refuge in Holland, so Stinnes

has stored a sufficient fortune there, where it is out of the hands of both the German Revenue Office and the Allies.

STEP BY STEP

There is nothing haphazard about the rise of this captain of industry. One enterprise was used as a stepping stone to another, and it was pressure of circumstances that caused him to reach out into other fields. Today his holdings present such a conglomeration that it seems strange to find one man having interests which seem so unrelated. But the Stinnes system of procedure made them all necessary, and so, today, we find that coke, coal, gas, electricity, steel, forests, factories, ships, harbors, shipbuilding plants, hotels, newspapers, &c., are all integral parts of the Stinnes machine.

The first great combination that Stinnes effected was the merger of the Rhenish-Westphalian Electric Works, the Gelsenkirchen Mining Company, the Rodder Coal Mines and the Deutsch-Luxemburg Mining Company. In forming this industrial union Stinnes worked on the basis of consolidating the producers and consumers. He dovetailed natural resources like coal and iron with gas and electrical utilities in the district surrounding Essen. This was his initial achievement, and he planned it long before the war. But it was the pressure of war that brought about the amalgamation.

Through the Rhenish-Westphalian Electric Company Stinnes got control of the subsidiary street railway systems. This corporation also is a holding company for the metallurgic factories. During the war Stinnes was able to monopolize the manufacture of chemical and war material. It was no easy task, but he reconciled the antagonistic factors. After the war he maintained the commanding position he had won in this field.

Recognizing the importance of raw materials and intermediate products,

Stinnes acquired interest in plants for the distillation of lignite or brown coal, taking over the Riebeck-Halle Corporation. Next he realized that the development of the by-products of coke and fuel was as necessary as the development of power machinery, and that it was imperative to control both to insure a powerful monopoly. In this way he stretched his holdings into the field of dynamo and water manufacture. He purchased the bankrupt Wittenauer Imperial Works and then gradually acquired other companies in order to strengthen his hold on this industry, his final acquisition being the great Loeb Works.

Stinnes then got interested in rail and water transportation. Many large railway systems now operate under his orders, and inland waterways shipping is under his control. John D. Rockefeller used rebates to defeat competition. Stinnes found rebates not enough. He must own the conveyances. To circumvent the differential freight rates he organized syndicates. He created not only the German Water Transportation Company, but also various branch firms in Russia, England, Italy and the smaller countries. When war narrowed his sphere of operation, he cleverly liquidated his foreign holdings without incurring losses. His primary object was to acquire cargo space for his manufactures, and in his characteristic way he soon established a monopoly of German inland waterways shipping.

His next step was to acquire control of the ship construction steel works in the Emden district. His efforts were not restricted to inland shipping. Ocean transportation was also a requisite, so, acting in conjunction with the late Henry Ballin, he acquired the Hapag, Waerman and East African Lines. Cheaper ocean freight rates and direct routes to markets were his chief considerations. He added more lines, and, as in other industries, he became a commanding figure in the marine world. German river and coastwise traffic is almost completely under his supervision.

Like the Kaiser of other days, Stinnes has his eyes turned to the East. The Berlin-to-Bagdad railway was a dream which wrecked William II.'s reign. Yet Stinnes may succeed where the Emperor failed. His commercial navy sails the Rhine, the Oder, the Elbe and down the Danube, giving him unchecked egress to the East. Stinnes also has his vision of tapping the East for its treasures, and under the guise of an international trader he has set out to win the coveted prize.

RUTHLESS FINANCE

Herr Stinnes's method of financing is simple. He merely uses other people's capital. He harnesses outside money to his financial chariot. When others are large investors, big dividends fail to be declared. This is shown in his management of the Rhenish-Westphalian Corporation, and the Hamburger Trading and Transportation Company. Extra dividends accruing are used in enlarging the scope and operation of the firms, and incidentally go toward increasing the strength of the controlling genius.

When Germany was obliged under the Versailles Treaty to deliver 300,000 tons of coal monthly, this burden, together with the labor shortage, crippled Germany's fuel supply. High as the price of coal was, Stinnes decided that it was not high enough. Being the coal king, he tied up fuel delivery and throttled the output of the mines. A desperate coal shortage resulted and the price mounted. As coal monopolist, Stinnes collected a royal tribute. Involved in projects requiring fuel and motive power, Stinnes is turning his attention to studying the oil and oil-motive problems. His aim is to gain control of inventions which will revolutionize the use of crude oils for energy and so enable him to win mastery in this undeveloped field.

When Stinnes discovered that he had become—overnight, so to speak—a national figure, he realized that he would have to take over the press for

the purpose of wielding public opinion in his own interests. Some newspapers overstepped what he considered the bounds of prudence, and to prevent further unpleasantness he simply bought them up. Dr. Georg Gothein, a colleague of Stinnes and a former German Minister, is authority for the statement in the *Neue Freie Presse* of April 1, 1921, that Stinnes was purchasing one daily after another and that there was no checking his newspaper acquisitions. To date, they number more than seventy. He owns the powerful *Deutsche Allgemeine Zeitung*, which, during the days of the empire, was the semi-official organ. He controls the *Reuter Bureau*, the *Associated Press of Germany*. Even *Simplicissimus*, the national humorous magazine, is his. Stinnes is the Lord Northcliffe of Germany in his domination of the public prints. Ownership of newspapers led the way to ownership of paper mills. He has acquired forests for wood pulp, and, since he also controls the production of cellulose, the numerous Stinnes newspapers will never be short of print paper. Stinnes runs his newspapers like his other industries. His object is not editorship, nor is it the raising of German journalism to a higher plane. All he wants is to be certain of creating favorable opinion for his activities.

Joint ownership and control of public utilities by cities, communities and private capital is one of the pioneer achievements of Stinnes in Germany. His plan is to have communities become partners in public enterprises—a co-operative municipal ownership scheme. For himself, however, Stinnes reserves a definite power of management, thus insuring profit for himself under the guise of public benefaction.

Stinnes's project to assist the German people to fulfill the reparation penalties throws further light on his resourcefulness. He preaches increased production as the panacea for rebuilding Germany's economic structure. He advocates labor sharing by stock ownership. To the working-

men he appears to be heralding a beneficent gospel.

Stinnes, however, does not overlook the fact that increased production in his mines and factories means more profits for him. He argues for the raising of the number of working

(© International)

HUGO STINNES

Germany's most powerful capitalist, who controls many of the nation's richest mines and largest newspapers

hours, which would fit in nicely with his plans. The few shares he would allow his workmen certainly would repay him in increased production and as insurance against strikes. Stinnes dominates the Volkspartei, or People's Party, and, ironically enough, poses as the spokesman of the laboring class.

HIS POWER DISPLAYED

At the Spa conference Stinnes thrust himself forward as the supreme master of Germany's destiny. He invited the Allies to submit to him personally the reparation proposals. Acting unofficially, for he was not a member of the body, he undertook to procure Germany's approval providing the terms were acceptable to him. The allied representatives were astonished at his role of leadership. They were also surprised at the strange deference shown Stinnes by the German entourage.

Again, at the recent London conference, Stinnes displayed his power. Stresemann acted solely under Stinnes's orders. Stinnes planned to reject the allied proposals. In France the feeling was that Stinnes desired occupation of the Ruhr Valley. A Socialist newspaper, the *Schwäbische Tagwacht* of Stuttgart, wrote:

Stinnes and his friends had calculated that within the first few months after the occupation of the Ruhr district the price of coal would rise so enormously as to become prohibitive for the rest of Germany. During these first few months it was intended to accelerate production of coal to the utmost until gigantic stores had been accumulated. This, Stinnes and his friends believe, could be accomplished under the protection of French troops, whereupon wages

would be decreased and working hours increased.

If he desired, Stinnes could come to the aid of Germany as Rothschild did in France after the war of 1870. Stinnes, however, does not plan to be the savior of Germany. He is not a popular figure, like certain American millionaires. His system is not the amassing of wealth, but rather the persistent elaboration of a definite industrial evolution.

Since peace has been formally declared between the United States and Germany, Stinnes has indicated a desire to visit America. His object is to conclude an industrial alliance and to establish markets here. In Germany he is Chairman of the boards of twenty-one corporations and a member of twenty-six others. His commercial prestige will win a ready hearing with our captains of industry.

Wherever you turn in Germany you come upon Stinnes. For the most part you come into contact with his projects. Everywhere, it seems, nothing can be done without him. Continually you buy his products, ride on his transportation systems, enter his banks. At every turn Stinnes greets you—and collects tribute. Already there are murmurings against the might of this industrial giant. He is trying to replace the well-known trade mark, "Made in Germany," with "Made by Stinnes." How secure is his hold on the new throne of Germany? Rumblings predicating volcanic disturbance are heard, and whether the dynasty of the House of Stinnes will live through the inevitable eruption time alone can tell.

SOLVING GERMANY'S HOUSE PROBLEM

BY JULIAN PIERCE

Remarkable results of a new plan that gives building contracts to co-operative associations of workers—Houses built by willing labor for one-third to one-half less than under old methods

GERMANY is undertaking to solve the housing shortage by the "socialization" of the housing industry, applied under different plans. The methods employed are worthy of study by Americans in search of a cure for the present prohibitive cost of housing construction. In the United States the term "socialization" usually implies direct Government construction and management. In the current phraseology of the German building industry the term has a significance quite different. Although it is used to describe the principle of the plans now being worked out, those who use it reject partly or entirely municipalization and nationalization.

Under one German plan the Federal Government, States and municipalities award housing and other contracts to co-operative construction societies composed of the workers themselves. The societies are organized as public utility associations. In some instances they are set up by the municipal governments; in others they are organized by the mental and manual workers in the building industry.

This plan is endorsed by the National Union of Building Workers and by the organized labor movement generally. It was adopted as a substitute for direct nationalization and municipalization of the housing industry, which was opposed on the ground that hitherto Government management, whether national, State or municipal, has compared unfavor-

ably in cost and efficiency with work done under private contract.

A. Ellinger, a member of the Federal Economic Council and of the Executive Committee of the Federation of Building Workers, gives this description of the Building Workers' plan for the elimination of direct governmental or municipal work while still retaining the "socialization" principle:

They asked that the Government and municipal authorities should create large building concerns, organized and conducted on business principles and in great measure independent of national or municipal parliaments; concerns which would be carried on, not by officials with assured pensions, but by efficient building experts engaged by private contract. These concerns must be organized essentially in the same way as a capitalistic building concern; with this difference, that the large scale concern would belong, not to a private person, but to the State or municipality. Consequently, the surplus value created by the workers would benefit, not an individual capitalist or a capitalistic association, but the community organized as a State or municipality.

In order to give the workers an interest in their output, the union proposed that Government and municipal building concerns should not engage building workers individually and employ them at hourly wages, but that they should hand over complete building contracts to associations, or co-operative societies of building workers, to be carried out at a fixed price.

The principle of the workers' co-operative building societies has been applied on municipal work in Nuremberg, Pforzheim, and other cities, with satisfactory results.

Nuremberg was the first city to

dispense with direct day labor on municipal work. E. Schrag, the Municipal Building Director, declares that with direct employment in excavation the output was so unsatisfactory and the work so costly that a new system was imperative. The employes actually worked but a fraction of the time for which they were paid, and the more industrious workers were derided by their less industrious fellows. As an experiment, the Nuremberg authorities organized a co-operative society of municipal workers and gave the next municipal job to it at fixed prices. According to Mr. Schrag, the result of the experiment was excellent:

This society has fulfilled the expectations it raised. Building operations have been started in which work is once more normally carried on with that industry which modern conditions require, and in which, up to the present, after six months' working, no stoppage or dispute has taken place.

GREAT SAVING IN COST

Other municipal operations were turned over to co-operative societies with equally satisfactory results. A comparison of costs incurred by the City of Nuremberg in its building operations under various direct employment and contract systems gives the following figures:

Job No. 1—Under direct employment by city officials this job cost 100,800 marks. If it had been done by the municipal workers' co-operative society the saving would have been 44,600 marks.

Job No. 2—The private contractor's tender was 64,000 marks. The co-operative society did the work for 54,000 marks.

Job No. 3—The private contractor's tender was 234,000 marks. The co-operative society completed the work for 195,000 marks.

In canal construction the co-operative societies did the work for from 25 to 33 per cent. less than the private contractor's bids.

Of the three methods of doing municipal work—private contract, direct municipal employment, or contracts awarded to workers' co-operative societies—Mr. Schrag concludes that direct city employment is the costliest method of construction, private contract the next costliest and

contracts to co-operative societies the cheapest. Work done by contractors, he finds, is from 15 to 20 per cent. more costly than the work done by co-operative societies. Direct employment on time wages has cost as much as 50 per cent. more. In Pforzheim private contractors charged the city from 37 to 42 marks per cubic foot of walling for the erection of municipal dwellings. The building workers' co-operative societies performed the work for 27 marks and made a profit of 10 marks per meter.

Since the Nuremberg and Pforzheim experiments, municipal and Government contracts are being awarded to building workers' societies on a large scale. Today there are over 100 such societies; some were set up by the municipal authorities, others were organized by the building industry workers.

When organized by the building industry workers the capital of the co-operative building associations is subscribed by the workers themselves and draws a maximum interest of 5 per cent. Surplus profits are placed in reserve funds and used in part for unemployment and relief work. The net surplus constitutes a social fund for the good of the community, and, in the case of dissolution of the society, must be applied to objects of public utility. The co-operative building societies have materially decreased the cost of housing and are liberally encouraged by both Government and municipal authorities.

MARTIN WAGNER'S PLAN

The second "socialization" plan is different. It is called the "Wagner plan," after its author, Martin Wagner, the Municipal Architect of Greater Berlin. Like the plan just described, it recognizes that the high cost of construction is the basic reason for the housing shortage. The high cost of housing, in turn, is rooted in the low labor output of the building industry workers. The crucial question, therefore, is, How can the labor output be increased?

It was Mr. Wagner's belief—a belief later adopted by the higher grade municipal architects—that an increase in labor output cannot be obtained under private enterprise because the worker has no interest in the yield of his labor and consequently takes little interest in his work. Under the old military state the German Government combined with the employers to compel the workers to speed up. But the military State is history; and giving the workers an interest in the yield of their labor is now the only way to increase the output. From his study of the problem Mr. Wagner concluded that private enterprise in the building industry should be rejected and a "socialized" industry developed in such a way that 100 per cent. of the workers' industrial energy would be mobilized.

Mr. Wagner originally outlined his plan before the Voluntary Socialization Commission convened in the Spring of 1919 by Mr. Beuster, President of the Housing Association of Greater Berlin. The commission was composed of experts in the building industry — Government representatives, architects, representatives from the Federal Ministry of Labor, &c. The plan, slightly modified, was later adopted by a congress of the higher grade municipal architects as the proper basis for the socialization of the building industry.

The Builders' Lodge Socialized Building Association of Berlin is the original Wagner plan association. It has a capital of 1,000,000 marks, furnished by the Marches Homesteads Building Society for Greater Berlin and the Province of Brandenburg. The Marches Homestead is itself an organization of the Prussian Government, the Province of Brandenburg and the municipality of Greater Berlin. The Berlin Building Lodge is therefore a State and municipal undertaking. It is entirely independent of the national, State, provincial and municipal parliaments. It is jointly administered by representatives of the State, the Province and the muni-

cipality—those who supplied the capital—and by representatives of the skilled and unskilled workers in the building trades—those who supply the labor.

The administration consists of the managers, a Board of Control and a Board of Directors. The managers are subject to the Board of Control. Three-fourths of the members of the Board of Control are selected by the capital-supplying organizations and one-fourth by the representatives of the workers—the labor-supplying organizations. The actual operations are conducted by the Board of Directors, consisting of the managers and representatives of the workers. The Board of Directors has complete control of building operations—employment, wages, labor regulations, contracts and so forth. The shareholders' meetings are the supreme authority, with power to discharge the Board of Control.

From one-tenth to one-twentieth of the net profits are set aside as a reserve fund. Out of the balance, not exceeding 5 per cent. interest is paid on the capital, 5 per cent. is devoted to the welfare fund, 20 per cent. may, in the discretion of the association, be applied to improvements, and the remainder is divided among all the employees, from managers to clerks and laborers, in proportion to their yearly salaries or wages.

SUCCESS OF NEW METHODS

Building associations on the Berlin plan have been organized in Stettin and Frankfort-on-Main. In Stettin the capital was furnished by the Public Utility Company for Workmen's Homes, neither the State nor the municipality participating as capital subscribers. In Frankfort the trade unions took an active part in the organization of the Wagner association and subscribed liberally to the capital. The local union of the National Union of Building Workers assessed its members one day's wages (42 marks) and purchased capital stock with the proceeds. In other parts of

Germany negotiations are on foot for the organization of similar large "socialized" building concerns.

In the Ruhr Valley housing construction for the coal miners is being financed by a coal tax. Otto Hue, former chief executive for the German Mine Workers' Federation, now the federation's representative on the national coal administration, thus describes the Ruhr Valley housing scheme:

In addition to the ordinary coal production tax of 20 per cent. of the ton price, the mines pay the Government a housing tax of 6 marks per ton of extracted coal, to be used as a subsidy for the construction of workmen's houses. The Minister of Finance transfers the money to the treasury of our Labor Construction Associations. These associations, which are organized locally and regionally, are co-operative joint-stock building societies of the building trades unions and are under trade-union management. The public powers usually contribute subsidies of so much per cubic meter of construction.

These building societies are much like the English "building guilds." The most significant results of their wide development are the elimination of middlemen in the building industry and the reduction of construction costs. The co-operative labor construction societies are one of the domains in which German trade union initiative has been most fruitful since the revolution of 1918.

The Federation of Socialized Building Concerns is also doing effective work in promoting the new "socialized" building industry program.

In 1920 the National Union of Building Workers appropriated 5,000,000 marks to forward the "socialization" movement. As a result of this financial stimulus ten building industry trade unions and a number of local socialized building societies organized the federation. The constitution of the federation defines its objects as the "establishment of public utility, co-operative and other building concerns not carried on for profit." This object is more definitely explained by a A. Ellinger, a member of the Executive Council of the Federation of Building Workers:

By establishing the Federation of Socialized Building Concerns, the unions of manual and brain workers in the building industry, as representatives of the whole body of building workers in Germany, have set themselves to carry out the socialization of the building industry in Germany. * * * If the Federal Government, States, and municipalities also do their part to promote this young community movement according to their powers, the peaceful organic transformation of the present capitalistic building industry into a socialized industry is only a question of time.

It is interesting to note that the building workers' "socialization" plans, as well as the Wagner plan, reject government and municipal ownership and operation of the building industry and substitute therefor self-governing service corporations largely independent of State parliaments and municipal councils.

FLEMISH VS. FRENCH IN BELGIUM

To the Editor of Current History:

Under the caption "Belgium's Two Languages," in your January issue, you state that Flemish is the second national language. Permit me to state that the census of 1910, as reported in the Statesman's Year Book for 1921, does not confirm your statement. On pages 690-691 Belgium's population is placed at 7,423,784, of whom 3,220,662 spoke Flemish only, 2,833,334 spoke French only, and 871,288 spoke both

French and Flemish—the Flemish outnumbering the French by several hundred thousands.

THOMAS J. BRYANT.

New York, Jan. 2, 1922.

[The phrase quoted was used with no implication of inferiority as regards distribution; it was meant simply to convey the fact that, besides French—hitherto the official language—Belgium had another language, viz., Flemish, spoken predominantly in the regions described.—EDITOR.]

A glimpse of the beautiful new town of St. Quentin, rebuilt by a railroad company, with the artistic well in the foreground and some of the men who are doing the work

THE RESURRECTION OF DEVASTATED FRANCE

BY JACOB L. CRANE JR.
City Plan Engineer, Cambridge, Mass.

Progress in the vital problem of rebuilding the homes of five million people—Struggle for life on farms torn by shells and denuded of orchards—Ternier's thousands of new houses

NOT even five years of war could break the miraculous courage of the French people in the war zone. During the three desolate years since the war ended they have carried on bravely in the bitter struggle for life. The enemy, poverty, has been pitiless in this last battle, fought silently on the barren land which had been farms, and in the jobless towns of wrecked factories. Impelled by love for their own home land, a love which seemed not to diminish even though the homes themselves were destroyed, these four million stricken people, inarticulate and patient, hung on in desperation and hope.

But even with all their courage

they could not have persisted in the struggle except for the measure of agricultural and industrial rehabilitation accomplished during the first two years of peace. Nor could they have existed except for the temporary housing, meagre as it was, erected by the Government to shelter the most helpless ones.

The vast problem facing the French Government when the war ended may be estimated from the official figures issued by the Ministry of Reconstruction. In 1914 there were 4,700,000 inhabitants in the invaded zone. During the war 2,700,000 abandoned their homes to enter the army or to become refugees in other parts of

France, leaving in the devastated region less than half the former population—a dismal, poverty-stricken remnant. When the war was over, the first task of the Government was to review and tabulate the damage done to factories, farms, and homes.

In the industrial field practically every factory was partially dismantled or entirely destroyed. The coal mines had been the particular object of destruction, for the Germans realized that on them the economic vitality of France depended in a large measure. All told, 220 mining operations were rendered useless. They were flooded, dynamited, filled with waste materials, or set on fire. Their rehabilitation has been especially difficult and slow. The French estimate that these mines cannot be brought up to pre-war production before 1930, and on this calculation base their claim to German coal during the intervening years. In other important industries of the invaded district the degree of destruction ranged from 60 to 100 per cent. For example, the important sulphuric acid industry was 80 per cent. damaged, the sugar mills 90 per cent., iron foundries 80 per cent., and the textile mills were from 60 to 100 per cent. destroyed. Five thousand factories had been laid waste, and the entire vital productive capacity of the region reduced to a pitifully low figure.

Likewise agriculturally the north of France was reduced to a shadow of its normal productiveness. Four and a half million acres of land lay barren when the smoke cleared away—torn by shell holes, some so big that they had to be fenced off to keep stock from falling in; traversed by trenches, filled with shell, grenades, and all sorts of war refuse; wild and noxious weeds had sprung up, and in other places the soil was washed away. Orchards had been cut, barns destroyed, and equipment confiscated or wrecked. The land had to be leveled, cleaned thoroughly, and reworked foot by foot; thousands of farm buildings had to be rebuilt, tens

of thousands of pieces of equipment replaced.

GRAPPLING WITH THE PROBLEM

The great problem of reconstruction in this country of desolation had two main aspects. In the first place all the people of France are dependent in an important degree upon the production of the farms, factories and coal mines of the North. It was necessary to repair the damage as rapidly as possible, for the welfare of all France. And secondly, a million people who had remained in the invaded territory were destitute because there was no work and no income for them, and, moreover, some 2,500,000 refugees were clamoring to return to their home communities, and indeed they did return long before there was cleared land or factory work to support them. Most pitiful of all, neither those who had remained nor the returned refugees had houses to live in. In a hundred towns not a single building remained standing. Here and there staggered gaunt walls, but for the most part only a dismal level of heaped brick and debris lined the partially cleared streets. All told, 2,600 towns were damaged, 300,000 houses were destroyed and 360,000 injured! Even if the farms and factories could be re-established, how could the people be provided with houses? How could these twenty-six hundred damaged towns and villages be rebuilt and their social life restored so that the workers and their families could again take up something approaching a normal life?

The problems were gigantic, but they were attacked boldly. For the restoration of Northern France the nation voted to pay all costs out of the State Treasury, which could be reimbursed with the German reparation payments when they were collected. Unfortunately, voting the money did not produce it. The funds which could be diverted to reconstruction from all possible sources were still meagre, and it was necessary to decide which of the reconstruction demands should first be met. A primary

consideration was that the people had to have work, and the country needed badly the products of their work; housing could wait. So railroad, industrial and agricultural reconstruction got the first money. Work was begun before the armistice was signed, on the heels of the northward-moving armies. And by the end of 1920 4,000,000 acres of farm land out of 4,500,000 which had been laid waste were cleared, and 3,000,000 acres placed again under cultivation. The industrial restoration was almost as rapid, so that now the industries, except for the coal mines, are back to 80 per cent. of their pre-war capacity. Four thousand establishments have been reconstructed. Thirty-five hundred miles of destroyed railroad are back in operation. Five hundred bridges, twelve tunnels, nearly six hundred stations and warehouses, and two thousand miles of telegraph were rebuilt on the railroad lines. Four hundred miles of canals have been repaired.

All this, an enterprise comparable in magnitude only to the war itself, took a vast amount of money, and when the rehabilitation had reached this point, the available funds were exhausted. Government support ceased, and the whole reconstruction

project slumped. This slump came before any house construction had been undertaken, except for a few temporary houses. In the meantime 1,500,000 refugees had returned. Four-fifths of the pre-war population is now there, employed in producing farm and factory goods which the rest of France needs critically. At least a third of them, a million people, are up to this moment living in dismal hovels built of refuse brick, of cast-off ammunition cases, or even of canvas. A number of towns are still a dead-level of wreckage where the houses stood, the little orchards are only shattered stumps, and the former gardens are humpy, weedy fields with scraps of shell and all sorts of war debris sticking out of the torn earth. No wonder the psychology of depression is taking hold of some of these people. Tourists going north from Paris may not guess the conditions in the completely destroyed places if they see only Rheims, Chateau-Thierry, and similar towns and do not see Saint Quentin, Tergnier, Montdidier, Albert and a few dozen others where the wreckage of the old towns has not even been cleared away.

Tergnier, France, as the war left it, a heap of pulverized ruins. The miracle of reconstruction accomplished near these ruins is shown on the opposite page

PROGRESS IN HOUSE BUILDING

Various emergency schemes have been proposed to remedy the deplorable living conditions in the unrestored communities, and although some of them have been tried out, none has proved generally successful. The intense provincialism or patriotism of the Frenchman will not let him use German-built houses offered in lieu of deferred reparation payments.*. The newly legalized co-operative building plan is not readily taken up by the individualist of North France, although an appreciable number of houses, both temporary and permanent, have been

constructed by co-operative societies.†. Municipal rebuilding is slow and uncertain in these disorganized communities. Only a few cities have been able to float bond issues and to start to build houses. Of course, the national reparations law provides that each property owner who rebuilds shall be paid the full cost of replacement at present prices. But most of the property holders have been waiting three years and still no reparation payment is forthcoming. It is no wonder that in face of these adversities a few people are selling their land and reparation rights for less than pre-war values and emigrating. The remarkable thing is that all but these few are hanging on with such loyal persistence for the sake of being in their own country.

But there are decidedly hopeful elements in the picture of slow domestic and social reconstruction. One of these is the movement to make the

*An Amiens correspondent of the Paris Temps wrote on Dec. 12, 1921, that the whole Somme Valley was in passionate debate over the Wiesbaden agreement, under which the French Government had agreed to accept reparation in kind from Germany, including the services of German labor associations in rebuilding French homes. When it came to the actual test of letting German workmen reconstruct Chaulnes and a dozen other towns in that neighborhood, French sentiment could not bear it. The Government had taken a popular vote on the subject last Summer, and 86 per cent. of the people had cast their ballots in favor of the plan, but in December, when the Prefect again put it to a vote, only 49 per cent. favored it. The other 51 per cent. decided against co-operating on equal terms with the men who three years ago were ravishing this same countryside. The Minister of Devastated Regions is thus compelled to find a new method for handling the reconstruction work in that part of Picardy.—EDITOR.

†The Chamber of Deputies last November authorized the Union of Building Societies to float a loan of 750,000,000 francs (normally \$150,000,000) for building 100,000 cheap dwellings before 1930. The Government guarantees the interest on the loan. Most of the buildings will be erected in the devastated regions, but about one-third will be put up in villages and towns near Paris.—EDITOR.

Panorama of Tergnier as it looks today, a wholly new town, built with all modern comforts, on farm land near the wreck of the old town

rebuilt towns better places to live in than they were before the war. The most important factor in this tendency is the national law passed in 1919 making city planning compulsory for every devastated town, as well as for every town of 10,000 population or over throughout France. This means that the resurrected communities will perforce have more efficient street and block plans, better sanitation, more and better parks and playgrounds, finer situations for public buildings, and, at the same time, that the old picturesque beauty will be preserved and enhanced by definite planning with this in view, instead of the old haphazard method of growth or rebuilding. An organization known as *La Renaissance des Cites* is helping the devastated towns in their planning under the new law. These public-spirited men and women, supported in their work by contributions from America, have had a new city plan drawn for Rheims, have held a competition for an ideal system of sanitation for Chauny, have helped in the plans for hundreds of other communities, and are now financing and directing the entire reconstruction of

Pinon as an ideal community after which other towns everywhere in France may be modeled.

EFFICIENT AMERICAN AID

As usual in places of distress, the Quakers are doing invaluable work. They have provided a few houses for the most needy, and have equipped many poverty-stricken households with furniture and utensils for re-beginning life. Similarly, the American Committee for Devastated France is doing significant work in social rehabilitation, directed and largely carried out by American women on the ground in the war zone. This committee, also with American funds, is supplying agricultural and domestic equipment, building school-houses, organizing play centres and health centres, repairing churches, and assisting French organizations for rehabilitation. Their work, while chiefly in the Department of the Aisne, will reach far beyond the time and place of its origin, for it is introducing into French social organization factors which will affect the future life of all France. Nothing is

A corner of Tergnier, showing both temporary quarters and permanent new homes. Seven people are living in the shack at the right, waiting for the houses to be completed

being forced upon the people; the service of the committee is offered, and where it is eagerly taken up, as it has been without important exception, facilities are offered for going ahead with the work. The committee has established a tourist bureau at Laon, in the geographic centre of the devastated area, where visitors are conducted to the sights of reconstruction and rehabilitation.

One of the more unusual projects developed by the French is also being carried out here in the Department of the Aisne. The Marquise de Noailles, whose chateau near Blérincourt was the centre of five little villages, all of which were destroyed, has undertaken to reconstruct them entirely. There is consequently a rush to claim former residence in these towns, and an enthusiastic co-operative organization has been developed for helping in the work. American students of engineering, architecture and landscape architecture have also been working during the past few Summers, under the direction of the French Government, at Rheims, Soissons and other places.

Most of this work, however, is the

planning of reconstruction. The actual building of homes on a large scale has been done so far only by industries and by the Railway of the North. At Dourges a coal company has built an efficient, pleasant workmen's town, and in scattered communities over Northern France groups of houses built by employers are beginning to appear. But the projects of the Northern Railway are the largest rehousing enterprises now under construction. This railway, although one of the shortest in point of mileage, is the largest in France in the amount of traffic carried. It was rebuilt directly after the armistice, but it was of little use until it had arranged for adequate housing for its workmen at the places where the main shops were located. So far the company has completed or has under construction 11,000 houses in twenty-six communities. The largest project is at Tergnier, where nearly 1,500 houses are being built. The old town, a level of ruins, has been left behind, and in an open field a fine new village is now nearly completed. Carefully planned houses, lots and streets, public water supply and sewerage,

Tasteful homes in the resurrected French village of Dourges, built by a coal company for its employes near the ruins left by German shells

baths, gardens and playgrounds, a little park, cleanliness and airiness, distinguish this new town from the old type of French community. And its possibilities for picturesque beauty, far from being destroyed, are at many points increased by the carefully studied planning. The company is renting these houses so cheaply that it will receive less than 3 per cent. net on its investment. The work had to be done; it is inspiring to see it being done so well.

To be sure, these projects are merely the start of the tremendous task of permanent rehousing, which has lagged so far behind the rehabilitation of farms and industries. The Disarmament Conference in Washington may have an important bear-

ing on this work, if it makes it possible for France to divert battleship appropriations to the building of homes. The significant thing about the work done so far is its tendency toward better standards in French domestic and community life. The people who lived here before the war can never have their old places back, but their children will live in communities far better than the old ones. And slowly, but with the certainty of slow-growing things, the old air of peace and charm is returning to these stricken towns; even the foliage and greenery are reviving. In a hundred years the marks of the war will be gone, and from the destruction will have risen a new and more livable France.

A DEFENSE OF RUMANIA

BY I. I. SCHIOPUL

Formerly Deputy to the Rumanian National Assembly

To the Editor of Current History:

Your magazine for December prints a letter from a Bulgarian contributor, who attacks Rumania on several questions, and very unjustly, I think. He forgets that for many long years Rumania has been the asylum for all Bulgarians fleeing from political persecution in their own country. Many Bulgarian statesmen have earned their living in Rumania, and many of Bulgaria's best known scholars received their education at the University of Bucharest.

The "Ode to the Rumanian Army," quoted by your correspondent, together with the marginal note saying that "at Orhany

the Rumanian soldiers fled at the firing of a single rifle," would seem to imply that Rumanian soldiers are cowards. If this is the intention, it would be a mean insult to the memory of those many thousands of Rumanian soldiers who, in 1878, lost their lives at Plevna, in Bulgaria, fighting against the Turks for the freedom of your correspondent's country. The memory of those Rumanian dead, buried in Bulgarian soil, ought to be sacred to all, especially to the Bulgarian. Hatred has never been a good adviser.

340 West Fifty-seventh Street, New York, Dec. 12, 1921.

THE CENTENARY OF AMPERE

THE centenary of the memorable discoveries of the French physicist, André Marie Ampère (born 1775—died 1836), was celebrated at the Sorbonne in Paris on Nov. 25, 1921. Before President Millerand, M. Le Troquer, Minister of Public works; M. Paul Appell, rector of the University of Paris, and a large assemblage of the most eminent scientific men of France, an address of eulogy of the great exponent of the

science of electrodynamics was delivered by M. Daniel Berthelot. Other addresses were delivered, notably by M. Appell, who said in part:

It is fitting that our country, lover of truth and humanity, should celebrate men such as Ampère, who have created a whole new world in the field of science, who have opened a new era in the development of humanity, and whose glory contributes to the prestige of France among the civilized nations of the earth.

THE NEW DEMOCRACIES OF EUROPE

BY RAYMOND LESLIE BUELL

Procter Fellow of Politics, Graduate College, Princeton University

A comparative study of four new Constitutions of European States, revealing a significant effort to avoid faults of the American system—Germany, Poland, Czechoslovakia and Jugoslavia

A SHORT time ago the President of a great American university declared publicly that the United States had contributed a form of government to the world which every European nation—wearied with continental inventions—would soon be forced to adopt; but little will be found in the Constitutions adopted by European countries since the war to justify this patriotic prophecy. Although Germany, Poland, Czechoslovakia and Jugoslavia have adopted Constitutions, none of them follows the American type of Presidential government.

It is true that three out of the four nations to adopt new governments have provided themselves with a President. In Germany he is elected by the people; in Poland and Czechoslovakia by legislative bodies. The type, however, is not American, but French. None of these Chief Executives possesses the vast powers of President Harding; on the contrary, they exercise little more authority than Alexandre Millerand of France. Ministers must countersign the acts of these Presidents and of the King in Jugoslavia. The Ministers, in turn, are responsible to the legislative body, which may at any time drive them out of office by an adverse vote. The President or the King, therefore, can do nothing without the assent of a Cabinet intimately controlled by a Parliament which represents the people. The legislative power supervises the execution of laws as a board of

directors controls the management of a corporation.

These new Constitutions are democratic not only because they assure the constant control of the Government by popular means, but also because they provide for the widest possible suffrage. In Germany every man and woman over the age of 20 may vote. In Poland and Jugoslavia the age is 21. In Czechoslovakia every citizen may vote for members of the Chamber of Deputies at the age of 21 and for the Senate at the age of 26. In all these countries, with the possible exception of Jugoslavia, women are given the right to vote. In all provision is made for the representation of minorities, or proportional representation.

"GROUP" REPRESENTATION

Guild Socialists and others who advocate that geographic representation be displaced by the representation of interests, or "functions," will find little to encourage them in these new Constitutions. All four Governments have retained the geographic district as the basis of representation, and have not adopted that of the trade union, professional group, or Chamber of Commerce. None of these Governments has provided itself with a legislative body composed of industrial interests per se. The German National Council is composed of representatives of States; the Polish Senate, of Voyevodships, or local self-

governing districts; the Czech Senate, of the same constituencies as the Chamber of Deputies, the Senate having only one-half the number of members possessed by the lower house.

An effort was made in the German Constituent Assembly to secure the adoption of a professional Parliament (*Kammer der Arbeit*), composed of representatives of producers, whether employers or employed. This Parliament was to constitute a second chamber, sitting side by side with a political chamber. It was proposed to give it power to veto all legislation, whatever its nature, passed by the political assembly. Its veto could be overcome only by the passage by the political Parliament of the measure under discussion in three successive years. The professional Parliament was to have power to invoke the referendum against a law thus passed by the political Parliament; it was also competent to initiate legislation of a purely economic character.

The advocates of this professional second chamber were not strong enough, however, to overcome the objections raised against it. As a result, the theory of functional representation was recognized only partially by the creation of a National Economic Council, composed of representatives of employers and workers. But the powers of this body are largely advisory. The Government must submit to this council draft laws of an economic nature. The council has the right itself to propose such laws, and even to introduce them to the Reichstag against the will of the Government. But the council is given no legislative power.

The Polish Constitution also provides for a system of "economic self-government for the individual fields of economic life." A Supreme Economic Council, composed of representatives of the Chambers of Agriculture, Commerce, Industry, &c., and of labor organizations, in co-operation with the Government authorities, is to direct the economic life of the country, as limited by law. Provision for an Economic Council is also made

in the Constitution of Yugoslavia. These functional bodies fall far short of the ideal of this type of reformers. Doubtless the objections to a Government of interests are well founded, as even such a critic of our present system as Graham Wallas, in "Our Social Heritage," has been forced to point out. Yet it is to be regretted that none of the new Governments of Europe—with the exception, possibly, of Soviet Russia—has attempted to try the experiment. The value and the shortcomings of such an innovation cannot be determined by reason alone. Experience is a better teacher than logic.

LOWER HOUSE RULE

In fact, the whole idea of a second chamber, equal in strength to the lower body, has found little favor in the countries which have adopted new forms of government. Yugoslavia goes to the extent of making no constitutional provision for a Senate at all. In each of the other three Governments, in Germany, Poland and Czechoslovakia, though provision is made for a Senate, this body does not represent social or material privilege, but geographic divisions, such as the State of Voevodship. Neither does it possess the same legislative power as the lower chamber.

According to the Constitution of Czechoslovakia, the Senate may introduce legislation equally with the Chamber, except in the case of army and budget bills. But by a three-fifths majority the Chamber may pass legislation of which the Senate does not approve. In Poland every bill passed by the Sejm (or lower house) must be submitted to the Senate for consideration. If within thirty days the Senate offers no objection to the bill, it becomes law. If it amends the bill, it is returned to the Sejm. The Constitution is silent in regard to cases where the Sejm refuses to accept the amendments of the Senate, but it is implied that the Sejm's decision in such a case is supreme. In Germany,

the National Council (Reichsrat) has the right to veto laws passed by the lower house (Reichstag). If the latter body refuses to acquiesce, the President of the republic within three months may refer the bill to a referendum, by which the people will decide on the adoption of the disputed legislation. But if the President does not order such a referendum, and if the Reichstag overrides the protest of the National Council by a two-thirds majority, the bill becomes law.

The use of the referendum itself in the German Constitution is another democratic provision. It may be used to recall the President before the expiration of his seven-year term of office. It may be invoked in such a case by a two-thirds vote of the Reichstag. Also the President may refer any law passed by the Reichstag to the people within one month. Furthermore, a referendum may be invoked if one-tenth of the qualified voters petition for the enactment of a specified law. However, if the Reichstag enacts the law desired, the referendum does not take place. Finally, in cases of deadlocks between the National Council and the Reichstag, the President may order the issue referred to the people. The referendum is also authorized in the Czechoslovak Constitution.

The referendum is an advance over the special election which is supposed to occur under a parliamentary government to decide an issue between the Prime Minister and the Legislative Assembly. In the case of a special election a thousand considerations will lead a voter to cast his lot for or against the Government in power—he may even lose sight of the issue upon which the election is held. But in the case of the referendum, the voter has only to pass on the merits of the particular issue. Consequently, the popular will is more intelligently determined, and Parliament does not run the risk of being unseated. At the same time there is no danger that a Ministry opposed to the majority in the Reichstag will be maintained in power, for the Constitution declares

that the Chancellor and other Ministers must resign as soon as the Reichstag—and not the Federal Council—withholds its confidence.

STANDING COMMITTEES

The theory of popular control, under a parliamentary form of government, is usually contradicted by the complete freedom of a Ministry when Parliament is not in session. For example, in France Parliament cannot be in session more than five months out of the year if the President wishes to dissolve it. During the intervals, the Government Ministers carry on the activities of government subject to no parliamentary supervision. To overcome this defect, three new Constitutions have adopted a device of far-reaching importance. This is the standing parliamentary committee, which continues in session when Parliament is adjourned, to survey the activities of the Government. In Czechoslovakia, this committee is known as the Committee of Twenty-four, composed of sixteen members chosen by the Chamber of Deputies and eight by the Senate, from their own membership. This committee has power to act on all matters of immediate urgency. It is competent to deal with all matters falling within the legislative and administrative powers of Parliament, except electing the President, amending the Constitution, levying permanent taxes or increasing military duties, and declaring war.

In Germany a provision is also made for a similar permanent committee, known as the Committee for Outside Affairs. Its activity is to be carried on "outside of the session and after the close of the election period until the reconvention of the new Reichstag."

The problem of racial minorities in these new States carved out of a Balkanized Europe has been difficult to solve. The Allies forced minority treaties on most of these States, guaranteeing a certain number of civil rights to minorities who otherwise would probably be oppressed.

But it is natural to believe that the most effective way of giving minorities a share in government and keeping them content would be by a Federal system of government in which local units would be sovereign in matters of local interest. But, very strangely, neither Poland, nor Czechoslovakia nor Yugoslavia has adopted the Federal form of government. In fact, the legislative powers of Bohemia, Moravia and Silesia have been suppressed by the Constitution of Czechoslovakia. Special laws, however, will organize local self-governing bodies.

MEASURE OF DECENTRALIZATION

All these States are attempting to avoid the evils of an over-centralized "unitary" Government, not by Federalism, but by the system of decentralization. Poland is divided up into *Voyevodships*, districts, and urban and rural communes. Each of these units may elect a council, and administration is placed in the hands of locally elected boards upon which representatives of the Central Government also sit. Through Superior Self-Government boards, the central authorities supervise all local activities.

In Yugoslavia a very strong minority favored a Federal type of government. This would have permitted the entrance of Bulgaria, who asked such a union; but that idea was defeated. Instead, an elaborate system of regionalism was devised. These regions are to be defined by law according to economic and geographic delimitations. A region cannot contain more than 800,000 inhabitants. A High Governor (*Joupan*), appointed by the King, is placed at the head of each region and administers its affairs. At the same time a Regional Assembly is to have jurisdiction over such subjects as the finances, budget, public works, economic development, public health, social welfare and communication systems of the region. The High Governor has the right to veto any decision of the self-governing bodies which do

not accord with the Constitution or national laws. His veto is subject to review by the Council of State, the supreme administrative tribunal of the kingdom. By such a system, long advocated in France, the advantages of self-government may possibly be reconciled with the necessity of national unity—which is of supreme importance to these new nations because of disruptive racial elements within and bitterly hostile foes without.

Likewise in Germany, federalism is giving way to a more unified State. The Imperial German Empire was marked by the hegemony of Prussia, which provided the Emperor with a King and Chancellor, and which controlled seventeen out of the fifty-eight votes in the Bundesrat, or Federal Council—a number sufficient to defeat any constitutional amendment or any law in regard to the army, navy, or taxation. However, Bismarck realized the great difficulty of uniting States which differed so widely in interests as did Prussia and Bavaria. Consequently, he purchased the acquiescence of the twenty-four other States of the Federation by leaving to them many powers of government which in other federalisms are vested in the central authorities. The Federal Government was one strictly of delegated powers. Even the execution of Federal laws was left, for the most part, in the hands of State officers, an experiment which was tried in America under the Articles of Confederation, and which ignominiously failed. Furthermore, the German States were permitted to maintain their own army contingents, as well as diplomatic legations abroad. Prussian hegemony and State localism were the earmarks of the old empire.

PRUSSIA'S LOSS OF POWER

All this has now been changed. First, Prussia has lost, or soon will lose, its former influence. Professor Schucking declared recently in the National Assembly that "until 1867 Prussia has been against the empire;

from 1867 to 1918 Prussia has been above the empire; henceforth the empire must be above Prussia." The new German Constitution paves the way toward this end, first, by permitting the territorial dismemberment of Prussia. The boundary of any State may now be modified by a simple Government law. In case Prussia or any other State objects to the loss of part of its territory, the Reichstag may even then disregard its wishes, provided at least a majority of the total number of voters in the territory in question votes to join another State. By virtue of this authority, seven of the republics of Central Germany have united to form the new State of Thuringia, while Coburg has voted to join Bavaria. It is entirely possible that in the future Prussia also may lose part of its territory by such a means.

Prussia has also lost in power because the Emperor of Germany, who was Emperor of Prussia, has been dethroned; and because the great powers of the old Bundesrat, or Federal Council, which Prussia controlled, have been destroyed. Consequently, Germany has become, and in the future is likely still more to become, a nation representing the whole German people. But at the same time Prussia will long exercise a legitimate preponderance over the republic, inasmuch as four-sevenths of the total population of Germany is within her borders.

As for destroying localism generally, the German Constitution has also done much. The army has been placed under more strict Federal control. The Federal Government has secured the right to administer State railways, posts and telegraphs. In April, 1920, the Government bought up the State roads and placed them under Federal control. It has also obtained control over State finances, for the States now must live virtually on subsidies from Berlin. The administration of Federal laws is still vested generally in State officials, but in cases where the Federal Government has the exclusive right of legis-

lation it may provide for the execution of its laws by Federal agents. There can be no question of secession, because the Constitution declares that Government law transcends State law, and that if a State does not carry out the duties laid down by the Constitution or laws, "the President of the republic may hold it to such fulfillment with the aid of armed power."

JUDICIAL AND OTHER FEATURES

Of the other features of these Constitutions deserving of notice, one of the most important is the provision for administrative courts. These courts, which try cases in which State authorities are alleged to have overstepped their power, are established in Germany, Poland, Czechoslovakia and Yugoslavia.

Social legislation, especially in regard to agrarian reform, constitutes a considerable part of the Constitutions of Yugoslavia and Germany. Provisions of this nature were not to be found in the old Constitutions, which, for the most part, limited themselves to questions of political rather than social science.

Religion has also proved in some States a difficult problem to solve. Only one of these States has set up an official religion. In Poland, Roman Catholicism occupies "the chief position among enfranchised religions"; but religious freedom is guaranteed within the limits of public order and morality. While only one State has thus set up a State religion, two States have disestablished such a relationship. In Germany no State Church is recognized, but religious organizations are given complete independence in administering their affairs. They also have the right to tax their members. The former obligation of the Government to share in the expenses of the established Church is no longer recognized. (Likewise in Russia the Church has been officially separated from the State.)

In Czechoslovakia and Yugoslavia, both Greek Orthodox and Roman

Catholic members are found in large numbers. A State Church was therefore impossible. In Yugoslavia the Constitution provides for religious liberty. Faiths obliged to communicate with a religious head outside of the State are permitted to do so, subject to the limitations of law. The Constitution does not prevent the financial support of religions by the State, but it does say that in case such support is given, it must be divided between the different recognized faiths according to the number of their members and needs. In Czechoslovakia the Constitution provides for the equality of all religions before the law and for religious freedom. No one can be compelled to participate in a religious ceremony.

Such are the outstanding features of the new Constitutions of Europe. They are the product of an earnest effort to provide these countries with

a form of government that will embody the best in political thought and that will reflect the popular will. None of these new Constitutions follows the American system of government. This should indeed be a subject of concern, because the rejection of the presidential type must be due to some deep-laid objections to the manner in which it operates. In formulating their own systems, the new democracies of Europe have called attention unconsciously to the defects of our Federal system: the inefficiency and irresponsibility of those who enforce the law; the deadlocks between executive and legislative power; the overshadowing influence of the Senate. These characteristics deserve the serious attention of every American who does not wish his country to lag behind the nations of Europe in providing itself with a system of government worthy of the people it is designed to represent.

FRANCE AND THE ARMENIANS

To the Editor of Current History:

Anent the treaty recently concluded between the French Government and the Turkish Nationalists, and the consequent withdrawal of the French army of occupation from Cilicia, Premier Briand, in a letter addressed to the President of the Armenian National Delegation in Paris, states that Armenians fleeing from Cilicia are given permission by the French to take refuge temporarily in Syria, the British having refused to admit them into Palestine, Egypt, or Cyprus.

This the Premier cites as evidence of French generosity. Ostensibly he ignores the fact that this same Franco-Turkish Treaty, made in violation of the inter-allied agreement, left the Armenians no

alternative between subjection to their ancient persecutors (which meant probable annihilation) and flight from their homeland.

Cable messages from Cilicia state that the passport stations are surrounded by immense crowds of Armenian men, women and children. These refugees have either abandoned their property or sold it for a song, and are waiting in the open, day after day, in the hope of securing permission to leave. The scenes of panic and misery recall the tragic days during the deportations of 1915.

BULGARIA'S TREACHERY

BY CAPTAIN G. GORDON-SMITH

To the Editor of Current History:

In addition to those contributors in preceding numbers of CURRENT HISTORY, Bulgaria, in your issue of December last, is fortunate enough to find no fewer than three more defenders. These writers persist in denying Bulgaria's treachery, both in 1913 and 1915. One of them declares that in 1915 "Bulgaria was a free and independent State, free to act as she chose." This is an argument which nobody can gainsay, provided always that Bulgaria is willing to abide by the consequences of her choice. What is irritating is that, having taken the German side and opposed the Allies and the United States, she expects that, because she was beaten, a sponge will be passed over the slate and that we will forget and forgive. She should remember that the first condition of the absolution of sins is sincere repentance.

Of this repentance I can discover no trace. On the contrary, all that one finds is a denial of guilt. Bulgaria tries to pose as a victim, not a criminal. One of your Bulgarian contributors declares that in 1913 "Bulgaria was at war with her former allies, trying to make them observe the sanctity of their treaties." When one reads such a statement in connection with Bulgaria one asks one's self if one is dreaming.

I know nothing more extraordinary in the domain of history than the continual attempts made by Bulgarian writers to deny the treachery of that State, both in 1913 and 1915. If any doubt whatever existed as to the guilt of Bulgarian statesmen, this denial might be comprehensible. But as this can be proved up to the hilt by means of official documents, most of them Bulgarian, these continual denials by Bulgarian contributors make it almost a duty to lay at least the list of these documents before its readers and once for all destroy the legend of Bulgaria's innocence.

As it is impossible in the short space at my disposal to cite these documents in extenso, I will have to give them in the shortest possible summary and indicate their source, so that any students interested

in this phase of European history can consult the documents themselves.

The point of departure is naturally the treaties of friendship and alliance entered into between the Balkan States. That between Serbia and Bulgaria was signed at Sofia on Feb. 29, 1912, and was completed by a secret annexe, signed the same day, a military convention (signed at Varna, June 19, 1912,) and two agreements between the General Staffs (signed at Sofia, Sept. 15, 1912).

The first mentioned treaty and secret annexe provided for the division of the Turkish territory captured in case of victory. It further provided that in case of disagreement *both powers would accept the arbitration of the Czar of Russia.*

A second treaty, in similar terms, was signed at Sofia on May 12, 1912, by Bulgaria and Greece and completed by a military convention signed at Sofia Sept. 22, 1912.

After the victory over Turkey, Bulgaria began putting forward exaggerated claims to territory. They were resisted by Serbia and Greece and these Governments, in accordance with the terms of the treaty, proposed that the controversy be submitted to the Czar for his arbitration. Reports of this attitude on the part of Bulgaria reached Petrograd and led M. Sazonoff to address a stern warning to Bulgaria, informing her that *she could not count on the aid or sympathy of Russia if she failed to keep her treaty engagements.* (Dispatch dated Petrograd, April 28, 1913. "Collection of Diplomatic Documents (Russian) Concerning Events in the Balkan Peninsula," No. 155, pp. 107 and 108.)

That there was good reason for this warning is proved by the fact that on April 4, 1913, a Bulgarian Ministerial Council had determined *to negotiate secretly with Turkey for a separate peace and, leaving in Thrace only the effectives strictly necessary for its defense, to attack, with the rest of the army, their Serbian and Greek allies.* ("The Truth About the Catastrophe," by General Savoff, Bulgarian Commander in

Chief, published in the *Dnevnik*, No. 4219, June 12, 1914.)

On April 21, 1913, a telegram was sent by M. Guechkoff, the Premier, to General Savoff, asking how long it would take to concentrate the Bulgarian armies against Serbia and Greece. (Telegram No. 974, in Bulgarian Foreign Office Archives.) The reply by General Savoff (April 23) indicated that from twenty-five to thirty-five days were necessary. (Telegram No. 3779.)

That this idea of a treacherous attack on Serbia and Greece had long been germinating in the Bulgarian mind is proved by a letter from General Savoff, dated as far back as March 8 and addressed to King Ferdinand, in which Savoff openly advocated a secret peace with Turkey and an attack on Serbia and Greece. ("Diary of General Savoff," published by the *Dnevnik* (No. 4219), June 12, 1914.)

The King replied by telegraph the same day, promising to take up the question of an attack on Greece and Serbia, but only after the capture of Adrianople, for which the Bulgarians had need of the support of the Serbian heavy artillery.

The ever-growing anxiety as to Bulgaria's attitude led the Russian Government to propose a general demobilization of the armies of the Balkan States. To this M. Pashitch, the Serbian Premier, at once consented. (Dispatch from M. Hartwig, Russian Minister at Belgrade. See "Collection of Diplomatic Documents (Russian) Concerning Events in the Balkan Peninsula," No. 149, p. 103.)

Though pretending to the Russian Government that it was ready to accept the proposal of demobilization, the Bulgarian Government really opposed it. (Decision of a Ministerial Council held on Easter Tuesday, April 29, 1913.) This council was attended by Generals Savoff and Fitcheff. On May 3, 1913, M. Hartwig, Russian Minister in Belgrade, telegraphed his Government that M. Pashitch greatly prized the alliance with Bulgaria and had assured him that *Serbia was ready to undertake a friendly revision of the treaty.* ("Diplomatic Documents (Russian) Concerning Events in the Balkan Peninsula," No. 163, pp. 113 and 114.)

On May 18 a telegram was sent by General Savoff advocating an immediate attack on the Serbian and Greek armies. The

following day General Savoff sent another telegram to M. Guechkoff. Its text, quoted from the "Diary of General Savoff," *Dnevnik*, No. 4223, June 15, 1914, is as follows:

War with the Serbs and Greeks is inevitable.

Any concessions made to our enfeebled allies would excite great discontent in the ranks of our army, and nothing could stifle it. On the other hand is the question of the future of our country. One asks one's self, who will have the hegemony of the Balkan Peninsula? The moment has come to profit by the advantages with which our allies themselves have furnished us in this struggle, and to concentrate on it all our efforts. A victorious war will settle definitely the question of the hegemony in our favor. A year or two from now it will be too late; Europe itself would oppose it. This is why, in my opinion, we ought to make use of all the ruses and all the means at our disposal to arrive at an armed conflict with our allies, while at the same time disclaiming all responsibility for it. When we will have inflicted a decisive defeat on them we will remove all possibility on the part of our enemies of creating in the future obstacles to the realization of our national ideal. According to my idea, we would commit an irreparable error if we let slip the favorable opportunity we now have.

According to information which I possess regarding our future operations, in four days at the most the Greeks will find themselves under the necessity of breaking with the Serbs and asking for a separate peace in order to escape defeat. Then our whole effort can be directed against Serbia. The Serbian Army could not at any point resist a sudden attack by our powerful columns.

(Signed) Lieutenant General SAVOFF.
Adrianople, May 19, 1913.

On May 29 General Savoff declared that he required thirty days to prepare the attack on Serbia and Greece, and that "he counted on Bulgarian diplomacy to gain him this breathing space," so that he might prepare this treacherous attack on Bulgaria's allies.

When the critical moment came M. Guechkoff's courage failed him and he resigned. M. Daneff became Premier. Events now began to move rapidly. On June 26 and June 27 urgent orders were telegraphed to the commanders of the various Bulgarian armies to attack Bulgaria's allies all along the line at midnight on the night of June 29, 1913. The attack was made with full force, and the Greeks and Serbians, being taken completely by surprise by this

act of treachery, were hurled back to a great distance from the position they held.

Boiling with indignation at this treacherous attack, the Serbs and Greeks counter-attacked in their turn and with such success that they completely routed the Bulgarians. Then Rumania intervened and marched on Sofia, while Turkey "came back" in her turn and recaptured Adrianople. Bulgaria was then, as the result of

her treachery, forced to sign the Treaty of Bucharest.

Such is the story of Bulgaria's treason as told in Bulgarian, Russian and Serbian State documents. I think it forever disposes of Bulgaria's claim that she was attacked in 1913 by her allies without due cause.

The Chateau-Thierry, Twentieth and S Streets, Washington, D. C., Dec. 30, 1921.

MONTENEGRO'S UNION WITH SERBIA

By V. P. BOURITCH

To the Editor of Current History:

I note that a correspondent in your December issue serves up afresh the old legend that the Montenegrins were "subdued by the tyrannical Yugoslav Government."

The union of Montenegro with Yugoslavia was the free act of the people. Immediately after the armistice the elections for the Grand National Assembly took place in Montenegro. The Assembly was summoned at Podgoritzta on Nov. 26, 1918. On that memorable date the people of Montenegro unanimously proclaimed the union with Serbia, and, incidentally, with the other Yugoslav provinces. Ex-King Nicholas and his dynasty were deposed and accused of having betrayed and delivered the people and the army to the enemy. These elections compare favorably with any previous voting under the reign of Nicholas, whose specialty in "faking" every election held in Montenegro before the war is well known to all acquainted with that country. This is confirmed by the report of an Inter-allied Commission under Generals Franchet d'Esprey and Bridges.

The suggestion that the electors were intimidated by the Serbian army of occupation is a mere invention. The forces which, after the armistice, advanced into Montenegro consisted, in addition to some French detachments, of about 2,000 Yugoslav volunteers from America. When the dissolution of the Austrian Army set in the Montenegrin population lost no time in arming itself to the teeth. Since then it has remained armed, and if the Montenegrins were opposed to unity with Serbia, or if they took up this attitude today, the few battalions

of Serbian soldiers would not be able to remain in Montenegro for twenty-four hours; still less would they be able to exercise any pressure on the population. But the fact is that the former high command and senior officers in Montenegro, including a brother and a cousin of the Queen of Montenegro, have without pressure accepted the fusion of Montenegro in Yugoslavia. The same applies to all the administrative officials and the whole people.

Nicholas's hopes were crushed by the results of the elections for the Constituent Assembly of Yugoslavia, which were held in Montenegro on Nov. 28, 1920. These elections proved disastrous for the ex-King. The Montenegrins showed once more that they were firm for the union. Out of 37,000 electors, more than 27,000 voted. Ten Deputies were elected, of whom four are Communists, two Democrats, two Republicans, one Radical and one Independent. The ex-King's party is not represented. The British Government has its own evidence that the people of Montenegro freely expressed their wishes, as British officials were present during the elections. And the fact that the French Government has recalled its diplomatic and consular representatives shows plainly that France was more than satisfied with the result.

As regards the charges of atrocities committed by Serbian soldiers, these were investigated by the British Government, and the Foreign Office issued a report that the stories were the work of partisans of the ex-King and were "sheer inventions."

MACEDONIA AND THE GREEKS

BY CONSTANTINE D. KOJOUHAROFF

Member of the Bulgarian National Historical and Geographical Societies

To the Editor of Current History:

The stand taken by certain pro-Greek contributors to your magazine does not correspond with the facts of the Macedonian question. These facts may be summarized as follows:

1. Ethnically, Macedonia, in its geographical limits, is not a Greek, but a Bulgarian, province. The Greeks form an insignificant minority, which holds third place among the ethnic groups, and consists mainly of "Greekomans" recruited through threats and force by Greek propaganda and the Greek Patriarchate. Greek aspirations to Macedonia are based purely on a policy of conquest. The Greeks have always desired the partition of Macedonia, and opposed autonomy or the principle of self-determination. Greek terror-rule in Macedonia—inhuman persecution of the population—has forced large numbers to seek refuge in Bulgaria, and this was the object sought by the Greeks. Confirmation of these statements will be found in H. N. Brailford's book, "Macedonia: Its Races and Their Future," pp. 114, 198, 130, 197, 199, and *passim*; in de Laveley's "Balkan Peninsula"; in the Report of the Carnegie Commission on the Balkan Wars (1913, p. 13); in Pouquerville's "Voyage dans la Grèce," p. 346; in the *Courrier d'Orient*, Constantinople, 1878; in the *Paris Temps* (No. 15950), and in Lebedev's "Souvenirs d'un Volontaire Russe." Only lack of space prevents me from citing other confirmations, including my own personal experience, of the truth of the propositions above laid down.

The Greeks, in a systematic manner, continue to present the Macedonian question to the world in a light favorable to their imperialism. The Greek dread of revision in respect to the settlements of Macedonia and Thrace has forced the Greeks to send a delegation to Washington, headed by Mr. Cassavetes, to be on the ground when the Bulgarian Premier arrives, and has led them to represent the Macedonians to the American public as a flock of sheep without national consciousness.

There was a time when Greece was

modest in her pretensions. After the first Balkan war (1912), Venizelos expressed the desire to reach an understanding with Bulgaria against Serbia, by which Greece was to obtain Saloniki with a small hinterland large enough to protect the city from artillery. The Bulgarian Government declined to consider the proposition and Venizelos concluded a treaty with Serbia against Bulgaria, providing for the partition of Macedonia. In Bucharest (1913), during the peace negotiations after the Balkan War, Venizelos declared that he himself was opposed to Greek annexation of Seres, Drama and Cavalla, but that King Constantine, through the Kaiser, insisted upon their annexation.

At the Paris Conference, Venizelos had changed his policy, and, in placing Greece under British influence, as a tool of the latter in the Balkans, he gained for Greece nearly all of Thrace; but he did not have the courage to state that Greece had any legitimate claim to these territories. He expressed himself as follows: "I am already in a position to take Thrace, as Bulgaria is no longer dangerous."

Greece has always been associated with a policy of conquest far exceeding her strength, and her difficult situation today is the result of an imperialistic program, with favorable elementary natural conditions lacking; that program has already ended in failure and disappointment. Natural geographic conditions in Asia Minor foretold Greek failure even before the Treaty of Sèvres had been enforced. More success has attended the Greeks in Macedonia and Thrace, but this does not mean that Greece has permanently acquired these provinces, no matter what extraordinary measures are used to subdue the populations. These populations are bitterly opposed to Greek rule, and, in spite of oppression, will struggle for that autonomy of Macedonia and Thrace which is the legitimate and permanent solution of the Balkan question. Until then, the Balkans will remain a menace to peace in Europe.

INDIA'S MOHAMMEDANS AND TURKEY

BY S. B. DERANIAN

To the Editor of Current History:

In your December issue you published an article entitled "India's Movement Against British Rule," in which the author—a native of India—cited as one of the chief causes of India's hostile spirit to Great Britain the dismemberment of the Turkish Empire by the Allies, and especially by the British, who are now in possession of Mesopotamia and Palestine.

Your contributor condemns British policies in the Near East—that is, in Turkey—with no basic reason. He fails to consider that from the beginning of Turkish rule up to the present, Turkey has been unable to govern herself; that she has not safeguarded the rights of the minorities inhabiting her boundaries for the last 600 years; that she has stood against all modern civilization by force of arms. Why does your correspondent ignore the greatest crime of the war—Turkey's shedding of innocent blood throughout the Turkish Empire, from the coast of the Black Sea to the shores of the Red Sea, from the Strait of Marmora to the mouths of the Tigris and Euphrates Rivers? The British Indian soldiers themselves, as they fought gallantly on the battlefields of Mesopotamia, Palestine and Syria with the victorious British armies, witnessed these massacres and their results. Does the world wish to leave the unprotected Christian minorities in the power of these Turkish brutes?

I do not question the good faith of the Mohammedans of India, but I regret to say that their judgment seems to have been warped by their sympathy for their co-religionists in Turkey. This bias makes

them blind to the bloody deeds of Abdul Hamid in 1895 and to the bloody persecutions of the Christians in 1908 and 1914 by Abdul's followers, Hamal, Talaat Bey and Enver Pasha. Nor do they properly weigh the certainty that, once the Turks have triumphed over the defenseless Christians, the last remnants of the Christian race in Turkey will be butchered in cold blood. This makes it clear that the Christian world of the West must refuse all moral support to the Turkish cause.

Your contributor describes the origin of the Caliphate, and its qualifications to control the three former Turkish provinces, namely, Mesopotamia, Palestine and Syria, now under the joint control of Great Britain and France. How can such qualifications be attributed to a power whose main aim and ambition has been to loot and massacre? History shows plainly that Babylon and Damascus made no progress under the retrogressive Turkish rule. Turkey always stood as a barrier against utilizing the natural resources of the empire under modern methods. Instead of serving the empire, she turned it into a shambles, committing crimes of every description on innocent men, women and children who were her subjects. It was in consequence of the continuance of these conditions and the discontent of the provinces mentioned that Great Britain, acting under the clauses of the Treaty of Sèvres, occupied Mesopotamia and Palestine, in order to give an opportunity to the unfortunate inhabitants to regain their rights as human beings, which the Turks had so long denied them, and for which they had so long and so vainly striven.

Boston University, Dec. 28, 1921.

WHAT THE TWENTY-ONE DEMANDS MEAN TO CHINA

Thomas F. Millard's presentation of the official text of a famous document side by side with a paraphrase that shows how the treaty might read if it had been forced upon the United States instead of upon China

THE Japanese delegates at the arms conference have repeatedly stated that the policy of Japan is in no sense threatening to China, and is not conceived in a spirit of aggression upon the territorial integrity and political autonomy of China. How nearly do the famous "Twenty-one Demands" of 1915 square with that statement? These demands have never been withdrawn; they are still an index to Japan's real attitude. In order to make their meaning clear to American readers, Thomas F. Millard, former editor of Millard's Review, Shanghai, has paraphrased each article as it might read if Japan had forced it upon the United States instead of upon China. This startling paraphrase, side by side with the official text of the Twenty-one Demands, is published in pamphlet form by the Weekly Review of the Far East, an American owned and edited magazine issued at Shanghai in behalf of the economic, political and social development of China.

When the war broke out in 1914 the Japanese military forces—against China's protest—occupied the territory of the German leasehold on Kiao-Chau Bay, in Shantung Province, and extended their control over almost the whole area of the province. This was the situation when, on Jan. 18, 1915, the Japanese Minister at Peking, acting under instructions from his Government, privately presented to the Chinese Government a series of proposals in five groups and twenty-one articles. The text of these famous demands, in the official English translation made by the Chinese Government and confirmed officially in various ways, is given herewith in the left-hand column, headed "The Real Demands." In the right-hand column Mr. Millard has adopted a simple device for making the true meaning plain to American readers; he has paraphrased each article, translating it into terms of American life corresponding with those of China. The two versions follow:

THE REAL DEMANDS.

I.

The Japanese Government and the Chinese Government, being desirous of maintaining the general peace in Eastern Asia and further strengthening the friendly relations and good neighborhood existing between the two nations, agree to the following articles:

ARTICLE 1. The Chinese Government engages to give full assent to all matters upon which the Japanese Government may hereafter agree with the German Government relating to the disposition of all rights, interests and concessions which Germany, by virtue of treaties or otherwise, possesses in relation to the Province of Shantung.

ARTICLE 2. The Chinese Government engages that within the Province of Shantung and along its coast no territory or island will be ceded or leased to a third power under any pretext.

ARTICLE 3. The Chinese Government consents to Japan building a railway from Chefoo or Lungkow (in Shantung), to join the Kla-Chau-Tsingtau Railway.

THE DEMANDS PARAPHRASED.

I.

The Japanese Government and the Government of the United States of America, being desirous of maintaining the general peace in the Pacific Ocean and further strengthening the friendly relations and good neighborhood existing between the two nations, agree to the following articles:

ARTICLE 1. The Government of the United States of America engages to give full assent to all matters upon which the Japanese Government may hereafter agree with the German Government relating to the disposition of all rights, interests and property which Germany, by virtue of treaties or otherwise, possesses in relation to the State of California.

ARTICLE 2. The American Government engages that within the State of California and along its coast no territory or island will be ceded or leased to a third power under any pretext.

ARTICLE 3. The American Government consents to Japan building a railway from a port in California to be selected by Japan to join the Southern Pacific Railway System.

ARTICLE 4. The Chinese Government engages, in the interest of trade and for the residence of foreigners, to open by herself as soon as possible certain important cities and towns in the Province of Shantung as commercial ports. What places shall be opened is to be jointly decided (by Japan and China) in a separate agreement.

II.

The Japanese Government and the Chinese Government, since the Chinese Government has always acknowledged the special position enjoyed by Japan in South Manchuria and Eastern Inner Mongolia, agree to the following articles:

ARTICLE 1. The two contracting parties mutually agree that the term of the lease of Port Arthur and Dalny and the term of the lease of the South Manchurian Railway and the Antung-Mukden Railway shall be extended to the period of 99 years.

ARTICLE 2. Japanese subjects in South Manchuria and Eastern Inner Mongolia shall have the right to lease or own land required either for erecting suitable buildings for trade and manufacture or for farming.

ARTICLE 3. Japanese subjects shall be free to reside and travel in South Manchuria and Eastern Inner Mongolia and to engage in business of any kind whatsoever.

ARTICLE 4. The American Government engages, in the interest of trade and for the residence of foreigners, to open, as soon as possible, certain important cities and towns in the State of California as commercial ports. What places shall be opened is to be decided in a separate agreement.

II.

The Japanese Government and the American Government, since the American Government has always acknowledged the special position enjoyed by Japan in Alaska and in the States of Oregon and Washington, agree to the following articles:

ARTICLE 1. The two contracting parties mutually agree that the term of the lease to Japan of the Port of Seattle and of the Alaskan and Northern Pacific Railways shall be extended to the period of 99 years.

ARTICLE 2. Japanese subjects in the States of Oregon and Washington, and Alaska, shall have the right to lease or own land required either for erecting suitable buildings for trade and manufacture or for farming.

ARTICLE 3. Japanese subjects shall be free to reside and travel in the States of Oregon and Washington, and Alaska, and to engage in business of any kind whatsoever.

ARTICLE 4. The Chinese Government agrees to grant to Japanese subjects the right of opening the mines in South Manchuria and Eastern Inner Mongolia. As regards what mines shall be opened, they shall be decided upon jointly.

ARTICLE 5. The Chinese Government agrees that in respect of the (two) cases mentioned herein below the Japanese Government's consent shall be first obtained before action is taken:

(a) Whenever permission is granted to the subject of a third power to build a railway or to make a loan with a third power for the purpose of building a railway in South Manchuria and Eastern Inner Mongolia.

(b) Whenever a loan is to be made with a third power pledging the local taxes of South Manchuria and Eastern Inner Mongolia as security.

ARTICLE 6. The Chinese Government agrees that if the Chinese Government employs political, financial or military advisers or instructors in South Manchuria or Eastern Inner Mongolia, the Japanese Government shall first be consulted.

ARTICLE 7. The Chinese Government agrees that control and management of the Kirin-Changchun Railway shall be handed over to the Japanese Government for a term of 99 years dating from the signing of this agreement.

ARTICLE 4. The American Government agrees to grant to Japanese subjects the right of exploitation of the mineral resources in the States of Oregon and Washington and Alaska. As regards what resources shall be exploited, they shall be decided upon jointly.

ARTICLE 5. The American Government agrees that in respect of the (two) cases herein below mentioned the Japanese Government's consent shall be first obtained before action is taken:

(a) Whenever permission is granted to the subject of a third power to build a railway or to make an international loan for the purpose of building a railway in the States of Oregon and Washington, and in Alaska.

(b) Whenever a loan is to be issued for international subscription pledging the local taxes of the States of Oregon and Washington, or Alaska, as security.

ARTICLE 6. The American Government agrees that if the American Government employs political, financial or military advisers or instructors in Oregon, Washington, or Alaska, the Japanese Government shall first be consulted.

ARTICLE 7. The American Government agrees that control and management of the Oregon Short Line Railway shall be handed over to the Japanese Government for a term of 99 years dating from the signing of this agreement.

III.

The Japanese Government and the Chinese Government, seeing that Japanese financiers and the Hanyehping Company have close relations with each other at present and desiring that the common interests of the two nations shall be advanced, agree to the following articles:

ARTICLE 1. The two contracting parties mutually agree that when the opportune moment arrives the Hanyehping Company shall be made a joint concern of the two nations and they further agree that without the previous consent of Japan, China shall not by her own act dispose of the rights and property of whatsoever nature of the said company nor cause the said company to dispose freely of same.

ARTICLE 2. The Chinese Government agrees that all mines in the neighborhood of those owned by the Hanyehping company shall not be permitted, without the consent of the said company, to be worked by other persons outside of the said company; and further agrees that if it is desired to carry out *any undertaking* which, it is apprehended, *may directly or indirectly affect the interests of the said company, the consent of the said company shall first be obtained.*

III.

The Japanese Government and the American Government, seeing that Japanese financiers and the United States Steel Corporation and its associated industries have close relations with each other at present, and desiring that the common interests of the two nations shall be advanced, agree to the following articles:

ARTICLE 1. The two contracting parties mutually agree that when the opportune moment arrives the United States Steel Corporation and its associated industries shall be made a joint concern of the two nations and they further agree that without the previous consent of Japan the American Government shall not by its own act dispose of the rights and property of whatsoever nature of the said corporation and its associated industries, nor permit the said corporation to dispose freely of same.

ARTICLE 2. The American Government agrees that all mines in the neighborhood of those owned by the United States Steel Corporation and its associated industries shall not be permitted, without the consent of the said corporation, to be worked by other persons outside of the said corporation; and the American Government further agrees that if it is desired to carry out any undertaking which, it is apprehended, may directly or indirectly affect the interests of the said corporation, the consent of the said corporation shall first be obtained.

IV.

The Japanese Government and the Chinese Government, with the object of effectively preserving the territorial integrity of China, agree to the following special article:

The Chinese Government engages not to cede or to lease to a third power any harbor or bay or island along the coast of China.

V.

ARTICLE 1. The Chinese Central Government *shall* employ influential Japanese as advisers in political, financial and military affairs.

ARTICLE 2. Japanese hospitals, churches and schools in the interior of China shall be granted the right of owning land.

ARTICLE 3. Inasmuch as the Japanese Government and the Chinese Government have had many cases of dispute between Japanese and Chinese to settle, cases which caused no little misunderstanding, it is for this reason necessary that the police departments of important places (in China) shall be jointly administered by Japanese and Chinese, or that the police departments of these places shall employ numerous Japanese so that they may at the same time help to plan for the improvement of the Chinese police service.

IV.

The Japanese Government and the American Government, with the object of effectively preserving the territorial integrity of the United States, agree to the following special article:

The American Government engages not to cede or to lease to a third power any harbor or bay or island along the coast of the United States.

V.

ARTICLE 1. The American Government at Washington, D. C., *shall* employ influential Japanese as advisers in political, financial and military affairs.

ARTICLE 2. Japanese hospitals, churches and schools in the United States shall be granted the right of owning land.

ARTICLE 3. Inasmuch as the Japanese Government and the American Government have had many cases of dispute between Japanese and Americans (in America) to settle, cases which caused no little misunderstanding, it is for this reason necessary that the police departments of important cities in America shall be jointly administered by Japanese and Americans, or that the police departments of these places shall employ numerous Japanese so that they may help to plan for the improvement of the American police service.

ARTICLE 4. China shall purchase from Japan a fixed amount of munitions of war (say 50 per cent. or more) of what is needed by the Chinese Government, or there shall be established in China a Chino-Japanese jointly worked arsenal. Japanese technical experts are to be employed and Japanese material is to be used.

ARTICLE 5. China agrees to grant to Japan the right of constructing a railway connecting Wuchang with Kiukiang and Nanchang, and another line between Nanchang and Hangchow, and another line between Nanchang and Chaochou.

ARTICLE 4. The United States shall purchase from Japan a fixed amount of munitions of war (say 50 per cent. or more) of what is needed by the American Government, or there shall be established in America a Japan-American jointly worked arsenal. Japanese technical experts are to be employed and Japanese material used.

ARTICLE 5. The American Government agrees to grant to Japan the right of constructing a railway connecting Chicago with St. Louis and Pittsburgh, and another line between Pittsburgh and Baltimore, and another line between Pittsburgh and Charleston.

ARTICLE 6. If China needs foreign capital to work mines, build railways and construct harbor works (including dockyards) in the Province of Fukien, Japan shall be first consulted.

ARTICLE 7. China agrees that Japanese subjects shall have the right of missionary propaganda in China.

ARTICLE 6. If the United States needs foreign capital to develop mines, build railways and construct harbors (including dockyards) in the States of Virginia and North Carolina, Japan shall be first consulted.

ARTICLE 7. The American Government agrees that Japanese subjects shall have the right of Buddhist propaganda in the United States.

These humiliating concessions, with the temporary exception of Group V., China was compelled to sign under pressure of an ultimatum in which Japan demanded "a satisfactory reply" by 6 o'clock P. M., May 9, 1915. Mr. Millard's pamphlet gives the text of the ultimatum, China's official protest at the time of signing, and the American note of protest handed to the Japanese Government a week later.

THE FIRST AIRPLANE FLIGHT

THE eighteenth anniversary of the first airplane flight made by Orville Wright at Kitty Hawk, N. C., was celebrated on Dec. 17, 1921. On the corresponding date in 1903, Wright, in a crude, insecure biplane, attained a speed of thirty miles an hour in a continuous flight of fifty-nine seconds. Continuous flights of more than 175 miles an hour are now of frequent occurrence. In his first statement issued since the war Mr. Wright, at the office of the Aeronautical Chamber of Commerce, New York, recalled that early attempt. Flying, he pointed out, up to 1903, had been "classed with perpetual motion, and the few who expressed belief in its possibilities were looked upon as mentally unbalanced." Mr. Wright described the difficulties encountered by himself and his brother Wilbur, now deceased, as follows:

The problem was not one to be solved by guesswork. Duechemin, about the middle of the last century, had published a formula for calculating the pressure on planes at different angles. Lilienthal, in the eighties, had published his measurements on several curved sur-

faces, with other valuable scientific work. Langley, in the nineties, published his measurements of plane surfaces, corroborating the earlier work of Duechemin. It was to the work of Lilienthal that my brother and I were by far more deeply indebted. But owing to various defects in the systems of measuring all this work, we found it too inaccurate and too meagre for purposes of design.

In 1901 my brother Wilbur and I, having proved by actual gliding tests the inaccuracy of these tables, began a scientific study of the subject. We designed new types of measuring instruments and made measurements of hundreds of differing wing surfaces in a wind tunnel. It was due to the accuracy of these measurements that we were able, in 1903, to design a new type of biplane, almost entirely from calculation, which was able to lift itself and operator into the air with a crude motor weighing more than twelve pounds per horse power. We had already developed a new system of control, the system with which our name has been so largely connected, but this system of control would have been of little use without our wind-tunnel work, which enabled us to design a machine which would lift itself.

Mr. Wright believes that aviation is still in its infancy, and that the use of the airplane as a carrier will eventually become universal.

THE JUGOSLAV CONSTITUTION

Translated by HOWARD WEBSTER WOLFE,
Instructor in the Charles University, Prague,

AND

ARTHUR IRVING ANDREWS,
Professor of History and Public Law at Tufts College

Complete text of the Constitution of the Kingdom of the Serbs, Croats, and Slovenes, in effect since last June—First English version of one of the most important documents of its kind

THE Yugoslav Constitution went into effect on June 28, 1921, after considerable opposition on the part of those who desired to see a Federal rather than a unitary State constructed from the various fragments of the Serbo-Croat and Slovene peoples, brought together as a result of the World War. This Constitution owes its existence primarily to Premier Pashitch, who led the fight for its adoption, a fight that was successful by a narrow margin, taking into consideration those who refused to vote for it as well as those who voted against it.

The new Yugoslav Constitution owes a great deal to the Serbian Constitution of 1888, which was re-enacted in 1903. In fact, the more one compares the two the less one is inclined to call the latest promulgation a new Constitution at all; it seems to be rather an extension of the old instrument to cover new territory, rather than a totally new instrument for the administration of Government.

The older document provided for representative parliamentary government under, of course, the same Monarch, Peter I. (1903), who was the King upon the passage of the present Constitution. It emphasized, as this does, the parliamentary type of government. There was then, also, but a single chamber in the legislative branch. The provisions in regard to budgetary control, and even for the sessions of the Legislature, resembled those provided for in 1921. In this year again reappears the Court of Accounts, the Council of State, and you find similar provisions for the jury in 1921 as in 1903. The earlier Constitution, like the later, provides for proportional representation in elections and the scrutin de liste.

Still more important it is to note that the great space given to the detailed Bill of Rights in the Yugoslav Constitution goes

back to the many clauses in the Serbian Constitution, which seemed to have caused as much remark then as these same provisions do now. It is worth while here quoting the words of M. Milanovitch:

Those who do not know the constitutional history of Serbia in the past might be astonished by many of the clauses of this Constitution, which appear superfluous or out of date. In its second part, for example, it treats of the constitutional rights of the Serbian citizens. These are not only guaranteed in principle—the public rights of private individuals, such as personal liberty, inviolability of the home, the liberty of the press, &c.—but there is set forth the detail, often including the minutest things; everything that the rights thus guaranteed have as consequences and everything that they exclude and prohibit.

Here M. Milanovitch emphasizes the necessity for such clauses, "owing to the vicissitudes of the constitutional struggle, revolutions and the like."*

In this Yugoslav Constitution Part I. (three sections) provides for a constitutional, parliamentary and hereditary monarchy, and designates the name of the State, the coat of arms, the flag and the official language (which is Serbo-Croat-Slovene). Part II. devotes eighteen sections to the rights and duties of citizens, a longer space devoted to these topics than in any other Constitution among the new States. Along with this should be considered Part III., which is composed of social and economic regulations (twenty-three sections), as to the protection of labor, health, marriage, insurance against accident, illness, unemployment, incapacitation, old age and death. The protection and obligations of property rights are provided for, with special attention to the forests, fisheries, &c. Part IV. is given up to brief definitions of the various

* Milanovitch, "The Constitution and Constitutionalism," in Stead's "Serbia by the Servians." London, 1909. Pp. 46-67.

authorities in the State. To the powers of the King are given eleven long sections in Part V., which, however, include the provisions whereby the Government is controlled by the Cabinet. There are also special provisions in regard to the royal family, the possible absence of the King and the appointment of his successor, who shall assume the position of heir to the throne during the lifetime of the King. Following this there are nine sections, Part VI. providing minutely for the working of the regency, under the control of the representatives of the people. Part VII. contains twenty-one provisions for a national Legislature of but one house, chosen by universal suffrage, with representation of the

minorities, and also the regulations in regard to those qualified to vote as well as those qualified to sit in this national Legislature.

Part VIII., composed of nineteen sections, discusses at length the administrative authority and provides for partial control of the Ministry by the courts, as well as by the national Legislature, and also for the division of the country into administrative units, under autonomous officials, as they are called. Provision for the Council of State is contained in six sections, a Council of State which acts as the highest administrative court and has appellate jurisdiction in many cases. These administrative courts are quite in accordance with Continental usage.

The judiciary is treated in Part IX., where, in four sections, arrangements are made for an independent system of courts whose importance in the trial of civil and criminal cases may be great enough, but whose power over the other branches of the Government may be described as practically nil.

A curious arrangement devotes Part X. (six sections) to State Economy, i. e., taxes, budget and general financial control. This is followed by six sections devoted to the army (Part XI.), in which provisions for military courts and for terms of service are particularly noteworthy. In Part XII., arrangements for amending the Constitution according to the French model are given in three sections. The difference between an amendment to the Constitution and ordinary legislation is not very great. Parts XIII. and XIV. provide for the transfer of authority from the old officials and old organization to the new, and for the definite coming into effect of the new Constitution. The emphasis is notable on the supremacy of Serbian procedure in all these arrangements.

The tendency to regard the Constitution as the place to insert all measures or reforms that one feels most concerned about is quite evident. The idea of making the Constitution merely a skeleton on which to hang such arrangements as the Legislature may enact is not followed, therefore, even though constant reference is made to laws by which the provisions of the Constitution shall be supplemented in detail and put into effect.

KING ALEXANDER

New ruler of Jugoslavia, whose engagement to Princess Marie of Rumania has recently been announced

We can sum up the situation by stating that in almost every respect the parliamentary monarchy in Yugoslavia suggests the parliamentary Republic of France. The powers, attributes, actions of the Cabinet, the election and composition and action of the Chamber, multiplicity of parties, the place of administrative law and the Council of State, the interpellations, at all these points and many others we can see clear resemblances to French procedure and regulations. Certainly the sources are French, rather than American, and more essentially French than British, although both Yugoslavia and Great Britain are constitutional parliamentary monarchies.

The Yugoslav document has two significant provisions: No one is obliged to take part in religious acts, celebrations, rites and practices, except on State holidays and celebrations, and in so far as the law enjoins this upon persons who are subject to paternal, guardian's or military authority. Religious leaders may not employ their spiritual authority for partisan aims outside their houses of worship, or beyond prescripts of a religious character, or otherwise in the fulfillment of their official duty.

To those acquainted with Eastern and Southeastern European history, this significance is not lost. Coercion on the one side, interference by ecclesiastics in politics on the other, have been the rule rather than the exception. Probably the attempt by their rulers to iron out religious differences among the Serbo-Croat people was a vital factor in making easy their subjugation by the Turks. Surely much of the ill-feeling today among the Balkan peoples can be traced to Church jealousies and attempted clerical usurpations.

TEXT OF THE CONSTITUTION

The copy of the Yugoslav Constitution which served as the basis for this English translation was given to Arthur I. Andrews, then Professor of American Foreign Policy at Charles University, Prague, by the Premier of Yugoslavia. From it the translation was prepared by Howard Webster Wolfe, a lecturer and instructor at the same Charles University, in collaboration with Professor Andrews. Parentheses (-) have been used to indicate somewhat freer renderings than a literal translation would justify. Words enclosed in brackets [-] are

added to clarify the meaning. The translators, however, have preferred to keep to the literal text as closely as possible. The full translation follows:

PART I.

General Provisions

SECTION 1—The State of the Serbs, Croats and Slovenes is a constitutional, parliamentary and hereditary monarchy.

The official name of the State is the Kingdom of the Serbs, Croats and Slovenes.

SECTION 2—The coat-of-arms of the kingdom is a double-headed spread eagle in flight, on a red shield. Over both heads of the double-headed spread eagle stands the crown of the kingdom. On the breast of the eagle is a shield on which are the coat-of-arms, Serb—a cross on a red shield with a single firesteel by each bar; Croat—shield with twenty-five fields, alternately red and silver; Slovene—on a blue field three golden six-pointed stars and under this a white half moon.

The State flag is blue, white and red in a horizontal position facing an upright staff.

NICHOLAS PASHITCH

Premier of Yugoslavia, whose work in the Constituent Assembly was largely instrumental in shaping the new Constitution

SECTION 3—The official language of the kingdom is Serb-Croat-Slovene.

PART II.

Basic Rights and Duties of Citizens

SECTION 4—There is one citizenship in the whole kingdom; all citizens are equal before the law. All enjoy the same protection from [State] authority.

There is no recognition of nobility, nor titles, nor pre-eminence of birth.

SECTION 5—Personal freedom is guaranteed.

No one can be called to account, nor be arrested, nor otherwise be deprived of freedom by any one except in cases that the law has prescribed.

No one can be imprisoned for any crime whatsoever without a warrant of competent authority in writing and furnished with reasons. That warrant must be shown to the person arrested, either at the time of the arrest or, if that be impossible, at furthest within a period of twenty-four hours from the time of the arrest. Against this warrant for arrest he has the right to appeal to a competent court within a period of three days. In case there has been no appeal within that time, the investigating body must send the evidence to the court within twenty-four hours. The court is bound to give its decision within a period of two days from the time of receiving the evidence. The court decision is final.

Official authorities who transgress against these statutes shall be punished for illegal deprivation of freedom.

SECTION 6—No one can be tried by an incompetent Judge.

SECTION 7—No one can be condemned until he shall have been summoned by an official lawfully or in legal manner to defend himself.

SECTION 8—Punishment may be fixed only in accordance with the law and can be applied solely to acts for which the said law stated beforehand that they should be punished according to said law.

SECTION 9—Capital punishment cannot be inflicted for merely political crimes.

Excepted are the cases of the commission of or attempt at assassination on the person of the ruler or members of the royal house, for which the death penalty is fixed in criminal law.

Besides this are also excepted acts in which, to purely political culpability there is added some punishable act for which the death penalty is fixed in the criminal law, and such acts also which military law punishes with death penalty.

SECTION 10—No citizen can be banished from the State. He cannot be driven within the country from one place to another, nor be banished to one particular place except in cases which the law has expressly foreseen.

No one can, in any event, be banished from his own native place without judicial action.

SECTION 11—A dwelling is inviolable.

The authorities [the State] may not undertake any investigation or search in the house of a citizen, except in eventualities which the law has foreseen and in the manner which the law has prescribed.

Before the investigation [or search] the au-

thorities are obliged to give to the person whose dwelling is being searched a written warrant for the search, the authorities [stating] on what grounds the investigation is undertaken. Against this warrant he has the right of appeal to a court of first instance. But this appeal does not prevent the carrying out of the search. The search shall be carried out immediately in the presence of two [other] citizens.

Immediately after the completion of a search, the authorities are obliged to give to the person whose house is searched information about the outcome of the search and a signed list of articles taken away for further examination.

At night police officials may enter a private house only in cases of sudden emergency, as when they shall be called on from the house for help. At this act of the authorities there shall be present the President of the municipality or two neighbors summoned.

Officials of state who have acted contrary to these provisions shall be punished for illegal violation of a dwelling.

SECTION 12—Freedom of belief and conscience is guaranteed. The adherents of different confessions are of equal rights before the law and may practice their religion openly.

The enjoyment of civil and political rights is not dependent on confession or belief. No one can be freed from his civil and military duties and obligations by appealing to the tenets of his faith.

Those faiths are permitted which have thus far obtained legal recognition in any part of the kingdom. Other faiths can obtain recognition only in accordance with the law. Accepted and recognized faiths regulate independently their internal religious affairs and control their own institutions and funds within the limits of the law.

No one is obliged to express publicly his religious convictions. No one is obliged to take part in religious acts, celebrations, rites and practices, except on State holidays and celebrations and in so far as the law enjoins this upon persons who are subject to paternal, guardian's or military authority.

Accepted and recognized faiths may maintain relations with their sovereign superiors even outside the borders of the State, in so far as the spiritual precepts of the several confessions demand this. The manner in which these relations shall be maintained shall be regulated by law.

In so far as is foreseen in the State budget for religion, the outlay is to be divided among the several accepted and recognized faiths, according to the number of their adherents and their clearly shown need.

Religious leaders may not employ their spiritual authority for partisan aims outside their houses of worship, or beyond precepts of a religious character, or otherwise in the fulfillment of their official duty.

SECTION 13—The press is free.

There cannot be established any preventive measure which hinders the appearance, sale and circulation of publications and newspapers. Censorship can be established only during time of war or mobilization, and that in a manner previously specified by law. Forbidden is the circulation and sale of newspapers or printed

matter which contains abuse of the ruler or members of the royal house, heads of foreign States, the National Skupshchina, indirect incitement of the citizens to forcible change of the Constitution or laws of the land, or which contains serious offense against public morals. But in these cases the authorities must lay the matter before the court within twenty-four hours of the infringement of the prohibition, and said court must also within twenty-four hours enforce or annul the suppression. In a contrary event, it is considered that the suppression is annulled. The regular courts shall decide about the indemnification for a wrong done, independently of the court decision about the suppression.

For such crime committed by the press are responsible: Author, editor, printer, publisher and circulator. It shall be prescribed by a special law regarding the press when and in what event the persons enumerated above, and in what manner they shall answer for crimes committed by the press. The regular courts shall try all crimes committed by the press.

SECTION 14—Citizens have the right of assembly and discussion. Further stipulations about this, the law shall provide. They may not come into assembly under arms. Assemblies in the open must be announced to competent authorities at least twenty-four hours beforehand.

Citizens have the right to assemble for purposes which are not punishable under the law.

SECTION 15—Citizens have the right of petition. Petitions may be signed by one or more individuals or by all legal persons. Petitions may be presented to all authorities without distinction.

SECTION 16—Science and art are unrestricted and enjoy the protection and support of the State.

University instruction is unrestricted.

Education is a prerogative of the State.

In the whole land education rests on one and the same plan, being adapted to the purpose for which it is intended.

All schools must give moral instruction and develop the civic consciousness in the spirit of national unity and religious toleration.

Public instruction is individual, general, and obligatory.

Religious instruction is given according to the wish of the parents or guardians respectively, divided into groups according to confession and in harmony with their religious principles.

Technical schools shall be opened in accord with the needs of business.

State education is given without enrollment fees, school tuition, or other charges.

In how far there shall exist private schools and schools of the several religious sects and under what arrangements they shall operate shall be established by law.

All institutions for instruction are under State supervision.

The State shall assist the work of national enlightenment.

To minorities of other race or language elementary instruction shall be given under conditions which the law shall prescribe.

SECTION 17—The right of private correspondence and telegraph and telephone communication is unincumbered except in the case of criminal investigation, mobilization, or war.

All those who violate private correspondence or telegraph and telephone communication shall be punished according to law.

SECTION 18—Every citizen has the right directly and without any sort of [previous] official authorization to bring charges against State courts or minor autonomous [minor civil] officials for criminal acts, which they may have committed against him in official activity.

Special regulations apply to Ministers, Judges and soldiers under the flag.

For a wrong which a State or autonomous official does to citizens by irregular fulfillment of duty, the State or autonomous body is answerable before the regular courts. The official concerned is answerable to them.

A complaint of a wrong is invalid after nine months.

SECTION 19—All offices in all branches of State service are open alike within their legal requirements to all [Jugoslav] citizens by birth as also to citizens who are by birth of Serbo-Croat-Slovene nationality.

Foreign-born citizens can enter State service only when they have been ten years resident in the kingdom; and by the express authority of the Council of State and with the well-founded support of a competent Minister beforehand (previously given).

SECTION 20—Every citizen enjoys the protection of the State in foreign States. Every citizen has the right to renounce his citizenship after fulfilling his obligations toward the State.

The surrender of its own citizens is prohibited.

SECTION 21—Every citizen is under obligation to obey the laws, serve the interests of national unity, protect the fatherland, support the burdens of the State according to his inherited ability and in accord with the provisions of the law.

PART III.

Social and Economic Provisions

SECTION 22—With the purpose that uniform prosperity be brought to all citizens, the State will provide a place of display for the economic products to which they give their efforts. In keeping with this it will establish a permanent scientific organization and institute constant support of school attendance for capable poor children.

SECTION 23—The working class is under the protection of the State.

Women and children not fully grown are especially to be protected from occupations harmful to their health.

The law shall establish special measures for the security and protection of workers and shall prescribe the hours of work in all occupations.

SECTION 24—The products of mental exertion are the property of the author and enjoy State protection.

SECTION 25—Freedom of agreement in trade relations is recognized in so far as it is not opposed to the interests of society.

SECTION 26—It is the right and duty of the State to intervene in the public interest and on the basis of the law, in the economic relations of citizens, in the spirit of justice and for the prevention of social friction.

SECTION 27—The State shall give attention to (1) The betterment of general hygienic and social conditions which affect the national health; (2) special care for mothers and young children; (3) the preservation of the health of the whole citizenship; (4) the suppression of acute and chronic infectious diseases, as well as the suppression of the abuse of alcohol; (5) medical assistance without cost, the furnishing of medicines and other necessities without cost for the preservation of the general health of the needy citizens of the nation.

SECTION 28—Marriage shall be under the protection of the State.

SECTION 29—The State shall assist materially the National Syndicate. Likewise the State shall assist materially other national economic organizations which are not working for profit. Precedence shall be given over other private undertakings under otherwise equal conditions to such syndicate and such economic associations within the circle of their activities in view of their co-operation.

There shall be passed a law with reference to associations, which shall apply to the whole nation.

SECTION 30—Farmers' insurance unions shall be established by a special legal enactment.

SECTION 31—The insurance of workmen against the event of accident, illness, unemployment, incapacity, old age and death shall be established by a special law.

SECTION 32—Invalids, war orphans, war widows and the poor parents, unable to work, of soldiers who fell or died in the war shall enjoy special State protection and help in token of recognition.

In accord with the law, provision shall be made for the feeding of invalids incapable of work and for the training of war orphans for work and for life.

SECTION 33—The right of workmen to organize for the purpose of obtaining better working conditions is guaranteed.

SECTION 34—Special attention shall be given to the marine and to sea fisheries.

The insurance of persons employed on the sea against the event of sickness, incapacity, old age and death shall be established by a special law.

SECTION 35—The State shall care for the construction and maintenance of all means of intercommunication wherever the general State interests demand.

SECTION 36—Usury (extortion) of every sort is forbidden.

SECTION 37—Property rights are guaranteed. From property arise also obligations. There shall be no employment of property to the detriment of the public. The content, extent and limitations of private property shall be fixed by law.

Expropriation of private property for the benefit of the public is permitted on the basis of the law in return for just compensation.

SECTION 38—Entail shall be abolished.

Foundations with purely beneficent purposes shall be permitted. It shall be fixed by law in what event aims and objects of foundations shall be changed to meet changed conditions.

SECTION 39—According to law concerning taxes on an inheritance, an interest in the inheritance shall be assured to the State; in this, basing the calculation on the degree of relationship between the heir and the deceased person and the value of the inheritance.

SECTION 40—The requisition of a room and of other necessities for the military shall be done only in return for just compensation.

SECTION 41—Large private forest tracts shall be expropriated according to the law and shall pass into the possession of the State or of autonomous bodies. The law shall stipulate in how far great forest tracts can be the property of other legal bodies which already exist or which shall be founded.

Real forest land, whose forestation furthers climatic, and cultural considerations, shall pass likewise in accordance with the law of expropriation into the property of the State or of autonomous bodies, in so far as this forestation cannot be accomplished in any other manner.

Great forest tracts which foreign authority handed over to individuals shall pass, according to the law, into State or municipal possession without any recompense whatever to those individuals. The law regarding forests shall fix the conditions under which peasants cultivating the land, and those who support themselves incidentally by work on the land, may help themselves by cutting wood for building material or fuel, as well as for the pasturing of cattle in State and communal forests.

SECTION 42—Fief relationships are legally regarded as terminated on the day of freedom from foreign domination. In how far injustices were done anywhere before that time by the dissolution of fief relationships or their simulations into private legal relationships shall be passed on by the law of rectifications.

Vassals (serfs), as also in general land workers who till the land in fief-like relationships, shall be established as free possessors of State lands, not paying themselves any sort of compensation whatever for it and shall be regarded as having hereditary rights.

SECTION 43—The expropriation of great possessions and their division into properties for those who till the land shall be regulated by law. The law shall fix also what sort of compensation shall be given for expropriated possessions. For great possessions which belonged to members of former foreign dynasties, and for those which foreign authority bestowed on individuals, no compensation whatever shall be given.

Settlements shall be effected primarily with the help of settlement associations organized freely, and giving attention also thereto that the settlers may be supplied with the indispensable equipment for production.

In settlements as well as in the division of expropriated tracts, preference shall be given to needy soldiers who fought for the deliverance

of the Serbs, Croats and Slovenes, and their families.

The amount of ground assigned to the land workers shall be specified by law, also the conditions under which this may not be divided among heirs or in any manner be taken away.

SECTION 44—An Industrial Council shall be created for the working out of social matters and the formulating of industrial laws. Further details about its composition and competency shall be fixed by law.

PART IV.

State Authorities

SECTION 45—All State authorities shall be established in accordance with the provisions of this Constitution.

SECTION 46—The King and the National Skupshtina (Assembly) together shall constitute the law-giving authority.

SECTION 47—The King shall exercise administrative authority through a responsible Ministry in accordance with the provisions of this Constitution.

SECTION 48—The courts shall exercise judicial authority. Their judgments and decisions shall be handed down and carried out in the name of the King on the basis of the laws.

PART V.

The King

SECTION 49—The King shall confirm and proclaim the laws, appoint State officials, and give out military commands according to the provisions of the law.

The King is the Commander-in-Chief of all military forces. He gives out decorations and other distinctions.

SECTION 50—The King has the right of amnesty for political and military criminals. Through amnesty the legal consequences of the criminal act may be lessened, but the right of private persons to compensation for injury cannot be infringed by it. Amnesty may be given before the beginning of court proceedings, during the course of the proceedings, or after the judgment is rendered. Amnesty is general or individual.

For amnesty of a Minister there is necessary a previous concurrence of the National Skupshtina, but this cannot be given to a Minister in any event before the rendering of judgment.

The King has the right of pardon. He can pardon, or shorten, or mollify a punishment fixed by the court. The right of amnesty for acts punishable only through private complaint is fixed by the law regarding judicial procedure in criminal cases.

SECTION 51—The King shall represent the State in all its relations with foreign States. He shall declare war and conclude peace. If the State is not attacked or war declared upon it by some other State, a previous approval by the National Skupshtina is necessary for the declaration of war.

If war be proclaimed on the country or if it shall be attacked, the National Skupshtina must be called together at once.

SECTION 52—The King shall summon the Na-

tional Skupshtina for ordinary or extraordinary session.

He shall open and close the sitting in person, with a speech from the throne or through the Council of Ministers with a message or ukas.

All the Ministers shall countersign a speech from the throne, a message and ukas.

A ukas by which the sittings of one session are closed shall always contain also an announcement of the date of the new session.

The King can at any time, in State necessity, convene the National Skupshtina which had prorogued its sitting.

The King has the right to dissolve the National Skupshtina, but the ukas concerning the dissolution must contain a call for new elections within a period of three months at latest, and a call for a sitting of the National Skupshtina within four months at latest from the day of dissolution of the Skupshtina. All Ministers shall countersign a ukas for the dissolution of the National Skupshtina.

SECTION 53—The King cannot at the same time be the ruler of any other State without the consent of the National Skupshtina.

If the King, contrary to this provision, still accepts the crown of any other State, he shall be regarded as having renounced the throne of the Kingdom of the Serbs, Croats and Slovenes.

SECTION 54—No act of royal authority shall have force nor can it be enforced if a competent Minister has not countersigned it. For all acts of the King, oral or written, countersigned or not countersigned, as also for all his proceedings of political character, a competent Minister shall be responsible.

For the King's acts as military Commander-in-Chief the Minister of War and Marine shall be responsible.

SECTION 55—The King and his heir are of age when they complete eighteen years.

The King's person is unassailable [inviolable]. No charge can be brought involving the King's responsibility, nor can a complaint be made against the King. This [inviolability] does not hold of the King's private status.

SECTION 56—In the Kingdom of the Serbs, Croats and Slovenes the ruler is Peter I., Karageorgevich. King Peter shall be followed by Heir to the Throne Alexander and his male offspring from legal marriage by the right of primogeniture.

If the King has no male offspring he shall appoint an heir to himself from the indirect line with the consent of the National Skupshtina. For that is necessary a decision of half plus one of the full number of the membership of the National Skupshtina.

SECTION 57—The royal house shall consist of the Queen Consort, the living forebears and descendants in direct line with their consorts, the full brothers and their descendants, with their consorts, and the sisters of the ruling King. The relations and status in the royal house shall be defined by a statute which shall be extra legal. No member of the royal house can be a Minister or member of the National Skupshtina.

SECTION 58—In the presence of the National Skupshtina the King shall take an oath which

runs as follows: I [name], ascending the throne of the Kingdom of the Serbs, Croats and Slovenes, and assuming royal authority, swear by Almighty God that I will preserve the unity and independence of the State and the integrity of State territory, and that I will hold the Constitution inviolable; that I will rule according to it and the laws, and that I will keep before me with all my might the welfare of the nation. So help me, Lord God. Amen!

SECTION 59—The King shall live constantly in the country. If the necessity appears that the King go out of the country for a short time the heir to the throne shall represent him. If the heir to the throne is not of age or if he is prevented [in any way], the Council of Ministers shall represent the King. This representation shall be carried out according to the directions which the King shall give within the limits of the Constitution. This also applies in the event of illness of the King which shall not produce permanent incapacity.

During the time of absence of the King or heir to the throne, the Council of Ministers shall not have the right to dissolve the National Skupshtina.

The representation of the Council of Ministers can last at longest six months. At the end of this time shall come into play the constitutional regulations for a regency.

PART VI.

Regency

SECTION 60—The King's authority shall be assumed by a regency: (1) If the King is a minor; (2) If, on account of mental or physical illness, he is permanently incapacitated from assuming the King's authority.

The National Skupshtina shall decide by secret vote regarding the establishment and abolition of a regency.

If the Council of Ministers shall decide that the event of the King's incapacity has transpired, it shall impart this to the National Skupshtina, together with the opinion of three physicians selected from the National Medical Faculty. The proceedings shall be the same if the heir to the throne is in question.

SECTION 61—The authority of Regent shall fall by right to the heir to the throne, if he is of age. If the heir to the throne, for reasons enumerated in Section 60, cannot assume the authority of Regent, the National Skupshtina shall, by secret vote, choose three Regents for the King. Regents for the King shall be chosen for four years; after this time, in the event that the regency must be prolonged at least for a year, there shall be a new election; if the regency is to last longer, a secret election shall be held again for four years.

Eligible for Regents are only those born Serbs, Croats and Slovenes, citizens of the Kingdom of the Serbs, Croats and Slovenes who are 45 years of age and have a higher education.

Before they take the King's authority into their hands the Regents must take an oath before the National Skupshtina which has chosen them that they will be faithful to the King and that they will rule according to the Constitution and the laws of the land.

SECTION 62—If one of the three Regents is for the time absent or [in any way] prevented, the two other Regents shall have authority and shall carry on State business without him.

SECTION 63—The Regents shall care for the education of a minor King. The administrators appointed by the will of a King shall care for the property of a minor King. If the deceased King has not appointed administrators, the Regents shall appoint them, conferring with the Council of State.

SECTION 64—Until the selection of Regents, the Council of Ministers shall exercise, provisionally, the royal authority under their own responsibility.

SECTION 65—In the event of the death or resignation of the King, the heir to the throne, if he is of age, shall assume the Government at once and shall announce this to the nation by proclamation. At the end of ten days he shall take the prescribed oath before the National Skupshtina. If the National Skupshtina has previously been dissolved and the new one is not yet elected, the old National Skupshtina shall be convoked.

SECTION 66—If the King, after his death, has not left male issue, but the Queen should be pregnant at the time of the King's death, the National Skupshtina shall choose Regents, who shall exercise the authority of the King only until the time of birth. The Government is bound to submit to the National Skupshtina before the selection of Regents, the opinions of three physicians selected from the National Medical Faculty regarding the pregnancy of the Queen. The same requirement holds also in the event that the heir to the throne should die and that his wife should be pregnant at the time of the King's death.

SECTION 67—In the event that the throne, according to the provisions of this Constitution, should remain without an heir, the Council of Ministers shall take into their hands the authority of the King, and shall at once call the National Skupshtina to a special session, in which a solution about the throne shall be reached.

SECTION 68—The civil list of the King shall be fixed by law. The civil list, once fixed, cannot be increased without the consent of the National Skupshtina, nor decreased without the consent of the King.

The King's Regents shall take from the State Treasury, for the fulfillment of their duties, only so much as the National Skupshtina shall fix for them at the time of their selection.

PART VII.

National Skupshtina

SECTION 69—The National Skupshtina shall be composed of representatives which the nation shall choose freely in a general, direct and secret election, held everywhere at the same time, with representation of the minorities.

For every 40,000 inhabitants one representative shall be chosen. If the excess of inhabitants in any election district shall be more than 25,000, one representative shall be chosen for that remnant.

The National Skupshtina shall be elected for

four years. The further details about the election shall be prescribed by law.

SECTION 70—Every citizen by birth or naturalization shall have electoral right if he shall have reached the age of 21 years.

Active officers, even though not in service, as well as under officers and soldiers under the flag, cannot exercise electoral right or be elected.

The law shall decide also about woman's right to the vote.

SECTION 71—Those persons shall be deprived temporarily of electoral right: (1) Who are condemned to hard labor (imprisonment), until they shall be restored to their rights; (2) who are condemned to the loss of the privileges of citizenship, for the duration of this punishment; (3) who are under restraint (temporarily mentally incompetent); (4) who are under guardianship.

SECTION 72—For representative in the National Skupshtina can be chosen only those persons who have electoral right, regardless of whether they are entered on the electoral list. From every representative are demanded the following conditions: (1) That he shall be a citizen by birth or naturalization of the Kingdom of the Serbs, Croats and Slovenes. Naturalized citizens, if not of Serb-Croat-Slovene birth, must be resident at least ten years counting from the day of naturalization; (2) that he be 30 years of age; (3) that he speak and write the national language.

National representatives cannot be at the same time purveyors or State contractors.

SECTION 73—Political, financial and forest officials as well as officials of the agrarian reform cannot be candidates except they have given up office a year before the announcement of the election.

Other officials who exercise public authority cannot be candidates in the electoral district of their territorial competence.

Officials who shall be chosen for national representatives shall be placed in official retirement during the period of the duration of the mandate.

Ministers, active and in retirement, and professors in the universities can be candidates, and if they are elected shall hold their position.

SECTION 74—Every national representative shall represent the whole nation and not merely those who elected him.

Electors cannot give, and national representatives cannot receive, mandatory and obligatory instructions.

All national representatives shall take oath that they will faithfully preserve the Constitution.

SECTION 75—The National Skupshtina shall meet in the capital city, Belgrade, in regular session every year Oct. 20, if it is not called before that date into extraordinary session by the King's ukas.

If in the event of war the capital is changed, the National Skupshtina shall meet in the provisional capital.

The regular session cannot be dissolved until the State budget shall be fixed.

During the time of war the National Skupsh-

tina is constantly in session except if it itself shall decide otherwise.

SECTION 76—The National Skupshtina shall scrutinize the credentials of its own members and shall decide about them.

The National Skupshtina shall prescribe its own order of business.

SECTION 77—The National Skupshtina shall choose for each session its officials from its own membership.

SECTION 78—The Council of Ministers or individual Ministers shall introduce bills on the King's authority.

The right of introducing bills belongs to every member of the National Skupshtina.

SECTION 79—The King shall conclude treaties with foreign States, but a provisional confirmation of the National Skupshtina is necessary for the validity of these treaties. The provisional confirmation of the National Skupshtina is not necessary for the validity of merely political agreements, if they are not contrary to the Constitution and laws of the State.

An agreement that a foreign army shall occupy land of the kingdom or shall go across it is not valid without provisional confirmation of the National Skupshtina.

The National Skupshtina can, if State necessity demands it, by resolution beforehand, empower the Council of Ministers to take measures for the acceptance of a proposed treaty if it cannot be postponed.

State territory cannot be disposed of or exchanged without the ratification of the National Skupshtina.

SECTION 80—The King shall proclaim the laws by ukas which shall contain also the law itself if passed by the National Skupshtina. All the Ministers shall countersign the ukas. The Minister of Justice shall place on it the State seal and shall care for the publication of the laws in the Official News.

The law shall have binding force fifteen days after publication in the Official News, if the law itself does not stipulate otherwise. The day of publication in the Official News shall be counted.

SECTION 81—The National Skupshtina has the right of inquiry and even of investigation in electoral and purely administrative questions.

SECTION 82—Every member of the National Skupshtina has the right to put questions and interpellations to the Ministry. The Ministers are obliged to give answer to them in the course of the same session at the time which the order of business fixes.

SECTION 83—The National Skupshtina shall deal only indirectly with the Ministers.

SECTION 84—Only its members, members of the Government, and Government confidants have the right to speak in the National Skupshtina.

SECTION 85—The National Skupshtina can make a fully binding decision if there are one-third of all the members present in the sitting.

For a fully binding decision a majority of the votes of the representatives present is necessary. In the event of an equal division of votes, the proposal voted upon shall be regarded as lost.

SECTION 86—No bill can be passed in a legal

manner by the National Skupshtina until it shall have passed first through a competent committee.

Voting in the National Skupshtina is usually open: only elections are decided by secret ballot. A vote can be cast only in person.

Each bill must be voted on twice in the same session of the National Skupshtina before it is finally adopted.

SECTION 87—No one can ever call a representative to account for a vote which he has cast as a member of the National Skupshtina.

For all utterances and proceedings in exercise of a mandate, whether in a sitting of the National Skupshtina, or in a committee, or on an individual mission, or in an individual duty at the direction of the Skupshtina, representatives are accountable only to the National Skupshtina according to the provisions of the order of procedure.

SECTION 88—Without the authorization of the National Skupshtina no members can be held to answer for any crime of whatever degree, nor in any event or on any authority be deprived of their freedom, as long as their mandate lasts, unless they are caught in the very act of crime or misdemeanor. But even in this last event the National Skupshtina, if it is in session, shall be informed at once and shall give or refuse authorization for a competent trial to be carried on during the time of the session.

Right of immunity of the representative begins with the day of election.

If any one becomes a representative before a judgment against him on account of any crime is carried out, the authority which made the inquiry and investigation shall give information about this to the National Skupshtina, which shall give or refuse authorization for the continuance of the proceedings.

A member of the National Skupshtina can be held to account only for that act of which he is charged.

SECTION 89—To the National Skupshtina falls the exclusive right of maintaining order in its midst through its presiding officer. No armed force can be posted in the building of the National Skupshtina, nor in any courtyard, without the consent of the President of the National Skupshtina. Likewise no State officials can perform any acts of authority in the National Skupshtina without his consent.

No armed person may enter the building of the National Skupshtina except persons who are authorized to wear arms and are engaged in service under the National Skupshtina.

PART VIII.

Administrative Authority

SECTION 90—All the Ministers form the Council of Ministers, which stands directly under the King. The King names the President and the members of the Council of Ministers. The Ministers stand at the head of the several branches of the State Administration.

Ministers can also be without portfolio.

In the Ministries there can be placed, where the necessity is shown, State Under Secretaries

for one definite part of the business of these branches of the State Administration. State Under Secretaries, if they are chosen from Parliament, do not lose their mandate.

Ministers name the subordinate State officials according to the provisions of the law.

Ministers before entering upon their duty take oath to support the Constitution and be faithful to the King.

SECTION 91—Ministers are responsible to the King and to the National Skupshtina.

The King and the National Skupshtina can bring charges against Ministers for infringement of the Constitution and of the laws of the land committed in their official capacity. For wrongs which Ministers do by an illegal [act in] fulfillment of duty the State is responsible.

SECTION 92—Charges can be brought against Ministers both during the time of their service and for five years after retirement.

A proposal that charges be brought against a Minister must be made in writing and must contain the charges.

If the National Skupshtina brings charges against a Minister a decision to bring the Minister before the court shall be brought by a majority of two-thirds of the votes of the members present.

SECTION 93—The State Court shall try Ministers. The State Court is formed of six Councilors of State and six Court of Cassation Judges, whom each of these bodies shall choose by lot in their plenary sittings. The President of the Court of Cassation is the President of the State Court.

For those acts which are not foreseen in the said law punishment shall be fixed by the law about Ministerial responsibility.

Further details about Ministerial responsibility shall be set forth in a special law.

SECTION 94—Administrative authority can make the necessary regulations for the application of laws.

By regulations with legal force administrative authority can regulate relations only on the basis of legal authorization which shall be given especially for each case.

The National Skupshtina can by resolution declare without force in whole or in part regulations set forth on the basis of legal authorization.

Regulations may be published, and in them must be cited each time the law on the basis of which they are made.

SECTION 95—Administration in the kingdom shall be conducted by departments, circuits, districts and communes.

The division into departments shall be made by law on natural, social and economic bases. One province can have at most 800,000 inhabitants.

Two or more smaller departments can be joined into one larger department. The departmental assemblies of the departments concerned shall make the final decision about this. But even such a department cannot have more than 800,000 inhabitants.

At the head of each department shall be a Great Zupan, whom the King shall appoint and who shall conduct the business of State admin-

istration in the department through State officials.

SECTION 96—For business of a city, commune, district and departmental character there shall be established local civil autonomous organizations for the city, commune, district and department on an elective basis.

A special law shall be passed regarding the government and autonomy of cities.

Autonomous business shall be cared for by special autonomous officials, according to the provision of the law.

In the range of activity of the autonomous departmental administration shall fall the following sorts of business:

1. Departmental finances: (a) Making up the departmental budget; (b) disposition of departmental public taxes, which are fixed on the basis of the law by the department to cover departmental expenditures.

2. Departmental public works, as also building prescriptions.

3. Care for the furthering of departmental economic interests: Agriculture, stock raising, vine culture, fruit culture, forestry, lake and river fisheries, hunting, as also for technical improvement of the land.

4. Administration of public property.

5. Care for the public health in the departments, as well as for all institutions, through which the health status of the department may be furthered.

6. Care about social problems in the department.

7. Departmental humane institutions.

8. Departmental means of communication.

9. Co-operation in the furtherance of enlightenment in the department.

10. Co-operation in industrial education in the department.

11. Establishment and maintenance of seed institutions, tourist clubs, mutual loan and insurance associations.

12. The expression of opinion at the request of the Government about projects in conformity with the law, which concern the department, as also in general about all other subjects for which the Government asks their opinion.

Also other business can by law be entrusted to the departmental, autonomous administration.

If the department with its means should not be able to carry out the several matters enumerated, the State shall on demand of the departmental Skupshtina and by decision of the National Skupshtina give the necessary means or shall itself take over the carrying out of these matters.

SECTION 97—Autonomous [local] units shall have their yearly budgets. The administration of autonomous units shall be under the supervision of the Minister of Finance and the chief control shall be regulated by special laws.

SECTION 98—The departmental organs of administration are the departmental Skupshtina and the departmental committee.

The departmental and district Skupshtina shall choose for themselves a President, who shall preside over their sittings. They shall choose also a departmental and district committee.

By exception, joint competence can be as-

signed by law for the same branches of State and autonomous work in the department.

The Great Zupan is the chief official of the general State administration in the department, in so far as special competence for one or more departments is not given by law for special business of State administration.

The law shall decide what State business the Great Zupan shall handle in consultation with the departmental committee.

Further details about authority and competence of autonomous bodies—city, commune, district and departmental—shall be fixed by a special law.

SECTION 99—The departmental Skupshtina has the right to make departmental regulation about those matters of its competence. The Great Zupan of the department shall proclaim departmental regulations.

The Great Zupan of the department shall stay from proclamation regulations which he finds are not based on the Constitution and the law. In this event he shall bring such regulations with his opinion to the Council of State for decision, and shall inform the competent Minister about this. If the Council of State shall find that the said regulations are not based on the Constitution or on any law, they shall not be proclaimed or published. The Council of State is obliged to bring in their decision within two months. If the Council of State shall not bring in their decision in that time, the decision of the Great Zupan shall stand.

SECTION 100—The departmental committee shall prescribe provisions and directions for the fulfillment of departmental regulations.

SECTION 101—The State administrative authority exercises supervision over autonomous business authorities through the Great Zupan and individual expert officials. The Great Zupan has the right to stay from execution all decisions of autonomous officials which should not be based on the Constitution, the laws or departmental regulations. Against a ruling of the Great Zupan a complaint can be lodged with the Council of State within the time limit of the law. If the Council of State should not bring a ruling within a month at furthest from the date of its receipt, the decision of the Zupan shall stand.

SECTION 102—For matters of administrative nature administrative courts shall be established. The law shall fix their seat, competence and organization.

SECTION 103—The Council of State is the highest administrative court. The King shall appoint members of the Council of State on the advice of the President of the Council of Ministers, and in the following manner: The King shall name half the members from twice the number which the National Skupshtina proposes, and the National Skupshtina shall choose the other half from twice the number which the King proposes. The filling of the administrative positions of the Councilors of State shall be fixed by a special law which can also deviate from the above stipulations.

For members of the Council of State only those higher officials or public workers who have Faculty (university) preparation or ten

years' State service or public work can be appointed.

At least two-thirds of the Councilors of State must have diplomas after completing [the work of] a legal Faculty.

Members of the Council of State can be removed from their places, transferred to another branch of State service and placed on pension only on legal action. But when they reach 70 years of age or become ill, so that they cannot fulfill their duty, they must be placed on pension.

The Council of State has the following duties:

1. As the highest administrative court it decides on matters of administrative nature. Matters pertaining to a complaint against a ukas and Ministerial decrees shall be decided by the Council of State in first and last instance.

2. As an administrative organ it heads State Administration and decides about acts of administrative nature for which its approval is not necessary according to special laws.

3. It exercises supervisory authority over autonomous units according to the provisions of the law.

4. It decides conflicts about competence between State administrative authorities as well as conflicts about competence between State and autonomous authorities.

5. It decides also about other questions which shall be placed within its competence by law.

Further details about the constitution of competence and its handling under the Council of State shall be prescribed by special law.

SECTION 104—State competence shall be established according to the prescriptions of the law.

SECTION 105—It shall be prescribed by law how officials shall be named.

SECTION 106—The names of State officials, rights and duties, pay and pensions of State officials according to their office shall be fixed by the law about officials.

SECTION 107—State officials are officials of the whole State and shall work for the general interest.

The use of their authority and position by State officials for partisan aims, as also the influence of a chief on State officials, shall be punished according to the law.

SECTION 108—An official to whom a permanent place shall be assured by law cannot be removed against his will without process of a regular criminal or disciplinary court.

PART IX.

Judicial Authority

SECTION 109—Judges are independent. In the rendering of justice they shall not stand under the influence of any authority, but shall judge according to the law.

Judges and judicial competency can be established only by law. But in no event can extraordinary Judges or commissions be established for investigations.

In family and supervisory business of the Muslims State Sheriat Judges shall act.

SECTION 110—For the whole kingdom there

shall be only one Court of Cassation, with its seat at Zagreb.

The Court of Cassation is competent also for the settlement of conflicts between administrative, civil or military authority and judicial authority. Likewise it is competent, also for the settlement of conflicts between administrative and regular courts.

SECTION 111—The appointment of Cassation and Appellate Judges and of the President of courts of the first rank shall be made by the King's ukas (decree) on the advice of the Minister of Justice from among the number of candidates which the original body shall select, the constitution of which shall be fixed more exactly by law.

SECTION 112—The Judges of all courts are permanent. Judges cannot be deprived of their office nor from any cause be relieved from duty against their will, without process of regular courts or disciplinary process of the Court of Cassation. Judges cannot be held to account for their judicial work without approval of a competent Appellate Court. For members of the higher courts the Court of Cassation shall give this approval.

A Judge cannot, even provisionally, be assigned to another paid or unpaid public service without his own consent and the approval of the Court of Cassation.

A Judge can be transferred only at his own consent.

A Judge can be in service only until reaching the sixty-fifth year of his life and the Presidents of the Cassation and Appellate Courts till the age of 70 years. Before that time Judges can be placed on pension only on written request or if they have so failed physically or mentally that they cannot fulfill their duty. The Court of Cassation shall bring in the rulings about pensioning in this last event.

PART X.

State Economy

SECTION 113—Each year the National Skupshtina shall draw up a State budget, which it shall fix only for a year.

The budget must be spread before the National Skupshtina at furthest a month after its coming together. At the same time with the budget shall be spread before the National Skupshtina for survey and approval also a complete account of the expenditures of the last fiscal year.

The National Skupshtina cannot increase the showing of the parts, but can decrease and omit them.

The budget shall be approved by parts.

The manner of construction and completion of the budget shall be prescribed by law.

The savings of one part of the budget or budget year cannot be expended in satisfying the needs of another part or year, without the approval of the National Skupshtina.

SECTION 114—Until the budget laid before it shall be approved, the National Skupshtina can approve one-twelfth for one or more months. If the National Skupshtina is dissolved before the budget is fixed, the budget of the preceding fiscal year shall be prolonged by ukas for at most four months.

SECTION 115—State expenditures and general State outlay shall be fixed by law.

The National Skupshtina shall decide about State loans. The Government is obliged to lay before the National Skupshtina, through the Chief Control, a punctual attested report, whether arrangements about loans are concluded and fulfilled in the sense of the law.

SECTION 116—Tax obligation is general, and all State public expenditures are general for the whole State.

[A] tax shall be paid according to taxable worth, and progressively.

The King and heir to the throne shall pay State taxes on private property.

No help whatever, permanent or temporary; no gift or loan can be given from the State Treasury if it shall not be based on the law.

SECTION 117—The Minister of Finance shall have control of State property, so far as the laws do not establish otherwise.

A special law shall be passed about the manner of disposal of State goods.

[The] right of monopoly shall fall to the State. Ores, medicinal waters and springs and forces of nature are State property.

A special law shall be passed about the giving over of mining, industrial or, indeed, any other privileges.

SECTION 118—A Chief Control shall be established for the oversight of State accounts and supervision of the completion of State and provincial budgets and as head of the Court of Accounts.

The President and members of the Chief Control shall be chosen by the National Skupshtina from a list of candidates, which the Council of State shall prepare and in which shall be nominated twice as many candidates as there are places vacant.

The President and half the members of the Chief Control must be jurists (i. e., members of the bar). The other members must have been Ministers of Finance or must have had ten years of proved service in financial employment.

The President and members of the Chief Control shall enjoy the same right of tenure as the members of the Council of State.

Further details about the composition, authority and procedure of the Chief Control shall be set forth in a special law.

It shall be fixed by law in what events there shall be grounds for complaint against the ruling of the Chief Control to the Court of Cassation.

The Chief Control shall survey, justify and liquidate accounts of general administration and all bills rendered against the State Treasury. It shall watch that no expenditure overstep the budget, and that no sum shall be carried from one part of the budget into another. It shall close up the accounts of all State administration and is obliged to bring together all evidence and information.

A complete State accounting shall be laid before the National Skupshtina in conjunction with explanations of the Chief Control and that, at longest, for one year, reckoning from the completion of each fiscal year.

PART XI.

The Army

SECTION 119—Military obligation is general, according to the ordinances of the law. The organization and size of the army and fleet shall be prescribed by law. The King, depending on the advice of the Minister of War and Marine, shall prescribe the formation of units for both within the prescriptions of the law. How much of the army shall be held under the flag shall be decided each year by the budget.

SECTION 120—The military courts are independent. In rendering justice, the Judge shall not be under any authority, but shall judge according to the law.

The Judges of the Military Appellate Court shall be permanent, but the permanency or the Judges of military courts of first instance shall be regulated by the law.

Judges of a military court of first instance cannot be held to account for their judicial work without the approval of the Military Appellate Court, and Appellate judges without the approval of the Court of Cassation. Judges of a Military Appellate Court can be transferred only by their own consent, and in the event of promotion to a higher position, and Judges of a military court of first instance in accordance with the ordinances of the law.

SECTION 121—The civil courts shall judge crimes which a civilian associated with the army commits, but during time of war military courts.

SECTION 122—No one, on reaching the age of 20 years, can enter State service or remain in it if he has not served his year according to the ordinances of the law or been excused from military service.

SECTION 123—For the maintenance of internal order, the military can be used only on the request of competent civil authorities.

SECTION 124—A foreign army cannot be taken into the service of our State, as also the army of our State cannot be placed in the service of any foreign State without the previous approval of the National Skupshtina.

PART XII.

Changes in the Constitution

SECTION 125—The National Skupshtina, with the King, shall decide about changes in the Constitution.

SECTION 126—A proposal that something be changed or supplemented in the Constitution can be made by the King or the National Skupshtina.

In such proposal must be named expressly all the points of the Constitution which should be changed or supplemented.

If the King has made the proposal, he shall impart this to the National Skupshtina, but the National Skupshtina can be prorogued at once afterward, and shall be convened anew after four months at longest.

If such proposal originated from the National Skupshtina, decision shall be made about it on the basis foreseen for decisions of legal (constitutional) proposals with a majority of three-fifths of the whole number of members.

If the proposal shall be adopted in this manner, the National Skupshtina shall be prorogued and convened anew at latest in a period of four months from the day when the proposal was adopted.

And in one and the other event the National Skupshtina can decide only about those changes and supplements of the Constitution which the proposal on the basis of which it was called together contains.

The National Skupshtina shall make decisions with a majority of half plus one of the total number of its members.

SECTION 127—In the event of war or general mobilization the National Skupshtina can suspend for the whole territory of the State, and for the event of an armed uprising for any single part of it, by law temporarily these rights of citizens: The right of assembly, coming together and taking counsel, freedom of movement, noninfringement of dwelling, correspondence and telegraphic communication. For the same reason the freedom of the press can be limited in the event of an armed uprising for the part of the State concerned.

PART XIII.

Transfer of Authority

SECTION 128—In the first session of the Skupshtina after the proclamation of the Constitution the Heir to the Throne Alexander as the Regent of King Peter I. in the sense of Section 58 of the Constitution shall take the oath:

"In the name of his Majesty King Peter I., I swear with the help of God that I will hold the Constitution inviolable; that I will rule according to it and the laws, that I will preserve the unity of the nation, the independence of the State and the integrity of the territory of the State, and that in all my efforts and work I will have the good of the nation before my eyes. So help me, God. Amen!"

SECTION 129—After this the national representatives in the sitting of the Skupshtina before the President of the Skupshtina shall take this oath:

"I [name] swear that with the help of God and by all that is most holy to me under the law and dearest to me on earth, I will hold true to the Constitution in my work as a representative, and that I will have ever the good of the King and the nation before my eyes and the unity of the State in my heart and mind."

SECTION 130—The provisions and provisional laws, with the signatures of the Provisional Government, published in the Official News, given out for the time from Dec. 1, 1918, until the entering into force of this Constitution, shall remain further in force as laws so far as they are not rescinded or changed by other laws.

Within the period of three months from the entering into life of this Constitution the Government shall lay before the Constitutional Committee all those provisions set forth for the time being in the first sitting which are to be annulled, and the Constitutional Committee shall render its decision as to what shall be annulled.

SECTION 131—Until the passing of laws regarding the organization of the Ministries, re-

garding the Council of State, regarding the Chief Control, regarding the order of business in the Council of State and regarding Ministerial responsibility, there shall be extended provisionally over the whole State the force of the corresponding laws of the Kingdom of Serbia, with changes and additions which shall be carried out in the manner foreseen in Section 133.

SECTION 132—The statute signed by the King Aug. 30, 1909, and published in the Serb News Feb. 26, 1911, shall remain in force until a new statute shall be passed in the sense of Section 57 of this Constitution.

SECTION 133—For the correlation of legislation and administration in the [newly] founded land a short course of procedure shall be established.

All legal proposals which have for their object the correlation of legislation and administration, originating either from the Government or from individual representatives, shall be referred through the President of the Skupshtina to a legislative committee.

The report of the legislative committee with the proposal which the committee has adopted shall be referred to the National Skupshtina for action. Regarding these legal proposals the Skupshtina shall decide by roll-call vote once and for all whether it shall accept or reject them. Before the vote each Parliamentary group may give short explanation through one representative.

Such rather brief procedure for correlation of legislation and administration in the land can be applied within five years from the day of entering into force of the Constitution, but this time can also be extended by law.

As long as the Constitutional Skupshtina shall last as a legislative Skupshtina the Constitutional Committee shall fulfill the duty of the legislative committee.

SECTION 134—After the entering into force of this Constitution there shall remain for the time being the provisional provincial administrations. A provincial Regent shall exercise administration through a chief of department under the direct supervision of the Minister of Internal Affairs, but as the organ of competent Ministers on the basis of laws and ordinances hitherto prevailing.

Laws passed after the entering into force of this Constitution cannot assign to provincial administrations new duties.

Regarding the progressive transfer of the business of the provincial administrations to the individual Ministries and to the individual departments, according to provisions set forth in the manner foreseen in Section 135, the Council of Ministers shall make decisions in agreement with the provincial Regent concerned.

As long as the provincial administrations shall be prolonged the subordinates of the several Ministries in the provinces are obliged to consult the opinion of the provincial Regent previous to a Ministerial decision for a project of theirs of general character or which bears on the official personnel.

Parties have the right of appeal to the Council of State as a first and last appeal about ad-

ministrative conflicts in which the provisional provincial administration decides. With respect to this duty, whatever is necessary is prepared in the Council of State. An administrative conflict is only between a private or legal person on the one side and an administrative authority on the other; and they arise there where by regulation or decision of an administrative authority the right of a private or legal person is injured contrary to legal provisions. According to this there is no conflict there where it is established by law for the provisional provincial Executive or administrative authority how he shall handle, judge or decide a matter.

SECTION 135—The project of a law about the division of the country into departments and for the establishment of departments (Sections 95 and 96), as also about the transfer of the previous provincial authority to the Ministerial and Departmental Governments (Section 134), the Government must present to the National Skupshtina for adoption within a period of four months. If the National Skupshtina should not act on these laws within a period of three months, the same shall be carried out under the provisions of Section 133 regarding the correlation of legislation and administration in the country; and in so far as these laws shall not be passed in accordance with this rather short method of procedure in the further time of two months, there shall be made by a decree of the King within one month a division of the country together with the apportionment of the provincial administration in the sense of Sections 95 and 96 of the Constitution. This decree can be changed only in a legal manner. If this division of the country should be made, not in accordance with the first nor the second sentence of this section, but in accordance with the third, then there shall be established in Chorvatia and Slavonia four departments.

Likewise, also, if the country be divided by higher decree, according to this section, Trzna Gora (Montenegro), of 1913, with the region of Boka Kotorska, but without the circuits of Plevlje and Bjelopolje shall constitute a department and shall fulfill the functions of a department according to this Constitution.

In accordance with the law about the apportionment of departments, Bosnia and Herzegovina shall be divided into departments within their present bounds, until this shall be enacted by law, the circuits in Bosnia and Herzegovina shall constitute departments. Uniting of these departments shall be carried out by decision of the Departmental Skupshtinas of the departments concerned by a majority of two-thirds of the votes cast within the limitations fixed by the third paragraph of Section 95 of the Constitution. Single communes or districts can be separated from their departments and annexed to another department within the present bounds of Bosnia and Herzegovina or outside of them, if their autonomous representatives consent to this by a decision of three-fifths of the votes and the National Skupshtina approves this decision.

The *circula* (*županates*) shall remain as units of State administration as far as they are not

abolished by law. The law shall regulate their circuit work.

Liquidation of the autonomous circuits shall be carried through in favor of the departments and districts as soon as the departments shall be organized.

SECTION 136—Until the new law about officials foreseen in Section 106 of the Constitution, the present law about the rights and duties of officials shall hold. The new law shall contain the transfers of authority in the whole compass and schedule of the officials of administration and shall be passed at furthest within three years from the entering into force of this Constitution, until which time the list of officials shall be extended and revised.

SECTION 137—The Presidents of the courts and all Judges to whom permanency is guaranteed by the Constitution or the law shall be maintained further in their positions and duties in court. In other regions than the former Kingdom of Serbia, permanency for the several Judges can be instituted within a period of one year from the adoption of this Constitution. In this time the Minister of Justice will form a commission of the Judges of the higher courts for these regions, with whom he shall formulate a decision, for what Judges by name this permanency shall not hold.

The necessary filling of administrative Presidencies and judicial positions shall be done according to the laws which are now being formulated.

Judges, who are appointed or shall be appointed in accordance with the law about the provisional filling of official positions during time of war or according to any other provisional law or decree, must pass their judicial examination within a year and a half after the entering into force of this Constitution. Whoever of them does not do this within the time decreed, shall be at once relieved from judicial duty.

The Court of Cassation in Belgrade, the Hundred Seven in Zagreb, the High Court in Sarajevo, the Great Court in Podgoritsa and the division of the Court of Cassation in Novy Sad shall continue as hitherto until the new establishment of one Court of Cassation for the whole land and shall be regarded as part of the Court of Cassation.

SECTION 138—The publishing—i. e., the circulation—of newspapers and printed matter can be forbidden if they stimulate hatred against the State as a whole, religious or race discord; likewise if they indirectly incite citizens to change the Constitution or the laws of the land by force, merely if it is seen clearly from the title that they thereby aim at such incitement of the citizens. The provisions of Section 13, Paragraph 3, about the enforcement of suppression, apply also here. If express necessity arises these provisions can be annulled by law.

SECTION 139—Until a law shall be passed about privileges in the sense of Section 117 of the Constitution, all privileges assigned until the day of the proclamation of the Constitution shall be reviewed in the manner foreseen in Section 123 of the Constitution. In the privilege for the cutting of State forests the terms

fixed in the review shall have retroactive force from Dec. 1, 1918.

SECTION 140—When this Constitution shall enter into force the Constitutional Skupshtina called Nov. 28, 1920, shall be transformed into an ordinary legislative Skupshtina with the time of duration provided by the electoral law for the Constitutional Skupshtina.

SECTION 141—Until a new law is passed regarding the election of representatives on the basis of the Constitution, that law shall continue in force on the basis of which the elections were held on Nov. 28, 1920, with whatever changes shall be made in conformity with this Constitution. These changes shall be made in the manner provided in Section 133 of this Constitution and shall have force as soon as they receive the sanction of the King.

The committee can make the necessary changes in time also, which that law prescribes, but besides that it is empowered to prescribe the manner, too, in which shall be made the

apportionment of the mandates to the several candidate lists in proportion to the number of votes.

PART XIV.

Concluding Ordinances

SECTION 142—This Constitution with the transfer of authority shall come into force when the King signs it, but shall take on binding force when it is published in the Official News. From that day all legal provisions which might be contrary to it shall cease to have force.

The President of the Council of Ministers and all the Ministers shall care for the enforcement of this Constitution.

We recommend to our Provisional Ministry for the Constitutional Skupshtina and Unification of the Laws that this Constitution be published, and to all the Ministers that they care for its enforcement; we enjoin the authorities then that they act according to it, and one and all that they submit to it.

THE END OF THE HAPSBURGS

*Text of the Dethronement Act which debars any member of the House of Hapsburg from assuming the Hungarian throne, by election or otherwise—
Debate that preceded the passage of the bill*

THE text of the Dethronement act of Nov. 6, 1921, which deposed the Hapsburgs from all future title to the throne of Hungary, together with the Government report recommending the bill to the National Assembly, is printed below. The third paragraph is somewhat ambiguous, and might, so far as the Hapsburgs are concerned, be construed "at a suitable time" as nullifying the first and second paragraphs. The Ambassadors' Conference had demanded that Hungary pass a law deposing the Hapsburgs and revoking the Pragmatic Sanction, to some extent under pressure from the Little Entente. Dr. Benesh, the Prime Minister of Czechoslovakia, had stated with considerable definiteness that the Little Entente was determined, after the last adventure of Karl, to secure once and for all the deposition of the Hapsburgs. The debate in the Hungarian National Assembly, when the Government introduced this bill, showed that both the Government and the majority of parties at present represented were bitterly opposed to the measure.

Because of the ambiguity of the third paragraph the representatives of the Great

Entente informed the Hungarian Government in a note (Nov. 5) that the bill was inadequate, as it did not expressly exclude the members of the House of Hapsburg from election as King. This occurred on the day (Nov. 5) on which the bill was passed in the Hungarian National Assembly. Subsequently (Nov. 8) the Hungarian Government issued a declaration, subject to ratification by the Assembly, correcting the ambiguity of the statute by an interpretation which definitely bars the election of a Hapsburg as King.

REPORT RECOMMENDING THE BILL

The text of the Government report recommending the bill that deposed the Hapsburgs, followed by the text of the law, is as follows:

To the sorely tried Hungarian Nation the time has come for further severe trials. In connection with the recent events the demand has been made of the Hungarian State to declare that its crowned King is deprived of his throne and his dynasty of its right of succession. The Hungarian State has never been faced with so hard a decision as this. Foreigners are now interfering with the independence of Hungary, guaranteed by the Peace Treaty, and with her internal affairs. They are demanding a measure to which Hungary has never bound

herself, the execution of which is not laid upon her by the Treaty of Trianon, and which cannot be brought into harmony with the basic principles of her Constitution. In case the demand is refused, they threaten the country with armed attack. The Government cannot take the responsibility of exposing the nation, deprived of its rights by the World War and the devastations of both revolutions, to a fresh war which would menace the very existence of the fatherland, for it places all its hopes of renewed prosperity and power for the country in the industrious habits which may be developed in peace. It has, therefore, resolved, in view of the crisis in the country—after resorting in vain to every possible peaceful means of maintaining peace, averting the menace to the existence of the nation, and safeguarding the free expression of the people's will—to bring the following bill before the National Assembly in fulfillment of the demand of foreign powers.

The bill satisfies the above-mentioned demand of the powers by declaring expressly in Clause 1 that King Charles's royal rights have ceased to exist, and on the other hand in Clause 2 by repealing the Pragmatic Sanction contained in Acts I. and II. of the year 1723, and all other laws upon which the succession of the House of Hapsburg is based. Consequently the bill decrees at the same time that the privilege of electing a King reverts to the nation. It was, however, necessary to provide that the extinction of the succession of the dynasty could not be held to involve any further consequences affecting the constitutional form of the Hungarian State. The bill, therefore, provides that the

nation retains the constitution of a kingdom unaltered. By this provision the National Assembly, in accordance with Clause 2 of Act. II. of the year 1920, which gives it the right, as the legal representative of Hungarian State sovereignty, to determine the method by which the State shall be governed, finally decides the future constitutional form by declaring for the ancient institution of royalty for the future in conformity with the feelings and traditions of the Hungarian Nation.

[From the *Prager Presse*, Nov. 4, morning edition.]

TEXT OF DETHRONEMENT ACT

1. King Charles IV.'s rights as a ruler have ceased to exist.

2. The Pragmatic Sanction, contained in Acts I. and II. of the year 1723, which determines the succession to the throne of the House of Austria (*Domus austriaca*), has lost its validity, and thereby the right of free election of a King has reverted to the nation.

3. The nation retains the ancestral Constitution as a kingdom unchanged, but postpones the choice of a King to a later date and instructs the Government to make proposals in this matter at a suitable time.

4. This act shall come into force on the day of its promulgation.

[From the *Neue Freie Presse*, Nov. 3, morning edition.]

DEBATE ON DETHRONEMENT BILL

The measure permanently debarring Charles and the rest of the Hapsburg

Typical harbor on the south shore of the Island of Madeira, 400 miles off the west coast of Morocco, to which island the former Emperor of Austria-Hungary has been exiled

(© Keystone View Co.)

Ex-Emperor Charles and his wife, former Empress Zita, kneeling while high mass was being celebrated at a railway station near Budapest. They had just arrived in Hungary and still expected to become the rulers of that country

family from the throne was passed by the Hungarian National Assembly on Nov. 3, 1921, but with great reluctance—under the imminent threat of armed invasion by the neighboring States of the Little Entente. The debate that preceded the passage of the bill is a matter of historical interest. It was, in part, as follows:

Count Bethlen, Premier—The bill now before the National Assembly is not a consequence of normal constitutional development, but the result of the events of the past two weeks. It makes a break in the development of 400 years by a stroke of the pen. Events had matured rapidly as the result of two circumstances: First, the frivolous attempt to which the King and the dynasty have been sacrificed [cries from members of the Friedrich Party: "Long live the King!"] Answering cries from members of the Smallholders' Party: "You are a disgrace to Hungary!"] that unprincipled attempt to which the King, the dynasty and the peace of the nation have been sacrificed; secondly, the eagerness and greed which our neighbors showed as a result of the attempt, with the object of interfering in our internal affairs

and compelling us by force of arms to yield to their demands. The events are too close for any one who played a part in them to claim to judge impartially. History will pronounce judgment on these events, and I, for my part, submit to that judgment.

* * * Hitherto we have been represented as the disturbers of the peace, desirous of interfering with armed force in the affairs of others and pursuing aggressive ends. Now Europe can see for herself that it is we who have saved the peace of Central Europe. Although we did nothing to endanger peace, yet it was endangered. This is explained by the fact that within the Carpathian basin Hungary has not ceased to attract all the peoples living in the basin. The fact that the Hapsburg problem has been raised in this form is, perhaps, also to be explained by the fact that, although from the international point of view it is clearly an internal question for Hungary, it becomes a question of foreign policy only if it is true that even the dying theories and traditions which the peoples living around us connect with the dynasty are still strong enough to break up the unity of neighboring States. [Applause continuing for several minutes.] It has not hitherto been clear what need there is, from the point

of view of defense, for a federation of States with 42,000,000 subjects to take hostile action against a State with 7,500,000 inhabitants. In the light of present events we can explain it thus: either that federation is necessary—in which case it is a confession of inner weakness by those States—or else it is unnecessary from the point of view of defense, and then it aims at aggression.

Count Apponyi—Article 73 of the Peace Treaty stipulates for the independence and integrity of Hungary. * * * Moreover, the Peace Treaty of Trianon contains the Covenant of the League of Nations. No armed interference or threat of armed attack is permissible until the matter has been before a court of arbitration. Only if one party does not submit to the award can there be any question of military action for a period of three months reckoned from the summons of the League of Nations. A conflict has arisen between Hungary and her neighbors. Hungary has therefore the right to demand that the League of Nations shall require her to submit the matter to arbitration. Any attempt at or threat of armed intervention is a flagrant

breach of the Covenant of the League of Nations, against which we must protest with such vehemence that we are heard beyond the frontiers of our country. [Stormy applause.]

Nobody deprecates the recent unfortunate events more than I. Nobody has more cause for regret than the legitimists. Many patriots were in the throes of a hard mental struggle, and each individual decision must be judged historically, for patriots might in all good faith think this or that point of view best for their country. The Government Ministers followed the voice of conscience, and took steps which they assumed to be essential in the interests of the country. They used armed force to prevent the return of the King. The neighboring States ought to have learned this with the utmost satisfaction, since the Hungarian Nation, on its own initiative, adopted a standpoint which they demanded. But they were not satisfied. The question is now no longer one of the honor and dignity of the nation, but of the personal safety of every citizen, since the surrender of a Hungarian, and that the King, is demanded. The Government has not been able to resist. But I regard it as my duty not only to protest in the interest of all Hungarian citizens but to give expression to the burning sorrow of all Hungarians at this violation of the legal security of all Hungarian citizens and of the sacred crown, which embodies the glory and dignity of the nation. * * * [Count Apponyi with twelve other Deputies leaves the Chamber.]

The President of the National Assembly, Gaál—According to Count Apponyi, the bill which the National Assembly is just about to pass is invalid. According to Paragraph 1 of Act I. of the year 1920, the National Assembly constitutes the sole representative of national sovereignty. * * * From this it appears that at the present moment the Hungarian Nation has only one constitutional and legal representative body, that is the National Assembly. Count Apponyi himself took part in passing this act. I must, therefore, state that Count Apponyi's declaration is contrary to the law. The freedom of speech of the Deputies cannot go so far as to allow them to cast doubt upon the validity of the existing laws. [Exclamations of approval from all parts of the House.]

Deputy Rassay proposes that in Clause 1 the provision be included that all members of the House of Hapsburg, now living and in future, should be excluded forever from the reversion of the Hungarian throne.

Count Bethlen begs that the clause be adopted in its original form.

Deputy Rubinek [reporter] makes the same request.

The bill is passed in its original form.

[From the *Prager Presse* and *Neue Freie Presse*, Nov. 5, 1921, evening edition, and Nov. 6, morning edition.]

On Nov. 6 the Dethronement act was promulgated and came into force. Two days later the Hungarian Government, at the demand of the Great Entente, issued the declaration that removed the ambiguity of Paragraph 3 and satisfied both the Council of Ambassadors and the Little Entente.

Whom the Allies have banished to Madeira
and barred from the Hungarian throne

IRISH RATIFICATION OF THE PEACE TREATY

Historic debate that ended in acceptance of the covenant making Ireland a Free State with rights of a British Dominion—Resignation of de Valera and election of Arthur Griffith—Provisional Government headed by Michael Collins

[PERIOD ENDED JAN. 18, 1922]

AS the signing of the Irish Free State treaty in London was the outstanding Irish event of December, so the ratification of that treaty by the Dail Eireann at Dublin was the great event of January. After long and bitter debate, which bade fair to create a dangerous split in the ranks of the Irish patriots themselves, the treaty was ratified, on Jan. 7, by a vote of 64 to 57. Thus by a majority of 7 the anxiously awaited decision was determined in favor of the covenant making Ireland a Free State within the British Empire.

Events leading up to this conclusion were at times of a tense and dramatic nature. At the resumption of the debate, on Dec. 19, Arthur Griffith and Eamon de Valera stood out prominently as the leaders for and against the treaty. With sincerity conceded to both, a plain, common-sense, reasonable man was found opposed to a very fluent, loud-voiced, unbending extremist who believed that Ireland was losing all she had fought for. As the mover for ratification of the treaty, Mr. Griffith won sympathetic cheers when he referred to the heavy task placed upon the shoulders of the London plenipotentiaries. He declared they had brought back with them the evacuation of British troops, who had been in Ireland for 700 years; they had got a full right of fiscal control and equality for Ireland with all the other nations of the British Commonwealth. Yet they were told the treaty was a poor thing, and the Irish people were to go back on it and fight for a quibble. He declared that 95 per cent. of the Irish people were for the treaty. The seconder of the motion was Michael Collins, who spoke in the direct form of a man of action. Mr. de Valera followed, and asked for rejection of

the treaty, because it would not make Ireland a republic and would not bring peace to the nation.

At this session Mr. Barton told the dramatic story of the last hour of the Downing Street negotiations, at which the treaty had been signed. He said there was a proposal to refer certain matters to the Dail. Mr. Lloyd George told them they were there as plenipotentiaries, and they must accept or reject. "He gave us," said Mr. Barton, "till 10 o'clock to make up our minds whether we should stand by our proposals for external association, face war, and maintain a republic, or whether we should accept inclusion in the British Empire and make peace. The responsibility for that war was to rest directly on two of the delegates who refused to sign. For myself I declared I could not accept that responsibility." Mr. Barton accordingly signed the agreement. This disclosure brought the unofficial English answer that Mr. Lloyd George had not intended to hand the Irish delegates an ultimatum of peace or war, but in the stress of that fateful hour, when a decision had to be conveyed to the Ulster Premier, Sir James Craig, he had wished to impress upon them most earnestly the consequences of rejection.

The meeting of the 20th was largely taken up with discussion of "Document 2," or de Valera's alternative treaty, which had been the subject of argument for three days in secret session. As a cat out of a bag, de Valera's oath was read by Mr. Milroy, after demanding to know if they were to take the responsibility before all humanity and all history of sending young men and women to their death for that. The oath ran as follows: "I do swear to bear true faith and allegiance to the Constitution of Ireland and to the treaty of association of Ireland with the British Commonwealth of nations and to recognize the

King of Great Britain as head of the associated States." Mr. de Valera later explained the difference between his oath and that contained in the treaty. He said: "The word 'Constitution' occurs in both oaths, but in one it refers to a Constitution in which there is not a vestige of British authority. The other oath is one in which the British King must be recognized as the head of the Irish State. There is a tremendous difference, though the same words are used in both."

The Dail Eireann on Dec. 23 adjourned until Jan. 3. During this interval many local public bodies adopted resolutions in favor of ratification of the treaty. Many Deputies received telegrams urging them to support the covenant. The Clare County Council made de Valera their representative in the Dail, aware of the strong trend of public opinion, by adopting a resolution which requested him to work for the treaty. The press was almost unanimously for it.

A statement issued by Premier Lloyd George on Dec. 28 threw new light on the broad liberal principles of the treaty, and left little but the form of allegiance to the British Crown for the de Valera faction to continue its opposition upon. It read as follows:

The treaty places Ireland on an equality with the other States of the empire, gives Ireland the same claim to membership in the League of Nations, and every right that Canada has in law, fact and constitutional practice, and not merely rejection but alteration even of the treaty by Ireland or Great Britain would render it null and void. This would, indeed, be deplorable in the interests of both countries.

The British Government have gone to their utmost limit in the treaty, and to reopen the discussion, which was closed only after the most exhaustive consideration of every point, would be a fruitless proceeding and is impossible. A committee consisting of British Ministers, presided over by the Colonial Secretary, has been set up to deal with the evacuation of the British forces, the settling of an amnesty and the making of all necessary arrangements on the British side for transferring full executive responsibility to an Irish Provisional Government. The work of this committee, which had been in continuous session up to Christmas, and had proposed to sit through the Christmas holidays, is now unavoidably held up pending the approval of the treaty. But on approval it would be carried through with the utmost possible dispatch.

It is the intention of the British Government to hand over without delay their responsibilities to a Provisional Government which will function during the period of transition required for the

setting up of the Irish Free State administration.

When the Dail Eireann reassembled on Jan. 3 it plunged at once into a stormy debate. The Republicans signalized the occasion by issuing a new organ, The Republic of Ireland, to represent their principles. On its committee of directors were Charles Burgess, Austin Stack, J. J. O'Kelly, Mme. Markievicz, Miss MacSwiney, Sean

THE IRISH QUESTION SETTLED
LLOYD GEORGE: "Viola!"

Etchingam, Erskine Childers and E. O'Callaghan. In its first issue the paper declared that "war, the exposure of ourselves to wounds, toil and death, is as much our duty in a just cause as any other mode of sustaining justice."

A peace committee was formed on Jan. 4 by nine members, representing both parties, to try to discover a formula on which the two sides could agree. This committee reached a temporary agreement the next day, but de Valera vetoed it. At the public session of the Dail in the afternoon of Jan. 6 de Valera caused a sensation by offering his resignation; but he subsequently agreed to Griffith's plan to wait for a vote on the treaty if taken within twenty-four hours.

Jan. 7, 1922, proved to be a notable date in the history of Ireland. Ratification of the treaty with England was voted by 64 to 57, a majority of 7. The last hours of the debate were made memorable by a bitter attack on Michael Collins by Charles Burgess, who questioned the former's military

record. The vote in favor of the treaty was received with cheers, but was taken by de Valera as proof of his defeat. He rose immediately and said:

It will be, of course, my duty to resign, but I don't know if I will do it just now. But I have to say to the country and to the world that the Irish people established a republic. A vote of Dail is simply approval; the republic can only be disestablished by the Irish people. Therefore, until the Irish people in regular manner disestablish it this Republican Constitution goes on. Whatever arrangements are made, this is the supreme sovereign body in the nation. This is the body to which the nation looks for its supreme Government, and it must remain, no matter who is the Executive, until the Irish nation has disestablished it.

Subsequently in attempting to say a last word he broke down completely, a pathetic figure as he almost fell back into his seat and covered his eyes with his hands. Many of the President's supporters gave way to tears. Michael Collins, in pleading for a united committee of both parties to take over the machinery of Government, said: "The President has the same position in

my heart as he always had." After cheers had been given for the republic, Charles Burgess declared that so far as he was concerned he would see that discipline was kept in the army.

After a heated debate on Jan. 9, de Valera finally resigned the Presidency of the Irish Republic. On permitting himself to be offered for re-election, he was beaten in the Dail Eireann by a vote of 60 to 58. Both he and his Government thereupon passed out of official existence. On the following day Arthur Griffith was unanimously elected President by 64 Deputies of the Dail Eireann after de Valera and his followers had left the Chamber. The Dail then approved a Cabinet presented by Mr. Griffith, as follows:

MICHAEL COLLINS—Minister of Finance.
 GEORGE GAVIN DUFFY—Foreign Affairs.
 EAMON J. DUGGAN—Home Affairs.
 WILLIAM T. COSGROVE—Local Government.
 KAVIN O'HIGGINS—Economic Affairs.
 RICHARD MULCAHY—Defense.

The Griffith Cabinet held its first meeting on Jan. 11 and discussed plans for taking over the administration from Dublin Castle and for obtaining the release of the 1,010 political prisoners in Ireland and England. On the 12th King George issued a proclamation of amnesty "in respect to political offenses committed in Ireland prior to the truce of last July."

Mr. Griffith and his Cabinet summoned the Southern Parliament to meet on Jan. 14, and on that day it assembled, in Mansion House, Dublin, where it formally ratified the treaty with Great Britain, created a Provisional Government, and set up the Irish Free State.

The Southern Parliament, which was technically different from the Dail Eireann, should have consisted of 126 members, including the four from Trinity College; but the abstention of Eamon de Valera and the other Republicans reduced the number to 65. The one surprise of the session was that Michael Collins, and not Arthur Griffith, was nominated as Premier or head of the Provisional Government. The change of plan was to avoid the criticism that would come from the Republicans if Griffith became both the Premier and the President of the Dail Eireann.

Pierce Beasley moved and Joseph McBride seconded the resolution "that the instrument entitled 'the treaty between

[American Cartoon]

—Springfield Republican

It's only taken about 750 years, but it seems longer

Great Britain and Ireland—articles of agreement signed in London on the 6th day of December, 1921,' by the members of the Irish and British delegations respectively be and is hereby approved." With the same businesslike dispatch it was moved, seconded and carried, "that a Provisional Government be and is hereby constituted composed of the following members: Michael Collins, William Cosgrove, Eamon Duggan, Patrick Hogan, Finian Lynch, Joseph McGrath, John MacNeill, Kevin O'Higgins and such other persons if and as determined from time to time by the Ministers for the time being." All are Ministers of the Dail Cabinet except Professor John MacNeill, who is Speaker of the Dail, and Finian Lynch, who was Secretary of the Irish delegation at London.

Arthur Griffith then stated that the Provisional Government had been set up to supervise the carrying out of the treaty. The Dail Eireann, he said, would remain in being until the treaty had been executed and a general election held in Ireland. He concluded by making a plea for fair play for the new Administration.

The Southern Parliament under the Home Rule act had met, but it will never meet again, and so before it adjourned the minutes of its proceedings were read over and approved. All the members present signed them, and then adjourned to a garden to be photographed as a memento of the historic occasion.

The next day—Jan. 16—Michael Collins and the Irish Provisional Government took over Dublin Castle amid public rejoicings, and received in their hands all the powers of Government. The cheering crowd commented freely on the fact that the taking over of the ancient British stronghold fell to Collins, who until a few months ago was a fugitive sought by Dublin Castle. He and the other Ministers, who received a salute from the military and police guards, went to the Chief Secretary's office and then to the Council Chamber, where the formal transfer was carried out. Viscount Fitz-Alan, Lord Lieutenant, and the chief offi-

cials were present. An official report of the proceedings was issued as follows:

Mr. Collins handed to the Lord Lieutenant a copy of the treaty in which acceptance of its provisions by himself and his colleagues had been endorsed. The other members of the Provisional Government were then introduced. The Lord Lieutenant congratulated Mr. Collins and his colleagues and informed them that they were now duly installed as a Provisional Government, and that in conformity with Article XVII. of the treaty he would at once communicate with the British Government, in order that the necessary steps might be taken for the transfer to the Provisional Government of the powers and machinery requisite for discharge of its duties. He wished them every success in the task they had undertaken, and expressed the earnest hope that under their auspices the ideal of a happy, free and prosperous Ireland would be attained.

When Lord FitzAlan drove from the Castle he was cheered. The evacuation of Ireland by the British Army, consisting of 60,000 men, began the next day. Ten battalions had already been ordered to embark. Peace with England seemed at last assured to the Irish people.

Senate investigation of charges against officers of the American Expeditionary Force—Supreme Court decision forbids a manufacturer to control retail prices

[PERIOD ENDED JAN. 15, 1922]

THE Senate Committee appointed to investigate the charges made by Senator Watson of Georgia against officers of the American Expeditionary Force held sittings on Dec. 20 and 21, and then adjourned until after the holidays, when the sessions were resumed, beginning Jan. 4. Some of the charges made were that officers had shot down enlisted men in cold blood; that they had made courtesans of army nurses, that many men were hung without court-martial, &c. The cases thus far heard have tended to disprove these assertions.

Thus charges were made that Major H. L. Opie of Staunton, Va., as a battalion commander of the 116th Infantry, had deliberately and without provocation shot five enlisted men. Major Opie, who was decorated by President Wilson with the Distinguished Service Cross and by the French with the Croix de Guerre and the Legion of Honor, took the stand and denied the charges absolutely. Only one of the thirteen witnesses who were called testified against Major Opie. Lemuel O. Smith of Dublin, Va., swore that he had seen Major Opie shoot to death in a dugout on the Verdun front a young Virginia soldier named William Woolwine. He named three comrades, who, he said, were with him at the time. These three men in turn testified that Smith's accusation was false, while the soldier said by Smith to have been murdered was shown to have met a gallant death in battle.

As his comrades, one after another, denied the charge made against Major Opie, that young officer almost lost control of himself, and he wept when Colonel John Philip Hill of Baltimore testified that no more courageous, high-minded officer than Opie served under the American flag in France.

SUPREME COURT DECISIONS

The resale price maintenance policy adopted by the Beechnut Packing Com-

pany of New York, by which it controlled prices of its food and other products to consumers, was condemned as illegal on Jan. 3 by the United States Supreme Court. An order of the Federal Trade Commission requiring the company to desist from its methods was upheld by the court. The decision was rendered by a five to four vote, the Justices dissenting from the majority of the court being Holmes, McReynolds, McKenna and Brandeis. Opposing views were read by Justices Holmes and McReynolds, in which the practices of the company were defended and held to be entirely legal. The order of the commission that was thus upheld by the court provided that the company, its officers, Directors, agents, servants and employees, cease from directly or indirectly recommending, requiring, or by any means bringing about the resale of Beechnut products by distributors, whether by wholesale or retail, according to any system of prices fixed or established by the company.

On Jan. 9, the Supreme Court, ruling for the second time on the North Dakota statute imposing a special excise tax against corporations, joint stock companies and associations organized under the laws of other States and doing business in that State, declared it invalid, so far as it had been applied to interstate railroads. The case in which the decision was rendered was an appeal from the United States District Court, which sustained a tax assessed upon the business of railroads within the State. The tax was opposed on the ground that it was levied on interstate commerce, and for a period when the railroads were under Federal control, and when the railroad corporation was not doing business within the State.

GREATER SAFETY ON RAILWAYS

The Interstate Commerce Commission on Jan. 11 issued a sweeping order directing forty-nine railroad systems to equip con-

gested sections of their main lines with automatic train control devices, to be operated in connection with all road engines. The carriers were allowed until March 15 to show cause why the order should not become effective. It was specified that under the Transportation act the installation must be completed by July 1, 1924. Figures were presented to show the heavy cost of railroads caused by wrecks, and proof was advanced that these would not have occurred if there had been adequate automatic control devices. In directing the roads to make the installations, which would entail considerable expense, the commission stated that investigation by a special train council committee had demonstrated that the devices were practicable.

AID AGAINST PROFITEERS

Attorney General Daugherty, on Dec. 27, addressed a letter to every State Attorney General, in which he urged close co-operation between State and Federal law-enforcement officers, and suggested that the separate States should call conferences between Federal and County District Attorneys to attain this object. Violations of the liquor, food and fuel supply laws should be prosecuted without duplication of State or Federal effort, Mr. Daugherty declared. Though the Department of Justice did not seek to evade any of its responsibilities, he said, it was his opinion that the initiative for the enforcement of these laws lay with the State authorities. The majority of cases of retail profiteering, the Attorney General held, were interstate matters, and rested with individual States for correction.

Investigation by the Federal Trade Commission of the housefurnishing goods industry was directed in a resolution adopted by the Senate on Jan. 4. The resolution, sponsored by Senator Kenyon of Iowa, provided that the inquiry should embrace the causes of factory, wholesale and retail price conditions in the industry. There was no record vote on the resolution. The debate which preceded its adoption was characterized by a general attack on profiteers, trusts and combinations in restraint of trade. The commission was defended by several Senators, who contended that it could never be a "popular" Government agency because of the nature of its work.

BAN ON UNION ABUSES

The Lockwood Committee of the New York State Legislature served a warning, Dec. 20, on upward of 1,000,000 members of labor unions in New York State, to the effect that it would expect them to eliminate existing abuses and regulations that limit efficiency, retard production and violate the law, and that if the reforms were not made voluntarily, legislation would be enacted to remedy the abuses. The communication embodied approximately fifty reforms and abuses. The latter cover restriction of membership, high initiation fees, limitation on the number of apprentices, the issuance of permit cards to non-union men, the auditing of books by independent chartered accountants, and the assumption of power by unions to hale their employers before them and to impose fines on them for infraction of union rules.

On Jan. 10, the Building Trades Council unanimously approved resolutions embodying practically all of the above reforms, as changed and modified somewhat at conferences between their representatives and Samuel Untermyer, counsel for the Lockwood committee.

WAR FINANCE LOANS

The War Finance Corporation showed, in the annual report submitted to Congress on Dec. 22, that it was doing business at the rate of several millions of dollars a day. Up to Nov. 30, the date of the report, the corporation said, its advances for agricultural and live stock purposes totaled more than \$82,000,000, of which the principal items were loans on cotton aggregating \$22,000,000; on grain, \$16,000,000; live stock, \$13,000,000, and for general agricultural purposes, \$34,000,000.

In addition to the agricultural financing, advances were reported aggregating \$51,500,000 on exports, of which the largest items were \$28,000,000 on cotton and \$11,500,000 on grain.

The loans were distributed as follows: Colorado, \$3,000; Georgia, \$208,000; Idaho, \$13,000; Illinois, \$46,000; Iowa, \$899,000; Kansas, \$138,000; Louisiana, \$375,000; Minnesota, \$196,000; Missouri, \$168,000; Montana, \$329,000; Nebraska, \$375,000; New Mexico, \$16,000; North Dakota, \$902,000; Ohio, \$100,000; Oklahoma, \$28,000; South Carolina, \$655,000; South Dakota, \$559,000; Texas, \$170,000; Utah,

TRYING TO SPILL YOUR UNCLE

\$602,000; Virginia, \$250,000; Wisconsin, \$59,000 and Wyoming, \$806,000.

FARM CONFERENCE SUMMONED

President Harding on Dec. 30 instructed Secretary Wallace, head of the Department of Agriculture, to call a national conference in Washington for the consideration of all phases of the country's agricultural problems. In a letter to Mr. Wallace the President declared it "unthinkable that with this country's vast agricultural resources the United States should develop into a distinctly industrial nation." To illuminate the matter, he would have a conference to consider, first, the solution for temporary agricultural difficulties, and, secondly, to make a survey of the future and lay down a general policy that would co-ordinate with governmental policies toward general business and manufacturing. Secretary Wallace expressed satisfaction with the President's suggestion, and set about its execution at as early a date as possible.

In the final estimates for the year, issued by the Department of Agriculture on Dec. 28, the important farm crops of the United States for 1921 were valued at \$5,675,877,000. This was almost \$3,400,000,000 less than the crops for 1920 were worth and \$8,000,000,000 less than was received by the farmers in 1919, when high prices prevailed for farm products. The

values were based on prices paid to farmers on Dec. 1, and the crops comprised about 90 per cent. of the value of all farm crops.

There were only two \$1,000,000,000 crops in 1921, corn and hay, while in 1920 four crops were valued at a billion dollars or more. Production was below that of 1920 for almost every crop.

IMMIGRATION QUOTAS

The number of immigrants permitted to land in this country up to the end of the fiscal year, June 30, 1922, and also those admissible for the month of January, as made public at Ellis Island, N. Y., Jan. 4, was as follows:

	Remainder for January.	Remainder for Year.
Armenia	92	92
Austria	1,489	4,669
Belgium	66	66
Czechoslovakia	2,159	2,159
Denmark	1,127	2,721
Finland	778	2,140
France	1,138	2,691
Germany	13,608	57,706
Italy	1,465	1,465
Netherlands	720	2,058
Norway	2,425	9,263
Rumania	753	753
Russia	6,848	18,246
Sweden	3,991	14,776
United Kingdom	15,439	50,300

[American Cartoon]

—Providence Journal

CONGRESS STARTS ON A LONG TRAIL

The following countries have exceeded their quotas for immigrants admissible during the remainder of the fiscal year: Australia, Africa, Atlantic Islands, Bulgaria, Greece, Hungary, Jugoslavia, Other Asia, Other Europe, Palestine, Poland, Portugal, New Zealand, Spain, Syria, and Turkey and Smyrna district.

ANTI-LYNCHING BILL

During the debate on the anti-lynching bill, fathered by Representative Dyer of Missouri, statistics were submitted to show that in the last thirty-five years there had been 4,096 lynchings in this country, and of that number only 810 of the victims were charged with offenses against women. Opposition to the bill was expressed almost solely by Southern Democrats, and was for the most part temperate. They made their fight on the ground that Congress had no authority to pass such legislation, that such an act would be a serious encroachment upon the sovereign powers of the States, and that it would not cure the evil, but would have a tendency to encourage the outrages which led to lynchings. Advocates of the bill declared that its provisions were simple and sensible. One section provided for the punishment of officials who should fail to do their duty. Another was to punish those who participate in lynchings, and a third provided for fining communities in which the crimes occurred.

RELEASE OF DEBS

Announcement was made at the White House on Dec. 23 that President Harding had commuted the sentences of twenty-four so-called political prisoners, including Eugene V. Debs, who were convicted under the Espionage act and other wartime laws and sentenced to from two to twenty years in prison. The releases from prison took place on Christmas Day. A statement issued from the White House said in part:

The list, in the main, is made up of those who opposed the war in one way or another, and it is made up of less than a third of I. W. W. prisoners, and these have either expressed full penitence or are booked for deportation. The Department of Justice has given no recommendation in behalf of the advocates of sabotage or the destruction of Government by force, and the President let it be known he would not consider such cases.

No comment was made by the President on

the case of Debs. The President and the Attorney General had given very extended consideration to the Debs petitions, and it is known that the fact that he had twice been the Presidential candidate of a million voters had its influence in reaching a decision favorable to his release.

The President expressed the wish that it be stated that the grant of clemency in the cases acted upon does not question the justice of any action of the courts in enforcing the law in a time of national peril, but he feels the ends of justice have been fairly met in view of the changed conditions. The vast majority of so-called political prisoners still imprisoned are the I. W. W. group, are rarely American citizens and have no good claim to Executive clemency. A number of convicted citizens have never been imprisoned, owing to appeals under bond. There are also many thousands of indictments under war legislation still pending. These do not come under Executive consideration.

Mr. Debs called upon the President and Attorney General Daugherty to thank them for the act of Executive clemency. He took pains to make it clear that there had been no change in his opinions, and declared that he would devote his time and efforts toward the freeing of all prisoners.

NEWBERRY SEATED AS SENATOR

By a vote of 46 to 41, the Senate on Jan. 12 adopted a resolution declaring Truman H. Newberry entitled to his seat as Senator from Michigan, but expressed disapproval of the large amounts spent to obtain his election. The affirmative vote was entirely Republican, while nine members of the majority (Borah, Capper, Jones of Washington, Kenyon, Ladd, La Follette, Norbeck, Norris and Sutherland) voted with thirty-two Democrats against the resolution. Mr. Newberry's view of the vote was thus expressed:

"My heart is filled with thankfulness that the three years and four months of persecution have ended in complete vindication and exoneration of myself and all concerned."

The resolution adopted by the Senate, concerning which Senator Kenyon of Iowa declared, "We have written our own infamy into this resolution," read as follows:

1. That the contest of Henry Ford against Truman H. Newberry be, and it is hereby dismissed.

2. That Truman H. Newberry is hereby declared to be a duly elected Senator from the State of Michigan for the term of six years, commencing on the fourth day of March, 1919,

and is entitled to hold his seat in the Senate of the United States.

3. That whether the amount expended in this (Michigan) primary was \$195,000, as was fully reported or openly acknowledged, or whether there was some few thousand dollars in excess, the amount expended was in either case too large, much larger than ought to have been expended. The expenditure of such excessive sums in behalf of a candidate, either with or without his knowledge and consent, being contrary to sound public policy, harmful to the honor and dignity of the Senate and dangerous to the perpetuity of a free government, such excessive expenditures are hereby severely condemned and disapproved.

PER CAPITA MONEY CIRCULATION

Per capita circulation of money in the United States declined \$6.09 during 1921, according to a statement issued Jan. 9 by the Treasury Department. On Jan. 1, 1922, the per capita circulation was \$53.03, based on a total of \$5,775,400,315 and an estimated population of 108,917,000, as compared with a per capita of \$59.12 on Jan. 1, 1921, based on a total of \$6,340,436,718 in circulation and an estimated population of 107,249,000. The reduction in the amount of money in circulation was accounted for mainly by the decrease of nearly \$1,000,000,000 in Federal Reserve notes, the total on Jan. 1, 1922, being \$2,443,789,739 in circulation, as compared with \$3,349,389,117 on Jan. 1, 1921.

During 1921 2,355 petitions in bankruptcy were filed in the Federal Court of the Southern District, being 852 more than in 1920 and 632 more than in any year since 1911. In the Eastern District, bankruptcies increased 60 per cent., compared with 1920. The 1921 record exceeded the number of bankruptcies in any year since the passage of the Federal Bankruptcy law in 1898.

DEATH OF SENATOR PENROSE

Senator Boies Penrose of Pennsylvania, Chairman of the Finance Committee, and for years one of the outstanding figures in the Republican Party, died Dec. 31 in his apartments at Washington, D. C. He was a member of an old and distinguished fam-

ily, born to affluence, well educated, and with a mind and training that would undoubtedly have made him eminent as a lawyer had he not chosen politics as a career. He had served in the Senate from Pennsylvania since 1897, at which time he succeeded the late Senator Donald Cameron. Since that time he had been by far the most powerful figure in Pennsylvania politics and extraordinarily influential in the national councils of his party.

On Jan. 9, Governor Sproul of Pennsylvania appointed Mr. George Wharton Pepper of Philadelphia as successor to Mr. Penrose. Like his predecessor, Mr. Pepper is a member of an old Philadelphia family. He will be 55 years old on March 16. He was graduated in 1887 from the University of Pennsylvania, of which he is now a trustee, and from the law department of that institution two years later. He is a lawyer of wide experience and recognized ability.

HENRY WATTERSON'S DEATH

Colonel Henry Watterson, one of the most forceful and picturesque figures in American journalism, died of heart disease Dec. 22 at Jacksonville, Fla., at the age of 81.

Mr. Watterson was almost the last of the old personal editors, those whose personalities were so dominant in their papers that the two were never dissociated in the thoughts of the readers. His was a trenchant and vivid pen, and the thoughts of "Marse Henry" as expressed in his paper, *The Louisville (Ky.) Courier-Journal*, went all over the country, and were widely quoted abroad. He was a redoubtable fighter for the causes in which he believed and a formidable foe to those that aroused his opposition. His virility and vigor, his spontaneity and buoyancy, endured to the day of his death. He fought with the energy of a crusader against sectionalism, greenbackism, protectionism and prohibition. His original and at times whimsical style made him tremendously effective, and no editorial writer has so enriched American journalism with memorable phrases and epigrams of enduring quality.

NEWS OF THE NATIONS

[PERIOD ENDED JAN. 15, 1922]

AFGHANISTAN

THE full text of the treaty between Great Britain and Afghanistan signed at Kabul on Nov. 22 was made public in London on Dec. 13. It contained points of importance not hitherto disclosed. Of these, Article 3, providing for the exchange of diplomatic representatives between London and Kabul, removed an Afghan grievance of many years' standing; the Afghan Government had long resented being compelled to negotiate as a vassal or protected State with the British Indian Government at Calcutta instead of with London direct as an independent sovereignty. A matter of Afghan prestige was also decided in the realignment of the British-Afghan frontier: so as to include in Afghanistan a small place known as Torkhani, on a ridge some 2,240 feet high. * * * On Dec. 4 Sir Henry Dobbs, head of the British Mission to Afghanistan, recrossed the frontier after having been entertained at Kabul by the Amir Amirullah with the most friendly courtesies.

ALBANIA

After hardly a month's term in office, the Cabinet of Pandheli Evangheli resigned owing to differences of opinion with the Council of Four Regents. The latter availed itself of the recess of the Diet in order to assert its claim to a more positive and active leadership. The Evangheli Cabinet was succeeded by one formed by Hussan Prishtina and supported chiefly by the Catholic leader Louis Goura Kuqi, appointed Minister of Interior, and the prominent Bektashi Moslem chieftain, Hodja Kodri. This Cabinet, however, lasted for only a few days. The chief mover in the intrigues that led to the overthrow of both Ministries was Aqif Pasha, Bektashi Moslem member of the Council of Regents, over which his personality predominates. He is supported by Abdi Toptani, the Sunni Moslem Regent. The Orthodox Regent, Dr. Tourtuli, was in Paris during the crisis, while his Catholic colleague, Mgr. Bumci, was outvoted by the two Mohammedans. After the withdrawal of Hussan Prishtina a "business Ministry," without party color, was formed by M. Kosturi, a wealthy merchant. This Ministry is expected to remain in power until Parliament reconvenes at the end of January. * * * The Mirdites (Catholic Albanians of the North) have made representations to the League of Nations and to the Allies, asking for protection against the encroachment of the "Turkish" Government of Tirana. The Mirdites have formed their own

independent republic and have applied for recognition.

ARGENTINA

This year's wheat crop appears to be considerably larger than last year's, the most authoritative estimate being 207,415,067 bushels. * * * The Governor of the Province of San Juan, Señor Jones, was assassinated by a group of political enemies. Federal intervention has extended not only to San Juan, but also to the Province of Entre Rios. * * * The appointment of John Riddle of Connecticut, as Ambassador to Argentina has been generally well received throughout the country. * * * Norberto Pinero, a lawyer, former Minister of Finance and one-time Minister to Chile, was named candidate for the Presidential election by a new party called the Concentraci6n Nacional. This party is a combination of the groups of Conservatives and Democrats arrayed against the governing Radical Party. * * * President Irigoyen declared to a representative of the Cologne Gazette that Argentinian neutrality during the war was neither for nor against any country, but purely in the national interest, and that though the Argentinian Senate and House of Representatives had both declared themselves in favor of joining the Allies, neither of them had gained popular support. The House of Representatives has enacted an insurance law by which insurance will be made compulsory for all citizens earning more than 6,000 nacionales a year. National insurance comprises as minimum benefits the age pension, pension for the disabled, insurance for illness and for maternity. The employer's and the employee's quota will be fixed according to the amount earned. * * * According to the most recent statistics, the population of the country has reached 8,698,516 inhabitants, the immigration for last year being 188,688 persons and the emigration 148,907.

AUSTRALIA

A reconstructed Australian Cabinet was announced in a dispatch from Melbourne, dated Dec. 27, as follows:

W. M. HUGHES—Premier and Minister for External Affairs.
GEORGE FOSTER PEARCE—Home and Territories.
E. D. MILLEN—Repatriation.
L. E. GROOM—Attorney General.
MASSEY GREENE—Navy and Defense.
A. S. ROGERS—Trade and Customs.

ALEXANDER POYNTON—Postmaster General.
S. M. BRUCE—Treasury.
R. W. FOSTER—Works and Railways.
J. EARLE—Vice President of Executive Council.

Premier Hughes has proposed a Constitutional Convention composed of delegates to be elected to amend the Federal Constitution, adopted in 1900 and since unchanged. It is proposed to give the Federal Parliament full powers over all trade and commerce, instead of that between the States only. As the convention would include eighteen members of the State Legislatures, eighteen from present members and seventy-five elected from Parliamentary constituencies, it is considered there will be enough defenders of State rights to prevent drastic Socialist proposals for centralizing government. * * * Australian labor unions on Jan. 10 voted in favor of merging into One Big Union.

AUSTRIA

A bill passed by the National Council on Dec. 21 obliges owners of foreign currency, cheques or credits abroad to deposit with the Government such property in exchange for bonds bearing 5 per cent. interest. The purpose of the measure is to raise the exchange of the Austrian krone. Failure to comply is punished with imprisonment (maximum, ten years), and confiscation of the concealed property. Foreigners resident in Austria are not exempted. * * * Plans to pledge the famous Imperial collection of gobelins and other art treasures, valued at \$50,000,000, with an American syndicate, have been announced. The money thus obtained will be used for the purchase of foodstuffs. * * * Pre-war bonds of the former Austrian Government owned by Americans and held outside of the Succession States will be received for collection by the Department of State at Washington, it was announced. The United States Government, the announcement says, does not guarantee payment, but merely turns the securities over to the Reparations Commission, which will take proper action.

BELGIUM

The new Belgian Cabinet which, at the request of King Albert, on the resignation of Count de Wiart, following the November elections, was formed by M. Georges Theunis, and is constituted as follows:

M. GEORGES THEUNIS—Premier and Minister of Finance.

M. HENRI JASPER (Catholic)—Minister of Foreign Affairs.

M. MASSON (Liberal)—Minister of Justice.

M. VAN DE VVERE (Catholic)—Economic Affairs.

M. DEVEZE (Liberal)—Defense.

Viscount BERRYER (Catholic)—Interior.

M. NEUJEAN (Liberal)—Railways.

Baron RIZETTE (Catholic)—Agriculture and Public Works.

M. MOYERSON (Catholic)—Industry and Labor.

Professor HUBERT (Liberal)—Sciences and Arts.

M. FRANCK (Liberal)—Colonies.

Thus M. Theunis selected five Catholics and

(© Harris & Ewing)

HENRY P. FLETCHER

New Minister to Belgium, succeeding Brand Whitlock

five Liberals for his Ministry, leaving the Socialists unrepresented. The complete returns of the elections showed a gain to the Catholic Party, a loss to the Socialists, while the Liberal Party remained about as it was before. The Chamber of Deputies is constituted as follows: Catholics 80, Socialists 68, Liberals 34, other parties 5. The Senate is as reported in the January CURRENT HISTORY: Catholics 73, Socialists 52, Liberals 28. Mme. Paul Spaak, Socialist Senator, is the first woman elected to a Belgian Parliament. M. Jasper was also Minister of Foreign Affairs in the old de Wiart Cabinet. * * * On Dec. 24 King Albert visited the American Embassy for a two-hour farewell call on Mr. Brand Whitlock, the retiring American Ambassador, expressing his nation's thanks for Mr. Whitlock's relief work during the German occupation. * * * President Harding nominated Under Secretary of State Henry P. Fletcher to succeed Mr. Whitlock as Ambassador to Belgium, but it was understood that Mr. Fletcher would remain in Washington until the close of the Armament Conference.

BRAZIL

All the important Republics of America, including the United States, have expressed willingness to take part in the Brazilian World's Fair to celebrate the centenary of Brazilian independence. It is stated that the American building will be a permanent structure, to be-

come the home of the Embassy after the Exposition is closed.

BULGARIA

It was officially announced that normal diplomatic relations have been resumed with the Kingdom of the Serbs, Croats and Slovenes. The step was delayed since the termination of the war because of disagreements between the two Governments concerning the fulfillment of certain provisions of the Treaty of Neuilly. * * * The Princesses Eudoxia and Nadejda, sisters of King Boris of Bulgaria, have been granted permission by the Bulgarian Diet to return to Sofia, and they are entertained there by their brother. The deposed King Ferdinand is barred absolutely from the country. * * * The Diplomatic Corps at Sofia, including the American Minister, Charles S. Wilson, has made a collective representation to the Bulgarian Government by way of protest against the burdensome taxation imposed upon foreign corporations in violation of peace treaty provisions.

visions. * * * The Bulgarian Government is negotiating with an American syndicate concerning the purchase of 1,000 freight cars from the United States.

CANADA

In the new party alignment due to the Liberal triumph in the December elections, Arthur Meighen, the defeated Prime Minister, has undertaken to lead an opposition group of Conservatives in the next House of Commons. The new Premier, William Lyon Mackenzie King, stated on Dec. 29 that national unity through having all parts of the Dominion represented in his Cabinet was the principal aim of his administration. On the same date he announced his Cabinet as follows:

W. L. MACKENZIE KING of Ontario—Premier.
WILLIAM S. FIELDING of Nova Scotia—Finance.

DANIEL D. MACKENZIE of Nova Scotia—Solicitor General and Minister without portfolio.

A. B. COPP of New Brunswick—Secretary of State.

JOHN E. SINCLAIR of P. E. I.—Minister without portfolio.

RAOUL DANDURAND of Quebec—Minister without portfolio.

HENRI S. BELAND of Quebec—Health and Soldiers' Re-establishment.

Sir LOMER GOUIN of Quebec—Justice.

JACQUES BUREAU of Quebec—Customs and Excise.

ERNEST LAPONTE of Quebec—Marine and Fisheries.

JAMES A. ROBB of Quebec—Trade and Commerce.

GEORGE P. GRAHAM of Ontario—Militia, Defense and Naval Service.

CHARLES MURPHY of Ontario—Postmaster General.

THOMAS A. LOW of Ontario—Minister without portfolio.

WILLIAM C. KENNEDY of Ontario—Labor.

WILLIAM R. MOTHERWELL of Saskatchewan—Agriculture.

CHARLES STEWART of Alberta—Interior, Mines and Indian Affairs.

HEWITT BOSTOCK of British Columbia—Public Works.

According to a report issued by the Dominion Bureau of Statistics, Canada's commerce declined heavily in the twelve months ended with November, 1921. Exports totaled \$880,458,548, compared with \$1,289,536,450 the previous year, while imports were \$825,226,585 against \$1,345,592,300 last year. Customs duties fell to \$124,184,941 from \$207,412,639 in the same period. Imports from the United States were valued at \$574,927,941 and exports at \$359,016,167.

CAUCASUS REPUBLICS

Events are moving swiftly in the Caucasus. Under the treaty signed Oct. 13, at Kars, Armenia, between the four Bolshevized republics, Armenia, Azerbaijan, Georgia and Daghestan, on the one hand, and the Turkish Nationalist Government of Angora, the latter power was given about half of Caucasian Armenia and large tracts of territory in Georgia; a small autonomous State was also set up on Armenian territory, to be known as Nakitchevan, under the protection of Azerbaijan. It now appears that the Russians broached to the Turks at Kars, and received support for, their intention to federalize in the Russian State all the so-

(© Harris & Ewing)

COUNT LASZLO SZECHENYI
Newly appointed Hungarian Minister to the
United States

called Caucasus republics. This has now been effected, with the definite object of fortifying Soviet influence in the Near East, and ostensibly for these republics' own protection. This action was timed to synchronize with the economic crisis in the region, and with the activities of the notorious Enver Pasha, Mustapha Kemal's bitter enemy, on Caucasus territory. The political centre of the new Russian province is at Baku, the economic centre at Tiflis. The independence of these republics is now a thing of the past, and they have reverted to their pre-war status as a part of Russian rule. Foreign Affairs, Finance, Transport, Food, Army and Labor have all been placed under Pan-Russian administration. The change was signalized by a note sent by Tshitcherin, the Soviet Foreign Minister, to the Angora Government, the text of which was published on Dec. 30.

CENTRAL AMERICA

That Guatemala intends to adhere to the Central American Federation was shown by the election on Jan. 7 of Senators to represent the State in the Federal Senate, and the approval by the Assembly of the Deputies and Federal Councillor. * * * General José M. Orellana, one of the leaders of the revolution that deposed President Herrera (see CURRENT HISTORY for January, p. 626) took the oath of office as Provisional President and named the following Cabinet for Guatemala:

J. S. RODRIGUEZ CASTILLEJO—Foreign Relations.
SELITE SOLARE—Finance.
JORGE UBICO—War.
BERNARDO ALVARADO—Interior.
MANUEL P. ARRIOLA—Education.
DAVID PIZARAL—Agriculture.

As an expression of desire for peace in Central America, Secretary Hughes sent a note to Salvador and Honduras, hoping they would abide by their treaties with Guatemala. Señor Castillejo telegraphed to Washington that Francisco Sanchez Latour had been designated to take charge of the legation archives and that the new Guatemalan Administration did not recognize Dr. Julio Bianchi as Minister. Dr. Bianchi refused to turn over the legation to Señor Latour and said the same position had been taken by Guatemalan Ministers to France, Mexico and Nicaragua, also by a number of Consuls. * * * Elections for President of Guatemala have been set for May 21 to 27. * * * Amnesty was proclaimed for Herrera and the more important prisoners held in connection with the overthrow of his Government.

CHILE

The note addressed on Dec. 12 by the Chilean Government to the Peruvian Minister of Foreign Affairs provoked a spirited though short-lived debate which carried the exchange of views almost to a tentative agreement for a meeting of plenipotentiaries at Washington. It finally failed, however, due to Peru's insistence that the negotiations should be preliminary to submitting to arbitration all the provisions of the Ancón Treaty, while Chile maintained that direct negotiations should be abandoned only on failure of

the plenipotentiaries to reach an agreement on the basis of the protocol governing the plebiscite by which the attribution of Tacna and Arica shall be decided. Another reason for the temporary suspension of negotiations has been the interference of the Bolivian Government, which claimed a voice in the negotiations with a view to obtaining a port on the Pacific. The Chilean Government replied that this was impossible, owing to the fact that it was then dealing with a provision of the Ancón Treaty with Peru, in which Bolivia has no part. Moreover, it was pointed out that matters between Chile and Bolivia were definitely settled by the treaty of 1904. The reply, however, leaves the door open for direct arrangements with Bolivia. Chile's contention, on the other hand, was upheld at the recent meeting of the League of Nations at Geneva, at which Bolivia's move for a revision of her treaty of 1904 with Chile was dismissed by the conference. * * * President Alessandri has sent a message to Congress recommending the passage of the bill limiting the production of wine, beer and liquors to one-fifth of the present output. The Presidential project proposes a tax on the manufacture of alcoholic beverages, the proceeds of which shall be destined to compensate the growers who prefer to destroy their vines and undertake some other agricultural enterprise. The establishment of bone-dry districts around the copper, coal and nitrate mining camps is also included in the bill.

CHINA

The resignation of the Chinese Cabinet headed by Ching Yun-peng, on Dec. 18, it is now known, was virtually forced by General Chang Tso-Lin, the powerful superintendent of Manchuria, who arrived in Peking on Dec. 14. This feat, performed with apparent ease by General Chang, supported by his troops in and around the capital, and the formation of a new Cabinet of men approved by him, demonstrated "strong-man" dictatorship in a land where the central Government is completely overshadowed by the provincial military rulers. The new Cabinet, which assumed office on Dec. 25, was made up thus:

LIANG SHI-YI—Premier.
W. W. YEN—Minister of Foreign Affairs.
CHANG HU—Vice Minister of Finance.
PAO KWAI-CHING—Minister of War.
LI TING-HSING—Minister of the Navy.
YEH KUN-CHU—Minister of Communication.
WANG CHUNG-HUI—Minister of Justice.
CHI YAO-SHAN—Minister of Commerce.
KAO LING-WEI—Minister of the Interior.
HUANG YEN-PEI—Minister of Education.

General Chang's motives were thus explained by himself in an interview published in Peking toward the end of December: "Government by an Occidental Constitution was a failure. We propose to assemble Parliament to frame a new Constitution suited to the temperament of the people. * * * Unscrupulous officials having been eliminated, financial reforms are easy, since the Government's normal income is 300,000,000 taels, and normal expenditure totals only 100,000,000 taels." This statement was challenged by the foreign press of Peking, which made charges against several of

the new officials. The reaction of the Canton, South China, Government to the new Cabinet was hostile. It issued, and subsequently renewed, an order for the arrest of Premier Liang as a traitor, and charged that he and his Cabinet were planning to capitalize the "failure" of the Chinese delegation at the Arms Conference to strengthen the grip of the Northern Government upon the country.

Another enemy against Liang appeared in Wu Pei-fu, Inspector General of the Southern provinces of Hunan and Hupeh, who charged the new Cabinet with being pro-Japanese. On Jan. 15 it was reported from Peking that Wu Pei-fu had sent a triple ultimatum to Liang demanding his and his Cabinet's resignation within three days, Wu threatening to publish further charges if this demand were not complied with in five days, and to march on Peking if Liang took no action within seven days. Liang defied all three ultimatums. President Hsu's appeals to General Wu had no effect, and all evidences pointed to war between Wu Pei-fu and Liang's sponsor, General Chang Tso-lin. Not only the Chinese delegation at Washington, but the United States Government itself was apprehensive of the threatened civil war, and the House of Representatives on Jan. 16 passed the Mapes resolution (already passed in substance by the Senate on Nov. 14, 1921) to prevent the shipment of arms and munitions from the United States. It was expected that the Senate would act on it promptly, in view of the crisis. * * * The China Trade bill was passed by the Senate on Dec. 16; under its terms American firms in China were to be incorporated under Federal charter, but tax exemption privileges were stricken out.

COLOMBIA

Just as the House of Representatives was about to adjourn on Dec. 20, the President of the Republic, Señor Holguin extended the period of extraordinary sessions four days, for the purpose "of putting an end to the grave crisis afflicting the National Treasury, and of furthering the serene and careful study of international questions having an influence upon the future of the Republic." On Dec. 24, the House approved the treaty with the United States on the Panama settlement, by which Colombia is to receive \$25,000,000 payable in five instalments, as a compensation for territorial losses she sustained through the setting up of the Republic of Panama. Thus is closed a series of incidents and unsuccessful negotiations between the Governments of the United States and Colombia lasting since 1903, when Panama separated itself from the latter country.

CUBA

Thirty thousand Cubans took part in a public demonstration on Dec. 18 against the Fordney Tariff bill, parading through Havana, carrying Cuban flags and banners demanding a "square deal." Similar demonstrations were held throughout the island. A statement was presented to President Zayas and Major Gen. E. H. Crowder, by sugar-mill owners and planters, pre-

dicting disaster to the trade of the island if ruinous tariff rates were enforced. On Dec. 19, Horatio S. Rubens, Chairman of the American Committee on Cuban Emergency, told the Senate Finance Committee that the proposed tariff would ruin Cuba and possibly again force American intervention, adding: "There is no use of protecting Cuba physically unless you protect her economically." On Jan. 7 a legal opinion was sent by Mr. Rubens to the Senate Committee, holding that the proposed Fordney rate is a violation of part of the reciprocity treaty with Cuba, under which preferential rates are granted over commodities from other countries. * * * The Cuban Sugar Commission, created to control the export of the 1920-21 crop, was dissolved on Dec. 31 by decree of President Zayas after it had disposed of half the crop and the free export of sugar was resumed. * * * At a conference between President Zayas and Congressional leaders it was decided to reduce the budget to a point that will render it unnecessary to continue negotiations in the United States for a loan. Congress had approved a budget of \$84,000,000, but it was stated an effort would be made to cut this to less than \$40,000,000.

CZECHOSLOVAKIA

A new era of friendship and good-will between the Republics of Czechoslovakia and Austria was inaugurated with the conclusion of negotiations at Lana Castle, in Tyrol, between the Presidents Masaryk and Hainisch, the former staying as the latter's guest. The outcome of the negotiations is virtually a new Entente between Austria and Czechoslovakia. Contentious questions will in the future be referred to the League of Nations. The two countries have agreed to assist each other in the defense of this policy of good-will and co-operation. * * * The agreement guarantees mutual support in maintaining the peace treaties of St. Germain and Trianon. Czechoslovakia undertakes to communicate to Austria her treaties previously concluded with Yugoslavia, Rumania and Poland. Austria will do likewise. The agreement is valid for five years.

DENMARK

With respect to the recent negotiations for a commercial treaty between Denmark and Soviet Russia, the Rosta (Bolshevist News Agency) published an interview with Kerzentssev, the Soviet delegate, who said he warned Foreign Minister Scavenius of Denmark that Danish unemployment would increase if Denmark did not come to an agreement satisfactory to Soviet Russia, who could afford to bide her time. Afterward Danish Socialists made use of this threat in an attack on M. Scavenius at a private meeting of Rigsdag members. At the meeting of the Folkething (Lower House), held on Dec. 16, the former Socialist Minister, Stauning, introduced a resolution violently attacking Foreign Minister Scavenius for his attitude toward the Soviet delegation and interpellated him on the interruption of the negotiations. M. Scavenius replied that Kerzentssev would have

nothing to do with any Danish-Russian "commercial" treaty, and was trying to secure a political treaty, with a de jure recognition of the Soviet Government. Thereupon the Folkething rejected M. Stauning's resolution, by a vote of 51 to 47. * * * A letter was recently received in Copenhagen from Knud Rasmussen's fifth Thule Expedition to Arctic North America. Three months out from Copenhagen the expedition reached Lyon Inlet, Sept. 18, the latter part of the journey being made difficult by block ice and motor trouble. Discovering an uncharted island at the mouth of Lyon Inlet, they took it for Winter quarters and named it Danish Island. There the letter was dated Sept. 23. It reports good hunting, sealing, and salmon fishing sufficient for food for men and team-dogs, and a highly favorable situation for scientific work. As ruins found suggest former Eskimo habitation, sledge-quests were to be made for tribes, Eskimo migrations being one of the objects of study.

EGYPT

After continuing negotiations for an Egyptian settlement the greater part of last Autumn (CURRENT HISTORY, October, 1921, Page 153), Adly Pasha's delegation gave up the task on Nov. 19 and left the next day for Egypt. Britain, it was conceded, would find it easy to grant independence to the Egyptians, a single nation with one race and practically one religion, were it not that the right of Britain to guard her communications through the Suez Canal, keeping garrisons in Cairo and Alexandria, was insisted upon by the Foreign Office and refused by the Egyptians. Adly's contention was that British troops should be confined to the canal zone, that Egypt should control her own foreign relations and Britain abandon her claim to the Anglo-Egyptian Sudan, now under joint control. Adly Pasha arrived at Alexandria on Dec. 5, reaching Cairo the next day. He resigned the Premiership on Dec. 8. The Sultan asked Sarwat Pasha to form a Ministry, but he declined unless certain conditions were accepted by the British Government. * * * Zaglul Pasha, on the day of Adly's arrival in Cairo, issued a manifesto stating that Britain had always toyed with Egypt, after the occupation promising evacuation and after the protectorate independence, but had thrown aside the mask and demanded that Egypt form part of the British Empire. He appealed to his followers to use their energies for the liberation of the country. * * * Rioting began in several places during the week before Christmas and on Dec. 24 extended to Gizeh, where students raided the Government Survey offices, but were ejected by British troops, leaving 5 killed and 20 wounded. There were minor disturbances at Tanta and Alexandria, spreading on Christmas Day as far south as Beni-Suef, sixty-two miles up the Nile from Cairo. British armed boats moved up the sacred river and airplanes circled over the tombs of the Pharaohs. Twelve persons were killed in disturbances in Cairo, among them "Professor Jean Orth," said to be the Austrian Archduke who disappeared years ago and who had been living as a teacher in the capital. He

was stabbed in the back on his way home. All the other persons killed were natives. * * * The disturbances were largely due to the forcible removal of Zaglul Pasha from Cairo to Suez early in the morning of Dec. 23 on his refusal to obey an order by General Allenby to refrain from political activity. With him were arrested five of his followers, and on Dec. 29 the six sailed from Suez for Ceylon, Arabi Pasha's old place of exile. On Jan. 10, twenty-seven participants in the riots were sentenced to several months' imprisonment and a number of others were ordered flogged.

ENGLAND

From official returns of the Ministry of Labor it was gathered that unemployment in Great Britain had decreased 350,000 between June 24 and Nov. 25, 1921. The reports showed 1,832,400 remained on the "live" registers. * * * The annual report of the Minister of Pensions issued on Dec. 20 showed the number of awards of all kinds at the end of the period was 1,760,000, 1,200,000 being for disabled officers and men and 560,000 in respect of widows and dependents. The total number of beneficiaries of all kinds was 3,365,000, an increase of about 20,500 on the figure of March 31, 1920. * * * An interim report of the Economy Committee, presided over by Sir Eric Geddes, was presented to the Chancellor of the Exchequer. It planned to save £195,000,000 by further cuts in the army and navy services, since there was an absolute need to effect a reduction approaching £200,000,000 in the national expenditure. * * * The Official Gazette of Dec. 13 contained the announcement of the revocation of Sir Edgar Speyer's British naturalization and the ordering of his name stricken from the list of his Majesty's Privy Council, on counts of disloyalty during the war. Sir Edgar Speyer declared the charges trivial and readily susceptible of explanation, in which contention he was supported by his English partners. * * * Over 1,000 men blinded in the war attended a memorial service on Dec. 13 for Sir Arthur Pearson, who, when his own sight failed, had devoted himself to alleviating the lot of others similarly affected.

FINLAND

The tension between Finland and Soviet Russia caused by the Karelian insurrection which the Russians accused the Finnish Government of fostering continued high, and wireless dispatches from Moscow declared that Finland was preparing for war. It was partly in answer to this threat that Leon Trotzky, at the ninth Soviet Congress, declared that the Red Army would be prepared for all attacks, whether they came from Finland or from any other neighboring nation. Tchitcherlin, in a new note to the Finnish Government, gave warning that all Karelian recruiting bureaus must be expelled from Finnish territory; the Soviet Foreign Minister even furnished Finland with the addresses of such bureaus. In Karelia, meanwhile, the Russians had gathered a force of 150,000 men, part of whom protected the roads to Petrograd. This force was under the com-

mand of Colonel Sergius Kamenev, Commander in Chief of the Bolshevik armies. From Bolshevik sources it was stated that this force would not cross into Finland unless attacked by the Finns themselves. Fighting between the Russians and Karelians was still going on early in January, and the insurgents sustained heavy losses. A considerable number of Karelian fugitives had crossed the frontier. A decisive victory was won by the Soviet forces against Finnish White raiding bands around Jan. 7. It was believed in Moscow that the defeat and dispersal of these Finnish pro-Karelian marauders would do much to decrease the danger of war between Russia and Finland, as the attacks of these bands had been one of the chief causes of friction. True to her word, Finland brought the whole controversy up before the Council of the League of Nations, which accepted the task of investigation of the merits of the controversy.

* * * The Council of the League of Nations on Jan. 11 formally undertook to guarantee the neutralization of the Aland Islands and to shoulder the responsibility of enforcing the ten-power treaty under which the League recently settled the dispute over these islands. Finland is empowered to act in defense of the islands if their neutrality is threatened. This is the first agreement involving the guarantee of neutrality of territory by the member States of the League.

* * * Axel Leonard Astrom, the new Minister from Finland to the United States, was received by President Harding on Jan. 5.

FRANCE

Aristide Briand resigned his office as Premier on Jan. 12, and Raymond Poincaré, former President of France, became the new Premier on Jan. 13. No recent event has caused more excitement in French political circles than the resignation of M. Briand, occurring as it did in the midst of uncompleted negotiations with Mr. Lloyd George at Cannes. The Cannes conference had opened on Jan. 6 and continued nearly six days. Briand had obtained a Franco-British treaty guaranteeing protection to France against any sudden German attack, but in exchange had made certain concessions on reparations. The news of this proposed arrangement aroused a storm of political hostility at home. Important organs of the French press raged against Briand, and even President Millerand was affected. The Senate Commission for Foreign Affairs on Jan. 11 sent to Briand at Cannes a warning telegram, embodying a resolution adopted unanimously by twenty-five Senators, declaring that no reductions in the May 5 reparations program should be made, and that the Franco-British compact "should, above all, confirm the guarantees and methods of execution and the securities France now holds under existing peace treaties, or will hold under future accords." Strong objection was also made to French participation in the proposed Genoa Conference, to which both Germany and Soviet Russia were to be invited, unless all French rights were previously guaranteed. The storm in Parliament and press was so violent that President Millerand sent a telegram to Premier Briand, soon fol-

lowed by another, urging him to return to Paris at once. With a modified draft of the Franco-British compact in his pocket, M. Briand hastened home, and after a stormy Cabinet meeting on the morning of Jan. 13 he appeared before the Chamber to defend himself. Pale and weary after his hurried night journey, the Premier declared it was his duty to dissipate certain fears and to tell the truth regarding the Cannes negotiations. Point by point he answered his enemies. In the bluntest words he declared that for a year he had done his best to put his country in a sound position, and that the responsibilities of the problems raised must be faced. He could not, however, continue without sufficient support; this he did not have, and others must now carry on the work he had begun. He then gathered up his papers and left the Chamber, which was still resounding with applause. Many Deputies crowded around him as he left, congratulating him, shaking his hand. The Premiership of Aristide Briand was over. His formal resignation was forthwith offered to President Millerand—and at once accepted. The next day the President asked Raymond Poincaré to form a new Cabinet. Briand's arch enemy accepted the post, and with considerable difficulty formed on Jan. 15 a Cabinet made up wholly of members of the Right. Its personnel was as follows:

RAYMOND POINCARE—President of the Council and Minister of Foreign Affairs.

LOUIS BARTHOU—Vice Premier and Minister of Justice for France and Alsace-Lorraine.

ANDRE MAGINOT—Minister of War and Pensions.

M. RAIBERTI—Minister of Marine.

COUNT CHARLES DE LASTETRIE—Minister of Finance.

MAURICE MAUNOURY—Minister of the Interior.

LEON BERAUD—Minister of Education.

YVES LE TROCQUER—Minister of Public Works.

HENRY CHERON—Minister of Agriculture.

ALBERT SARRAUT—Minister of the Colonies.

M. REIBEL—Minister of the Liberated Regions.

M. PEYRONNET—Minister of Labor.

LUCIEN DIOR—Minister of Commerce.

PAUL STRAUSS—Minister of Health.

GERMANY.

The total estimated deficit for the year, including railroad and post subsidies, was 46,800,000 marks.* * * The industries are active and the number of unemployed at the close of the year was estimated around 1 per cent. All the factories were in operation. * * * Herr Stinnes obtained the consent of the Government to denationalize the railroads. His plan assigns to the Government 51 per cent. of the new railroad stock, 25 per cent. to the capitalists and apportionments 24 per cent. to the railroad employes. * * * Between 250,000 and 300,000 Russian immigrants now live in Germany. The colony consists mainly of ex-officers, lawyers and merchants. * * * The Krupp Works has increased its capital 250,000,000 marks, changing from war production to peace production. The gross profits during the year were 250,000,000 marks, the net 98,000,000. The new stock is to be profit sharing with the employes. * * * The Allied Disarmament Commission reconsidered its order to destroy the Deutsche Werke, a group of plants used during

the war for manufacturing German armaments, and will instead convert them into workshops for the manufacture of industrial machinery, which will call for the employment of 20,000 workers. * * * The German Consulate at New York was reopened in January at the old address, 11 Broadway. The office was taken in charge by Dr. Erich Kraske, Acting Consul General in the absence of Dr. Karl Lange. * * * The trial of the Kapp supporters ended in Berlin Dec. 21. Herr Jagow was sentenced to five years' detention in a fortress. The other defendants, Baron von Waginheim and Mr. Schelle were discharged. Jagow once was famous as Berlin's Police Chief. * * * The German monarchists circulated a petition embodying birthday greetings to Emperor William, expressing the hope for his restoration to power.

GREECE

The new year began auspiciously for Greece with the announcement made on Jan. 1 by the Ministry of Finance that the British Government had withdrawn its objections to granting a credit of £15,000,000 to Greece, the credit to be supplied by private banking interests. * * * The congress of the Metropolitans and Bishops belonging to the Oecumenical Patriarchate of Constantinople, but whose dioceses are in the provinces liberated by the Greek Army, met in Saloniki on Jan. 2 and decided to consider the election of the Most Rev. Meletios Metaxakis as null and void. It appointed a committee to proceed to Constantinople after the holidays in order to find a settlement of the difficulty arising from his elevation to the Patriarchate. The Ecclesiastical Court of the Holy Synod of Athens found him guilty of an attempt to create a schism in the Greek Church on Jan. 12, and sentenced him to lifelong seclusion in a monastery, with reduction to the rank of a mere monk. Metaxakis was not present when he was sentenced, and his extradition was asked by Greece from the Allies. * * * On Jan. 4 King Constantine received a delegation representing the Popular Clubs of Athens, who congratulated him upon the first anniversary of the plebiscite that brought him back to Greece. The King, in an address to them, expressed his firm belief that Greece, with the help of her great allies, will succeed in satisfactorily solving all her problems. * * * On the same day the newly-appointed British Minister to Athens, Mr. Lindley, who bears the title "His Majesty's Representative," visited the Minister for Foreign Affairs of Greece and assumed his duties. * * * The Greek Government decided (Jan. 6) to build a great port at the Aegean town Dede-Agatch, which is to be renamed Alexandroupolis. * * * M. Nicholas Demetracopoulos, one of the most prominent jurists of Greece and ex-Minister of Justice under M. Venizelos, died in Vienna on Jan. 6. M. Demetracopoulos was the leader of the Progressive Party. * * * M. Caffrey Jefferson, until recently Counselor of the American Embassy in Madrid, was sent to Athens on Jan. 10 to take charge of the American Legation there.

HAITI

The Senate Committee Investigating American naval administration in Haiti and Santo Domingo returned on Dec. 21, and the Chairman, Medill McCormick, delivered a preliminary report to President Harding advising that United States marines should not be withdrawn from the island at present. It exonerates the marines of charges of atrocities, urges a definite policy, while making it clear that annexation is not intended, and advocates the centralization of American control and the extension of road building and educational and sanitary work. The report contained no analysis of the charges of brutality by marines, made by Haitians, such as cutting off ears of prisoners and pouring salt into their wounds. Appointment of a high Commissioner, to whom both civil and military authorities should report, continuance of the treaty forced upon Haiti, and maintenance of the American civil staff were recommended. Senator Pomerene, Democrat, of Ohio, was quoted as saying reports of atrocities were largely exaggerated. One case was well established, that of Captain Merkel, who ordered killing of men without trial in 1918, but when arrested by order of the Military Governor he committed suicide. * * * The Haiti-Santo Domingo Independence Society in New York, on learning of the foregoing report, issued a statement saying that the committee had done irrevocable damage to the good name of the United States, especially in Latin America, as it made a part of American policy the overthrow of weak nations, imposed a treaty and upheld a dummy President by American bayonets. It urged the restoration of Haitian independence at once.

HOLLAND

The Government bill to increase the size of the Dutch Navy is opposed by all parties, on the grounds that it is premature in view of the Washington conference's efforts to limit armaments, that it will stimulate the militarist movement, that even joint action with an ally in such a policy offers too great risks, that the plan is at variance with the economy recommended in the last speech from the throne, and that Holland cannot afford the estimated expenses of the fleet contemplated in the plan. It would cost Holland for twelve years 36,000,000 guilders (normally \$14,000,000) and India 32,000,000 guilders (normally \$20,800,000) annually for the expenses of the fleet.

HUNGARY

The discussion in the National Assembly of the responsibility for the attempted coup d'état of the ex-King Charles revealed sensational details. Deputy Somogyi read the depositions of the arrested Legitimist leaders, ex-Foreign Minister Gratz and Mr. Borovicsenyi the Hungarian Government's Envoy to Charles's Court at Hertenstein, Switzerland. It appeared from these documents that Premier Bethlen had encouraged Charles's plans, and that Regent Horthy himself conducted a correspondence with

the ex-Monarch. Another storm broke forth when the ex-Premier, Friedrich, in an impassioned speech, hurled charges of responsibility for the White Terror at the Regent's head. He disclosed a plot, engineered by Regent, then Admiral, Horthy in August, 1919, to do away with the leader of the Farmer's Party, Stephen Szabo of Nagyatad. The latter, he said, was kidnapped at Kaposvar and taken to Siofok, the Admiral's headquarters. It was planned to wrap him in cotton and burn him in a railroad engine's boiler, so as to make him disappear without a trace. Friedrich said that he had learned of the plot in time. He was Premier then, and rushed without a moment's delay to Siofok and effected Szabo's release. Szabo, who listened to the narrative, confirmed it with a nod, but refused to make a statement. * * * Dr. George Nagy and Emery Veer, leaders of the Republican Party, which has no representation in Parliament, were acquitted by a jury of a charge of seditious utterances, made in connection with a celebration at Louis Kossuth's grave. The acquittal is regarded as a sign of a reversal of public sentiment toward more liberal policies. * * * Oedenburg, principal city of the Burgenland, over which discussion had raged with Austria since August, 1921, was handed back to the Hungarian authorities on New Year's Day by the interallied commission in charge of the plebiscite there. The plebiscite had decided in favor of Hungarian sovereignty. * * * Count Laszlo Széchenyi, husband of the former Miss Gladys Vanderbilt of New York City, has been appointed Hungarian Minister to the United States following the exchange of ratifications of the Peace Treaty between the two Governments.

INDIA

The tour of the Prince of Wales through India continued to produce some demonstrations of popular protest from the Gandhi Nationalists. The month's events will be found sketched in detail on page 752, following the article on "Gandhi's Weaponless Revolt in India."

IRELAND

The story of the ratification of the treaty that created the Irish Free State is told in detail on pages 851-855. Ratification was accepted on Jan. 7 by a vote of 64 to 57 in the Dail Eireann. On the 9th de Valera resigned the Presidency of the Irish Republic. A motion for his re-election was defeated by 60 to 58 votes. This action automatically terminated the de Valera Government. After a night without an Irish Government, on the 10th Arthur Griffith was unanimously elected President of the Dail Eireann in a House vacated by de Valera and his supporters. Mr. Griffith then presented the names of his Cabinet, and after formal approval of this Cabinet the Dail Eireann adjourned until Jan. 14. * * * In Northern Ireland the setting up of an Irish Free State fixed the attention of Ulster politicians on the task of saving the whole of the counties of Fermanagh and Tyrone from the surrender of one inch to Southern Irish dominion. J. M. Andrews, Northern Min-

ister of Labor, stated there would be a fight to a finish by the Northern Parliament over this question. In a more pacific vein the Ulster Premier, Sir James Craig, at New Year's expressed a hope for good feeling between North and South. Meantime factional disorder continued to increase in Belfast and adjacent territory, with many casualties. Official figures made public in Belfast on Dec. 29 showed that 110, including eleven policemen, were killed and 540 wounded by bombs and bullets in Belfast disorders in 1921.

ITALY.

The Parliamentary situation underwent a considerable change at the beginning of December, through the formation of a bloc of the Constitutional parties of the Left, comprising at least 140 Deputies. The Rome correspondent of the Temps reported that Signori Boselli, Orlando, Nitti and Giolitti—all former Premiers—had joined this new grouping, and that everything indicated that the three chief parties of the Right—the Fascisti, the Nationalists and the Liberals—would give their adherence. The formation of this group implied a diminution of the influence of the Popular or Catholic Party in the future. * * * A great sensation was caused in Rome and other cities of Italy by the suspension of payments by the Banca di Sconto (Bank of Discount) on Dec. 29. It was well known that this bank, one of the largest in Italy, had been shaken by heavy losses, and that it had been saved from closing several months before only by the aid of other banks. The Government took steps at once to protect the bank's creditors, granting meantime a limited moratorium. Government aid to the industries which had been dependent on the bank was being considered. The bank's liabilities totaled 4,000,000,000 lire. A dramatic sequel came on Jan. 4 when it was announced in Rome that the liquidating court had decreed the sequestration of the private fortunes of the Directors of whom Senator Marconi is one. * * *

The long-delayed commercial agreement between Italy and Soviet Russia was signed on Dec. 26 by Marquis della Torretta, the Foreign Minister, and M. Vorovsky, the Soviet representative in Rome. The conclusion of the compact had been previously hindered by the Russian desire to include political clauses. The terms of the agreement were briefly these: reciprocal clauses regarding import and export, the use of ports by shipping, abstention from propaganda, removal of all trade barriers except the ban on import of alcoholic liquors from Russia, repatriation of Italian nationals from Russia, postal and telegraph communications and Italian trading in Russia not to be hampered by the Soviet, Italian goods in Russia not to be requisitioned, funds of former Russian property in Italy not to be demanded, all forms of blockade and boycott to be avoided. A similar agreement was signed to cover the Ukraine. M. Vorovsky departed at once for Russia to secure the ratification of this agreement. The Foreign Affairs Committee of the Senate had previously (Dec. 17) given its anticipatory consent to the resumption of trade relations with

Soviet Russia, on condition that it be based on the free expression of the will of the Russian people, that the rights, past, present and future, of all Italians in Russia be effectively guaranteed, and that the bonds with the Entente Powers be not thereby weakened. * * * Another agreement signed with M. Vorovsky pledged the Italian Red Cross to establish eighteen food and medical bureaus in the famine area of South Russia. An Italian famine mission is to leave for Russia in February. The Government has contributed 6,000,000 lire for this work.

JAPAN

Reactions to the decisions of the Washington conference have not been lacking in Japan. These decisions were denounced at a mass meeting of the Anti-American Young Men's League in Tokio on Dec. 18. The police suppressed a contemplated demonstration before the American Consulate. Various papers, notably the Asahi, the Yorozu Choho and the Kokumin Shinbun, condemned especially the naval ratio agreement, which they interpreted as detrimental to Japan. The leaders of the Kenseikai, or Opposition Party, at a meeting of Parliamentarians held on Dec. 20, formulated questions implying that the acceptance by the Government of the invitation to the Washington conference was unjustified by the circumstances and that the conclusion of the four-party treaty would be a wedge for interference by the United States and other powers in Far Eastern affairs. One of the Ministers contested this view and declared the criticism unwarranted. Premier Takahashi, on the other hand, in an address delivered the following day to the Seiyukai, or Government Party, stressed the "paramount importance of the understandings nearly concluded at Washington." On Dec. 23 he declared that "the Quadruple Alliance, which for Japan replaces the Anglo-Japanese Alliance, is much wider in bearing and removes all chances of war." The conference, he added, had "opened a new epoch in the Pacific and in the world." The new entente, he said, would lighten the Japanese people's burdens and strengthen the position of Japan in the Far East. * * * The Cabinet met on Dec. 24 to consider the Shantung and Siberian questions. In both cases a deadlock had been established, in the one instance with the Chinese delegates at Washington (see the Arms Conference), in the other with the Chita delegates at Dairen. It was semi-officially understood in Tokio that Japan was determined to maintain her position regarding property rights in Siberia, including the coal properties in Northern Saghalin. The Chita delegates at Dairen (Dalny) from the latest reports (see Siberia) had refused the Japanese demands. * * * A Korean appeal for independence to the Washington conference was made public in Washington on Jan. 1. Signers of a similar appeal from Korean students in Tokio were arrested. * * * Marquis Shigenobu Okuma, Japan's "grand old man" and twice Premier, died in Tokio on Jan. 6. The death

of this great progressive and patriotic statesman was universally deplored.

JUGOSLAVIA

The threatened Cabinet crisis was averted when President Ribar of the Chamber succeeded in mediating between the Radicals and Democrats, whose split threatened the coalition with ruin. The Democrats retain the Ministry of the Interior, which was the bone of contention between the two parties, but M. Pribitchevitch, the Minister of Education, is forced out. The Radicals obtain a new post of Under Secretary in the Ministry of the Interior and the Democrats a similar post in the Department of Agrarian Reform. M. Pashitch remains Premier. * * * Disorders between Croats and Italians at Sebenico, Dalmatia, culminated in an attack by an armed Croat mob, aided by police, upon sailors from an Italian destroyer at anchor in the port. Friction also occurred at Spalato. * * * Prince George, former Crown Prince of Serbia, who renounced his rights to succession in 1909 and of whom nothing was heard for some time, has been discovered as a student of law in the University of Lausanne, Switzerland. * * * The engagement has been announced of King Alexander of Yugoslavia and Princess Marie, eldest daughter of the King and Queen of Rumania.

LATVIA

M. Meierovics, Premier and Foreign Minister of Latvia, in an interview given in Riga in the middle of December, stated that the general situation of his country, both internally and externally, was favorable. Economic questions with Soviet Russia were being resolved. Moscow was doing all it could to fulfill the terms of the Russo-Lettish treaty, considering the lack of administrative organization and the inertia of the Russian character. The Soviet had restored some of the locomotives, cars and boats removed by the Russian army. It had sent back more than 200,000 Lettish refugees. The Lettish Government was effectively helping the feeding of Russia's starving by facilitating railroad transit across its territory. * * * Latvia's relations with her other Baltic neighbors were excellent. The military alliance with Estonia was in force. A political agreement had been made with Finland. A full understanding with Lithuania and Poland was dependent on a solution of the Vilna controversy.

LITHUANIA

The Vilna controversy between Lithuania and Poland, which was expected by both parties to be settled by the plebiscite elections held on Jan. 8, is again threatening trouble. The official result of the elections has not yet been published, but unofficially it is understood that a large majority of votes were cast in favor of annexation to Poland. The dispute was brought before the Council of the League of Nations at Geneva for the tenth time on Jan. 12, at the Council's request. At this session both the Polish and Lithuanian delegates declined for-

mally to accept the second solution proposed by M. Paul Hymans, the Council's President. [This solution proposed to make Vilna a canton in a Lithuanian federation under a joint Polish-Lithuanian council.] The Lithuanians refused furthermore in advance to be bound by the outcome of the Vilna elections. M. Askenazy, the Polish spokesman, admitted that the Council's efforts had prevented armed conflict between his country and Lithuania, and declared that Poland was ready to settle the dispute in a spirit of fairness. Both delegations declared that all safeguards existed in their respective countries for the protection of minorities. At the session of Dec. 13 the Council again acknowledged its inability to settle the dispute and urged the parties in dispute to seek their own settlement. M. Hymans informed them that the League could not accept the Vilna plebiscite, inasmuch as it had been held without the Council's sanction. A resolution was presented terminating the League's efforts for conciliation and notifying the disputants that it proposed to withdraw its military mission within one month. The Lithuanian representative laid the initial blame on the failure of the Versailles Treaty to establish boundaries. He feared that the withdrawal of the League mission would lead to a revival of the frontier troubles which would be fatal to peace. Lithuania, he said, was ready to submit the whole controversy to the League's newly-established Court of International Justice. Both parties agreed to strive for a peaceful settlement. * * * The plebiscite held on Jan. 8 covered not only Vilna, but the two contiguous districts of Lida and Braslaw, both which were already a part of the Polish State. The total vote approximated 900,000. To remove all appearance of coercion General Zeligowski, the Polish irregular General who had occupied and held Vilna since October, 1920, was induced to resign at the end of November, 1921, and he was replaced by a prominent local citizen, M. Alexander Meysztowicz.

MEXICO

President Obregon in a reception on New Year's Eve declared his policy would be unchanged during the coming twelve months, but some prohibitionists see hope for their cause in his interest to end the manufacture of pulque and mescal by forbidding future planting of the maguay, or century plant, from the juice of which these are made. * * * During recesses of the Mexican Congress legislative affairs are placed in charge of a permanent commission, which has considerable power and is elected by the Chamber of Deputies just before adjourning. On the last occasion, Dec. 30, the Social Democratic bloc triumphed over the Liberal Constitutional Party, of which President Obregon is the head, receiving 122 votes to 118 cast by the administration party. Crowds in front of the building took a lively part in the discussions, which lasted two days, and there were scenes of wild disorder, scores of shots being exchanged and several persons wounded. * * * General Francisco Reyna, who figured prominently in revolutions in Mexico during the last

ten years, was executed by a firing squad in Nogales on Dec. 26, having been caught digging up rifles that had been buried in preparation for a revolt on Jan. 1. * * * A special delegate from the Pope, Mgr. Philippi, who was in Mexico during the Diaz régime, was received by President Obregon on Dec. 21. Since 1910 the Vatican had been unrepresented. * * * Mexico's army budget calls for \$124,383,859, more than \$30,000,000 less than in 1921, and \$50,000,000 are to be spent on schools, more than ever before. * * * Unemployment in Puebla has reached an acute stage, and union workmen on Dec. 24 asked the authorities to grant them lands on which they can raise food. The May-orazgo hacienda was seized by workmen, who displayed a red and black flag. * * * Felipe Carillo, a Deputy and leader of the Socialists in Yucatan, was elected Governor of that State, unopposed by the Liberal-Constitutionalists, and was inaugurated on Jan. 1, succeeding Manuel Berzuanza, a youth of 25. * * * Señor Morones, leader of the Social Democratic Party, and Congressman Luis Leon were attacked on Jan. 10 in the streets of Mexico City. Three shots were fired at them, but they escaped without injury. The attack was said to be a result of the troubles over the election of the permanent commission referred to above. * * * Supreme Court Justice Donnelly of New York, on Jan. 11, dismissed a suit brought by the Mexican Government against the Lebertan Corporation for breach of contract to supply twenty-five submarine chasers, on the ground that Mexico has not been recognized by the United States.

NEW ZEALAND

The population of New Zealand increased more than 14,500 last year by immigration from Great Britain and other parts of the Empire, the largest annual total of new arrivals in forty years. The British Government assisted 5,286, and of the remainder nearly 5,000 were assisted by the New Zealand Government. A curious feature of the immigration laws is that those Britons expecting to receive assistance in the form of steamer passage at a reduced fare are required to be nominated by some person already in the Dominion. * * * At a conference of meat packers and dealers, presided over by Premier Massey, a resolution was adopted on Jan. 10 supporting the principle of compulsory pooling of meat sales, and a committee was appointed to bring it into operation.

NICARAGUA

Three American marines, who killed three Nicaraguan policemen and wounded others in a brawl in Managua on Dec. 8 (CURRENT HISTORY, January, 1922, p. 675), were sentenced on Dec. 30 to ten years' imprisonment at hard labor by a United States naval tribunal composed of officers from the Galveston, which had been ordered from Balboa to investigate. * * * Nicaragua's best harbors and the bulk of her population are on the west between Lake Nicaragua and the Pacific, so that the chief means of com-

munication with Europe and Eastern America are by way of the Panama Canal. To open a more direct route, it is proposed to construct a railroad to the Atlantic Coast, and the Government has authorized a loan of \$3,000,000 to start the work.

NORTH AFRICA

Anti-white feeling is increasing among the natives all over Africa, according to evidence obtained by an authoritative British observer. The strongest factor in the development of this antagonism, he says, is "skillful propaganda fostered by an extreme section of American negroes." Circulars from the United States are translated into the principal African languages and distributed with unsettling effect in French and Belgian Africa, Nyassaland, Uganda and Kenya. * * * Italy, to allay the race prejudice, has announced her intention of granting self-government to Tripolitana. All persons 20 years of age are to receive the franchise. * * * Count Maurice de Lusse, member of a well-known Paris family, was assassinated by natives while on a big-game hunting expedition in Northeast Africa, according to a message from Jibuti to the French Foreign Office, on Jan. 2. The other members of the party were returning to France with the Count's body. * * * The death of Colonel Charles Young, the only negro to reach the rank of Colonel in the United States regular army, was reported in a cable to the War Department, received in Washington on Jan. 12 from Monrovia, Liberia, which said he had died in Nigeria, but gave no details of why he went there. He was graduated from West Point in 1889, served with Pershing in Mexico and was Military Attaché in Liberia in 1912, reorganizing the constabulary there. He was retired in 1917 and went again to Liberia two years ago.

NORWAY

Under the special arbitration agreement between the United States and Norway, signed June 30, 1921, for the adjustment of certain claims of Norwegian subjects against the United States arising out of requisitions by the United States Shipping Board Emergency Fleet Corporation during the war, President Harding has appointed Chandler P. Anderson of New York arbitrator, and William C. Dennis of Indiana agent. Under the terms of the treaty, the case is to be heard by an arbitral tribunal of three members sitting at The Hague. * * * M. M. Mjelde of Norway House, London, in a letter to The London Daily Telegraph, Dec. 23, corrected newspaper reports that an amount recently paid to Norway by Germany for food sold to the latter since the armistice was an indemnity for submarine damages. M. Mjelde added that Norway had received no submarine indemnity from Germany, and that the Norwegian merchantmen seized by the Germans were afterward divided between the Allies as German ships. On Dec. 29, King Haakon formally opened the newly finished Norway House, Cockspur Street, London, which for several months has been the home of the Norwegian

Legation, the Norwegian Chamber of Commerce, and the Norwegian State Railways Travel Bureau. * * * News of Messrs. Knudsen and Tessen, the men lost from the Roald Amundsen North Polar expedition in the Winter of 1919, was given through the official Russian Rosta Agency. It told The Associated Press on Dec. 30 of getting a letter signed by the two lost Norwegians and found at Cape Wild by the Russian expedition under Begitchen. The letter was dated Nov. 10, 1919, and read in part: "Bears destroyed our depots; we have now twenty days' provisions." Near Cape Premetny, the Begitchen expedition, which has been searching the Arctic regions for traces of Knudsen and Tessen, reported finding the remains of a fire on the beach and what seemed to be a burned human body. There were footprints of only one man, and a rifle and cartridges of the Norwegian 1914 model. Little hope is entertained of their survival. * * * Captain Roald Amundsen's preparations for his renewed quest for the North Pole contemplate a five-year drift from Alaska, over the top of the world with the ice-pack, to Norway.

PALESTINE

On the fourth anniversary of Lord Allenby's entry into Jerusalem, Dec. 9, the Palestine Arab delegates in London, in a florid telegram to the King, requested his Majesty, under the guidance of the Christianity originating in Palestine, to grant them the self-determination proclaimed by Lord Allenby on his entry into Jerusalem. * * * The Duke of Sutherland replied in November, on behalf of the British Government, to interpellations by Lord Sydenham and Lord Parmoor, that a moratorium had been declared in favor of the Orthodox Patriarchate of Jerusalem to ease its almost hopeless burden of debt. The activities of the Patriarchate, founded on the Bishopric of Jerusalem, which extended back to the days of the Apostles, had been paralyzed by a great schism between the Patriarch and the majority of the Synod, at the time of the formation of Palestine's civil government. As Palestine was no longer under Moslem rule, it had been decided to sell off the properties of the Patriarchate still under Moslem jurisdiction. Also, lands in Palestine, especially in the suburbs of Jerusalem, of recent acquisition and of no historic associations with the Patriarchate, were being sold under provisions that aimed to prevent land speculation.

PANAMA

Panama's independence, after eighteen years of separation, was finally recognized by Colombia on Dec. 24, when the Chamber of Deputies at Bogota passed the treaty with the United States first presented on April 6, 1914.

PERSIA

Rabbi Joseph Saul Kornfeld of Columbus, Ohio, has become United States Minister to Persia, having been nominated for that position by President Harding. The President received the credentials in November of Mirza Hussein Khan Ali, the new Persian Minister to the

United States. * * * Friendly negotiations between British and American interests in Persian oil fields were under way in December. The result was expected to have no effect on the Anglo-Persian Oil Company's operations in Southern and Eastern Persia. A complication arose over the Northern interests, originally belonging to a Georgian named Khostaria. Oil magnates in Great Britain expected the whole question of the remaining Persian oil concessions would have to be settled by diplomatic action of the powers concerned.

PERU

On Dec. 25 the Peruvian Government sent a note to Bolivia offering to co-operate with Bolivia to bring about arbitration between Bolivia and Chile, provided the present controversy between Peru and Chile is settled by arbitration. The Bolivian Government in a previous note suggested that in case Peru and Chile were unable to reach an agreement regarding the sovereignty of the disputed Provinces of Tacna and Arica an international conference, composed of disinterested and friendly nations, be called to settle all claims. * * * The head of the Peruvian Cabinet denied on Dec. 14 that revolutionary troops operating in Eastern Peru had defeated the Government forces, declaring that, on the contrary, the rebel forces have been repelled three times in small encounters. * * * The anniversary of the battle of Ayacucho was commemorated with the inauguration of the Bolivar Museum, in which many trophies of the War of Independence are exhibited. * * * A Presidential decree forbids the crossing of the national boundaries at below 3,000 meters for any foreign airplane or other airship, establishing at the same time a protective zone of 12,000 meters breadth. Any foreign aircraft trespassing beyond these limits will be suspected of espionage, and will be dealt with by force and its crew taken prisoners. Notwithstanding this law, foreign aircraft will be permitted to cross Peruvian territory in transit if previously furnished with official authorization. The descent within Chilean territory will also be allowed, provided the place and time have been designated in advance. * * * With the hundred-thousand-pound loan for the payment of several months' salaries to customs employes and the approval by the Executive of the plan presented by the American expert in charge of the reorganization of customs services, rapid improvement is expected of the commercial life of the country.

POLAND

Poland received its first payment about the middle of December from the Russian Soviet Government under the Riga Peace Treaty signed last March. The payment was in the form of gold and jewels to the value of 50,000,000,000 Polish marks, and arrived on a special train under military guard. The bullion, weighing 1,280 pounds, gives Poland its first substantial gold reserve. * * * The number of Polish refugees from Russia arriving daily at Baranowicze, on the frontier, was estimated in De-

cember at 6,000. Many of these repatriated Poles had been frozen to death in unheated cars, and the Polish officials blamed the Soviet Government for criminal neglect. * * * Polish foreign trade is improving month by month. Trade with the Ukraine is active, and a special commission composed of Polish economic leaders has been formed in Warsaw for the double purpose of developing trade relations between Poland and Soviet Russia and improving the transportation conditions between them. Considerable quantities of agricultural implements were being exported to Russia. * * * The settlement in Upper Silesia was progressing smoothly, both in Kattowitz and in Geneva. The German industrialists, haunted by the fear of expropriation in the districts assigned to Poland, and the Polish negotiators were showing a mutually conciliatory spirit. * * * The result of the Vilna elections, which were held on Jan. 8, has not yet been officially announced. (See Lithuania.) * * * The political and economic treaty concluded by Poland with Czechoslovakia (Nov. 7) was communicated to the League of Nations toward the middle of December. Under this treaty, all future disputes are to be settled by compulsory arbitration under an appeal to the Permanent Court of International Justice recently set up by the League. * * * Danzig-Poland relations continue to be favorable. The inter-allied commission for the division of former German property in Danzig has assigned virtually all the material of the arms factories to Poland, thereby arousing the furor Teutonicus of the Pan-German press. The Free City has given all Germans one year in which to exercise their option of citizenship under the Danzig-German Treaty, which Poland refused to ratify.

PORTO RICO

Despite the demand of Porto Ricans, of fifteen out of nineteen Senators and thirty-nine out of fifty-eight Assemblymen, for the removal of E. Mont Reilly as Governor of the island, President Harding instructed him to return to his duties, according to a White House announcement made on Dec. 16. * * * With regard to the charge that Governor Reilly was appointing an unusual number of Americans to jobs in Porto Rico, about which Senator King, Democrat, of Utah, offered a resolution of inquiry, President Harding, without waiting for its passage, wrote to Mr. King saying that on July 1, when Reilly became Governor, forty-nine continentals and 5,911 natives were employed in the insular government and the only changes of consequence since then were a reduction of the number of Americans from forty-nine to forty-five. In the major appointments, there had been six changes, and in four of them continentals had been replaced by islanders. * * * Associate Justice Emilio del Toro was selected for appointment as Chief Justice of the Supreme Court of Porto Rico by Secretary Weeks on Dec. 22. * * * The Federal farm loan system has been extended to Porto Rico. * * * Cayetano Coll, Speaker of the Porto Rico House of Representatives, in an address at Madrid, Spain, on Dec. 20, suggested the founding of a Spanish-speaking League of Nations, "as Spain

and Latin America have been ignored at the Washington conference." * * * A commission of Porto Ricans on Jan. 13 presented a petition to Congress for an ample autonomous form of government, comparing the political situation of Porto Rico to that of Canada in 1839.

PORTUGAL

The outstanding event in revolution-torn Portugal in December was the overthrow of the Cabinet of Maia Pinto, with the formation of a new Cabinet under Senhor Cunha Leal, former Minister of Finance. The new Premier, who came into power on Dec. 15, is barely 30 years of age, a Captain in the Engineer Corps, who served in Africa and Flanders. He entered politics only three years ago, and his rise to high responsibility has been exceptionally rapid. The downfall of the Pinto Cabinet was due primarily to the dissolution of Parliament and the adjournment of the elections. Premier Cunha Leal increased his reputation for energy and courage on the night of Dec. 15, when, menaced by the revolutionary Octobrists, he passed the night under the protection of the Republican Guards and declared that no threats would deter him from accepting his new responsibilities—that he would succeed or perish. Assured of the support of the principal parties in Parliament, he managed despite all obstacles on the following day to form a Cabinet, composed as follows:

CAPTAIN CUNHA LEAL—Premier and Interior.
 SENHOR JULIO DANTAS—Foreign Affairs.
 SENHOR VICTORINO GUIMARAENS—Finance and Commerce.
 CAPTAIN JOAO CAVALHO—Marine.
 SENHOR MARIANO MARTINS—Agriculture.
 SENHOR REGO CHAVES—Colonies.
 COLONEL FREIRA—War.
 SENHOR ALVES SANTOS—Labor.
 SENHOR ROCHA SARAIVA—Instruction.
 SENHOR ABRANCHES FERRAO—Justice.

"I have a double task—to maintain order and to reorganize the Administration," said the new Premier on Dec. 20. It was essential, he said, to improve the bad financial situation caused by Portugal's failure to increase taxation during the World War. First of all, the Government must be stabilized. Measures must also be taken to remedy the high cost of living, which caused universal discontent. Arrests were made on Dec. 29 following the killing of two persons and the wounding of five others through the explosion of bombs in process of manufacture in a building belonging to the Lisbon General Confederation of Labor. Up to the middle of January Senhor Leal had succeeded in keeping the revolutionary element in control.

RUMANIA

The Cabinet crisis continued to be the centre of public interest. It appears that, although the withdrawal of the Averesco Government had been expected, it occurred ahead of schedule time and under rather precipitate circumstances. This was the result of a feud of old standing between Premier Averesco and the Foreign Minister, Také Jonesco. The former had made all arrangements to cede his place to General Coanda, who had been Premier in the period between the pro-German Marghilo-

man Cabinet of 1918 and the appointment of the Averesco Administration. The Coanda Cabinet was to assume power pending the convocation of a new Chamber. This plan, however, was thwarted by Averesco's enemy, Foreign Minister Jonesco, who resigned three days ahead of the time set, and thus precipitated the fall of the Ministry. It is generally assumed that the newly-appointed Cabinet, headed by M. Jonesco, cannot last over Feb. 1. Both the new Premier and ex-Premier Averesco are canvassing the Deputies, trying to secure their pledges of support for the reopening of Parliament. Averesco is making approaches to the Extreme Left, the Peasant Party, headed by Dr. Lupu. It is generally believed, however, that the man of the future is the former Premier Bratiano, who is regarded as the strongest man by both Court and people, and who, as head of the Liberal Party, commands the support of all the big banks. He is negotiating with the powerful Transylvanian Nationalist Party, and the combination, if achieved, would probably carry the day. The Liberals, who have been out of power for several years, have a detailed program of economic reconstruction, with the stoppage of the currency-printing presses as a preliminary.

RUSSIA

Premier Lenin has shifted some of the portfolios in his Cabinet and added three new members. The following is the revised list, as taken from the official newspaper Pravda and the Rosta Agency on Jan. 13:

NIKOLAI LENIN—President of the Council of Commissars.
 M. RYKOV—First Vice President.
 M. TSURUKOFF—Second Vice President. (The Vice Presidents are newly created officials.)
 M. LUNACHARSKY—Commissar for Education.
 LEONID KRASSIN—Foreign Trade.
 M. KARETSKSKY—Finance.
 M. STALIN—National Minorities and Labor and Peasant Inspection.
 M. SCHMIDT—Labor.
 M. BRUKHANOFF—Food.
 LEON TROTZKY—War and Navy.
 M. DJERJINSKY—Communication and Interior.
 M. DOLNALEVSKY—Posts and Telegraphs.
 DR. SEMASHKO—Health.
 GEORGE TCHITCHERIN—Foreign Affairs.
 M. KURSKY—Justice.
 M. YAKOVENKO—Agriculture.
 M. BOGDANOFF—President of the Supreme Economic Council.

All the members of the Cabinet are of the so-called Right Wing Communists, following Lenin's lead. Nearly all are native Russians. Trotzky, the Minister of War, and Schmidt, Minister of Labor, are of Jewish parentage. Djerjinsky, the Minister of the Interior, is of Polish nationality, and Stalin, the Minister of National Minorities and Labor and Peasant Inspection, is a Georgian.

An American appropriation of \$20,000,000 for Russian Relief was signed by President Harding on Dec. 23. Col. Haskell, Director of the relief work in Russia, had reported that 27,000,000

people were starving. * * * The Soviet Government on Dec. 24 promised Walter Lyman Brown, European Director of American relief work, that it would contribute \$10,000,000 to purchase food and seed supplies in the United States within 90 days. The Soviet's request for permission to send a representative to the United States to supervise these purchases was granted by Mr. Hoover. Meanwhile five large ships, laden with grain, sailed for Russia. * * *

The ninth All-Russian Congress opened in Moscow on Dec. 23, and closed on Jan. 4. Many addresses were made, notably by Lenin and Trotzky, but the practical results of the congress were few. Lenin announced at the opening session that the dreaded Extraordinary Commission would henceforth confine itself to political activities. His whole plan for economic reform was approved at this first session. Land reform plans were adopted at the session of Dec. 28. Trotzky on Dec. 29 made a belligerent speech against Poland, Rumania and Finland, in which he declared that the Red Army would be ready to beat back all new aggressions in 1922. He also denounced the Washington Conference, one of the first consequences of which, he declared, was Japan's attack on the Far Eastern Republic. The whole "Presidium," or Soviet governing body, was re-elected at the closing session.

SANTO DOMINGO

The Senate Committee which investigated conditions in Haiti also inquired into affairs in Santo Domingo and advised against the removal of American troops. The conditions laid down by President Harding last summer—that elections be held under American auspices and that a loan floated by American bankers be validated—had not been fulfilled, Senator McCormick, the Chairman, said in a preliminary report. He admits that the program of public works was "perhaps too ambitious" and urges a new loan to refund two previous ones saddled on the Dominican Government, of which he says the services "including the provision for their amortization, are unusual and crushing," crippling the ordinary administration. * * *

Horace G. Knowles, formerly United States Minister to Santo Domingo, and counsel for the deposed Government before the Senate Committee, returned to New York, and on Dec. 30 issued a statement denouncing the report, the only base for which was a plea made by the Navy Department in attempted defense of its action. He says abuses, cruelties and murders were committed by the marines. An alleged bandit was invited to American headquarters on promise of a commission and assassinated on the way, after one officer, Captain Thomas E. Watson, had refused to do the killing because he "did not want nigger blood on his hands." Lieut. Commander Arthur H. Mayo had been elevated to Chief Financial Manager and brought the country to a state of bankruptcy. "Although last year's revenue had exceeded by \$4,000,000 the budget estimates, so much had been spent that, against the protests of the people, \$2,500,000 had been borrowed in New York on which the rate of interest was from 9.2 to 18.7 per cent."

SCOTLAND

Industry along the Clyde has suffered a stunning blow from the suspension of the huge contracts given to the shipyards for the construction of three great warships. The Washington disarmament plan means that for a long time to come there will be more workers than work on the Clyde. The three firms immediately affected had counted on earning their running expenses from the warships, which would enable them to make more favorable bids on merchant liners. Until the news of the suspension was received there had been a turn for the better, but, as one shipyard manager put it, the suspension will only darken the gloom and give a set-back to other possible contracts. It was estimated that the suspension of the warship contracts would have the effect of throwing between seven and ten thousand men back into the unemployed ranks, and blasting the hopes of other thousands who anticipated work in the near future.

SIBERIA

The already tangled situation in Siberia became still more complex at the end of December, through the capture of Khabarovsk by forces of the Vladivostok Government. This city, lying at the point where the Trans-Siberian Railroad crosses the Amur River and turns west into inner Siberia, has great strategical importance. It had been held by the Chita Government since October, when the Japanese evacuated. The capturing forces were made up largely of soldiers formerly of the Kappel, Semenov and Kalmykev armies controlled by Kolchak, and who have now allied themselves with the Vladivostok anti-Bolshevist régime, which is headed by Spiridon Merkulov. The attackers took advantage of the Japanese area extending some 120 miles north of Vladivostok and of the neutral zone twenty miles west lying beyond and fixed by an agreement between Japan and Chita. Advancing under this double cover, they fell on the Chita garrison suddenly and overpowered it easily. The Chita army all told amounts only to some 50,000 soldiers, and the Khabarovsk position was weakly defended. The power of the Vladivostok Government was thus extended to the northern boundary of the Far Eastern Republic. The Chita delegation at the Washington Arms Conference, on the basis of its messages from home, charged the Japanese with engineering this assault in order to gain from the Vladivostok Government concessions which had been refused them by the Chita negotiators at the Dairen Conference, their alleged purpose being to find new pretexts for not withdrawing their military forces from Siberia. The leaders of the Japanese delegation at Washington denied this. The Chita representatives also charged the Japanese with maintaining an oppressive military rule in the Maritime Province and at Nikolaevsk, basing their charges on proclamations issued by the Japanese military commanders there. * * *

The Dairen Conference, which has continued with interruptions since last May, has made but little progress. The

latest demands made by the Japanese, which the Chita officials declared were equivalent to making the Far Eastern Republic a Japanese colony, were these:

(1) That Japanese subjects receive equal rights and privileges with citizens of the Far Eastern Republic. (2) Abolition of all laws limiting the rights of Japanese subjects. (3) Destruction of fortifications in Vladivostok and in the Maritime Province. (4) The recognition of the right of Japan to maintain military guards in the Far Eastern Republic.

Officially the attitude of the Japanese Government remained the same: Japan would withdraw her forces from Siberia when she received assurance that a stable Russian rule existed there and that the lives and property of Japanese subjects would be secure. There are some 8,000 Japanese nationals in Vladivostok alone. The official representatives of the new Vladivostok régime, on their arrival in Washington, issued statements in which they denied that they were controlled by or in complicity with the Japanese, and asserted that they were the standard bearers of the sane Russian element unalterably opposed to the Bolshevik régime, of which they declared Chita, despite all camouflage, to be a part. Nikolai Matveev is now the President of the Far Eastern Republic.

SPAIN

The Spanish military successes in Morocco continued through December, both in the western and the eastern sections of the war zone. The Spanish forces had been increased by approximately 20,000 men under High Commissioner Berenguer as Chief of Command. Spanish prisoners taken by the Moors were being ransomed on the payment of sums averaging from 4,000 to 5,000 pesetas. More than a score of these prisoners who escaped early in December were recaptured and severely punished. * * * The debate on the Morocco campaign which had occupied the Spanish Parliament for forty days continued with little practical result. The general sentiment expressed was that this campaign, which had cost so much in blood and treasure, as well as national prestige, should be ended speedily. Señor Martínez Campos, a staff officer in Melilla, drew a deplorable picture of the disorganization existing in every branch of the service in Morocco, and General Primo de Rivera advocated withdrawal. To this disorganization, attested by Spanish authorities, the Madrid correspondent of *The London Times* attributed the grievances of the British volunteers who quit the Spanish service and returned to England. * * * The dispute between Juan de la Cierva, the civilian Minister of War, and the army officers' juntas or committees was reaching a crisis in the first ten days of January. The efforts of this Minister to reform the Morocco maladministration are said to have been the cause of the committees' hostility. Clashes of the juntas with the Morocco commanders over the appointment of junta officers on the new General Staff were recorded in the January issue of *CURRENT HISTORY*. Feeling was high over the resignation of the octogenarian General

Valeriano Weyler, Chief of Staff, following censure from Minister de la Cierva. * * * The preferential tariff régime in force between France and Spain since 1906 ended on Dec. 10, and what was described as a tariff war began on that date. The main cause of this rupture was Spain's surcharges for depreciated currency. * * * The Madrid Government received notice on Nov. 15 that the Spanish-American Postal Convention drawn up in Madrid last year had been ratified by the Governments of Cuba, Colombia, Salvador, Honduras, Bolivia, Peru and Santo Domingo.

SWITZERLAND

The Swiss Federal Assembly has elected M. Robert Haab President of the Confederation, with 154 votes out of 163. M. Haab is a lawyer and railway expert. He was born at Zurich in 1865. He had held the position of Minister to Berlin, and since 1917 has had charge of the Department of Posts and Communications, which he will retain during his Presidency. The President whose term has just expired, M. Motta, will retain charge of the Political Department, which is the Foreign Office of the Federal Council. M. Scheurer of Berne, head of the Military Department, was elected Vice President. * * * Construction of the second Simplon tunnel, started in 1912, has been finished. * * * The electric industry of Switzerland is seriously crippled by the drought which lasted all last Summer and Fall, and has left generating stations in the Alps without adequate supply of water. * * * The Federal Council has ratified, by 7 votes against 2, the convention with France concerning the free border zones, as provided by the Treaty of Versailles. * * * Ex-Empress Zita of Austria-Hungary arrived in Switzerland to attend the operation on her son, the Archduke Robert, for appendicitis. She was given special permission to do so by the Swiss Government, as the imperial couple have been barred forever from Swiss territory. The permit was valid for two weeks only.

SWEDEN

The stabilization of exchange rates in Sweden, bringing Swedish money almost on a par with the American dollar and thus reviving foreign trade, has raised hopes of early business improvement in all Scandinavian countries. Sweden's trade with the United States, after two years of suffering from the high cost of American dollars, can now go on as formerly, according to Stockholm bankers. The Swedish Government, in December, prolonged the Riksbank's dispensation from the redemption of bank notes in gold until March 31, 1922. Consignments of Soviet gold to Sweden are declared to amount, all told, to something between 500,000,000 and 600,000,000 kroner, according to investigations of the Svensk Handelstidning. Of this amount, Swedish mints have melted down gold valued at \$31,200,000. Trade with Russia and the Baltic States is slack. Trade negotiations with the Soviet proceed very slowly and with remote prospects of settlement. A Swedish communist delegation to Moscow had to re-

port there that, in spite of growing unemployment and stringent money conditions, Sweden was not revolutionary. So, with no prospect of civil war, the Swedish Communist Party decided to support Branting's Socialist Government.

* * * On Jan. 6, Emma Goldman, Alexander Berkman and Alexander Shapfro, the anarchist deportees from America, arrived in Stockholm from Soviet Russia. The Swedish authorities gave the trio permission to remain in Sweden a month, granting also guarantees that they might return by way of Sweden to Soviet Russia. * * * While Premier Hjalmar Branting and the Swedish press praise the progress of the Washington Conference as beginning a new phase in relations among the great powers which will proportionately benefit the smaller nations, "Sweden could not accept the banning of the submarine, which is the most efficient weapon of defense for small nations," according to Captain Gislko, chief of the submarine department of the Swedish Navy. Unable to build battleships and cruisers comparable to those of the great powers, Sweden is to base her naval defense on submarines, destroyers and airplanes.

TURKEY

The snarl of complications created in the Turkish situation by France's separate treaty with Kemal's Nationalist Government at Angora (see text of same in January CURRENT HISTORY) was aggravated by the resignation of Premier Briand, and the immediate succession of ex-President Raymond Poincaré, M. Briand's opponent, to the Premiership. M. Poincaré had been carrying on a press campaign to secure a modification of the Treaty of Angora, largely agreeing with British criticisms of it, that it dangerously divided allied policy, and strained relations between France and Britain, and that France did wrong in conceding territories to the Kemalists over which she had only mandates.

The terrible plight the Treaty of Angora created for Christian minorities in Cilicia became apparent from the moment the withdrawal of French troops began, Nov. 28. Thousands of Armenians and Greeks had begun to migrate as soon as the French withdrawal was assured. The Kemalist Turks, rushing into the vacated territory, began such a series of atrocities and outrages that the remaining Armenians sent appeals to the British Government, to the French Government, and to the League of Nations both for relief from famine and for transportation of their entire population to some foreign country. Britain replied that she was

unable to give either. On Jan. 5 the evacuation of 49,884 Christians, mostly Armenians, from Cilicia into Syria under the protection of the French Army was completed. According to the French official announcement, 3,985 Christians remained in Cilicia of their own free will.

On Jan. 6 the French Government issued an official paper indicating that the Angora agreement is not regarded as a treaty of peace and implies no recognition, *de facto* or *de jure*, of the Angora Government. It indicates further that the rights of Great Britain and Italy, recognized in the tripartite agreement, are in no way affected by the Angora agreement, and that France admits the principle of adjusting in a final peace treaty all outstanding problems.

Meanwhile the continued state of war between Greece and the Angora Turks and the menace of the Bolshevik machinations in the Kemalists' rear create a dilemma. The Kurds were kept supplied with arms from Russia, and they kept passing the arms exported to them from Russia on to Enver Pasha, who, at last advice, was in Batum, creating a new State—Ajaristan—under his rule on the Black Sea. This unfriendly activity of the Bolsheviks resulted from Kemal's transference of economic concessions already granted the Soviets to France, in the Angora agreement. This estranged the Russians, though Kemal continued to profess loyalty to his alliance with them. Moscow's continued efforts to stir up unrest in the East to prevent peace between Turkey and the Western nations are in contrast to her efforts for Western recognition. It was indicated in London that a joint offer of reasonably acceptable peace terms to Kemal by the Allies, as a solution of the Near Eastern deadlock, was contemplated by the Supreme Council before its final adjournment. Franklin-Bouillon, the French negotiator of the Angora Treaty, had been called to the Cannes Conference about a week before its adjournment. A British mission to Ineboli under Major Henry meanwhile had done much toward securing for Great Britain an agreement favorable to British interests in Turkey.

UNITED STATES

The chief interest continued to centre about the Arms Conference at Washington, a full report of which will be found at the beginning of this magazine. Other American developments are recorded under the heading, "The Month in the United States."

THE CANNES CONFERENCE

What the Supreme Council accomplished in the sessions that inadvertently overthrew the Briand Government—Call to the Genoa Conference—New German reparation terms—Franco-British treaty of alliance

A CONFERENCE was held at London on Dec. 21 and 22, 1921, between Premiers Lloyd George and Aristide Briand, at which the whole question of disarmament, reparations and economic restoration of Europe was discussed. As a result, a call was issued for a meeting of the Supreme Council at Cannes, France. Preliminary to the Cannes Conference, a meeting was held at Paris Dec. 29 by French and British financiers under the leadership of Laming Worthington Evans, the British Secretary of State for War, and Louis Loucheur, French Minister of Reconstruction. It was at this meeting that plans were formulated for organizing a national corporation to finance the restoration of Europe, with a capital of \$100,000,000, to be shared equally by Great Britain, France, Germany and the United States—if the United States so desired.

The allied Supreme Council met at Cannes on Jan. 6, with the Premiers of Great Britain, France, Italy, Belgium and the Japanese Ambassador at Paris in attendance. Ambassador Harvey was present as an observer, but did not participate in the proceedings. The Allied Reparation Commission was also in attendance, and large official delegations from the allied countries. The Supreme Council held two sessions the first day and unanimously passed a resolution calling for a conference of all the European States to meet at Genoa, Italy, March 8. The resolution was as follows:

The allied powers, met in conference, are unanimously of the opinion that a conference of an economic and financial nature should be called during the first weeks of March, to which all the European powers, Germany, Austria, Hungary, Bulgaria and Russia included, should be invited to send representatives. They consider that such a conference constitutes an urgent and essential step toward the economic reconstruction of Central and Eastern Europe. They are of the firm opinion that the Prime Ministers of each nation ought, if possible, to take part themselves at this conference, so that the recommendations can be acted on as quickly as possible.

The allied powers consider that the restoration

of the international commerce of Europe, as well as the development of the resources of all countries, is necessary to increase the amount of productive labor and lessen the suffering endured by the European peoples.

A common effort by the most powerful States is necessary to render to the European system its vitality, which is now paralyzed.

This effort ought to be applied to the suppression of all obstacles in the way of commerce. It ought to be applied also to granting large credits to the most feeble countries and to the co-operation of all for the restoration of normal production.

The allied powers consider that the fundamental and indispensable conditions for the realization of an efficacious effort are capable of being defined in general terms as follows:

1. The nations cannot claim the right to dictate to each other the principles according to which they must organize within their frontiers, their régime of property, their economy and their Government. It is the right of each country to choose for itself the system which it prefers.

2. Nevertheless, it is not possible to place foreign capital in order to help a country unless the foreigners who provide the capital have a certitude that their property and their rights will be respected, and that the fruits of their enterprise will be assured.

3. This feeling of security cannot be re-established unless nations or their Governments desiring to obtain foreign credits freely engage: (a) To recognize all public debts and obligations which have been contracted, or will be contracted or guaranteed by States, municipalities, or other public organizations, and to recognize also obligation to restore or, in case of default, to indemnify all foreign interests for loss or damage which has been caused by the confiscation or sequestration of property; (b) to establish legal and juristic punishment and assure the impartial execution of all commercial or other contracts.

4. The nations ought to have available convenient means of exchange; in general, financial and monetary conditions ought to exist which offer sufficient guarantees.

5. All nations ought to engage to abstain from all propaganda which is subversive of the political system established in other countries.

6. All nations ought to take a common engagement to abstain from all aggression on their neighbors.

If, with a view to assuring the necessary conditions for the development of the commerce of Russia, the Russian Government claims official recognition, the allied Governments cannot ac-

cord this recognition unless the Russian Government accepts the preceding conditions.

Premier Lloyd George took the leading part in the deliberations. He delivered a long address in which he reviewed the situation in Europe, urging the utmost frankness between delegates, and dwelling particularly upon the importance of all the nations being invited.

The meeting of the council on Jan. 7 was devoted to discussion of reparations, and it was finally determined to summon German representatives to Paris, whence, if necessary, they could be called later to Cannes. Meanwhile, however, conversations were in progress between Premier Lloyd George and Premier Briand with relation to a treaty of alliance between France and Great Britain. The Supreme Council on Jan. 10 approved the plan for the formation of an international finance corporation and appointed a committee, composed of two British, two French, one Italian, one Belgian and one Japanese representative, to organize a corporation. The Governments represented at the Cannes Council undertook to furnish £10,000 for the organizing expenses. It is to be called the Central International Corporation, and will have its principal offices in London. The corporation will consist of representatives of the national corporations to be formed in England, France, Italy, Belgium and Japan, and, if willing, the United States. Germany is not invited, but is desired in the corporation, though it is stipulated that one-half of the profits accrued on the shares of the German National Corporation will be paid to the Reparation Commission. The first meeting of the committee was called for Jan. 25 at London.

At the meeting of the council on Jan. 10 it was announced that the text of the Anglo-French Treaty of Alliance was agreed upon. Meanwhile reports from Paris of the great opposition to the course of Premier Briand convinced him that it was necessary that he consult at Paris before proceeding further in the deliberations. The Council was suspended until he could go to Paris for this purpose. The next day the world was startled by Briand's resignation and the creation of a new French Ministry. [See "France" in News of the Nations.]

At the final session of the council formal invitations were issued summoning the na-

tions to the Genoa Conference, regardless of what happened at Paris. The most important countries were asked to send at least three delegates, and not over five, and the other nations two delegates each.

The Reparation Commission at this same meeting made its final report of an adjustment of the German payments. The decision stated that the Reparation Commission had decided to grant the German Government a provisional delay for payment of the sums due Jan. 15 and Feb. 15, so far as these payments were not covered by payments in cash or in kind, on certain conditions. These conditions are:

First—During the period of provisional delay Germany must pay in approved foreign securities 31,000,000 gold marks every ten days, the first payment to be Jan. 16.

Second—Germany, within a fortnight, must submit to the commission a plan for reforms or appropriate guarantees for its budget and paper currency, and also a program for reparation payments in cash and in kind for 1922.

Third—The period of provisional delay shall end when the commission or the allied Governments have reached a decision in regard to the plan and program mentioned in the second condition, the balance due becoming payable a fortnight after the commission or the Allies have reached a decision.

The 31,000,000 gold marks which Germany is called on to pay every ten days during the period of provisional delay is just about equal to 25 per cent. on German exports. It is made clear in the conditions that the arrangement is only temporary, to be superseded by any definite arrangement the Allies may make hereafter in regard to reparations. The expectation in Council circles is that by the time the Germans reply to the demand of the commission for reforms, which include the suppression of subsidies and an increased price for coal, the French Government will be ready to resume consideration of the whole reparation question.

Dr. Walter Rathenau, head of the German delegation, took note of the decision in the name of his Government. He added that Germany had not defaulted in her payments, because negotiations had been taken up regarding the payments due Jan. 15. He also took note of the invitation to Germany to take part in the Genoa Conference.

Dr. Rathenau, in his speech before the commission on the day preceeding, had said that Germany was able to meet the London terms of 500,000,000 gold marks in cash and

[Dutch Cartoon]

—De Amsterdammer, Amsterdam

THE GERMAN REPARATIONS

JOHN BULL: "No! Don't kill it, Marianne. Let's fatten it"

1,000,000,000 gold marks in kind annually, but could not go beyond those figures. He explained that Germany's inability to pay was due to the disastrous exchange, which had made it necessary for Germany to use marks to buy foreign currency, until the mark was a drug on the market. Germany's exportations amounted in the last year to only one-fourth of the exports in 1914, and the balance of trade against her amounted to 2,500,000,000 gold marks. This could not be offset by decreasing imports, because Germany was now buying abroad only food and necessary raw materials.

In connection with the reparation report the French Ministry of Foreign Affairs issued the following figures of the relative financial condition of France and Germany:

The German foreign debt is \$787,250,000; interior funded debt, \$850,250,000; interior floating debt, \$2,111,110,000, whereas France's foreign debt is \$6,856,000,000; interior funded debt, \$10,171,000,000, and interior floating debt, \$7,199,000,000.

To meet the financial obligations of the Treaty of Versailles Germany has designated

for the budget \$787,000,000, whereas France to meet reconstruction of the devastated regions has designated a budget of \$1,570,000,000.

According to the tables the German budget makes the tax per person \$13.88. At the same time the French tax per head is \$45.22. The German fiscal year is May 1 to April 3 and the French Jan. 1 to Dec. 3. A kilogram of bread in Germany is 3½ cents, in France 8.22 cents. In Germany a ton of coal costs \$2.05, in France \$9.56. Transportation of a ten-ton railway car 1,000 kilometers: Germany, \$60, and France, \$178.50.

THE FRANCO-BRITISH TREATY

Following is the text of the proposed Treaty of Alliance between France and Great Britain as finally presented to the respective Governments for ratification:

CONSIDERING that the territory of France has been twice invaded by Germany within the memory of living men and that the country still profoundly suffers from the devastation inflicted by the enemy;

CONSIDERING that the peoples of both France and the British Empire paid a heavy tribute in human lives and riches to repulse the invasion of the German armies;

CONSIDERING that the prosperity of European peoples and the economic organizations of the world have been profoundly troubled by the

trial of prolonged war through which they have just passed;

CONSIDERING that guarantees for the security of France against future invasions by Germany are indispensable for the restoration of the stability of Europe, the security of Great Britain and the peace of the world;

CONSIDERING that the following measures for security contained in the Versailles Treaty—

Article 42—Germany is forbidden to maintain or construct any fortifications either on the left bank of the Rhine or on the right bank to the west of a line drawn fifty kilometers to the east of the Rhine.

Article 43—In the area defined above the maintenance and the assembly of armed forces, either permanently or temporarily, and military manoeuvres of any kind, as well as the upkeep of all permanent works for mobilization, are in the same way forbidden.

Article 44—In case Germany violates in any manner whatever the provisions of Articles 42 and 43, she shall be regarded as committing a hostile act against the powers signatory of the present treaty and as calculated to disturb the peace of the world.

—may not provide sufficiently for the defense of the common interest essential to both high contracting parties, as well as to the maintenance of peace in Eastern Europe,

His Britannic Majesty and the President of the French Republic have agreed upon the following dispositions:

ARTICLE I. In case of direct and unprovoked aggression against the territory of France by Germany, Great Britain will place herself immediately at the side of France with her naval, military and aerial forces.

ARTICLE II. The high contracting parties again affirm the common interest which Articles 42, 43 and 44 of the Treaty of Versailles have for them, and they will act in concert if there arises any menace of violation to any one of said articles, or if any doubt arises as to their interpretation.

ARTICLE III. The high contracting parties also undertake to act in concert in case of Germany taking any military, naval or aerial measures whatever incompatible with the Treaty of Versailles.

ARTICLE IV. The present treaty imposes no obligation whatsoever on any dominions of the British Empire, unless or until approved by the dominion which is interested.

ARTICLE V. The present treaty will remain in vigor for a period of ten years, and will, by common accord, be renewable at the end of that period.

THE GENOA CONFERENCE

The Genoa Conference was expected to be the most important gathering since the Versailles Peace Congress. Up to the time of going to press the United States Government had made no announcement as to whether or not it would officially participate. The Soviet Government accepted with alacrity, even before the official invitations were issued. The following wireless communication was sent by Tchitcherin, Minister of Foreign Affairs, on Jan. 8:

The Russian Government accepts with satisfaction the invitation to the European conference called for March next. An extraordinary session of the Central Executive Committee will proceed to select the Russian delegation and will confer on it the most extended powers.

Even if President of the Council of the People's Commissaries Lenin is prevented by his multiple tasks, particularly in connection with the famine, from leaving Russia, in any case the composition of the delegation, as well as the extent of its powers, would give it the same authority as if Citizen Lenin were in it. Nothing, then, will hinder in any case on the part of Russia the rapid progress of the conference.

Deep satisfaction was expressed in German official circles over the conference, and the German Government announced that it would be represented.

AMERICAN ATROCITIES IN THE DOMINICAN REPUBLIC

BY HELEN LESCHORN*

IT was my good fortune to be in Santo Domingo City, the capital of the Dominican Republic, some time prior to and at the time of the hearings held by the Special Committee of the United States

Senate to Investigate the Occupation and Administration of the Dominican Republic by the United States. It looked at first as if there were to be no hearings. When the Dominicans learned that the impresario had staged the investigation in the palace of the Military Governor, in a room adjoining his private office, and that the place

*The writer, an American, was for six years private secretary to the Attorney General of Porto Rico, and for the last three years has been a resident of Santo Domingo.

was to have armed marines posted everywhere, even close to the table where the Senators would sit, they indignantly decided to have nothing to do with the investigation, declaring that such display of armed marines would make it appear that in no other way could the investigation be conducted in an orderly manner and with safety to the Senators, and would prejudice the minds of the Senators at the very outset against the Dominicans. Counsel for the Dominicans was not able to persuade his first witnesses and a few spectators to attend until the second day.

The hearings extended over a period of five days, and in all my experience attending court and judicial proceedings I have never heard and witnessed anything so intensely interesting, so amazing, and at times so horrifying. As an American citizen, devoted to the honor of our flag, my emotions were kept at the breaking point practically every moment of the time the committee held its sessions. Crimson with shame must have been my face most of the time, as witness after witness, men of high character and lofty ideals, ability and commanding patriotism, gave their accusing and incontrovertible testimony against our Government.

The claims of the Dominican people as to the illegality of the invasion and occupation of their country were supported by a number of unimpeachable witnesses. Their testimony and the sworn declarations of Senators, Congressmen and Ministers of State went much further and charged the United States with (1) either having originated or being implicated in a plot to foment a revolution; (2) interfering with the Dominican Congress when it was proceeding according to the Constitution and endeavoring to elect a President of the country; (3) using the American Legation to effect a corrupt deal whereby a certain man, apparently desired by Washington, was to be elected President of the Dominican Republic; (4) using armed force and imprisoning members of Congress in an attempt to elect that man President; (5) seeking to overthrow the Constitutional Government of the island republic. All the witnesses, without a single exception, declared that the reasons stated by the Navy Department as the cause for the intervention were based on false information.

Then came the accounts given under oath, many by men who had been victims, bearing horrible and ineffaceable wounds made by keen-edged steel and red-hot irons, of torture committed by United States marines, both officers and men. When details of some of the countless atrocities inflicted upon the previously disarmed, helpless, defenseless and unoffending Dominican people were given, the effect on me and, I believe, on every one in that audience room, including the Senators, was sickening, as pallid faces plainly indicated. At one stage I recall that Chairman McCormick, showing rare judgment and caution, indicated to the counsel of the Dominicans that it would be just as well if no more of that accusing evidence were given. Already an alarming effect of the at times unlistenable testimony of maimed natives on the Dominican auditors was noticeable to keen-eyed observers. The committee ended the hearings with astounding suddenness and left Santo Domingo City three days earlier than the time that had been announced.

The American people can prepare themselves for hearing one of the worst transactions in which our Government has ever been concerned. The evidence already in the record of this case puts Uncle Sam, probably for the first time in our history, on the defensive in a matter of our international relations and involving our integrity, and apparently the four members of the Senatorial committee realized that this investigation was developing in such a way that our country's honor was at stake. So far as the Dominicans are concerned, they tell me that the case has just been opened, and that when hearings are resumed in Washington there will be presented to the investigation committee evidence of wrongdoing on the part of representatives of the United States Government, and of atrocities and brutalities inflicted by the uniformed men of the United States upon a defenseless and unoffending people, that will shock and arouse every good citizen of our country.

Let the truth be told. It is far better for the American people to learn about this unfortunate affair now, and to end it in an honorable way, than to have such a black chapter go in our history for future generations and other nations of the world to read.

CONQUEST OF HAITI AND SANTO DOMINGO

BY ERNEST H. GRUENING

Managing Editor of The Nation, New York

A documented narrative of the United States Government's seizure of political and military control in the two island republics—Ruthless destruction of Dominican self-government—"The gravest breach of fundamental American traditions in our history"

HISPANIOLA, or Haiti, is the second largest island in the Antilles. It lies between Cuba and Porto Rico. It was discovered by Columbus, and the earliest Caucasian civilization in this hemisphere took root there. The tomb supposed to hold Columbus's ashes is in the Cathedral of Santo Domingo. The eastern two-thirds of the island is occupied by the Dominican Republic, the western one-third by the Republic of Haiti. The island was a French colony till 1804, although the French claims were frequently disputed by the Spaniards, who at various times established themselves in the eastern part, where language and culture remain Spanish. Following nearly fifteen years of struggle, which began when the Bastille fell, the natives achieved their independence. The revolution was unique in that the revolutionaries, who had formerly been slaves, secured the political independence of their country and their personal freedom as well. The Republic of Haiti was established on Jan. 1, 1804, the second republic in this hemisphere. In 1844 the eastern two-thirds of the island seceded and set up the Dominican Republic.

The Republic of Haiti continued free and independent until 1915. During that 111 years it had troublous history. For many years recognition of this little State was refused by other world powers, who

feared the effect on their own slaves. The French, under the constant threat of reinvasion, succeeded in exacting a 90,000,000-franc indemnity for the property of Frenchmen ousted in Haiti's war of independence. Charles X. of France then recognized the republic. American recognition did not come until the Presidency of Abraham Lincoln. The relations with the United States from then on until 1915 amounted chiefly to negotiations and efforts to secure the cession of Mole St. Nicholas, a harbor at the northwestern extremity of the island. It controls the Windward Passage, and the United States desired it for a naval base. All these efforts failed. The Haitians adhered firmly to the constitutional provision, which forbade the cession of territory. During 1914 and 1915 the United States began overtures to Haiti of a different character. A treaty giving Americans control of the customs and finances was proposed. The cession of Mole St. Nicholas appears also in the earlier exchanges. In October, 1914, Mr. Bryan, Secretary of State, wrote to President Wilson, urging the immediate increase of our naval forces in Haitian waters, "not only for the purpose of protecting foreign interests, but also as an evidence of the earnest intention of this Government to settle the unsatisfactory state of affairs which exists." More naval vessels

were sent. At the same time the United States offered to assist the President of Haiti to put down certain threatened revolutionary disturbances. Certain conditions were attached to this assistance, and it was refused. In November and December modifications of previous treaty drafts were again submitted. They proposed the control and administration of the Haitian customs by the United States, and were again refused.

On Dec. 13, 1914, without warning to the Haitian Government, American marines landed in the Haitian capital from the U. S. S. *Machias*. They went to the vaults of the National Bank of Haiti and carried away \$500,000 in gold, the property of the Haitian National Government, on deposit in the bank for the redemption of paper money. This procedure had been arranged between the Secretary of State and the American Director of the National Bank of Haiti, who had been in charge since the control was secured by the National City Bank of New York in 1911. The reason assigned for the removal of the gold was that the bank feared revolutionary activities. The Haitian Government protested to Washington against this violation of its sovereignty, but no explanation was ever given.

LANDING OF MARINES

Subsequent negotiations brought about successive modifications, in Haiti's favor, of the proposed convention. The Haitians indicated willingness to secure American financial aid and friendly co-operation, but would not consent to any abdication of their sovereign rights, and so all negotiations came to naught. On July 1, 1915, the U. S. S. *Washington*, with Rear Admiral Caperton on board, arrived at Cape Haitien, on the north of the island. He established a field radio station ashore on July 3, and on the 9th landed marines from the *Washington* and bluejackets from the *Eagle*. On the 27th a revo-

lution broke out in the capital. The President, Vilbrun Guillaume, seized some two hundred Haitians of the better class and threw them into prison. During the night, either at his order or that of the military commander of the capital, General Oscar, these political prisoners were massacred. The next morning a mob of friends and relatives of the victims marched to the Presidential Palace. The President fled to the French Legation. The mob pursued him there, dragged him and General Oscar out and cut them to pieces. Quiet was immediately restored. There was no looting and no other violence. A committee of safety took charge.

The same day, July 28, a regiment of marines was landed south of the capital. They took possession of all strategic points and disarmed the inhabitants. There was virtually no resistance. On Aug. 10 Admiral Caperton issued the following proclamation:

I am directed by the United States Government to assure the Haitian people that the United States has no object in view except to insure, establish and help maintain Haitian independence and the establishment of a stable and firm government by the Haitian people. Every assistance will be given to the Haitian people in their attempt to secure these ends. *It is the intention to retain United States forces in Haiti only so long as will be necessary for this purpose.*

Meantime the election of the President by the Legislative Chambers was twice delayed at the request of Admiral Caperton, who was acting under orders from the State Department. Secretary Lansing's orders to the American Minister were, in part, as follows:

In order that no misunderstanding can possibly occur after election, it should be made perfectly clear to candidates, as soon as possible, and in advance of election, that the United States expects to be entrusted with the practical control of the customs and such financial control over the affairs of the Republic of Haiti as the United States may deem necessary for efficient administration.

*The Government of the United States considers it a duty to support a constitutional Government. * * * It has no de-*

sign upon the political and territorial integrity of Haiti.

FORCIBLE INTERVENTION

In the interval granted, American naval officers in the capital sought a candidate who would agree in advance to sign and support any treaty which the United States would submit. Several thus approached refused. Among them was the Hon. J. N. Léger, for many years Haitian Minister at Washington, characterized by Lord Pauncefoot as "the ablest diplomat I have ever known." He could not agree to such conditions, he said; he was "for Haiti, not for the United States." Finally, Philip Sudre Dartiguenave, President of the Senate, appeared as a candidate and offered, if elected, to accede to any terms the United States desired, including customs control and cession of Môle St. Nicholas. Upon being apprised of this fact, the Navy Department notified Admiral Caperton that it preferred the election of Dartiguenave. Under American supervision, he was elected on Aug. 12.

Two days later, Aug. 14, a draft of

a treaty was presented. It contained all the clauses which the Haitians had rejected in previous peaceful negotiations—and further conditions. The American Legation was instructed to advise the Haitian President that "the Haitian Congress will be pleased to pass forthwith a resolution authorizing the President-elect to conclude, *without modification*, the treaty submitted by you." The legation transmitted the message. Negotiations for the acceptance of the treaty were thenceforth carried on by Admiral Caperton and his naval officers, acting jointly with the legation. On Aug. 19 Secretary Daniels ordered the seizure of the Haitian custom houses, adding: "Confer for purpose of having Dartiguenave solicit above action. Whether President requests or not, proceed." By Sept. 2 the ten principal Custom Houses had been taken over. The Haitian Government protested in the strongest terms in a series of notes, but in vain. Meanwhile strong opposition was evidenced in the Haitian Cabinet and Congress against ratifying the treaty. On Sept. 3 Admiral

Map of Haiti and Santo Domingo, showing the geographical relation of the two republics to each other, and the location of the island

Caperton proclaimed martial law in the capital, and on Sept. 8 sent the following message to Captain Durell, commanding the Connecticut at Cape Haitien:

Successful negotiation of treaty is pre-dominant part of present mission. After encountering many difficulties, treaty situation at present looks more favorable than usual. This has been effected by the exercising of military pressure at propitious moment in negotiations. Yesterday two members of Cabinet who had blocked negotiations resigned. President himself believed to be anxious to conclude treaty. At present am holding up offensive operations and allowing President time to complete Cabinet and try again. Am therefore not yet ready to begin offensive operations at Cape Haitien, but will hold them in abeyance as additional pressure.

Meanwhile the customs receipts, virtually the sole revenue of the Republic, were held up by Admiral Caperton, so that there were no funds for the payment of Government salaries and other current expenses. On Oct. 2 Admiral Caperton informed the President that "funds will be immediately available upon ratification of the treaty." The President replied that if funds were further withheld he could not face the growing opposition of the Senate, especially in view of the steadily increasing subjugation of the country by American naval forces, but would have to resign. Upon transmission of these facts to the Navy Department, the latter authorized the allowance of a certain weekly amount to the Haitian Government to meet current expenses, saying also: "The question of payment of back salary will be settled by the department immediately after the ratification of the treaty." The Haitian Cabinet had ratified on Sept. 16. The Chamber of Deputies followed suit on Oct. 6. During these weeks several messages from the Navy Department demanded to know the cause of the delay in securing ratification. On Nov. 3 Admiral Caperton, in a statement to the President, said in part:

I have given Captain Edward L. Beach, who is my senior Captain, orders to do everything in his power to get the treaty ratified. Accordingly, he has repeatedly

seen different members of the Senate Treaty Committee, as well as other prominent and influential Haitians, and has earnestly and forcefully presented to these members my reasons why the Senate committee should reconsider the report it has determined upon, and should recommend immediate ratification by the Senate of the

Chairman of the Senatorial Commission of Inquiry in Haiti

treaty as it has passed the House. Captain Beach will continue to work for this ratification. * * * The only objections are unimportant technical points and abstract principles. These and other details can be arranged later.

On Nov. 5 the Senate presented its objections to the treaty and demanded certain modifications. On Nov. 7, following the election—to fill a vacancy—of a new Senator known to be favorable to the treaty, Admiral Caperton sent the U. S. S. Hector to transport him from Cape Haitien to Port-au-Prince. On Nov. 10 Secretary Daniels sent the following message to Admiral Caperton:

* * * Arrange with President Dartiguenave that he call a Cabinet meeting be-

fore the session of Senate which will pass upon ratification of treaty and request that you be permitted to appear before that meeting to make a statement to the President and to members of the Cabinet. On your own authority state the following before these officers: "I have the honor to inform the President of Haiti and the

sition and to secure immediate ratification."

The Admiral carried out these instructions and the next day, Nov. 11, the treaty was ratified by the Haitian Senate. It was ratified by the Senate of the United States the following May (1916).

FORCED LABOR INSTITUTED

Since that episode, the history of Haiti under the American occupation has been, in the words of Admiral Caperton, written at that time, "purely one of military control." Operations were conducted into the hills, particularly against all who offended against the existing régime. The military operations were, however, of minor consequence. The Haitians had no modern weapons. The annual report of the Secretary of the Navy for 1920 gives the Haitian killed for the ensuing years as follows:

1915.....	212	1918.....	35
1916.....	50	1919.....	1,861
1917.....	2	1920.....	90

During the same period one marine officer and twelve enlisted men were killed in action or died of wounds.

The tremendous rise in Haitian casualties in 1919 was due to the following conditions:

While determined opposition existed against the coming of the Americans, the Haitians are a naturally peaceful people. Almost without exception, they expected the American military occupation to be of short duration. (The categorical promises in the American proclamation confirmed that belief.) There had been little resistance. In 1917 the country was absolutely at peace. In 1918, however, the American military forces resurrected the old Haitian law of *corvée*. This law required Haitians to work a few days each year on the roads in their immediate community to keep the highways in repair. The occupation determined to build a military highway running from north to south through the island, and other roads, by forced labor. Even the moderate Haitian law

REAR ADMIRAL W. B. CAPERTON

Naval officer under whose command American marines first occupied Haiti in 1915

members of his Cabinet that I am personally gratified that public sentiment continues favorable to the treaty; that there is a strong demand from all classes for immediate ratification, and that the treaty will be ratified Thursday. I am sure that you gentlemen will understand my sentiment in this matter, and I am confident if the treaty fails of ratification that my Government has intention to retain control in Haiti until the desired end is accomplished, and that it will forthwith proceed to the complete pacification of Haiti so as to insure internal tranquillity necessary to such development of country and its industry as will afford relief to the starving populace now unemployed. * * *

The message ended with the confidential memorandum, "It is expected that you will be able to make this sufficiently clear to remove all oppo-

had been in disuse for a long time. Testimony varies as to the extent of the abuses committed under the *corvée*, but it seems to be clearly proved that Haitians were (a) seized wherever they could be found; (b) transported to other parts of the island; (c) compelled to work under guard, often for weeks; (d) placed under guard at night to prevent their escape; (e) subjected to physical violence if they resisted; (f) shot if they attempted to escape. Navy Department testimony admits that at least a hundred were thus killed. Haitian figures are very much higher. It is also proved that the *corvée* continued in certain sections after it had been ordered discontinued by brigade headquarters.

In consequence of these repressive measures, a widespread revolt broke out against the American military forces. This was headed by Charlemagne Peralte, a formerly wealthy landowner of the town of Hinche and a former *chef d'arrondissement*. He was arrested, charged with revolutionary activities and sentenced by court-martial to a long term of imprisonment. He was subjected to ill treatment and forced to labor on the public streets in prison garb. He escaped and became the leader of the rapidly growing revolutionary forces. For many months he defied all efforts of the American troops, until finally he was captured and killed with the aid of treacherous natives and his body exposed in the market place at Cape Haitien. His followers were then rapidly exterminated.

THE NEW CONSTITUTION

In the Spring of 1917 the draft of a new Constitution was submitted to the Haitian Congress by the American officials. The chief provision of the new Constitution was that it permitted foreigners to acquire land. Haitians had always considered that their greatest safety lay in their constitutional provision which had hitherto forbidden this. The new Constitution centred unheard-of powers in

the executive, enabling him, at his pleasure, to hold or postpone elections! Moreover, this Haitian Constitution contained clauses ratifying all acts of the occupation, providing that no Haitian could be prosecuted either

PHILIP SUDRE DARTIGUENAVE
President of Haiti, elected under American
auspices soon after landing of marines

civily or criminally for any act executed by order of the occupation, and that the courts-martial of the occupation were the supreme law of the land. The Legislative Assembly refused to ratify. It proposed instead to pass the Constitution without the most objectionable provisions. On June 17 General Eli K. Cole, U. S. M. C., chief of the Occupation, sent the following message to the Secretary of the Navy:

Antagonism National Assembly to foreign ownership land such that no endeavor short of dissolution will prevent passage Constitution along lines reported my 13107. Have discussed matters fully with Minister and General Butler. Suggest Minister notify Haitian Government that, in opinion our Government, Constitution prepared Assembly will make impossible to bring about

results contemplated Articles 1 and 14 of treaty, and consequently our Government cannot accept such Constitution. If Assembly refuses heed such warning, it will be necessary to dissolve Assembly to prevent such passage. The number marines in Haiti should be increased by at least

BRIGADIER GENERAL JOHN H. RUSSELL
Marine Corps Commander named by President
Harding to investigate conditions in Haiti

eight full companies to prevent disorders that may follow dissolution Assembly.

On June 18 General Cole notified Washington, "unless contrary instructions received, if necessary to prevent passage proposed Constitution, I intend dissolve National Assembly, through President, if possible, otherwise direct." In reply the Navy Department vested General Cole "with full discretionary power." The next day General Butler, acting under instructions from General Cole, dissolved the Assembly. The Haitian newspapers were ordered by General Cole to omit all comment on this action.

So universally hostile was public sentiment to the proposed Constitution that it was evident that no Hai-

tian Legislature could be elected that would vote for it. No authority existed in consequence to pass such a Constitution. But in the course of the following twelve months the occupation decided to arrange a plebiscite for that purpose. For such a plebiscite neither precedent nor authority existed in Haiti. The following is a specimen order indicating the manner in which this plebiscite was conducted:

Republic of Haiti,
Port-de-Paix, June 11, 1918.

In accordance with the decree of his Excellency the President of the Republic, published in The Monitor of May 8 last, all the citizens of this commune of Port-de-Paix are asked to be present tomorrow at the Hotel Communal to vote on the new Constitution, published in The Monitor of the same date. Any abstention from such a solemn occasion will be considered an unpatriotic—that is, an anti-American occupation—act. Maintenance of order will be assured by the gendarmerie [under chief, General Williams, American marine officer], and the ballots will be distributed by a member of the Administration of Finances [an American marine officer] opposite the voting offices, &c.

The voting is described by a Baptist missionary, the Rev. L. Ton Evans. (Page 191 *et seq.*, Official Record, Senate Resolution 112, Inquiry Into Occupation and Administration of Haiti and Santo Domingo.) He states that "the natives were terror-stricken." Further, all the pink slips marked *non* (no) were tied up and only the white slips with *oui* (yes) were handled on the table before which the so-called voters were driven in.

The following passages are taken from the record:

Senator POMERENE—What was the vote at St. Marc? What was the result there?

Mr. EVANS—There was no means of knowing. The natives felt no interest whatever, as it was known from announcement by the occupation (through Dartiguenave), that whatever the American marines did no one dared to oppose or even question. All slips were taken to Port-au-Prince and published there. It was looked upon as a mere farce, and lowered the prestige of the United States among Haitians who seriously think, and even Europeans, and, indeed, Americans, who felt that the American occupation had gone the limit, and made itself a laughing stock and looked contemptible. No votes were reckoned to my knowledge at either town, but all taken in charge of American marines to Port-au-Prince.

Senator POMERENE—No, no; when the votes were counted, what was the result of the election at that place?

Mr. EVANS—All were taken to Port-au-Prince and published there, but whether they gave numbers supposed to be cast at each town, I know not, and, like others, cared little, as I became disgusted and felt disgraced that such was possible in the name of the United States and by any one who called himself an American!

Senator KING—Sixty-three thousand for, and two or three hundred against in all the island.*

Mr. EVANS—You mean the republic, Senator. They might have published the vote as 1,000,000, or as 63,000; there is no one to contradict or to explain, for the American marines managed the whole business. I do not believe that any slips were put in by Haitians, and that out of shame certain marines cast in a couple of hundreds. This is the belief in Haiti. I denounced it then, and denounce it more still today, as the greatest mockery I ever saw in my life, and never thought we had Americans and marine officers that could sink so low before these gendarmes and poor Haitians, whose respect, implicit confidence and highest admiration should be the aim of every military officer and true American, who despises anything like hypocrisy and scorns deceit and fraud.

Senator POMERENE—What part did these educated Haitians take in the election?

Mr. EVANS—The great majority—apart from those who happened, as stated, to be officially and financially connected with the occupation, so-called Haitian Government, sugar and castor-oil corporations, schools, courts, prisons, customs, railroads, &c.—abstained and kept clear of the voting places, though in so doing they ran the risk of being blacklisted, run into prison on slightest suspicion or provocation, &c.

Had they gone they would have asked for the pink slip with *non*, which would have decided their lot with the occupation. It was a hard and trying situation, but many were heroic enough to stand the test, whatever have been the consequences since.

This testimony has remained uncontradicted, although virtually every high marine officer who served in Haiti testified subsequently, viz., General Butler, General Waller, General Cole, General Catlin, Colonel Williams (the General Williams of the Gendarmerie d'Haiti mentioned in the above plebiscite order), as well as Admiral Caperton and General Barnett, who was Commandant of the Marine Corps from 1914 to 1920.

THE HAITIAN MEMORIAL

Today Haiti remains under martial

law, but recently the situation there began to attract attention in the United States and elsewhere. In the Summer of 1920, following the publication of articles in *The Nation*, President Harding made of the Haitian and Dominican situations a campaign issue. Secretary Daniels denied the accusation of wrong-doing by the Democratic Administration, but sent a Naval Commission to investigate. This commission found nothing materially discreditable to report. On Oct. 2, 1920, Major Gen. Barnett, Commandant of the Marine Corps, expressed himself as shocked by "the indiscriminate killings in Haiti." Another Naval Commission was sent to investigate, and it reported approximately as had the first. Shortly afterward a delegation of representative Haitian citizens came to the United States, representing the Haitian people, and particularly the popular organization known as the Union Patriotique d'Haiti. These delegates, refused an audience by the State Department, composed a detailed memorial—with documents—which was sent to the Secretary of State and to the Chairman of the Committees on Foreign Relations of the Senate and House. It was also read into the official record last August of the Senatorial Commission of Inquiry, of which Senator Medill McCormick was Chairman. This memorial makes charges of administrative incompetence and malfeasance by the civilian officials. It lists twenty-five specimen atrocities which, it charges, were committed by the American military and were vainly called to the attention of the Naval Commission of Inquiry headed by Admiral Mayo. The memorial makes the following conclusion (pp. 32 and 33 of the record of the Senatorial Commission of Inquiry):

The Haitian Republic was the second nation of the New World—second only to the United States—to conquer its national independence. We have our own history, our own traditions, customs and national spirit, our own institutions, laws and social and political organization, our own culture, our own literature (French language), and our

*The official figures as published at the beginning of the new Constitution are 98,294, yes; 769, no.

own religion. For 111 years the little Haitian Nation has managed its own affairs; for 111 years it has made the necessary effort for its material, intellectual and moral development as well as any other nation—better than any other nation, because it has been from the start absolutely alone in its difficult task, without any aid from the outside bearing with it along the harsh road of civilization the glorious misery of its beginning. And then, one fine day, under the merest pretext, without any possible explanation or justification on the grounds of violation of any American right or interest, American forces landed on our national territory and actually abolished the sovereignty and independence of the Haitian Republic.

We have just given an account of the chief aspects of the American military occupation of our country since July 28, 1915.

It is the most terrible régime of military autocracy which has ever been carried on in the name of the great American democracy.

The Haitian people, during these last five years, have passed through such sacrifices, tortures, destructions, humiliations and misery as have never before been known in the course of their unhappy history.

The American Government, in spite of the attitude of wisdom, moderation, and even submission, which it has always found in dealing with the Haitian Government, has never lived up to any of the agreements which it solemnly entered into with regard to the Haitian people.

The Haitian people are entitled to reparations for the wrongs and injuries committed against them.

The great American people can only honor themselves and rise in universal esteem by hastening the restoration of justice—of all the justice due a weak and friendly nation which the agents of its Government have systematically abused.

Reparations are due for the human lives that have been taken and for the property that has been destroyed or abstracted. An impartial investigation will provide the necessary statements and supply the basis for the estimates to be determined.

The present political aspirations of the Haitian Nation have been formulated by the Union Patriotique, a comprehensive national association which, through its numerous branches throughout the country and in all levels of society, includes virtually all the Haitian people. The undersigned have been sent to the United States by this association to make the will of the country clearly known.

The Haitian people are filled with peaceful sentiments, but there is no doubt that they intend to recover definitely the administration of their own affairs and to resume under their own responsibility the entire life of the country, with full sovereignty and independence. They will never rest until they have obtained them.

The salient aspirations of the Haitian people are summarized as follows:

1. Immediate abolition of martial law and courts-martial.

2. Immediate reorganization of the Haitian police and military forces, and withdrawal within a short period of the United States military occupation.

3. Abrogation of the convention of 1915.

4. Convocation, within a short period, of a Constituent Assembly, with all the guarantees of electoral liberty.

But the Haitian people desire too strongly the friendship of the great American people, and are too anxious for their own material, intellectual and moral development, not to wish and bespeak for themselves the impartial and altruistic aid of the United States Government. They have urgent needs, vital to the development of the natural resources of the country and essential to the full expansion of its agricultural, industrial and commercial activity. The satisfying of these needs is absolutely necessary for the continued progress of the Haitian community.

Nothing would serve better to bring about the speedy re-establishment of normal relations between the two countries than the friendly aid of the United States Government in the economic prosperity and social progress of the Haitian Republic.

SITUATION IN SANTO DOMINGO

The Dominican situation may be said to have begun on Nov. 19, 1915. On that date, one week after the final ratification by Haiti of the treaty giving the United States military and financial control, a virtually similar draft was presented to President Jimenez of the Dominican Republic. It was promptly and emphatically rejected. The following April, after a disagreement between President Jimenez and his Minister of War, Desiderio Arias, impeachment proceedings were entered upon against the President in the Dominican Congress. On May 4, 1916, during some revolutionary disturbance, and without warning to the Dominican Government, American marines were landed near Santo Domingo. The American Minister at that time gave assurance to the Dominican Government that these forces were solely for the purpose of protecting the American Legation. On May 7 these forces had increased so greatly that it appeared evident to President Jimenez that they were there for another pur-

pose, and he resigned in protest against this violation of Dominican sovereignty.

The next day, General Arias, the Minister of War, was invited and escorted personally by the American Minister to the American Legation, where he was induced to enter a conference with Federico Velasquez. It was proposed to Arias that, in return for certain favors and remunerations, he would use his influence and the military under his command to aid the election of Velasquez. Arias refused, declining to abet the scheme to foist illegally and by force majeure an undesired candidate on the Dominican people. On May 11 Federico Henriquez y Carvajal was nominated for president of the Republic in the Chamber of Deputies and confirmed by the Senate on May 23. On May 13 the American Minister formally notified the Dominican Government of the intention of the United States Government to land a large armed force and to occupy the capital, and threatening bombardment of the city and unrestricted firing upon the natives if in any way they interfered with the landing of the American forces. The next day, May 18, the American Minister notified the Dominican Congress that Federico Henriquez y Carvajal was not acceptable to the United States as President.

On June 5 the American Minister gave formal notice to the Dominican Government that the Receiver General of Customs would take charge of all the finances and funds of the Government. Under the treaty of 1907 with the United States, an American appointed by the United States Government was in charge of the collection of customs of the Dominican Republic. It was his duty under this treaty to turn in all but the sum of \$100,000 monthly to the Dominican Government. All above this \$100,000 was to go, one half to the Dominican Government for its own uses, the other half to the sinking fund of the loan contracted under the treaty. The Dominican Government instantly and

vigorously protested against this procedure. On June 11 Federico Henriquez y Carvajal, bowing to the expressed opposition of the United States, declined election to the Presidency. His resignation was accepted by the Dominican Congress, which then decided to elect as President a man who had had no affiliations with any of the existing political parties, namely, Dr. Francisco Henriquez y Carvajal, who had been practicing medicine in Santiago de Cuba for the previous twelve years. On June 16, following orders from Washington, the Receiver General of Customs took charge of all revenues—internal, as well as the customs revenues which alone were stipulated in the treaty of 1907—and set himself up as disbursing agent of the republic. Dominicans made vigorous protest, pointing out that this action was in violation of the treaty of 1907.

The Receiver General admitted his inability to conform to the wishes of the Dominican Government, stating that his orders were received directly from the State Department of the United States, and that he had but to obey. On July 31 Dr. Henriquez was inaugurated as President. No objection was raised by the United States to his election. On Aug. 18 notice was sent to the Dominican Government by the American authorities that no money coming into the hands of the Receiver General would be paid to the Dominican Government. On Aug. 23 the American Minister presented a note demanding the acquiescence of the Dominican Government to the conditions rejected Nov. 19 of the preceding year by President Jimenez—virtually the same treaty then in effect in Haiti. The Dominican Government refused. On Oct. 17, following instructions from Washington, the Receiver General formally refused recognition to the Dominican Budget to pay the salaries of its officials and employes and the pensions of its widows and orphans. On Nov. 29, 1916, a "proclamation of occupation" was made by the United States. It was issued over

the signature of Captain H. S. Knapp, U. S. N., who subsequently declared himself to be "supreme legislator, supreme judge, supreme executor."

HELD IN IRON BONDAGE

For five years Americans held Santo Domingo in the iron bondage of martial law. Public meetings were forbidden, the press censored, protestors court-martialed. Every governmental function was taken over by American marines. During this period, also, the occupation built excellent highways, cleaned up towns, and greatly improved the school system, using Dominican funds for these ends. Many Dominicans were also killed in action. The occupation holds all Dominicans killed in action to be bandits; the Dominicans consider them patriots. The Dominicans have never ceased to protest before the world against the occupation of their country. The sentence of imprisonment and fine of the poet, Fabio Fiallo, because of his article of protest against the invasion of his country, attracted wide attention in Latin America.

A plan for withdrawal was proposed by the Wilson Administration in December, 1920. A similar plan was proposed by the Harding Administration through the proclamation issued by the Military Governor on June 14, 1921. The plan set a date eight months ahead for the withdrawal of the American forces and the restoration of the national Dominican Government. It constituted the Military Governor the provisional Dominican Executive, gave him the power to promulgate an electoral law and to convene the people to the elections. It also gave him the power to name the Dominicans who, together with representatives of the American Government, would agree: (1) to ratify all acts of the military Government; (2) to entrust the command and organization of the Dominican forces to American officials.

This plan aroused the unanimous resentment of the Dominican people.

They protested solemnly that they desired their freedom without qualifications. They refused to ratify the acts of the military Government, which included a loan that carried interest varying from 9 to 19 per cent. As the co-operation of the Dominicans was necessary, the plan went by the board.

That is the status of the Dominican Republic to date. It asks its unconditional sovereignty as an absolute right. It desires that the Americans retire and leave them in peace.

The contentions of the American Government, justifying its occupation of the Dominican Republic, are vigorously denied by the Dominicans. They assert, first, that they have not violated the treaty of 1907 by increasing the public debt, and that the indebtedness to the United States has been paid far in excess of requirements (they present the official figures to prove these assertions); second, that the revolutionary disturbances were of a purely political and minor character, which in no sense affected American lives or property, or the execution of the treaty of 1907; third, that granting a difference of interpretation of these two preceding issues, nothing in law or morality justified the aggression and conquest practiced by the United States.

SUMMARY AND INDICTMENT

To sum up: The cases of Haiti and Santo Domingo are closely analogous. In both instances the United States clearly desired to gain control of these republics. In both instances, when attempts to secure this by peaceable means failed, advantage was taken of internal disorder to land forces. Then what could not be obtained by peaceable means was sought by military pressure. In Haiti the United States was able to force through a treaty, and today this treaty is held up as the sanction for all America's acts in that republic since. In Santo Domingo the treaty could not be forced

through, and a ruthless destruction of all forms of Dominican self-government followed. These acts are indisputably proved by the record. They comprise the gravest breach of fundamental American traditions in our history. They violate international law. They violate the Constitution of the United States. They violate every treaty involved. They constitute essentially the same kind of aggression as that which Germany practiced against Belgium in 1914—and without even the invalid excuse of “military necessity.” While we were preparing to enter the struggle against Germany to oppose ruthless military conquest we were secretly practicing it.

The activities in Haiti and Santo Domingo were guarded by a rigid military censorship and were practically unknown in the United States

until 1920. They are not widely known today.

The people of both these countries are clamoring for their independence. The Haitians demand the abrogation of the convention of 1915, imposed upon them by force, and the withdrawal of the occupation. In the next few weeks the Senate of the United States will have the opportunity to decide whether or not the nation will adhere to the traditions in which it was conceived and grew to greatness. The issue is far larger than Haiti and Santo Domingo. Shall the United States follow the course of Japan in Korea, of England in Egypt, of Germany in Belgium? Or shall it follow the path of honor, justice, fair-dealing and common decency to weak and friendly neighbor States? We are at the parting of the ways. Haiti and Santo Domingo are the acid test.

THE EX-KAISER'S “HISTORICAL TABLES”

THERE was published in Leipzig early in January a book by the ex-Kaiser, entitled “Comparative Historical Tables From 1878 to the Outbreak of War, 1914.” We find here what may be called a skeleton of history for the thirty-six years concerned, with the essential dates, the treaties, the wars, and the conferences of Kings and Emperors. Though the compiler was one of the principal actors in these events, there is practically no information given which has not been made known by the usual agencies of publicity. There are two exceptions to this, however; one is the statement that in 1900 the Czar surprised Chancellor von Bülow and Wilhelm himself by informing them that he intended to go to war with Japan as soon as possible; the other is that King Edward in 1909 told the Emperor that the excitement in England over the growth of the German fleet was ludicrous.

Considerable space is devoted to foreign comment, much of which has been already used by the Germans as propaganda to prove that Germany was not to blame for

the war. Many of the obscurer diplomats of the minor powers are quoted; there are unsigned articles from Russian and German papers, as well as cuttings even from the British press; one record placed in evidence gives what Frank Harris, sometime London editor, wrote in 1887. As to what the Kaiser thought, what really went on behind the coulisses—silence. The events based on the critical date, July 5, 1914, fail completely to coincide with what is now definitely known of the events leading directly to the war. All the Kaiser says is this: “The German Government considers the clearing up of the relations with Serbia is an Austrian affair, in which Germany will not interfere.” From other sources we know that the Austrian Emperor sent a letter to the Kaiser, and that the Kaiser personally guaranteed to the Austrian envoy his full support of the proposed Austrian action. The growth of the German fleet is put in the background. The challenge by Germany to the world is completely ignored.

THE LYNCHING INFAMY

BY CHARLES FREDERICK CARTER

Plain facts about the frequent exhibitions of mob savagery that disgrace the United States among civilized nations—Record of each State for the last thirty-five years—Penalties imposed by the Anti-Lynching bill passed by the House of Representatives

BURNING human beings alive by slow fire so that the spectators, men, women and children, may be edified by the agonies of the victims as long as possible—it is recorded that one such spectacle lasted 59 minutes before the victim became unconscious—is likely to lose something of its popularity if a bill which passed the House Jan. 26, by a vote of 230 to 119, becomes a law. The purpose of this bill (H. R. 13) is "To assure persons within the jurisdiction of every State the equal protection of the laws, and to punish the crime of lynching."

Briefly stated, the bill is drawn on the theory that if a State or a governmental subdivision thereof fails or refuses to protect the lives of persons against a mob (three or more persons may constitute a mob), it may be deemed to have denied the equal protection of the laws guaranteed by the Constitution; and the Federal Government may, therefore, intervene to punish the State officers for their dereliction. The bill provides that any local official who is charged with the duty of protecting a prisoner, and who fails, neglects or refuses to make all reasonable efforts to protect him, or any officer who fails to make all reasonable efforts to apprehend or prosecute all persons composing the mob, shall be deemed guilty of a felony punishable by imprisonment not exceeding five years or a fine of \$5,000 or both. Action is to be brought in the United States District Courts, so that local feeling may not interfere with justice. Participation in a lynching is defined as a

felony punishable by imprisonment for a term varying from five years to life.

Any county in which a lynching takes place is to forfeit \$10,000 to the family of the victim; or, if he has no family, the money is to be for the use of the United States. It is made mandatory upon the Federal courts to see that the money is collected—by execution against any property of the county or by the levy and collection of a tax if it is not paid voluntarily.

LYNCHING BILL CONSTITUTIONAL

This anti-lynching bill, introduced by Representative Leonidas C. Dyer of the Twelfth Missouri district, and amended by the Committee on the Judiciary, was strongly contested by some Southern Representatives, who, if it is permissible to judge by their reported expressions, saw in any reference to the subject of lynching a studied insult to the South. It is also opposed on the ground that it is an invasion of the rights of the States. All Democratic Congressmen voted against it except eight. Advocates of the bill maintain that the power of the Federal Government to intervene, when a State fails to accord protection guaranteed by the Constitution to all persons within its jurisdiction, is amply conferred by the Fourteenth Amendment, by Section 31 of the Judiciary act and by decisions of the Supreme Court thereunder.

Assistant Attorney General Goff, who examined the bill on behalf of the Committee on the Judiciary, pronounced it constitutional in every

particular. In fact, every provision in the bill is now in force in some of the States. The sections penalizing communities for permitting lynching are based on South Carolina and Ohio laws which have been held constitutional in both States by their respective Supreme Courts. A West Virginia law recently enacted provides that the representative of a mob victim may recover \$5,000 from the county, the action to be brought in a State court. If the amount is not paid, a tax may be levied against the county for its collection. The county may recover on the official bond of any officer responsible for the protection of the victim, when proved guilty of negligence. Every person participating in a riotous assemblage which puts another person to death is declared guilty of murder. If only damage to property or injury to persons, not resulting in death, are inflicted by the mob, members thereof are liable to a penitentiary sentence of from one to ten years.

One argument in behalf of a Federal anti-lynching law is the fear, expressed by more than one member of Congress, that a California mob by some outrage against Japanese residents of the State may embroil us with Japan. From that standpoint legislation is declared to be of immediate urgency. The country has reason to know the danger that may arise from lynching citizens of foreign Governments, for Congress has had to appropriate nearly eight hundred thousand dollars for payment to foreign Governments for the murder of their citizens by American mobs.

WHY THE BILL IS NECESSARY

Obviously the paramount reason for a Federal anti-lynching law is that the States in which lynching is

prevalent seem wholly incapable of dealing with the matter, however sincere and courageous some State officials have shown themselves to be.

Kentucky has a law providing for the automatic removal of officials who fail to do their duty in dealing with mobs, yet lynching goes on as if no such law had ever been heard of.

Governor Cooper of South Carolina attracted national attention by using the National Guard to prevent a lynching; yet South Carolina ranks tenth among the States in the frequency of lynchings.

Governor Bickett made possible the defense of the Goldsboro (N. C.) Court House against a mob bent on lynching, yet North Carolina ranks fourteenth in the frequency of lynchings.

Governor Dorsey of Georgia, the State with the worst lynching record of all, organized a movement to check such crimes, and for a time the country apparently did not know whether

[American Cartoon]

—Dallas News

IT LOOKS AS THOUGH SOME ONE NEEDED A
LITTLE HELP

to expect his impeachment or his lynching.

Governor Hobby of Texas, aided by State Attorney General Cureton, proceeded against a lynching mob in Hill County, but the case was never called up from the docket. Two years later two members of a lynching mob in East Texas were tried on reduced charges, and sentence was suspended.

The Mayor of Omaha attempted to check a mob which was wrecking the Court House to carry out a lynching in September, 1919, and was himself strung up. He was rescued barely in time to save his life.

Lynching appears to be decreasing somewhat, according to such statistics as are available. Sixty-three lynchings were reported in 1921, as

compared with sixty-five in 1920 and eighty-three in 1919. While there are fluctuations in the number of these outrages from year to year, there has been an almost steady decrease in lynchings for the last thirty years from the high-water mark of 208 in 1892. In no year of the decade ending with 1901 did the number of lynchings drop below 100, the total for the ten years being 1,460. In the next decade only once, in 1903, when the figure was 102, did the annual total reach 100. The total for the period was 782. For the ten years ending with 1921 the total was 604. This shows a decrease of 678, or 46.5 per cent., in the second decade, as compared with the first, and a decrease of 178 in the third decade, as compared with the second, and a decrease of 58.6 per cent. from the decade ending with 1901 to that ending with 1921. The annual average number of lynchings during the whole period of thirty-six years for which any statistics are available was 94, as compared with 63 in 1921.

In all but the ten States in which the crime has always been at its worst, lynching is decreasing. The highest number of lynchings in any year in Georgia, foremost of the lynching States, was 21 in 1911 and again in 1919. If the ratio of lynchings to population had been the same throughout the United States as it was in Georgia, the 1919 total would have been 766 instead of 83, which was the highest for twelve years. To put it another way, Georgia in 1919 had 9.1 times as many lynchings in proportion to population as all the rest of the country.

If the Mississippi lynching rate in the first half

[American Cartoon]

—Rochester Democrat and Chronicle

TRYING TO EXTINGUISH IT

of 1921 had been maintained throughout the United States for the entire year, there would have been 1,180 such crimes. That is to say, the lynching rate in Mississippi was eighteen times what it was in the rest of the country, including neighboring States in which lynchings are not rare.

It should not be surprising to find other forms of murder more frequent where lynching is so common. Statistics show that in 1920 there were 63.4 murders per 100,000 population in Memphis, Tenn. In Savannah, Ga., there were 44 murders, and in Atlanta, Ga., 40.9 murders per 100,000 population. In Charleston, S. C., the murder rate is 36.5, in New Orleans 16.9, and in Nashville 16 per 100,000 population. All these cities are in the leading ten lynching States. Compare the murder rates there with the corresponding rates of 1.3 per 100,000 in Rochester, N. Y., 2.9 in Providence, 3.4 in Newark, 4.1 in Buffalo, 4.3 in Hartford, or even 5.9 in New York City.

Neither should it be deemed surprising to find illiteracy high among the native white population of the lynching States. As shown in the table, page 901, there has been only one lynching in New England in the whole period of thirty-five years, and that was in Connecticut in 1886. Illiteracy among the native white population in these six States, according to the census bureau, was but seven-tenths of 1 per cent. in 1920. Utah has never had a lynching. There the illiteracy among the native white population is but three-tenths of 1 per cent. The average illiteracy among native whites for the whole United States is 2 per cent.

In Georgia, the leading lynching State, 5.4 per cent. of the native white population is illiterate. For the leading ten lynching States the percentage of illiteracy among native whites is 5.66. Ignorance, murder and lynching seem to go together.

Whenever lynching is referred to, particularly in the South, it is always

pleaded in extenuation that no other form of punishment is swift and terrible enough to be effective as a deterrent from crimes against white women, the impression conveyed being that only black men are lynched, and only for this particularly revolting crime. But, according to figures prepared by the Tuskegee Institute of Alabama, only 20 per cent. of all the lynchings from 1885 to 1921 were for this cause. In the five-year period ending with 1918, 264 negroes were lynched. Crimes against white women were alleged in twenty-eight of the cases, or a little more than 10 per cent. of the total. The remainder included white men as well as black, women and even girls. Included in the wide range of causes deemed serious enough to warrant lynching, according to this authority, are 53 for "insults to whites;" 237 paid with their lives for thefts of various kinds; 189 were shot, burned or hanged for felonious assaults not connected with white women.

In 1918, six women were done to death by mobs. The crime for which Sarah Cabiness atoned with her life at Huntsville, Texas, on June 4, 1918, was attempting to drag the bodies of her four sons from their burning home after they had been murdered by a mob. She was shot and her body was tossed into the burning house to be cremated along with those of her sons. Her daughter Bessie was also shot and burned on the common pyre. The four sons who were the unwitting cause of their mother's death had committed no crime against white women. In fact, they had committed no crime at all. Their lynching was merely by way of precaution. A fifth brother had been killed by officers who had come to arrest him on the charge of trying to evade the draft law. Under these circumstances the surviving four brothers conspired, or at least they might have conspired if they had thought of it, to avenge his death.

June 4, 1918, seems to have been a good day for lynching, for there were no fewer than three such af-

fairs in Texas on that date, the total score being eight victims, one of whom was a white man.

Three negroes were lynched at Rayville, La., Feb. 26, 1918, two being hanged and the other shot, for stealing hogs, number not specified. In this affair one member of the mob was killed. A fourth negro also was killed, but that was accidental. If the total number of hogs stolen equaled the number of negroes killed, this would establish the value of a negro's life in Louisiana at one hog. The prevailing quotation in Georgia is somewhat higher; for there two negroes were lynched for killing a mule, which establishes a valuation of half a mule per negro.

Spencer Evans was convicted by a court at Crawfordsville, Ga., March 22, 1918, of attacking, not a white, but a colored woman, and sentenced to be hanged. Not to be cheated of its favorite diversion by any such legal subterfuge as a death sentence, a mob took Evans from the jail and hanged him the same day.

William Bird was hanged by a mob at Sheffield, Ala., Nov. 11, 1918, for creating a disturbance! Three days later Charles Shipman was lynched in Fort Bend County, Texas, because he disagreed with a landowner. Of the total of sixty-four lynchings in 1918, fifteen were for crimes or attempted crimes against white women.

In this connection an incident related to the House by Representative Dyer last January may be interesting. It appears that a Mississippi gentleman had repeatedly attacked two negro girls, one 18, the other 16

LYNCHING RECORD BY STATES

More than 78 per cent. of all lynchings from 1885 to 1920 took place in ten Southern States. Here is the record:

State.	Lynchings.	State.	Lynchings.
Georgia	523	Arkansas	219
Mississippi	400	Tennessee	198
Texas	304	Florida	180
Louisiana	289	Kentucky	167
Alabama	260	So. Carolina	121

Total . . . 2,666

The lynching record for the other States for the period from 1885 to 1920, both inclusive, follows:

State.	Lynchings.	State.	Lynchings.
Missouri	85	Idaho	3
Oklahoma	84	Iowa	19
Virginia	76	Oregon	10
No. Carolina	71	Minnesota	6
Kansas	37	Nevada	6
West Virginia	37	Pennsylvania	6
California	33	Michigan	5
Indiana	31	Wisconsin	5
Nebraska	30	No. Dakota	3
Illinois	26	New York	2
Colorado	25	Connecticut	1
Maryland	23	Delaware	1
Montana	21	New Jersey	1
Ohio	20	Maine	0
Wyoming	17	Massachusetts	0
New Mexico	16	N. Hampshire	0
So. Dakota	15	Rhode Island	0
Washington	14	Utah	0
Arizona	12	Vermont	0

Total . . . 737

years old. Finally a negro youth aged 20 killed the white man as the most effective way of stopping the attacks. A mob promptly assembled and hanged the youth, another boy of 17 and the two girls from the same tree.

In a total of eighty-three lynchings in 1919 the victims were burned alive in eleven cases; one was cut to pieces, one was drowned and one was beaten to death. Thirty-one were shot and twenty-four were hanged. The manner of death in the remaining cases is not recorded.

Offenses alleged included 27 crimes, or attempted crimes, against white women; 27 murders; 7 white men shot but not killed; assaulting a

white man, 1; altercation with a white man, 1; not turning out of the road for a white boy in an auto, 1; talking about the Chicago riot, 1; for being a member of the Non-Partisan League, 1. Four of the victims were white men, two were Mexicans, one was a woman, ten were soldiers, three of whom were lynched in Georgia, three in Mississippi, two in Arkansas, and one each in Alabama and Florida.

Eight of the sixty-five persons lynched in 1920 were burned alive, one was flogged to death, two were drowned, fifteen were shot and thirty-one were hanged. The manner of death in eight cases is not known. One of the victims was charged with the crime of jumping a labor contract. Another was lynched because he was insane, another because he was a moonshiner, while six paid with their lives for creating a disturbance on election day.

THE FRANK CASE

The State of Georgia has one absolutely unique lynching on its record: A Georgian mob actually entered a Georgia penitentiary and broke into the prison hospital, where was confined a white man named Frank, who had been committed to prison on the charge of assaulting and killing a girl in his employ. The conviction was based on the testimony of a negro drunkard and ex-convict. Frank, while in the penitentiary, had been attacked by a fellow-prisoner with a butcher's knife and frightfully lacerated, his throat being cut almost from ear to ear; this convict acknowledged that his "sense of honor" prompted him to try to lynch his fellow-prisoner. Frank, suffering from ghastly wounds, was dragged from the Georgia penitentiary by the Georgia mob and conveyed nearly 100 miles to Marietta, Ga.; there he was lynched by hanging, his body riddled with bullets, the corpse being afterward set upon by the lynchers and kicked and mangled to an almost unrecognizable pulp. Though many of the lynchers were well known, not one was punished, but the man who convicted Frank (believed by many to have been entirely innocent) was rewarded by being made Governor of the State.

A mob, which included women and children, burned a negro alive near Hubbard, Texas, in September, 1921. While the victim was slowly roasting, various members of the mob amused themselves and entertained the rest by jabbing sticks into his mouth, nose and eyes. Not even the Sioux, reputed to be the cruelest of all Indians half a century ago, ever surpassed this achievement of a Texas mob.

In too many cases officers of the law do not make so much as a pretense of protecting prisoners. An example of flagrant dereliction occurred in Missouri early in the Sum-

mer of 1921. A negro youth had been arraigned in court, had pleaded guilty, and had been sentenced to ten years in the penitentiary. His offense could not have been against a white woman, for Missouri provides the death penalty for such crimes. That night a mob went to the jail and asked for the prisoner. The officer in charge complied with all the ready courtesy with which he might have granted a request for a match, whereupon the mob proceeded to lynch the youth. No attempt whatever was made to protect a prisoner who had been duly condemned by law to a punishment which a Judge had deemed adequate. Indeed, it is no rare thing for a mob to lynch a man after he has been tried in court, found guilty and sentenced to death. This would seem to dispose of the plea often advanced in extenuation of mob rule, that the courts cannot be depended upon to administer justice.

One specific case in which law-abiding citizens proved that they could deal with a mob when they wanted to do so, and that the courts were equally capable of dealing with crime, occurred in Indianapolis in June, 1920. A negro attacked a white child. He was promptly arrested. A mob of 3,000, chiefly composed of boys and tough characters, collected, demanding that the prisoner be turned over to them. But the police, reinforced by a number of Deputy Sheriffs hastily sworn in, including Representative Merrill Moores, dispersed the mob and protected the prisoner. Next day the Grand Jury was called, the negro was indicted in due form, tried, condemned and electrocuted within ten days after the crime.

More recently New Jersey has had occasion to deal with two similar crimes by white men against children, both the victims being murdered. The culprits were hunted down, tried and put out of the way promptly, without any degrading exhibitions of mob savagery.

THE REVOLUTION IN HOUSING

BY JACOB L. CRANE JR.

City Plan Engineer, Cambridge, Mass.

England's wonderful success in co-operative and community house building—Half a million new, comfortable and sanitary homes under construction by methods developed since the war

FOR twenty years it has been evident that the cities of Europe and America are degenerating from the effects of insanitary living conditions—poor housing. The all too common overcrowding in dark, poorly ventilated tenements and houses is producing city populations with an increasing susceptibility to disease and demoralization. The inevitable result is decreased productive capacity and lowered social value for millions of the people on whom the cities must depend for their existence. The critical nature of this problem has been aggravated and forcibly brought to public attention by the vast housing shortages all over the world following the war, for, with the five-year cessation of building, overcrowding increased enormously and conditions of insanitation became much worse. A Government agency estimated that in this country four million families, or perhaps eighteen million people, were without adequate housing in 1921.

In England and on the Continent the situation has been even worse. Between four and five million people in England and Wales were until recently living two persons to a room! A tenement of kitchen and bedroom accomplished four persons in the bedroom, or two each in the kitchen and bedroom. As in America, the problem had become vital in the life of English cities.

The critical importance of this public emergency has finally set going in

Europe and America a virtual revolution in housing standards and methods. This revolution has passed through two phases. The first produced legislation requiring that only hygienic new houses be built and that old ones be maintained on sanitary principles. When it was found that new houses were not being built by private builders at the time of greatest pressure the second phase of the revolution developed—the construction of houses in large numbers as a community or Government enterprise.

In all Europe the movement is in full swing along these lines, but in America the second phase has not yet been reached. We are, however, approaching the point of community house building, and when we reach it the developments across the Atlantic will be of great use to us. By all odds, the most valuable developments are those in England. England offers, in the revolutionary housing schemes developed there in the last few years, a vital contribution to the solution of the housing problem in America. As pioneer she has made mistakes which we shall not need to copy, but she has also set the pace for original and very promising methods of getting adequate housing for city and suburban populations. Various reports are to be had on each phase of this English work, but I am here outlining together the most important movements.

The reaction against bad housing

of the construction was undertaken by municipalities. Each city issued housing bonds, organized building departments, operating under the general supervision of the National Ministry of Health, and set to work with great vigor.

As the houses were completed the municipalities rented them for as much as could reasonably be collected, applied a penny rate tax (a penny on the pound of the annual rental value of the property) to the deficit, and the Federal Government made up the rest. In a few cases the penny rate alone has paid the deficit, but usually the State has had to pay up to as much as two-thirds of the economic rental. If the program had been carried out to completion and 500,000 houses built on this plan, the National Treasury would have had to collect in taxes and pay as a deficit on the housing scheme \$100,000,000 a year for sixty years.

But there were many delays, costs

exceeded estimates, dissatisfaction was rampant—all of which was to be expected in such a project. It was a mistake to leave the ultimate deficit to the State, because this arrangement did not offer sufficient incentive for the municipalities to save on their construction. And finally, when it became clear that England's national debt was reaching an insupportable figure, the housing scheme, along with many other public projects, was curtailed. At that time and since then the whole scheme has been criticised on all hands and its failures have been ruthlessly advertised. Nevertheless, while other countries have had investigations by the dozen and houses at about the same rate, England has 200,000 homes under construction.

METHODS REVOLUTIONIZED

More important, the whole field of city housing has been revolutionized.

Beautiful new residences in Hampstead, a co-partnership suburb of London, owned and occupied by workers and middle-class families with no more income than that of the people who still live in the unsightly brick barracks in neighboring towns

From a haphazard business of "jerry builders" it has become a community affair in which the old standards have been relegated to the dust heap and replaced by sane ideas of hygiene, light and air, gardens, house location and site planning. Since the curtailment of the national scheme, individual communities are going forward without the Government sub-

learn from England's experience in this great project.

Smaller in the number of houses produced and people affected, but equally significant as the forerunners of the Government housing scheme and capable of higher development in the future, are the other three main subdivisions of the general better-housing movement: Industrial housing, supported or encouraged by employers; copartnership housing and the Garden City movement. These three overlap at certain points, and they have given inspiration and assistance to each other, but each has produced its own revolutionary results.

The two earliest and therefore most important examples of industrial housing on a large scale are Port Sunlight, near Liverpool, at the works of Lever Brothers, who make Sunlight Soap and Lux, and Bournville for the Cadbury Chocolate Works, in the suburbs of Birmingham. At Port Sunlight Lever Brothers built a village to house 6,000 employees, maintaining the property by company forces and renting the houses to workmen at rates which yield no interest whatever on the

One of the new Letchworth houses, built on the co-operative plan which is revolutionizing the housing situation in England

sidy, so that altogether at least half a million houses will be built as community enterprises under the inspiration of the new standards—a half million well-designed human habitations instead of the desolate old row houses. This practical application of new ideals on such a tremendous scale itself constitutes a revolution in English housing, which has begun the regeneration of English cities. And the world in its business of progress has much to

Model homes in the workmen's village of Earswick. The most valuable thing in the housing revolution in England is the new financing method which makes such ideal homes possible for ordinary wage workers

Before and after housing revolution near Liverpool, where the new workmen's village of Port Sunlight has been built. At the left is a street of the old houses, now demolished, and at the right a glimpse of the modern cottages now occupied by the same workmen

company's investment. The greatest care was given to the design of the village and of the individual house, to provision for gardens, playgrounds, libraries and schools. The result is a community of loyal workmen living in conditions almost undreamed of in old England. And Lever Brothers say it pays. Loyalty, good health, better production and a high advertising value are the results on which extensions are being planned as fast as they can be financed.

Although they were started at

about the same time, these two developments proceeded on different lines. In Port Sunlight only the employees of the company can live, but at Bournville a new plan for workmen's communities was introduced whereby any one can live in the village, which was built by a trust separate from the company and largely operated by the men, thus eliminating much of the element of paternalism. Bournville is a great success, one in which the Cadburys take the greatest pride as a high-class

The commons at Port Sunlight, the new and beautiful English village built by an industrial firm and occupied wholly by its employees and their families

community developed by the workmen themselves with the advice and support of the company. In contrast to the old Liverpool and Birmingham, these industrial villages are places of delight, which set the pace for a new era in the housing of employes in England. Following these two, other industries have developed similar communities on slightly different lines, but each with the principle of healthful, attractive housing. Two of the most notable instances are those of the Prince of Wales estate in Cornwall and Earswick of the Rountree Chocolate Company, near York. In the field of industrial housing these successful experiments, varying in their methods, but aiming at the same goal, will be landmarks for years.

PARTNERSHIP ENTERPRISES

Copartnership housing, which touches the field of housing for professional and clerical people, rather than that for industrial workers, has been growing up in England for a decade and before the war had produced several beautiful low-cost city and suburban communities. In the copartnership method an association, pooling the funds of individuals, buys land at agricultural value, and plans, builds and operates an entire community as a single enterprise. The results in view are lower costs and, particularly, pleasanter homes, with carefully planned streets and gardens. The most famous development is that at Hampstead, a suburb of London, where 6,000 houses have been built in a beautiful garden suburb reached by the bus lines and subways of the city. It is built around a great play field in a hollow, where, on Summer evenings, games of cricket, tennis, bowling and football are played in the wholesome English way. Along the streets the hedges and gardens are beautiful and the houses cozy and adapted to the best type of modern English life. It seems to me that Hampstead is the nearest to the ideal in community life that has been reached so far in the world. Since

the war not a great deal has been done in this type of housing, because of high prices; but altogether nearly ten thousand homes have been built by copartnership societies, so that in most of the great English cities you will find one or more little model communities within or adjoining the city area and contrasting strikingly with the pre-revolutionary housing.

Similar to copartnership housing in its co-operative aspect and, in fact, gathering together the best ideas of co-operative enterprise and of community planning, the Garden City movement fires the imagination of nearly every one who sees it in action. In 1898 a modest book entitled "Tomorrow," by Ebenezer Howard, first attracted an attention which increased when it was reissued under the more explanatory title of "Garden Cities of Tomorrow." Today, the Garden City of Letchworth, about forty miles from London, and the many garden suburbs in process of creation throughout the United Kingdom are monuments to the author's sound foresight as a social reformer. Mr. Howard desired to remedy two great evils—the migration of rural population into the towns and the congestion resulting in the industrial cities themselves, which causes bad health, inefficiency and degeneration; high rents, high tax rates and excessive competition in the labor market.

Attempts at remedy within the city seemed to Mr. Howard not to touch the root of the trouble. Gradually the Garden City idea formed in his mind—the relief of the situation in old cities by the establishment of new ones, smaller and better controlled. In brief, his scheme, which must not be confused with the "City Beautiful" or with the popular phrase "Garden City," was to purchase a freehold estate at its agricultural value, plan it with regard to the present and future needs of the population, provide ample open space, reserve to each inhabitant a plot of garden ground, and then by favorable land prices and tax rates attract industries and employers of labor to the

town. Around the Garden City, to be limited in size to about thirty thousand people, an agricultural belt is preserved to insure a local food supply and provide genuine rural environment for the town. The unearned increment of the land as it advanced in value from the establishment of the town was to be reserved to the community.

The astonishing thing is that this dream has come true. The Garden City is there, with its railroad station, its industries, Post Office, public services, churches and halls and schools and playgrounds and some four thousand homes. There are hundreds of humble houses, but each has its garden ablaze with flowers in Summer; they have served as models to housing experts from Europe and America. It is one of the healthiest towns of England.

Letchworth has grown to 15,000, and a new Garden City, Welwyn, has been started. The experience gained at the first Garden City has been of value in the second, and it looks now as if there would be several such

cities within the next twenty-five years. No one who has seen it can resist the inspiration of this practical realization of an ideal. It is the climax of the revolution in housing.

In Continental Europe these English schemes are being adapted to the critical housing problems. Municipal house building has been undertaken by every large city on the Continent. Co-operative suburbs have been completed in Germany, Austria and Italy. A most interesting example is the residential suburb at Milan, exclusively for journalists.

In America we have had some valuable anti-slum legislation, a few excellent industrial housing projects, many investigations and volumes of statistics on the housing deficiency and its grave consequences—and a total failure of any Government or community action to relieve the stringency as a whole. But sooner or later our communities will have to face the situation squarely, and then the good and bad examples of the English work will be more valuable to us than any other housing work in the world.

BELGIUM'S HOUSING METHODS

BY JULIAN PIERCE

THE National Low-Priced Housing Society is a Government institution authorized by the Belgian Parliament in October, 1909, as a form of Government assistance and co-operation to relieve the housing shortage. It was definitely established on April 15, 1920, by an agreement between the Belgian Government and the Governments of the nine provinces. Last Autumn it already had more than 5,000 houses completed or under construction.

This society is not empowered to construct houses for sale, or to acquire real estate. It is largely an association to stimulate the organization of local and regional building societies and to mobilize local and regional capital for housing projects.

It is authorized to make financial advances to approved societies, the Belgian Government having made an original deposit of 100,000,000 francs for this purpose. The society makes the loans at a low rate of interest fixed by Parliament. The present rate is 2 per cent. per annum. In addition, the Government has advanced to the society a special credit of 25,000,000 francs to enable it to subsidize building societies in certain cases, thus making up in part for the abnormal costs of construction. The society may also act as a general buying and selling agent of building material and supplies, and is empowered to perform a wide range of experimental work in housing construction. If emergency conditions render such

a venture imperative, it may also manufacture building supplies.

A. Van Billoen, Director General of the National Low-Priced Housing Society, gave an account of some of its methods and accomplishments in his first annual report:

During the middle of 1920 the National Society organized a veritable crusade throughout Belgium to establish local and regional building societies and give them the benefit of its advice and assistance. Our accomplishments in less than one year are highly gratifying. Up to May 15, 1921, sixty-three local or regional societies had been approved. A hundred others are in process of formation and will soon be regularly constituted.

Capital to the amount of 82,290,800 francs has been subscribed. Of this sum the Belgian Government contributed 15,231,000 francs, the provinces 14,273,400 francs, 141 Communes 34,413,100 francs, hospitals and charitable organizations 4,730,600 francs, industrial chiefs 7,157,800 francs, banks and individuals 2,157,800 francs, and certain building societies 4,329,000 francs.

Of the sixty-three approved societies, thirty-six have already begun building projects, including 5,383 houses, whose total cost is estimated to be 107,000,000 francs. This building program is extending every day. There are now [May, 1921] 2,775 houses completed or nearing completion.

One hundred and three of the approved local and regional building societies already organized or in process of organization have made public their first building projects. They include the construction of 11,000 houses at a cost of approximately 220,000,000 francs. A large part of the building program had been completed by the end of 1921. To these figures there must be added the projects of the building societies which have not as yet made their plans public.

Mr. Van Billoen declares that the results of the first year's work of the National Low-Priced Housing Society are such as to merit felicitation.

The task of the National Society [he says] is heavier because of the handicaps which confront it in the construction of so-called "low-priced" houses when the prices of both material and labor are at high levels. Happily, the recent labor adjustments have brought about important reductions in contractors' prices. A house that would have cost from 4,000 to 5,000 francs before the war can now be constructed for

from 16,000 to 17,000 francs, not including the site. At the prices prevailing at the beginning of 1921, the same house would have cost 20,000 francs.

All the new houses, several of which are already occupied, indicate a serious effort to react against the commonplaceness and lack of comfort which characterized workers' dwellings in pre-war times, when they were often but ugly copies on a small scale of the houses of the bourgeoisie. The architects have also endeavored to give the houses regional characteristics. In general the houses have at least three bedrooms in order to provide adequate accommodation for large families.

In May, 1921, the National Low-Priced Housing Society organized the National Material and Supply Office, a co-operative society. The capital of 800,000 francs was subscribed by the cities, communes, approved building societies and individuals. The principal function of the Material and Supply Office is to act as the central buying and selling agent for everything required by the building societies in the development of their projects. The office does not fix prices, but regulates them, and stimulates effective competition. Mr. Van Billoen says of it:

Thanks to wise technical supervision, bulk buying, and the judicious standardization of certain elements of construction, the National Material and Supply Office is even now able to furnish a large variety of building material of irreproachable quality at prices visibly lower than those obtaining in current commercial circles. The building societies make constant use of its good offices, as it responds to a real need. Many have realized important economies through its services.

In the attempt to reduce still further the cost of building, the Material and Supply Office is constructing sixty different types of houses in order to experiment with new materials and methods.

In concluding his report of the first year's operations, Director General Van Billoen declares that by the "energetic action which it uses, and with the sympathetic co-operation of the public powers and private initiative, the National Low-Priced Housing Society expects shortly to solve an important part of the serious housing shortage in Belgium."

WHAT GREECE HAS WON FROM THE TURK

BY DEMETRIOS P. GOUNARIS
Prime Minister of Greece

A clear and simple statement of Greek aims in Asia Minor, addressed especially to the American public by the head of the present Government—War of liberation against Mustapha Kemal

THE Hellenic people have been a good deal surprised and disappointed in the attitude of the people of the United States toward the war for the liberation of the Greek Christian population of Asia Minor, which has been going on now virtually since the Treaty of Sevres was signed. For a century there have been tens of thousands of people in America who have longed very ardently to see the Greeks, not only in Greece proper, but throughout the Near East, liberated from the yoke of the Turk, and who have expressed that hope in their prayers. We Greeks naturally expected that when the moment of the final struggle for that liberation came we should have with us the expressed sentiment of all those who had for so long prayed and hoped for what has now been accomplished.

But the late war confused many issues in people's minds, and the peace which followed the war was so complicated that there were many in every country who did not understand just what was being settled or how it was being settled. We Greeks believe that this must have been so in respect of the Near Eastern question, so far as the American people are concerned; otherwise, certainly, we should have had the whole sentiment of America with us in the struggle which we have been conducting against the Turks, instead of the uncertain, divided opinion which the

American press has reflected. We all feel that if the American people understood clearly what is at stake in the Near East in this struggle with the Turks there could be no question as to the whole-hearted support that America would give us. That is why I am going to try to set a few matters right as to our war, so that the misunderstanding may be dispelled and that those devoted people in America who for a century have remembered the Greeks under Turkish rule in their prayers—and they are numbered by the hundreds of thousands, we know—may be reassured in their faith in us.

In the first place, we have been charged with conducting a war of imperialism—seeking to conquer vast territories in Asia Minor which are not Greek, with a view to subjecting a Turkish majority to Hellenic rule. Nothing is further from the truth. God forbid that we, a small nation which for a century has struggled for its very existence, should now enter upon a course of imperialism! It is the thing furthest from our thoughts. For 468 years millions of Greeks knew what it was to live under the rule of conquerors. We know that it did not crush our spirit or our determination to be free. We know that it did not profit the world, advance civilization or better the state of the conquerors under whom the Greeks lived. It was a festering sore in the whole state of civilization, and no one knows

it better than we. Why, in God's name, should we now try to commit the same evil that for 468 years was committed against us?

The war which we have been conducting is a war of liberation, and nothing else. It began not in 1919 but in 1821. Piece by piece, almost foot by foot, during a century of struggle we conquered back from the Turk the freedom which had been Greece's for 3,000 years. Little by little we had achieved that freedom so far as Europe was concerned, save in Thrace. Then came the World War. For a while we kept apart from it, saving our strength for the great final struggle with the Turks, which every Greek knew was bound to come; King Constantine, who had led the Hellenic armies in the Balkan wars, knew it better, perhaps, than any one else. At last we joined the Allies; and with the final victory of the Allies received by the Treaty of Sevres a certain quasi-realization of that dream of the freedom of the Greeks which had been the ultimate aim of our whole history since the beginning of the Hellenic War of Independence in 1821.

But, unfortunately, the Treaty of Sèvres, which was to have settled once for all this whole mooted Near Eastern question, which had been the basis of so many wars, was not in effect really a settlement. It was rather in the nature of a compromise, in regard to what the Greeks had been working for and fighting for and giving their money and their lives for, for the last hundred years. The point is that it was not a solution. It was an arrangement—and the Greeks had been rearranging arrangements for a century, and were tired of it.

But the Treaty of Sèvres did one clear thing: It established the right of the Greeks to security in Asia Minor, and to that part not only the Greeks and the rest of Europe set their hands, but the Turks as well. Yet no sooner was this arrangement signed and sealed than it was called

into question—as every previous settlement of the Turkish problem had been called into question for the last hundred years. And to maintain what they had gained and what had been officially recognized as theirs, the Greeks were called upon once more to take up arms and to fight.

It is important to recall that it was not the present régime in Greece which began that fight, but the previous régime, the very one which had negotiated and signed the Treaty of Sèvres. Thus it is plain that there was no change in policy with the coming of the present régime; it was all an expression of the will of the whole Hellenic people. An entire nation does not give over what it has been struggling for for a century, for nothing; nor did the Greeks in this instance.

And now comes the second important factor in the situation, which does not seem to be well understood in the United States. The elements in Turkey which were opposed to the execution of the Treaty of Sèvres were not the Government of Turkey. The Government of Turkey—the only one recognized by any other Government in the world—had signed the Treaty of Sèvres and agreed to abide by its terms. The Government of Turkey was under the surveillance of the Allies, because Turkey had been one of the defeated enemies during the war; and the Government of Turkey was held by the Allies to carry out the terms of the treaty which it had signed.

But at that moment there came into being a rebel force—that of Mustapha Kemal Pasha—unrecognized by any one as having either rights or responsibilities. And this rebel force said in effect: "We shall not carry out the terms of the Treaty of Sèvres."

So far as our allies in the World War were concerned, all was well so long as the Government of Turkey declared its willingness to carry out the terms of the Treaty of Sèvres. The Allies were not directly con-

Premier of Greece, who succeeded Venizelos after the return of King Constantine

cerned in what Mustapha Kemal and his rebel army said. But the Greeks were, because that part of the Treaty of Sevres which provided for freeing the Greeks of Asia Minor—one of the main aims for which Greece had gone to war—was precisely one of the things which Mustapha Kemal Pasha not only said he would not accord, but raised an army to resist.

It is plain that, even if this did not concern the other signatories of the Treaty of Sèvres, it certainly concerned the Greeks most vitally. And as they were the ones vitally concerned, it fell upon them to see that

the Treaty of Sevres was executed in this particular respect. As there was no organized force in Constantinople to compel the rebel Mustapha Kemal Pasha to carry out the terms to which the Constantinople Government had agreed, it devolved upon the Greeks, alone and single-handed, to do it.

Well, they have done it. There was a brief period in which even some of those who had signed the Treaty of Sevres together with the Greeks felt doubtful whether it could be done or not. They said: "Mustapha Kemal Pasha is too strong. He cannot be made to agree to the terms of the treaty. Better compromise." But the Greeks said: "No!" And they set about demonstrating that Greece alone could force Mustapha Kemal's rebel army far out of the territory which had been granted to the freed Greeks by the Treaty of Sevres, and keep it out. They have demonstrated that. Those who thought

that Mustapha Kemal could not be driven out of the territory which he sought to wrest from the Greeks have been convinced that he could be driven out, and driven so far out that there is no chance of his return. That is all the Greeks set out to do. They have done it.

And now, in the final solution, they do not want a foot of territory that is not and should not be Greek; they want only Greek-inhabited territory, with whatever may be necessary from a military standpoint to see that it remains Greek. They want no conquests, no colonies. But it must be

borne in mind that they have learned a bitter lesson, which has cost thousands of lives—and that lesson is that it is suicide to depend upon the written word of the Turk if he can find a way to escape it. The Turkish Government agreed to the Treaty of Sèvres; but a Turk, Mustapha Kemal Pasha, refused to recognize or abide by that agreement. Well, the Greeks have learned from that—and the whole civilized world may well note it—that whatever settlement is now made must, absolutely, place Greece in a position to guard, militarily, what has been given to Greece in the way of freeing the Greeks of Asia Minor from Turkish rule. In a word, any frontiers now set up between Greeks and Turks in Asia Minor must be frontiers that the Greeks can hold easily against any more such unauthorized attacks as that of Mustapha Kemal and his rebels.

It is not the Greeks who seek this. There are Greeks today who have been mobilized for the last twelve years, and who are sick of the whole

war business. Every one in Greece is sick of it. But it is in order to avoid another war in a year or so that the Greeks must now insist upon terms which will make it easy for them to keep themselves free from a new Turkish domination. If the Turkish Government at Constantinople has been so weakened that it cannot enforce its will in the interior of Turkey, then the Greeks must protect themselves where there is no other protection.

That is all we seek. We have waited a hundred years for it, and we have won it with our blood and our treasure. We have done it alone. We have not been a nuisance to any other nation in the world in carrying out the terms of a treaty which had been formally signed by all concerned. All we ask now is that the rest of the world shall recognize the fact that the Greek populations of Asia Minor have been freed, and that it would be a grotesque negation of the whole civilization of the past century to return them to slavery.

KRUPP STEEL WORKS TRANSFORMED

KRUPP'S, famous for the part it played during the war, has undergone a complete transformation. At present its output is mainly limited to locomotives—on whose weldless steel tires the House of Krupp built its first success—and to general railway steel and iron work. Hundreds of locomotives are in process of construction at the same time, and a complete locomotive leaves the works every day in the year. The actual output is 400 a year. Many of these are being built for Russia. The new peace activities include high-speed machine tools, dynamos and electrical appliances, boilers, motor engines, screw propellers, hydraulic presses, steam hammers, rails, paper-making machinery, tex-

tile machinery, agricultural machinery, cutlery and tools, 100-ton steel castings, pen nibs, &c. Miles of factories employing 80,000 workmen are impressive. One of the Directors has said that even if Krupp's never made another gun or rolled another armor plate it would always be able to find work for its army of employes. English visitors look with uneasiness on this vast industry as they recall the sinister part which Krupp's played in the World War, seeing here ample scope both in means and in large-scale training for the fabrication of munitions and guns in the event of another war. Meanwhile Essen goes on with its colossal production for the ends of peace.

BOLIVIA AND THE CHILE- PERU CONTROVERSY

BY CARLOS CASTRO-RUIZ, C. B. E.

Professor of International Law in the University of Chile

Facts tending to show that Bolivia was the chief gainer by the treaty of 1904, which she is now seeking to revise or to repudiate

PRACTICALLY every Latin-American republic has had long-standing controversies with its neighbors over the boundaries inherited from colonial times, since they were vaguely given dominion over unknown territories in accordance with theological and not with geographical or economic principles, at a time when a million square miles more or less was something entirely negligible for the world-wide Spanish dominions overseas. The coast of the Atacama Desert from the Loa River to the south was for a long time the subject of discussion between Chile and Bolivia, until, by the treaties of 1866 and 1874, it was agreed that ownership over that territory as far as the twenty-fourth degree of south latitude should reside in Bolivia; for this Chile had received substantial compensations in exchange, exemption from future taxation for Chilean nitrate owners being the principal one.

The nucleus of Bolivian population was, however, over three hundred miles inland, on the Andean plateau, "the roof of South America," and separated from the sea by a barren desert, without roads or even trails. The ports and inlets of that littoral were Cobija, Mejillones and Antofagasta, the last-named having been founded by the Chilean Nitrate Company (Compania Chilena de Salitres). These ports were of little or no use to Bolivia, wholly lacking as they were in supply points to which the mule and the llama caravans

could have recourse for sustenance in transportation.

A quick glance at a map will suffice to show why this territory was not suitable as an outlet to the sea for Bolivia, unless some modern means of communication were provided. Geographically, the whole of the Atacama desert lay below the southern Bolivian frontier, and its immediate inland boundary was touching Argentinian and not Bolivian territory. Therefore, Bolivian commerce was carried on almost entirely by way of Arica, which port, isolated as it was from other Peruvian centres of population, owed its existence to that commerce, because in that location as well as in Tacna (some forty miles from the sea) there lay two small valleys useful for pasturage, but useful principally because Arica was at the end of the shortest route from Bolivia's centres of trade to the Pacific Coast.

In the years 1875 and 1876, the Peruvian Railroad from Mollendo to Lake Titicaca was put in operation, and a large part of Bolivia's freight went over that line, with the consequent loss of trade in transit for Arica. Later after the war of the Pacific, the railroad from Antofagasta to the Bolivian mining district of Oruro was constructed, and Bolivian commerce, abandoning the caravan transport, availed itself exclusively of those two railways, thereby wholly depriving Arica of that commerce on which it had been depending for its very existence, and thus leaving the life of

both Tacna and Arica to rely solely on what they derive out of Chile's possession thereof. The railroad from Arica to La Paz, constructed by Chile in conformity with the stipulation of the Treaty of Peace of Oct. 20, 1904, revitalized Arica and re-established its importance, because that railroad follows the shortest line between Bolivia and the sea. It is only 400 kilometers long, whereas the Mollendo rail-and-water route covers about double that distance, and the Antofagasta line a little more than a thousand kilometers. Such are the geographical facts.

The war of the Pacific was terminated by the Treaty of Ancon (with Peru) in 1883 and by the truce with Bolivia in 1884. By virtue of the latter, the entire Atacama littoral from the Loa River southward was definitely incorporated under the sovereignty of Chile. It is to be noted that the Treaty of Ancon ceded to Chile the Province of Tarapaca, and that this cession imposed upon Bolivia the recognition of perpetual Chilean sovereignty over the Atacama littoral, since Chile could not be expected to accept a break in her territorial continuity. Bolivia acknowledged this accomplished fact in the adjustment of the truce convention.

No further thought was given by Bolivia to the recovery of what she called her littoral (which was hers solely by reason of Chile's conditional cession in the above-mentioned Treaties of 1866 and 1874). Upon Bolivia's abandonment of the idea of the recovery of that littoral, all her thought was concentrated upon obtaining her own access to the sea by way of Arica, and to this end she took various steps before the Chilean Government. Chile found herself unable to consider Bolivia's proposition, in view of the fact that the sovereignty under which she occupied that territory was conditional upon a future plebiscite. It is not known whether Bolivia took similar steps before the Government of Peru, but there are

certain reasons for believing that if such steps were taken they were not acquiesced in by her former ally.

When it became apparent that Chile and Peru were unable to reach an agreement as to definitive ownership of Tacna and Arica, Bolivia decided to abandon her hopes of a port on the Pacific in favor of other more immediate and substantial benefits. In the Summer of 1902 she commissioned her Minister in London, Don Avelino Aramayo, to return by way of Chile and sound its Government on a proposition by virtue of which, in exchange for her abandonment of the idea of a port and the substitution of a definitive treaty of peace for the truce pact, Bolivia was to get certain concessions from Chile. These concessions were embraced in a memorandum, and, improved by Chile, they are the same that are set forth in the Treaty of Peace of Oct. 20, 1904.

Among the provisions of that treaty are those for the construction of a railroad from Arica to La Paz (in operation since 1913) and the free use by Bolivia of all Chilean ports. In their entirety the Chilean concessions to Bolivia exceeded in value the sum of £6,000,000.

Chile accepted Bolivia's proposition at the hands of Señor Aramayo; thereupon the present Chilean Ambassador to the United States, Senor Mathieu, was appointed Minister to Bolivia for the special purpose of drafting the treaty. This would have been accomplished within a few days but for the fact that the Bolivian Government expressed the desire that the boundaries between the two countries should be definitely determined in the same treaty, in order that in the future there should be no differences for dispute. This subject naturally required a long time for study by experts on the field.

Finally, in 1904, the treaty was signed and ratified to the satisfaction of the two Governments, particularly that of Bolivia, as shown by the reports of the Bolivian Chancellery covering that period. The conclusion of the treaty was considered to have

been a substantial achievement before the country by President Montes and by his Minister in Chile, who signed the treaty, Don Alberto Gutierrez, an enthusiastic defender in

both books and pamphlets of the advantages that accrued to Bolivia by that instrument.

Señor Aramayo, the bearer of Bolivia's proposition to Chile; Señor Montes, the President of the Republic at that time, and Señor Gutierrez, the signer of the treaty, are the same persons who, after the treaty had been in existence for seventeen years without cause of friction or difficulty, hailed Chile before the League of Nations and repudiated unequivocally a pact which they had theretofore held up as a meritorious personal achievement.

Bolivian commerce is being carried on without any obstacle whatsoever through Chilean ports. Not only that, but the treaty brought back to Bolivia the confidence of Chile, and there was a great influx of Chilean capital and enterprise, which have contributed to the present great development so happily enjoyed by that country. Furthermore, the entire population of the Province of Antofagasta is Chilean; it has always been Chilean, even before the war, as were also the industries therein established.

SHADED AREA INDICATES THE TACNA-ARICA DISTRICT, THE SUBJECT OF A TRIANGULAR DISPUTE WHICH ALL THE NATIONS CONCERNED ARE NOW SEEKING TO SETTLE

From a map sketched by Lieutenant Commander J. M. Creighton, U. S. Naval Intelligence Office

RADIO REPORTS FOR FARMERS

THE first attempt ever made in the East to distribute market news to farmers by radiophone — a system already in operation in the West — was initiated in New York City in the last week of January, 1922. From this date began the sending out twice a day of radiophone news of the wholesale markets. Arrangements to serve the farmers of New York, New Jersey and Eastern Pennsylvania had already been completed between the State Department of Farms and Markets and the Westinghouse Electrical and Manufacturing Company. Under the new system

the farmers of the regions specified will receive news the same as by telephone. A statement issued by the Department of Farms and Markets said in part:

The farmers' reports will cover not only market prices and conditions of the day in the New York wholesale market, but will summarize information from other large national markets obtained daily by the United States Bureau of Markets and Crop Estimate over their leased telegraph wires. Market conditions for Eastern agricultural products in the big wholesale centres will be compared on at least three days a week.

The isolation of the farmer is rapidly becoming a thing of the past.

THE WAR LORDS OF CHINA

BY HENRY C. FENN

An American resident of Peking

An intimate view of Chang Tso-lin, the military Governor who has seized the Peking Government, and of Wu Pei-fu, his chief rival—How Sun Yat-sen faces two powerful military dictators

ALL Gaul was divided into three parts. Nothing as definite as that can be said about China at present. Divided the country certainly is, and into many more than three parts. The rapid shift of divisions gives a kaleidoscopic effect, but this very fact shows that the divisions are neither natural nor permanent. There are no claims of distinct nationality such as caused the break-up of Austria-Hungary. No one of the "independent" sections of the country looks forward to permanent separation from the others. Each is a protest against the present military oligarchy in Peking. All look forward to a reunited China, but their conceptions of the terms on which that union can be effected differ materially.

Outsiders frequently get the impression that China is in the throes of a civil war between the North and the South very similar to the American Civil War of half a century ago. Nothing could be further from the truth. There is no Mason and Dixon line in China marking a distinct cleavage of public opinion. One "Government" happens to be located fairly far north and another at the extreme south. China is not equally divided between them, however, and there are further divisions within the territories more or less nominally controlled by these two "Governments." Also, as I have made clear, this is not a war of secession.

"TUCHUN" GOVERNMENT

In Peking there is nominally a Government, headed by a President; also a Cabinet, which is a variable

quantity. But the real power behind these figureheads is lodged with three of the strongest provincial Tuchuns, or military Governors. Rumor occasionally mentions a "Parliament," ostensibly to be summoned—some time. But when? And really, what's the use of summoning it? It's a serious question whether the President would find himself in harmony with it, and it's a foregone conclusion that the war lords behind the Government would *not*. So if it ever does convene it is likely to be the "goat" for all good war lords to burden with the blame for their mistakes while they see to it that said "goat" be not allowed rope enough to make any mistakes on its own account. Inasmuch as these military gentlemen are having great difficulty in keeping the figurehead President supplied with a Cabinet,* will they be able to keep a Parliament convened once they get it? Of course, a judicious use of troops has a strong persuasive force; troops have been used before.

It can fairly be said that in no part of the country do thinking people outside the militarist circles pin any faith on the ability of the Peking officials and their supporters to evolve a responsible Government. Opinions to that effect are openly voiced, and no serious attempts are made at their suppression. There has been a process of decay since the death of Yuan Shih-kai, due largely to the weakness of the Presidents and consequent growth of power

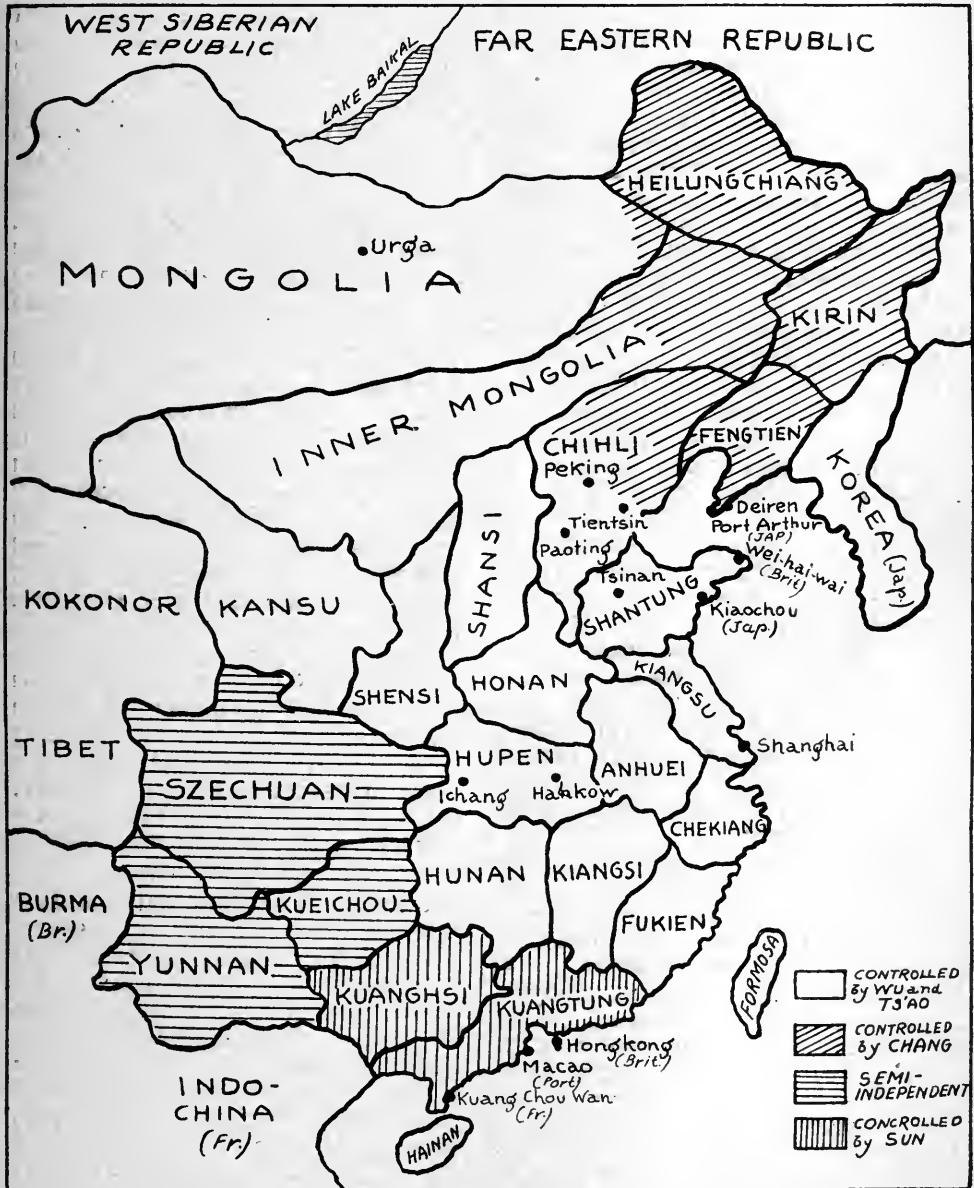

*This article was written early in December, 1921. Later in the month (Dec. 25) the Peking Cabinet of Ching Yun-peng was overthrown and replaced by a new Cabinet virtually dictated by Chang Tso-lin, the super-Tuchun of Manchuria, and headed by Liang Shi-yi.—EDITOR.

among the military officials. It is freely predicted in Peking as well as elsewhere that even if left to work out its own future the present "Government" has not long to live.

The chief props of this anomalous "Government of the Republic," as I have intimated, are the three super-Tuchuns, or "Inspectors General,"

who dictate it. These are Chang Tso-lin (Manchuria), Tsao-kun (Chihli), and Wu Pei-fu (Yangtse provinces).

Chang Tso-lin, the uncrowned King of Manchuria, sends forth his orders and decrees to Peking from Mukden, the capital of the three eastern provinces known collectively as Manchuria. (See the accompanying

Map of China as it is today, torn by warring factions, which include two rival Governments and the mutually hostile armies of three or more Military Governors

map.) These orders usually read somewhat as follows: "I need a few million yen to suppress bandits in Inner Mongolia and to rescue Outer Mongolia from the Far Eastern Republic. If I don't get them my unpaid troops are likely to mutiny, and I won't be responsible for the consequences." And he gets them. The suppression of bandits never takes place. Neither does the campaign against the Siberians. But after a while Chang comes back for further funds. While foreign loans fall due and are defaulted, Chang stipulates his needs for imaginary military expeditions and gets quick attention. There's a reason. He has 20,000 troops in the vicinity of Peking and controls the Peking-Mukden railway. It is whispered that the policemen in Peking are his troops in disguise. And this man Chang a few years ago was a hunted bandit in Manchuria.

Tsao-kun is the war lord of the "Chihli Party" and rival-in-chief of Chang Tso-lin. His headquarters are at Paotingfu, eighty-odd miles down the railway southeast of Peking. His wants are only less than those of Chang because he has no troops in Peking. Some think that they see a grain of mercy in Tsao. Others say he is merely biding his time. Certain it is that last Fall he was much weaker than Chang, whereas today the balance of power is quite the other way. The change is due to the rise to power of Tsao's chief lieutenant, Wu Pei-fu.

Since last Spring Wu Pei-fu, now the Lord of the Yangtze, has so overshadowed his master, Tsao-kun, that the relationship is merely a convenience. Tsao saw the need of consolidating the central provinces of the Yangtze River region before they seceded like other quarters, so much against the will of the Mukden Lord—he got General Wu appointed super-Tuchun No. 3, in charge of all the Yangtze region. And Wu made good. The Szechuanese from the west invaded his territory and threatened the great river port of Ichang. He drove them out and almost annihilated their army. That was the first bit of real fighting

China had seen for some time. No serious attempt to penetrate his preserve has been made since.

But Wu's chief problem is not defense. He is intrusted with the task of winning back the seceded provinces—not an easy task for any man. But Wu's standing with the people at large is certainly better than that of any other single leader in the North. If any one can do it, he can. Last Fall it was said by many that Wu, who was then ingratiating himself with the people of Shantung province as their Governor, and the Christian General, Feng Yu-hsiang, were the only two leaders whom China could trust. Chinese and foreigners alike voiced the hope that they would get together. Today Feng is Tuchun of Shensi—under Wu. His elevation was a quick piece of work and a surprise to the country. But such happenings are rather frequent in China. Last Spring the writer was engaged in famine relief work at Shuntehfu, some two hundred miles south of Peking on the Hankow Railway. Tsao-kun was north of us at Paotingfu, and Wu was south of us at Honanfu. Both were very helpful in facilitating the shipment of supplies for our work. But the local commander at Shuntehfu, General Hsiao Yao-han, had a division of troops who were constantly interfering with our transportation. It was not until we threatened to report him to his superiors that he gave us the protection we were entitled to. The same Hsiao is now Wu's right-hand man.

General Wu admittedly holds the strongest position in the country at present. In his control—merely nominal in some regions—are the central, richest and most populous provinces of China. The kingdom of Chang Tso-lin is situated in the border lands, a thinly populated country supporting some twenty millions of people. Wu's domain includes nearer two hundred and fifty millions, or more than one-half the entire population of the country.

SITUATION IN SOUTH CHINA

The main factor in the South is, of course, the Canton Government, headed by Dr. Sun Yat-sen. Another political division, it is true, exists in the three southwest provinces of Yunnan, Kweichow and Szechuan, which are independent, though fluctuating at present between Dr. Sun and Wu Pei-fu. The papers announced early in December that Yunnan and Kweichow had decided to support Sun. It remains to be seen what such "support" will consist of. These provinces, far from any railroad, are no small prize, for their aggregate population is near the hundred million mark. It is the Canton Government in the southeast, however, as I have said, which focuses attention.

The question as to whether Dr. Sun, bitter enemy of Peking and the ruling power of Canton, is a patriot or a self-seeker is beyond the scope of this article. He has his friends in the North as well as in the South. Many, on the other hand—especially foreigners—consider him a visionary. However that may be, he has set up and maintained at Canton a "Government" which has caused no little stir abroad. Probably it has aroused more talk abroad than in China, due in a measure to the preponderance of Cantonese in Britain and America. This at least seems certain: Sun has set up what all who visit Canton report to be a very efficient administration within the city limits. They note new roads cut through the heart of the city, where once were narrow lanes; electric lighting and telephone systems, aqueducts, and a remarkably progressive municipal organization. Canton has the first city character known in China. At the same time the writer has heard the admission from Cantonese in Peking that Sun, outside of Canton itself, has little hold on the province of Kwangtung, which is constantly overrun with bandits.

As for Kwangsi Province, which lies in the East, Sun's able lieutenant, General Chen Chiung-ming, is in con-

trol there, but Chen is anything but Sun's humble servant. Sun is preparing to invade the North, or so the papers report every few days. He is trying to raise a loan abroad, as the territory under his control cannot possibly produce sufficient funds for such an enterprise. But whenever Sun says, "Let's go," Chen Chiung-ming replies, "Not yet. The time isn't ripe." Meanwhile it is reported that Chen and Wu are negotiating.

SUN VS. THE WAR LORDS

If Sun should really start his expedition—which he is supposed to have done several times already—the three War Lords would probably lay aside private disputes and unite against him. In fact, they act together now in all matters concerning the South. And their funds will be drawn from within the country, two-thirds of which they control. Hence it is evident that Sun's tactics will be to try to alienate elements from his enemy and give his friends in the North reason to believe he will be successful. But he is consistently refusing overtures from the North, which seek to reach an agreement without fighting, while Chen Chiung-ming seems to be playing for time in order to reach such an agreement if possible. Chen's game is more Chinese. But will the outcome be that Wu will go over to the South, or that Chen will go over to Wu?

It would seem to the casual observer that, in spite of warlike preparations on both sides, the chance of real fighting is small. Either an invasion of the North by Sun or of the South by Wu would cost more than either has to spend. Wu has shown by his tactics since assuming the General Inspectorship of the Yangtze provinces that he will not attack Sun until all efforts at diplomacy have failed. Chen seems to have the same attitude. So Sun will have to force war on the country, and the country is in no condition to welcome it after several years of famine and flood.

One big reason for Wu's "watchful

waiting" policy is that he has another matter to attend to which is much more to his liking than a fight with Sun. Some day he must whip Chang Tso-lin. Only lately he announced that he would not be the one to start the fight. That is probably only too true, for time is on his side. If he can come to terms with the South, persuading Sun that he is seeking China's welfare rather than his own, he will have overwhelming odds against Chang. Otherwise the fighting between them, which will probably take place on the Peking-Hankow Railway, between Peking and Paotingfu, is likely to be no joke. However, there will be few in that day who will waste one good wish on the Mudken War Lord.

[Since this was written, Chang has become virtual dictator at Peking, and Wu has gone through the form of sending him an ultimatum.]

Although the provinces of Fukien, Kiangsi and Hunan are generally included in Wu Pei-fu's domain, they are internally divided and their influence is doubtful. A misstep on the part of the Yangtze Lord may throw them into Sun's arms, for his agents are hard at work there. An unprovoked attack by Sun, on the other hand, may cause them to unite against him. Hence their weight is in favor of negotiations.

PUBLIC OPINION

I suppose that if a straw vote were to be taken among the students throughout China the result would be a complete victory for Sun Yat-sen in the North as well as in the South. Such is the impression conveyed by students in Peking, at least, for almost to a man they come out openly for Sun. But they have no leadership and their numbers are comparatively small. The Peking Government fears them so little that it

doesn't even trouble to punish seditious statements.

In the merchants, however, we have a class whose influence is increasingly felt. Through chambers of commerce and bankers' associations they are even now exerting no small pressure. They are the keepers of the nation's pursestrings. Already they have refused loans for military purposes. What greater power is there than just this to bring peace and unity in the country? A normal revenue is insufficient for military expeditions in any country, and especially in China. The consistent shutting off of funds will do more to curb the War Lords than secessions, revolutions and expeditions. If military movements are impossible, diplomatic means will soon reunite the provinces.

Of course, once reconciliation is effected, these same merchants must pay the enormous bill for disbandment of the troops. Unpaid troops are an invitation to any one who is willing to lead them for personal gain. At best they will become scattered groups of bandits, requiring further raising of troops for their extirpation. Only when China's 1,600,000 soldiers are sent home with pay in their pockets will there be any real peace in the country. And when that kind of peace is secured, a very small police force will suffice to keep order, for the Chinese people are by nature law-abiding and peace-loving. The chief need of a Government in China is to govern the Governors, for, after all, they are the trouble-makers. They have been and will be a constant danger to any central Government, not merely until the power of raising troops is taken from them, but until the Chinese people as a whole change their entire code of personal and political morality and practice the patriotism they are now preaching everywhere.

WHAT JAPAN IS THINKING

BY JESSE WILLIS JEFFERIS

Glimpses of the contents of some recent books by Japanese on international issues—Volumes by American authors on Japanese aims and ideals—Forces making for peace in the Pacific

THE rise of Japan in seventy years from obscurity to a commanding position in a proposed entente of the most powerful nations in the world is a striking example of what an ancient civilization may become when quickened by modern ideas. It is true that the precocity of Japan, compared with the conservatism of such countries as China and India, is largely the result of her exposed insular position; but they cherish an illusion who believe that Japanese civilization began when "the big black fire-ships of the barbarians," commanded by Commodore Perry, first steamed into the harbor of Yeddo. May not historians of the future declare that the dropping of our anchors was the beginning of Japan's lapse into a modernized and more deadly form of barbarism? For since then the pacifist Japan of cherry blossoms, poetry and the gentle teaching of Buddha, the Light of Asia, has learned the ways of Western imperialism.

It is because the Japanese have learned from Germany, Great Britain and America to arm themselves to the teeth, and, like us, to plant all four feet in the trough of commercialism, that we are now compelled to regard them as factors to be reckoned with in what is popularly known as "the family of civilized nations." Dwelling so smugly and complacently in celluloid houses, let us discreetly refrain from shooting Roman candles.

Every honest American, and every Liberal living in the Kingdom of the Rising Sun, is unalterably opposed to Japan's military autocracy. Justice,

of course, demands that Japan take her foot off the neck of China and that Great Britain do likewise. But what Pharisees have we become to protest against the expansion of the overcrowded, rock-ribbed island of Japan, no larger than the State of Montana, and wholly incapable of sustaining 57,000,000 inhabitants, while we who command a continent have taken possession of and fortified islands which repose almost under the shadow of Mount Fujiyama!

Psychologists say that no one is capable of plumbing the depths of another's soul. If this be true, how much more difficult must be the task of the American who tries to pierce the wall which separates his mind from the peculiar consciousness of the Japanese! The chasm between the two may be indicated by a single example. Dr. Uyesugi, Professor of Constitutional Law in the Imperial University of Tokio, declares that the Mikado is the organized will of the Japanese nation. "The wish of the whole people," he says, "can never be indicated through a majority vote, but is expressed by the Emperor." The Sovereign in Heaven sent his grandson down to Japan for the purpose of founding an ideal State on earth, and willed that the grandson's descendants should be the Emperors of Japan, from generation to generation. By absolutely obeying the Mikado, who is a descendant of the Almighty, every Japanese may attain the highest virtue. As the Mikado's will does not conflict with the people's, says Dr. Uyesugi, the true ideals of democracy can be realized

only in Japan. Jimmu Tenno, the first Emperor, who ascended the throne in 660 B.C., said: "The world shall be our metropolis; the universe shall be our realm."

MIRRORS OF JAPAN

Difficult as it is for an American to get the viewpoint of the learned professor just quoted, I shall endeavor, by means of significant passages from recent books on Japan, to mirror some phases of present Japanese thought. Never before has there been so abundant an outpouring of good books on Japan. A glance into some of the best of them may aid to a fuller understanding of the nation's traits, aims and ideals.

In the admirable collection of articles written by representative Japanese, entitled "What Japan Thinks," just published by the Macmillan Company, may be found striking opinions on political questions of the day. In this volume a representative liberal, Professor Sakuzo Yoshino—also of the Tokio Imperial University—deplores the militaristic tendencies of the Japanese Government. The military ordinance of 1909 provides that in certain matters plans may be carried out by appealing directly to the Emperor. According to this law, it is not necessary to submit these policies to the Diet, nor do the members of the Diet have any right to question such proceedings. The Minister of the Navy or the Minister of War may, without consulting the Premier or other member of the Cabinet, carry out plans over the Premier's head and bring new ordinances into effect.

The military ordinance of 1909 provides that in certain matters plans may be carried out by appealing directly to the Emperor. According to this law, it is not necessary to submit these policies to the Diet, nor do the members of the Diet have any right to question such proceedings. The Minister of the Navy or the Minister of War may, without consulting the Premier or other members of the Cabinet, carry out plans over the Premier's head and bring new ordinances into effect.

In the conduct of national affairs, a scheme has therefore been adopted in which the militarists, including the army and navy, compose one side of a triangle, while on the other side is the Cabinet, whose business it is to look after ordinary administrative affairs. The Emperor, who is at the top of the triangle, is the unifying force. The result is that Japan practically has two Governments. On the one side is the militaristic class and on the other the people, with the Emperor at the top. Of course this scheme of a double Government is not constitutional.

But reform is very difficult to undertake. The stronger the opposition among the people, the stronger the resistance of the militarists, whose attitude is that whatever is best for Japan should be done, no matter who or what is to be sacrificed.

Professor Yoshi S. Kuno of the University of California in "What Japan Wants" (Thomas Y. Crowell Co.) says that Japan has no intention of seeking to control the Pacific Ocean single-handed. She well knows that this would be impossible so long as strong marine powers, like Great Britain and the United States, exist. What she really wants is a fair share of rights and privileges on the Pacific. Such being the case, the strong fortification by the United States of Hawaii, Guam and the Philippines has caused her grave misgivings. She can see no reason for the fortification of these islands, unless the United States regards Japan as a potential enemy. Therefore, with the exception of a few militarists, the people of Japan are united in wanting the nations to remove all fortifications from their insular possessions on the Pacific, so that this ocean may become in reality what it already is in name—a truly "peaceful sea."

The concessions held by Japan in China, Professor Kuno explains, are of three kinds. The first were secured as a result of the Chino-Japanese war. By them persons of other

nationalities are permitted to navigate the rivers of China and to establish industrial plants within the confines of her territory. The second were obtained as a result of the Russo-Japanese war, when Japan stepped into the shoes vacated by Russia. By these concessions special rights were granted to Japan alone—rights not open to other nations. By securing territorial leases with special mining and railroad concessions, the Japanese have thus entered upon an era of remarkable national expansion. Out of these concessions has sprung the ill-will of China for Japan. The third class of concessions consists of former German rights in Shantung, which Japan acquired as a result of the World War. The famous "Twenty-one Demands," by means of which Japan gained further political and industrial concessions, have at the same time brought the enmity of China to its highest pitch.

Japan desires to retain all these concessions, but only in their com-

mercial and industrial aspects, separating them from military and political influences. Her policy regarding Shantung, says Professor Kuno, is to return the political control of the peninsula to China and to retain only the mining, railroad and industrial concessions, which China conceded to her under the "Twenty-one Demands" of 1915.

THE CALIFORNIA QUESTION

An apology for Japan's peaceful economic conquests in California is found in a notable book, just published by G. P. Putnam's Sons, "Japan and the California Problem," by Dr. T. Iyenaga, Department of Political Science, University of Chicago, and Kenosake Sato. According to these authors, the chief cause of Japanese emigration is the lack of productive land. Japan has an area of only 147,655 square miles, or about 8,000 less than that of California. Such is the geological formation of the islands that only about 16 per

Illustration from "The Pacific Triangle," by Sydney Greenbie, showing Japanese children dressed in modified foreign clothes—"Japan's first reaction to foreign influence"

cent. of the total area is fit for cultivation, over 70 per cent. being mountains and forests. Nearly five and one-half million families—30,000,000 people—cultivate 15,000,000 acres, which means less than three acres per family, and half an acre per individual farmer. In recent years the pursuit of agriculture has become less and less remunerative, driving farmhands into the industries.

CONGESTED POPULATION

Naturally, the authors continue, the Japanese look with eager eyes for an opportunity to cultivate land abroad. In the north are the vast plains of Manchuria, toward the south the fertile soil of Australia, in the east Hawaii and California offer golden opportunities for industrious farmers. But Manchuria is too cold, and competition there with cheap Chinese labor is unprofitable. From the beginning Australia never welcomed the yellow races. Only Hawaii and California seemed satisfactory for Japanese emigration.

Within the last fifty years the population of Japan has nearly doubled, increasing from 35,000,000 to 55,000,000. At the present time the population is increasing at the rate of 650,000 or 700,000 per annum in Japan proper alone. The census taken Oct. 1, 1920, shows the total population of the Mikado's empire to be 77,005,510, of which that of Japan proper is 55,961,140.

Twenty years of emigration attempts have resulted in failure, Japan's efforts to colonize her race in other lands having proved futile in every case. There are many causes for this failure, and Dr. Iyenaga and Mr. Sato say in their book that Japan herself is partly, but not wholly, responsible for it. Excluded and maltreated wherever they have gone, the Japanese return home with shattered hopes and wounded feelings, where the mooted question of population once more confronts them with intensified severity.

That the Japanese are efficient

tillers of the soil, these authors say, is evidenced by their work in California. Of the 12,000,000 acres of irrigated farm land in that State the total value of the crops produced is \$500,000,000, or about \$42 per acre annually. Of the 390,000 acres cultivated by the Japanese, the total value is \$55,000,000 in farm products, or \$141 per acre. The value of Japanese farms per acre has therefore turned out to be three and one-half times as much as California farms in general.

The authors of "Japan and the California Problem" contend that the Japanese may be readily assimilated by the white race. To fortify this statement they cite the conclusions reached by such authorities as Professor Millis and Dr. Gulick. "The offspring of mixed marriages," Dr. Gulick declares, "are often practically indistinguishable from Caucasians. The color distinction is the first to break down. The Japanese hair and eye exert a stronger influence. So far as the observation of the writer goes, there is a tendency to striking beauty in the Americo-Japanese. The mental ability, also, of the offspring of Japanese and white marriages is not inferior to that of children of either race."

THROUGH A GLASS DARKLY

The mutual impenetrability of Occidental and Oriental minds to one another is explained by Julian Street in his "Mysterious Japan" (Doubleday, Page & Co.), as follows:

The Orient is all vague to the average American. If he does not live on the Pacific Coast, or in some large city where Japanese may have settled, he may never have laid eyes upon a Japanese. Or, if he has seen Japanese over here, he may have seen them in the farming districts of the Pacific Slope. Whether he has seen them or not, he has gathered some impressions of them through newspaper accounts of the trouble there has been about them in California. He understands that their customs, religion and food are unlike his—which may be taken as implying a certain lack of merit in them. He understands that Japanese women and children work in the fields. His own women and children do not work in the fields, but wear silk stockings, chew gum and go to the movies—all of which, of

course, counts against the Japanese, since to work in the fields is in these times almost un-American. And, of course, it is still more un-American to do what the Japanese laborers did in California until the patriotic Californians stopped them, namely, to save money and buy farms.

Then there is this business about "picture brides"—my average American may have heard vaguely about that, though probably he does not know that the Japanese Government, in deference to our wishes, no longer allows picture brides to come here. He would not think of such a thing as picking out a wife by photograph. None of his friends would do it, either.

A decidedly entertaining and beautifully illustrated work, published by Harper & Brothers, is Sydney Greenbie's "Japan, Real and Imaginary." The author is of the opinion that Western ways have been accepted by the Japanese under protest and have only to a slight degree become an integral part of their civilization.

The effect [he says] of the transplanting of Western ways to Japan is ominous.

Artificial enough in themselves, they are not bad when they are the outgrowth of ages of experimentation. But in Japan there is not that growth. The new is plastered right on to the old, which seemed much grander in its ancient simplicity. The danger is that the Japanese begin to feel discouraged; begin to lose self-confidence. The danger of reaction is even worse. With primitive races, the stage of development is so elemental that it is not difficult for foreign culture and habits to grip them. There is no hard, ingrained custom to overcome. But here in Japan, Western civilization came in contact with a civilization as perfected and as rigidly formed into habit as it was itself. At first the Japanese threw their own away as children do their toys. Today they realize their mistake.

PROBLEMS CONFRONTING JAPAN.

The problems confronting Japan and the methods which America might employ to meet them are ably set forth in J. O. P. Bland's "China, Japan and Korea," recently published

(Wide World Photos)

Japanese school girls are learning to handle rifles and many of them are becoming very skillful. The illustration shows Japanese military officers giving instructions to a girl student

by Charles Scribner's Sons. Mr. Bland says:

The motive force behind Japan's imperative claims to expansion is severe economic pressure, due to increasing overpopulation of the Island Kingdom. This pressure is compelled to seek relief on the Asiatic continent; because insistence on a free right of entry into America and Australia is impracticable. It is evident that, as laborers, colonists and farmers, the Japanese cannot hope to compete with the Chinese in Manchuria and Mongolia. The Japanese Government's policy of expansion now aims chiefly at obtaining control of the latent resources of these regions, and developing them as economic protectorates, so to speak, for the supply of raw materials.

I have also endeavored to show that, if China is to be protected from internal disintegration, a common purpose of good-will toward her must actuate the United States, Great Britain and Japan; that this cannot possibly be achieved if Japan has reason to consider that her claims to expansion are being arbitrarily thwarted by the same powers which deny her the right of emigration to white men's countries, and that therefore it would seem to be good statesmanship to recognize Japan's "special interests" in Manchuria and Mongolia.

Recalling the rise to power of such insular and peninsular countries as England, France, Spain, Italy and Greece, G. A. Ballard in his "Influence of the Sea on the Political History of Japan" (E. P. Dutton & Co.) contends that Japan's splendid isolation renders her practically impregnable to attack, either from Europe or from America.

Surrounded by the Pacific Ocean [he says], which has once again become her great guarantee of safety, because she has learned how to use it as a line of defense; separated by 10,000 miles of water from Europe and nearly 5,000 from America, and having no great military neighbor near at hand since the break-up of the Russian Empire, her situation is such that no power in the world can seriously threaten her in her own regions, in the near future, at least. For any attack on Japan, as matters now stand, the enemy must be in possession of a fleet about three times as powerful as that of the defense; because no other country has a fully-equipped modern naval base and arsenal in the Eastern Pacific capable of docking two or three of the largest battleships simultaneously; or of removing guns 100 tons in weight; or of manufacturing wholesale supplies of heavy-calibre ammunition; or, lastly, of storing the millions of tons of oil-fuel required by a twentieth-century fleet in war.

Without such a base in easy reach, a large proportion of the attacking fleet—

probably a third—must constantly be at some distance from the theatre of operations; while the force actually on the spot must always be twice as strong as the defense, if any effective watch or blockade is to be possible. No power exists at present in a position to undertake such a task.

Arthur Judson Brown's "The Mastery of the Far East," from the press of Charles Scribner's Sons, is the most comprehensive book on this subject published in the last year. Tracing Japan's rapid rise to supremacy in the Orient, the author portrays the Japanese people neither as a nation of saints nor as "varnished savages."

WHAT AMERICA EXPECTS

What America expects of Japan is clearly set forth in Payson J. Treat's "Japan and the United States," published by the Houghton Mifflin Company.

Thoughtful Americans [says Mr. Treat] recognize the peculiar necessities of Japan—the pressure of a rapidly increasing population dwelling in a small area with limited natural resources. They welcome, therefore, any development of Japanese commerce and industry which will help Japan to provide for the economic advancement of her industrious people. But this development must not come at the expense of the rights and liberties of neighboring States. American capital has shown itself willing to co-operate with Japan in developing the resources of China, and the new consortium, if it can secure the co-operation of the Chinese people, will offer large opportunities for legitimate investment of American and Japanese capital in enterprises of great and permanent value in China. If Japan should continue to follow the old precedents; should endeavor to extend her special interests in China by force or intrigue, then there need be no question that American public opinion will certainly support China, and the relations between Japan and the United States will be increasingly unsatisfactory.

Popular notions of Japan, which her rising sons usually fail to take seriously, frequently put the highly sensitive mistress of the Far East on her mettle. Such is the view expressed in "The Pacific Triangle" (Century Company) by Sydney Greenbie, who says that Japan is trying to stand up to the world as a man, and not as a pretty boy, as the world has imagined.

Wherever I have gone [he continues] I have been asked a certain type of question

that seems to me to hold the mirror up to Japan. The questions are generally these: What business is it of ours, after all, what Japan does in Asia? Isn't it only the conceit of the white man that makes him regard himself as superior to the Japanese? Isn't it true that the Japanese haven't any room for their surplus population? Or, the more knowing, those who have read up on the subject—like the man who signed a contract with a publisher to produce four boys' books at once, one of which was on Shintoism in Japan—assume this attitude: "Let them adore their Emperors; it's a charming little peculiarity." There is still a third group. It belongs to the adolescent class, to the age of boys who threaten to lick other boys with their little finger, or "I'll fight you with my right hand tied behind my back," and has been fed by the romancers who portrayed everything Japanese as petite and charming.

Fortunately, powerful forces in the world are making for peace. In "Must We Fight Japan?" (Century Company), Walter B. Pitkin, Associate Professor of Journalism, Columbia University, weighs in the balance the main factors which—aside from the momentous developments of the arms conference—will determine the

future international relations of Japan and America. He says:

Certainly the most conspicuous of the forces making for peace, so far as the United States is concerned, is the widespread disgust and disillusionment as to the value of war as a method of getting results. Almost every American today realizes, somewhat bitterly, that the cost of the World War was out of all proportion to any possible or actual benefits accruing from the conflict. Two years ago this statement would have been treason; today it is an axiom.

A second influence is the rapidly growing solidarity of the intellectual classes of the world and their concerted efforts to anticipate international crises and block them by honest and open debate and publicity. In this movement the intellectuals of Japan are playing a worthy part, at times under handicaps little realized by us.

A third influence is the shaky financial condition of the whole world, and of Japan in particular, which operates to array all international bankers solidly against every political movement that threatens, even remotely, to carry any country into war. A fourth influence is the economic dependence of Japan's new industrial system upon the United States for most of its raw materials and special machinery.

DRIFTING TOWARD A JUGOSLAV FEDERATION

BY CONSTANTINE STEPHANOVE

Professor of the English Language and Literature in the University of Sofia

How Serbia and Bulgaria, after throwing off the Turkish yoke, sought a permanent union, and how this failed through assassination and Austro-Russian intrigue—Movement for a Slavic federation that will include Bulgaria

Federation is the only salvation of the Southern Slavs.—*Prince Michael III. of Serbia.*

I am first a Yugoslav, and then a Bulgarian.—*Alexander Stambolisky, Peasant Premier of Bulgaria.*

The Southern Slavs are a people of four nationalities and four distinct types of national consciousness.—*Stepan Raditch, leader of the Croatian Agrarian Party.*

There can be no lasting Yugoslavia without Bulgaria.—*Dr. Koroshets, leader of the Clerical Party of Slovenia.*

THERE is a saying among the Slavs: "Why aren't you on good terms with John?"—"Because we are brothers." The relations between Serbs and Bulgars ever since their appearance in the Balkans, twelve centuries ago, are well characterized by this paradox. Hardly any other two peoples have so many identical national features. They are both Slavs, brave, industrious, outspoken, honest, genial, hospitable. They both use almost the same language, which now, with the orthographic simplification introduced into the Bulgarian by the present Peasant Cabinet under Premier Stambolisky, renders the two kindred tongues still more nearly identical. As it is, the Slavs, from Klagenfurt and Pressburg to the Aegean, and from the Danube to the Albanian frontier, can easily understand each other. The Dalmatian or the Croatian feels equally at home in Sofia. The Bulgarian and his brother of Serbia proper are Yugoslav in race, speech, belief, popular folk-lore and traditions.

It is a different matter, of course, when we touch upon the question of

nationality and national self-consciousness. The political events which have taken place in the Balkans since the establishment of the Slav tribes in the peninsula have exerted such an influence upon their character that—as Mr. Raditch was constrained to declare during his trial for high treason at Belgrade in August, 1920—today among the Balkan Slavs one must reckon with "four distinct nationalities and four distinct types of national consciousnesses," meaning, of course, the Serbs proper, the Bulgarians, the Croats and the Slovenes. The last two, besides, are Catholic, and that divergence will always stand in the way between Agram and Laibach on the one side, and Orthodox Belgrade on the other; though the fact that the Bulgarian and Serb are both Orthodox did not prevent the two kindred peoples from writing a series of most bloody records of their mutual relations in the past, while, on the other hand, the Orthodox Bulgarian and the Catholic Serb of Croatia and Slovenia, or the Mohammedan Serb of Bosnia and Herzegovina, have never had occasion to rue their ethnic origin and blood affinity. At present, because of the despotic proclivities of the Serbs proper, manifested toward all other branches of Yugoslavdom, a more brotherly feeling unites Croats, Slovenians, Bosnians, Herzegovinians, Montenegrins and Bulgarian Mace-

donians against what they consider the "usurper brother," who is bent on playing the role of the Piedmontese—in his own rude, uncouth and unscrupulous fashion.

TIES IN COMMON OPPRESSION

The mutual bondage to the Turkish yoke, under which both Serbs and Bulgars suffered for some four hundred years, intensified their racial and brotherly feeling. The Slav solidarity of the two peoples during that period manifested itself in many ways. Religiously they were one; both professed the same orthodox faith. Socially no distinction was made between them. They were "*bracha*," brothers, and felt and acted as such. Students, scholars, priests and merchants found brotherly reception and treatment in either country. Politically, both Serbs and Bulgars had one aim in view—the final expulsion of the common oppressor from their land. Throughout the long period of Turkish dominion the two peoples demonstrated repeatedly their possession of national self-consciousness. A joint guerrilla warfare against the Ottoman despotism was carried on to the last days of their bondage. Serbs, Bulgarians and Macedonians always took an active part in the wars waged by the European powers against the Ottoman Empire. The Bulgarians in particular had to pay dearly for the general uprisings in 1405, 1444, 1595, 1612, 1669, 1673, 1829, 1841, 1856, 1878, for the vengeance of the Ottoman ire was wreaked mainly upon the inhabitants of the territory which by virtue of its central position became the arena of all the Turko-European conflicts.

The fighting qualities of the Serbian and Bulgarian were well known to the then great powers. Austria and Russia, in their repeated struggles with the Osmanlis, always counted upon the help of the oppressed Christian peoples, particularly on the Serbs and Bulgars, who looked to them for deliverance. Unhappily for these races, neither of the great powers named was sincere

in its military campaigns against the Sultans of Turkey. Their aims and interests were purely political and imperialistic. And, to their disgrace it should be stated, the Bulgarians and Serbians allowed the bonds of brotherhood, which had become traditional during Turkish times, to be shattered, chiefly through the machinations and intrigues directed from Vienna and Petrograd.

THE PROJECT OF UNION

The fraternal feeling between the Serbs and Bulgarians had been so deeply rooted in the hearts of the two peoples that during the sixties of the 19th century they were both imbued with the idea of forming a lasting alliance, a union of the two kindred races. From this time dated the first serious and consecutive movement for the creation of a Yugoslav Federation. It is true that an attempt to create a united Yugoslavia had been made as early as the beginning of the 19th century, but that proved a premature political undertaking and lasted only as long as the French Army of Occupation remained in the Balkans. Ten years later all these provinces were subjugated by Austria.

The Serbo-Bulgarian rapprochement which started over fifty years ago was a spontaneous manifestation of two kindred peoples. The chief promoter and patron was no less a personage than the third Prince Michael Obrenovitch of Serbia. The Balkan Slavs were pervaded with the idea of federating all Yugoslav States under his leadership. It was to be the first important step toward the formation of a Danubian Confederation, with Greece, Rumania and Hungary as members—a confederation strong enough to defend itself against encroachments from the East, the West, and the North. With that end in view the Serbian ruler set out to raise and organize a large national army, to which was secretly attached a Bulgarian legion, made up of the best Bulgarian and Macedonian revolutionary contingents. The Serbian Government meanwhile

made preparations for a sudden attack upon the Turkish garrison still retained at Belgrade. The assault took place in 1862, and the Bulgarian legion, under the leadership of Rakowsky, distinguished itself in the bloody encounter.

Encouraged by his military successes, Prince Michael concluded, in 1867-68, treaties of alliance with Montenegro, with the representatives of Croatia, Dalmatia, Bosnia and Herzegovina, and with the Bulgarian Revolutionary Committee, whose headquarters were at Bucharest, all with the idea of bringing about the unification of these Slav lands. Though the Serbian Government, in order to please the Sultan for returned favors, had expelled the Bulgarian legionaries from its territory, and had thus created great disappointment in Bulgaria and among the Bulgarian revolutionary organizations abroad, his federation plan had not ceased to attract them. The Bulgarians in 1867 gladly responded to the invitation of Prince Michael for the conclusion of a treaty of alliance. After an exchange of views a protocol was drawn up, which contained twelve points, chief of which were the first three, which read:

1. Between the Serbians and the Bulgarians is established a brotherly union under the name of "Jugoslav Kingdom."

2. The future Jugoslav Kingdom is made up of Serbia and Bulgaria. (Bulgaria includes Thrace and Macedonia).

3. The ruler of the Jugoslav Kingdom is the present Prince Michael Obrenovitch of Serbia, endowed with the right of heredity.

FAILURE THROUGH ASSASSINATION

This treaty was well advanced toward realization when the hand of an assassin put an end both to the life of Prince Michael and to his noble project. The murder of the great Serbian ruler is justly laid at the door of Austrian and Russian agents. It should be remarked that both the Russian and Austrian diplomacy skillfully pretended to be in favor of Prince Michael's program, and, curiously enough, Count Andrassy, for Austria and Magazinovitch for Russia were admitted into the secret con-

versations carried on between the Serbian Government and the Bulgarian revolutionary societies. As was the case in 1912, both Russia and Austria gladly encouraged a movement likely to cause a new conflict with Turkey, thus creating an opportunity for their intervention in the Near East question. Finding, however, that the federation idea was being consummated successfully, they decided to choke it at its very inception by doing away with Prince Michael, the soul of the movement. And, indeed, with him also died the grand Jugoslav idea.

That the murder of the Serbian Prince was an act inspired from Vienna, which was exceedingly sensitive on any question touching Jugoslav unity, is now an open secret. Did not Austria show her mischievous hand again in 1885, when, fearing the union of Bulgaria and Eastern Rumelia, she incited King Milan, Prince Michael's cousin and successor, to attack the Bulgarians in the rear? The Serbo-Bulgarian war in 1885 was a heinous crime. Serbia played the part of Cain, and the relations between the two kindred States were strained to the extreme. But "blood is thicker than water," and the Bulgarians, tracing the finger of Austria in the fratricidal war, were ready to pardon their Serbian brothers.

THE BALKAN ALLIANCE

All those familiar with the events of the first decade of our century remember the joy and enthusiasm of Serbs and Bulgarians, which led to the glorious days of the Serbo-Bulgarian Alliance of 1912, and which paved the way for the creation of the ill-fated Balkan Alliance. The aged Bulgars and Serbs, who still remembered the old days of Serbo-Bulgarian fraternity, were moved to tears at the sight of the new comradeship, by the common festivities, games, excursions and musical entertainments inaugurated by their young sons and daughters. Ever memorable will be the touching scenes witnessed at Sofia and else-

where on the arrival of the allied Serbian Army in September, 1912. They were addressed with the endearing word "*bracha*" (brothers), which was seldom used more appropriately. Bulgar old men and women kissed and hugged and loved the Serbian heroes as their own. The Bulgar and Serbian youngsters sang, drank and danced together as if they had done so all their lives. The Turk soon found out to his sorrow what Serbo-Bulgar unity meant. In less than three weeks the Ottoman veteran forces were swept off their feet at Kirk-Kilisseh and Lozengrad in Thrace, at Koumanova in Macedonia. What tried European Generals had so often attempted and failed to achieve in the past was accomplished, so to speak, by Captains and subalterns of two young States in less than a month. It was a war of liberation. Two brothers had clasped hands and vowed to break the chains of bondage in which still groaned a third. The whole world was amazed at the lightning dash and military exploits of the young Yugoslav soldiers. Almost before she realized it, the power of Turkey in Europe was a thing of the past.

These days of brotherly feeling, abnegation and patriotism were short-lived. The narrow-minded, imperialistic and chauvinistic politicians at Belgrade and Sofia, largely under the influence of Austrian and Russian diplomacy, soon had their own way again. Russia, it will be remembered, played the "patron" of the Balkan Alliance, perfectly confident that the Ottoman hordes would cut to pieces the green youngsters of the allied Balkan States, in which emergency her hard-pressed proteges would again turn to her for intervention. Austria, too, though the Serbo-Bulgarian Treaty of Alliance was also directed against "the power who might attack Serbia," showed a marked forbearance until the signal victories of the small allied States set her hair on end. Thereupon she fell back upon her old tricks. Vienna urged the Serbian Government not to evacuate Macedonia, as stipulated by

the Serbo-Bulgarian Treaty, and to demand its revision, while the Russian Minister at Sofia intimated that the entry of the Bulgarian troops in Constantinople would be looked upon with displeasure by the Russian Czar.

WAR INCITED BY AUSTRIA

Foreign and local intrigues were set going, and already in December, barely two months after the war had begun, the Serbs and Bulgars were allies only in name. Bloody encounters between contingents of the two camps had commenced to take place. The Serbians began to entrench and fortify themselves in Macedonia, determined to retain it at all cost. The relations between the members of the Balkan Alliance grew so hostile that to all who knew the psychology of the Balkan peoples it was evident that a fratricidal conflict was inevitable.

The Balkan war of liberation was to become a Serbian war of conquest, with ugly consequences for all concerned.

Posterity will brand the chauvinist circles at Belgrade and Sofia as the real culprits in the second Balkan war. Both the Serbian and the Bulgarian Governments are to blame for the rupture of the Yugoslav entente so auspiciously launched—a rupture which they would surely have avoided had they not flagrantly violated that stipulation of the Serbo-Bulgarian Treaty which provided that in case of disagreement about Macedonia it was to be converted into an autonomous province, and was to form a connecting link between Serbia and Bulgaria. Had they adhered to that clause, the fratricidal war would have been prevented, the brotherly unity preserved, and the foundations of a Yugoslav federation laid.

The second Balkan war is one of the blackest stains upon the records of history. It was waged with blind desperation and vengefulness, to the satisfaction and joy of the Austrian diplomats who had inspired it. It was the forerunner of the Serbo-Bulgarian conflict during the World War.

Some even go so far as to trace the origin of the world conflagration to the Serbo-Bulgarian quarrel over Macedonia. Nowhere else was armed antagonism carried on with such ghastly ferocity as in the Balkans. The Bulgarians of Macedonia acquitted themselves in a most brutal manner. The draconian regime of the Serbs in Macedonia had created deep-seated animosities in the mind of the Macedonian Bulgar, who is largely responsible for the cruelties committed in Serbia during the Bulgarian occupation. If Imperial England has been unable to curb a handful of Irish patriots, all the less could a small Serbia stifle a Macedonian movement led by a hardened and desperate race of men. Russian and Austrian diplomacy well knew this secret and acted accordingly.

THE NEW JUGOSLAVIA

The great war of 1914 wrought radical changes, political, geographical, ethnical, social and economic. It solved some questions, but bungled up most of them. Of the latter the Balkan problem is typical. Bulgaria was cut down to a minimum, in order to satisfy the wishes of the Entente Balkan allies. And yet neither Greece nor Serbia, nor even Rumania, has found a lasting solution of her national problems. The World War is still going on in the Near East.

Jugoslavia, so called, is the country that interests us here. The compact of Corfu, July 20, 1917, and the Geneva Convention the following year, at the stroke of the pen created the Kingdom of Serbia, Croatia and Slovenia. Here another fatal mistake was made—all due to the frenzied Belgrade politicians headed by Nicholas Pashitch, the arch-imperialist in the Balkans. The new State was appropriately named "Jugoslavia," but in reality it is nothing else than a greater Serbia. None of the new Slav States was properly consulted when it was formally set up. The Jugoslavia brought into existence by the Pashitch party is a bitter disap-

pointment to all good Slavs in South-eastern Europe. They awoke one morning in October, 1918, to find themselves under Serbian, instead of Austrian, occupation. The inhabitants of these States, who for generations had yearned to be delivered from Austrian rule and hoped to see a true Yugoslav federation established, were filled with terrible misgivings. They soon discovered that the Serbian Administration and Army of Occupation were more obnoxious to them than those of the fallen Austrian Empire. A new rule was imposed upon them against their will, and it proved harsher and more arbitrary than the alien one. The discontent became general. There soon followed riots, outbreaks and even revolutions. First the Montenegrins, then the Croats and Slovenians rose in protest. The Marburg rebellion was a serious affair.

FEDERATION VS. CENTRALIZATION

In the midst of that popular discontent and turmoil there rose the spokesman of the oppressed Jugoslavs, Stepan Raditch, the great Croatian Peasant leader, once the terror of the Dual Monarchy. The Austrians had feared to lay hands on him, but now he was languishing in prison in his own country, just delivered from the foreign yoke. He was secretly dragged to Belgrade by men of his own blood to be tried for high treason. That trial will ever remain memorable in the annals of history. A great patriot, fearless, self-confident, he boldly took the stand to defend himself against his judges, who were rendered mute by the irrefragable pleadings of a brother and patriot. His words rang clear and sonorous to the discomfiture of his accusers:

The people are still yearning for real freedom, and have a different conception of the Liberation act. We did not destroy Austria in order to have Budapest in Zagreb, Belgrade or Sarejevo. The Southern Slavs today are a people of four nationalities and four types of national consciousness. The principle of self-determination is not concerned only with territorial

boundaries, but also with the right of establishing a form of government such as the people desire. •

So spoke the intrepid apostle of Yugoslav federation. Had he been tried a year before, he would have been hanged on a Belgrade gallows. But a year of Serbian occupation had blasted the force of Serbian imperialistic zeal. Raditch had become the idol of all oppressed Yugoslavs. The Belgrade Government now feared Raditch dead more than Raditch living.

Raditch was virtually acquitted by the Belgrade High Tribunal. The official press consoled itself by branding him as a "madman." On Nov. 28 following, however, the date of the general elections, "Mad Raditch" polled more votes than any single man in all Jugoslavia. His native land, Croatia, gave him fifty-one mandates out of eighty, thus completely endorsing his policy for a Yugoslav union on the Federal basis. All the new States virtually voted against the Centralist parties, the Radical and the Democratic. Even the Slovene Clericals of Dr. Koroshetz now stood for the federation idea with Raditch, their political opponent. Raditch and Dr. Koroshetz, not to speak of the extremists, Dr. Frank, Dr. Horwath and others, now assumed a bolder stand for a federated Jugoslavia. The Government coalition, composed of the Centralist parties of Pashitch, Trotitch and Davidovitch, perfectly well aware that time was working against them, hastily completed preparations for the adoption of the new Constitution. When the Constituent Assembly met and the Organic Statute was put to the vote, on June 28, 1921, 161 Deputies, mostly followers and sympathizers of the Raditch program, boycotted the assembly in protest.

SERBIA'S VICTORY

After skillful parliamentary manoeuvres, the Government finally succeeded in putting the project through by a vote of 227 against 35 of the

Deputies present, out of a total of 419, the number of the Deputies elected for the Skupshtina. Of the 227 votes cast for the Constitution, however, 31 represented the rich Mohammedan begs of Bosnia and Macedonia, who cared less for the Constitution than for the preservation of their vast estates, which was promised them by Premier Pashitch before their consent was obtained. The dissatisfaction and disgust of most Yugoslav States at the way the Constitution was carried through may easily be judged when it is remembered that at its voting the general principle of a two-thirds majority of the votes, in vogue in all advanced States, was utterly disregarded by the Government. The Pashitch Cabinet resorted to the so-called "absolute majority" tactics; but it came near lacking even that kind of majority, as the 31 Mohammedans for a long time refused to vote, and without their support the Government's mandates dwindled to only 196 seats out of a total of 419. So the votes of the 31 Mohammedan begs had to be won or bought at all cost, at the expense of the Orthodox and Catholic Serbs. The Constitution of the Kingdom of Serbs, Croats and Slovenes then was able to pass through, thanks to the vote of the rich Mussulman faction, without which the coalition of the parties in power were in the minority. The real victors were again the Mohammedans, even as they had been the victors in 1389, the fatal day of the Kossova battle.

That the new Constitution does not represent Jugoslavia, but only the present Cabinet of Radicals and Democrats, who are Centralists *coute que coute*, may be seen from the fact that against the Government votes for Centralism (Radicals 87, Democrats 88, Mohammedan begs 31, Slovene agrarians 10, scattered 5), there stood for the federation or decentralization 161 Deputies representing all the States of Serbia proper, besides 35 Deputies representing Serbian Agrarians, Nationalist Socialists, Social Democrats and Republicans

who voted against it for various other reasons. (According to the Croatian paper, *Obzor*, only 8 out of 80 Croatian and 10 out of 30 Slovenian Deputies, and only 1 from Dalmatia voted for it, while outside the Mohammedan begs, Bosnia, Herzegovina and Vojvodina abstained altogether.)

FEDERATION STRUGGLE CONTINUES

"Jugoslavia or Greater Serbia," that is the "to be or not to be" dilemma facing the Kingdom of the Serbs, Croats and Slovenes today. On one side are arrayed the politicians of the old school, the jingo parties, imperialists "par excellence," of the Pashitch Radicals, and the Davidovitch supporters of the Democrats, with the scanty subsidiary forces of weaker factions reluctantly siding with them on most questions. On the other side there looms up the growing popular movement headed by Raditch, Dr. Frank, Dr. Pavetitch, Prebek, Dr. Horwath (in Croatia), Dr. Koroshetz and Franich (in Slovenia), Dr. Pavitchich (in Dalmatia), and other leaders throughout Yugoslavia, not to mention Macedonia, which is totally anti-Serbian. These leaders stand boldly for a real Yugoslav federation to include all Slav States, taking in Bulgaria, too, and eventually all the Bulgar provinces now found under an alien rule. The Croats, Slovenes and Montenegrins particularly insist on the entry of Bulgaria into a united Yugoslavia. This has been repeatedly demanded in the Skupshtina by anti-centralist Deputies. Thus at one of the sittings of the Constituent Assembly, Dr. Shurmin of the Croatian National Club, in answer to Minister Davidovitch, who had said that all Slavs should come to an understanding, declared, "Mr. Lyuba Davidovitch is a Yugoslav, but I say there can be no Yugoslavia without the Bulgarians," which statement evoked a volley of protests from the Government's right wing.

Happily for the Yugoslav idea, in Bulgaria, on the contrary, the Government itself has the Yugoslav Federation inscribed as one of its funda-

mental principles. The Cabinet leader, Premier Stambolisky, is a staunch supporter of and pleader for a united Panslavia, and in a speech delivered as early as 1914 he uttered the words that have since become famous: "I am first a Yugoslav and then a Bulgar." Since his party has come into power he is doing his best toward a rapprochement with Belgrade—the only bar to a Yugoslav understanding today. He has declared on several occasions in the National Assembly that Bulgaria is ready to join a Yugoslav federation. And no man can speak with more authority in behalf of Bulgaria than he, for his party represents 82 per cent. of the Bulgarian people. In this policy Premier Stambolisky has also the support of the Socialists and even of the Communists, who control the greatest Parliamentary vote next to the Agrarians.

In Bulgaria, too, there are rabid imperialists and extreme nationalists. This group, with ex-Czar Ferdinand, precipitated the two fratricidal wars in 1913 and 1915. There are also the Serbian Radicals and Democrats, who are just as incorrigible, but they are a stifled minority today. And when one remembers that, of the most influential parties, the National Liberal was the one that concluded the Serbo-Bulgarian Tariff Union of 1904, and the People's Party, now amalgamated with the National Progressives, was the chief promoter of the Serbo-Bulgarian or Balkan Alliance of 1912, one can form a good estimate of the popularity of the Yugoslav federation movement in Bulgaria.

STAMBOLISKY AND RADITCH

The two strongest personalities throughout Yugoslavia today are Premier Stambolisky, the undaunted leader of the Bulgarian Peasant Party, which is the strongest political group in Bulgaria, and Stepan Raditch, the founder and leader of the Peasant Party, the strongest in Croatia, and recognized spokesman of the newly liberated Yugoslav

States. Behind these idols of the people stand Croatia, Slovenia, Bosnia, Herzegovina, Montenegro, Dalmatia, Macedonia and Peasant Bulgaria, with a population of nearly 15,000,000 people and an area of some 120,000 square miles, in contrast with Serbia proper, which by itself alone counts only 4,500,000 population and an area of 35,000 square miles.

Slowly but surely the struggle between a federated Yugoslavia and a greater Serbia is progressing.* Already on the horizon are seen marching the slow but sure-footed masses of Raditch and Stambolisky, who are now the recognized victors of their own lands, and whose popularity is daily increasing throughout the Yugoslav States. Even the people of Serbia, who find it difficult to forgive and forget the cruel treatment meted out to them by the Bulgarian army of occupation during the great war, speak of Stambolisky as "the only Bulgar friend of Serbia."

Raditch-Stambolisky versus Pashitch-Davidovitch, democracy versus imperialism, united Yugoslav versus Greater Serbia—these are the issues in the Balkan Slavdom of today. The Magna Charta of the Southern Slav, which is yet to come, will bring the realization of the dream of these two Cromwells of Jugoslavdom.

All Yugoslav nations (including Bulgaria), except the present Government of Belgrade, are ready to see the realization of this project. The Yugoslav provinces now under Serbian occupation have repeatedly protested and risen in bloody revolts against the Centralist regime forced upon them. The Bulgarian Government, on the other hand, has been empowered by the Peasant Party to make all efforts to secure joint co-

operation with the other Southern Slavs for the creation of a united Yugoslav Federation. Premier Stambolisky on passing through Lublana recently told the editor of the *Sloven-sky Glas*: "The great majority of the Bulgarian people are for union with Serbia, Croatia and Slovenia, and for the formation of a great Yugoslav State." And Novi Chas, an organ of Dr. Koroshetz, the most powerful Slovenian political leader today, in an editorial which combats the dangerous manoeuvres resorted to by the Belgrade Centralist Government, frankly declares:

The most salient question facing our State is that of our relations with Bulgaria, because the Bulgarians belong to the national unity of the Southern Slav States. Without Bulgaria we shall pursue only a great Chauvinistic policy, which sooner or later will lead us to isolation and catastrophe. That policy, espoused by the supporters of great Serbian dreams, is the real obstacle to the creation of a strong and united Jugoslavia. All Yugoslav people independent of the Belgrade politicians are thoroughly convinced that the security of our future existence as a State demands union with Bulgaria, all the more as the Bulgarian Nation today is fully prepared and qualified for it. We know that this question, left for solution to the Belgrade race alone, will never bring about our consolidation with the brave Bulgarian people. On that account the entire Slovene and Croatian people should inscribe this demand in its program, and should never rest until it has been realized. The future Jugoslavia of Serbs, Bulgarians, Croats and Slovenes will be the strongest State in Southern Europe. It will prove a great guarantee for the cultural development of Southern Jugoslavdom, and one of the strong citadels for the world's peace.

The bitter experience of the past should make clear to the Yugoslav nations the necessity for Yugoslav solidarity, which seems to be the only alternative. Did not the Serbian poet, Voislav Ilitch, once say, "There is no room in the Balkans for both the crown of Simeon and the sceptre of Czar Doushan"? The Southern Slavs today are groping toward a free and united Jugoslavia. God grant that the Yugoslav States may soon realize the truth of President Masaryk's words: "The oppressor Slav is no Slav!"

* When these lines were being written there arrived a Belgrade official telegram announcing that "owing to the co-operation of the Communists the Croatian Separatist bloc, led by Raditch, had obtained a majority of votes at the Zagreb communal elections." Simultaneously with this came the report that at Belgrade the congress of the Republican Party had laid the foundation of a new and bigger party under the name of "Republican Democratic Party of Jugoslavia," in which will participate all republican factions throughout the land, and whose motto is "A Federated Yugoslav Republic."

SIMPLIFYING THE CALENDAR

BY FRANCES A. BLANCHARD

Bill before Congress to divide the year into thirteen months of twenty-eight days each—New system to include a fixed Easter

FOR twenty-five years men have argued the desirability of reforming the old Gregorian calendar, which has been in use since 1582. There are now increasing signs that something definite may soon be accomplished in that regard. A bill has been presented in Congress which calls for an arrangement of the fifty-two weeks of the year into thirteen months of exactly four weeks each, seven days in a week. The calendar sheet for every month would register twenty-eight days, and each week and each month would begin on Monday and end on Sunday, as shown below:

MO.	TU.	WE.	TH.	FR.	SA.	SU.
1	2	3	4	5	6	7
8	9	10	11	12	13	14
15	16	17	18	19	20	21
22	23	24	25	26	27	28

In 1918 a group of business men of Minnesota formed an incorporated organization known as the Liberty Calendar Association of America for the stated purpose of accomplishing a worldwide calendar reform. They elected a Board of Directors, of whom Joseph U. Barnes of Minneapolis is the President, and engaged experts to study different calendar arrangements and present one that would be simple and at the same time correct.

The result was that about a year ago Congressman Thomas David Schall of Minnesota presented a bill before the House of Representatives for a new calendar much more suited to the needs of business men than the one designed by Julius Caesar, which, in a form modified by Augustus and later by Pope Gregory, has been followed for 340 years.

On Feb. 7 and 8, 1922, a convention of astronomers, business men, and all

interested in the revision of the calendar, met in Washington, D. C., for the purpose of discussing the new proposition.

Thirteen months of twenty-eight days each account for 364 days of the year. The new month, to be called possibly Vern or Verna, is to follow immediately after February. The one additional day is to be placed between December and January, not numbered or named except that it will be called New Year Day, and will be a legal holiday. The next day will be Monday, Jan. 1. Every fourth year a day will be added between June and July called Leap Year Day, also a legal holiday. Each seventh New Year Day and Leap Year Day is to be observed as Sunday to preserve one-seventh of time as sacred.*

An innovation long desired is the fixing of an established date for Easter, which has been determined by the movements of the sun and moon at the Spring equinox ever since the year 325 A. D. The bill suggests March 12 as Good Friday, which would bring Easter two days later, on the 14th. The only holiday that would be displaced by reducing the length of months to twenty-eight days would be Memorial Day. The date set for this holiday is Saturday, May 13, a time of year nearly corresponding with the present 30th.

Although the thirteen months are not exactly divisible into quarters, yet the fifty-two weeks of the year are, and by dividing in this way each quarter would contain thirteen weeks. The first quarter would begin on

*Apparently this simplified calendar is based on the plan devised by Charles Wilkes Bennett of Coldwater, Mich., and submitted by him to a scientific magazine in New York City on June 7, 1911, as described recently in The New York Herald by Dr. John A. Wyeth.—Editor.

Monday, Jan. 1; the next on Monday, March 8; the next on Monday, June 15, and the last on Monday, Sept. 22. This is a much simpler, more accurate, more easily remembered division than the one now in use.

This calendar may be instituted on any year beginning with Sunday or Monday without disarranging dates in any way. Congressman Schall's bill provides that all contracts, agreements and obligations, maturing on or after the first day of the year when the new calendar is put in operation, shall mature on the same numerical day of the year as they would under the present calendar. Further, all agreements requiring monthly payments entered into under the Gregorian calendar should be so construed that the sum or sums to be paid each month should equal one-thirteenth of the total amount to be paid annually, and that contracts requiring payment of sums after the 28th day of the

month should become due on the same numerical day of the year as that specified in the contract.

An International Chamber of Commerce was organized in Europe in June, 1920, to consider the question of adopting a fixed date for Easter and reforming the calendar, but no definite arrangement has been agreed upon. The late Pope Benedict called a convention of astronomers to meet at the Vatican in April, 1922, for the purpose of discussing an improved calendar and a settled date for Easter.

M. Armand Baar, a distinguished Belgian member of the International Chamber of Commerce, said before a recent conference in London: "It is the commercial and industrial world that will eventually reap the largest amount of benefit from the reform of the calendar. It is, therefore, for the men of the business world to take the initiative in the movement."

DEATH OF POPE BENEDICT XV. AND ELECTION OF PIUS XI.

POPE BENEDICT XV. died of pneumonia at the Vatican on Jan. 22, 1922, and his successor, Cardinal Achille Ratti, elected in solemn conclave of the high Cardinals of the Church on Feb. 6, was crowned in St. Peter's amid scenes of medieval grandeur on Feb. 12. "Sic transit gloria mundi!" was the admonition which the new Pontiff heard, as a part of the stately ceremonial, just prior to his coronation with the massive, many-jeweled tiara.

Profound grief was manifested throughout Italy over the death of Pope Benedict. Flags were flown at half mast on the public buildings, and the Italian Cabinet, which subsequently fell (see Italy), sent Catholic representatives to bring condolences to the Vatican. Messages of sorrow were received by Cardinal Gasparri from many lands. The obsequies

took place on Jan. 26 according to the solemn rites which have attended the burial of Pontiffs for centuries. The body was lifted from the funeral bed in the Chapel of the Sacrament by sedari clad in red brocade, and by them slowly borne toward the Shrine of St. Peter, the high dignitaries of the Church following in procession. The last rites were administered in the Chapel of the Choir, lighted by a hundred candles and two immense braziers. In the presence of the violet-robed Cardinals the body was enclosed in three coffins and lowered into the crypt by red silken cords, while the choir chanted the Miserere.

The new Pope, Cardinal Ratti, was elected by the Sacred College, consisting of fifty-three Cardinals, which deliberated in secret council in the Sistine Chapel, beneath the magnificent frescoes of Michelangelo's "Last

Judgment." The Cardinals were completely cut off from the outside world on Feb. 2, when workmen walled up the doors, according to ancient custom. In the first two votes taken (Feb. 3), the Sacred College reached no agreement, this result being announced according to prearranged signals by a cloud of black smoke from the chimney. The same result attended the voting of the next two days. It was not until Feb. 6 that Cardinal Ratti was elected. A thin stream of white smoke announced that a decision had been reached, and Cardinal Bisleti, one of those whose elevation to the Papal throne had been predicted, appeared on the balcony and announced the result to the excited crowd of 10,000 people, waiting outside St. Peter's in the rain. "I announce to you great joy," he said.

"We have a new Pontiff, Cardinal Ratti, who assumes the name of Pope Pius XI." The bells of St. Peter's immediately rang out, and the chimes were answered at once by the bells of all the other churches of Rome; but the guns of the great Castle of St. Angelo, which now belongs to the Italian Government, did not boom as they did on a similar occasion fifty years ago. The Italian troops, who were drawn up in the square, and whose presence was one of several friendly concessions by the Government, presented arms, and the crowd gave way to demonstrations of joy.

A dramatic appearance upon the balcony was made at this point by the new Pope, whose white robes contrasted sharply with the rich red of

Cardinal Achille Ratti, Archbishop of Milan, elected to succeed Pope Benedict XV., Feb. 6, 1922

the Cardinal's gown. His blessing of the people from this balcony was an innovation, contrary to precedent since the feud between the Papacy and the Italian Government began. After intoning in Latin, "Blessed be the name of the Lord!" he pronounced his first apostolic benediction "urbi et orbi" (to the city and the world) over the kneeling throngs. The new Pope is renowned both for his learning and for his love of mountain climbing. His attitude is said to favor reconciliation with the Italian Government. Cardinal O'Connell of Boston reached Rome one hour too late to take part in the election. The ceremonial of coronation on Feb. 12 was described by spectators as a scene of imposing splendor, a blaze of medieval costume and color.

RISE OF THE FASCISTI IN ITALY

BY CARLETON BEALS *

Growth of the revolutionary movement that began by fighting the Italian Reds and has developed into an intensely nationalistic organization of tradesmen and peasants—Its tyrannical methods and imperialistic aims—Has both good and evil aspects

THE Fascisti call themselves the "backbone of Italy." They constitute a movement with a doctrine and a tactic known as *fascismo*. Their doctrines revolve around the tactic, which is direct action. That is why Gabriele d'Annunzio, when the Fascisti began to enter politics, predicted the downfall of their organization. Fascista direct action does not include the boycott, strike or sabotage. It is still more direct and primitive. Thus, last Summer the Fascisti ordered all retailers to cut prices 20 per cent. Most dealers immediately posted signs:

THIS STORE COMPLIES WITH THE
FASCISTA ORDER. ALL GOODS
20% BELOW MARKED PRICES

Recalcitrants were promptly caned into submission. In Florence the price of show-case glass and window glass went up. Reduced schedules were also imposed for butter, eggs, fruits and vegetables. I saw many an old man and one old woman kicked and caned and their cartloads of vegetables trampled into the mire.

In Venezia Giulia, the annexed province—containing, according to the Austrian 1910 census, 700,000 Slavs and Germans—foreign language schools, churches and printing plants are destroyed and the teachers, pastors and editors maltreated. In the farming areas of the Adriatic Delta district, Apulia, Sicily and Sar-

dinia, the headquarters, newspaper offices and co-operative stores of the agricultural leagues are pillaged and burned; the *capi-lega*—league officials—are beaten, doused, sequestered, even murdered. In the Province of Mantua all meetings of the co-operatives were supervised by Fascisti representatives. In the towns the public buildings are occupied on behalf of the mutilated, strikes are broken, officials intimidated and radical funerals and processions disrupted. According to the *Critica Sociale* (Reform-Socialist) of June 15-30, between Jan. 3 and May 9, 1921, there occurred in the Province of Ferrara forty-five Fascista sorties characterized by shooting, bombing and assaults on private houses; forty-two league and three labor union headquarters, valued at from 2,000 to 250,000 lire, were burned and twenty-one Clerical and Socialist communal administrations terrorized into resigning. Fascista tactic is direct action in the most direct sense.

The well-springs of Fascismo are found in the pre-war nationalist movement led by Enrico Corradini, in the increased faith in violence en-

*Mr. Beals has resided in Italy, with one short interruption, since February, 1921. He has devoted his attention to a study of the political and social situation. In Bologna he made a first-hand investigation of agrarian Fascismo, interviewing the leaders, and witnessing several Fascista forays. Prior to this he spent three years in Spain and Latin-American countries in various educational and journalistic capacities. He has had articles published in a number of leading magazines. His alma mater is the University of California, and he also holds a degree from Columbia University.

gendered by the war and in the outraged idealism of the middle class.

The Nationalists have always practiced direct action. The unification of Italy was in large part attained by revolution and the direct action of Garibaldi—"seven men on seven mules going to capture a kingdom." Garibaldi would have overrun Tyrol, Trentino and Istria in the same manner had Cavour not called him off. Since then the Italians in Trieste, Fiume and Zara have constantly resorted to violence, trying to embroil Italy with Austria as now with Jugoslavia.

A FORM OF SYNDICALISM

The Nationalists have boldly acknowledged their tactical debt to the syndicalists—to Bakunin and particularly to Fernand Pelloutier and Georges Sorel. The Fascista Deputy, Farrinacci, has labeled Fascismo "the Nationalistic Syndicalism." This thought is of German origin, but was elaborated by Enrico Corradini fully a decade ago:

Just as socialism has redeemed the proletariat, so nationalism will be our method of redemption from France, Germany, England, North and South America, who are our bourgeoisie. Just as the methods of socialism are strife, and they look to the general strike to emancipate them from exploitation, so the methods of nationalism must be war, or the preparation for war. Nationalism is the logical outgrowth of socialism. The Nationalists have taken up the struggle where the Socialists left off. But, of course, their ideal is a greater one: instead of a class, the whole nation; instead of the bourgeoisie, the world.

Piero Marisch, a Nationalist from Venice, declares openly that Fascismo means revolution (*Nuovo Giornale*, Nov. 18, 1921):

We do not admit the charge that a thing can be too revolutionary; we are the only revolutionists. Let it be well understood that the revolution of workers and communist gentlemen, Republicans and similar canaille, has nothing in common with that one and only true serious revolution conceivable in Italy: the revolution born of Fiumianism and Fascismo together—the revolution which is actually transpiring.

This faith in direct action was heightened by the war. In many a

commune have I heard eddying down the dark, narrow streets that battle-song of the Fascisti:

Giovanezza, Giovanezza,
Primavera di bellezza. . . .

Many a night have I heard their feet ring past in military quick-step. There were starlit nights such as these in the Trentino and the Tyrol. This restlessness, this night-prowling, this thirst for adventure and impatience with routine, this love of quick conflict, are primeval emotions ever in the heart of man; but the war has permitted their untrammelled expression.

Lastly, Fascismo is a reaction of the outraged middle-class—*il piccolo borghese*. Before the war this group was pinkishly socialistic. During the war it was protected by special decrees. Since, it has been ground down by speculation, taxation and the revolutionary thrusts of the proletariat. Fascismo, in spite of such inconsistencies as retail price-lowering, is a violent reassertion of middle-class libertarian ideals, standards of living, and rights of property.

Yet, both in tactics and in doctrine, Fascismo has shown gradual change and growth. The *Fasci di Combattimento* are the logical outcome of the Nationalist locals that sprang into new life in 1914 when Benito Mussolini deserted the Socialist Party and his editorial chair on the *Avanti* to found the pro-war *Popolo d'Italia* of Milan, and d'Annunzio scattered his poetic propaganda from Sicily to the Alps. Actually, the first groups of that name were made up of ex-soldiers in the annexed areas, who co-operated with the troops of occupation to hasten the Italianization of aliens by the methods already described—men who were disgusted with the Government's failure boldly to seize the fruits of victory.

When the eastern outposts of the Adriatic were in danger of being lost to Italy, the Fascisti and many of the troops rallied behind d'Annunzio and followed him to Fiume and Zara. On Sept. 11 and 12, 1919, these volun-

teers streamed south from Trieste by bicycle, by motorcycle, airplane, auto and boat—infantry, machine gun companies, grenadiers, even 300 professors.

TWO DANGEROUS YEARS

Concurrent with the rise of the Fascisti came the general strike in protest against the Treaty of Versailles, and the elections which gave the Socialists the largest party representation in Parliament and control of 2,500 communes, including Milan. From then on the mood of labor was ugly. Mails, trains, steamers, manufacturing were held up without warning for five minutes or five weeks. Demobilization had flung the soldiers back into civil life without provision for their assimilation. Revolution was in the air. The Government of Signor Nitti admitted that the war had been a disaster and that the country's one salvation lay in sweeping socialistic reform. By September of 1920 the occupation of the factories and fields was well under way.

The Fascisti did not prevent revolution at that time. Rather the land and factory seizures, by withdrawing public attention from Fiume, broke the backbone of the Regency of Carnaro. Only then did the Fascisti apply themselves to domestic affairs, and enroll the middle class, which had become alarmed at the threat of revolution. Fascista violence, however, was quite sporadic until the first months of 1921, by which time the reaction had spread to every corner of Italy. Yet the workers had already abandoned the idea of revolution. At the Congress of Leghorn, held in February, 1921, the Socialist Party definitely purged itself of communism, and the pendulum began to swing toward the tactic of parliamentary reform. As Socialism retreated Fascismo advanced. Toward March bloody conflicts took place in every corner of Italy, but particularly in Milan, where I witnessed the fiendish explosion in the Diana Theatre, the sacking of the press of the

Avanti, the burning of the million-lire Socialist headquarters and several sanguinary riots. In Bologna, Pisa, Venice, Siena and other communes occurred piazza demonstrations; and in Florence on the notorious day of San Frediano the Communists were driven out of the barracks they had erected after the assassination of their leader, Spartaco Lavagnini. One may still see the bullet holes in the Y. W. C. A. Except in Apulia, where the peasants rose en masse; in Trieste, where millions of dollars' worth of lumber was burned, and in the Adriatic Delta district, even sporadic communist violence was ended. Yet the wave of Fascista passion was carried on by its original propulsion until it finally broke in an orgy of blood and incendiarism the week prior to the elections of May.

Then Italy breathed again. The Fascisti, by the end of June, were even induced by De Nicola, President of the Chamber, to sign a peace pact with the Socialists—the Pact of Rome, which in the recent national Fascista convention was declared by the Delegate Mandel to be a "truce with the public opinion of America."

Into the signing of this pact entered not a little demagogism. Certainly the signers were not so superficial as to believe that civil strife—"*lotta fratricida*"—is a sport called off *ad libitum*, or that pacification can be secured by "fraternal sentiment."

ITALY WEARY OF DEMAGOGUES

Following the May elections, Professor Modestino Petrozziello stated in *La Vita Italiana* for June 15:

An impetuous wave of reform has pervaded the electorate, which affirms its aspirations for the greatness of the patria, the restoration of social order, the reintegration of ethical and political values, but above all else, a new method with a new conscience, whose chief characteristic shall be anti-demagogism.

The people of Italy were, and still are, tired of false prophets, violence and Governmental *laissez-faire*. That Mussolini was well aware of this new

sentiment is revealed in the tone of his explanation made upon his resignation from the Presidency of the *Fasci di Combattimento*, when half the organization—sixty local secretaries represented by 150,000 agrarian Fascisti—refused to abide by the Pact of Rome (Popolo d'Italia, Aug. 8, 1921):

How shall we achieve pacification? Do you think it will be possible to exterminate the 2,000,000 who voted for socialism? Or to run the risk of civil war? Or to go against the sentiment of the nation? Or do you prefer to submit to a peace imposed by the Socialists by another not improbable whirl of the wheel? * * * The Peace Pact of Rome does not mean the demobilization of the Fascisti nor the cessation of their political struggle against the Socialists; nor a general embracing of enemies. With the Pact of Rome the Fascisti might have shown not only their pugilistic, bombarding superiority, but their cerebral and moral superiority. * * * After the Pact of Rome that party which could give the most firm proof of internal discipline would in the reality of things be victorious. The Fascisti are giving constant proof of their discomfiture.

But in view of the recrudescence of communist violence and the formation (July 6) of the Arditi del Popolo, composed of revolutionary Socialists, Communists and Anarchists, and even radical Clericals, for the extermination of the Fascisti; and in view of the fact that Premier Bonomi, in agreement with the Socialists, has consistently suppressed Fascista demonstrations with the Royal Guard (as in Sarzana), the Agrarian Fascisti have won over the organization, so that in the national convention recently held in Rome the peace pact was annulled.

Violence, however, is to be restricted to reprisal and self-defense. On the whole, the bitterness of the internal war has abated, and Fascismo has definitely entered a political phase. Last May thirty-five Fascisti were elected to the National Chamber. This was purely the result of local or individual initiative. At the national convention of November, however, the Fascisti definitely constituted themselves a political party. Mussolini confidently expects it to

become the leading parliamentary force. He stated at the convention:

There is a middle group, *La Democrazia*. Who is not a democrat today? Every one is a democrat both in public and private life. But democracy for us must ever be a means, not an end; for even the development of democracy can be a danger for Italy. However, a democratic party lives only by dead dogmas and the art of dancing. We Fascisti have given potent injections of energy to this party. But there is a limit beyond which we cannot go. * * * Nor can Fascismo ever be absorbed by liberalism, because Fascismo is something superior. Only by surpassing the methods of liberalism (based on the theory that the Government is neutral in all conflicts) were we able to save the nation. The liberals will come to us.

OBJECT OF THE MOVEMENT

If these are the four principal stages in the evolution of Fascismo—Italianization of the annexed areas, occupation of Fiume, violent reaction to communism, and the political embodiment of an aroused spirit of nationalism and middle-class ideals—it nevertheless presents varied aspects. The movement is not yet oriented. At times it has been used by the big industrials to further their private interests. In Apulia it marked a bloody reaction to property; in Sicily and Sardinia it has assassinated the peasant leaders who were responsible for the land seizures. But in Parma it has been accused of being communistic, and the delegate from Parma, Ruggeri, was hissed when he attempted to speak at the Rome convention. In the Adriatic delta district it has a definite program of “*spezzatamente*,” or small land-holding.

Thus far the negative aspects of Fascismo have been most obvious. It is, first of all, anti-socialistic. Yet it is not, as the radicals say, a White Guard in the service of reactionaries and profiteers. As De Stefani declared in Parliament on July 22: “The Fascisti do not intend to be the dagger of the politicians and industrials with whom, for expediency, they were yoked during the elections.” As a matter of fact, its principal leaders are recruited from radi-

cal ranks. Before the war Benito Mussolino and Enrico Besana were revolutionary Socialists; Alceste de Ambris founded the Soviet of Parma; Leandro Arpinati was an anarchist; Cesare Rossi was an anarchist-syndicalist.

Indeed, the same bitterness is manifested against the Catholics. In Florence I witnessed the bloody break-up of the Catholic procession that marched to lay a wreath on the towering statue of Dante in the Piazza Santa Croce. The Fascisti considered this a defilement of the memory of the first great seer of Italian nationalism. Mussolini has spoken of the Clerical Party (Partito Popolare) in the most rabid manner:

It is the most dangerous. It swings from one extreme to another. It rests upon its rich banking institutions, upon ignorance, upon its thirty thousand parochials—black Bolsheviki, more dangerous than red Bolsheviki, and guided by more ferocious neutrals and anti-Italians.

CONFLICTING ELEMENTS

Anti-socialism, anti-Catholicism and anti-pacifism—these are the burning sparks of the nationalistic fervor of Fascismo. Writes Piero Belli, one of the *arditi* who gained the nickname of "Ironhead" in the war (Popolo di Trieste, Feb. 5, 1921):

A few months ago Fascismo did not exist. We were "gay cats." We were the "froth" of the *arditi*. * * * We were equivocal elements "in the pay of the bourgeoisie and armed by the police." * * * But we have grown. We are still growing everywhere. We are incessantly multiplying. Between conflicts and battles we swell to legions, to armies. We have sprung up like "funghi" without propaganda, without organizers. It is not necessary to hunt for us. You will find us everywhere. And we are "felt" by everybody. *Because we are the new Italy.* *Because we are the patria* itself. * * *

We have not been born to combat the Socialist Party; we are against the past of every party. We march to the conquest of the future against every force that negates the patria, that insults it, that would ruin it.

But the entrance into politics has made necessary the replacement of instinctive interest by defined programs. As yet these are hazily

mouthed by the leaders, as, for instance, by Piero Marisch in *Il Nuovo Giornale* for Nov. 18:

We are for a State not considered as something already made, but as a dynamic organism in continual transformation by means of its profound ethical content founded upon the principle of co-operative, productive unity resulting from the fervor of the aroused individual conscience in behalf of the national welfare—the State that was envisaged in the Regency of Carnaro. The duty of Fascismo is to create the spirit and means to this end; to create a spirit free from demagogism and apathy; to arrange for a means, which cannot be aught else but our economic organization—our flying squadron transformed into a solid civil militia. This is the force which will stir in the breast of Italy, and no one will arrest it—neither guards, nor police force, nor Governments barren of national pride, nor subversive elements without faith or idealism; neither democratic oligarchs nor plutocratic oligarchs.

In internal affairs this nationalism is republican in tendency, advocating liberty of contract, co-operation between capital and labor, the establishment of a stabilized class of peasant proprietors, the suppression of the free commune, the centralization of power. In international affairs it advocates an aggressive foreign policy, the seizure of the eastern shores of the Adriatic and the consistent pursuit of a mild Mediterranean imperialism, which will further the prosperity of an agrarian, shop-keeping, coastal-trading civilization with the minimum of personal sacrifice.

Corrado Zolli, the former Sub-Secretary of Foreign Affairs under d'Annunzio in Fiume, has, in his "*Le Giornale di Fiume*" (Page 137), expressed the current sophism of this imperialism:

From the Alps, from the Carso, from the Piave, has stepped forth a nation of 40,000,000 inhabitants * * * the second great Continental power of Europe, constricted in the long land pier that reaches out toward the East and toward Africa—seething with energy that will burst over its neighboring European and African confines; for from Marseilles to Tunis, from Trieste to Smyrna, from Alexandria to Tripoli, nothing is heard but the language of Genoa and Venice, of Bari and Palermo—even the distant shores of the two Americas are fecundated with the intelligent labor of our people. This nation cannot but be proud of its honor, cannot but respond to the stirrings

of its strength. Sooner or later it should and will regasp its proper post in the world.

WHAT FASCISMO STANDS FOR

Some declare that Fascismo is doomed to disappear; that it has no definite theories and no lasting interest. But Fascismo is not a new movement. It is a projection of the sentiment that freed Italy from Austria. Following unification, however, the Italian Government became the grab-bag for office-seekers, grafters and crooked cliques. It was weakened by regionalism and factional feuds. Its finances were depleted; its army, a ragged laughing-stock. Public opinion, to the extent that it existed, was apathetic. The Nationalists brought the first breath of idealistic fervor into the arena. They demanded the cleansing of the Augean stables. The Fascisti carry this demand into the present.

Second, Fascismo is an expression of the self-centred, raucous adolescence of a nation without governmental traditions or achievements in the sense that these are possessed by France, Spain or England. It represents a historic phase in the rise of all new nations eager for unity and glory.

Third, Fascismo is an honest expression of the aspirations of the traditional Italy—the Italy of the self-sufficient peasant and the small trader. The Fascisti would endow this class, so long indifferent, so long betrayed by the bureaucracy, with political energy and acumen; they would give it a conscience; they would weave it into a closely knit social fabric, capable of withstanding international anarchy.

Fascismo does not represent the new industrial Italy of Lombardy; it

does not represent the proletarian Italy. Nor does it, in its egotistic emphasis upon the strong State; represent those broader, nobler, international forces that are struggling to life. From the national standpoint Fascismo is a powerful, reinvigorating force; from the world standpoint it appears reactionary and dangerous.

The Fascisti, in their passion for the patria, in their impatience with the status quo, with their insistence upon immediate tangible changes, have been forced into two inconsistent courses: that of weakening governmental prestige when they stand for a strong State and that of advocating certain socialistic reforms.

But when Italian public opinion demands that its Government merit respect the Fascisti will automatically be assimilated by the State. And there are those, as Mario Misiroli, editor of *Il Secolo* of Milan (one of the chain of Nitti papers), who even declare that the aims of the Socialists and the Fascisti are not incompatible; who say that a strong socialist movement is historically inevitable in the smaller, more poverty-stricken nations, and that when the Socialist Party of Italy has followed its present tendency to the end of becoming a truly national party of constructive reform, the two antagonists will discover common causes and slogans. Certainly they have a common tactical tradition. This would be a true Chestertonian paradox; but no more of a paradox than we have learned to expect from Italian politics.

[Since this article was put in type the Bonomi Government has been forced out [Feb. 2], and though the chief issue on which it fell was that of its attitude toward the Vatican, the underlying conflict of the Socialists and Fascisti undoubtedly had much to do with the overthrow.]

SUFFERINGS OF RUSSIA'S CULTURED CLASSES

BY JEROME DAVIS

Department of Sociology, Dartmouth College;
Recently of the American Relief Staff in Russia

Hardships of educated people in Russia depicted by an American who visited many of them in their homes—A close-up view of General Brusiloff and his brave wife—Gorky's eloquent message

SINCE the revolution there have been no groups in Russia which have undergone more disappointment and suffering than the nobility, the wealthy, and the intellectual classes. Some of these cultured people have been killed, others have joined the various counter-revolutionary movements of Denikin, Kolchak, Wrangel, and in the end have fled before the advance of the Red armies to other lands. It is said that there are over 2,000,000 such Russians trying to eke out a meagre living on foreign soil. In Constantinople, for instance, Princesses are working in restaurants, nobles toil as day laborers in factories, and army officers clean the streets. Many of the women have been forced even into lives of shame.*

Besides these exile groups is the unhappy number of those who have remained in Soviet Russia. They have, for the most part, opposed the Bolsheviks, but have felt that if all

to bring about its regeneration. So they have dared to stay and risk the charge of being considered Bolsheviks by working in various departments of the Government.

Were one of the old prophets of Israel writing about these aristocrats of a past splendor he would declare that their lot now is merely a retribution for the "hardness of their hearts" in the days gone by. It is the sound elements should desert Russia there would be no force left indisputably true that many of the nobles in the Czar's regime were so utterly indifferent to the sufferings of the workers and peasants that there is a certain amount of grim justice in the reversal of the wheel of fortune. Today numbers of the nobility themselves confess that they never realized what a peasant must have had to bear in the old days until they themselves were in a similar position. "Now we understand why a peasant in need of food would steal," they say; "we are quite ready to do the same thing ourselves."

One of the most popular and well-known of the military leaders remaining in Soviet Russia is General Brusiloff. He has been co-operating with the Bolsheviks to the extent of serving on their military committees. He feels that foreign military intervention is a big mistake and has gladly done what he could to repel invasions such as that of the Poles. In view of this work one would natural-

*A young English naval officer at Constantinople wrote to his father in December: "Here in Constantinople 30,000 loyal Russian refugees are starving and homeless. We (the fleet) have started saving our scraps for these unfortunate people; this ship alone is feeding 500. Even our seamen are deliberately buying more than they want for themselves, especially bread, and we find whole new loaves put into the scrap baskets. We hope to raise £100 in our ship, but that will go no way, and unless something is done at home the services out here (5,000 all told) can't hope to keep 30,000 starving Russians alive through the Winter. This will mean cholera for a certainty. For Heaven's sake, and for our own, let us preserve these brave loyalists from starvation, that in due time they may return to their own country."

ly expect that he would be comparatively well off and comfortable, but as a matter of fact his present situation is in striking contrast to his former one. His salary, including the food given by the Government, is not sufficient to meet the needs of his family, hence he has been forced to sell the family furniture and jewelry piece by piece. Today he is living in a small flat with borrowed furniture. The old family servant refuses to do more than prepare the noonday meal, and for this demands her board, no mean requirement in the Russia of the Bolsheviks. All the work of cleaning the floor and washing the clothes has now to be done by Mrs. Brusiloff, whose hands clearly show the results of such unaccustomed labor.

I took dinner with the family. The meal consisted of a thin vegetable soup, black bread, cucumbers and tea. Yet it must be remembered that General Brusiloff is well taken care of, compared with many army officers. He has served on the military commissions. Today in a period of peace he is at the head of a commission to conserve the horses and cattle still remaining in Russia. As a matter of fact, the Government is giving him unusual consideration, yet he is still unable to live without selling his personal belongings. What about others?

HARDSHIPS OF A PRINCESS

Let us consider the case of Princess S. Before the war she lived in a palace with a retinue of servants and governesses. She had four automobiles entirely at her command. When the Bolsheviks seized the power, her home and personal belongings were confiscated. Her husband was at last forced to secure a position in one of the Soviet departments, and the family, including two small children, found themselves in a three-room flat. In 1919 her husband was ordered to make a trip to Kiev on Soviet business. While there he contracted typhus and died without seeing his wife.

Never having learned to support

herself, the wife was soon on the verge of starvation. After an anxious period, during which she sold even the rings from her fingers, she appealed to the peasants on her old estate, who consented to grant their former mistress a small plot of land. With her own hands she tilled the soil and planted potatoes. When these were large enough, she—a former Princess—dug and carried them, on her own back, to the railroad station. There she took her place along with the peasants in the crowded third-class cars, perhaps even standing on the platform in Winter when she was not successful in pushing her way inside. Arrived at Moscow, she had still to walk with her burden clear across the city to the market, where she stood all day selling her product. She now lives in a one-room attic, which even the Soviet officials themselves said was not worth requisitioning. Thus her life drags on. One of her two children has died as a result of the hardship endured, but the mother still has the other to live for.

Another typical case is that of the wife of a very wealthy political leader who had fled from Soviet Russia. She was forced to accept work in the Government as a translator, and for this received at first 2,000 and later 4,000 rubles a month. This is just about the cost of one pound of black bread on the market. The advantages of a position in Soviet Russia, however, do not depend upon the salary, but on the *pyok* or food ration given by the Government. Indeed, the amount of the *pyok* is the chief criterion of the importance of one's occupation, and people scheme for weeks and months to obtain a position with a larger *pyok*. The position of this lady, who was exceptionally proficient in four languages—English, German, French and Russian—was supposed to be especially good because of the *pyok*. Yet this is all it consisted of each month: One pound of sugar, eighteen pounds of flour with an additional twelve pounds for each member of the family under sixteen years, three pounds of *kasha* or barley, two boxes of

matches, one-half pound of soap, and apples and potatoes in substantial quantities. In addition three-quarters of a pound of black bread could be secured every two days.

It is obvious that this is little more than the barest subsistence diet, yet the salary for one month was hardly more than enough to purchase a pound of black bread on the open market. It was quite inadequate to buy any article of clothing. The situation of those who belong to even the most essential professions is quite as bad.

DOCTORS AND LAWYERS

Let us consider the doctors, whose vital importance is obvious even to the Bolsheviks. The following is but one concrete illustration. Doctor V., in the Czar's regime, had an immense practice and was worth over a million rubles. When the Bolsheviks took the power, his home and Summer estate were nationalized, so that he lost everything. Although he was about 60 years of age and found it difficult to adjust himself to a Communist Government, he continued to serve as a physician in one of the Bolshevik hospitals. For this work he received enough money to pay for three rooms. During the civil war he was commandeered to one of the base hospitals which served the Red Army, and had to leave his wife in Voronezh. During the protracted absence she was stricken by disease and her husband was unable to reach her before she died. Today he continues to work in a hospital, receiving enough to pay for black bread, vegetables, and occasionally a little meat; but life for him is at best a dreary thing.

The practice of the law we usually consider a necessary profession in any country, but in Soviet Russia this is not true in the old way. As a consequence, the lawyers who still remain there are serving in various departments of the Government, as, for example, that of food or commerce. Many of them have been able to live in comparative comfort through

speculation, although that has been hazardous until the recent decree permitting free trade. For the most part that speculation has consisted in buying food supplies on the market and selling them later at a profit. There is also a brisk trade in property rights which would be valid under the old regime. Some believe that under another Government these will be recognized. One man showed me a bank draft for 1,000,000 rubles on the Azofski-Donski Bank, one of the largest institutions of its kind in Czarist Russia, which he had purchased for £2 and expected to sell for double the sum. Another had purchased the rights to the building in which the Moscow Soviet holds its meetings. He said that he did not expect that the Soviet would be ousted, but intended to sell the paper at a profit. It is obvious that the speculators gain by these transactions, whether or not the Bolsheviks are overthrown.

Nearly all the lawyers are clever enough to get ahead by some means or other under the Bolsheviks. For example, one told me that he had a two years' supply of flour saved up. "Of course," he said, "I keep it elsewhere." The Bolsheviks have finally realized that for the present, at least, they cannot get enough flour to provide for the needs of all the people, nor even for those who work in their own departments. In consequence, they urge each Soviet department to organize its own co-operative and secure its own supply of bread as best it can. This affords an opportunity for a trained lawyer to use his skill. One showed me a handful of gold coins, which he had worked six months to secure. With these he would go down to Kiev with a special railroad car and purchase flour and incidentally feather his own nest. Naturally, all the lawyers are not as successful as this one. For most of them conditions have been so difficult that they, too, have been forced to sell their personal possessions one by one.

The Bolsheviks have placed the

teachers in a category entitling them to the best *pyok*. They are supposed to get as much as the most favored class. Nevertheless, they are having an extremely hard time. Those who are clever enough to do so receive several *pyoks*. The trick is accomplished by accepting more than one position at the same time. For example, one prominent professor, although opposed to the Bolsheviks, serves in five or six places and earns a salary of 500,000 rubles a month, or 6,000,000 rubles a year. At the peace-time rate of exchange this would equal \$3,000,000, but at present it is the equivalent of only \$220 annually, a sum which scarcely pays for living expenses. Besides the money his *pyok* yields four pounds of bread each week, and, each month, two and one-half pounds of sugar, seven pounds of barley or beans, one-half pound of tea and two pounds of lard. In addition, his relatives who live with him—an elderly lady, a mother with two young children, and a girl of 16—receive jointly two and one-half times the above rations. This professor also has a sister who is ill in the tuberculosis hospital. Owing to the inadequacy of the food given the patients, a supplementary ration costing about 20,000 rubles a day must be supplied by her brother. His extra food supplies are purchased from the co-operative, which is still functioning, and his monthly bill from this source averages 300,000 rubles. The result is that he also is compelled to sell some personal belongings from time to time to meet his obligations, although his position is far better than that of the ordinary teacher.

The great majority are struggling along with a salary of only a few thousand a month and almost a starvation food ration. They are living in one or two rooms, most meagrely furnished. Many of them have developed tuberculosis, and, being unable to obtain proper care, have died. To cite but one illustration: The fiancée of one doctor contracted the disease chiefly on account of her meagre food supply. Because of his

MAXIM GORKY

Noted Russian Author (at right), recently photographed in Berlin, where he is trying to aid Russia's famine victims.

position he was able to send her to the Crimea for recuperation. In the course of the slow railroad journey, traveling in cars which were crowded with a conglomeration of peasants and soldiers, she caught typhus and died before reaching her destination.

As has been intimated, others who are more fortunate, or perhaps brighter and more forceful, hold more than one position. For example, one unusually capable woman teacher holds three. She assists a professor in the radio laboratory from 8 to 12 at night, for which her salary is 17,500 a month. During the day she works in the Radio Commission, and for this receives 17,600. In the afternoon from 4 to 6 she serves in the library at a compensation of 18,000. Her total salary, therefore, is 53,100 rubles a month. Unfortunately, the payments are not always

regular; for the work in the library, although she served from April to June, she received her salary for only one month—June. But much more important than her salary is the food ration. Of the three positions, the library gives by far the best *pyok*. It consists of two and one-half pounds of sugar, four pounds of barley, one pound of cottonseed oil, six pounds of dried fish a month and one and one-half pounds of bread daily. In spite of the combined income from three positions, she uses part of her Sundays to bake small cakes, which she sells on the street in order to obtain additional funds for new shoes and clothing. And yet the ordinary individual must live on one *pyok*! The result is that he must accept one of the following alternatives: fill two or three extra positions and thereby work twelve to sixteen hours a day, be a speculator, or take part in illegal transactions.

TRAGEDY OF THE SITUATION

One American, who had been imprisoned by the Bolsheviks and was later released, worked for a time in one of the Government departments. He found it impossible to live on the

ration he received, so he managed to secure an extra food card through deception, and daily received two dinners. This is typical of existing conditions in Soviet Russia. The food *pyok* and the salary are so small that, in order to live, men are almost forced to become dishonest. Another result is that many of the professional men desert their professions for work where the possibilities of food supply are better. Thus, one capable lawyer is working as a Pullman porter, because in so doing he makes a weekly trip between Moscow and Latvia, and is able to bring his family food.

The result of all this is that there is a shortage of capable professional help where it is most needed. It is, no doubt, true that the average office clerk, and even the worker, is almost as badly off as the professional man; but they do not feel it so keenly. They have never been used to the comforts which are almost a necessity to the intellectuals. The tragedy of their situation is the contrast with what they have always been accustomed to.

Moreover, the best of the intellectuals have always gloried in their task. Today they have been stripped in large part of all their former luxuries and enjoyments; at the same time they do not get much satisfaction from their work. They do not feel that it is achieving anything worth while. This fact causes perhaps the greatest mental suffering to the intellectual classes in Russia, and thousands have as a consequence fled the country. Other thousands have succumbed to tuberculosis, typhus and cholera. It takes unusual heroism to endure under such conditions.

GORKY'S APPEAL TO AMERICANS

These are some of the things that I saw with my own eyes last Summer in Russia. Since returning to this country I have received from Maxim Gorky the following appeal, which speaks for itself, and which throws

GENERAL A. A. BRUSILOFF

Former Commander of the Czar's armies,
now an employe of the Soviet Government.

further light on the tragedy of all educated people in Russia:

To the Generous Heart of America:

I feel sure that without contradiction you will all agree that the most precious treasure of humanity is intellectual power and scientific discovery, and that the most valuable people of the world are the leaders in scientific thought. The culture of the United States and of Europe is indebted to them for its present strength and beauty.

Permit me to call your attention to the fact that a considerable number of such leaders, the group of Russian scientists who have helped to develop the world's discoveries and culture, are now, because of the famine, facing death.

Their situation is becoming more and more tragic. I will not dwell on the general condition of life in Russia, but I wish to point out that during the last four years Russian scientists have suffered great poverty and famine; their condition is so critical that some already have been attacked by disease and have perished.

Re-establishment of free trade in Russia cannot improve the condition of Russian scientists, because the fact of the high cost of provisions, the shortage of necessary food and, above all, their poverty, will remain. Even now the Soviet Government is unable to pay when due their wages, and since August they have not received any salary payments.

Starvation is rapidly spreading among them, and the time is not far off when they will be compelled to die by the score. To save their lives, the lives of the best minds of Russia, immediate help in the form of food is indispensable.

It is absolutely vital that they have flour, cereals, fats, beans and sugar. O America!

this is not a beggar's plea; it is only a human cry, an appeal to people who know that science is the foundation of culture and that only the work of science is, in the last analysis, international and universal.

Notwithstanding the hard conditions of life during the war and the revolution, the Russian scientists have tenaciously clung to their work. Members of the Academy of Science and the educational societies, as well as individual scholars, have written and prepared for publication results of the most valuable research work, which undoubtedly has great social importance for humanity.

Of such manuscripts there are now ready for the press what would approximate 20,000 printed pages. All these works cannot be published in Russia because of the shortage of money and technical supplies. Dear people of the United States, you would render a very great service to humanity by establishing a fund for the publication of these works of the Russian scientists. They would enrich the world with a considerable amount of new knowledge in every branch of science.

It is not my right to discuss the methods for the practical realization of this idea, but it seems to me that its accomplishment would afford a unique opportunity for all the cultured world to feel its intellectual solidarity.

For you citizens of the wealthiest land, who have proved yourselves capable of achieving such wonderful material prosperity, the making real of this idea should be easy and simple. I cannot believe that this appeal to you will result only in silence for Russia.

MAXIM GORKY.

[Maxim Gorky's address is "Pension Stellinger, Augsburger Strasse 47, Berlin, Germany," where direct communications may be sent to him.]

TWENTY THOUSAND KILLED BY U-BOATS

OFFICIAL estimates brought before the Washington conference showed that more than 20,000 noncombatant people of both sexes and various nationalities, mainly British, were killed by the intensive submarine warfare initiated by Germany during the war. These men, women and children were drowned, killed by explosions, or died from exposure while aboard merchant vessels and fishing craft. The British losses from submarines totaled 12,723; adding the American lives lost—largely on British ships—the figure reached approximately 14,000. Of this number, 13,233 were

aboard British vessels of all descriptions, except those listed as naval vessels, while 408 were aboard vessels flying the American flag, 66 before the United States entered the war, and 342 after. These ships were all unequipped for warfare, and their passengers were noncombatant civilians peaceably going about their legitimate business.

The similar losses of France, Italy, Norway, Belgium, Japan, China and other countries are not yet available in detail, but are known to bring the grand total to 20,000.

AMERICAN OIL CLAIMS IN TURKEY

BY HENRY WOODHOUSE

Author of "Anglo-French Discord in Turkey," "Dominant Factors Affecting International Relations,"
"The Inside of the United States versus British-Dutch Oil Controversy,"
"The Struggle for the World's Oil Resources."

Why Secretary Colby and Secretary Hughes wrote those tart notes about Mesopotamian oil—Full story, now first published, of the Chester Syndicate's billion-dollar concessions in Turkish oil fields—Backed by five Washington Administrations

THE question of American rights to the oil fields of former Turkish territory, which has been the subject of many sharp diplomatic notes between the United States and Great Britain during the past two years, is still unsettled. It was thought that this question could be settled at the Washington Conference for Limitation of Armament as part of the Mesopotamia, Palestine and other Near East mandate questions, but somehow these claims were erroneously listed as being located mainly in Mesopotamia, and the British delegation sidetracked discussion of Mesopotamian matters by stating that Mesopotamia (or Irak) was now ruled by the new Arab King, Emir Feisal, and that matters relating to concessions in that country must be taken up directly with him.*

This excuse would be technically correct if the American rights were confined largely to Mesopotamia, but they are not. Therefore it is to be regretted that the opportunity to settle this controversy has been lost, and that the controversy is to be continued by way of diplomatic notes. In the meantime the Turkish Petroleum Company, which is controlled by the British Government through its ownership of over 50 per cent. of the company's stock held by his Majes-

ty's Petroleum Department, is drilling and operating about twenty wells and tapping some of the richest oil fields in Mesopotamia and other former Turkish territory, and on the Persian border, to which Americans have prior claims. As shown by the San Remo agreement and the Anglo-French agreement of Dec. 23, 1920 (published in CURRENT HISTORY for January, 1922), the British Government has given to France a 25 per cent. share in the oil to be obtained, for which France agrees to permit the British to run a pipe line across territory under French influence.

These oil fields, which are estimated to hold oil worth over \$1,000,000,000, are the oldest in the world, and are referred to repeatedly in the oldest books of the Old Testament, and by Herodotus, father of Greek history, as well as by other historians.

ORIGIN OF AMERICAN CLAIMS

After twenty-four centuries, during which the Mesopotamian-Persian-Turkish oil fields remained untouched and practically undiscovered, Rear Admiral Colby M. Chester, U. S. N., was sent in 1899 to Turkey, in command of the U. S. S. Kentucky, to lend "moral support" to the United States Minister at Constantinople to secure payment of indemnity for destruction of property belonging to

* Feisal, third son of the King of Hedjaz, was crowned King of Irak on Aug. 23, 1920, at Bagdad.

American missionaries in the so-called Armenian massacre of 1896. The claim, amounting to only \$95,000, was not of great importance to either party concerned, yet, like everything else connected with the Ottoman Government at the time, it was whipped by foreign interests into an international episode, with some European powers clashing in such a way as to threaten American and Turkish relations. Rear Admiral Chester did not indulge in a demonstration of gunboat diplomacy to intimidate the old Sultan, Abdul Hamid, to get concessions, and the Sultan was very favorably impressed. The diplomatic negotiations also were carried on with such tact by the American representative, Lloyd Griscom, as to redound to the credit of all Americans concerned. A contract for the construction of a Turkish cruiser by the Cramp Company of Philadelphia, which had been hanging fire for a long time, was immediately recorded in connection with the missionary claim. Rear Admiral Chester acted as adviser to the Sultan, who informed him that it was the beginning of a large order for ships which he wished built in America. The Sultan also extended the concession for Robert College, the credit for which has very properly been given to Admiral Chester. The original concession for this great American college in Turkey had been obtained by Admiral Farragut on his visit to Constantinople in 1866. Without Chester's influence the concession might not have been extended.

In 1899 Abdul Hamid already had been Sultan for twenty-three years, having succeeded his brother, Amurath V., on Aug. 31, 1867. During this time his reign had been subject to foreign interferences in connection with or following the atrocities of 1876, the Russo-Turkish war of 1877-78; the Treaty of Berlin, 1878; Bulgaria and Rumelia union, 1885; Armenian atrocities of 1896, the Greco-Turkish war, 1897, and other similar events. He had suffered from the intrigues of the various scheming powers and interests, which incited

disorder so as to create pretexts for seizing Turkish lands and obtaining valuable concessions.

Admiral Chester proved to Abdul and the Turkish officials that the American Government and people were not inclined, as other nations were, to take advantage of the excuses afforded by the massacres of 1896, the Greco-Turkish war of 1887 and similar upsetting conditions, to "hold up" the Turkish Government in various ways.

ADMIRAL CHESTER'S "COMMISSION"

The cordial relations thus established by Admiral Chester grew and, finally, when the United States Government, following the Boxer uprising of 1900, remitted its share of \$25,000,000 of indemnity from China, the Turkish Government officials, greatly impressed, sought to attract Americans and American trade to Turkey as a means of creating a moral influence to counteract the selfish influence of most of the European nations.

Rear Admiral Chester himself urged American business men to go to Turkey. As a result, American capitalists invited him to go to Turkey in the interest of American trade, which he did in May and June, 1908. Previously he had written several reports to the various Government departments on the opportunities offered to American commerce by Turkey. When he decided to go to Turkey, the Chamber of Commerce and the Board of Trade and Transportation of New York furnished him with a commission, now of historic importance, as it was based on the lines of the commission under which Lord Charles Beresford of the British Navy was sent to China by the United Boards of Trade of Great Britain to report on the possibility of increasing the British trade in the Far East.

The "commission" given Rear Admiral Chester by the Chamber of Commerce of New York, which has historic as well as diplomatic importance, read as follows:

Chamber of Commerce, New York, May, 1908.
Dear Sir:

In view of the great changes that may

occur in the development of trade with the East, the Chamber of Commerce of the State of New York, which is composed of leading men of this community, is deeply interested in the future outlook for the participation of our country in this development.

As Chairman of the Committee on Foreign Commerce and the Revenue Laws of the Chamber, I am desirous of contributing as much as may be in my power toward promoting our commercial interests in the countries of Asia and Eastern Europe that are now opening their doors to Western civilization and trade, and I therefore take the liberty of addressing you on this subject.

Understanding that you are about to engage in a mission—partly official and partly civic—which may lead you into the vicinity of these countries, it appears to me that an officer in the navy of the United States, which has as one of its chiefest glories the credit of laying pathways across the seas for our commerce, may be able to secure ready access to information that might be of benefit to our Chamber, as well as to kindred organizations of this country which are seeking light in this direction.

I write to ask, therefore, your engagements permitting, if you will kindly furnish me at the end of your trip abroad with a report of any matters that you think will tend to the betterment of our country's foreign trade or upon any other subjects that in your opinion are of interest or advantage to the Chamber of Commerce of the State of New York.

(Signed) GUSTAVE H. SCHWAB,
Chairman, Committee on Foreign Commerce
and the Revenue Laws.

Similar credentials were given to Rear Admiral Chester by other commercial bodies. His mission was to the Near East, where America practically had no trade, although Americans were spending millions there for the social development of the people of the Ottoman Empire, while the British Admiral's activities were in a region where Great Britain controlled more of China's trade than all other countries combined. Lord Beresford brought back a voluminous report of conditions in his bailiwick, published in book form, called "The Breaking Up of China." Admiral Chester reported to Americans the dawn of a new era in the Ottoman Empire and the "Waking Up of Turkey."

Upon Chester's acceptance of the duty delegated to him by New York's commercial bodies, application was made to Elihu Root, then Secretary

of State, for governmental support in such negotiations as might arise. The Secretary agreed to support the measure heartily and has done so ever since. Eventually Admiral Chester was placed on special duty to carry on this work under the direction of the Secretary of State by President Roosevelt, who also took every opportunity to foster the enterprise. On its way home from its globe-encircling cruise, in 1909, the American fleet was directed to stop at Smyrna and take on board twelve Turkish naval officers in the interest of the American concession.

THE CONCESSIONS OFFERED

Sultan Abdul Hamid and his close advisers wanted American friendship and moral support in Moslem affairs. Admiral Chester had shown his ability to establish friendly relations with the natives of Turkey. The Sultan, on Chester's visit in 1908, therefore promptly tendered him a broad concession, which included the construction of practically all the public works of Turkey, with appropriate guarantees for the payment of the cost.

The two principal features of the plan which the Chester interests arranged, first with the Sultan, then with the Young Turks, to remunerate the capitalists, were the Arg-hana copper mine and the oil fields, both in Mesopotamia and across the Tigris River on the Persian border, and the several other gold, silver and copper mines and other valuable properties that came within the purview of the American concessionaires. On parts of the railroad line which the Chester interests did not want to take, a substantial kilometric guarantee was offered in the contract.

Because Admiral Chester had undertaken to establish cordial relations between the two countries, Sultan Abdul Hamid granted these concessions with a large "kilometer guarantee" to be paid to the Chester interests by the Ottoman Government for every kilometer of railroad

built, which guarantee would practically pay half the cost of building the railroad; and, further, an annual subsidy of 5 to 8 per cent. of the total capital invested in the railroad and the cost of operation thereof.

Abdul Hamid also granted the right to explore for and operate oil fields and mines for a number of years prior to deciding on the location of the railroads, so as to insure that the roads when constructed would be along and between productive points and would be capable of self-support and represent an asset to the Ottoman Empire. He believed this would probably attract many Americans to that part of Turkey, and thereby extend the cordial relations between the two countries.

The concessions were to be operative from that date, but without restrictions or time limits regarding the actual starting of operations, and were to be for ninety-nine years, with provisions that the Ottoman Empire could buy the properties at the end of the first thirty years by paying their aggregate cost and a good margin of profit to be mutually agreed upon.

A few weeks later Sultan Abdul Hamid was suddenly deprived of his throne by the Young Turk Party, and was replaced by his brother, Reshid Effendi (Mohammed V.) Abdul was exiled to Saloniki, where he remained until November, 1912; then he was taken to Constantinople by a German warship and imprisoned in a palace on the Bosphorus. Mohammed, meanwhile, and the leaders of the Young Turk Party accepted and confirmed the concessions which had been granted to Admiral Chester, and on which a stay of proceedings had been obtained pending the reorganization of the Government by the Young Turk regime.

After two years of exploration in Asia Minor and Syria by representatives of the Chester interests, definite plans of operation were drawn and included in a formal contract to be approved by the Ottoman Parliament, which was the only power that could grant concessions to foreign-

ers. The concessions carried the privilege to explore and operate extensive mineral and mining concessions extending from Alexandretta Bay to the oil fields in the Mosul, Mesopotamia, Kirkuk, Chemihemal and Sulaimaniya districts. They also granted the privilege of building and operating a railroad, or a number of short railroads, aggregating 2,000 kilometers in length, from Alexandretta Bay or some other point on the Mediterranean to and along the Euphrates River, with the privilege to extend to Harput, Arghana, Sam-soun, Bitlis and Van, with the right of navigation on Lake Van, and with the further privilege to extend operations along the Tigris River to Diarbekir, to Mosul, to the oil fields of Altoun-Keupru, Kirkuk and Sulaimaniya, and to neighboring districts on the Persian border, and from these oil fields to Bagdad or any part thereof, with the right to exploit all metal, petroleum, coal and all the mineral and other resources and water power that might come within the zone of twenty kilometers on each side of the railroad or railroads that might be contemplated by the Chester interests. Leaders of the Young Turk Party took steps to have this convention confirmed by the Ottoman Parliament in June, 1911.

American trade to Turkey was then limited to purchases by Americans of Turkish goods in amounts ranging from \$10,000,000 to \$22,000,000 annually, the latter being the amount of American purchases for 1912 (the bulk being for carpets, rugs, silk, lace, skins, wool, mohair, cotton, slippers, oranges and other fruit, attar of roses, gum tragacanth, emery, chrome, &c.) It was expected that the new American interests would construct improved public works throughout the Ottoman Empire and supply the Turkish market with automobiles, trucks, machinery, electric power plants, electric equipment, typewriters, office furniture and supplies, leather and shoes, rubber products, gasoline, vegetable oils, soaps, canned goods, live stock and food products in general.

REASONS FOR DELAY

Owing to the delay caused by the schemes and bitter opposition of German interests, the Chester contract could not be presented in time for formal confirmation by Parliament, but it was stated to be generally approved and was placed on the calendar as the first matter to be acted upon at the following session in November. While arrangements were being made in New York to carry out the Chester contract, however, war between Italy and Turkey broke out (in September, 1911), and further action on the concession was deferred until the war should end. The Ottoman Government was so notified.

After the convention was submitted to the Turkish Parliament, every Government in Europe, through the Chancelleries in Constantinople, recognized the successful termination of the contest by sending congratulations to John Ridgely Carter, the Acting American Ambassador in Constantinople, for his diplomatic efforts in securing the concession, and Sir Babington Smith, then financial agent of Great Britain, now prominent in the British Government-controlled oil monopoly, gave a banquet to the American concessionaires in Constantinople, publicly felicitating them on their work.

Action on the Chester project, however, was again repeatedly prevented by new upheavals—the upset of the Young Turk Party in 1912, followed by the declaration of war by Turkey against Bulgaria and Serbia on Oct. 17, 1912, and the declaration of war on Turkey by Greece on Oct. 18, 1912; the second Balkan war, which began on July 5, 1913; Turkey's entry into the World War in November, 1914, and finally the more recent hostilities. None of these wars, it should be stated, in any way impaired the value of the Chester concessions, claims, franchises, rights, privileges and priorities, because, both under accepted principles of international law and under the special provision made on

behalf of the Chester interests in case of war, such operations are simply deferred until after the cessation of hostilities, without prejudice to the value or extent of the concession.

THE CLAIMS NOT ABROGATED

Under the recognized principle of international law laid down by the Swiss jurist, Emeric de Vattel, close to two centuries ago, which holds that "the aliens' right of action is only suspended during the war," the Chester concessions were only suspended during the wars in which Turkey has been involved since 1911, and the Chester interests have the right to resume now or to wait until the present conflict between Turkey and Greece is ended. This right, furthermore, was specifically laid down in the concession governing the Chester interests, as follows:

Article 6—At all times, in case of interference by "force majeure," duly proved, the delay fixed for the execution will be prolonged by one of equal duration to that of the interruption of the work.

Great Britain has accepted and upheld Vattel's principle on similar occasions—a matter of importance in view of the fact that the keenest contenders for the Chester concessions have been the British interests that formed the Turkish Petroleum Company, Ltd., in 1912, and acquired from the Deutsche Bank some alleged claims for alleged rights to prospect for oil in certain Mesopotamian fields. These German claims were admitted to be spurious by the Germans in their secret correspondence, which has come into the hands of British and American authorities and of the Chester interests.

Article 6 of the Chester compact was invoked in September, 1911, on the outbreak of Turkey's war with Italy, and this formal notice of a stay in execution was duly acknowledged by a messenger sent from Turkey to the United States. The Secretary of Parliament, Halil Bey, it is true, upon Parliament's reconvening in November, 1911, declared that the Legisla-

ture was ready to pass an act ratifying the convention and urged the Chester interests to proceed with its execution in spite of the war. But the Chester interests wisely preferred to wait until the country was at peace again. Many times in the last ten years, during which Turkey has been engaged in almost continuous warfare, messages of this character have been received by individuals connected with the Chester concession. One such call came through the former American Ambassador to the Ottoman Empire, Henry Morgenthau. Shortly after he returned to the United States from his mission abroad he told Admiral Chester that the Turks had frequently interrogated him regarding the "Chester project" and wanted to know when the syndicate would take over the concession.

This, summarized, is the heretofore unpublished story of the "Chester claims" to the \$1,000,000,000 oil fields of Mesopotamia and Turkey, which are the American claims to those oil fields referred to in the forceful notes sent to Great Britain by Secretary of State Colby and Secretary of State Hughes in the last two years. These claims antedate the British claims by several years, and the secret German correspondence and statements made by high British authorities show that they are the only valid claims. Therefore the monopolistic British "oil group" cannot deprive Rear Admiral Chester and his son, Arthur Chester, and their associates of their rights to these oil fields.

FULL GOVERNMENT SUPPORT

The Chester project has had unusual official support from the United States Government from its inception, receiving the sanction of the McKinley, Roosevelt, Taft, Wilson and Harding Administrations. The late President Roosevelt instructed the Navy Department to give Admiral Chester carte blanche authority to carry out a public policy, in which he

was so deeply concerned as to dispatch a portion of the United States battleship fleet to Turkey, with instructions to the commander to receive on board the vessels twelve officers belonging to the Ottoman Navy for passage to the United States, mainly in the interest of the concession the Chester interests were securing in Turkey.

When Admiral Chester first returned from his mission to Turkey, he and his friends made it clear to Secretary Root and the McKinley Administration that American capital had never before been invested, to any great extent, in Asia Minor, and that before taking this new departure it must be definitely known that the enterprise would receive the strong backing of the home Government, as it was sure to involve long and tedious negotiations and substantial financial burdens as well. It is a matter of record that not only was the syndicate assured of such support from the American Government, but that in the ensuing negotiations no attempt to open up trade for American citizens in a foreign country ever received more cordial and helpful cooperation from the Federal Government than that accorded to the Chester group.

It was with this understanding that the Ottoman-American Development Company, the first Chester organization, was incorporated, and that its capital was enlisted in the cause of advancing American trade in the Near East. It should be understood, moreover, that this great undertaking originated in the State Department itself, being based upon the report from the United States Consul at Alexandretta as a part of a public policy in which the Government was at the time greatly interested.

GERMAN OPPOSITION OVERCOME

After a bitter contest with the Bagdad Railway Company, which was backed by all the power of the German Government, wielded by one of the most astute diplomatists,

Baron von Bieberstein, the German Ambassador at Constantinople, a convention was arranged with the Ottoman Minister of Public Works, was approved by the Grand Vizier, and sent to Parliament for ratification, when a strong speech in its favor was made by the head of the Government himself. It was generally known that in this assembly the American concessionaries held the strong backing of a majority of the delegates, and that adoption of the concession was certain. While the negotiations were going on in Constantinople, it was understood that the State Department at Washington had communicated with all the European powers interested in Turkey, and had been informed that they were satisfied with the verdict of the Ottoman Cabinet rendered in favor of the Americans. Even the German Foreign Office went so far as to say that, as the convention had been harmonized with German interests, the Kaiser was not only willing but anxious for American capitalists to come to Turkey and aid in the development of the country. Admiral Chester himself was a party to a conference which brought about the withdrawal of German opposition to the scheme.

Philander C. Knox, Secretary of State during the latter part of the negotiation period, displayed—as he authorized Admiral Chester to state—his deep interest in securing the concession, and the Assistant Secretary, Huntington Wilson, who was commissioned in 1909 to proceed to

Constantinople to felicitate the new Sultan of the Ottoman Empire on his coronation, publicly stated that the principal object of his visit was to aid the American claim. Moreover, in the presence of Admiral Chester he informed the American Ambassador that the department would be willing, in order to secure the concession, to give up our treaty rights to the “capitulations” in Turkey, as had been done a short while before in the case of Japan.

During the war there was no occasion to assert diplomatically the policy of the Department of State regarding American rights to concessions secured abroad before the war, but soon after the signing of the armistice that necessity arose, and both Secretary of State Colby and his successor, Mr. Hughes, stated in firm tones that the United States Government insists that account must be taken of legitimate rights abroad acquired by American interests before the war. It cannot be asserted, therefore, that the Chester rights have been unsupported by the United States Government.

This is, briefly, the history of the American claims to the oil fields of former Turkish territory; claims which have been the subject of extensive diplomatic correspondence between the United States and Great Britain, and which are to be discussed again in the near future, in view of the fact that the question was not settled at the Washington arms conference.

AUTOMOBILE FATALITIES

ACCORDING to the National Highways Protective Society, 1,981 persons were killed by automobile trucks and passenger cars in New York State, including New York City, in 1921. This is the highest number of motor fatalities ever recorded in any State. Fatalities in 1921 were 452 more than in 1920.

In the City of New York automobiles caused the death of 835 persons, 281 of whom were killed by trucks. The increase

of automobile fatalities since 1919 in the State of New York was nearly 60 per cent. In 1919 the number of deaths was 1,270.

Experts at the National Safety Council meeting in Chicago, Jan. 14, 1922, estimated that the total number of persons killed by automobile accidents in the whole United States in 1921 was between 12,000 and 15,000, with the probabilities in favor of the larger figure. The total in 1920 had been approximately 11,000.

Tent colony at Lick Creek, West Virginia, inhabited by union miners who have been evicted from houses owned by the mine operators

WRONGS OF THE SOFT- COAL MINERS

BY ELLIS SEARLES

Editor of the United Mine Workers Journal, official publication of the United Mine Workers of America

*Official revelation of abuses in the coal region of West Virginia—Tyranny of the operators declared to be maintained by means of armed thugs—Charges of a spokesman of the union**

IN writing about industrial conditions in West Virginia, it is just as well to stick to the truth. Actual conditions are bad enough to make it unnecessary for any writer to draw on his imagination. A tremendous conflict has been raging in industrial West Virginia for many years, but too often the facts of the case are utterly misrepresented in the public prints. Sometimes we read that the union coal miners of that State are a

lawless mob of vicious men with absolute disregard for law, order and right; and when we take the trouble to investigate we find that the information comes directly from the offices of coal companies and coal operators that adhere to the old, worn-out theory that a coal miner is merely an animal to be used in the manufacture of dividends. You may go out into the coal-mining fields of West Virginia or any other State and study the coal miner in his home, at his work and as a citizen, and you will find an entirely different set of facts. He is not a bandit. He is not a law-defying cutthroat. He is as good an

* This article is essentially a reply to the one in the January CURRENT HISTORY entitled "Murder to Maintain Coal Monopoly." The two together furnish a full statement of both sides of the warfare in the West Virginia coal region.—EDITOR.

American citizen as can be found in any walk of life.

It is unfortunate for the coal miner that he is not better known to the American public. That he is so woe-fully unknown is due to his inevitable isolation from the rest of the world. It is only when the citizen becomes alarmed at the prospect that he may run out of fuel that he ever gives the coal miner a second thought, and then it is only to denounce the miner as a brute with no regard for public comfort. No thought is given to the miner's side of the case. The public loses sight of the fact that the coal miner is a man—a human being—just like the rest of us; that he loves life and liberty, and hates tyranny and oppression; that he has the same love for his wife and children that other men have for their families; that he craves knowledge and education like other men, and grieves when these advantages are denied him; that he is just as loyal, just as patriotic in his devotion to his country as any other man, whether in high station or low, and that he stands ready to defend the flag with the same valor that manifests itself in other men.

The public, too, gives too little heed to the fact that the coal miner lives in an out-of-the-way, isolated camp on the side of a mountain, where opportunities do not exist. There he works and raises his family under conditions that would, in most cases, appal the city man. He spends his working hours in inky darkness. He braves the dangers of the earth's caverns, with no assurance that he will return to his loved ones at home. He hears nothing, sees nothing, learns nothing except that which is brought in to him from beyond the great hills.

RULED BY ARMED THUGS

The coal miners of West Virginia are virtually cut off from the rest of the world, entirely dependent upon one single industry for their living. Unless a man works in the mines he can find no employment in that State. And once a man moves into a non-

union mining field the chances are a hundred to one that he cannot get out without trouble. He becomes at once the property of the coal company. His liberty is taken away by means of coal company rules and orders. His freedom of action is abolished, because coal companies employ hundreds of armed men, the majority being of the most desperate character, to coerce and intimidate the miner and his family into strict obedience to the will of the operators. The miner cannot walk on the public highway without the consent of these gunmen. He cannot board a passenger train at a railroad station unless these thugs are willing. They are employed for that purpose, and right well do they perform their work. When a miner is assaulted or shot by one of these hired gunmen prosecution for the crime is a farce. A gunman is never punished for anything he may do. Most of these gunmen are sworn in as Deputy Sheriffs, but their salaries are paid by the coal companies. The coal companies admit this to be true. A circular recently issued by the Logan District Mines Information Bureau, Charleston, W. Va., says that the levy in Logan County is sufficient only for the employment of eight Deputy Sheriffs, and then the circular says:

Consequently, the coal operators of the county have been called upon to provide funds for the employment of thirty-nine additional Deputy Sheriffs. These men are not employed by the operators, but by the Sheriff of the county, who, under the West Virginia law, is also fiscal officer of the county and to whom the funds provided by the operators are paid and by whom the deputies are paid. These deputies are under the direct authority of the Sheriff, just as are the eight deputies whose wages are paid by county levy.

That circular was issued by an association of coal operators. They say there are thirty-nine "additional" Deputy Sheriffs in Logan County who are paid by the operators. The fact is that there are hundreds of them, and their sole purpose is to prevent the coal miners' union from obtaining a foothold in that field.

There would be no industrial

trouble in West Virginia if it were not for these brutal ruffians, who are employed by the hundreds by the coal operators. They bear a roving commission to roam at will over the mountains and in the coal mining camps and assault and intimidate and murder union coal miners or any others who may attempt to seek improvement in their conditions.

SQUARE DEAL IMPOSSIBLE

Coal miners are like other men. They resent the murderous activities of this private armed force. But there is one peculiar fact about this whole business. The public never hears about the crimes of these gunmen against the miners, yet when a miner resents an assault or rises up against their intimidations the news is spread broadcast over the land that the miners are defying the law. The operators can do this, while the miners have no means of placing their side of the controversy before the public. The coal companies control the politics, the judiciary, the military and every public activity in West Virginia, and it is impossible for a coal miner to obtain a square deal.

Remove the company gunman and

thug from the coal fields of West Virginia and give the citizens the liberty guaranteed to them by the Constitution, and industrial peace will reign. But the coal companies will not do this. The local officials, controlled by the operators, will not do it. The Governor and the other State authorities will not do it. The miner is driven to the expedient of self-defense.

The march of miners and citizens which took place last August in Boone and Logan Counties is fresh in the minds of all who have paid attention to events in West Virginia. Exasperated and driven to the last ditch of despair by the brutality of the armed guards and company gunmen, the people made up their minds to stand no more of it. So they gathered by the hundreds, miners, merchants, professional men and others, with the announced purpose of marching across the mountains and driving out the company thugs. The United Mine Workers of America did not authorize that march, nor did the union give that movement any kind of sanction or approval. In fact, the international officials of the union had no knowledge of the proposed march until it was well under

Group of West Virginia coal miners and their families, evicted from company houses because of their union activities, and now living in a tent colony.

The holes in these tents of evicted miners were slashed with knives by State Police in one of their many attempts to make life unbearable for union members.

way. The charge that it was financed and promoted by the miners' union is as false as many of the other allegations and insinuations that are hurled against the union. Instead of giving approval to the movement, John L. Lewis, President of the United Mine Workers of America, at once sent Vice President Philip Murray to West Virginia with instructions to do all in his power to bring about peace and order, and it was largely due to Murray's efforts that the march finally was abandoned and peace restored. But the operators, of course, never tell that fact to the public.

John J. Leary Jr., one of the best newspaper reporters in the country, covered the march last August for The New York World. After telling of the coming of General Bandholtz, by direction of President Harding, to make an investigation of conditions, he said General Bandholtz called on the men to disperse and return to their homes, which they agreed to do. Leary then quoted Thomas W. Petry, acting head of the

United Mine Workers of America in that district, as follows:

As we agreed, we began sending the men back. The drive was over and General Bandholtz was satisfied that it was, and everything went well until the night of Aug. 27. Then Chafin's men and State Constabulary began shooting up Sharples. They killed two and injured two more. Then it was all off. The next day and the 29th, the men, who had started home, were on the drive again until there were 10,000 men out. The men were actually afraid to go home. They said they might as well die fighting as to be murdered. "We'll at least get a chance," they said.

Sharples is a mining village where the men belong to the union. It is interesting to note that General Bandholtz corroborated this statement in his official report, when he said:

It is believed that the withdrawal of the invaders, as promised by Keeney and Mooney, would have been satisfactorily achieved but for the ill-advised and ill-timed advance movement of State Constabulary on the night of Aug. 27, resulting in bloodshed.

Soon after Governor Morgan of West Virginia declared martial law,

a squad of improvised militia raided the office of the United Mine Workers of America at Williamson, where relief was being given to locked-out miners and their families, and arrested twelve union workers on a charge of "unlawful assemblage." These men were engaged only in relief work to save those poor people from starvation. The twelve men were taken to Welch and locked in the McDowell County Jail, where a kangaroo court held sway. One of the pastimes of this court consisted in brutally whipping newcomers with a big strap. The twelve men were released only on their promise to leave the State.

Throughout the years 1920 and 1921 armed gunmen continually shot up the little mining camp of Willis Branch, where the miners were members of the union. When the men moved from place to place to escape the bullets, they were followed by the thugs, who again shot up their homes. When the miners could stand it no longer, they decided upon a pitched battle with the so-called guards. Fifty-six of the latter participated. The miners won the fight, and twenty-eight gunmen packed their guns and artillery on a train and departed. What became of the other twenty-eight gunmen has never become known. And the operators sent out stories about how lawless union miners fired upon officers of the law.

There was a tent colony at Lick Creek last Summer in which the families of a large number of miners were obliged to live after they had been evicted from company houses because of the union activities of the men. There was no other place for them to go to, and the union supplied the tents and leased the ground upon which the tent colony could be established. Coal companies were opposed even to the tent plan of living, and, as they had done many times before, they determined to drive out the tent dwellers. As I said before, they completely control every public activity in the State. They boast their control of the judi-

cial system, the administration, the civil authorities, the military establishment and everything else, including the right of men to work and earn a living.

The State police is a part of the whole system that is controlled by coal companies. One day last Summer the State police raided the Lick Creek tent colony. A State trooper ordered Alex Breedlove, a union miner, to throw up his hands, and when Breedlove complied with the order the trooper shot him dead in his tracks. Then the State troopers cut and slashed the tents of the colony, broke up the furniture, destroyed the food supplies of the families living in the tents, poured coal oil in milk that was to feed the babies of the tent colony, and marched a number of men off to jail for no reason whatever. Every constitutional right of the mine workers was violated by these troopers in behalf of the coal companies.

THE CHARGE OF TREASON

What may be regarded as being, perhaps, the most astounding move on the part of the West Virginia coal operators to keep the union out was made when the Logan County Grand Jury recently returned indictments against approximately three hundred union men, charging them with treason to the State of West Virginia. The indictment is based on the march of last August. The operators are in complete control of Logan County, and they are responsible for the indictment. Treason is the highest degree of crime that can be committed by any person, and to charge treason against union coal miners is nothing short of ridiculous. The members of the United Mine Workers of America challenge the coal operators of West Virginia or any other State to a comparison of their records for patriotism and loyalty to country. More than 80,000 of them donned the uniform of Uncle Sam in the World War. More than 3,300 of these coal miner soldiers, sailors and marines made the supreme sacrifice by giving up their

lives for the flag of liberty. And yet West Virginia coal operators indict the miners of the union on a trumped-up charge of treason. Surely, the public will not sustain such an accusation against men who did their full part to win the war while most of the coal operators were at home, piling up huge extra profits on the coal that the nation and the world needed.

One of the men thus indicted was Lawrence Dwyer of Beckley, W. Va., member of the International Executive Board of the United Mine Workers of America. Dwyer had no part whatever in the march. And it is significant that he was not placed under arrest until after he had taken a delegation of starving men, women and children from the West Virginia mining field to Washington for a conference with President Harding. Coal companies had served eviction notices on hundreds of miners, and the families were to be set out of company houses on the mountainside in eight inches of snow. The miners had been out of work for months. They and their families were on the very edge of starvation. Local and State authorities refused to interfere or supply relief. So Dwyer took a committee to Washington on Jan. 15, and this committee told President Harding of the situation and begged for Federal relief.

The President, through Secretary of Labor Davis, induced the coal companies to postpone the evictions. The committee returned to West Virginia, and on his arrival home Dwyer was arrested on the treason charge. Dwyer and his lawyer went to Logan County to give bond. Sheriff Don Chafin at first refused to admit him to bail because of the publicity that Dwyer had lately given out, and said he would be kept in jail. Later, however, Chafin changed his mind. On his arrival home from Logan, Dwyer wrote me a letter (Jan. 28), in which he said:

After we left the Court House for the depot to take the train, Don Chafin's "Deputy Sheriffs," or thugs, followed us around. The man with me asked a man whom we met to wait to the depot with us,

as he feared the thugs were going to attack us. While we were waiting at the depot the thugs stood around and, speaking so that I could hear them, said: "That's the peg-legged ——— that went to President Harding. Let's knock his ——— head off," and a group of them boarded the train with us, continually passing in front of me with threatening looks.

So we find that a West Virginia miner cannot appeal even to the President of the United States for relief from the cruelties of the system in that State without danger of being arrested for treason. Treason to whom? To the coal companies, of course.

Is it strange that the coal miners of West Virginia become desperate over such treatment? No man can smother his wrath forever when he is subjected to ruffianism and provocation year in and year out. Every attempt at self-protective organization by the miners meets with redoubled fury on the part of the coal companies and their paid gunmen. They are determined that the union shall not come in, for they know that if it comes the day of their unhampered domination over the lives and bodies of the miners is at an end.

IN THE FEDERAL COURTS

That is the reason why the Borderland Coal Corporation, a West Virginia company, brought suit in the Federal Court of Judge Anderson, at Indianapolis, to enjoin the United Mine Workers of America from further efforts at organization of the miners of West Virginia, and to abolish the check-off system for the collection of the dues of members of the union. The company filed a bill containing vicious allegations against the union. It supported the bill with affidavits and ex-parte evidence by coal company officials and others who bitterly oppose the union. Some of the affidavits were simply astounding in their character. For instance, a man named Jesse Stepp made affidavit as follows:

During my stay in this union field several inflammatory and riot-inciting speeches [were made] by agitators and organizers

of the Mine Workers' Union. One speech in particular that I remember was made by John L. Lewis of Indianapolis, Ind., who is International President of the United Mine Workers' Union, in which he stated they wanted to get all the men they could from other States and make a march on Mingo County, that they intended to kill all the gunmen, poison the waters and blow up every damned tippie in Mingo County. The above remarks were made in a speech at a local union meeting at Red Rock, which is about seven miles from Adrian, and just a few days before the miners started to gather at Marmet, W. Va., for the purpose of marching into Logan and Mingo Counties.

President Lewis immediately denounced the affidavit as utterly false and filed the following counter-affidavit:

John L. Lewis, being duly sworn, says that he is the President of the International Union, United Mine Workers of America; that in open court this morning, on the 29th day of October, 1921, he heard read the affidavit of one Jesse Stepp of Mingo County, West Virginia, filed by the plaintiff in the above cause; that so far as the statements in said affidavit relate to this affiant, they are wholly untrue; that affiant never addressed the union at Red Rock and was never in the town; that the affiant never made any speech on any occasion whatsoever in the State of West Virginia in the year 1921; that affiant has not been in the State of West Virginia in the year 1921 except upon a railroad train while crossing said State. Affiant further denies that at the time and place stated, or at any other time or place in West Virginia or elsewhere, that the affiant ever countenanced, encouraged or approved the destruction of property, poisoning of water or the killing of people, or any other form of violence whatever.

However, Judge Anderson granted the injunction, forbidding further collection of dues by the check-off and prohibiting the union from making any further attempt to organize the non-union mine workers of the field in question. Of course, the coal companies paraded the Anderson injunction all over the country as proof that the United Mine Workers of America was a vicious thing that had at last been downed in court. Public sentiment was arrayed against the union by this propaganda of the operators. But they told only half of the story, hiding the rest of it effectually, so that the public might not learn the full truth.

JUDGE ANDERSON REVERSED

The United Mine Workers of America appealed from the decision of Judge Anderson to the United States Circuit Court of Appeals at Chicago, and that court, after a full and complete hearing, by a unanimous decision of its full bench, reversed Judge Anderson in every essential feature of the case. The Circuit Court of Appeals held that the check-off was legal and could not be enjoined. It held, too, that the United Mine Workers of America had a legal right to attempt to organize the non-union workers of West Virginia by any and all lawful means and methods. That was all the union could ask.

In commenting upon the check-off, while the hearing was in progress, Judge Baker stated clearly that the check-off was nothing more or less than an assignment by the miner to the union of a part of his wages already earned. Such assignment, he said, was entirely lawful. A workman has the legal right, he said, to assign his wages for any purpose. The wages earned are the sole property of the wage-earner and may be disposed of by him by assignment or otherwise; therefore, Judge Baker said, the check-off could not be enjoined. And the court carried this statement of the law into its written decision when it said:

So far as the contracts themselves and this record disclose, the check-off is the voluntary assignment by the employe of so much of his wages as may be necessary to pay his union dues and his direction to his employer to pay the amount to the Treasurer of his union. In that aspect that contract provision is legal; and quite evidently there are many lawful purposes for which dues may be used.

Coal operators have made a persistent effort to induce the public to believe that the check-off is simply a contribution which they are forced to make to the coal miners' union. They have told the public that they are compelled, through the check-off, to furnish money to sustain and maintain the union. Nothing could be further from the truth. The check-

off does not cost the mine operators a cent. They do not contribute a penny of their own money to the union. It is wholly unfair for the operators to ask the public to believe otherwise. The miner earns so much money. The operators pay a small part of that money to the union and the rest of it to the miner. That's all there is to the check-off. The miner has the same right to assign a part of his wages to his union that he has to assign a part of his wages to a grocer, a doctor or a landlord. And the same coal-mining companies that are now denouncing the check-off for union dues as being illegal and a burden have never objected to a check-off for the other purposes mentioned.

The real reason the coal operators seek to abolish the system is that they believe they see in such a course an opportunity to cripple or destroy the United Mine Workers of America. And if they can destroy the union or impair its influence they can again bring the coal mine workers down to the old-time level of wages and working conditions; compel them to accept any wage rate that the operators may feel disposed to pay; compel the men to work longer hours for less money; in fact, drag them down to a lower level of existence, so that they may be unable to protect themselves against whatever practices or conditions the operators wish to impose.

I am not overstating the case. Men who have been employed in the coal mining industry for years remember what conditions were before the union came to their rescue. They know what they might expect if the union were out of the way.

LEGAL RIGHTS OF UNIONS

It was difficult for miners of Western Pennsylvania, Ohio, Indiana and Illinois to understand by what right the Borderland Coal Corporation, a West Virginia concern, could come into a court and seek to regulate the affairs of the Central Competitive Field, where the check-off contract between miners and opera-

tors is in effect. Judge Anderson held that the Borderland Coal Corporation could do that very thing. But the Circuit Court of Appeals reversed Judge Anderson completely on that point. The Circuit Court of Appeals, in its decision, said in part:

But appellee is not a party to the contract, is not the attorney of either contracting party, and is not the agency to establish the public welfare.

In reversing Judge Anderson and holding that the union had the legal right to attempt the unionization of the non-union mines, the Circuit Court of Appeals said:

Appellee sought and obtained a decree restraining "the unionization or attempted unionization of the non-union mines" in the Williamson district. Appellants, and their agents and representatives in West Virginia, are thus enjoined from publishing lawful union arguments and making lawful speeches in the closed district; from making lawful appeals to those in the pool of unemployed labor to join the union rather than the non-union ranks; and from using lawful persuasion to induce any one of appellee's employees to join the union and thereupon instantly and openly to sever his relationship with appellee, not in violation of, but in exact accordance with, his contract with appellee. Manifestly, the purpose of such publications, public speeches and personal persuasions would be to enlarge the membership of the union. If completely successful, these means would compel appellee, if it stayed in business, to deal with the union, and thus "unionize" its mine. And use of these means, short of complete success, would be an "attempted unionization." This broad sweep of restraint makes it necessary to refer briefly to the rights of employers and of labor unions. Unions of owners of capital may bargain collectively, through their officers, with laborers either individually or collectively. Unions of laborers may bargain collectively, through their officers, with employers either individually or collectively. Employers may bargain for a closed non-union shop. Laborers may bargain for a closed union shop. Both are entitled to free and equal access to the pool of unemployed labor for the purpose of securing recruits by peaceful appeals to reason. Employers may persuade a union man, provided they do not violate his right of privacy nor invade the rights of another, to become non-union. Union laborers may under the same conditions persuade a non-union man to become union.

There was no conspiracy about the entrance of the United Mine Workers of America into West Virginia, and no such conspiracy exists today.

The United Mine Workers invaded West Virginia for the sole purpose of bettering the condition of the coal-mine workers of that State. The union went in because the oppressed miners of West Virginia wanted it to come. The union carried to the downtrodden miners of that State the first ray of hope that had ever

penetrated the gloom of their existence. No other organization, no other influence in the land could do it, but the United Mine Workers could make life better for the miners and their families, and the union went into West Virginia to do that job. That was no conspiracy. It was a mission of mercy, of justice.

FINANCE IN SOVIET RUSSIA

IN all recent discussions of the possibilities of reopening trade and commerce with Russia, the financial problem has loomed large. The Paris Temps has defined this problem as one involving the stabilization of the ruble and the balancing of the Russian budget. A writer in the Contemporary Review remarks that the Temps, like others who have dealt with the subject, seems to be entirely unaware that the Russian Government has already adopted measures to deal with reforms in currency, banking and the budget.

Private trade requires some form of stable currency, and the first difficulty attending the introduction of the new economic policy was the fact that the Russian ruble had depreciated to such an extent that it was no longer an adequate medium of exchange. The paper ruble at the present time is reckoned to be worth between one-fifty thousandth, and one-sixty thousandth of the pre-war ruble. In other words, the ruble is practically valueless, being worth about one-eleven hundredth of a cent. This depreciation has been very largely caused by an immoderate use of the printing press. No business transactions of any magnitude can be conducted with a unit of currency which has fallen in value from 50 cents to one-eleven hundredth part of a cent.

The first step which the Soviet Government took, therefore, was to introduce a new unit of currency, a new medium of exchange. The People's Commissariat for Finance is now putting this new monetary token into circulation. Its value is fixed as equal to 10,000 paper rubles. If it maintains this ratio value in actual circulation it will be worth about 1 cent. The Government proposes, furthermore, to renounce

the policy of inflation, and to limit severely the amount of money which it puts into circulation.

This involves a reorganization of the Russian budget. The new budget for 1922 has been made, first of all, for the nine months ending on Oct. 1, 1922, in order that the end of the Government's financial year may coincide with the realization of the harvest. The most important innovation is that the estimates of revenue and expenditure are expressed in gold rubles. The Finance Department has explained that the old method of expressing these estimates in paper rubles, the value of which is subject to depreciations sometimes as great as 100 per cent., made any financial order or control utterly impossible. The estimated revenue (883,000,000 gold rubles) by no means balances the estimated expenditure (1,403,000,000 gold rubles), and the Government has, therefore, been compelled to make good the deficit by the old expedient of issuing more money. Thus, on the revenue side, one finds an item of 230,000,000 gold rubles under the heading, "Issue of Paper Money." This involves the colossal sum of 18,000,000,000,000 paper rubles. The Government contends that its new method of computation in gold is at least an improvement over the old system.

A second step taken by the Government was the establishment in November, 1921, of a Government bank. This bank has only just begun its activities, and it is too early to form any opinion of its chances of success. It is intended that the bank shall play an important part in reviving the foreign trade of Russia, mainly through operations in bills, foreign currencies, &c., necessary for the financing of foreign commerce.

THE NEGRO IN THE NORTH

By EUGENE KINCKLE JONES

Executive Secretary of the National Urban League

Important results of the recent negro migration to the North, as set forth by a progressive member of that race—Definite progress toward establishing the negro's place in the business world

THE negro population in the Northern United States increased in the ten years between 1910 and 1920 from 1,000,000 to more than 1,500,000. The one-half million represents, in the main, the increase due to a considerable migration of negroes from the South and to a relatively small West Indian immigration. Although the migration from the South has been largely from rural and small town districts, the population in the North is almost entirely centred in urban communities, where death and birth rates are about equal, thereby providing practically no natural increase. The majority of this one-half million came to the North preceding and following the participation of the United States in the World War. The causes of this migration are well known—the industrial vacuum caused in the North by the departure of foreign reservists for service in Europe, drafting of many men from the North's industrial centres, the speeding up of industry incident to the war, the push from the South caused by the withholding of personal, civic and educational rights from the negro, especially the persistent persecution of negroes by the lawless elements, against which no protection was afforded. Though it is true that in the South the negro has not been denied industrial opportunity as a skilled or unskilled laborer, his wages were relatively low and his treatment at the hands of white men in authority, both on the job and in connection with his civic and home affairs, made him feel constantly restricted and oppressed.

A discussion ten years ago on the negro in the North would have consisted primarily of a consideration of the housing conditions and the general wage scale of negroes engaged in domestic and menial service, with a citation of isolated cases of negroes employed here and there in responsible positions where their work was in the main associated with white people. But the discussion of this subject today must embrace a study of the masses of negroes who have recently come to the North, the successes or failures with which they have met in seeking adjustment, the development of larger opportunities for personal and group advancement and the actual material progress made thus far. Negro cities, as it were, within the already established cities, may be seen in New York, in Boston, in Chicago, in Cleveland, in Detroit, in Pittsburgh and in many other Northern and border communities. Here negro banks, theatres, hotels, restaurants, stores of all kinds, real estate offices and modern churches with social service facilities are in evidence, and negro doctors, lawyers, architects, social workers and other professional men and women are kept constantly busy ministering to the needs of their own people.

THE NEGRO MOVEMENT NORTH

Of course, negroes have been migrating to the North in large numbers since the Civil War. But this migration has only been the answer to the demand, in the main, for personal servants, and such social problems among negroes as have arisen

in Northern cities have been of such gradual growth that, though existent, they have not altered in any large measure the condition of the communities at large. When the war period set in, however, the communities to which negroes went began to realize that they had a problem of their own. One often heard unfavorably of the Southern negro, of his crude behavior, of his boarding street cars while returning from work without changing his working clothes, of groups of men in their shirt sleeves and women with cloths tied around their heads hanging out of windows or sitting on front porches of recently acquired houses in restricted neighborhoods. Many of the industries that were responsible for negroes coming North in large numbers did not consider the communities' welfare and made no provision for the housing of the newcomers, for their recreation and religious observances. Thus three or four families were forced into houses intended for one normal family; epidemics of pneumonia ensued, as was the case in Newark, N. J., and race disturbances followed, as in East St. Louis, Chicago and Omaha.

The first movement North early in 1916 and subsequently for three years was, in the main, composed of the average and under-average workingman and his family from the fields and smaller cities. For the last two years those coming have been principally lawyers, doctors, artisans and skilled workers—the type of solid and efficient persons who usually follow in the train of such mass movements, and who build on them business and professional life and thereby maintain or elevate such standards as have already been developed.

I suppose that few people are unacquainted with the conditions that obtained in the North at the time the negroes came. Business was flourishing. Labor was scarce. Wages were high. Money was plentiful. Now two years of unemployment have been passed through by the country, and a considerable number of negroes who were not adjusted in mind or po-

sition to the Northern atmosphere have returned South; it is interesting at this juncture, therefore, to consider the present status of the Northern negro population and to gauge thereby the negro's future prospects both in the North and in the South.

NEGRO UNEMPLOYMENT

I have recently talked with professional men, business men, skilled workmen and unskilled labor groups in practically every large city of the North, and I have yet to meet one who has any idea of returning permanently to the South. They all seem to feel that the present business depression and period of unemployment is but a temporary social phenomenon that is also being experienced by the whites, and that they will find themselves in much better circumstances when prosperity returns to the country at large. In Detroit, where the unemployment situation was the most desperate of all the cities of the North, the negro suffered in exactly the same way as the whites suffered, and assistance was rendered him in exactly the same way by the municipal and private relief-giving agencies. The Employers' Association of Detroit has continued to support its employment office (located on St. Antoine Street, in the heart of the colored section), although but few placements have been made during the last year. This is evidence of the intention of the employing group to continue the employment of negro workers.

In Cleveland, an inquiry sent to most of the industries employing negro workers brought the reply that negroes would be re-employed on the return of normal business conditions and that many of the plants were still carrying the workmen's compensation insurance on their negro employees.

An interesting incident recently occurred in Chicago in connection with the unemployment problems there. The city made scant provision for the care of its unemployed. The only organized and co-ordinated effort to

help the unemployed for the first six months was in behalf of the negroes, the effort being promoted by a combination of negro churches and welfare agencies in that city. With 15,000 colored men unemployed in and about South State Street alone, this co-operating group was not able to cope entirely with the situation. A number of negro unemployed, rather than face the necessity of returning to the South, where possibly they might have gotten along better physically in their old haunts, repaired to the lake front, built their own huts out of collected stone and driftwood and organized themselves into a municipal government within the City of Chicago itself, with their own Mayor, Police Department and an additional city department known as the Culinary Division, with a chef and an improvised refrigerator made of a cave within the hillside. They adopted and applied rules and regulations sufficiently stringent to keep the denizens law-abiding, yet in good spirits and happy, while waiting for the return of better times.

That the big industries generally intend to continue negro labor in the North is attested by the experiences of one of the largest corporations in industry. After a recent great strike, almost country-wide, in which the negro employes with a few exceptions refused to participate, several of the company's local managers were inclined to discontinue the use of negro labor. This was after the strike was lost. A complaint of this evidence of ingratitude was made to the headquarters of the corporation, which resulted in an order being issued to the effect that in practically all the subsidiary plants of this corporation upward of 17 per cent. of their employes should remain colored, or that the colored proportion be increased to that figure. It should be stated in explanation that the main reason the negroes did not line up with the white strikers in larger numbers was that no effort was made to encourage negro membership in the unions until the eve of the strike.

OPPORTUNITY IN THE NORTH

Some years ago Dr. Booker T. Washington in one of his many forceful speeches said, "The negro can earn a dollar in the South, but he cannot spend it. He can spend a dollar in the North, but he cannot earn it." He always emphasized the view that the place for the negro was the South. Dr. Washington was a wise man. He talked in terms of immediate need, always keeping his eye on the future. Before his death, however, he became much interested in welfare activities calculated to help the negroes adjust themselves to Northern environment. If he were alive today, he undoubtedly would change his philosophy about the negro's earning capacity in the North, whether in the factory, foundry and hotel, or in professional and business pursuits. In New York City there are more than 200 colored teachers, among them being teachers in high schools, a principal and an assistant principal in public schools, supervisors and lecturers for the Board of Education. In Chicago, in Cleveland, Buffalo, Detroit, Boston and several other cities there are also colored teachers in schools that likewise make no special provision for colored pupils.* Many intelligent and progressive negro clergymen have established themselves, and their congregations are purchasing and building beautiful edifices. The St. Philip's Protestant Episcopal Church of New York City has church and other real property valued at more than \$1,000,000. The Olivet Baptist Church of Chicago has a membership of 8,000, requiring two church edifices and three assistant pastors.

*It is interesting in this connection to note the great increase in rural schools for the negro communities of the South, as set forth in a declaration of the thirty-first annual Tuskegee Negro Conference held on Jan. 15, 1922. From this it appears that \$1,000,000 will be expended during 1922 in building schoolhouses for negroes, and in Mississippi \$800,000 will be devoted to a similar purpose. The Julius Rosenwald School Building Fund, it was said, had assisted in building more than 1,100 schools at a cost of almost \$4,000,000. Plantation owners were commended for schools built for their tenants. Educational work of a valuable nature was being done in Alabama and Louisiana.—
EDITOR.

Although prejudice has denied the negro the opportunity to advance in industrial and professional pursuits, even in the North, thorough business development and acquired ability are breaking down a great deal of this prejudice based upon color. In practically all the cities of the North where negroes reside in large numbers there are colored doctors who have made great headway in their profession. With many their white practice has almost crowded out their colored practice. In Paterson, N. J.; in Morristown, N. J.; in Jersey City, in New York City, in Chicago, in Detroit, in Buffalo, I personally know of colored physicians and dentists at least 90 per cent. of whose practice is white. A colored surgeon of Chicago, who was the first to operate successfully on the human heart in 1894, is on the staff of a Chicago hospital, where he seldom has a colored patient. Colored chemists on Staten Island, in Northern New Jersey, in Detroit, in Chicago, in St. Louis, are employed by large industrial concerns. Colored artists, such as Scott, the mural painter; Meta W. Fuller, the sculptor, and Charles Gilpin, the actor, have made their mark and are being followed by numerous other individuals who are studying and making headway in these directions.

Two large mail order houses in Chicago, before the industrial depression set in, employed 2,000 colored girls in clerical positions, one firm employing 700 and the other 1,300. One large bank in New York employs eight or ten negro clerks. Checkers and wrappers in department stores in Pittsburgh; binders, map mounters and cutters with a map and textbook manufacturer in Chicago; several thousand shirtwaist makers, machine operators on various kinds of underwear and outer garments in New York City; women workers at machines in Newark, Bridgeport, St. Louis and Detroit, have been employed, and in many instances are still at work despite the general state of unemployment.

BUSINESS EFFICIENCY

In the business world many instances of success may be given of even greater interest. One colored woman has a retail coal business in a small town near New York City bringing in \$100,000 a year. Two beauty culture concerns with headquarters in Indianapolis and St. Louis take in annually gross receipts of more than \$250,000. One New York real estate concern has monthly collections of \$30,000; brokerage firms handling oil stock and real estate ventures, restaurants and theatres are thriving. One firm of contractors has a monopoly on the work of moving and wrecking buildings in a prominent Northern city of over 250,000 inhabitants. A colored doll factory in New York City has grown to large proportions. Garage, taxicab and private automobile service has sprung up in practically all these Northern cities, one man in Chicago having a garage—of which he is sole owner—with a capacity of 200 cars and a demand for much more car space than he can provide. There are barber shops and hotels, one hotel representing an investment of \$250,000. A phonograph and record manufacturing company in New York, handling only music composed, sung and played by negroes, is doing a business of more than \$25,000 a month. Chicago has a State bank with \$2,000,000 deposits, Philadelphia has one with more than \$1,000,000 in deposits.* A newspaper for negroes in Chicago—a national weekly with a circulation of 225,000—requiring the services of over forty employes, more than half of whom are white, has a plant valued at \$250,-

*The first national bank ever operated by negroes was opened in Chicago at the beginning of the year 1922. All the officials and Directors, including P. W. Chavers, its President, are negroes, with but a single exception, O. F. Smith, President of the Citizens' Trust Bank, who is Chairman of the Board of Directors. R. R. Jackson, Spanish War veteran, who followed Roosevelt in the famous charge of San Juan, is the Vice President. Mr. Chavers in an interview given on Dec. 7 said: "Lincoln gave the colored man political emancipation, but nobody can give him economic emancipation. He must win that for himself by thrift, honesty and good judgment."—EDITOR.

000, all paid for. There are at least fifty negro newspapers and journals located in the North. In West Virginia there are two coal mines operated and owned exclusively by negroes. Business schools have sprung up in practically all the large cities, affording to young colored boys and girls training in stenography, book-keeping and business methods.

For years the impression has been assiduously spread by certain groups of whites that the negro is inefficient and cannot absorb modern civilization. What impression of his physical efficiency, first of all, must one get from the account of the breaking of the world's record in the broad jump and the winning of the Pentathlon by Edward O. Gourdin, negro athlete of Harvard; of the holding at various times by negroes of the lightweight, welterweight and heavyweight pugilistic championships; of the securing of two places on the All-American team in the last four or five years by negro football stars of Rutgers and Brown Universities; of the larger percentage of negroes than whites received as "physically fit" in the draft and retained as "physically fit" in the army after being accepted in the draft? What, from the mental aspect, may be deduced from the 5,000 patents taken out in Washington by negro inventors, including a self-starter for airplanes and a device for taking motion pictures by daylight? What of negro organizations such as the National Association for the Advancement of Colored People and the National Urban League, which are demanding for them full citizenship and all their human rights, and which urge them so to prepare themselves for the demands of a competitive modern civilized community that when justice is secured for them they may be able to merit it and be secure in the exercise of their rights?

With the great influx to the North, more negroes have received the ballot. As a result negroes have been elected to the State Assemblies of Ohio, Pennsylvania, New York, Illinois and New

Jersey, and to the City Councils or Boards of Aldermen of New York, Cleveland, Chicago, Philadelphia, Morrisville, Pa., and other cities. A colored Magistrate has just been elected in Philadelphia, and a colored man was nominated for election to serve on the commission to draw up a new City Charter for Kansas City, Mo. Because of the weight of their political influence, negroes have been appointed to the following positions: Assistant Federal District Attorney located in New York City; Assistant District Attorney, New York, Indianapolis and Chicago; Assistant Attorney General for the State of Illinois; member of the Zoning Commission, Chicago; Special Assistant in the Department of Agriculture, New York; Assistant City Solicitor, Pittsburgh; State Librarian, West Virginia; Director of the Department of Negro Welfare, West Virginia; Clerk of the Juvenile Court, Boston; Board of Education, New York (until the board was reduced to seven members); health officers in Richmond, Ind., Detroit, Mich., and New York City. On local unemployment committees negroes have been appointed in Chicago, Detroit, New York, St. Louis and Pittsburgh.

THE CHALLENGE TO DEMOCRACY

This larger distribution of the negro population over the United States is apparently having a good effect on the great American experiment in democracy. It is giving the North an opportunity to disprove the assertions of Southern critics that the citizens of the North with the negro present in numbers would treat the negro in exactly the same way as the Southerner has seen fit to treat him. It will give the negro an opportunity to disprove the statement that he cannot thrive physically, industrially or intellectually in the North, where he has to combat a more rigorous climate and match skill with a more uncompromising industrial competitor. President Harding, in the wisdom of his statesmanship, has already indi-

cated that the South and North alike need guidance and counsel in their attitude toward the negro. Already the attitude of the labor unions toward negro labor is being challenged. The Executive Council and the National Convention of the American Federation of Labor are demanding of their internationals and locals that the negro be not denied membership in organized labor and equal opportunity for advancement in industry. The negroes of Boston and New England are learning through inquiry that even there, where Freedom received its birth, and where the negro is not generally denied his civic rights, there is still great need of improvement. Most of the factories in and around Boston employ no negroes, or employ them only as unskilled yardmen, sweepers and porters.

It is being discovered that it is possible to reduce materially the death rate of negroes in cities through educational processes. The Health Officer of Newark, N. J., has recently stated that since the introduction of public service nurses of the negro race infant mortality among negroes in that city has been reduced in two years from 171.6 per 1,000 in 1919 to 106 in 1921. A campaign of education in New York City under the general direction of the City Department of Health, working largely in negro districts, resulted in the reduction in two years (from 1915 to 1917) of negro infant mortality from 202 per

1,000 births to 173 per 1,000 births, the rate during 1920 being further reduced to 164.

The years to come bid fair to show the same steady improvement along all lines; a lessening of opportunity for exploitation of the negro by false and unprincipled leaders, both black and white; a growing race consciousness, a stronger determination on the part of negroes of ability to excel; a net result of increased virility, morality, intelligence and wealth, which will command a greater respect for the group.

With a greater migration of the negro population from the South, an increased participation by negroes in community affairs generally, the passage and enforcement of a national Anti-Lynching bill* and the good results of the proposed national interracial commission to be authorized by Congress, the nation will gradually be impressed with the necessity of treating all peoples within its boundaries fairly, in order that our great experiment in democracy may be indeed a lesson to the other nations and races of the world. The migration of the negro to the North and his progress in this section of the country will, therefore, in large measure be both the occasion for a larger number of negroes in America receiving better treatment and an aid to the whole nation in its efforts to meet the "challenge to democracy."

*See article on lynching at the beginning of this issue of CURRENT HISTORY.

COMMERCIAL AVIATION IN SOUTH AMERICA

COMMERCIAL lines of aeroboats of both the land and the sea type are in process of establishment in several South American countries, having already had a start in Colombia, where a weekly mail and passenger service between the Atlantic ports of Barranquilla and Cartagena has been inaugurated by the Governor, Martínez-Aparicio. Argentina is purchasing some twenty military airplanes of the Avro and other English makes, besides placing a good order with the Italian firm of

Ansaldo for Sva airplanes. A commercial passenger service between Neuquén and Bariloche, in the Southern Andean territory, has proved practicable after a trial trip by Major Kingsley of the Argentine Military School. The new conveyance reduces to three hours a trip usually made in two days. Chile has made a fifteen-year concession in favor of the firm of Recart for the establishment of a coastal airplane service extending from Iquique in the north to Concepcion in the south, some 650 miles.

GOVERNMENT CONTROL OF MEAT AND GRAIN

BY JULIAN PIERCE

A striking innovation in governmental methods, which places the stockyards, the packing houses and all trading in grain "futures" in the United States under official supervision—Guarding the nation's food supply

THE meat-packing industry of the United States has passed under the supervision of the Government, also the buying and selling of live stock in commerce. Together these twin industries represent an invested capital of about \$20,000,000,000; with the possible exception of the railroads, they may be called the largest business venture in the United States. The Packers and Stockyards act, passed on Jan. 24, 1921, placed both of them under the control of the Department of Agriculture and created an entirely new administrative unit to perform the new function thus imposed upon the Secretary of Agriculture. Secretary Wallace has intrusted this important task to Chester Morrill, Assistant Secretary, who has now completed the organization of the Packers and Stockyards Administration, the bureau which will henceforth execute the Government's functions in this untrodden field.

Gambling in grain has also been brought under Government control by the Futures Trading act of Aug. 24, 1921, which places all boards of trade, grain exchanges and similar institutions under strict supervision of the Department of Agriculture.

The enactment of these laws by a Congress and a President pledged to a policy of less, rather than more, interference in business is a striking proof that a representative Government, in this day of democracies, has to deal with facts rather than with theories. The laws in question are

among the first fruits of the activities of the "farmer bloc" in Congress.

The production of live stock for food purposes is carried on in every State. The live stock is usually purchased from the small producers by dealers, who forward it to the stockyards in various cities. In the stockyards it is received by other dealers or commission men, who in turn sell it to the meat packers. Certain large producers ship their own stock direct to the yards without the intervention of the local dealers. These stockyards are scattered all over the country, from Arabi, La., and El Paso, Texas, to New York, St. Paul and Spokane.

The act places all these stockyard services—buying and selling, marketing, feeding, watering, holding, delivery, shipment, weighing and handling of live stock—under Government control, provided that the animals are bought and sold in interstate commerce, and most of them are so bought and sold.

From the stockyards the Government follows the live stock to the meat packers, who transform it into food products—fresh meats, smoked meats, canned meats, lard and every other edible meat food. There are also by-products, such as fertilizer. All these products are then shipped to the four corners of the country, and the Government control follows them wherever they go. The same is true of dairy products, poultry and

eggs, when handled by the meat packers. Beginning with the stockyards, the Government supervision follows the buying and selling of all these food products and by-products through every channel of interstate commerce until the shipments reach the wholesale local dealers.

ORIGIN OF THE LAW.

"Packer control" legislation is an old question. It has been hanging fire for a quarter of a century. For many years the stock raisers—from the general farmer, with his farrow cow, or a couple of steers, or a litter of pigs to sell, to the cattlemen, sheepmen and hog raisers, with their hundreds or thousands of cattle and sheep and hogs—have been firmly convinced that the large meat packers were in a permanent conspiracy to destroy competition in the buying of live stock, and thus depress prices to the detriment of producers. There was also a conviction that the stockyards were controlled by the same interests—and always against the farmers. Among the consumers of meat products, on the other hand, there was a well-grounded feeling that the packers were arbitrarily "boosting" the prices of meat products. The general idea was that the packers defrauded the farmers by buying their live stock for less than its real value, and then defrauded the consumers by profiteering in the manufactured meat products. Much of this controversy is now ancient history, and includes many indictments and prosecutions, with very few convictions, under the anti-trust laws. But the immediate parent of the present Packers and Stockyards act is a Federal investigation conducted only three years ago, the character of which was spectacular.

After the World War was launched there was a heavy demand by the allied powers for American food products. The "natural" law of supply and demand worked perfectly on the demand end. The cost of living soared—and never came to earth. There was nation-wide un-

rest over food prices. In 1916 the charge was persistently made both in the press and in Congress that the constantly rising prices of food products were caused by artificial and illegal combinations in restraint of trade. On Feb. 7, 1917, President Wilson took official cognizance of this charge in a communication to the Federal Trade Commission. In his letter Mr. Wilson included this order:

Pursuant to the authority conferred upon me by the act creating the Federal Trade Commission, I direct the commission, within the scope of its powers, to investigate and report the facts relating to the production, ownership, manufacture, storage and distribution of foodstuffs and the products or by-products arising from or in connection with their preparation and manufacture; to ascertain the facts bearing on alleged violations of the anti-trust acts, and particularly upon the question whether there are manipulations, combinations, conspiracies or restraints of trade out of harmony with the law or the public interest.

FEDERAL COMMISSION'S REPORT

The Federal Trade Commission received the necessary funds from Congress on July 1, 1917, and engaged Francis J. Heney to make the investigation. Mr. Heney conducted a spectacular and thorough investigation, and the Packers and Stockyards act is the reply of Congress and the President to the findings of the Federal Trade Commission based upon Mr. Heney's researches into the packing industry.

The Federal Trade Commission made its report to President Wilson on July 3, 1918—one year and three days after the Congressional appropriation. The commission's findings were limited to five great packing concerns with headquarters in Chicago. This is what it reported to the President:

It appears that five great packing concerns of the country. * * * have attained such a dominant position that they control at will the market in which they buy their supplies, the market in which they sell their products, and hold the fortunes of their competitors in their hands. Not only is the business of gathering, preparing and selling meat products in their control, but an almost countless number of by-product

industries are similarly dominated; and, not content with reaching out for mastery of commodities which are used as substitutes for meat and its by-products, they have invaded allied industries and even unrelated ones.

The producer of live stock is at the mercy of these five companies, because they control the market and the marketing facilities, and to some extent the rolling stock which transports the product to market. The competitors of these five concerns are at their mercy because of the control of the market places, storage facilities and the refrigerator cars for distribution. The consumer of meat products is at the mercy of these five because both producer and competitor are helpless to bring relief.

After having thus revealed the power of the packers, the commission inquired into the exercise of that power.

The power [it reported] has been and is being unfairly and illegally used to manipulate live-stock markets, restrict interstate and international supplies of food, control the prices of dressed meats and other foods, defraud both the producers of food and consumers, crush effective competition, secure special privileges from railroads, stockyard companies and municipalities, and profiteer.

Entrenched in their position of monopolistic power, how did the packers protect their possessions against the encroachments of both law and public opinion? The commission reported to the President that the packers created "joint funds" which were used:

To employ lobbyists and pay their un-audited expenses; to influence legislative bodies; to elect candidates who would wink at violations of law and defeat those pledged to fair enforcement; to control tax officials and thereby evade just taxation; to secure modifications of governmental rules and regulations by devious and improper methods; to bias public opinion by the control of editorial policy through advertising, loans and subsidies, and by the publication and distribution at large expense of false and misleading statements.

Passing on to the results of the packers' alleged combination, the commission said:

The purposes of this combination are: to monopolize and divide among the several interests the distribution of the food supply not only of the United States but of all countries which produce a food surplus, and, as a result of this monopolistic position, to extort excessive profits from the people not only of the United States but of a large part of the world. To secure

these ends the combination employs practically every method of unfair competition known to the commission * * * among which may be mentioned the following: Bogus independents, local price discriminations, short weighing, acquiring stock in competing companies, shutting competitors out of life-stock markets.

Following the report of the Federal Trade Commission the packers opened a nation-wide campaign of denial and defense. A large sum of money was spent in publicity to break down the commission's charges. Congress took up the matter, and week after week, in session after session, the packers and their counsel confronted the commission and its experts before committees of both houses. But, true or false, the commission's report stuck. The farming and stock-raising interests believed the commission's charges were true, and nothing could shake their belief. The Packers and Stockyards act followed.

EXTENSIVE PROHIBITIONS

This act is designed to prevent the practices described in the Federal Trade Commission's report to President Wilson on the meat-packing industry. Under the act the packers are prohibited:

From any unfair, unjustly discriminatory, or deceptive practice or device;

From giving undue or unreasonable preference or advantage to any person or locality;

From apportioning the supply of any article between them, where the tendency or effect of such apportionment would restrain commerce or create monopoly;

From dealing with any person for the purpose, or with the effect, of manipulating or controlling prices, or creating a monopoly or restraining commerce;

From engaging in any course of business for the purpose, or with the effect, of manipulating or controlling prices, or of creating a monopoly in buying, selling or dealing in any article, or restraining commerce;

From conspiring or combining with any other person to apportion territory or purchases or sales, or to manipulate or control prices;

From aiding or abetting the doing of any of the foregoing acts.

The Secretary of Agriculture may also require the packers to "keep

such accounts, records and memoranda as will fully and correctly disclose all transactions in their business, including the ownership of such business by stockholding or otherwise."

From the prohibitions listed, taken in connection with the last-mentioned provision, it would appear that Congress has placed the meat packers in a straitjacket of inflexible material. "Teeth" are put into the law by the following penalties: For violation of the terms of the act packers or their agents will be liable to a fine of from \$1,000 to \$10,000 or may be sent to prison for terms ranging from one year to five years, according to the seriousness of the infraction. The privilege is given to the packers, as to the stockyard men, to appeal to the United States courts against such penalties imposed by the Secretary of Agriculture.

As for the stockyard men, the law requires all owners, live-stock dealers and commission merchants to register with the Secretary of Agriculture, file their price schedules and change those schedules to conform with the decree of the Secretary in case he finds them unreasonable. The stockyard owners and others are also required to keep their accounts in the manner prescribed by the Secretary of Agriculture so as to disclose all their transactions and the ownership of their business.

With regard to his policy in administering the law, Secretary of Agriculture Wallace says:

The power placed in the hands of the supervising agency is very great, and could be used to cause much annoyance and unnecessary expense to those who come under the law. I am all the more conscious of this because, for the time being, I happen to be the one who is charged with this responsibility. Therefore, I wish to make it perfectly clear that without prejudice of any kind my whole effort will be to administer this law in a constructive way, and with the purpose of promoting the live-stock and meat industry and safeguarding the legitimate interests of every one connected with it. There will be no arbitrary or offensive exercise of power. There will be no interference with the free operation of legitimate business nor imposition of burdensome and unnecessary rules and regulations. Discretionary powers will be

used fairly and with due regard to all concerned.

THE FUTURES TRADING ACT

Confident that in the enactment of the Packers and Stockyards act a definite step had been taken toward securing a square deal for all concerned in the marketing of live stock and meat products, the agrarian bloc in Congress turned its attention to remedying certain long-standing evils in the handling of grain. The result of these activities was the Futures Trading act, designed to prevent speculation and gambling in grain, which the law defines as including wheat, corn, oats, barley, rye, flax and sorghum.

Gambling in grain may be quite accurately described as betting that the price will go up or down within certain dates. It usually takes the form of "trading in futures," which means that the grain gamblers sell millions and millions of bushels of grain which they contract to "deliver" on some future date. The grain, however, is not delivered. The "selling" gambler does not intend to deliver it; the "buying" gambler does not intend to insist on its delivery; both settle in cash the difference between the delivery price and the market price on the delivery date.

Under this gambling régime the staple grain crops are sold over and over again. The 1920 corn crop of 3,000,000,000 bushels was sold three times over before a bushel of it reached the market. Most of the sales were "paper" sales by the grain gamblers. The grain growers contend that this gambling forces down the producer's price and forces up the price to the consumer.

The Futures Trading act undertakes to abolish this whole system of grain gambling by imposing a tax of 20 cents on every bushel involved in transactions known as "puts" and "calls," and on all contracts for future delivery except where the sellers are the actual owners or growers of the grain. "Puts" and "calls" are contracts giving one the right to

deliver or call for the delivery of certain amounts of grain at a fixed price and time. In actual practice the grain is rarely delivered on these contracts. The contracts are merely bets on the price. The new law proposes to destroy this sort of gambling by taxing the transaction.

Friends of the law admit that it will not destroy all gambling in grain; to a certain extent its action will be defeated by the persistence of what is called the "hedge" in legitimate marketing as well as in gambling. The "hedge" is a sort of insurance against price fluctuation in grain bought and sold for future delivery. A grain buyer is buying wheat from the farmers during the harvest. He knows that tomorrow he will buy in the neighborhood of 20,000 bushels. Wheat on the Minneapolis wheat exchange is selling for \$1.50. He instructs his broker in Minneapolis to sell 20,000 bushels at or near that price for delivery on some future date. This is "selling a future," but it is protected by the present law as a legitimate part of grain marketing. In the Congressional investigations preceding the enactment of the Futures Trading act it appeared that many grain buyers, millers and exporters make use of this "hedge" in the actual handling of grain. But the same device is used by the speculators. The grain marketing experts who appeared before the Congressional committees were unable to devise legislation under the present marketing system which would abolish the "hedge" as a gambling device and at the same time permit its use in legitimate grain marketing.

EFFECT OF THE LAW

The law as enacted undertakes to destroy manipulation of grain prices and to minimize grain gambling. It compels Boards of Trade and Grain Exchanges to make proper rules to prevent unfair practices, abolishes

the so-called "bucket shops," compels exchanges and brokers to keep proper accounts, undertakes to prevent the dissemination of false market reports and makes it mandatory for the Grain Exchanges to admit to their membership co-operative associations of grain producers, who have hitherto been barred.

When Boards of Trade and Grain Exchanges live up to the provisions of the Futures Trading act and the administrative regulations imposed, the Secretary of Agriculture is authorized to designate them as "contract markets." These organizations then receive exemption from the tax of 20 cents a bushel on contracts for future delivery.*

Among the things made mandatory on Boards of Trade to qualify for this exemption are these: That they prevent the "dissemination by the board or any member thereof of false, misleading or inaccurate reports concerning crop or market information or conditions that affect or tend to affect the price of commodities," and, further, that they "prevent the manipulation of prices or the cornering of any grain by the dealers or operators upon such board."

It has taken twenty-five years to write this prohibitory legislation into the Federal statute law. The grain growers are confident that this entering wedge will be driven deeper and deeper, until poker playing with the nation's grain resources is completely stopped. The live-stock producers are equally hopeful that the new legislation will defend the American people against the machinations of monopolistic packing industries.

*Suits have been instituted at Chicago in the United States District Court to test the constitutionality of both the Packers and Stockyards act and the Futures Trading act. Pending a decision, the Supreme Court has instructed the Secretary of Agriculture to designate the Chicago Board of Trade as a "contract market" and has suspended the collection of the 20 cents a bushel fine imposed by the law until the litigation is ended. Otherwise the enforcement of both laws throughout the country is now in operation, Congress having made the necessary appropriation in the Emergency Deficiency bill.

Powerful Alexanderson alternators, the machines at the radio central, which generate the current that conveys telegraph or telephone messages to amazing distances.

THE LONG ARM OF RADIO

BY RAYMOND FRANCIS YATES

Wonders of recent wireless inventions which make it possible to telephone across the Atlantic and to telegraph around the world. —How 300,000 amateurs are getting musical programs out of the air every day

TWENTY years ago radio was a plaything of scientists. Today, 15 per cent. of international communication is carried on by means of ethereal impulses. The last three years have brought tremendous progress—progress so rapid, indeed, that the man in the street does not have even an inkling of its far-reaching character.

As to the "how" of the new science: We all have a more or less hazy idea that radio waves are formed by a disturbance of the ether. When one throws a stone into a quiet pool of water there is a splash, and waves

radiate from it in all directions. We might look upon a radio transmitting station as being an instrument that sets up splashes in the ether. These splashes produce waves, which travel in all directions, and which can be picked up by suitable apparatus and transformed back into electric currents that are made audible in head 'phones. If the transmitting station has a range of 3,000 miles, this means that every receiving station within that distance will be able to receive the message sent forth. It is convenient to think of the ether as an all-pervading substance; in fact, it would

be well, as a matter of analogy, to look upon the world as a sponge soaked in ether. This brief explanation should be sufficient to relieve the reader of the mistaken idea that radio messages are made up of visible flashes from the transmitting antenna.

Intensive radio development took place during the war, and progress that would otherwise have taken ten years was crowded into three. Radio history was made rapidly.

It is gratifying to know that America has taken the lead in the development of radio telegraphy. There was recently opened at Rocky Point, Long Island, a powerful radio station designed to make New York the focal point of radio-telegraphic communication throughout the world. This pow-

erful transmitter, the aerials of which are supported by no less than seventy-two 410-foot steel towers, and spread over a space of ten square miles, will enable this country to communicate with six foreign nations simultaneously. Besides this we have several other transatlantic stations and one transpacific station.

Modern transoceanic radio telegraphy is carried on in a way somewhat different from that of a few years ago. What is known as a remote control system has come into vogue. The big transatlantic stations at New Brunswick and Rocky Point are attended to only by engineers and mechanics, who see that the apparatus is kept in condition. The operators for these stations are located at a central point on Broad Street, New York City. Here the transatlantic transmission and reception are controlled. When the transmitting operator presses a small telegraphic key on his desk at the Broad Street control room, the impulse is carried by wire to the switchboards of the big stations. Here the comparatively feeble current controlled by the key passes into what is known as a relay. This relay can be looked upon as another key which controls a still heavier current, and this heavier current in turn controls a still stronger relay. The last relay controls the powerful, high-frequency electric currents that are produced by the Alexanderson alternators. The Alexanderson alternators are really electric generators, or dynamos, so to speak, which produce alternating current that oscillates back and forth many thousands of times a second. When the operator at Broad Street presses his key, 3,000-horsepower of electrical energy is released by the aerial system as a stream of electromagnetic waves in the all-pervading ether.

The transatlantic receiving stations are located from twenty-five to forty miles from the transmitter. The purpose of this is to prevent interference, so that receiving and transmitting can be carried on simul-

Transatlantic operating room in New York City, where wireless messages are sent to and received from all parts of Europe by expert operators. The plant that furnishes the current is thirty or forty miles away

By means of this apparatus in a Pittsburgh church, the congregation listened to a preacher in another city, whose voice was transmitted perfectly through the horn-shaped "loud speaker" above the pulpit, by means of the kite-shaped antenna at the right.

taneously. The receiving arm of the New Brunswick (N. J.) station is on Long Island. Here the transatlantic messages are detected by an experienced radio man, and after amplification the messages are placed on land wires and carried to the Broad Street office in lower Manhattan, where they are either read in the form of dots and dashes or registered on a fast-moving tape at the rate of from sixty to one hundred words a minute. Rapid transmission is possible by the use of a perforated tape, which is run through an automatic sender. This method of sending is gradually replacing the use of the hand key.

The business interests of the

United States are rapidly finding a place for radio. The Ford interests now have an interplant system, and many other large manufacturers, including the B. F. Goodrich Company, have come to realize that radio can be of use to them. Many of the power companies located in the mountain passes of the West keep in touch with their home offices by radio telegraphy, and large contractors who have construction work in isolated places manage to communicate with their home offices by radiophone. Newspapers are using radio. The New York Times now receives much of its transatlantic news by radio telegraphy. The messages are first recorded directly upon a phonographic cylinder at high speed and read off later. The New York Stock Exchange has been experimenting with radio, and radio communication between cities is now an established thing.

The night of Dec. 7, 1921, marked a new era in amateur wireless work, for on that and succeeding nights more than a score of American and Canadian amateur operators first realized their ambition of "getting across" the Atlantic. Though the law limits amateurs to comparatively short wave lengths, some of their messages during that historic test covered the 3,000 miles of ocean and were accurately recorded at an amateur receiving station in Scotland.

Toward the end of 1921 a photograph of President Harding was flashed across the Atlantic Ocean from Annapolis to Paris in twenty minutes. This feat was achieved with an ingenious apparatus invented by Edouard Bélin. The picture, of course, was not transmitted in material form, but was translated into radio-telegraphic impulses, which were recorded on the distant apparatus. The work done along this line opens up a new field. Within a few years we shall probably be transmitting important news pictures over great distances, and then how easy it will be even to sign checks and im-

A few of the seventy-two towers, each 410 feet high, which constitute the new and powerful central radio station near Port Jefferson, L. I.

portant papers through the ether! In fact, a signature sent by this method has already been recognized as legal in France. The possibility of criminal detection is also interesting in this connection. A criminal's likeness can be sent broadcast to any part of the country within the space of a few minutes.

Wireless telephone apparatus has reached a point of perfection that enables it now to be applied to commercial affairs. The human voice has been wafted across the Atlantic and Pacific Oceans. In the not far distant future we shall be able to pick the telephone receiver off the hook and ask central to connect us by radiophone with any telephone subscriber in Europe or any vessel on the ocean. It will not require a very complicated system. The operator will simply connect us by wire with a radio telephone transmitting and receiving station. When we speak into the transmitter in our home it will be like speaking into the transmitter of the radio telephone station, though the station may be a good many miles away. One's voice will be sent forth across the sea by this radio telephone station, and on the other side it will be picked up and sent again into a land wire, through the telephone exchange, and on to the person with whom one wishes to talk. The gap is simply filled by radio telephony. Within ten years it will probably be a common thing for a person to be called to the telephone on a transatlantic liner to speak with his home or office.

This system is in use today on a small scale between the Catalina Islands and the City of Los Angeles. A Los Angeles telephone subscriber, or any subscriber in the United States, for that matter, can call a person located on the Catalina Islands, which are off the coast of California. The intervening space has been covered by radio telephone for the last two years.

The use of radio in safeguarding sea travel has increased in the last

three years through the development and application of what is known as the radio compass. With this apparatus the captain of a vessel approaching a harbor in a fog can learn his exact bearings within five minutes. Several small "direction-finding" stations are located at different points. These stations are able to determine the exact direction of a sending station. They find the direction from which the ship's message is coming, and make their report to a central station; there the exact position of the vessel is computed, and the report is then sent to the captain of the inquiring vessel.

The United States Department of Agriculture recently inaugurated a radio farm service, which has proved to be both practical and profitable. Nine broadcasting stations are located in various parts of the country, and these are used to send forth weather and market reports, together with other information of value to tillers of the soil. With an outfit that need not cost over \$25 a farmer can "listen in" and take advantage of this valuable information.

The Westinghouse Company recently started a radio telephone broadcasting system which will eventually cover the entire United States. At present radiophone stations are operating in Newark, Pittsburgh, Chicago and Springfield, Mass. A musical and educational program is sent out daily. With an outfit ranging in price from \$25 to \$100, this music and speechmaking can be heard in any home. No unsightly outside wires are needed, nor is a knowledge of radio essential. Radio has reached a point of great popularity among amateurs in cities where radiophone service is in use. Thousands of outfits have been sold in the last few months. In fact, it is estimated that there are no less than 300,000 privately owned receiving stations in this country. In Newark, for instance, it is quite a common thing for Mrs. Jones to take her cretonne-covered phones along when she

A typical but elaborate amateur installation of wireless telephone apparatus, by which any one can hear the music and news sent broadcast through the air every evening.

goes to call on Mrs. Smith. She plugs her phones in on her hostess's receiving equipment, and they listen to the radio concerts while knitting and sewing. This service is so complete that the final number on the program consists of bedtime stories for the children.

Radiophone receiving outfits are now fighting for their place beside the phonograph. In fact, an enterprising manufacturer has already brought out a receiving equipment that greatly resembles a phonograph cabinet. By the use of a loud-speaking and amplifying apparatus the music or voice is made available for the entire household without the use of phones.*

Although the United States has taken the lead in the development and application of radio telegraphy,

England, France, Germany and Japan are by no means overlooking the value of this kind of communication. England has already started to carry out an ambitious plan which will give her an "All Red Chain" of wireless stations throughout the world. Japan recently completed the erection of a powerful transmitter which places her in direct touch with points as far distant as the United States. Germany's powerful Nauen station represents the latest advances in the art and keeps her in constant touch with the commercial activities of America. Many German brokers have small radio receivers in their offices, so that the information received at Nauen can be made instantly available for use. France has provided herself with a number of efficient radio stations for world-wide communication, and the Scandinavian Peninsula is in direct touch with America through the use of a newly erected station. Poland is now building a transatlantic station, which will enable her to avoid the cables in her communication with America. The radio era is here.

*The Department of Commerce on Feb. 3, 1922, issued a temporary order forbidding amateur radio sending stations to broadcast addresses and music until some system could be worked out for preventing the "interference" of these stations with other wireless activities. The boom in amateur work of this kind is thus checked for a time, but there is already a loud cry of protest. It is estimated that there are more than 14,000 amateur radio sending stations scattered over the country.—Editor.

FINAL FRUITS OF THE ARMS CONFERENCE

Proceedings of the last sessions, in which the labors of twelve weeks were crystallized in five epoch-making treaties—Limits set on the world's great navies, and on submarines and poison gas—Shantung controversy settled and the open door assured in China

THE Conference on the Limitation of Armament, which had opened its sessions on Nov. 12, 1921, came formally to an end on the morning of Feb. 6, 1922, after the signing of five important treaties resulting from almost three months' incessant labors. The final session was marked by a valedictory address by President Harding, who had called the conference, and who declared that it had written "the first deliberate and effective expression of great powers, in the consciousness of peace, of war's utter futility."

Its greatest achievement was the Five-Power Naval Limitation Treaty, by which the perilous competition in naval armament between the great powers, notably the United States, Great Britain and Japan, and, secondarily, France and Italy, was definitely ended for at least the next decade. Next in importance was the signing of a five-power treaty prohibiting the use of the submarine against merchant shipping, and also the use of poison gas as an instrument of warfare. The Four-Power Pacific Treaty, which was signed early in December, was also momentous, in that it replaced and did away with the Anglo-Japanese treaty, which had alienated both the United States and China and had generally aroused suspicion of British policy in the Far East.

By the first of these main treaties the conference took a long stride toward its fundamental aim—the lifting of the world's gigantic burden of armament. By the second and third

it decreed the elimination of especially atrocious weapons developed in the World War, and the causes of suspicion and alienation produced by Britain's alliance with Japan. But the conference went still further: it boldly faced the colossal problem created by the situation in China and took effective action to do away with conditions which bore in them the seed of future wars.

Among its accomplishments in this field were the signing of the Open Door and Tariff Treaties. Under the first of these, the whole nine powers bound themselves to refrain from seeking any unfair or special privileges in China and to aid China to regain her sovereignty; a special permanent Board of Reference, furthermore, was created in Peking to maintain the open-door principle and to study and report on all disputes and controversies in that connection. Under the Tariff Treaty, the effective customs revenues of China were raised to 5 per cent. and special surtaxes were provided for to increase the financial resources of China's depleted Treasury.

Important resolutions were also passed with a view to correcting many abuses and injustices at foreign hands, of which China had been for many years the victim. Measures were adopted for the eventual elimination of extraterritorial rights; foreign Post Offices were made subject to removal within a year; resolutions for the taking over by China of foreign radio stations were passed;

all the powers pledged themselves to withdraw their military or police forces under a procedure to be determined by a mutual Chinese and foreign commission; China and all powers operating railroads in Chinese territory pledged themselves against unjust discrimination in rates, and the conference went on record as favoring the eventual unification of all Chinese railways under China's own control. All treaties, secret or otherwise, concluded by any of the powers with China or in respect to China were made subject to full publication and listing—a provision considered of the highest importance alike for the maintenance of the open door and for the prevention of mutual suspicion among the powers themselves.

Last, but not least, the long-standing and dangerous dispute between China and Japan over Shantung was finally settled on Feb. 4 by a treaty concluded under the auspices of the conference. The settlement of this controversy through the conference, if not directly by it, was considered by all as one of the most vital of its achievements.

Besides many general agreements to "consult" among themselves when troublesome questions arise, the conference powers as a Committee of the Whole set up a number of commissions qualified to deal with specific problems. Nine such commissions, conferences or boards were established, namely:

1. A five-power conference (created by the naval limitation treaty), to meet eight years hence to discuss the question of naval armament anew.
2. A five-power commission to revise the rules of warfare in the light of the World War.
3. A board of reference to consider economic and railway questions in China—what may be called the Open Door Commission.
4. A nine-power commission on "extra-territoriality" rights in China.
5. A special conference to prepare the way for Chinese tariff revision.
6. A separate commission to revise the existing Chinese tariff.
7. A conference of Chinese officials and foreign diplomats at Peking, to meet subject to China's request, in order to determine the procedure under which foreign

military or police troops shall be withdrawn from China.

8. A conference of the managers of foreign wireless stations in China and the Chinese Communications Minister, to work out the details of radio regulation.

9. A joint Sino-Japanese Shantung Commission to determine the procedure under which Japan shall restore Kiao-Chau and Shantung rights to China.

The results listed above were the concrete achievements. Action of various kinds was taken in many other directions. In cases like that of land armament and auxiliary craft limitation, as well as the twenty-one demands and the Japanese occupation of Siberia, the conference, guided wholly by the necessity of complete unanimity, had to limit itself to what was possible. All in all, its delegates adjourned with a sense of success achieved. Eloquent was the fact that both the Chinese and Japanese delegations issued statements expressing their appreciation of its work, and that Hsu Shih-chang, the President of China, sent a special message of thanks and appreciation to President Harding when the conference closed. President Harding himself, in his farewell address of Feb. 6, called the work of the conference "a truly great achievement, the beginning of a new and better epoch in human progress."

PRESIDENT HARDING'S ADDRESS

The President's address of Feb. 6 summarizing the results of the conference was in full as follows:

Mr. Chairman and Members of the Conference: Nearly three months ago it was my privilege to utter to you sincerest words of welcome to the Capital of our Republic, to suggest the spirit in which you were invited, and to intimate the atmosphere in which you were asked to confer. In a very general way, perhaps, I ventured to express a hope for the things toward which our aspirations led us.

Today it is my greater privilege, and even greater pleasure, to come to make acknowledgment. It is one of the supreme compensations of life to contemplate a worth-while accomplishment.

It cannot be other than seemly for me, as the only chief of government so circumstanced as to be able to address the conference, to speak congratulations and to offer the thanks of our nation, our people; perhaps I dare volunteer to utter them for

the world. My own gratification is beyond my capacity to express.

This conference has wrought a truly great achievement. It is hazardous sometimes to speak in superlatives, and I will be restrained. But I will say, with every confidence, that the faith plighted here today, kept in national honor, will mark the beginning of a new and better epoch in human progress.

Stripped to the simplest fact, what is the spectacle which has inspired a new hope for the world? Gathered about this table nine great nations of the earth—not all to be sure, but those most directly concerned with the problems at hand—have met and have conferred on questions of great import and common concern, on problems menacing their peaceful relationship, on burdens threatening a common peril. In the revealing light of the public opinion of the world, without surrender of sovereignty, without impaired nationality or affronted national pride, a solution has been found in unanimity, and today's adjournment is marked by rejoicing in the things accomplished. If the world has hungered for new assurance, it may feast at the banquet which the conference has spread.

I am sure the people of the United States are supremely gratified, and yet there is scant appreciation of how marvelously you have wrought. When the days were dragging and agreements were delayed, when there were obstacles within and hindrances without, few stopped to realize that here was a conference of sovereign powers where only unanimous agreement could be made the rule. Majorities could not decide without impinging on national rights. There were no victors to command, no vanquished to yield. All had voluntarily to agree in translating the conscience of our civilization and give concrete expression to world opinion.

And you have agreed in spite of all difficulties, and the agreements are proclaimed to the world. No new standards of national honor have been sought, but the indictments of national dishonor have been drawn, and the world is ready to proclaim the odiousness of perfidy or infamy.

It is not pretended that the pursuit of peace and the limitations of armament are new conceits, or that the conference is a new conception either in settlement of war or in writing the conscience of international relationship.

Indeed, it is not new to have met in the realization of war's supreme penalties. The Hague conventions are examples of the one, the conferences of Vienna, of Berlin, of Versailles, are outstanding instances of the other.

The Hague conventions were defeated by the antagonism of one strong power whose indisposition to co-operate and sustain led it to one of the supreme tragedies which have come to national eminence. Vienna

and Berlin sought peace founded on the injustices of war, and sowed the seeds of future conflict, and hatred was armed where conference was stifled.

It is fair to say that human progress, the growing intimacy of international relationship, developed by communication and transportation, attended by a directing world opinion, have set the stage more favorably here. You have met in that calm deliberation and that determined resolution which have made a just peace, in righteous relationship, its own best guarantee.

It has been the fortune of this conference to sit in a day far enough removed from war's bitterness, yet near enough to war's horrors, to gain the benefit of both the hatred of war and the yearning for peace. Too often heretofore the decades following such gatherings have been marked by the difficult undoing of their decisions. But your achievement is supreme, because no seed of conflict has been sown, no reaction in regret or resentment ever can justify resort to arms.

It little matters what we appraise as the outstanding accomplishment. Any one of them alone would have justified the conference. But the whole achievement has so cleared the atmosphere that it will seem like breathing the refreshing air of a new morn of promise.

WHAT HAS BEEN WROUGHT

You have written the first deliberate and effective expression of great powers, in consciousness of peace, of war's utter futility, and challenged the sanity of competitive preparation for each other's destruction. You have halted folly and lifted burdens and revealed to the world that the one sure way to recover from the sorrow and ruin and staggering obligations of a world war is to end the strife in preparation for more of it, and turn human energies to the constructiveness of peace.

Not all the world is yet tranquilized. But here is the example, to imbue with new hope all who dwell in apprehension. At this table came understanding, and understanding brands armed conflict as abominable in the eyes of enlightened civilization.

I once believed in armed preparedness. I advocated it. But I have come now to believe there is better preparedness in a public mind and a world opinion made ready to grant justice precisely as it exacts it. And justice is better serviced in conferences of peace than in conflicts at arms.

How simple it all has been! When you met here twelve weeks ago there was not a commitment, not an obligation, except that which each delegation owed to the Government commissioning it. But human service was calling, world conscience was impelling, and world opinion directing.

No intrigue, no offensive or defensive alliances, no involvements have wrought your agreements, but reasoning with each other

to common understanding has made new relationships among Governments and peoples, new securities for peace, and new opportunities for achievement and attending happiness.

Here have been established the contacts of reason, here have come the inevitable understandings of face-to-face exchanges when passion does not inflame. The very atmosphere shamed national selfishness into retreat. Viewpoints were exchanged, differences composed and you came to understand how common, after all, are human aspirations; how alike, indeed, and how easily reconcilable are our national aspirations; how sane and simple and satisfying to seek the relationships of peace and security.

When you first met I told you of our America's thought to see less of armament and none of war; that we sought nothing which is another's, and we were unafraid, but that we wished to join you in doing that finer and nobler thing which no nation can do alone. We rejoice in that accomplishment. It may be that the naval holiday here contracted will expire with the treaties, but I do not believe it.

Those of us who live another decade are more likely to witness a growth of public opinion, strengthened by the new experience, which will make nations more concerned with living to the fulfillment of God's high intent than with agencies of warfare and destruction.

POINTS TO FUTURE CONFERENCES.

Since this conference of nations has pointed with unanimity to the way of peace today, like conferences in the future, under appropriate conditions and with aims both well conceived and definite, may illumine the highways and byways of human activity. The torches of understanding have been lighted, and they ought to glow and encircle the globe.

Again, gentlemen of the conference, congratulations and the gratitude of the United States. To Belgium, to the British Empire, to China, to France, to Italy, to Japan, to the Netherlands and to Portugal, I can wish no more than the same feeling which we experience, of honorable and honored contribution to happy human advancement and a new sense of security in the righteous pursuits of peace and all attending good fortune.

From our own delegates I have known from time to time of your activities and of the spirit of conciliation and of adjustment and the cheering readiness of all of you to strive for that unanimity so essential to accomplishment. Without it there would have been failure. With it you have heartened the world.

And I know our guests will pardon me while I make grateful acknowledgment to the American delegation—to you, Mr. Secretary Hughes; to you, Senator Lodge; to you, Senator Underwood; to you, Mr. Root

—to all of you for your able and splendid and highly purposed and untiring endeavors in behalf of our Government and our people; and to our excellent Advisory Committee which gave to you so dependable a reflex of that American public opinion which charts the course of this Republic.

It is all so fine, so gratifying, so reassuringly full of promise, that above the murmurings of a world sorrow not yet silenced; above the groans which come of excessive burdens not yet lifted, but now to be lightened; above the discouragements of a world yet struggling to find itself after surpassing upheaval, there is the note of rejoicing, which is not alone ours or yours or of all of us, but comes from the hearts of men of all the world.

• THE LAST WEEKS' SESSIONS

Three sessions of the Far Eastern Committee—Jan. 16, 17 and 18—were devoted to discussing the "open door" in China, the policy first defined by Secretary Hay in 1908, accepted by all the powers throughout the last twenty years, and variously confirmed by the American Government in recent times. The subject first came up at the session of Jan. 16, with which the record virtually closed in January CURRENT HISTORY.

At that session Secretary Hughes presented a series of four resolutions, restating the open-door principle and providing for a permanent commission of jurists in China, empowered to maintain it and to investigate and decide on all questions in connection with it. In the debate that followed, it soon became evident that both France and Japan were opposed to Mr. Hughes's fourth resolution, which opened the possibility that existing concessions might be referred to this permanent commission. The first three resolutions were finally adopted on Jan. 18, with only one slight modification; the fourth was omitted. The text of the three resolutions, as finally passed, was as follows:

I. With a view to applying more effectually the principles of the open door or equality of opportunity in China for the trade and industry of all nations, the powers other than China represented at this conference agree:

(a) Not to seek or to support their nationals in seeking any arrangement which might purport to establish in favor of their

interests any general superiority of right with respect to commercial or economic development in any designated region of China;

(b) Not to seek or to support their nationals in seeking any such monopoly or preferences as would deprive other nationals of the right of undertaking any legitimate trade or industry in China or of participating with the Chinese Government or with any local authority* in any category or public enterprise which by reason of its scope, duration or geographical extent is calculated to frustrate the principle of equal opportunity.

It is understood that this agreement is not to be so construed as to prohibit the acquisition of such properties or rights as may be necessary to the conduct of a particular commercial, industrial or financial undertaking or to the encouragement of invention and research.

II. The Chinese Government takes note of the above agreement and declares its intention of being guided by the same principles in dealing with applications for economic right and privileges from Governments and nationals of all foreign countries whether parties to that agreement or not.

III. The powers, including China, represented at this conference agree in principle to the establishment in China of a Board of Reference to which any question arising on the above agreement and declaration may be referred for investigation and report. (A detailed scheme for the constitution of the board shall be framed by the special conference referred to in Article I. of the convention on Chinese customs duties.)

SECRETARY HUGHES'S PROPOSALS

All the powers, said Secretary Hughes in bringing up the resolutions, were in agreement regarding the desirability of maintaining this principle. Long discussions on the question of concessions or preferential economic privileges—the next item on the agenda—might be avoided, he said, if the conference would adopt “a statement of principle in amplification of the so-called open-door principle.” It was obvious, he added, that to grant to any one power special concessions of a monopolistic or preferential character was in opposition to the open-door principle. He then presented a draft resolution pledging the conference powers not to seek or to support their nationals in seeking such monopo-

listic or preferential rights, with the exception only of the acquisition of properties or rights necessary to the conduct of a particular undertaking. (Later interpreted by Mr. Balfour as referring to railroads, telephones, telegraph systems, &c.)

Sir Auckland Geddes and Mr. Balfour, in the ensuing discussion, took the stand that the resolution proposed was inadequate, in that it did not provide machinery to settle the inevitable disputes of interpretation that would arise from the exception laid down. These objections were carefully weighed by Secretary Hughes, and at the opening of the next session, Jan. 17, he presented his resolutions in a new and amended form, the text of which was that finally adopted. Resolution IV., which was eventually omitted, read as follows:

IV. The powers, including China, represented at this conference agree that any provisions of an existing concession which appear inconsistent with those of another concession or with the principles of the above agreement or declaration may be submitted by the parties concerned to the Board of Reference when established for the purpose of endeavoring to arrive at a satisfactory adjustment on equitable terms.

After reading all four resolutions Secretary Hughes explained that Article I. was intended to define, with as much precision as the subject allowed, the accepted understanding of what the open-door principle really is; it could not provide for all contingencies nor even attempt to state them. Article III., he said, set up machinery for resolving all questions in a sane and practical way; the permanent board it constituted would have no power to make decisions or to interfere in any way with the freedom and sovereignty of any State, but would be charged only with the duty of investigation and report; by mere elucidation of the facts, it would undoubtedly aid in finding a solution of any controversy. As for Article IV., that provided for inquiry and report and effects a readjustment where there existed conflicting claims.

*In the draft as originally proposed, the text read “any Provincial Government.”

INSUPERABLE OPPOSITION

This last article became the storm centre of the debate, implying as it did a retroactive construction for the revision of already existing concessions. So unexpected was this proposal that when Secretary Hughes completed his explanations there was an embarrassing interim of silence. This was finally broken by Signor Schanzer, head of the Italian delegation, who rose to ask further explanation of Article I. Secretary Hughes replied that Paragraphs (a) and (b) of this article, though consistent and even complementary, were different in scope: (a) related to a general superiority of rights in the development of designated regions (i. e., spheres of influence); (b) to particular concessions of a monopolistic or preferential character, which excluded other nations from undertakings either alone or in co-operation with the Chinese Government, and thus infringed the open-door principle.

Senator Schanzer was satisfied, and the Italian delegation accepted the American proposal. Sir Auckland Geddes voiced a similar assent for the British Empire delegation. Albert Sarraut, however, head of the French delegation, found objections. First of all, he wished to know if it was intended to make the revision power of the permanent board retroactive. Secretary Hughes replied that this was the intention, but emphasized the fact that the board was a purely advisory one, and that no power would be bound by its decisions. M. Sarraut then said that he agreed to all the resolution except Article IV., through which he thought the way might be opened to abuses through bad faith. Secretary Hughes assured him that his observations would receive due consideration. He had not, he admitted, expected any objection to Article IV., which merely set up machinery for the settlement of disputes over concessions now existing in China. M. Sarraut replied that the principle of

retroactivity had not been generally accepted at international conferences, and that he did not believe it wise to adopt the principle that existing contracts could be made subject to revision. Baron Shidehara for Japan declared himself in agreement with the general principles of the resolution, but wished more time to study it before any decisive action was taken.

At the next session, Jan. 18, the debate on the American proposals was resumed. Baron Shidehara asked how the proposed Board of Reference would be set up and composed. Under Article III. of the resolution this board was to be constituted by the special appointees on Chinese customs duties. Judging from the nature of the questions to be dealt with, the nine nations represented would have to appoint some of their ablest jurists, who would have to remain permanently in China or would have to be sent there whenever they were needed. The question arose, said Baron Shidehara, whether jurists of this calibre could be spared; there was also the consideration of expense for the maintenance of such a board. Sir Auckland Geddes rose to say that, so far as Great Britain was concerned, he thought his country could utilize the services of eminent British jurists already resident in Hongkong or Shanghai. He believed the other nations could solve the problem in a similar way. Before sitting down he asked the Chairman whether the resolution would affect the activities of the international consortium. Secretary Hughes replied that it was not so intended.

Baron Shidehara then pointed out that the resolutions embodied an entirely new definition of the open-door policy, differing from that first laid down by Secretary Hay in 1908; it seemed natural, therefore, he said, that this new definition should not have any retroactive force, for fear it should affect private parties unfairly. He proposed to substitute in Article IV. the words "of a concession which may hereafter be granted by

China," instead of the former wording, "an existing concession."

DEFEAT OF ARTICLE IV.

Secretary Hughes, to controvert Baron Shidehara's view that the amplification of the Hay open-door doctrine was new, read several international documents. The first of these was the communication of Ambassador Choate to Lord Salisbury in 1899, saying that the United States did not admit the right of any country to hold positions in China which interfered with the rights of American nationals. Subsequent statements were read by Secretary Hughes from the British, French and Italian Governments recognizing the American stand; then the restatement by Secretary Hay in 1900, in notes to the six powers holding leases in China, and finally the declaration by Great Britain and Germany in 1900 recognizing the principle. He also read the assent of various other Governments, including the American note to the Japanese Government in 1908, outlining the policy toward China, and ending with a sketch of the Root-Takahira correspondence.

In the light of all these confirmations, said Secretary Hughes, he could not agree that the restatement embodied in his resolutions contained anything new. It was rather a more precise and definite statement of a principle long admitted and to which the Governments had given their unqualified adherence for twenty years.

The first suggestion to eliminate the contentious Article IV. came from Sir Robert Borden, Canadian representative on the British Empire delegation. If this article were omitted, he pointed out, it would still be open for the powers, if they saw fit, to give consent to the determination or investigation of any relevant question by the Board of Reference to be established under Article III. Mr. Alfred Sze, speaking for China, thanked the delegates for their zeal on behalf of the open-door

principle, and made it plain that his delegation wished Article IV. to remain. When Mr. Hughes asked for opinions, Baron Shidehara veered from his former position in favor of emendation of Article IV., and said that Japan approved the suggestion of Sir Robert Borden in favor of its elimination. The French delegation also supported this. Senator Schanzer for Italy hesitated to express his view until he knew that of the American delegation. Secretary Hughes then said that in view of the prevailing attitude it would perhaps be best to omit Article IV. He put the remaining three articles to the vote, and they were adopted by all, the Chinese only making the reservation that they would be free to bring up Article IV. on a subsequent occasion.

Baron Shidehara made a statement urging China to open her doors fully to foreign capital and to foreign trade and enterprise. He referred to the important statement made by Mr. Sze at the meeting of Nov. 16, declaring that China wished to make her vast natural resources available to all people that needed them. He hoped that China would formulate a policy in favor of extending to foreigners, as far as possible, the opportunity of co-operation in the development and utilization of these resources. The rest of the session was taken up with discussion of Chinese railways.

RESOLUTIONS ON RAILROADS

The discussion which began at this point in the session of Jan. 18 resulted the next day in the adoption of two important resolutions on China's railways, and the commitment of the whole subject, including specifically the Chinese Eastern Railway, to a subcommittee for study. Secretary Hughes began it by stressing the extreme complexity of the question, especially in relation to the Chinese Eastern Railway. The United States, he declared, had no interest whatsoever in the ownership of this important line, and no desire to secure control; it wished only to

do all in its power to promote the proper conduct of the road, as one of the greatest instrumentalities of commerce in the East. He suggested that a subcommittee of experts be appointed, representative of all the nine powers present, "to consider at once whether there was anything that could be done at this conference which would aid in promoting the efficiency of the railroad and its proper management." Mr. Hanihara of the Japanese delegation made the point that not all the nine powers present were interested in the Chinese Eastern Railway. Secretary Hughes, however, held that it was advisable to have the views of as many powers as possible. The recommendation was then unanimously adopted. The personnel of the subcommittee, as announced at the close of the official communique of this session, was as follows:

United States—Dewitt C. Poole, chief of the division of Russian Affairs of the State Department, Chairman.

Belgium—M. Lemaire de Warzee.

British Empire—M. W. Lampson.

China—Dr. Hawklings Yen.

France—M. Kammerer.

Italy—Count Emilio Pagliano.

Japan—Mr. Matsudaira.

Netherlands—Mr. de Kat Engelino.

Portugal—Captain E. de Vasconcellos.

The Chairman called for resolutions on the subject of Chinese railways in general. Sir Auckland Geddes offered one which would commit the Chinese Government to practice no discrimination on any of its railroads. The avenue leading in through that open door which they had just been discussing, he said, was becoming more and more an avenue of railroads. It was in the common interest of all countries that there should be equality of treatment. He offered his resolution from this viewpoint. Secretary Hughes stressed the importance of adopting a definite stand as to railway operation by China in the future, and he therefore offered an additional resolution declaring that the powers wished to see China enabled as soon as possible to weld her rail-

roads into one unified system. Both resolutions were circulated among the delegations, and after some further debate were adopted with slight modifications at the following session on Jan. 19. The Geddes resolution, as finally passed, was as follows:

The Chinese Government declares that throughout the whole of the railways in China it will not exercise or permit any unfair discrimination of any kind. In particular there shall be no discrimination whatever, direct or indirect, in respect of charges or of facilities on the ground of the nationality of passengers or the countries from which or to which they are proceeding, or the origin or ownership of goods or the country from which or to which they are consigned, or the nationality or ownership of the ship or other means of conveying such passengers or goods before or after their transport on the Chinese railways.

The other powers represented at this conference take note of the above declaration and make a corresponding declaration in respect of any of the aforesaid railways over which they or their nationals are in a position to exercise any control in virtue of any concession, special agreement or otherwise.

Any question arising under this declaration may be referred by any of the powers concerned to the Board of Reference, when established, for consideration and report.

The resolution for railway unification, as finally adopted, read thus:

The powers represented in this conference record their hope that, to the utmost degree consistent with legitimate existing rights, the future development of railways in China shall be so conducted as to enable the Chinese Government to effect the unification of the railways into a railway system under Chinese control, with such foreign financial and technical assistance as may prove necessary in the interests of that system.

In the debate Sir Auckland Geddes voiced the belief of the British Empire delegation that the resolution offered by it "would go far to make the open door a reality." He made it plain that there was no intention to charge China with having practiced discrimination in the past, further suggesting that a regime of absolute fairness and equality in respect to transportation would grow up in China if the Board of Reference created by the conference to maintain the principle of the open

door were also empowered to deal with any alleged cases of railway discrimination. He moved that the resolution presented by him should be incorporated in the convention on the open door. Mr. Sze for China asked and received assurance that there was nothing in the resolution which would impair China's right to classify railroad rates. At the suggestion of Baron Shidehara, the Chairman stated that it was understood that this classification of rates would be made in such a way as to avoid any unfair discrimination. Japan assenting, the resolution was then adopted. The Hughes resolution on unification was similarly adopted after the Chairman had explained that it was indicative of a general policy "to aid in the maintenance of a strong and stable administration in China, and of suitable control of the facilities essential to such an administration and to the prosperity of the people, and that it did not in any way suggest the slightest interference with any legitimate and existing rights."

REDUCING CHINA'S ARMIES

The Far Eastern Committee on Jan. 20 adopted a formal resolution asking the Chinese Government to reduce the forces of the Tuchuns, or military Governors of the Chinese provinces. The conference had made the recommendation that such a resolution be drafted after hearing the report of the subcommittee on the Chinese customs tariff (Jan. 5). Senator Underwood, the Chairman of that subcommittee, had drafted the resolution and presented it at the Jan. 20 session. This is its text as finally adopted:

Whereas the powers attending this conference have been deeply impressed with the severe drain on the public revenue of China through the maintenance in various parts of the country of military forces, excessive in number and controlled by the military chiefs of the provinces without coordination;* and

Whereas the continued maintenance of these forces appears to be mainly responsible for China's present unsettled political conditions; and

Whereas it is felt that large and prompt reductions of these forces will not only advance the cause of China's political unity and economic development, but will hasten her financial rehabilitation;

Therefore, without any intention to interfere in the internal problems of China, but animated by the sincere desire to see China develop and maintain for herself an effective and stable Government, alike in her own interest and in the general interest of trade; and being inspired by the spirit of this conference, whose aim is to reduce, through the limitation of armaments, the enormous disbursements which manifestly constitute the greater part of the encumbrance upon enterprise and national prosperity; it is

Resolved, That this conference express to China the earnest hope that immediate and effective steps may be taken by the Chinese Government to reduce the aforesaid military forces and expenditures.

THE MILITARY GOVERNORS

Prior to the adoption of the resolution, Sir Robert Borden, representing Canada on the British Empire delegation, spoke at considerable length on the conditions which made such an expression by the conference desirable. The Canadian spokesman, whose concluding words, expressing serene belief in China's future, were deeply appreciated by Mr. Koo and the whole Chinese delegation, spoke in part as follows:

The resolution now presented was inspired by a sincere and earnest desire to aid the purpose of the Chinese people in establishing stable government and in freeing the country from the incubus of excessive militarism. The appointment of Military Governors for the provinces, which was initiated shortly after the inception of the republic by the then President, Yuan Shih-kai, has had an unfortunate effect and operation since his death. The power of these Governors has increased to such an extent that the Central Government at Peking exercises very little control over a large part of the country.

In fact, the Military Governors have become military dictators within their respective provinces or spheres of influence; they recruit and maintain their own armies; they form combinations among themselves and struggle for ascendancy, and at inter-

*The original wording of this first section, as drafted by Senator Underwood, was "through the maintenance of excessive military forces in various parts of the country, most of which are controlled by the military chiefs of the provinces." The new wording was adopted at the suggestion of the Chinese delegation to meet certain difficulties brought up by one of the other delegations.

vals they dictate the personnel and policy of the Central Government.

This system has continued in force for several years, although it is entirely alien to the habits and traditions of the Chinese people. Up to the present there has been an unfortunate lack of such organizing capacity as would establish a strong and stable Central Government and bring the country once more under its effective direction and control. For such a purpose the provision of great revenues or the placing of large funds at the disposal of a weak administration is not of itself effective. So long as the Military Governors retain their present dominating authority and influence, such financial resources would probably be absorbed to a very great extent by these military chiefs, instead of being employed to cut down their power.

Exact accuracy in any statistics of military forces and expenditure in China at the present time cannot be expected; but reasonable estimates place the total number of men under arms at not less than 1,000,000; at least the payroll probably includes that number. It is confidently asserted that more than half of the total revenues of the country are employed in the upkeep of these forces. They have not been raised for the defense of the country against outside aggression; on the contrary, they are really maintained for the purpose of civil war, and when on active service they are fighting against their own countrymen enlisted under the banner of some other military chieftain.

In one province, which is said to be exceptionally well governed by a man who devotes his whole attention to the welfare and prosperity of his district, a considerable military force maintained as a necessity to his prestige is made to do duty in the construction of excellent roads. In that province the progress and advancement of the people are said to be quite remarkable and they give an illustration of what the Chinese people may accomplish under good government.

The forces enlisted under the various military chieftains are said to regard their military duties as entirely occupational, and it is believed that they would be quite ready to accept employment in the construction of railways, highways and otherwise, provided the arrears in their pay were made good. This weakness, and indeed impotency, of the Central Government, so far as a great portion of the country is concerned, must necessarily be a matter of concern to the other powers.

ALL CHINESE TREATIES TO BE REVEALED

Two important resolutions affecting the open-door principle, and making against secret commitments by any power in China, were adopted

by the Far Eastern Committee on Jan. 21, after three days of animated debate. The first of these was presented by Secretary Hughes at the session of Jan. 19, immediately after the adoption of the railway resolutions. His proposals embodied a sweeping demand that all the powers represented in the committee should list and reveal to the conference all treaties with the Chinese Government, as well as treaties concluded by their nationals with China and involving sums greater than \$1,000,000. During the long debate that followed, the original resolutions were considerably modified by amendments. The text of the Hughes resolution, as finally adopted on Jan. 21, read thus:

The powers represented in this conference, considering it desirable that there should hereafter be full publicity with respect to all matters affecting the political and other international obligations of China and of the several powers in relation to China, are agreed as follows:

I.

The several powers other than China will, at their earliest convenience, file with the Secretariat General of the conference for transmission to the participating powers a list of all treaties, conventions, exchange of notes or other international agreements which they may have with China, or with any other power or powers in relation to China, which they deem to be still in force and upon which they may desire to rely. In each case citations will be given to any official or other publication in which an authoritative text of the documents may be found. In any case in which the document may not have been published, a copy of the text (in its original language or languages) will be filed with the Secretariat General of the conference.

Every treaty or other international agreement of the character described which may be concluded hereafter shall be notified by the Governments concerned within sixty days of its conclusion to the powers who are signatories of or adherents to this agreement.

II.

The several powers other than China will file with the Secretariat General of the conference at their earliest convenience for transmission to the participating powers a list, as nearly complete as may be possible, of all those contracts between their nationals, of the one part, and the Chinese Government or any of its administrative subdivisions or local authorities, of the other part, which involve any concession, franchise, option or preference with regard to

railway construction, mining, forestry, navigation, river conservancy, harbor works, reclamation, electrical communications, or other public works or public services, or for the sale of arms or ammunition, or which involve a lien upon any of the purviews or properties of the Chinese Government or of any of its administrative subdivisions. There shall be, in the case of each document so listed, either a citation to a published text or a copy of the text itself.

Every contract of the public character described which may be concluded hereafter shall be notified by the Governments concerned within sixty days after the receipt of information of its conclusion to the powers who are signatories or adherents to this agreement.

III.

The Chinese Government agrees to notify, in the conditions laid down in this agreement, every treaty agreement or contract of the character indicated herein which has been or may hereafter be concluded by that Government or by any local authority in China with any foreign power or the nationals of any foreign power, whether party to this agreement or not, so far as the information is in its possession.

IV.

The Governments of powers having treaty relations with China, which are not represented at the present conference, shall be invited to adhere to this agreement. The United States Government, as convener of the conference, undertakes to communicate this agreement to the Governments of the said powers, with a view to obtaining their adherence thereto as soon as possible.

TEXT OF ROOT RESOLUTION

The second resolution, which was similarly adopted, and virtually as an integral part of the Hughes proposals, was presented by Elihu Root. It bound the signatory powers not to give support to their nationals in respect to spheres of influence, and read as follows:

Resolved, That the signatory powers will not support any agreement by their respective nationals with each other designed to create spheres of influence or to provide for the enjoyment of exclusive opportunity in designated parts of Chinese territory.

Taken together, these two resolu-

[American Cartoon]

—N. E. A. Service

BLEST BE THE TIE

tions were interpreted as insuring a new era of open dealing and fair play in all matters pertaining to China's economic development. Though all the delegations were in sympathy with the spirit of the original proposals, it was strongly felt by some of them, notably the Japanese, that it was asking too much of the respective Governments to demand that they list and publish all the engagements and contracts made in China by private individuals. Throughout the debate the Japanese clung tenaciously to their view that the Tokio Government, for one, had no power to compel its nationals to divulge details of their commitments in China; this difficulty, it was afterward said by the Japanese delegates, might be covered by the inclusion of the qualifying clause, "as nearly complete as may be possible."

An important amendment was made by omitting a clause that required the powers to list all engage-

[American Cartoon]

—Tacoma News-Tribune

THE MONSTER BRANDED AT LAST

ments of private individuals "on which their respective Governments propose to rely." It was felt by many delegates that this closed the door against Government support in the future for any contract not included in the proposed lists. Another important elimination was made in the case of a clause of the original text providing that all public utility concessions involving an obligation of more than \$1,000,000 silver on the part of the Chinese authorities must be included in the list. This elimination was voted on the strength of the British argument that it would be unfair to compel business interests to divulge the exact amounts involved in their contracts. Another alteration in the original proposals, made at the motion of the Japanese, transferred from the powers to China herself the task of publishing agreements made by the Chinese authorities with the nationals of any of the powers in respect to other than public utilities.

The whole tone of the debate indicated that the delegations were some-

what staggered by the proposal to publish all commitments and treaties in China. Few hopes were entertained of the possibility of completing the task before the end of the conference. Many queries were made, many difficulties pointed out, but Secretary Hughes remained steadfast in his view that no important progress could be made toward solving the tangled situation in China until all the treaties and commitments were exposed to the light of day in one common clearing house. The Chinese, naturally, hailed the resolutions enthusiastically from the start, but the adoption of them in their final form after so many amendments left them less satisfied.

One of the leaders of the Chinese delegation said after the session of Jan. 21 that his Government would probably not have knowledge of contracts made by private corporations or nationals of another country with local military Governors or nationals of China, and therefore could not make such agreements public. Many of the agreements made by Japanese nationals, therefore, he said, would probably never become known unless the Japanese Government forced their publication. (The Japanese delegates had specifically objected to such compulsion.) He thought it unlikely that the Japanese intended to secure publication of any agreements of doubtful character, made without the knowledge of the Tokio Government. The discussion which resulted in the final draft was not made public, though it was indicated that some very earnest exchanges had taken place; the official communique was one of the briefest ever issued by the committee, consisting only of the official version of the resolution as finally adopted.

CHINA PRESENTS SECRET PACT

PACT

The first nation to register a secret treaty, as provided under the above resolutions, was China herself. At the session of Jan. 24, Chairman Hughes announced that he had received from the Chinese delegation a telegraphic summary (sent by Peking) of the secret treaty of alliance between China and Russia concluded in May, 1896. It was presented provisionally to comply with a request of the conference that China disclose the text of this secret treaty, the full importance of which may be gauged by the fact that it is supposed to have been one of the direct causes of the Russo-Japanese war. The treaty was secretly negotiated after the Treaty of Shimonoseki, which terminated the Sino-Japanese war. Under Shimonoseki, Japan took over the southern portion of the Liaotung Peninsula, in which Dairen (Dalny and Port Arthur are situated. The protests and attitude of France, Russia and Germany became so threatening that Japan was intimidated for the moment, and compelled to disgorge her new territories. Russia at once moved in, and it was this action which impelled the Japanese later to declare war on the Czar's Government, the result being the first victory of an Asiatic over a first-class European power. The Japanese have declared that Russia's action was undertaken under the cloak of this secret treaty with China, with the aim of occupying Manchuria and Korea.

Japan, at all events, was the chief gainer by the treaty, for it enabled her to consolidate her power in Manchuria, while China, the main loser,

[American Cartoon]

—Rochester Democrat and Chronicle

DANIEL IN THE LION'S DEN

ascribes to it most of her present troubles. The Chinese rely upon its publication to prove that Japan is an intruder in Manchuria. The object of the conference in asking for the text of this flagrant example of secret diplomacy was to make sure that it had lapsed through definite and formal Chinese declarations, so that no future Russian Government would be able to claim it as still valid. The telegraphic summary sent by Peking reads as follows:

Treaty of alliance between China and Russia—May, 1896.

Article 1.—The high contracting parties engage to support each other reciprocally by all their land and sea forces in case of any aggression directed by Japan against Russian territory in Eastern Asia, China or Korea.

Article 2.—No treaty of peace with an adverse party can be concluded by either of them without the consent of the other.

[American Cartoon]

—N. E. A. Service

NOBODY CAN VERY WELL MISUNDERSTAND THIS

Article 3.—During military operations all Chinese ports shall be open to Russian vessels.

Article 4.—The Chinese Government consents to the construction of a railway across the Provinces of Amur and Kirin in the direction of Vladivostok. The construction and exploitation of this railway shall be accorded to the Russo-Chinese Bank. The contract shall be concluded between the Chinese Minister at St. Petersburg and the Russo-Chinese Bank.

Article 5.—In time of war Russia shall have free use of the railway for the transport and provisioning of her troops. In time of peace Russia shall have the same right for the transit of her troops and provisions.

Article 6.—The present treaty shall come into force from the day on which the contract stipulated in Article 4 shall have been confirmed. It shall have force for fifteen years.

RADIO STATIONS IN CHINA

The question of the return to China of all foreign-owned and foreign-operated radio stations was settled at the session of Jan. 27. Debate on this subject had been reopened on Jan. 24, when Mr. Balfour brought up again

the Viviani resolution adopted on Dec. 7 (see January CURRENT HISTORY), and offered an alternative resolution based on the same fundamental plan. At the following session Mr. Balfour offered the resolution in still another form, in which were incorporated various suggestions which he had received from the other delegates. Both resolutions, as well as the original Viviani draft, were resubmitted to the Drafting Committee. At the session of Jan. 27 Mr. Root stated that the Drafting Committee now recommended the readoption of the Viviani resolution without change, but also recommended that two specific declarations which it had formulated be spread upon the record. The first of these set forth that nothing in Paragraphs 3 or 4 of the

Viviani resolution shall commit the conference to any opinion as to whether the radio stations maintained in China are or are not authorized by the Chinese Government. The other reservation declared that nothing in Paragraph 4 shall militate against the principle of the open door. The Viviani resolution, as readopted is as follows:

The representatives of the powers hereinafter named participating in the discussion of Pacific and Far Eastern questions in the conference on the limitation of armament, to wit, the United States of America, Belgium, the British Empire, China, France, Italy, Japan, The Netherlands and Portugal, have resolved:

1. That all radio stations in China, whether maintained under the provisions of the International Protocol of Sept. 7, 1901, or in fact maintained in the grounds of any of the foreign legations in China, shall be limited in their use to sending and receiving Government messages and shall not receive or send commercial or personal or unofficial messages, including press matter; provided, however, that in case all other telegraphic communication is interrupted, then, upon official notification ac-

accompanied by proof of such interruption to the Chinese Ministry of Communications, such stations may afford temporary facilities for commercial, personal or unofficial messages, including press matter, until the Chinese Government has given notice of the termination of the interruption;

2. All radio stations operated within the territory of China by a foreign Government or the citizens or subjects thereof, under treaties or concessions of the Government of China, shall limit the messages sent and received by the terms of the treaties or concessions under which the respective stations are maintained;

3. In case there be any radio station maintained in the territory of China by a foreign Government or citizens or subjects thereof without the authority of the Chinese Government, such station and all the plant, apparatus and material thereof shall be transferred to and taken over by the Government of China, to be operated under the direction of the Chinese Ministry of Communications upon fair and full compensation to the owners for the value of the installation, as soon as the Chinese Ministry of Communications is prepared to operate the same effectively for the general public benefit;

4. If any question shall arise as to the radio stations in leased territories, in the South Manchurian Railway zone or in the French concessions at Shanghai, they shall be regarded as matters for discussion between the Chinese Government and the Government concerned.

5. The owners or managers of all radio stations maintained in the territory of China by foreign powers or citizens or subjects thereof shall confer with the Chinese Ministry of Communications for the purpose of seeking a common arrangement to avoid interference in the use of wave lengths by wireless stations in China, subject to such general arrangements as may be made by an international conference convened for the revision of the rules established by the International Radio Telegraph Convention signed at London, July 5, 1912.

TEXT OF RESERVATIONS

The reservations, as approved by the committee and spread upon the record, read thus:

The powers other than China declare that nothing in paragraphs 3 or 4 of the resolution of Dec. 7, 1921, is to be deemed to be an expression of opinion by the conference as to whether the stations referred to therein are or are not authorized by China.

They further give notice that the result of any discussion arising under paragraph 4 must, if it is not to be subject to objection by them, conform with the principles of the open door, or equality of opportunity, approved by the conference.

In addition, Mr. Alfred Sze for China similarly spread upon the record the following declaration by China:

The Chinese delegation takes this occasion formally to declare that the Chinese Government does not recognize or concede the right of any foreign power or of the nationals thereof to instal or operate, without its express consent, radio stations in legation grounds, settlements, concessions, leased territories, railway areas or other similar areas.

To understand this declaration, as well as the other reservations affecting the interpretation of Clauses 3 and 4, it is necessary only to bear in mind the unchanging viewpoint of China—a viewpoint at odds with that held by the powers—that all radio stations maintained and operated on Chinese soil are so maintained and operated without China's consent, that the Chinese Government recognizes no such concession, and asserts vigorously that radio communication in China is a Government monopoly.

THE SIBERIAN ISSUE—JAPAN'S NEW PLEDGE

The question of Siberia, involving the possible withdrawal of the Japanese forces, had been considered one of the most important on the conference agenda. Considerable debate had been expected, and the discussion had been arranged under several heads. To the surprise of most of the delegations, the whole question was settled in two sessions of the committee.

Japan, at the first of these sessions, presented a formal statement reviewing the circumstances of her occupation and repeating her pledges to evacuate as soon as she received from a stable Siberian Government assurances of protection for the lives and property of Japanese nationals in Siberia (as well as indemnity for the massacre of Japanese at Nikolaievsk, as a guarantee for which Japan occupied part of Saghalin). At the following session Secretary Hughes presented a full statement of the American position regarding Japan's continued occupation of Siberia, and asked that both statements

be spread on the records. Both the statement by Baron Shidehara and that by Secretary Hughes were considered as of the greatest importance in their bearing upon the eventual restoration of normal conditions in Siberia.

The problem of Siberia was first brought up by Secretary Hughes at the session of Jan. 23. Fully half of this session was given up to a series of eulogies of Viscount Bryce, whose death had been announced. Mr. Hughes, Mr. Root, M. Jusserand and Mr. Balfour all spoke in praise of his personality and achievements for universal peace. Then Secretary Hughes opened the Siberian discussion. Baron Shidehara at once rose and announced that he would like to read a formal statement for Japan in regard to Siberia. If this problem was to be discussed, he said, it would be of interest to the committee to know exactly the intentions and aims of Japan in regard to Siberia. He then read a formal statement, the text of which follows:

The military expedition of Japan to Siberia was originally undertaken in common accord and in co-operation with the United States in 1918. It was primarily intended to render assistance to the Czechoslovakian troops who in their homeward journey across Siberia from European Russia found themselves in grave and pressing danger at the hands of hostile forces under German command. The Japanese and American expeditionary forces, together with other allied troops, fought their way from Vladivostok far into the region of the Amur and the Transbaikial Provinces to protect the railway lines which afforded the sole means of transportation of the Czechoslovakian troops from the interior of Siberia to the port of Vladivostok. Difficulties which the allied forces had to encounter in their operations in the severe cold weather of Siberia were immense.

In January, 1920, the United States decided to terminate its military undertaking in Siberia and ordered the withdrawal of its forces. For some time thereafter Japanese troops continued alone to carry out the duty of guarding several points along the Transsiberian Railways, in fulfillment of interallied arrangements and of affording facilities to the returning Czechoslovaks.

The last column of Czechoslovakian troops safely embarked from Vladivostok in September, 1920. Ever since then Japan has been looking forward to an early moment

for the withdrawal of her troops from Siberia. The maintenance of such troops in a foreign land is for her a costly and thankless undertaking, and she will be only too happy to be relieved of such responsibility. In fact, the evacuation of the Transbaikial and the Amur Provinces was already completed in 1920. The only region which now remains to be evacuated is a southern portion of the Maritime Province around Vladivostok and Nikolsk.

OBSTACLES TO WITHDRAWAL

It will be appreciated that for Japan the question of the withdrawal of troops from Siberia is not quite as simple as it was for other allied powers. In the first place, there is a considerable number of Japanese residents who had lawfully and under guarantees established themselves in Siberia long before the Bolshevik era, and they were entirely welcome. In 1917, prior to the joint American-Japanese military enterprise, the number of such residents was already no less than 9,717. In the actual situation prevailing there, those Japanese residents can hardly be expected to look for the protection of their lives and property to any other authorities than the Japanese. Whatever districts those troops have evacuated in the past have fallen into disorder, and practically all Japanese residents have had precipitately to withdraw, to seek for their personal safety. In so withdrawing they have been obliged to leave behind large portions of their property, abandoned and unprotected, and their homes and places of business have been destroyed. While the hardships and losses thus caused the Japanese in the Transbaikial and the Amur Provinces have been serious enough, more extensive damages are likely to follow from the evacuation of Vladivostok, in which a larger number of Japanese have always been resident and a greater amount of capital invested.

There is another difficulty by which Japan is faced in proceeding to the recall of her troops from the Maritime Province. Due to geographical propinquity, the general situation in the districts around Vladivostok and Nikolsk is bound to affect the security of the Korean frontier. In particular, it is known that these districts have long been the base of Korean conspiracies against Japan. Those hostile Koreans, joining hands with lawless elements in Russia, attempted in 1920 to invade Korea through the Chinese territory of Chien-tao. They set fire to the Japanese consulate at Hunchun and committed indiscriminate acts of murder and pillage. At the present time they are under the effective control of Japanese troops stationed in the Maritime Province, but they will no doubt renew the attempt to penetrate into Korea at the first favorable opportunity that may present itself.

Having regard to those considerations, the Japanese Government have felt bound

to exercise precaution in carrying out the contemplated evacuation of the Maritime Province. Should they take hasty action without adequate provision for the future, they would be delinquent in their duty of affording protection to a large number of their nationals resident in the districts in question and of maintaining order and security in Korea.

It should be made clear that no part of the Maritime Province is under Japan's military occupation. Japanese troops are still stationed in the southern portion of that province, but they have not set up any civil or military administration to displace local authorities. Their activity is confined to measures of self-protection against the menace to their own safety and to the safety of their country and nationals. They are not in occupation of those districts any more than American or other allied troops could be said to have been in occupation of the places in which they were formerly stationed.

POLICY OF NON-INTERVENTION

The Japanese Government are anxious to see an orderly and stable authority speedily re-established in the Far Eastern possessions of Russia. It was in this spirit that they manifested a keen interest in the patriotic but ill-fated struggle of Admiral Kolchak. They have shown readiness to lend their good offices for prompting the reconciliation of various political groups in Eastern Siberia. But they have carefully refrained from supporting one faction against another. It will be recalled, for instance, that they withheld all assistance from General Rozanov against the revolutionary movements which led to his overthrow in January, 1920. They maintained an attitude of strict neutrality and refused to interfere in these movements, which it would have been quite easy for them to suppress if they had so desired.

In relation to this policy of non-intervention, it may be useful to refer briefly to the past relations between the Japanese authorities and Ataman Semenov, which seem to have been a source of popular misgiving and speculation. It will be remembered that the growing rapprochement between the Germans and the Bolshevik Government in Russia in the early part of 1918 naturally gave rise to apprehensions in the allied countries that a considerable quantity of munitions supplied by those countries, and stored in Vladivostok, might be removed by the Bolsheviks to European Russia for the use of the Germans. Ataman Semenov was then in Siberia, and was organizing a movement to check such Bolshevik activities and to preserve order and stability in that region. It was in this situation that Japan, as well as some of the Allies, began to give support to the Cossack chief. After a few months such support by the other powers was discontinued. But the

[American Cartoon]

—Brooklyn Eagle

A SEA DOG MUZZLED

Japanese were reluctant to abandon their friend, whose efforts in the allied cause they had originally encouraged, and they maintained for some time their connection with Ataman Semenov. They had, however, no intention whatever of interfering in the domestic affairs of Russia, and when it was found that the assistance rendered to Ataman Semenov was likely to complicate the internal situation in Siberia, they terminated all relations with him, and no support of any kind has since been extended to him by the Japanese authorities.

The Japanese Government are now seriously considering plans which would justify them in carrying out their decision of the complete withdrawal of Japanese troops from the Maritime Province, with reasonable precaution for the security of Japanese residents and of the Korean frontier regions. It is for this purpose that negotiations were opened some time ago at Dairen between the Japanese representatives and the agents of the Chita Government.

PROMISE OF WITHDRAWAL

Those negotiations at Dairen are in no way intended to secure for Japan any right or advantage of an exclusive nature. They have been solely actuated by a desire to adjust some of the more pressing questions with which Japan is confronted in relation to Siberia. They have essentially in view the conclusion of provisional commercial arrangements, the removal of the existing

[American Cartoon]

—Brooklyn Eagle

Who Said America Had No Picturesque Ruin?

menace to the security of Japan and to the lives and property of Japanese residents in Eastern Siberia, the provision of guarantees for the freedom of lawful undertakings in that region, and the prohibition of Bolshevik propaganda over the Siberian border. Should adequate provisions be arranged on the line indicated, the Japanese Government will at once proceed to the complete withdrawal of Japanese troops from the Maritime Province.

The occupation of certain points in the Russian province of Saghalin is wholly different, both in nature and in origin, from the stationing of troops in the Maritime Province. History affords few instances similar to the incident of 1920 at Nikolaievsk, where more than 700 Japanese, including women and children, as well as the duly recognized Japanese Consul and his family and his official staff, were cruelly tortured and massacred. No nation worthy of respect will possibly remain forbearing under such a strain of provocation. Nor was it possible for the Japanese Government to disregard the just popular indignation aroused in Japan by the incident. Under the actual condition of things, Japan found no alternative but to occupy, as a measure of reprisal, certain points in the Russian provinces of Saghalin, in which the outrage was committed, pending the establishment in Russia of a responsible authority with whom she can communicate in order to obtain due satisfaction.

Nothing is further from the thought of

the Japanese Government than to take advantage of the present helpless condition of Russia for prosecution of selfish designs. Japan recalls with deep gratitude and appreciation the brilliant rôle which Russia played in the interest of civilization during the earlier stage of the great war. The Japanese people have shown and will continue to show every sympathetic interest in the efforts of patriotic Russians as pointing to the unity and rehabilitation of their country. The military occupation of the Russian province of Saghalin is only a temporary measure and will naturally come to an end as soon as a satisfactory settlement of the question shall have been arranged with an orderly Russian Government.

In conclusion, the Japanese delegation is authorized to declare that it is the fixed and settled policy of Japan to respect the territorial integrity of Russia and to observe the principle of non-intervention in the internal affairs of the country, as well as the principle of equal opportunity for the commerce and industry of all nations in every part of the Russian possessions.

STATEMENT BY MR. HUGHES

At the session of Jan. 24, Secretary Hughes read a long and detailed statement taking cognizance of the Japanese declarations and setting forth the American attitude as follows:

The American delegation has heard the statement by Baron Shidehara and has taken note of the assurance given on behalf of the Japanese Government with respect to the withdrawal of Japanese troops from the Maritime Province of Siberia and from the Province of Saghalin. The American delegation has also noted the assurance of Japan by her authorized spokesman that it is her fixed and settled policy to respect the territorial integrity of Russia, and to observe the principle of non-intervention in the internal affairs of that country, as well as the principle of equal opportunity for the commerce and industry of all nations in every part of the Russian possessions.

These assurances are taken to mean that Japan does not seek, through her military operations in Siberia, to impair the rights of the Russian people in any respect, or to obtain any unfair commercial advantages, or to absorb for her own use the Siberian fisheries, or to set up an exclusive exploitation either of the resources of Saghalin or of the Maritime Province.

As Baron Shidehara pointed out, the military expedition of Japan to Siberia was originally undertaken in common accord and in co-operation with the United States. It will be recalled that public assurances were given at the outset by both Governments of a firm intention to respect

the territorial integrity of Russia and to abstain from all interference in Russian internal politics. In view of the reference by Baron Shidehara to the participation of the American Government in the expedition of 1918, I should like to place upon our records for transmission to the conference the purposes which were then clearly stated by both Governments.

The American Government set forth its aims and policies publicly in July, 1918. The purposes of the expedition were said to be, first, to help the Czechoslovaks consolidate their forces; second, to steady any efforts at self-government or self-defense in which the Russians themselves might be willing to accept assistance; and, third, to guard the military stores at Vladivostok.

The American Government opposed the idea of a military intervention, but regarded military action as admissible at the time solely for the purpose of helping the Czechoslovaks consolidate their forces and get into successful co-operation with their Slavic kinsmen, and to steady any efforts at self-government or self-defense in which the Russians themselves might be willing to accept assistance. It was stated that the American Government proposed to ask all associated in this course of action to unite in assuring the people of Russia in the most public and solemn manner that none of the governments uniting in action either in Siberia or in Northern Russia contemplated any interference of any kind with the political sovereignty of Russia, any intervention in her internal affairs, any impairment of her territorial integrity, either now or thereafter, but that each of the associated powers had the single object of affording such aid as should be acceptable and only such aid as should be acceptable to the Russian people in their endeavor to regain control of their affairs, their own territory and their own destiny.

What I have just stated is found in the public statement of the American Government at that time.

The Japanese Government, with the same purpose, set forth its position in a statement published by the Japanese Government on Aug. 2, 1918, in which it was said:

"The Japanese Government, being anxious to fall in with the desires of the American Government and also to act in harmony with the Allies in this expedition, have decided to proceed at once to dispatch suitable forces for the proposed mission. A certain number of these troops will be sent forthwith to Vladivostok. In adopting this course, the Japanese Government remain unshaken in their constant desire to promote relations of enduring friendship with Russia and the Russian people, and reaffirm their avowed policy of respecting the territorial integrity of Russia and of abstaining from all interference in her internal politics. They further declare that, upon the realization of the projects above indicated, they will immediately withdraw all

Japanese troops from Russian territory and will leave wholly unimpaired the sovereignty of Russia in all its phases, whether political or military."

JAPAN'S COURSE REGRETTED

The United States of America withdrew its troops from Siberia in the Spring of 1920 because it considered that the original purposes of the expedition had either been accomplished or would no longer be subserved by continued military activity in Siberia. The American Government then ceased to be a party to the expedition, but it remained a close observer of events in Eastern Siberia and has had an extended diplomatic correspondence upon this subject with the Government of Japan.

It must be frankly avowed that this correspondence has not always disclosed an identity of views between the two Governments. The United States has not been unmindful of the direct exposure of Japan to Bolshevism in Siberia and the special problems which the conditions existing there have created for the Japanese Government, but it has been strongly disposed to the belief that the public assurances given by the two Governments at the inception of the joint expedition nevertheless required the complete withdrawal of Japanese troops from all Russian territory—if not immediately after the departure of the Czechoslovak troops, then within a reasonable time.

As to the occupation of Saghalin in reprisal for the massacre of the Japanese at Nikolaievsk, the United States was not unimpressed by the serious character of that catastrophe; but, having in mind the con-

[German-Swiss Cartoon]

—Nebelspalter, Zurich

DISARMAMENT

Then spake the British Walrus: "Do away with your quills." Then said the French Porcupine: "Walrus, do away with your tusks." And there the matter rested

ditions experienced by both Governments at the outset of the joint expedition, of which the Nikolaievsk massacre must be considered an incident, it has regretted that Japan should deem necessary the occupation of Russian territory as a means of assuring a suitable adjustment with a future Russian Government.

The general position of the American Government was set forth in a communication to Japan of May 31, 1921. In that communication appears the following statement:

"The Government of the United States would be untrue to the spirit of co-operation which led it, in the Summer of 1918, upon an understanding with the Government of Japan, to dispatch troops to Siberia, if it neglected to point out that, in its view, continued occupation of the strategic centres in Eastern Siberia—involving the indefinite possession of the Port of Vladivostok, the stationing of troops at Khabarovsk, Nikolaievsk, De Castries, Mago, Sophiesk and other important points, the seizure of the Russian portion of Saghalin, and the establishment of a civil administration, which inevitably lends itself to misconception and antagonism—tends rather to increase than to allay the unrest and disorder in that region.

"The military occupation in reprisal for the Nikolaievsk affair is not fundamentally a question of the validity of procedure under the recognized rules of international law.

"The issue presented is that of the scrupulous fulfillment of the assurances given to the Russian people, which were a matter of frank exchanges and of apparently

complete understanding between the Governments of the United States and of Japan. These assurances were intended by the Government of the United States to convey to the people of Russia a promise on the part of the two Governments not to use the joint expedition, or any incidents which might arise out of it, as an occasion to occupy territory, even temporarily, or to assume any military or administrative control over the people of Siberia."

Further in the same note, the American Government states its position as follows:

"In view of its conviction that the course followed by the Government of Japan brings into question the very definite understanding concluded at the time troops were sent to Siberia, the Government of the United States must in candor explain its position and say to the Japanese Government that the Government of the United States can neither now nor hereafter recognize as valid any claims or titles arising out of the present occupation and control, and that it cannot acquiesce in any action taken by the Government of Japan which might impair existing treaty rights or the political or territorial integrity of Russia.

"The Government of Japan will appreciate that in expressing its views the Government of the United States has no desire to impute to the Government of Japan motives or purposes other than those which have heretofore been so frankly avowed. The purpose of this Government is to inform the Japanese Government of its own conviction that, in the present time of disorder in Russia, it is more than ever the duty of those who look forward to the tranquilization of the Russian people and a restoration of normal conditions among them, to avoid action which might keep alive their antagonism and distrust toward outside political agencies. Now, especially, it is incumbent upon the friends of Russia to hold aloof from the domestic contentions of the Russian people, to be scrupulous to avoid inflicting what might appear to them a vicarious penalty for sporadic acts of lawlessness, and, above all, to abstain from even the temporary and conditional impairment by any foreign power of the territorial status which, for them as for other peoples, is a matter of deep and sensitive national feeling, transcending perhaps even the issues at stake among themselves."

To that American note the Japanese Government replied in July, 1921, setting forth in substance what Baron Shidehara has now stated to this committee, pointing out the conditions under which Japan has taken the action to which reference was made, and giving the assurances, which have here been reiterated, with respect to its intention and policy.

How France understands disarmament and European pacification

est hope of the American Government—and of Japan as well, I am sure—that this occasion for divergence of views between the two Governments might be removed with the least possible delay. It has been with a feeling of special gratification, therefore, that the American delegation has listened to the assurances given by their Japanese colleague, and it is with the greatest friendliness that they reiterate the hope that Japan will find it possible to carry out within the near future her expressed intention of terminating finally the Siberian expedition and of restoring Saghalin to the Russian people.

My suggestion would be, if it is not desired otherwise by the delegates, that the statement made on behalf of the Japanese Government by Baron Shidehara and the one that I have made setting forth the position of the American Government, which is as stated in its communication of May 31, 1921, which I have read, should be communicated to the conference for the purpose of being spread upon its records.

I suggest the adoption of the following resolution:

"Resolved that the statements by the Japanese and American delegations in respect to the presence of foreign troops in Siberia be reported to the conference at its next plenary session to be spread upon its records."

This resolution was then put by the Chairman to a vote. All the nine delegations formally assented, and it was unanimously passed. In signifying the assent of the French delegation, M. Sarraut declared that it was with "peculiar satisfaction" that he had heard the formal assurance given by Japan that she would withdraw her troops as soon as possible, and would not interfere in the domestic affairs of the Russian people. He recalled the fact that France was one of the oldest allies of Russia, and declared that France was still grateful to the Russian people for the part they had played in the world war, still loyal to that friendship, and to Russia's hopes of future regeneration. When that time arrived, he said, it would be good for Russia "to find unimpaired the patrimony that had been kept for her by the honesty and loyalty of her allies."

FINAL SESSIONS

The final sessions of the conference were marked by a large number of positive achievements, including

the approval of several important treaties and decisions on many matters that had been worked out in committee. The Far Eastern Committee continued its labors to the very end, and all outstanding issues affecting China were adjusted at its last session on Feb. 3. The question of the administration of the Chinese Eastern Railway, the long controversy between China and Japan over the famous twenty-one demands, and last-minute declarations by China on the "open door" and on leased territories, were some of the matters settled. The conference, meeting as a Committee of the Whole, held two plenary sessions on Feb. 1 and Feb. 4, at which many questions of importance were finally disposed of.

At the plenary session of Feb. 1 the conference took the following action: Adoption of the Five-Power Naval Treaty, providing for abolition of competition in capital ships; fixing the ratio of such ships in the American, British, Japanese, French and Italian navies; limiting the tonnage of aircraft carriers; specifying the maximum size and armor permitted to capital ships; laying down the status quo for the possession by any power of naval bases in the Pacific; adoption of the Five-Power Treaty binding the same nations to refrain from the use of submarines as commerce destroyers and from the employment of poison gas in warfare. A number of resolutions on China approved by the Far Eastern Committee were formally adopted.

At the sixth plenary session, Feb. 4, the conference adopted the two nine-power treaties on the open door and the Chinese tariff. It also adopted a resolution for the establishment of a Board of Reference in Peking to consider questions arising from the application of the open-door principle; adopted resolutions on the Chinese Eastern Railway, approved a supplement to the four-power treaty which removed Japan's "homeland" from its scope, naming Formosa, the Pescadores, the Japanese half of Saghalin and the mandated islands as the only Japa-

nese insular possessions specified in the treaty; approved a declaration by China that she would not alienate any of her territory, and finally passed a supplementary resolution to the Naval Treaty intimating that the five signatory powers would consider it a breach of honor for any of those powers to sell or otherwise dispose of any of the warships designated for scrapping between the present and the date of ratification of the treaty. These and other decisions will be found treated under separate heads. The text of the treaties finally approved and signed at the seventh plenary session of Feb 6—the closing meeting of the conference—as well as of the separate treaty on Shantung (signed on Feb. 4)—will be found further along in these pages.

CHINESE EASTERN RAILWAY

Resolutions were passed by the Far Eastern Committee on Feb. 2 regarding the future administration of the Chinese Eastern Railway. The subcommittee of experts charged with the problem of what should be done in the case of this important line, which China is holding and operating through the Russo-Asiatic Bank, pending the establishment of a stable Government in Russia, had recommended that the supervision of finances and protection for the road be intrusted to the Interallied Technical Commission, which has exercised a moral trusteeship since 1919. The strong objections of Dr. Hawuling Yen, the Chinese member of the subcommittee, led to an impasse, many resolutions being drafted and failing to meet the Chinese objections. The net result was embodied in this double resolution, presented to the main committee at the Feb. 2 session:

Resolved. That the preservation of the Chinese Eastern Railway for those in interest requires that better protection be given to the railway and the persons engaged in its operation and use, a more careful selection of personnel to secure efficiency of service, and a more economical

use of funds to prevent waste of the property.

That the subject should immediately be dealt with through the proper diplomatic channels.

At the same time all powers other than China—that is to say, the United States, Belgium, Great Britain, France, Italy, Japan, the Netherlands and Portugal—have united in the following reservation:

The powers other than China in agreeing to the resolution regarding the Chinese Eastern Railway reserve the right to insist hereafter upon the responsibilities of China for performance or non-performance of the obligations toward the foreign stockholders, bondholders and creditors of the Chinese Eastern Railway Company, which the holders deem to result from the contracts under which the railroad was built and the action of China thereunder and the obligations, which they deem to be in the nature of a trust resulting from the exercise of power by the Chinese Government over the possession and administration of the railroad.

Mr. Koo defended the Chinese objection against giving financial control to the Interallied Technical Commission. He referred to the interallied agreement of 1919, to which China was a party, and to which five of the other powers represented at the Washington conference were also parties. Under this agreement provision had been made for supervision of the whole Transsiberian system, including the Chinese Eastern Railway; he feared, he said, that misgivings would be aroused in China if this particular railroad should be singled out for separate treatment. Any such special agreement, furthermore, he added, would be of slight value if it did not take in the Transsiberian Railway, which connects with Europe and the Ussuri Railway, and which assures its access to the sea. The line, furthermore, ran through Chinese territory, and Chinese sovereignty must be guaranteed. He pointed out the legal status of the contract under which China now assumed responsibility for this originally Russian line, though he emphasized the provisional nature of this responsibility. He admitted that there was opportunity for improvement in the Chinese Administration, but pointed out the unsettled conditions which prevailed, due to the political revolution in Russia, and

declared that China had done her best. The resolution was then unanimously adopted.

THE TWENTY-ONE DEMANDS

In the Far Eastern Committee on Feb. 2 Japan offered three modifications in the famous twenty-one demands, including the withdrawal of Group 5, which had been reserved for further consideration when these demands were forced upon China by an ultimatum on May 25, 1915, following the Japanese seizure of Kiao-Chau from the Germans. Baron Shidehara, the spokesman for Japan, declared emphatically against revision of the treaties growing out of these demands, which gave Port Arthur and Dairen (Dalny) to Japan under extension of a lease formerly owned by Russia. These treaties had been signed by China, he declared, and any attempt to revise them would create a dangerous precedent. Japan, however, he explained, was willing, in view of the change in the situation, to make the following modifications:

1. Japan is ready to throw open to the international consortium the right of option, granted exclusively to Japanese capital, to loan for the construction of railways in South Manchuria and Eastern Inner Mongolia.

2. Japan will not exercise her preferential rights in questions concerning the engagement by China of Japanese advisers or instructors on political, financial, military and police matters in South Manchuria.

3. Japan will withdraw the reservations, which she made in proceeding to the signature of the twenty-one demands, to the effect that Group 5 of the original proposals would be postponed for future negotiations.

These modifications, as well as the Japanese viewpoint, were regarded as unsatisfactory by the Chinese delegates, and the matter came up again at the next day's session, when Dr. Wang vigorously reasserted China's desire for a revision on the ground of essential injustice; the demands were forced on China, Japan gave no *quid pro quo*; the agreements are in violation of treaties between China and other powers, inconsistent with the principles adopted by the conference, dangerous to the peace between

China and Japan. This statement, he said, was made by China in order to place on record her unchanging view regarding the treaties of 1915. Secretary Hughes then explained the attitude of the American Government, as it was outlined in the note sent by Washington to Japan on May 13, 1915; this attitude, he said, remained the same. Group 1 of the demands, he added, had been eliminated by the Shantung settlement; Group 5 would not be pressed by Japan, while many of the other rigid features of the demands had been softened by the concessions now offered. In comment on the first of the three concessions offered by Japan, he expressed the hope that this might be interpreted to mean that Japan would not confine such undertakings by foreign capital to the consortium powers alone. At Mr. Hughes's suggestion, the various speeches made in the conference on the twenty-one demands were spread upon the record. The Chinese delegation assented to this, but reserved the right to seek a solution of the question on some future occasion. The controversy, so far as the action of the conference was concerned, was thus terminated.

THE OPEN-DOOR TREATY

The Open-Door Treaty was unanimously adopted at the sixth plenary session on Feb. 4. This agreement, considered one of the most important, incorporated in treaty form the original Root resolutions, which had pledged the powers to aid China to recover her equilibrium, to refrain from seeking any unfair or special advantages and to respect Chinese neutrality. The treaty also empowers any of the nations concerned, including China, to call a conference of all the signatories in case a situation arises "which in the opinion of any one of them" involves the application of the stipulations of the treaty. With this treaty a special resolution was passed for the creation of a Board of Reference in Peking to consider dis-

puted points in connection with the open-door principle.

In reference to this agreement, Baron Shidehara of Japan, at the session of the Far Eastern Committee of Feb. 2, took occasion to press the Chinese delegation for a statement regarding the development of China's vast resources by foreign capital under the open-door principle of equal co-operation. He had first asked for such a formal statement at the session of Jan. 18, but the matter had been laid over. Mr. Sze replied with a voluntary statement declaring China's entire willingness to throw this development open to foreign interests; her policy for some time, he said, had been in this direction, and had been based on China's consciousness "of mutual advantage which foreign trade brings." Such trade, he added, consisted mostly of natural products. In the railway transportation of such products and other articles of merchandise his Government had always followed the principle of strict equality of treatment between all foreign shippers, and it had also steadily encouraged the development of natural resources by the participation of foreign capital. Thanks to this liberal policy, said Mr. Sze, raw material and food supplies in China and Manchuria are now accessible to all nations on fair terms. He understood that Japan in pressing for this statement was not seeking any special consideration for herself, or even for the foreign powers as a whole, but merely wished to be assured that China was disposed to accord equal opportunities on the same terms as any other nations richly endowed with natural resources.

CHINESE TARIFF TREATY

The nine-power treaty on the Chinese tariff was approved at the plenary session, Feb. 4. It embodied resolutions that had been passed on Jan. 16. In reporting it, Senator Underwood reviewed the history of events leading to the adoption on Oct. 8, 1843, of the existing arrangement, under which China was technically to

receive a 5 per cent. quota of the revenues, but under which she receives a scant 3½ per cent. *ad valorem*. To give China an effective 5 per cent., he explained, it was necessary to provide for a revision of this arrangement; furthermore, in recognition of China's need of greater income, a special commission is to be charged with the levying of various surtaxes detailed in the treaty. Senator Underwood stressed the importance of the clauses of the treaty abolishing all unfair discriminations made in tariff treaties concluded by China in favor of Russia, Great Britain, France and Japan. He ended his reading of the terms of the treaty thus: "I can say that adoption of this treaty and putting it into effect will, in all probability, double the existing revenues of China received from maritime and inland customs."

Mr. Sze, for the Chinese delegation, then asked to have spread on the record the statements made by him on this subject at the sessions of Jan. 5, Jan. 16 and Feb. 3. He took special note of Senator Underwood's statement that the present treaty was drawn only to meet the present temporary conditions in China, and emphasized the fact that his country "looks eagerly toward the earliest restoration of full tariff autonomy." The treaty was then formally approved by all the delegations.

THE SHANTUNG TREATY

The long and dangerous controversy between China and Japan over Shantung was finally settled by the signing of a treaty between those two powers on Feb. 4. This was one of the most important things done at the Washington conference; its importance was in no way diminished by the fact that the action and influence of the conference were only indirectly exercised. Under the treaty China is to receive back from Japan the former German properties, concessions, railway, port, mining, maritime customs and other rights. Thus was written, apparently, the last chapter in a perilous controversy that had raged without cessation ever

since the signing of the Treaty of Versailles. That treaty had confirmed Japan's claim to the former German rights in Shantung. China had refused, for that reason, to sign the Versailles Treaty. Many times since then, Japan had tried to get China to negotiate on this question, but the Chinese Government had steadfastly refused to accept the demands which the Japanese Government made the condition of an eventual return of Shantung. Meantime, Japanese military forces held the disputed peninsula.

At the conference the Chinese persisted in this refusal to negotiate, and as Japan remained inflexible in her demands, there seemed to be no hope of a settlement. The conference itself was hampered by the situation. It was only through the intervention of Secretary Hughes, Chairman of the conference, and of Mr. Balfour, head of the British delegation, that the Chinese and Japanese delegates, after securing the consent of their respective Governments, consented to tackle the issue in separate negotiations outside the conference. The result of these "conversations," which were opened on Dec. 1, and which continued for nearly two months, was the treaty signed on Feb. 4.

The ceremony of signing took place in the presence of Secretary Hughes and Mr. Balfour, also of four Far Eastern experts, namely, John V. A. MacMurray and Edward Bell for the United States, and M. W. Lamson and F. A. Gwatkin for Great Britain, and lastly of a small group of newspaper men. The proceedings took place in the Hall of America, adjoining the room where the Chinese and Japanese delegates had wrestled over the problem so many weeks. The delegates and other participants met at 5 o'clock, and the signing occurred half an hour later. The two delegations, seated at opposite sides of the table, signed alternately, and in the following order for each delegation: China—Dr. Sze, Dr. Koo, Dr. Wang; Japan—Baron Kato, Baron Shidehara, Mr. Hanihara. The signatures were in English, not in Chi-

nese or Japanese characters. The annex was signed immediately after the treaty.

After the signing, Dr. Sze formally voiced, on behalf of the Chinese delegation, his thanks to Mr. Hughes and Mr. Balfour for their good offices, which had resulted in so happy a settlement. Baron Kato expressed also Japan's gratitude. Secretary Hughes replied simply: "I congratulate you both, gentlemen." Mr. Balfour said: "It is a source of deep satisfaction to me to see the matter so happily settled." The session then adjourned. Thus ended one of the most dangerous disputes in the Far East.

This agreement had not been achieved without a struggle. From the moment when the discussions opened on Dec. 1, almost up to the beginning of February, the difficulties of reaching a settlement were constantly in evidence. The terms on which Japan should hand over the Shantung Railway to China constituted the chief rock on which the negotiations threatened to be shattered. Several times a deadlock was established, and Japan ultimately declared that she had gone to the fullest extent of her power of concession. A report that President Harding had intervened personally, in view of the importance of a settlement to the Arms Conference itself, proved to be erroneous. The Chinese delegation leaders had seen and talked with the President at the White House, but they had sought this interview of their own volition. The deciding factor in securing a settlement of the embittered controversy was the unwearied effort of Secretary Hughes and Mr. Balfour to aid the conflicting delegations to compose their differences. The main dispute was over the desire of the Chinese to obtain absolute possession of the Shantung Railway by purchase; the Japanese wished to retain financial control for a number of years, and also desired joint operation under a Japanese traffic manager, which meant Japanese administrative control.

CHINA BUYS THE RAILWAY

Under the agreement finally reported to the fifth plenary session of the conference on Feb. 1, and signed three days later, China is to pay to Japan 53,406,141 gold marks (the assessed value of the properties taken by the Japanese from the Germans during the World War, plus the value of the improvements added by Japan, and making allowance for depreciation). Payment is to be made in Chinese treasury notes, and the instalments may be spread over fifteen years, China being given an option to complete payment within five years. Pending the redemption of the treasury notes, a Japanese traffic manager and Japanese auditor are to be sanctioned by the Chinese Government. Under a statement of understandings reached at the conversations and read by Secretary Hughes at the session of Feb. 1, the entire subordinate staff of these two Japanese officials is to be appointed by the Chinese Managing Director, the Japanese employes to be gradually eliminated by substitution; China is also to have the right to appoint an assistant traffic manager of Chinese nationality within two years and a half after the transfer of the railway is effected.

Japan pledges herself, furthermore, to withdraw all her military forces from Shantung as soon as China sends her own troops to guard the railway. Special agreements were reached on the following questions: transfer of public properties and of the maritime customs; disposition of the mines lying along the railway, opening of the former German leased territory, purchase by China of the salt industry, return to China of the former German cables, transfer to China of the Japanese wireless stations under fair compensation, and Japanese military withdrawal from these stations. The full text of the Shantung treaty will be found further along in these pages.

The importance of the treaty was stressed by both Baron Shidehara

and Dr. Sze. Before all the delegations they formally voiced their gratitude to Secretary Hughes and Mr. Balfour for so powerfully aiding in the settlement. "Of supreme importance," said Baron Shidehara, "is it that this vexatious question of long standing between Japan and China should be definitely removed. The atmosphere of unrest and tension which it has created in the popular mind must be set forever at rest. That desirable end, indeed, has been achieved fully and completely." Dr. Sze said in part: "The Chinese delegation rejoices in the settlement of this question, not only because a source of friction between its Government and that of Japan has been removed, but also because the Chinese Government is able to aid in the realization of the beneficent object for which this conference was convened." Secretary Hughes extended "most cordial congratulations of the conference to the representatives of the Japanese and Chinese Governments upon the successful conclusion of these conversations, and upon the fact that they have been able to reach a satisfactory basis of agreement with regard to this most serious subject of controversy."

Mr. Balfour, after making similar appropriate comment, gave utterance to a formal statement for the British Government, of great importance in its bearing on the Shantung treaty. He announced that Great Britain was now ready to complete the purpose of that treaty by handing back the British concession of Wei-hai-wai, which also lies within the Shantung borders. He reviewed the events which first led the British to acquire this concession at a moment when both Germany and Russia were attempting to dominate the Chinese Empire. The necessity which thus arose had disappeared, and his country was now ready to hand this strip of Chinese territory back to its rightful owner, China. (The intention to do this was first announced by the British delegation at the session of Dec. 3.) Thus the complete sovereignty of her most

populous province would be restored to China. This statement was warmly applauded by all the delegations.

LEASED TERRITORIES

The subject of leased territories which had thus arisen again, was finally closed at the session of the Far Eastern Committee held on Feb. 2, when Mr. Sze declared that the Chinese delegation would cordially welcome a similar statement from the French delegation with regard to the French concession of Kwang-chow-wan. M. Sarraut in reply pointed out that France had been the first to offer to restore her leased territory to China, and reminded Mr. Sze that M. Viviani, speaking for France on Dec. 4, had stated in the most definite way that this return would be made on condition that all the other powers having leased territories should restore them to Chinese sovereignty. The French Government, added M. Sarraut, still had this intention, and was now willing to do so, irrespective of whether the condition stipulated was fulfilled or not. Mr. Sze, in reply, stated this would be greatly appreciated by the Chinese people.

COMMISSION ON RULES OF WAR

The conference on Jan. 27 created a commission to study the rules of warfare in the light of the World War. Though certain decisions had been reached in regard to submarines, gas warfare, and the use of airplanes, the American delegation still advocated a future parley to revise international war rules in general, and Secretary Hughes made a formal proposal to that effect on Dec. 9. His, plan, he explained, contemplated only a commission of expert jurists, because a general conference would be as greatly handicapped by its lack of technical preparation as was the conference at Washington. Objection to a juristic personnel was overcome, but new opposition arose from an unexpected quarter when Mr. Balfour, head of the British delegation, pointed out that the scope as-

signed by Secretary Hughes to the contemplated commission was altogether too broad. He referred to the many complex ramifications of the whole subject of the international rules of war, and intimated that no one commission would ever be able to compass an investigation of such magnitude. He then suggested that the field of study be limited to rules of war as affected only by the new weapons. The commission was accordingly created on these lines by a resolution approved on Jan. 27; it is to be composed of ten members, two each for the United States, Great Britain, France, Italy and Japan, and is to report its findings to each of these powers, which shall consider collectively the steps necessary to make the adoption of the new rules universal. The resolution, as finally adopted, included a special reservation exempting submarines and chemical warfare from the inquiry. The text follows:

The United States of America, the British Empire, France, Italy and Japan have agreed:

1. That a commission composed of not more than two members representing each of the above-mentioned powers shall be constituted to consider the following questions:

(a) Do existing rules of international law adequately cover new methods of attack or defense resulting from the introduction or development, since the Hague conference of 1907, of new agencies of warfare?

(b) If not so, what changes in the existing rules ought to be adopted in consequence thereof as a part of the law of nations?

2. That notices of appointment of the members of the commission shall be transmitted to the Government of the United States of America within three months after the adjournment of the present conference, which after consultation with the powers concerned will fix the day and place for the meeting of the commission.

3. That the commission shall be at liberty to request assistance and advice from experts in international law and in land, naval and aerial warfare.

4. That the commission shall report its conclusions to each of the powers represented in its membership. Those powers shall thereupon confer as to the acceptance of the report and the course to be followed to secure the consideration of its recommendations by the other civilized powers.

The reservation, cast in the form

of a supplementary resolution, read thus:

Resolved. That it is not the intention of the powers agreeing to the appointment of a commission to consider and report upon the rules of international law respecting new agencies of warfare that the commission shall review or report upon the rules or declarations relating to submarines or the use of noxious gases and chemicals already adopted by the powers in this conference.

ADOPTING THE NAVAL TREATY

The fifth plenary session, held on Feb. 1, was one of the most momentous in the whole life of the conference. This session was marked by the final adoption of the Five-Power Naval Treaty embodying, in a somewhat modified form, the American proposals with which Secretary Hughes had electrified the world in November. The salient features of the compact, as passed, are these: Abolition of competition in capital ships; a fixed ratio for such ships in the British, American, Japanese, French and Italian navies; limitation of the tonnage of aircraft carriers; specification of the maximum size and armament permitted to non-capital ships; a special Anglo-American-Japanese agreement to abstain from further construction of naval bases and fortifications in the islands of the Western Pacific. The official text of the treaty will be found elsewhere in these pages.

The treaty, which had been distributed to the delegations in both an English and a French version, proved to be a long document, and Mr. Hughes, who reported its final completion after weeks of arduous labor on the part of the Subcommittee on the Limitation of Naval Armament, made no attempt to read it. In lieu of this, he presented a very full analysis of it, pointing out the differences between the original American proposals and the version finally reported. The main features of Secretary Hughes's explanation, elaborated and clarified, are as follows:

In the original American proposals of Nov. 12 these four principles were laid down, under which the limitation of capital ship tonnage should proceed:

1. That all capital ship building pro-

grams, whether actual or projected, should be abandoned.

2. That further reduction should be made through the scrapping of certain of the older ships.

3. That, in general, regard should be had to the existing naval strength of the powers concerned.

4. That the capital ship tonnage should be used as the measurement of strength for navies, and that a proportionate allowance of auxiliary combatant craft should be prescribed.

THE ORIGINAL PLAN

The original American plan for naval limitation had been briefly as follows:

United States—(a) Retention of eighteen capital ships, with an aggregate tonnage of 500,650. (b) Scrapping of fifteen capital ships now under construction, representing a total of 618,000 tons; these fifteen ships included six battle cruisers and seven battleships on the ways, and two battleships already launched. (c) Scrapping of all the older battleships up to, but not including, the Delaware and the North Dakota—a total of 227,040 tons. (d) Total number of capital ships to be scrapped, 30; total tonnage to be scrapped, 845,740.

Great Britain—(a) Retention of twenty-two capital ships, with an aggregate of 604,450 tons. (b) Scrapping of four projected battleships of the Hood type, not yet laid down, but on which money has been spent, representing a total tonnage of 172,000. (c) Scrapping of her pre-dreadnoughts, second and first line battleships up to, but not including, the King George V. class, a total of nineteen capital ships, with an aggregate of 411,375 tons. (d) Total number of ships to be abandoned or scrapped, twenty-three; total tonnage to be scrapped, 583,375.

Japan—(a) Retention of ten capital ships with an aggregate of 299,700 tons. (b) Abandonment of her building program for ships not yet laid down, viz., the Kii, the Owari, battleships No. 7 and No. 8, battle cruisers Nos. 5, 6, 7 and 8. (c) Scrapping of three capital ships (the Mutsu, launched, and the Tosa and Kago, in course of construction), also of four battle cruisers (the Amagi and Akagi, in course of building, and the Atoga and Takao, not yet laid down, but material for which has been assembled); whole number of ships under this heading, seven, totaling 288,100 tons. (d) Scrapping of all pre-dreadnoughts and battleships of the second line, up to, but not including, the Settsu, a total of ten old-type battleships, with an aggregate of 159,828 tons. (e) Total number of ships to be scrapped, 17; total tonnage to be scrapped, 448,928.

France and Italy—The American proposals stated, in respect to France and Italy, that "in view of the extraordinary conditions due to the World War, affecting the existing strength of the navies of France and Italy," the proportion in capital ships

to be allotted to these nations would be subject to later adjustment.

In the long committee debates following the presentation of the American proposals, Japan, though accepting the proposals in principle, held fast to her contention that she should be allowed to retain the Mutsu, recently launched and partly built by popular subscription. This claim was finally allowed, though the change necessitated a readjustment of plan for both the United States and Great Britain.

THE TREATY AS IT STANDS

The plan, as modified by the treaty, now stands thus:

The United States, Great Britain and Japan are to retain the same number of capital ships as in the original proposals, viz.: The United States, 18; Great Britain, 22, and Japan, 10. For the United States, the tonnage figures remain roughly the same, that is, 500,650, but the following changes are provided for: Two ships of the West Virginia type are to be completed, and on their completion two of the ships originally to have been retained, viz., the North Dakota and the Delaware, are to be scrapped, bringing the total tonnage retained to 525,850. Great Britain retains the same ships as in the original proposal, except that the Thunderer is substituted for the Erin, bringing down the original tonnage estimate from 604,450 to 580,450 tons. She is, however, given the right to construct two new ships of 35,000 tons each, on the understanding that she will scrap the following ships: The Thunderer, the King George V., the Ajax, and the Centurion. When these four ships are scrapped and the two new ships are completed, the total tonnage for Great Britain will be 558,950.

For Japan, the only difference is that the Mutsu is to be retained, and the Settsu scrapped, making a total tonnage of 301,320 tons, as against the 299,700 tons originally proposed, and diminishing the tonnage to be scrapped in a similar proportion.

As for France and Italy, for which the principle of approximate parity has been applied, each of these nations is to retain the ships which it now possesses, viz.: France, 10 ships (three of these are pre-dreadnoughts of the old type), with a total tonnage of 221,170 tons; Italy, also ten ships, with a total tonnage of 182,800 tons. Secretary Hughes made the following explanation:

"In view of the reduced condition of the navies of France and Italy, it was recognized at the outset that they could not fairly be asked to scrap their ships in the proportion in which the United States of America, the British Empire and Japan were to scrap their ships. In the case of these three powers, the scrapping roughly amounts to about 40 per cent. of the capi-

tal ship strength, and it was not thought, in view of the reduction of the navies of France and Italy, that they could be asked to scrap in anything like that proportion."

The number and tonnage of ships to be retained, as laid down by the treaty for all the five powers concerned, as well as the number and tonnage of the ships to be scrapped, are shown in the following table:

Country.	No. of ships retained.	Amount of tonnage retain'd.	No. of ships scrapped.	Amount of tonnage scrapped.
United States.	18	500,650 (*525,850)	28	845,740
Great Britain.	22	580,450 (*558,950)	†23	583,375
Japan	10	301,320	17	147,308
France	10	221,170	None	None
Italy	10	182,800	None	None

* The eventual tonnage.

† Including the four projected but unbuilt Hoods.

‡ Excluding the difference of tonnage between the Mutsu and the Settsu.

SPECIAL PROVISIONS

Secretary Hughes pointed out that the prescribed process of scrapping was not left to conjecture or to individual decision, and that special provisions had been inserted to cover the procedure in Part II. of the treaty under Chapter II., "Rules for Scrapping Vessels of War." He emphasized Article 4, which fixes the maximum replacement tonnage as follows: United States, 525,000 tons; Great Britain, 525,000 tons; Japan, 315,000 tons; France, 175,000 tons; Italy, 175,000 tons. He also referred to the special provisions for aircraft carriers under Articles 7, 8, 9 and 10. Mr. Hughes stressed the importance of the definition of this type of ship as "a vessel of war, with a displacement in excess of 10,000 tons standard displacement, designed with the specific and exclusive purpose of carrying aircraft." It must be so constructed, under the treaty terms, that aircraft can be launched therefrom and landed thereon, and not designed and constructed to carry a more powerful armament than that allowed to it. Provision for replacement without regard to age had been made owing to recognition of the experimental nature of existing aircraft carriers. Tonnage had been generally limited to 27,000 tons, but a special arrangement had been made authorizing the contracting powers to build not more than

two of these craft, each of a tonnage of not more than 33,000 tons. Furthermore, it was provided that any nation might convert two ships slated for scrapping into aircraft carriers, not to exceed 33,000 tons each.

Secretary Hughes also explained the insertion of certain provisions "of a protective nature, that is, to protect the faithful execution of the agreement." No vessel of war laid down by any of the contracting powers (save capital ships) may carry a gun in excess of eight inches; no vessel slated to be scrapped may be converted into a vessel of war; no merchant ship in time of peace shall be prepared for conversion into a war vessel, other than the stiffening of decks necessary for the mounting of 6-inch guns; no vessels built for any foreign power may exceed the limits laid down in the treaty for vessels of a similar type; no aircraft carrier so constructed may exceed 27,000 tons; information is to be given by any signatory nation of orders for the construction of such ships; no such nation shall seize any such ship in process of construction for a non-signatory nation in the event of war; none of the signatory nations may dispose "by gift, sale or transfer" of any vessel usable as a warship.* Lastly, Secretary Hughes referred to the special article regarding fortifications in the Pacific Ocean (Article 19) embodying a special agreement—already published—between the United States, Great Britain and Japan, to maintain the status quo in respect to fortifications and naval bases established on any of the Pacific islands held by these powers. His final remarks, summing up the results of the treaty and stressing its value, were repeatedly applauded. He said in part:

May I say, in conclusion, that no more extraordinary or significant treaty has ever been entered into? It is extraordinary because we no longer merely talk of the desirability of diminishing the burdens of naval armaments, but we actually limit

them. It is extraordinary because this limitation is effected in that field in which nations have been most jealous of their power and in which they have hitherto been disposed to resent any interference with their power.

I shall not enlarge upon the significance of the engagement. Of course, it is obvious that it means an enormous saving of money and the lifting of the very heavy and unnecessary burden from the peoples of the countries who unite in this agreement. This treaty ends—absolutely ends—the race in competition in naval armament. At the same time it leaves the relative security of the great naval powers unimpaired. * * * In other words, we are taking perhaps the greatest forward step to establish the reign of peace.

FRANCE'S ACCEPTANCE

The naval treaty, as thus reported and clarified, was approved and adopted by all the delegations. The French delegation, through M. Albert Sarraut, seized the opportunity to say a final word in defense of France's attitude throughout the discussions. Both M. Jusserand, the French Ambassador to Washington, and M. Sarraut had made strong pleas against what they deemed unfair criticism of the French policy regarding submarines and auxiliary vessels. M. Sarraut now pointed out the necessity, if the moral effect desired were to be obtained, that the treaty should be given to the world sanctioned by the full acquiescence, the loyal conviction, the unreserved assent of all those who have signed it. "It must not," he said, "appear threatened with a precarious existence and exposed in the future to the reaction and fermentation of ill-disguised disappointments or persistent spite."

He wished above all to state clearly that the minds of the French delegates were free from any such feelings. The French delegation had yielded what they felt they should yield, and resisted on the points where they had to resist. "We marked the line to show how far we could go, and traced the limit which we would not pass; and, therefore, when today we come and say, 'I assent,' everybody must know that

*A supplementary resolution in amplification of this provision (Article 18) was passed on Feb. 4. Its text will be found at the end of the treaty.

what France has signed will be respected and defended by her with the same sincerity and the same good will." As to the shadows which the debate on naval disarmament had left on American public opinion so far as France was concerned, he was confident that in the course of time a proper perspective would be secured, and the ghost of "French Imperialism" would finally be laid. The destruction of German ambition had cost France the lives of 1,500,000 of her best sons and the devastation of her most prosperous regions. Should she have made this frightful sacrifice only to recommend now the crime which she has helped to chastise? He then gave the whole crux of the French argument regarding both her

If France keeps a strong enough army, which she is now reducing; if she must still fear the crushing burden of military charges, is it not because her territory, twice invaded in fifty years by the same enemy, still remains exposed to the threat of revenge and because the world is menaced along with us? And if, together with this army, France needs an adequate naval strength, is it not because without those naval means she cannot maintain her army, she cannot muster on her frontiers effectives that are not all found within the mother country, but are scattered abroad in distant colonies? Nor can she without warships insure the safety of transport vessels that bring to the assistance of the home forces the indispensable colonial contingents which during the last war supplied the mother country in its hour of peril with nearly a million men, hastening from all French possessions beyond the seas, through the dangers of oceans infested by German pirates whom we could find there again if we did not take proper precaution. * * * Yet so great was the desire of France to co-operate in the great work initiated by the Washington conference that she did not recoil before sacrifices the extent of which should not pass unnoticed on a day like this. Two figures, more eloquent than any words, will allow you to appreciate the importance of her share in the reduction of naval armament. In 1914, on the eve of the war, France was fully occupied in carrying out a naval plan through which, if war had not interfered, she would now possess 700,000 tons of capital ships. Instead of this my country reduces to 175,000 tons her strength in capital ships—a reduction of three-fourths of her program. France, had it not been for the war, would possess since the first of November last twenty-eight capital

ships; with the treaty of Washington she is now content with five. Thus does France, represented as an imperialistic country, abandon the essential arm of aggressive militarism. * * *

France has only preserved, she only wishes to keep a defensive force (submarines and auxiliary craft) for the protection of her coasts, her colonies, ports and lines of communication with her distant possessions, and even in this it is only a possibility, an opportunity, which she eventually reserves. She does not assert her intention, her will, to build such a defensive force. It is certain she will not want to incur the burden if circumstances turn out so that she can give it up without danger. Furthermore, France gives a spontaneous adhesion to the resolutions so loftily expressed by Senator Root, which brand the abominable use made by Germany of offensive weapons in naval and submarine warfare, and unite all of us in a gentlemen's undertaking, binding each to repudiate those infamous practices forever.

ANNEX TO PACIFIC TREATY.

One of the last acts of the conference was to pass a special agreement supplementary to the Four-Power Pacific Treaty, the text of which was published in the January CURRENT HISTORY. This agreement had been drafted with the intention to define precisely the extent of the guarantee given under that treaty to the integrity of the Japanese "homeland," doubts concerning which had been expressed even by President Harding. The new agreement was adopted on Feb. 4, and was one of the five treaties signed on Feb. 6. It reads as follows:

The United States of America, the British Empire, France and Japan have, through their respective plenipotentiaries, agreed upon the following stipulations supplementary to the quadruple treaty signed at Washington on Dec. 13, 1921:

The term "insular possessions and insular dominions" used in the aforesaid treaty shall, in its application to Japan, include only Karafuto (or the southern portion of the Island of Saghalin), Formosa and the Pescadores and the islands under the mandate of Japan.

The present agreement shall have the same force and effect as the said treaty, to which it is supplementary.

The provision of Article IV. of the aforesaid treaty of Dec. 13, 1921, relating to ratification, shall be applicable to the present agreement, which, in French and English,

shall remain deposited in the archives of the Government of the United States, and duly certified copies thereof shall be transmitted by that Government to each of the other contracting powers.

In faith whereof the respective plenipotentiaries have signed the present agreement. Done at the City of Washington, Feb. 6, 1922.

President Harding's farewell address, which summed up the achievements of the conference before the departure of the delegates on Feb. 6, is given in full near the beginning of this article. The text of the treaties will be found on the following pages.

THE FIVE-POWER NAVAL TREATY

Full official text of the treaty under which the United States Great Britain, France, Italy and Japan agree to abolish competition in capital ships—One of the greatest achievements of the Arms Conference

THE adoption by the Arms Conference at Washington on Feb. 1, 1922, of the Five-Power Naval Treaty, the text of which is published herewith, was one of its most momentous achievements. By this treaty competition in capital ships is abolished; a ratio for ownership of such ships is fixed for the British, American, Japanese, French and Italian navies; the tonnage and armament of aircraft carriers are limited, the maximum size and armament permitted to non-capital ships are specified, and the status quo in respect to fortification and naval base construction in the islands of the Pacific is agreed upon by the powers concerned. An account of the reporting of the treaty by Secretary Hughes, as Chairman, to the fifth plenary session on the date given, and a summary of his clarifying explanations, will be found in preceding pages describing the sessions of the conference. The official text of the treaty follows:

The United States of America, the British Empire, France, Italy and Japan,

Desiring to contribute to the maintenance of the general peace, and to reduce the burdens of competition in armament,

Have resolved, with a view to accomplishing these purposes, to conclude a treaty to limit their respective naval armament, and to that end have appointed as their plenipotentiaries:

The President of the United States of America:
Charles Evans Hughes,
Henry Cabot Lodge,
Oscar W. Underwood,
Elihu Root,
Citizens of the United States;

His Majesty the King of the United Kingdom of Great Britain and Ireland and of the British Dominions beyond the Seas, Emperor of India:

The Right Hon. Arthur James Balfour, O. M., M. P., Lord President of his Privy Council;

The Right Hon. Baron Lee of Fareham, G. B. E., K. C. B., First Lord of his Admiralty;

The Right Hon. Sir Auckland Campbell Geddes, K. C. B., his Ambassador Extraordinary and Plenipotentiary to the United States of America;

and for the Dominion of Canada:

The Right Hon. Sir Robert Laird Borden, G. C. M. G., K. C.;

for the Commonwealth of Australia:

Senator the Right Hon. George Foster Pearce, Minister for Home and Territories;

for the Dominion of New Zealand:

The Hon. Sir John William Salmond, K. C., Judge of the Supreme Court of New Zealand;

for the Union of South Africa:

The Right Hon. Arthur James Balfour, O. M., M. P.;

for India:

The Right Hon. Valingman Sankaranarayana Srinivasa Sastri, member of the Indian Council of State;

The President of the French Republic:

M. Albert Sarraut, Deputy, Minister of the Colonies;

M. Jules J. Jusserand, Ambassador Extraordinary and Plenipotentiary to the United States of America, Grand Cross of the National Order of the Legion of Honor;

His Majesty the King of Italy:

The Hon. Carlo Schanzer, Senator of the Kingdom;

The Hon. Vittorio Rolandi Ricci, Senator of the Kingdom, his Ambassador Extraordinary and Plenipotentiary at Washington;

The Hon. Luigi Albertini, Senator of the Kingdom;

His Majesty the Emperor of Japan:

Baron Tomosaburo Kato, Minister for the Navy, Junii, a member of the first class of the Imperial Order of the Grand Cordon of the Rising Sun with the Paulownia Flower;

Baron Kijuro Shidehara, his Ambassador Extraordinary and Plenipotentiary at Washington, Joshii, a member of the first class of the Imperial Order of the Rising Sun;

Mr. Masanao Hanihara, Vice Minister for Foreign Affairs, Jushii, a member of the second class of the Imperial Order of the Rising Sun,

who, having communicated to each other their respective full powers, found to be in good and due form, have agreed as follows:

CHAPTER I.

General Provisions Relating to the Limitation of Naval Armament

ARTICLE 1—The contracting powers agree to limit their respective naval armament as provided in the present treaty.

ARTICLE 2—The contracting powers may retain respectively the capital ships which are specified in Chapter II., Part 1. On the coming into force of the present treaty, but subject to the following provisions of this article, all other capital ships, built or building, of the United States, the British Empire and Japan shall be disposed of as prescribed in Chapter II., Part 2.

In addition to the capital ships specified in Chapter II., Part 1, the United States may complete and retain two ships of the West Virginia class now under construction. On the completion of these two ships the North Dakota and Delaware shall be disposed of as prescribed in Chapter II., Part 2.

The British Empire may, in accordance with the replacement table in Chapter II., Part 3, construct two new capital ships not exceeding 35,000 tons (35,560 metric tons) standard displacement each. On the completion of the said two ships, the Thunderer, King George V., Ajax and Centurion shall be disposed of as prescribed in Chapter II., Part 2.

ARTICLE 3—Subject to the provisions of Article 2, the contracting powers shall abandon their respective capital ship building programs, and no new capital ships shall be constructed or acquired by any of the contracting powers except replacement tonnage which may be constructed or acquired as specified in Chapter II., Part 3.

Ships which are replaced in accordance with Chapter II., Part 3, shall be disposed of as prescribed in Part 2 of that chapter.

ARTICLE 4—The total capital ship replacement tonnage of each of the contracting powers shall not exceed in standard displacement, for the United States 525,000 tons (533,400 metric tons); for the British Empire 525,000 tons (533,400 metric tons); for France 175,000

tons (177,800 metric tons); for Italy 175,000 tons (177,800 metric tons); for Japan 315,000 tons (320,040 metric tons).

ARTICLE 5—No capital ship exceeding 35,000 tons (35,560 metric tons) standard displacement shall be acquired by, or constructed by, for, or within the jurisdiction of, any of the contracting powers.

ARTICLE 6—No capital ship of any of the contracting powers shall carry a gun with a calibre in excess of 16 inches (406 millimeters).

ARTICLE 7—The total tonnage for aircraft carriers of each of the contracting powers shall not exceed in standard displacement, for the United States 135,000 tons (137,160 metric tons); for the British Empire 135,000 tons (137,160 metric tons); for France 60,000 tons (60,960 metric tons); for Italy 60,000 tons (60,960 metric tons); for Japan 81,000 tons (82,206 metric tons).

ARTICLE 8—The replacement of aircraft carriers shall be effected only as prescribed in Chapter II., Part 3, provided, however, that all aircraft carrier tonnage in existence or building on Nov. 12, 1921, shall be considered experimental, and may be replaced, within the total tonnage limit prescribed in Article 7, without regard to its age.

ARTICLE 9—No aircraft carrier exceeding 27,000 tons (27,432 metric tons) standard displacement shall be acquired by or constructed by, for or within the jurisdiction of, any of the contracting powers.

However, any of the contracting powers may, provided that its total tonnage allowance of aircraft carriers is not thereby exceeded, build not more than two aircraft carriers, each of a tonnage of not more than 33,000 tons (33,528 metric tons) standard displacement, and in order to effect economy any of the contracting powers may use for this purpose any two of their ships, whether constructed or in course of construction, which would otherwise be scrapped under the provisions of Article 2. The armament of any aircraft carriers exceeding 27,000 tons (27,432 metric tons) standard displacement shall be in accordance with the requirements of Article 10, except that the total number of guns to be carried in case any of such guns be of a calibre exceeding 6 inches (152 millimeters), except anti-aircraft guns and guns not exceeding 5 inches (126.7 millimeters), shall not exceed eight.

ARTICLE 10—No aircraft carrier of any of the contracting powers shall carry a gun with a calibre in excess of 8 inches (203 millimeters). Without prejudice to the provisions of Article 9, if the armament carried includes guns exceeding 6 inches (152 millimeters) in calibre, the total number of guns carried, except anti-aircraft guns and guns not exceeding 5 inches (126.7 millimeters), shall not exceed ten. If alternatively the armament contains no guns exceeding 6 inches (152 millimeters) in calibre, the number of guns is not limited. In either case the number of anti-aircraft guns and of guns not exceeding 5 inches (126.7 millimeters) is not limited.

ARTICLE 11—No vessel of war exceeding 10,000 tons (10,160 metric tons) standard displacement, other than a capital ship or aircraft car-

rier, shall be acquired by or constructed by, for or within the jurisdiction of any of the contracting powers. Vessels not specifically built as fighting ships, nor taken in time of peace under Government control for fighting purposes, which are employed on fleet duties or as troop transports or in some other way for the purpose of assisting in the prosecution of hostilities otherwise than as fighting ships, shall not be within the limitations of this article.

ARTICLE 12—No vessel of war of any of the contracting powers hereafter laid down, other than a capital ship, shall carry a gun with a calibre in excess of 8 inches (203 millimeters).

ARTICLE 13—Except as provided in Article 9, no ship designated in the present treaty to be scrapped may be reconverted into a vessel of war.

ARTICLE 14—No preparations shall be made in merchant ships in time of peace for the installation of warlike armaments for the purpose of converting such ships into vessels of war, other than the necessary stiffening of decks for the mounting of guns not exceeding 6-inch (152 millimeters) calibre.

ARTICLE 15—No vessel of war constructed within the jurisdiction of any of the contracting powers for a non-contracting power shall exceed the limitations as to displacement and armament prescribed by the present treaty for vessels of a similar type which may be constructed by or for any of the contracting powers; provided, however, that the displacement for aircraft carriers constructed for a non-contracting power shall in no case exceed 27,000 tons (27,432 metric tons) standard displacement.

ARTICLE 16—If the construction of any vessel of war for a non-contracting power is undertaken within the jurisdiction of any of the contracting powers, such power shall promptly inform the other contracting powers of the date of the signing the contract and the date on which the keel of the ship is laid; and shall also communicate to them the particulars relating to the ship prescribed in Chapter II., Part 3, Section I. (b), (4) and (5).

ARTICLE 17—In the event of a contracting power being engaged in war, such power shall not use as a vessel of war any vessel of war which may be under construction within its jurisdiction for any other power, or which may have been constructed within its jurisdiction for another power and not delivered.

ARTICLE 18—Each of the contracting powers undertakes not to dispose by gift, sale or any mode of transfer of any vessel of war in such a manner that such vessel may become a vessel of war in the navy of any foreign power.

ARTICLE 19—The United States, the British Empire and Japan agree that the status quo at the time of the signing of the present treaty, with regard to fortifications and naval bases, shall be maintained in their respective territories and possessions specified hereunder:

(1) The insular possessions which the United States now holds or may hereafter acquire in the Pacific Ocean, except (a) those adjacent to the coast of the United States, Alaska and the Panama Canal Zone, not including the Aleutian Islands, and (b) the Hawaiian Islands;

(2) Hongkong and the insular possessions which the British Empire now holds or may hereafter acquire in the Pacific Ocean, east of the meridian of 110 degrees east longitude, except (a) those adjacent to the coast of Canada, (b) the Commonwealth of Australia and its territories, and (c) New Zealand;

(3) The following insular territories and possessions of Japan in the Pacific Ocean, to wit: the Kurile Islands, the Bonin Islands, Amami-Oshima, the Loochoo Islands, Formosa and the Pescadores, and any insular territories or possessions in the Pacific Ocean which Japan may hereafter acquire.

The maintenance of the status quo under the foregoing provisions implies that no new fortifications or naval bases shall be established in the territories and possessions specified; that no measures shall be taken to increase the existing naval facilities for the repair and maintenance of naval forces, and that no increase shall be made in the coast defenses of the territories and possessions above specified. This restriction, however, does not preclude such repair and replacement of worn-out weapons and equipment as is customary in naval and military establishments in time of peace.

ARTICLE 20—The rules for determining tonnage displacement prescribed in Chapter II., Part 4, shall apply to the ships of each of the contracting powers.

CHAPTER II.

Rules relating to the execution of the treaty —Definition of terms

PART I.

Capital Ships Which May Be Retained by the Contracting Powers

In accordance with Article 2, ships may be retained by each of the contracting powers as specified in this part.

Ships which may be retained by the United States:

Name.	Tonnage.	Name.	Tonnage.
Maryland	32,600	Nevada	27,500
California	32,300	New York	27,000
Tennessee	32,300	Texas	27,000
Idaho	32,000	Arkansas	26,000
New Mexico	32,000	Wyoming	26,000
Mississippi	32,000	Florida	21,825
Arizona	31,400	Utah	21,825
Pennsylvania	31,400	North Dakota	20,000
Oklahoma	27,500	Delaware	20,000

Total tonnage 500,650

On the completion of the two ships of the West Virginia class and the scrapping of the North Dakota and Delaware, as provided in Article 2, the total tonnage to be retained by the United States will be 525,850.

Ships which may be retained by the British Empire:

Name.	Tonnage.	Name.	Tonnage.
Royal Sovereign	25,750	Emper. of India	25,000
Royal Oak	25,750	Iron Duke	25,000
Revenge	25,750	Marlborough	25,000
Resolution	25,750	Hood	41,200

Name.	Tonnage.	Name.	Tonnage.
Ramillies	25,750	Renown	26,500
Malaya	27,500	Repulse	26,500
Valiant	27,500	Tiger	28,500
Barham	27,500	Thunderer	22,500
Queen Elizabeth	27,500	King George V.	23,000
Warspite	27,500	Ajax	23,000
Benbow	25,000	Centurion	23,000

Total tonnage 580,450

On the completion of the two new ships to be constructed and the scrapping of the Thunderer, King George V., Ajax and Centurion, as provided in Article 2, the total tonnage to be retained by the British Empire will be 558,950 tons.

Ships which may be retained by France:

Name. (Metric Tons).	Tonnage	Name. (Metric Tons).	Tonnage.
Bretagne	23,500	Jean Bart	23,500
Lorraine	23,500	Courbet	23,500
Provence	23,500	Concorcet	18,890
Paris	23,500	Diderot	18,890
France	23,500	Voltaire	18,890

Total tonnage..... 221,170

France may lay down new tonnage in the years 1927, 1929 and 1931, as provided in Part 3, Section 2.

Ships which may be retained by Italy:

Name. (Metric Tons).	Tonnage	Name. (Metric Tons).	Tonnage
Andrea Doria.....	22,700	Dante Alighieri.....	19,500
Cai Duilio.....	22,700	Roma	12,600
Conte di Cavour.....	22,500	Napoli	12,600
Giulio Cesare.....	22,500	Vittorio Eman- uele	12,600
Leonardo da Vin- ci	22,500	Regina Elena.....	12,600

Total tonnage..... 182,500

Italy may lay down new tonnage in the years 1927, 1929 and 1931, as provided in Part 3, Section 2.

Ships which may be retained by Japan:

Name.	Tonnage.	Name.	Tonnage.
Mutsu	33,800	Fu-So	30,600
Nagato	33,800	Kirishima	27,500
Hiuga	31,260	Haruna	27,500
Ise	31,260	Hiyel	27,500
Yamashiro	30,600	Kongo	27,500

Total tonnage..... 301,320

PART II.

Rules for Scrapping Vessels of War

The following rules shall be observed for the scrapping of vessels of war which are to be disposed of in accordance with Articles 2 and 3:

1. A vessel to be scrapped must be placed in such condition that it cannot be put to combatant use.

2. This result must be finally effected in any one of the following ways:

(a) Permanent sinking of the vessel.

(b) Breaking the vessel up. This shall always involve the destruction or removal of all machinery, boilers and armor, and all deck, side and bottom plating.

(c) Converting the vessel to target use exclusively. In such case all the provisions of Paragraph 3 of this part, except Subparagraph 6, in so far as may be necessary to enable the

ship to be used as a mobile target, and except Subparagraph 7, must be previously complied with. Not more than one capital ship may be retained for this purpose at one time by any of the contracting powers.

(d) Of the capital ships which would otherwise be scrapped under the present treaty in or after the year 1931, France and Italy may each retain two seagoing vessels for training purposes exclusively; that is, as gunnery or torpedo schools. The two vessels retained by France shall be of the Jean Bart class, and of those retained by Italy one shall be the Dante Alighieri, the other of the Giulio Cesare class. On retaining these ships for the purpose above stated, France and Italy respectively undertake to remove and destroy their conning towers, and not to use the said ships as vessels of war.

3. (a) Subject to the special exceptions contained in Article 9, when a vessel is due for scrapping, the first stage of scrapping, which consists in rendering a ship incapable of further warlike service, shall be immediately undertaken.

(b) A vessel shall be considered incapable of further warlike service when there shall have been removed and landed, or else destroyed in the ship:

(1) All guns and essential portions of guns, fire-control tops and revolving parts of all barbettes and turrets;

(2) All machinery for working hydraulic or electric mountings;

(3) All fire-control instruments and range-finders;

(4) All ammunition, explosives and mines;

(5) All torpedoes, warheads and torpedo tubes;

(6) All wireless telegraphy installations;

(7) The conning tower and all side armor, or alternatively all main propelling machinery; and

(8) All landing and flying-off platforms and all other aviation accessories.

4. The periods in which scrapping of vessels is to be effected are as follows:

(a) In the case of vessels to be scrapped under the first paragraph of Article 2, the work of rendering the vessels incapable of further warlike service, in accordance with Paragraph 3 of this part, shall be completed within six months from the coming into force of the present treaty, and the scrapping shall be finally effected within eighteen months from such coming into force.

(b) In the case of the vessels to be scrapped under the second and third paragraphs of Article 2, or under Article 3, the work of rendering the vessels incapable of further warlike service in accordance with Paragraph 3 of this part shall be commenced at later than the date of completion of its successor, and shall be finished within six months from the date of such completion. The vessel shall be finally scrapped, in accordance with Paragraph 2 of this part, within eighteen months from the date of completion of its successor. If, however, the completion of the new vessel be delayed, then the work of rendering the old vessel incapable of further warlike service in accordance with Paragraph 3 of this part shall be commenced within four years from the laying of the

keel of the new vessel, and shall be finished within six months from the date on which such work was commenced, and the old vessel shall be finally scrapped in accordance with Paragraph 2 of this part within eighteen months from the date when the work of rendering it incapable of further warlike service was commenced.

PART III

Replacement

The replacement of capital ships and aircraft carriers shall take place according to the rules in Section I. and the tables in Section II. of this part.

SECTION I.—Rules for Replacement

(a) Capital ships and aircraft carriers twenty years after the date of their completion may, except as otherwise provided in Article 8 and in the tables in Section II. of this part, be replaced by new construction, but within the limits prescribed in Article 4 and Article 7. The keels of such new construction may, except as otherwise provided in Article 8 and in the tables in Section II. of this part, be laid down not earlier than seventeen years from the date of completion of the tonnage to be replaced, provided, however, that no capital ship tonnage, with the exception of the ships referred to in

the third paragraph of Article 2, and the replacement tonnage specifically mentioned in Section II. of this part, shall be laid down until ten years from Nov. 12, 1921.

(b) Each of the contracting powers shall communicate promptly to each of the other contracting powers the following information:

(1) The names of the capital ships and aircraft carriers to be replaced by new construction;

(2) The date of governmental authorization of replacement tonnage;

(3) The date of laying the keels of replacement tonnage;

(4) The standard displacement in tons and metric tons of each new ship to be laid down, and the principal dimensions, namely, length at waterline, extreme beam at or below waterline, mean draught at standard displacement;

(5) The date of completion of each new ship and its standard displacement in tons and metric tons, and the principal dimensions, namely, length at waterline, extreme beam at or below waterline, mean draught at standard displacement, at time of completion.

(c) In case of loss or accidental destruction of capital ships or aircraft carriers, they may immediately be replaced by new construction subject to the tonnage limits prescribed in

*The British Empire may retain the Colossus and Collingwood for noncombatant purposes, after complying with the provisions of Part 2, III. (b).

*Two 35,000-ton ships, standard displacement.

NOTE.—A, B, C, D, &c., represent individual capital ships of 35,000 tons standard displacement laid down and completed in the years specified.

Articles 4 and 7, and in conformity with the other provisions of the present treaty, the regular replacement program being deemed to be advanced to that extent.

(d) No retained capital ships or aircraft carriers shall be reconstructed except for the purpose of providing means of defense against air and submarine attack, and subject to the following rules: The contracting powers may, for that purpose, equip existing tonnage with bulge or blister or anti-air attack deck protection, providing the increase of displacement thus affected does not exceed 3,000 tons (3,048 metric tons) displacement for each ship. No alterations in side armor, in calibre, number or general type of mounting of main armament shall be permitted, except:

(1) In the case of France and Italy, which countries within the limits allowed for bulge may increase their armor protection and the calibre of the guns now carried on their existing capital ships so as to exceed sixteen inches (406 millimeters), and (2) the British Empire shall be permitted to complete, in the case of the Renown, the alterations to armor that have already been commenced but temporarily suspended.

[Here follows Section II. of Part III., giving the replacement and scrapping schedules of all five countries—the United States, Great Britain, France, Italy and Japan. These tables are printed separately at the tops of pages 1021-1024.]

PART IV

Definitions

For the purposes of the present treaty the following expressions are to be understood in the sense defined in this part:

Capital Ship

A capital ship, in the case of ships hereafter built, is defined as a vessel of war, not an aircraft carrier, whose displacement exceeds 10,000 tons, (10,150 metric tons) standard displacement, or which carries a gun with a calibre exceeding 8 inches (203 millimeters).

Aircraft Carrier

An aircraft carrier is defined as a vessel of war with a displacement in excess of 10,000 tons (10,160 metric tons) standard displacement designed for the specific and exclusive purpose of carrying aircraft. It must be so constructed that aircraft can be launched therefrom and landed thereon, and not designed and constructed for carrying a more powerful armament than that allowed to it under Article 9 or Article 10, as the case may be.

Standard Displacement

The standard displacement of a ship is the displacement of the ship complete, fully manned, engined and equipped ready for sea, including all armament and ammunition, equipment, outfit, provisions and fresh water for crew, miscellaneous stores and implements of every description that are intended to be carried

in war, but without fuel or reserve feed water on board.

The word "ton" in the present treaty, except in the expression "metric tons," shall be understood to mean the ton of 2,240 pounds (1,016 kilos). Vessels now completed shall retain their present ratings of displacement tonnage in accordance with their national system of measurement. However, a power expressing displacement in metric tons shall be considered for the application of the present treaty as owning only the equivalent displacement in tons of 2,240 pounds. A vessel completed hereafter shall be rated at its displacement tonnage when in the standard condition defined herein.

CHAPTER III.

Miscellaneous Provisions

ARTICLE 21.—If, during the term of the pres-

ent treaty, the requirements of the national security of any contracting power in respect of naval defense are, in the opinion of that power, materially affected by any change of circumstances, the contracting powers will, at the request of such power, meet in conference with a view to the reconsideration of the provisions of the treaty and its amendment by mutual agreement.

In view of possible technical and scientific developments, the United States, after consultation with the other contracting powers, shall arrange for a conference of all the contracting powers, which shall convene as soon as possible after the expiration of eight years from the coming into force of the present treaty to consider what changes, if any, in the treaty may be necessary to meet such developments.

*Japan may retain the Shikishima and Asahi for noncombatant purposes, after complying with the provisions of Part 2, III. (b).

NOTE.—A, B, C, D, &c., represent individual capital ships of 35,000 tons standard displacement, laid down and completed in the years specified.

NOTE APPLICABLE TO ALL THE TABLES IN SECTION II.

The order above prescribed in which ships are to be scrapped is in accordance with their age. It is understood that when replacement begins according to the above tables the order of scrapping in the case of the ships of each of the contracting powers may be varied at its option; provided, however, that such power shall scrap in each year the number of ships above stated.

ARTICLE 22—Whenever any contracting power shall become engaged in a war which, in its opinion, affects the naval defense of its national security, such power may, after notice to the other contracting powers, suspend for the period of hostilities its obligations under the present treaty, other than those under Articles 13 and 17, provided that such power shall notify the other contracting powers that the emergency is of such a character as to require such suspension.

The remaining contracting powers shall, in such case, consult together with a view to agreement as to what temporary modifications, if any, should be made in the treaty as between themselves. Should such consultation not produce agreement, duly made in accordance with the constitutional methods of the respective powers, any one of said contracting powers may, by giving notice to the other contracting powers, suspend for the period of hostilities its obligations under the present treaty, other than those under Articles 13 and 17.

On the cessation of hostilities, the contracting powers will meet in conference to consider what modifications, if any, should be made in the provisions of the present treaty.

ARTICLE 23—The present treaty shall remain in force until Dec. 31, 1936, and in case none of the contracting powers shall have given notice

two years before that date of its intention to terminate the treaty, it shall continue in force until the expiration of two years from the date on which notice of termination shall be given by one of the contracting powers, whereupon the treaty shall terminate as regards all the contracting powers. Such notice shall be communicated in writing to the Government of the United States, which shall immediately transmit a certified copy of the notification to the other powers and inform them of the date on which it was received. The notice shall be deemed to have been given and shall take effect on that date. In the event of notice of termination being given by the Government of the United States, such notice shall be given to the diplomatic representatives at Washington of the other contracting powers, and the notice shall be deemed to have been given and shall take effect on the date of the communication made to the said diplomatic representatives.

Within one year of the date on which a notice of termination by any power has taken effect, all the contracting powers shall meet in conference.

ARTICLE 24—The present treaty shall be ratified by the contracting powers in accordance with their respective constitutional methods and shall take effect on the date of the deposit of all the ratifications, which shall take place at

Washington as soon as possible. The Government of the United States will transmit to the other contracting powers a certified copy of the procès-verbal of the deposit of ratifications.

The present treaty, of which the English and French texts are both authentic, shall remain deposited in the archives of the Government of the United States, and duly certified copies thereof shall be transmitted by that Government to the other contracting powers.

In faith whereof the above-named plenipotentiaries have signed the present treaty.

Done at the City of Washington the first day of February, one thousand nine hundred and twenty-two.

To the naval treaty was added a supplementary resolution, adopted at the plenary

session of Feb. 4. This addition was an amplification of Article 18 of the treaty, which binds the signatory powers not to dispose of war craft—in such condition that the vessels might be utilized as warships—"by gift, sale or transfer." The new resolution, which is to be taken as a part of the treaty, reads thus:

It should, therefore, be recorded in the minutes of the sub-committee (on naval limitation) and before the full conference that the powers signatory to the treaty of naval limitation regard themselves in honor bound not to sell any ships between the present date and ratification of the treaty, when such a sale would be a breach of Article 18.

SUBMARINES AND POISON GAS TREATY

Text of the Five-Power compact under which the United States, Great Britain, Japan, France and Italy bind themselves to refrain from the use of submarines as commerce destroyers, and of poison gas in warfare

THE treaty embodying the resolutions passed by the conference against the use of submarines as commerce destroyers, and also against the employment of poison gas in warfare, the text of which is given herewith, was presented by Mr. Root at the fifth plenary session of Feb. 1, and signed at the seventh and last plenary session on Feb. 6, 1922. Both subjects had been debated at length in previous sessions, and the decisions here translated into treaty terms were not reached without considerable discussion. [See February CURRENT HISTORY.] Mr. Root was sponsor for both of the original resolutions prohibiting these agencies of warfare. The text of this double treaty is as follows:

The United States of America, the British Empire, France, Italy and Japan,

Hereinafter referred to as the signatory powers, desiring to make more effective the rules adopted by civilized nations for the protection of the lives of neutrals and noncombatants at sea in time of war, and to prevent the use in war of noxious gases and chemicals, have determined to conclude a treaty to this effect, and have appointed as their plenipotentiaries [here follows the list of names], who, having communicated their full powers found in good and due form, have agreed as follows:

ARTICLE 1—The signatory powers declare that among the rules adopted by civilized nations for the protection of the lives of neutrals and noncombatants at sea in time of war, the following are to be deemed an established part

of international law: (1) A merchant vessel must be ordered to submit to visit and search to determine its character before it can be seized. A merchant vessel must not be attacked unless it refuse to submit to visit and search after warning or to proceed as directed after seizure. A merchant vessel must not be destroyed unless the crew and passengers have been first placed in safety. (2) Belligerent submarines are not under any circumstances exempt from the universal rules above stated; and if a submarine cannot capture a merchant vessel in conformity with these rules, the existing law of nations requires it to desist from attack and from seizure and to permit the merchant vessel to proceed unmolested.

ARTICLE 2—The signatory powers invite all other civilized powers to express their assent to the foregoing statement of established law, so that there may be a clear public understanding throughout the world of the standards of conduct by which the public opinion of the world is to pass judgment upon future belligerents.

ARTICLE 3—The signatory powers, desiring to insure the enforcement of the humane rules of existing law declared by them with respect to attacks upon and seizure and destruction of merchant ships, further declare that any person in the service of any power who shall violate any of those rules, whether or not such person is under orders of a governmental superior, shall be deemed to have violated the laws of war and shall be liable to trial and punishment as if for an act of piracy, and may be brought to trial before the civil or military authorities of any power within the jurisdiction of which he may be found.

ARTICLE 4—The signatory powers recognize the practical impossibility of using submarines as commerce destroyers without violating, as

they were violated in the recent war of 1914-1918, the requirements universally accepted by civilized nations for the protection of the lives of neutrals and noncombatants, and to the end that the prohibition of the use of submarines as commerce destroyers shall be universally accepted as a part of the law of nations they now accept that prohibition as henceforth binding as between themselves, and they invite all other nations to adhere thereto.

ARTICLE 5—The use in war of asphyxiating, poisonous or other gases, and all analogous liquids, materials and devices having been justly condemned by the general opinion of the civilized world, and a prohibition of such use having been declared in treaties to which a majority of the civilized powers are parties, the signatory powers, to the end that this prohibition shall be universally accepted as a part of international law, binding alike the conscience and practice of nations, declare their assent to such prohibition, agree to be bound thereby as between themselves and invite all other civilized nations to adhere thereto.

ARTICLE 6—The present treaty shall be ratified as soon as possible in accordance with the constitutional methods of the signatory powers

and shall take effect on the deposit of all the ratifications, which shall take place at Washington. The Government of the United States of America will transmit to all the signatory powers a certified copy of the procès-verbal of the deposit of ratifications. The present treaty, in French and English, shall remain deposited in the archives of the Government of the United States of America, and duly certified copies thereof will be transmitted by that Government to each of the signatory powers.

ARTICLE 7—The Government of the United States of America will further transmit to each of the non-signatory powers a duly certified copy of the present treaty and invite its adherence thereto. Any non-signatory power may adhere to the present treaty by communicating an instrument of adherence to the Government of the United States of America, which will thereupon transmit to each of the signatory and adhering powers a certified copy of each instrument of adherence.

In Faith Whereof the above-named plenipotentiaries have signed the present treaty. Done at the City of Washington, the sixth day of January, One Thousand Nine Hundred and Twenty-two.

TEXT OF THE "OPEN-DOOR" TREATY

Nine-Power Pact declaring for integrity of Chinese sovereignty and for equal opportunity in trade intercourse—Peking's rights respected

THE Treaty on Chinese Integrity, as it was entitled in the official version, or the treaty on the "Open Door," the text of which is given below, was presented by Secretary Hughes at the sixth plenary session of the arms conference on Feb. 4. This nine-power agreement, signed by the American, British, Chinese, Japanese, French, Belgian, Italian, Dutch and Portuguese delegations for their respective Governments, was based on the original Root resolutions and embodied further a number of resolutions passed by the Far Eastern Committee at various sessions. It was formally approved by the conference after Secretary Hughes had read the "substantive portions" and was signed, together with other treaties, at the seventh plenary session held on Feb. 6—the last meeting of the conference. All the delegations also unanimously approved a supplementary resolution, which had been adopted by the Far Eastern Committee on Feb. 3, and which provided for the establishment in China of a board of reference charged with

the maintenance of the "open-door" principle, as well as a special declaration by China binding her not to alienate any of her territory.

The main treaty pledges the nine signatory powers to help China to get on her feet, and not to seek for themselves any unfair or special advantages, and also to respect Chinese neutrality; it further authorizes all or any of them, including China herself, to call a conference of all the signatories in case a situation arises which involves the application of the terms of the treaty. The official text is as follows:

The United States of America, Belgium, the British Empire, China, France, Italy, Japan, the Netherlands and Portugal,

Desiring to adopt a policy designed to stabilize conditions in the Far East, to safeguard the rights and interests of China, and to promote intercourse between China and the other powers upon the basis of equality of opportunity;

Have resolved to conclude a treaty for that purpose, and to that end have appointed as their

respective plenipotentiaries [here follow the names of the plenipotentiaries], who, having communicated to each other their full powers, found to be in good and due form, have agreed as follows:

ARTICLE 1—The contracting powers, other than China, agree:

1. To respect the sovereignty, the independence, and the territorial and administrative integrity of China.

2. To provide the fullest and most unembarrassed opportunity to China to develop and maintain for herself an effective and stable Government.

3. To use their influence for the purpose of effectually establishing and maintaining the principle of equal opportunity for the commerce and industry of all nations throughout the territory of China.

4. To refrain from taking advantage of conditions in China in order to seek special rights or privileges which would abridge the rights of subjects or citizens of friendly States, and from countenancing action inimical to the security of such States.

ARTICLE 2—The contracting powers agree not to enter into any treaty, agreement, arrangement or understanding, either with one another, or individually or collectively with any power or powers, which would infringe or impair the principles stated in Article 1.

ARTICLE 3—With a view to applying more effectually the principles of the open door, or equality of opportunity, in China for the trade and industry of all nations, the contracting powers, other than China, agree not to seek or to support their respective nations in seeking:

(A)—Any arrangement which might purport to establish in favor of their interests any general superiority of rights with respect to commercial or economic development in any designated region in China;

(B)—Any such monopoly or preference as would deprive the nationals of any other power of the right of undertaking any legitimate trade or industry in China, or of participating with the Chinese Government, or with any local authority, in any category of public enterprise, or which by reason of its scope, duration or geographical extent is calculated to frustrate the practical application of the principle of equal opportunity.

It is understood that the foregoing stipulations of this article are not to be so construed as to prohibit the acquisition of such properties or rights as may be necessary to the conduct of a particular commercial, industrial or financial undertaking or to the encouragement of invention and research.

China undertakes to be guided by the principles stated in the foregoing stipulations of this article in dealing with applications for economic rights and privileges from Governments and nationals of all foreign countries, whether parties to the present treaty or not.

ARTICLE 4—The contracting powers agree not to support any agreements by their respective nationals with each other designed to create spheres of influence or to provide for the enjoyment of mutually exclusive opportunities in designated parts of Chinese territory.

ARTICLE 5—China agrees that, throughout the whole of the railways in China, she will not exercise or permit unfair discriminations of any kind. In particular there shall be no discrimination whatever, direct or indirect, in respect of charges or of facilities on the ground of the nationality of passengers or the countries from which or to which they are proceeding, or the origin or ownership of goods or the country from which or to which they are proceeding, or the nationality or ownership of the ship or other means of conveying such passengers or goods before or after their transport on the Chinese railways.

The contracting powers, other than China, assume a corresponding obligation in respect of any of the aforesaid railways over which they or their nationals are in a position to exercise any control in virtue of any concession, special agreement or otherwise.

ARTICLE 6—The contracting parties, other than China, agree fully to respect China's rights as a neutral in time of war to which China is not a party; and China declares that when she is a neutral she will observe the obligations of neutrality.

ARTICLE 7—The contracting powers agree that, whenever a situation arises which, in the opinion of any one of them, involves the application of the stipulations of the present treaty, and renders desirable discussion of such application, there shall be full and frank communication between the contracting powers concerned.

ARTICLE 8—Powers not signatory to the present treaty which have governments recognized by the signatory powers and which have treaty relations with China shall be invited to adhere to the present treaty. To this end the Government of the United States will make the necessary communications to non-signatory powers and will inform the contracting powers of the replies received. Adherence by any power shall become effective on receipt of notice thereof by the Government of the United States.

ARTICLE 9—The present treaty shall be ratified by the contracting powers in accordance with their respective constitutional methods and shall take effect on the date of the deposit of all the ratifications, which shall take place at Washington as soon as possible. The Government of the United States will transmit to the other contracting powers a certified copy of the procès-verbal of the deposit of ratifications.

The present treaty, of which the English and French texts are both authentic, shall remain deposited in the archives of the Government of the United States, and duly certified copies thereof shall be transmitted by that Government to the other contracting powers.

In Faith Whereof the above-named plenipotentiaries have signed the present treaty.

Done at the City of Washington the sixth day of February, one thousand nine hundred and twenty-two.

THE SUPPLEMENTARY RESOLUTION

The supplementary resolution adopted by the conference at this same session read thus:

The United States of America, Belgium, the British Empire, China, France, Italy, Japan, the Netherlands and Portugal,

Desiring to provide a procedure for dealing with questions that may arise in connection with the execution of the provisions of Articles 3 and 5 of the treaty to be signed at Washington on Feb. 6, 1922, with reference to their general policy, designed to stabilize conditions in the Far East, to safeguard the rights and interests of China, and to promote intercourse between

China and the other powers upon the basis of equality of opportunity,

Resolve, That there shall be established in China a board of reference to which any questions arising in connection with the execution of the aforesaid articles may be referred for investigation and report.

The special conference, provided in Article 2 of the treaty to be signed at Washington Feb. 6, 1922, with reference to the Chinese customs tariff shall formulate for the approval of the powers concerned a detailed plan for the constitution of the board.

DECLARATION BY CHINA

The Chinese declaration regarding alienation of territory, also added to the Far Eastern treaty, was stated thus:

China upon her part is prepared to give an undertaking not to alienate or lease any portion of her territory or littoral to any power.

TREATY ON THE CHINESE TARIFF

Text of the Nine-Power Agreement raising China's Customs Revenue to 5 per cent., and appointing a Revision Commission to meet at Shanghai

THE nine-power treaty on the Chinese tariff, like the treaty on the "open door," was presented to the arms conference at the sixth plenary session of Feb. 4, and was unanimously approved at that session. The reporter for the compact was Senator Underwood, who traced the series of events that had created the existing situation—a situation under which China received a quota of customs revenue far below the nominal 5 per cent. to which she was entitled. Mr. Sze asked that China's various statements on this subject—made at the sessions of Jan. 5, Jan. 16 and Feb. 3—be spread upon the record, and this was done. The treaty, which embodied the resolutions adopted Jan. 16, provides for the assembling at Shanghai as soon as possible of a special commission, whose duty it shall be to revise the Chinese tariff so as to make it equivalent to 5 per cent. ad valorem, instead of about 3.5 per cent., as at present. The treaty also provides for a special conference to take steps toward the abolition of the "likin" or internal customs in China, and authorizes the levying of a surtax, in most instances 2.5 per cent., on Chinese imports as soon as this is found advisable. A further revision is

to be made in four years to adjust the specific duties fixed by the revising commission to the ad valorem rates, and thereafter revisions are to take place every seven years instead of every ten years, as heretofore. Senator Underwood, in reporting the treaty, said that it might be expected to double the maritime customs revenue of China. A full account of the presenting address made by Senator Underwood, and the reply of the Chinese delegation, will be found in preceding pages. The text of the treaty, which was signed at the last session of the conference on Feb. 6, reads as follows:

The United States of America, Belgium, British Empire, China, France, Italy, Japan, The Netherlands and Portugal,

With a view to increasing the revenues of the Chinese Government, have resolved to conclude a treaty relating to the revision of the Chinese customs tariff and cognate matters, and to that end have appointed as their plenipotentiaries [here follow the names of the plenipotentiaries], who, having communicated to each other their full powers, found to be in good and due form, have agreed as follows:

ARTICLE 1—The representatives of the contracting powers having adopted, on the 4th day of February, 1922, in the City of Washington, a resolution, which is appended as an annex to

this article, with respect to the revision of Chinese customs duties, for the purpose of making such duties equivalent to an effective 5 per centum ad valorem, in accordance with existing treaties, concluded by China with other nations, the contracting powers hereby confirm the said resolution and undertake to accept the tariff rates fixed as a result of such revision. The said tariff rates shall become effective as soon as possible, but not earlier than two months after publication thereof.

Annex—With a view to providing additional revenue to meet the needs of the Chinese Government, the powers represented at this conference, namely, the United States of America, Belgium, the British Empire, China, France, Italy, Japan, the Netherlands and Portugal, agree:

That the customs schedule of duties on imports into China, adopted by the Tariff Revision Commission at Shanghai on Dec. 19, 1918, shall forthwith be revised so that rates of duty shall be equivalent to 5 per cent. effective, as provided for in the several commercial treaties to which China is a part.

A revision commission shall meet at Shanghai, at the earliest practicable date, to effect this revision forthwith and on the general lines of the last revision.

This commission shall be composed of representatives of the powers above named and of representatives of any additional powers having governments at present recognized by the powers represented at this conference and who have treaties with China providing for a tariff on imports and exports not to exceed 5 per cent. ad valorem and who desire to participate therein.

The revision shall proceed as rapidly as possible, with a view to its completion within four months from the date of the adoption of this resolution by the Conference on Limitation of Armament and Pacific and Far Eastern Questions.

The revised tariff shall become effective as soon as possible, but not earlier than two months after its publication by the Revision Commission.

The Government of the United States, as convener of the present conference, is requested forthwith to communicate the terms of this resolution to the Governments of powers not represented at this conference, but who participated in the revision of 1918 aforesaid.

ARTICLE 2—Immediate steps shall be taken through a special conference to prepare the way for the speedy abolition of likin and for the fulfillment of the other conditions laid down in Article 8 of the treaty of Sept. 5, 1902, between Great Britain and China; in Articles 4 and 5 of the treaty of Oct. 8, 1903, between the United States and China, and in Article 1 of the supplementary treaty of Oct. 8, 1903, between Japan and China, with a view to levying the surtaxes provided for in these articles.

The special conference shall be composed of representatives of the signatory powers, and of such other powers as may desire to participate and may adhere to the present treaty, in accord with the provisions of Article 8 in sufficient

time to allow their representatives to take part. It shall meet in China within three months after the coming into force of the present treaty on a day and at a place to be designated by the Chinese Government.

ARTICLE 3—The special conference provided for in Article 2 shall consider the interim provisions to be applied prior to the abolition of likin and the fulfillment of the other conditions laid down in the articles of the treaties mentioned in Article 2; and it shall authorize the levying of a surtax on dutiable imports as from such date, for such purposes and subject to such conditions as it may determine.

The surtax shall be at a uniform rate of 2½ per centum ad valorem, provided that in case of certain articles of luxury which, in the opinion of the special conference, can bear a greater increase without unduly impeding trade, the total surtax may be increased, but may not exceed 5 per centum ad valorem.

ARTICLE 4—Following the immediate revision of the customs schedule of duties on imports into China, mentioned in Article 1, there shall be a further revision thereof, to take effect at the expiration of four years following the completion of the aforesaid immediate revision, in order to insure that the customs duties shall correspond to the ad valorem rates fixed by the special conference provided in Article 2.

Following this further revision there shall be, for the same purpose, periodical revisions of the customs schedule of duties on imports into China every seven years, in lieu of the decennial revision authorized by existing treaties with China.

In order to prevent delay, any revision made in pursuance of this article shall be effected in accord with rules to be prescribed by the special conference provided for in Article 3.

ARTICLE 5—In all matters relating to customs duties there shall be effective equality of treatment and of opportunity for all the contracting powers.

ARTICLE 6—The principle of uniformity in the rates of customs duties levied at all the land and maritime frontiers of China is hereby recognized. The special conference provided for in Article 2 shall make arrangements to give practical effect to this principle, and it is authorized to make equitable adjustments in those cases in which a customs privilege to be abolished was granted in return for some local economic advantage.

In the meantime, any increase in the rate of customs duties resulting from tariff revision or any surtax hereafter imposed in pursuance of the present treaty shall be levied at a uniform rate ad valorem at all land and maritime frontiers of China.

ARTICLE 7—The charge for transit passes shall be at the rate of 2½ per centum ad valorem until the arrangements provided for by Article 2 come into force.

ARTICLE 8—Powers not signatory to the present treaty, whose Governments are at present recognized by the signatory powers and whose present treaties with China provide for a tariff on imports and exports not to exceed 5 per

centum ad valorem, shall be invited to adhere to the present treaty.

The Government of the United States undertakes to make the necessary communications for this purpose and to inform the Governments of the contracting powers of the replies received. Adherence by any power shall become effective on receipt of notice thereof by the Government of the United States.

ARTICLE 9—The provisions of the present treaty shall override all stipulations of treaties between China and the respective contracting powers which are inconsistent therewith, other than stipulations according most favored nation treatment.

ARTICLE 10—The present treaty shall be ratified by the contracting powers in accord with their respective constitutional methods and shall take effect on the date of the deposit of all the ratifications, which shall take place at Washington as soon as possible. The Government of the United States will transmit to the other con-

tracting powers a certified copy of the procès-verbal of the deposit of ratifications.

The present treaty, of which the English and French texts are both authentic, shall remain deposited in the archives of the Government of the United States and duly certified copies thereof shall be transmitted by that Government to the other contracting powers.

In Faith Whereof the above-named plenipotentiaries have signed the present treaty. Done at the City of Washington the sixth day of February, one thousand nine hundred and twenty-two.

In connection with the tariff treaty, the Chinese delegation presented and caused to be spread upon the record a resolution which states that "the Chinese Government have no intention to effect any change which may disturb the present administration of the Chinese maritime customs."

THE SHANTUNG TREATY

Text of the separate treaty between China and Japan which settled the long and bitter dispute over Shantung—The agreement a result of mutual concessions

THE treaty between China and Japan embodying the terms of transfer to China of Kiao-Chau and the Shantung Railway, together with all rights to public property, maritime customs, mining, port and other rights formerly held by Germany, was presented to the conference at its fifth plenary session on Feb. 1. The history of this whole episode, and of the conditions under which a final settlement was reached after two months' discussion outside the conference proper, has been told in the main article on the conference. The two Asiatic delegations attributed the final success of these long negotiations to the good offices of Mr. Hughes and Mr. Balfour. The text of the treaty, which was signed at the seventh and last plenary session, Feb. 6, follows herewith:

China and Japan, being equally animated by a sincere desire to settle amicably and in accordance with their common interest outstanding questions relative to Shantung, have resolved to conclude a treaty for the settlement of such, and have to that end named as their plenipotentiaries, that is to say:

His Excellency the President of the Chinese Republic:

Soa Ke Alfred Sze, Envoy Extraordinary and Minister Plenipotentiary;

Vi Kvuin Wellington Koo, Envoy Extraordinary and Minister Plenipotentiary; and
Chung-Hui Wang, former Minister of Justice;
His Majesty the Emperor of Japan;
Baron Tomosaburo Kato, Minister of the Navy;

Baron Kijuro Shidehara, Ambassador Extraordinary and Plenipotentiary; and

Masanao Hanihara, Vice Minister for Foreign Affairs;

Who, having communicated to each other their respective full powers, found to be in good and due form, have agreed upon the following articles:

1.—THE FORMER GERMAN-LEASED TERRITORY OF KIAO-CHAU

1. Japan shall restore to China the former German leased territory of Kiao-Chau.

2. The Governments of Japan and China shall each appoint a commission with powers to make and carry out detailed arrangements relating to the transfer of the administration and of public property in the said territory and to settle other matters equally requiring adjustment. For such purposes the Japanese and Chinese commissions shall meet immediately upon the coming into force of the present agreement.

3. The said transfer and adjustment shall be completed as soon as possible, and in any case not later than six months from the date of the coming into force of this agreement.

4. The Japanese Government agrees to hand over to the Chinese Government, upon the transfer to China of the administration of the former German leased territory of Kiao-Chau, such archives, registers, plans, title-deeds and other

documents, in the possession of Japan or certified copies thereof, as may be necessary for the said transfer, as well as those that may be useful for the administration by China, after such transfer, of that territory, and of the fifty-kilometer zone around Kiao-Chau Bay.

II.—PUBLIC PROPERTIES

1. The Government of Japan undertakes to transfer to the Government of China all public properties, including land, buildings, works or establishments in the leased territory of Kiao-Chau, whether formerly possessed by the German authorities or purchased or constructed by the Japanese authorities during the Japanese administration of the said territory, save those indicated in this article (Paragraph 3) of this treaty.

2. In the transfer of such public properties no compensation will be claimed from the Government of China except (1) for those purchased or constructed by the Japanese authorities and also (2) for the improvement on or additions to those formerly possessed by the German authorities. With regard to cases under these two categories, the Government of China shall refund a fair and equitable proportion of the expenses actually incurred by the Government of Japan for such properties specified in (1) or such improvements or addition specified in (2), having regard to the principle of depreciation.

3. It is agreed that such public properties in the leased territory of Kiao-Chau as are required for the Japanese Consulate to be established in Tsing-tao shall be retained by the Government of Japan, and that those required more especially for the benefit of the Japanese community, including public schools, shrines and cemeteries, shall be left in the hands of the said community.

Details of such matters shall be arranged by the joint commission provided for in an article of this treaty.

III. JAPANESE TROOPS

The Japanese troops, including gendarmes now stationed along the Tsing-tao-Tsinanfu Railway and its branches, shall be withdrawn as soon as the Chinese police or military force shall have been sent to take over the protection of the railway.

The disposition of the Chinese police or military force and the withdrawal of the Japanese troops under the foregoing provisions may be effected in sections. The date of the completion of such process for each section shall be arranged in advance between the competent authorities of Japan and China. The entire withdrawal of such Japanese troops shall be effected if possible within three months, and, in any case, not later than six months from the date of the signature of the present agreement.

The Japanese garrison at Tsing-tao shall be completely withdrawn, simultaneously, if possible, with the transfer of the administration of the leased territory of Kiao-Chau to China, and in any case not later than thirty days from the date of such transfer.

IV. THE MARITIME CUSTOMS

1. It is agreed that upon the coming into force of the present treaty the Custom House of Tsing-tao shall be made an integral part of the Chinese maritime customs.

2. It is understood that the provisional agreement of Aug. 6, 1915, between Japan and China relative to the maritime customs office at Tsing-tao will cease to be effective upon the coming into force of the present treaty.

V. THE TSING-TAO-TSINANFU RAILWAY

1. Japan shall transfer to China the Tsing-tao-Tsinanfu Railway and its branches, together with all the properties appurtenant thereto, including wharves, warehouses and other similar properties.

2. China, on her part, undertakes to reimburse to Japan the actual value of the railway properties mentioned in the preceding paragraph. The actual value to be so reimbursed shall consist of the sum of 53,406,141 gold marks (which is the assessed value of such portion of the said properties as was left behind by the Germans), or its equivalent, plus the amount which Japan, during her administration of the railway, has actually expended for permanent improvements on or additions to the said properties, less a suitable allowance for depreciation. It is understood that no charge will be made with respect to the wharves, warehouses and other similar properties mentioned in Paragraph 1 of this article, except for such permanent improvements on or additions to them as may have been made by Japan during her administration of the railway, less a suitable allowance for depreciation.

3. The Government of Japan and the Government of China shall each appoint three commissioners to form a joint railway commission, with powers to appraise the actual value of the railway properties on the basis defined in the preceding paragraph, and to arrange the transfer of the said properties.

4. Such transfer shall be completed as soon as possible, and, in any case, not later than nine months from the date of the coming into force of the present agreement.

5. To effect the reimbursement under Paragraph 2 of this article, China shall simultaneously with the completion of the transfer of the railway properties, deliver to Japan Chinese Government Treasury notes, secured on the properties and revenues of the railway, and running for a period of fifteen years, but redeemable at the option of China at the end of five years from the date of the delivery of the Treasury notes, or at any time thereafter upon six months' previous notice.

6. Pending the redemption of the said Treasury notes, the Chinese Government will select and appoint, for so long a period as the said notes remain unredeemed, a Japanese subject to the post of traffic manager and another Japanese subject to be chief accountant jointly with the Chinese chief accountant with co-ordinate functions. These officials shall all be under the direction, control and supervision of the Chinese managing director, and removable for cause.

7. Financial details of a technical character re-

lating to the said Treasury notes, not provided for in this article, shall be determined in mutual accord between the Japanese and Chinese authorities as soon as possible, and, in any case, not later than six months from the date of the coming into force of the present agreement.

VI. THE EXTENSIONS OF THE TSING-TAO-TSINANFU RAILWAY

It is agreed that the concessions relating to the two extensions of the Tsing-tao-Tsinanfu Railway, namely, the Tsinanfu-Shunteh and the Kaomi-Hsuehowfu lines, will be thrown open for the common activity of an international financial group, on terms to be arranged between the Chinese Government and the said group.

VII. MINES

The mines of Tschuan, Fangtse and Chinlingchen, for which the mining rights were formerly granted by China to Germany, shall be handed to a company to be formed by a special charter of the Chinese Government, in which the Japanese capital may not exceed the amount of the Chinese capital. The mode and terms of such arrangement shall be determined by the Chinese and Japanese commissions which are to be appointed for that purpose and which shall meet immediately upon the coming into force of the present agreement.

VIII. OPENING OF THE FORMER GERMAN LEASED TERRITORY

The Japanese Government declares that it has no intention of seeking the establishment of an exclusive Japanese settlement or of an international settlement in Tsing-tao.

The Chinese Government, on its part, declares that the entire area of the former German leased territory of Kiao-Chau will be opened to foreign trade, and that foreigners will be permitted freely to reside and carry on commerce, industry, and other lawful pursuits within such area.

The vested rights lawfully and equitably acquired by foreign nationals in said area, whether under the German régime or during the Japanese military occupation, will be respected.

All questions relating to the status or validity of such vested rights acquired by Japanese nationals shall be arranged by the Sino-Japanese Joint Commission.

IX. SALT INDUSTRY

Whereas, the salt industry is a Government monopoly in China, it is agreed that the interests of Japanese companies of Japanese nationals actually engaged in the said industry along the coast of Kiao-Chau Bay are to be purchased by the Chinese Government on payment of fair compensation, and that exportation to Japan of a quantity of salt produced by the said industry along the said coast is to be permitted on reasonable terms. Arrangements for the above purposes, including the transfer of said interests to the Chinese Government, shall be completed by the Chinese and Japanese commissions as soon as possible, and in any case

[English Cartoon]

—Passing Show, London

THEY WON'T BE HAPPY TILL THEY GET IT

not later than six months from date of the coming into force of the present agreement.

X. SUBMARINE CABLES

Japan declares that all the rights, titles and privileges concerning former German submarine cables between Tsing-tao and Chefoo, and between Tsing-tao and Shanghai, are vested in China, with the exception of those portions of the said two cables which have been utilized by the Japanese Government for the laying of a cable between Tsing-tao and Sasebo—it being understood that the question relating to the landing and operation at Tsing-tao and the said Tsing-tao-Sasebo cable shall be arranged by the Chinese and Japanese commissions as subject to the terms of the existing contracts to which China is a party.

XI. WIRELESS STATIONS

The Japanese wireless stations at Tsing-tao and Tsinanfu shall be transferred to China upon the withdrawal of the Japanese troops at those two places, respectively, with fair compensation for the value of these stations. The details of such transfer and compensation shall be arranged by the Chinese and Japanese commissions.

ANNEXES

I. Preferential Rights—Japan declares that she renounces all preferential rights with regard to foreign assistance in persons, capital and material, stipulated in the Sino-German Treaty of March 6, 1898.

II. Public Enterprises—Enterprises relating to electric light, telephone, stock yards, &c., shall be handed over to the Chinese Government, with the understanding that the stock yard, electric light and laundry enterprises are, in turn, to be handed over to the municipal government of Tsing-tao, which will form Chinese

corporations in conformity with the Chinese Company law to manage them under municipal supervision and regulations.

III. Telephones—1. The Japanese Government agrees to turn over to the Chinese Government the telephone enterprise in the former German leased territory of Kiao-Chau.

2. As regards such telephone enterprise, the Chinese Government will give due consideration to requests from the foreign community at Tsing-tao for such extensions and improvements as may be reasonably required by the general interests of the public.

IV. Public Works—The Chinese Government declares that in the management and maintenance

termination of such points the two Governments shall, if necessary, obtain recommendations of an expert or experts of a third power or powers who shall be designated in mutual agreement with each other.

VII. Extension of the Tsing-tao-Tsinanfu Railway—The Japanese Government has no intention of claiming that the option for the construction of the Chefoo-Weihsien Railway should be thrown open for the common activity of the international financial consortium if that railway is to be constructed with Chinese capital.

VIII. Opening of the Former Leased Territory—The Chinese Government declares that, pending the enactment and general application of laws regulating the system of local self-government in China, the Chinese local authorities will ascertain the views of the foreign residents in the former German leased territory of Kiao-Chau in such municipal matters as may directly affect their welfare and interests.

SPECIAL UNDERSTANDINGS

The four following special understandings, as recorded in the minutes of the conversations, and as explained by Secretary Hughes at the plenary session of Feb. 1, form a part of the conclusions reached:

1. It is understood that on taking over the railway, the Chinese authorities shall have full power and discretion to continue to remove the present employees of Japanese nationality in the service of the railway and that reasonable notice may be given before the date of the transfer of the railway. Detailed arrangements regarding the replacements to take effect immediately

THE DOOR STAYS OPEN

And Next Time Maybe We Can Make It for Life

of the public works in Tsing-tao, such as roads, waterworks, parks, drainage, sanitary equipment, &c., handed over to the Chinese Government by the Japanese Government, the foreign community in Tsing-tao shall have fair representation.

V. Maritime Customs—The Chinese Government declares that it will move the Inspector General of the Chinese maritime customs to permit the Japanese traders at Tsing-tao to communicate with the said customs in the Japanese language, and, in the selection of a suitable staff for the Tsing-tao customs, to give consideration within the limits of its established service regulations to the diverse needs of the trade of Tsing-tao.

VI. The Tsing-tao-Tsinanfu Railway—Should the Joint Railway Commission fail to reach an agreement on any of the matter entrusted to its charge, the points at issue shall be taken up by the two Governments for discussion and adjustment by means of diplomacy. In the de-

on the transfer of the railway to China are to be made by the Chinese and Japanese authorities.

2. It is understood (1) that the entire subordinate staff of the Japanese traffic manager and of the Japanese chief accountant is to be appointed by the Chinese Managing Director; and (2) that after two years and a half from the date of the transfer of the railway, the Chinese Government may appoint an assistant traffic manager of Chinese nationality, for the period of two years and a half, and that such

assistant Chinese traffic manager may also be appointed at any time after six months' notice for the redemption of the Treasury notes is given.

3. The Japanese delegation declares that Japan has no intention to claim that China is under any obligation to appoint Japanese nationals as members of the said subordinate staff.

4. It is understood that the redemption of the said Treasury notes will not be effected with funds raised from any source other than Chinese.

ITALY'S TRADE AGREEMENT WITH RUSSIA

All barriers except that in regard to alcohol are removed between the two countries—Abstention from political propaganda promised—Italian goods in Russia not to be requisitioned, and Russian gold not to be seized

A PRELIMINARY commercial agreement between the Italian Government and the Soviet Government of Russia was signed at Rome on Dec. 26, 1921, by M. Vorovsky, head of the Russian Commercial Mission to Italy, and Marquis della Torretta, the Italian Foreign Minister. The brief cabled summary of this agreement was printed in the February CURRENT HISTORY. The full text of the agreement, as given in the Russian Soviet press, reads as follows:

PREAMBLE—As it is in the interest of Russia and Italy to resume peaceful commercial intercourse immediately, and as it is necessary to establish a preliminary agreement between the Italian Government and the Government of the Russian Socialist Federated Soviet Republic (hereinafter to be referred to as the Russian Soviet Government) to cover the period preceding the conclusion of a commercial agreement and of a formal general treaty between the Governments of these countries which shall regulate their economic and political relations in the future, the above-mentioned parties have, by mutual consent, concluded the following preliminary agreement with the object of the resumption of traffic and commerce between them.

The present convention is conditioned upon the fulfillment of the following:

(a) That each party shall abstain from any act or attempt hostile to the other party and shall abstain from carrying on, outside of its own borders, any direct or indirect propaganda against the institutions of the Kingdom of Italy or of the Russian Soviet Government. (By the term propaganda we include assistance or encouragement given by either party to any

propaganda whatsoever conducted outside of its own borders.)

(b) That all Italians, including natives of the redeemed provinces, who are now in Russia shall be allowed immediately to return to their home country, and that all Russian citizens living in Italy who may wish to return to Russia shall likewise receive full liberty to do so. The two parties obligate themselves immediately to give all necessary instructions to their agents or other persons subject to their authority so that they may conform to the conditions stated above.

ARTICLE 1—The two parties agree not to impose or maintain any blockade against each other, and agree that they will remove immediately all obstacles that have hitherto prevented the resumption of trade between Italy and Russia in goods that may be regularly exported from or imported into their respective territories from or to any other foreign country. They will not subject such commerce to any condition putting it at a disadvantage compared with commerce with any other country, and they will not hinder the banking, credit and financial operations connected with such commerce, but will apply the legislation ordinarily current in their respective countries. It is understood that this article does not deprive the parties concerned of the privilege of regulating traffic in arms and munitions by general legal rules that may later be applied to all importations of arms and munitions from foreign countries, as well as to their export.

No provision of this article shall be interpreted as derogatory to the general international conventions binding upon each party by which commerce in any specific kind of goods is now regulated, or may be regulated later.

ARTICLE 2—Italian and Russian ships and their commanders, crews and cargoes shall obtain in Russian and Italian ports precisely

the same treatment, privileges, facilities, immunities and protection in every respect as are granted habitually, by the practices established among commercial nations, to foreign merchant ships, their commanders, crews and cargoes visiting their ports, including the facilities customarily granted with regard to coal, water, pilots, anchoring, docks, cranes, repairing, stores and, in general, all the services, facilities and privileges connected with maritime commerce. In addition, the Italian Government undertakes the obligation not to participate in, or adhere to, any measure restricting or preventing, or tending to restrict or prevent, Russian ships from exercising the rights of free navigation on the high seas, straits and canals enjoyed by ships of other nations.

This article shall not impair the right of either party to take the action authorized by its laws connected with the admission of foreigners to its own territory.

ARTICLE 3—Each party shall name such number of its citizens as shall be determined from time to time as reasonably necessary for the execution of the present agreement, with due regard to the conditions under which commerce in its territories is being carried on. The other party shall permit such persons to enter its territory and to remain there and transact business. It shall furthermore remain within the discretion of each of the two contracting parties to limit the admission of the above-mentioned persons or individuals to any specific region and to refuse such admission and sojourn in its territory to any person whom it may consider non grata.

The persons admitted in conformity with this article to the territories of each of the two parties shall, during the time they may remain for commercial reasons, be exempt from all compulsory services of any kind, whether civil, naval, military or other, and from all contributions, whether in money or in kind, imposed as an equivalent for personal service; and they shall have the right to leave whenever they so desire. They shall be at liberty to communicate freely by mail and telegraph and to make use of telegraphic codes under the conditions and regulations fixed in the International Telegraphic Convention of 1876, in St. Petersburg (as revised at Lisbon in 1908).

Each party obligates itself to keep account and to pay the difference due to the other party for telegrams, direct and in transit, and for letters in transit, on the basis of the Regulations of the International Telegraphic Convention and of the Convention and Regulations of the Universal Postal Union. The resulting difference shall be paid in the currency of either country, according to the desire of the receiving party.

Persons admitted to Russia, under the terms of this agreement shall have the right to import freely goods (except goods, such as alcoholic beverages, the importation or production of which are, or may be, prohibited in Russia), destined solely for their own domestic use, or for consumption in quantities reasonably required for such domestic use.

ARTICLE 4—Each party may delegate one or more official agents, the number of whom shall

be mutually agreed upon, who may reside and exercise their functions in the territory of the other party. These agents shall personally enjoy all the rights and immunities mentioned in the preceding article and also immunity from arrest and search and immunity for their office premises and dwellings; but it shall be understood that each party reserves for itself the right to refuse admission as an official agent to any person whom it considers persona non grata, and it may request the other party to recall such persons whenever acts have been committed contrary to the present agreement or to the customs of international law.

Such agents shall be accredited to the authorities of the country in which they reside for the purpose of facilitating the execution of this agreement and protecting the interests of their nationals.

These official agents shall have the right to communicate freely with their own Governments and with the official representatives of their own Governments in other countries, by mail, telegraph and wireless, in cipher, and to receive and forward consignments in sealed pouches, subject to a limitation of eight kilograms a week, which shall be exempt from search.

The telegrams and wireless messages of these official agents shall enjoy all those rights of precedence over private dispatches as are generally granted to the dispatches of official representatives of foreign Governments in Italy and Russia.

The official Russian agents in Italy shall enjoy the same privileges regarding local and general taxation as are granted to the official representatives of foreign Governments. The official Italian agents in Russia shall enjoy similar privileges, which shall in no case, however, be less than those granted to the official agents of any other country.

The official agents shall be empowered to visa the passports of persons who may ask to be admitted to the territory of either of the two parties, in conformity with the preceding article.

ARTICLE 5—Each of the parties obligates itself in general to assure the persons admitted to its territory in accordance with the two preceding articles every protection and right and such facilities as may be necessary to carry on business, but such persons shall always remain subject to the regular laws effective in the respective countries.

ARTICLE 6—The two contracting parties agree, from the moment of the conclusion of the present commercial agreement, to resume the exchange of private mail and telegraphic correspondence between the two countries, as well as the forwarding and accepting of telegraphic messages and parcel post, in accordance with the laws and regulations in force up to 1914.

ARTICLE 7—Passports, identification papers, powers of attorney and other documents of like nature issued or certified by competent authorities in either of the two countries and by their official agents, for the purpose of making possible the carrying on of commerce in accordance with this agreement, shall be considered in the

other country as having been issued or certified by the authorities of a recognized foreign Government.

ARTICLE 8—The Italian Government declares that it will not take any step toward sequestrating, or taking possession of, gold, funds, securities, or goods that have not been identified as the property of the Italian Government and which may be exported from Russia in payment, or as guarantees for imports. Nor shall any action be taken against the movable or real property that may be acquired by the Russian Soviet Government in Italy.

The Italian Government renounces all special legislation not applying to other countries against the importation into Italy of precious metals from Russia, in coin, in bullion, or in finished articles, or against gold imported to be stored, analyzed, refined, or melted, and given as guarantees or for similar purposes in Italy.

ARTICLE 9—The Russian Soviet Government obligates itself not to advance any claim to the right to dispose in any way of the assets or property of the former Imperial Government or of the Provisional Russian Government, that may still exist in Italy. The Italian Government in turn obligates itself in the same way regarding the assets and property in Russia of the Italian Government. This article does not preclude the inclusion in the general treaty provided for in the preamble to this agreement of provisions regarding the subject of this article. The two parties agree to hold, and not to transfer to any claimant prior to the conclusion of the above indicated treaty, the assets and property mentioned and now under their control.

ARTICLE 10—By virtue of the declaration attached to the present convention regarding the claims of either of the two contracting parties and of its citizens upon the other party for property rights or for obligations assumed by the existing Governments, or by other Governments preceding them, in either country, and regarding the compensation of private Italian, or Russian, persons who may have furnished goods or services to Russia or to Italy, respectively, it is agreed that gold, funds, securities, goods, and in general property of all kinds of the two countries imported or acquired after the conclusion of this convention shall not be subject to sequestration in either country, or to legal action limiting their free disposal, by reason of obligations incurred by the existing Governments or those preceding them in either country prior to the present agreement.

ARTICLE 11—Goods, products and manufactured articles of one country imported into the other, in accordance with this agreement, shall not be subject to compulsory requisition by the Government or any local authority.

ARTICLE 12—It is agreed that all questions concerning rights or claims of the nationals of each of the two countries regarding patents, labels, copyrights, or other literary property in the territory of the other country shall be equitably adjusted in the treaty provided for in the preamble.

ARTICLE 13—The present preliminary agreement shall come into force immediately, and both parties shall at once take all measures nec-

essary for its execution. Immediately following the signing of this agreement the two parties shall begin a discussion of the commercial agreement mentioned in the preamble, which shall regulate the economic relations between the two countries until it is superseded by a general treaty. The commercial agreement shall be signed within six months after the signing of the present preliminary convention.

In case there is a violation by one of the two parties, at any time whatsoever, of any of the provisions of this agreement or of any of the conditions mentioned in the preamble, the other party shall be freed immediately from its contractual obligations. But it shall nevertheless be agreed that before taking any action contrary to the convention the injured party shall allow the other a reasonable time to furnish explanations or to make good the error.

It is mutually agreed that in the event of the cases covered by the preceding clauses each party shall offer all necessary facilities for the liquidation, in accordance with the principles of the agreement, of the transactions already effected, and the facilities necessary for the recall and departure from its territory of the nationals of the other party and for the withdrawal of their movable property.

In case the present convention should expire without being superseded by a commercial agreement a prolongation, not to exceed one year, shall be provided for the liquidation of business transactions in order to continue in force the immunities provided for in Article 3 in favor of such persons as are indispensable for such liquidation. Drawn up in Rome, Dec. 26, 1921.

(Signed) DELLA TORRETTA.
VOROVSKY.

A similar convention was signed on the same day between Italy and the Ukraine, the Ukrainian Soviet Government having given Vorovsky full power to act for it. The agreement was accompanied by this declaration of recognition of claims:

At the moment of signing this agreement both parties declare that all claims of each party and of its own nationals against the other party regarding property or rights or obligations assumed by the existing Government and the preceding Government of either party shall be equitably adjusted in the general definite treaty provided for in the preamble.

However, without prejudicing the general provisions of the treaty provided for above, the Russian Soviet Government declares that it recognizes in principle its own responsibility for the payment of compensation to private persons who may have furnished goods or services to Russia that may still remain unpaid. The details for the carrying out of this obligation shall be laid down in the treaty provided for in the preamble.

The Italian Government makes the same declaration for itself.

It is understood that the declarations given above do not actually imply that the claims in question shall have priority in the above-mentioned treaty over claims of other kinds which may be provided for in said treaty.

THE MONTH IN THE UNITED STATES

Presentation of the Arms Conference treaties to the Senate for ratification—Foreign debt to be refunded—Action of the Agricultural Conference—Resignation of Postmaster General Hays—Senator Kenyon a Judge

[PERIOD ENDED FEB. 15, 1922]

PRESIDENT HARDING on Feb. 10 presented to the Senate in person the seven treaties resulting from the Conference on the Limitation of Armament. [See frontispiece.] He declared that they involved no alliances, and asked for their ratification in order to prove that the desire to end war was not a mockery. He said in part:

If we cannot join in making effective these covenants for peace and stamp this conference with America's approval, we shall discredit the influence of the Republic, render future efforts futile and unlikely, and write discouragement where today the world is ready to acclaim new hope.

There has been concern. There has been apprehension of territorial greed, a most fruitful cause of war. The conference has dissipated both, and your ratification of the covenant will stabilize a peace, for the breaking of which there is not a shadow of reason or real excuse. We shall not have less than before. There is no narrowed liberty, no hampered independence, no shattered sovereignty, no added obligation. We will have new assurances, new freedom from anxiety, and new manifestations of the sincerity of our own intentions: a new demonstration of that honesty which proclaims a righteous and powerful republic.

Immediately following his address, the President handed to the Senate the official report of the American delegation. The report, which went into the work of the conference and the reasons actuating the American delegation, was a printed document of 132 pages. It declared that the treaties embodied a "new state of mind" tending toward better relations in the East, and supplying a sense of security in connection with the naval agreements.

No announcement respecting American participation in the Genoa Conference had been made up to Feb. 15. It was understood that the latest developments in the situation had rendered it unnecessary for the American Government to hasten the announcement of its disinclination to have any complete participation in the work of that conference as long as there

were swollen land armaments and unbalanced financial budgets in various important countries of Europe. The position of the Administration was that this country, which was affected by anything that affected the general European economic and financial situation, had great sympathy with the problems that confronted Europe, but was reluctant to participate at Genoa in the making of treaties and agreements until necessary steps had been taken by other nations in the direction of stabilization.

PERSHING'S ARMY REFORMS

General Pershing informed the House Military Committee on Jan. 20 that elimination from the military service of inefficient officers would reduce the War Department's annual payroll approximately \$3,400,000. To provide retirement pay for officers of considerable service and one year's pay for younger officers dropped would require an expenditure of approximately \$2,000,000, making the net saving for the first year about \$1,500,000. By discharging inefficient officers of higher rank, \$4,000,000 would be lopped off the payroll, the committee was informed, and the appointment of needed Second Lieutenants at lower salaries would cost about \$600,000 in pay.

The Independent Offices Appropriation bill was passed on Jan. 30 by the House and sent to the Senate. The bill appropriated for the Veterans' Bureau \$377,474,622. The only change made in the bill as passed was the elimination of a provision which would have limited the number of camps at which training schools might be established to Camp Sherman, Ohio.

AN ALL-AMERICAN NAVY

Figures compiled by the Bureau of Navigation and made public on Jan. 16 show that among the 119,205 members of the United States Navy only 352 are aliens. Of the total enrolment at the end of the

fiscal year, 109,457 were natives, 5,829 were born in Guam, Samoa, the Philippines and Virgin Islands, and 3,567 were naturalized citizens. The care taken in recruiting was also shown by the fact that out of 135,993 applicants, only 72,386 were accepted. Of the total number of discharges, only 6.8 per cent. were dishonorable and but 6.08 per cent. of those in service during the year deserted. The good conduct medals in the service totaled over six thousand, some men having as many as eight to their credit.

FOREIGN DEBT BILL PASSED

The Senate on Jan. 31 passed, by a vote of 39 to 26, the bill authorizing the refunding of \$11,000,000,000 of foreign debt into securities maturing in not more than twenty-five years. All those who voted for the bill were Republicans, while the opposition was made up of twenty-three Democrats and three Republicans—Senators Borah, La Follette and Norris.

The bill, as passed, provides for a commission of five members, of which the Secretary of the Treasury shall be the Chairman. The other four will be named by the President, with the advice and consent of the Senate. The commission is authorized, subject to the approval of the President, to refund or convert and to extend the time of payment of the principal or the interest, or both, of "any obligation of any foreign Government now owing the United States, or any obligation of any foreign Government hereafter received by the United States."

It is stipulated, however, that the time of maturity of any obligation shall not be extended beyond June 15, 1947. The obligations which the commission is authorized to refund or convert include all those based on the Liberty and Victory loans, as well as the obligations held by the United States Grain Corporation, the Navy Department and the American Relief Administration. On Feb. 3, the House, by an overwhelming majority, accepted the Senate measure.

BILL TO CURB LYNCHING

The Dyer bill, making lynching a Federal crime and providing penalties, was passed by the House on Jan. 26 by a vote of 230 to 119, with four members voting present. The vote was almost entirely partisan, although seventeen Republicans broke from their party ranks to vote with the Demo-

WILL H. HAYS

Who has resigned the position of Postmaster General to become arbiter of the moving-picture industry

crats against the bill, while eight Democrats joined the Republican majority. Under the original language of the bill a "mob" was constituted by five or more persons, but this was amended by having the number reduced to three. The chief argument used by the opponents of the bill was that it was unconstitutional, because it invaded the police powers of the State. The bill still awaits the action of the Senate. [See "The Lynching Infamy," p. 897.]

SAVINGS BY BUDGET SYSTEM

On Feb. 3, President Harding announced, at a meeting of the Business Organization of the Government, consisting of about 1,000 department heads and bureau chiefs in Continental Hall, that the expenditure of \$109,000 in the establishment of the Bureau of the Budget had accomplished the direct saving of \$32,000,000 and the indirect sav-

ing of \$104,000,000 in all branches of the Federal Government during the preceding four months. This example of Government thrift "has helped greatly to make saving fashionable," the President said, in commending the work of Charles G. Dawes, Director of the Budget Bureau, and the co-ordinating officials under him. He added:

In a business so great as that of the National Government unexpected receipts will not infrequently swell the total of calculated revenues. It seems likely that this will be true during the current year, but, despite this possibility, it now seems probable that the restrictions upon expenditure which have been possible by reason of the Administration's general policy and your splendid co-operation would have resulted in a surplus of receipts for the year. The prospect of such a surplus, when compared with the estimated deficiency of \$24,500,000 that was outlined in the budget figures submitted to Congress in December, is certainly the occasion of much satisfaction to all of us.

The President was followed by Mr. Dawes, who made a vigorous speech, in which he explained the way in which economies had been effected and denounced

the bureau chiefs who wound red tape around the Administration's efforts to economize.

LOSS IN EXPORT TRADE

Foreign trade reports, issued Jan. 30 by the Department of Commerce, showed that exports to Europe during the last year fell off by more than \$2,000,000,000 as compared with 1920. During the year 1921, exports to Europe aggregated \$2,364,000,000, as against \$4,466,000,000 in 1920, while imports for the year aggregated \$765,000,000 as against \$1,228,000,000 in 1920. Exports to South America for the year aggregated only \$273,000,000 as compared with \$624,000,000 in 1920, while imports from South America totaled \$296,000,000 as against \$761,000,000 in 1920.

GOVERNMENT EXPENDITURES

Government financial operations since this country's entrance into the World War involved more than \$200,000,000,000, according to figures compiled Jan. 15 by the Treasury, on the basis of daily statements from April 6, 1917, to Dec. 31, 1921.

This stupendous sum consisted of receipts, both ordinary and public debt, of more than \$99,000,000,000, balanced against disbursements, of both classes, of a like total. Starting on the eve of the war, April 5, 1917, with a net balance in the general fund of \$92,000,000, receipts, exclusive of principal of public debt, from April 6, 1917, to Dec. 31, 1921, totaled \$24,018,000,000, while public debt receipts during the period amounted to \$75,643,000,000.

Disbursements, exclusive of public debt, for the period aggregated \$45,785,000,000, while public debt disbursements totaled \$53,481,000,000, and on Dec. 31, 1921, the net balance in the general fund was \$488,000,000.

For the war period the excess of disbursements, exclusive of principal of the public debt, over receipts of the same class was \$24,000,000,000. Over the same period the gross debt increased by \$22,000,000,000 from \$1,000,000,000 on April 5, 1917, to \$23,000,000,000 on Dec. 31, 1921.

Exclusive of foreign loans of \$9,597,000,000, ordinary disbursements of the Government from April 6, 1917, to the end of the past year aggregated \$36,187,000,000, these expenditures amounting to \$330,-

000,000 from April 6, 1917, to June 30, 1917, \$7,958,000,000 for the fiscal year of 1918, \$15,035,000,000 for the fiscal year of 1919, \$5,982,000,000 for the fiscal year of 1920, \$5,042,000,000 for the fiscal year 1921, and \$1,837,000,000 from July 1, 1921, to Dec. 31, 1921.

AGRICULTURAL CONFERENCE

The National Agricultural Conference met in Washington on Jan. 23. It was made up of 325 delegates, who included farmers, representatives of agricultural associations, bankers, packers, implement manufacturers, middlemen and Government officials. The conference was opened with an address by President Harding, who asserted that the whole country had an acute concern with the conditions and the problems which the conference had met to discuss. He declared that it was truly a national interest, and not entitled to be regarded as primarily the concern of either a class, a section or a "bloc." The President's recommendations were, in brief:

1. Provision for greater working capital for farmers.
2. Extension of co-operative marketing associations.
3. Better dissemination of scientific information.
4. Measures to protect farmer and consumer from violent price fluctuations.
5. Greater development and use of waterways and eventual electrification of all railroads.
6. Fuller development of natural resources through increased reclamation.

The conference continued in session for five days. In general, the resolutions adopted and the speeches made reflected the opinion of the delegates that there were three classes in this country—capital, labor and agriculture. For themselves and their efforts to force agricultural prices up to a level with other commodities, the farmers passed a resolution favoring the limitation of crop acreage until agricultural conditions in this country and in Europe should improve. An utterance from the report of the committee on costs, prices and adjustments, which was adopted by the conference, summed up the general view of the delegates as to the necessity that labor and capital should share in the deflation which had come to the farming industry. In addition to a general statement on the subject, a specific resolution was adopted in regard

to the railroad situation, which read as follows:

We insist that the railroad corporations and railroad labor should share in the deflation in charges now affecting all industry. This is essential to the restoration of normal conditions in agriculture, and it is essential to the welfare of the entire community. We earnestly appeal to those in authority to take such action as may be necessary in order to accomplish that result.

CO-OPERATIVE MARKETING

The Senate on Feb. 8, by a vote of 58 to 1, passed the Co-operative Marketing bill, which authorizes farmers, ranchers, dairy-men, planters and nut and fruit growers to act together in associations, corporate or otherwise, in collectively processing, preparing for market, handling and marketing in interstate and foreign commerce the products of their farms, dairies, groves and ranches. Whether or not such an association becomes a monopoly or unduly enhances prices in violation of law is a matter left to the decision of the Secretary of Agriculture instead of the Federal agencies created for that purpose. A substitute bill, which was reported from the Committee on Judiciary, and which stipulated that nothing in the bill shall be deemed to authorize or create a monopoly or to exempt any association organized under the provisions of the bill from any proceedings under the Federal Trade Commission act, was overwhelmingly defeated.

DECREASE IN UNEMPLOYMENT

While the unemployment situation during January had its discouraging features, the United States Employment Service, in a survey made public Feb. 5, declared: "The feeling that there will be a decided change for the better by early Spring is manifested by every section of the country, and seems to be based on real evidence of prosperity and not mere optimism." Forty out of sixty-five cities reported employment increases over December. Most of the increases, however, were small. Twenty-five cities reported decreases in employment, the decrease in New York being 1.8 per cent.

President Harding on Jan. 27 sent a letter to the Secretaries of War, Navy, Agriculture, the Treasury, Interior and Commerce, asking them to aid in providing work for the jobless by pushing ahead all repair and construction plans which other-

(Wide World Photos)

Mr. Hughes, Secretary of State, signing the treaties (Feb. 6) that embody the results of twelve weeks' deliberations of the Conference on Limitation of Armament, over which he presided

wise would not be undertaken until later in the year.

Cotton manufacturers employing approximately 50,000 operatives in New Hampshire, Massachusetts and Maine notified their employes on Feb. 2 of wage cuts amounting in most cases to 20 per cent., effective Feb. 13. New Hampshire plants also gave notice of an increase of from forty-eight to fifty-four hours in the weekly working schedule.

WAR-PLANE MAKERS SUED

The Department of Justice announced on Jan. 26 that suits would be started soon in Ohio and New York to recover \$7,260,439 which, it is alleged, represents over-payment made to the Dayton-Wright Company and the Wright-Martin Aircraft Corporation on cost-plus contracts for aircraft production during the war. The Attorney General intimated that a thorough investigation of aircraft production for the Government would be made as the result of information which had been supplied by accountants, who have been at work for some time. It was understood that the ac-

tion taken in New York State would be under the direction of United States Attorney Haywood.

The Attorney General stated that the work of investigating the war fraud cases generally would continue as fast as the magnitude of the undertaking would permit. He repeated the announcement, which he had previously made, that while the innocent need feel no alarm, the Government would exhaust every civil and criminal remedy to reach the guilty.

POSTMASTER GENERAL HAYS RESIGNS

Postmaster General Will H. Hays announced on Jan. 14 his intention of leaving the Cabinet on March 1 to become the head of a national association of motion-picture producers and distributors. His salary in his new office was said to be \$150,000 a year. After his interview with the President the latter gave out the following formal statement:

The Postmaster General and I have been discussing at considerable length the proposal which has been made to him to become the head of a national association of motion-picture

producers and distributors. If the arrangement proves to be, when the details are worked out, what it seems to be, I cannot well interpose any objection to Mr. Hays retiring from the Cabinet to take up a work so important. It is too great an opportunity for a helpful public service for him to refuse. I shall be more than sorry to have him retire from the Cabinet, where he has already made so fine a record, but we have agreed to look upon the situation from the broadest viewpoint and seek the highest public good.

The President intimated on Feb. 7 to a delegation from St. Louis that while he had

not definitely made up his mind as to the appointment of a successor to Mr. Hays, he looked with favor upon the recognition of the hard work and splendid service that had been rendered by Colonel Hubert Work of Pueblo, Colo., now First Assistant Postmaster General.

KENYON NAMED FOR BENCH

Senator William S. Kenyon of Iowa, leader of the farm bloc in the Senate, was nominated by President Harding on Jan.

[American Cartoon]

—N. E. A. Service

IT'S FUNNY, THE DIFFERENCE THREE THOUSAND MILES MAKE'

[American Cartoon]

—Los Angeles Times

BUT IT WEAKENS THE WHOLE
STRUCTURE

31 to be Circuit Judge for the Eighth District, and the nomination was unanimously confirmed by the Senate in open session, the Senators rising to vote.

The contention was raised that Senator Kenyon was ineligible for the position under the section of the Constitution which declares that no Senator or Representative shall, during the time for which he is elected, be appointed to any civil office which has been created or whose emoluments have been increased during such time. The salary of the Circuit Judgeship to which Senator Kenyon was appointed was increased from \$7,000 to \$8,500 by a law passed during the Senator's service. It was later declared, however, by Attorney General Daugherty, that the appointment was legal on the ground that the action in question had taken place before the beginning of Mr.

Kenyon's latest Senatorial term. The Senator thereupon announced his purpose to accept the new position at an early date.

RULING ON RAILROAD EARNINGS

Railroads which earned more than 6 per cent. upon the value of their property used in transportation during the period from Sept. 1, 1920, to Jan. 1, 1921, were required, under an order issued Jan. 28 by the Interstate Commerce Commission, to turn half of the excess so earned over to the Government. The order, as issued by the commission, made effective sections of the Transportation act of 1920 and prescribed rules for the application of those sections. Railroads, during the four months specified in the order, were understood to have earned a considerable amount in excess of the 6 per cent. limitation prescribed by Congress, but the valuations not having been given out for the individual lines the amounts had not yet been calculated.

PORTO RICO

A bill to make Porto Rico a free State with an autonomous government, under which all administrative officers would be

[American Cartoon]

—N. E. A. Service

THE WATER HOLE

elected by the Legislature, was introduced in the House by Representative Campbell of Kansas on Jan. 19. It is sponsored by the Unionist Party of Porto Rico, which sent a commission to back it. A United States Resident Commissioner is to have power to annul all laws for a period of ninety days, pending an appeal to the President. The Porto Rican Unionist Party on Feb. 10 issued a new platform pledging the party to work for the creation of a free State. On the same date Senator King of Utah introduced a bill in the Senate proposing to make Porto Rico a State of the Union, with a Governor and Legislature elected by the people.

Governor Reily's return to Porto Rico was marked by demonstrations of hostility similar to those attending his visit to the United States last November. Extra police protection was afforded at the pier in New York, whence he sailed on Jan. 20. His

chief opponent, Antonio R. Barcelo, President of the Porto Rican Senate and head of the Unionist Party, left a few days later, saying that Mr. Reily's return had created a difficult situation.

George R. Shanton, Chief of Police at San Juan, requested authority of Federal Judge Odlin to destroy evidence in Volstead law cases. The court refused, but the liquor disappeared and Judge Odlin sentenced the Chief of Police to forty-eight hours in jail for contempt of court. Governor Reily and other officials petitioned the Judge to remit the sentence, but he indignantly declined, saying he did not have the power and, if he had, he could not exercise it without belittling the dignity of the United States in Porto Rico. He characterized the attempt of the executive to interfere with the judicial authority as "probably the most unusual occurrence" in the history of the Federal Courts.

THE CZECHOSLOVAK CONSTITUTION

BY E. F. PRANTNER

To the Editor of Current History:

In your issue of February, 1922, Raymond Leslie Buell, in commenting on the Czechoslovak Constitution, says: "In fact, the legislative powers of Bohemia, Moravia and Silesia have been suppressed by the Constitution of Czechoslovakia."

Objection is made to the use of the word "suppressed" in this extract. The reasons are obvious. The word implies the use of force, and surely no one will contend that any force was used in erecting what is now Czechoslovakia. Thus, Section 3, Subdivision 1, of the Czechoslovak Constitution provides: "The territories shall form a united and indivisible unit." Section 6, Subdivision 1, of the same instrument, says:

"The legislative power * * * shall rest in the hands of Parliament." And Section 7, Subdivision 1, of the same instrument, provides: "The legislative and administrative powers of the *former* Diets are hereby abolished." (The italic is mine.)

No hint of any suppression that I can see. Everything was done openly and above-board, and there was no one else to be satisfied except the people. If they did not want to surrender this power they would have spoken long ago.

For a State of 13,000,000 inhabitants it would be mad folly to maintain four legislative bodies of minor importance in the republic's Parliament. Suppose the State of New York were divided into five districts, four of them to enjoy legislative powers and be subordinate to a main Legislature. That would be not only wasteful but cumbersome. The Czechoslovak people wanted their State to be a "united and indivisible unit." For that purpose they centralized power of legislation in the Parliament. The republic is not a confederation, like Switzerland, but is more like Belgium. [See President Masaryk's New Year address, *Czechoslovak Review*, February, 1922.]

Then, on Page 865, you speak of Lány Castle as being in the Tyrol. Lány Castle is in Czechoslovakia, near Pilsen (Bohemia), and is the Summer home of President Masaryk. He is occupying it this Winter because of repairs to his quarters in Hradcany, Prague. In the circumstances, President Hainisch and Chancellor Johann Schober paid a visit to President Masaryk and Premier Benesh. The treaty was negotiated on Czechoslovak soil.

1479 Elmwood Avenue, Lakewood, Ohio, Feb. 4, 1922.

NEWS OF THE NATIONS

Birdseye view of the chief events and developments of the month in all countries, arranged alphabetically for convenience of ready reference—Survey of the world's political and social changes

[PERIOD ENDED FEB. 15, 1922]

ABYSSINIA

TWO correspondents of the London Westminster Gazette assert that slave raiding and slave trading in Abyssinia have increased by leaps and bounds. The slave gangs are smaller than formerly because the border districts are becoming depopulated. In Southern Abyssinia, these correspondents say, there are to be seen men chained together and women and children dragging themselves painfully alongside them, many of them dying from exhaustion by the roadside. They are captured not only in Abyssinian territory but in British East Africa and the Anglo-Egyptian Sudan. On one occasion the slave raiders advanced 120 miles into British territory. The correspondents describe a steady relapse into barbarism since Menelik's death. The situation as described by them is as follows:

The Central Government exerts no authority outside of the suburbs of the capital. Roads, bridges and water mains have sunk in decay and all pretenses at sanitation have disappeared. Brigandage is rampant and a majority of the inhabitants of Addis Abeba, the capital, are slaves. Bribery and corruption flourish among the officials, including the Judges, while the police condone theft and blackmail and do not protect the community. America is said to be to some extent responsible, on the ground that the slave traders get most of their ammunition from the United States. The only way to abolish the slave system in Abyssinia, these writers conclude, would be a demonstration in force by one or more of the European powers. Their charges were taken up and discussed seriously by several London papers and so far as the decay of the Abyssinian Kingdom was concerned their statements were confirmed.

AFGHANISTAN

Satisfactory progress is being made in putting the British-Afghan Treaty into force. A feature of the treaty peculiar to the frequently unsettled state of the frontier tribes makes it incumbent on each party to inform the other of any contemplated military activity of major importance to preserve order before commencing such operations. Announcement was made of the appointment of Abdul Hadi, a noted Kabul journalist, to be the first Afghan Minister at the Court of St. James's, and Major F. H. Humphreys, C. I. E., Indian Army, to be the first British Minister at Kabul. The British Minister's staff is made up of a Military At-

taché, two British Secretaries, an Oriental Secretary and a Surgeon. Previously the only medium of diplomatic intercourse between the British Empire and Afghanistan was through a representative of the Indian Government at Kabul, of late years usually a native military officer of high rank.

ALBANIA

The new Albanian Government, formed after the December coup d'état, is composed as follows:

DJAFFER UTI BEY, President of the Council.
MONSIEUR FAN NOL, Minister of Foreign Affairs.
AHMUD BEY MATI ZOGOLI, Minister of the Interior.
KOL THATCHI, Minister of Finance.
HUSEI BEY URIONI, Minister of Justice.
Colonel ISMAIL TAZARLI, Minister of War.
SPIRO KOLIKA, Minister of Public Works.
REDJTE BEY MITROIZTSA, Minister of Education.

ARGENTINA

A movement in Argentina to restrict the consumption of alcoholic beverages has materialized in a bill introduced in the House of Representatives. It proposes to regulate the consumption of intoxicants, even in centres of private reunion, such as clubs, &c. Selling liquor from Saturday at midnight until early Monday is forbidden. One of the bill's most important provisions is that from Jan. 1, 1923, no alcoholic beverage containing any ingredient other than the product of fermented grapes, apples and pears may be manufactured or sold in Argentina. * * * The Legislature of the Province of Cordoba has increased the tax on beer, establishing an even heavier toll on the imported article. * * * The French Government has expressed its appreciation to the Government of Argentina for having extended the time for payment of the loan advanced to France during the war. A similar loan offer has again been extended to the French Minister in Buenos Aires for an undetermined amount, which could be used as a credit in the purchasing of wheat, meat and other staples. * * * The Argentine Army has made a contract with the American firm of E. I. du Pont de Nemours & Co. for more than a million dollars' worth of ammunition. This is the first purchase of American products of this kind ever made by Argentina, but it is expected that if the initial order proves

satisfactory others will follow. * * * The plan referred to in a former issue concerning the establishment of a Zeppelin line between Spain and Argentina will begin by regular flights between the Spanish coast and the Canary Islands. The type of dirigible definitely agreed upon is one with nine motors of 350 to 400 horsepower. The structure, 250 meters long by 33.8 wide and containing 125,000 cubic meters of gas, will be able to carry a cargo weighing 15,000 kilograms, exclusive of its fuel. The trip is expected to require: From Spain to the equatorial line 37 hours, to Cape Frio 31 additional hours, to Buenos Aires 20 hours more. The speed will be 120 kilometers per hour. The return trip is expected to take a longer time, but Dr. Eckner, the German engineer in charge of the plans, declared that he had observed that at a height of 1,800 to 2,500 meters the contrary winds can be avoided. * * * The condition of lawlessness in the Territory of Santa Cruz has been definitely suppressed, in the opinion of the local authorities. News of recent outbreaks are declared by the officials of the Territory to be merely delayed reports of former incidents. * * * The National Educational Council is prepared for the establishment of 1,000 new schools, which will be distributed throughout the Provinces and Territories of the republic. * * * There is great speculation in financial as well as industrial circles following the announcement that the German captain of industry, Hugo Stinnes, has asked for the incorporation under Argentine laws of the Hugo Stinnes Company, Limited. Among its plans are the development of agricultural, oil, lumber and transportation business and the establishment of a steamboat line in the Parana River for the opening up of virgin tracts in the Chaco Territory. * * * The improvement in the exchange situation has determined an increase in the imports, especially those from North America. A decisive influence for good is attributed in this connection to the recent loan of \$50,000,000 negotiated in the United States.

AUSTRALIA

Few countries have shown such a remarkable recovery in economic conditions as Australia. She entered 1921 under dense clouds of commercial and industrial depression. Wool, her chief product, seemed to have no market. But the resources of the country are so great that one or more industries are almost certain to offset the failure of others. First came a bumper wheat crop, with 100,000 bushels surplus. When wheat exports began to slacken, trade in wool revived. There followed abundant rain, and agricultural crops flourished beyond recent records. With only about \$250,000,000 in notes, backed up by one of the biggest gold reserves in the world, Australia occupies a very strong financial position. The Commonwealth is aiding in relieving the starving people of Europe to the extent of \$250,000 in supplies, principally wheat, shipped from stores in Great Britain. * * * It was announced on Feb. 4 in Berkeley, Cal., that astronomical observations to test the validity of the Einstein theory of relativity are to

be undertaken by an expedition which the University of California will send to Australia to observe the total eclipse of the sun on Sept. 21. Delegations from all over the world are preparing already to go there, as Australia contains the most favorable points for observation. * * * Australia's census shows a population of 5,436,796, of whom 2,762,758 are males and 2,674,038 females—one of the few countries in the world where the males are in excess of the females. * * * As a result of the Washington arms parley, Australia's single battle cruiser, the Australia, was placed in reserve on Feb. 9 in Sydney harbor, about 450 of her men being dismissed. * * * With the advance of the Australian Summer the bubonic plague in Queensland was reported on Jan. 21 to be slowly increasing and a plague of grasshoppers and ants has descended upon South Australia, even holding up trains by alighting on the rails and preventing the driving wheels of the locomotives from obtaining a traction hold. * * * Australia has elaborate plans for her mandated territory of New Guinea. The Central Labor Administration has perfected a scheme of technical education, with a view to equipping the island with skilled native labor. A site for a school building has been selected at Rabaul and instructors will be sent from Australia.

AUSTRIA

The currency crisis reached another high water mark early in January, when, in spite of a new issue of 17,000,000,000 kronen, increasing the total to over 160,000,000,000, many employers were unable to pay wages on account of shortage of bank notes. * * * The ratification of the treaties concluded with Czechoslovakia provoked a storm in the Federal Parliament, culminating in the resignation of Chancellor Schober. The Pan-Germans, whose support is essential to the Coalition Government, attacked the Chancellor bitterly for the clauses in which the two republics safeguard mutually their territorial integrity and in which the Austrian Government pledges itself to suppress any movement within its territory aimed against the safety of the Czechoslovak Republic. The former provision, the Pan-Germans felt, is intended to thwart Austria's union with Germany. The latter is aimed against the restorationists. Owing to these furlous attacks, which charged him with betraying his country, Chancellor Schober tendered his resignation, but was later induced to withdraw it. The Cabinet was reorganized, Chancellor Schober yielding the foreign portfolio to Dr. Leopold Heneit and assuming the portfolio of the Interior instead. * * * The governmental crisis aggravated the financial uncertainty to such an extent that on Jan. 23 the dollar was quoted in Vienna at 10,000 kronen. This resulted in a panic. * * * A deputation of scholars, writers and artists called on the Government to protest against the reported sale of the Imperial gobelin collection. The President of the Republic informed the deputation that no such sale was contemplated. * * * The famous pearl necklace of Maria Theresa, which had been pawned by the ex-Emperor

Charles in Switzerland, was sold in Paris to Jefferson Davis Cohn of London for \$200,000. He is a godson of the late ex-President of the Southern Confederacy.

BELGIUM

Discussion of the Anglo-Belgian defensive compact, negotiated at Cannes by Foreign Minister Jasper and Lord Curzon, which the British Government had expressed willingness to sign, was still under way in the Foreign Affairs Commission of the Belgian Chamber of Deputies, Feb. 9. Practically, it renews the famous guarantee of Belgian territory against attack contained in the treaty of 1839, which the invading Germans, in 1914, treated as a scrap of paper, the difference being that Belgium has abandoned her technical neutrality and become an ordinary sovereign State. Chamber members objected to the absence of a definite declaration that the guarantee is against any possible attack by Germany; without this, it was held, the compact would amount to a British protectorate rather than protection. It was objected also that the clause prohibiting Belgium from concluding any other convention in conflict with this Anglo-Belgian compact was a restriction upon Belgium's sovereign rights, no treaty being acceptable that might compromise Belgium's independence. Unlike the proposed Anglo-French pact, this proposed Anglo-Belgian pact has not been officially published.

At the Cannes Conference, Belgium also obtained important financial advantages, notably in regard to her prior claim of the first 2,000,000,000 gold marks received from Germany over and above the costs of the allied armies of occupation on the Rhine. Out of the 1,000,000,000 gold marks (about \$250,000,000) paid by Germany in 1921, Belgium received only one-half—550,000,000 gold marks. She was looking forward to the payments of 1922 for needed funds. Lloyd George and M. Briand, however, in their conference at London on Dec. 22, 1921, recommended the reduction of German payments for the current year to 500,000,000 gold marks and the equivalent of 1,750,000,000 gold marks in kind, reducing thereby also Belgium's share to 250,000,000 gold marks (about \$62,500,000) in cash, plus an undetermined share of about 500,000,000 gold marks in kind. At Cannes, M. Theunis, Belgian Minister of Finance, and M. Jasper, Minister of Foreign Affairs, convinced the Reparations Commission that Germany would be able to pay 720,000,000 gold marks in cash. Deducting about 140,000,000 marks for the British Army of Occupation, this means that Belgium will receive 580,000,000 gold marks instead of the 250,000,000 proposed by the London Conference. As Belgium is well supplied with native building material, the major part of the payments in kind will go to France. The Belgian Government, apprehensive lest the German indemnity will be reduced or spread over a lengthy period, is looking anxiously to the forthcoming conference at Genoa.

Belgium also persuaded the British Exchequer not to press for post-war loans amounting to \$71,000,000, and to change these to long-time

obligations. In announcing this arrangement to the Belgian Parliament, the Prime Minister stated that the Belgian Ambassador at Washington had been instructed to obtain similar action in regard to the \$160,000,000 post-war loan made by the United States.

Negotiations between Belgian manufacturers having large properties in Russia and the Russian Trade Commission under General Ipatiev were still proceeding in February. The manufacturers' proposals of complete restoral of these properties and indemnities for damage done were transmitted by General Ipatiev to Moscow.

BOLIVIA

In response to the offer made by President Saavedra to the White House for Bolivian intervention in the negotiations to be held in Washington for the settlement of the difficulties pending between Chile and Peru, an answer from President Harding, worded in the most cordial and friendly terms, was received at La Paz on Feb. 28. President Harding begins his note by making it clear that the part played so far by the American Government has been limited to that of a friend and neighbor who thinks it a duty to offer a friendly and neutral ground for the discussion of the problems arising between American nations. There is nothing in the offer made by the United States to Peru and Chile, the note continues, which could possibly be construed as a move toward the mediation of the United States. It is, therefore, the President concludes, left to the Governments of Chile and Peru to decide whether they will consider it necessary to call Bolivia to participate in the forthcoming negotiations. (See Chile.)

BRAZIL

The Brazilian Federal Congress has passed a law prohibiting gambling in public and limiting it to clubs, water resorts and other places far from the centres of population. The alarming increase in public gambling has determined this measure. The next measure in Congress is study of means to replace in the public Treasury the great sums it derived from the tax on gambling. * * * President Pessoa has sent President Alessandri of Chile a marble bust of the late Secretary of State, Baron de Rio Branco. Señor Alessandri, in his answer, expressed his gratitude for a present that shall perpetuate in the Executive Mansion of Chile the memory of a great South American and a great worker in cementing the friendship existing between the two countries. * * * Great enthusiasm has been displayed during the ceremonies commemorative of the famous declaration of Emperor Dom Pedro I., who on being invited by the Lisbon Court to take up his residence at the metropolis answered: "It being necessary to the happiness of the Brazilian people, the Emperor has decided to remain in the capital of the colony." * * * The Executive has been authorized to undertake the work of linking the telegraphic and railway lines of Brazil with those of Paraguay and Bolivia, promoting at the same time improvements in

the navigation of the rivers Paraguay, San Lorenzo and Cuyabá. The Government has also been authorized to negotiate the necessary international conventions for this work of American rapprochement. * * * In retaliation for prohibitive custom measures in Argentina, the Brazilian Government had for some time made difficulties for the introduction of Argentinian fruit. An agreement has now been reached between the two Governments and importations have taken a new impetus.

BRITISH WEST INDIES

Bermuda is about to inaugurate automobile omnibus and freight service between Hamilton and St. George, on the main island, a majority of the House of Assembly having been won over to the plan. This is a settlement of the question which has disturbed the politics of the island for a score of years. An automobile was imported into Bermuda toward the close of the last century, but the Legislature bought it from the owner and deported it, passing a law forbidding future importations.

Jamaica, on Feb. 7, issued a statement of export trade for last year and for January, this year, showing clearly that the period of acute depression from which the island has been suffering is passing. Prices are low, but quantities exported are satisfactory, the banana output being 50 per cent. greater than last year. The authorities of Jamaica have taken steps to prevent emigration to Panama, where the condition of laborers who have gone there is reported to be serious. The Jamaica Government expects to repatriate the destitute men.

At a meeting of sugar interests of Jamaica and other Caribbean colonies on Jan. 10 resolutions were adopted stating that the industry was faced with ruin unless imperial assistance were given. A deputation was chosen to go to London to obtain Government aid in the crisis, due to abnormal overproduction in Cuba, enhanced by heavy import duties in the consuming countries such as proposed in the Fordney bill.

Dominica has been more seriously hit than other colonies by the prevailing depression. Lime fruit products are its principal crop. The island is also interesting as containing the Carib Reserve, where remnants of the original inhabitants of the West Indies still live. Mr. Wood, Under-Secretary of State for the Colonies, who has made a tour of the West Indies for the Colonial Secretary, was informed that Dominica favors the introduction of a small elective element in the Legislative Council, such as that granted to Grenada. Mr. Wood's Colonial Office delegation found the same sentiment in favor of representative government to be general in St. Vincent.

BULGARIA

A treaty to safeguard American interests in Bulgaria, in view of allied reparation claims against that country, was approved by the Bulgarian Cabinet and submitted to Parliament. This agreement, though drawn in the form of a treaty of commerce and amity, is really the after-war settlement between Bulgaria and the

United States. As the two countries have not been at war, no formal peace treaty is necessary. As soon as the treaty is passed by the Sobranje it will be forwarded to Washington. * * * A Greek commission has arrived in Sofia to receive from the Bulgarian Government valuable archaeological objects seized by the Bulgars during the war in Greek territory, and ordered returned to Greece by the peace treaty. * * * Following the decree of the Minister of Education, M. Omartchevsky, abolishing three letters of the Bulgarian alphabet, a conflict has arisen between that official and the Faculty of the university. The latter protested against the reform, whereupon the Minister tried to stop payment of the Professors' salaries; the Rector of the university, however, had withdrawn from the bank funds sufficient to meet current expenses. An effort of the university to secure publicity for its views failed when the Minister, who is also acting as censor, prohibited publication of the university statement.

CANADA

In the Quebec Legislature, Premier Taschereau, in continuing the debate on the speech from the throne, declared the Provisional Government's policy in control of the liquor traffic both a moral and financial success. He stated that the success in the administration of the liquor business and other retrenchments meant the probable elimination of the whole provincial debt within twenty years, while enabling the Government to spend much more on improvements, education, roads and the support of charities. For the present year he estimated the province's surplus at \$1,300,000, the largest but one in the history of Quebec. He added that the liquor law brought a profit of \$4,000,000 a year to the Government, which contemplated opening a wine-purchasing office in Paris to import the wines of France, Spain, Portugal and Italy direct, thus following the policy of encouraging the use of wine rather than "hard" liquors. Though the Premier issued a stern warning to breakers of the liquor laws, he emphatically cried "hands off Quebec" to the professional prohibitionists seeking Dominion prohibition. * * * A decrease in customs and excise collections of \$1,500,000 was reported for January, 1922, as compared with the corresponding month in 1921. Total revenues from these sources were \$17,195,744.77 for the month, and \$191,395,250.77 for the first ten months of the fiscal year ended Jan. 31. The same period of 1921 yielded \$253,990,790.50.

CAUCASUS STATES

Now that the new Transcaucasian Federation, sponsored by the Russian Soviet Government, is an accomplished fact, it is of interest to follow the effect of the Bolshevik rule on the various States included in this compulsory union. These States at present are limited to Azerbaijan, the adjoining autonomous district of Nakitchewan, Armenia, Georgia and the little Republic of Ajaristan, in the Moslem district of Georgia. The mountain republic of Daghestan on the Caspian and the Republic of Sukhum on the

Black Sea are not included. The federated States are held under strong military control by the Bolshevik forces. The famine conditions previously reported, partly as a consequence of drought conditions similar to those in the Volga region, and partly as the result of the influx of Bolshevik soldiers and refugees, are now said to have considerably improved. Finances are still bad, owing to the output of enormous masses of paper currency. According to H. C. Jacquith, a representative of the Near East Relief Committee, who returned from a year's visit to the cities of Angora, Tabriz, Erivan, Tiflis, Novorossisk and other Caucasus centres on Feb. 9, the Bolshevik rule is proving for Armenia, at least, a blessing in disguise, the common people showing actual relief at being protected by Russia and Russian armored trains from the nightmare of Turkish invasions and massacres. American money spent in Armenia, he said, was doing the maximum amount of good. The Russian Armenian Government had scattered the refugees among the country villages, thus preventing the worst cases of starvation and congestion in the cities. This official further declared, on the basis of his observations, that the whole Caucasus region had benefited by the Bolshevik conquest in its elimination of all previous frontiers and the facility of communication thus gained. * * * Great popular discontent was reported in Azerbaijan Jan. 1 against the sovietized Government of M. Narimanov. Mass meetings hostile to the Government have been held in Baku, and the unreconciled element of Tartar Azerbaijanis were maintaining their guerrilla warfare against the Bolshevik forces throughout the country. These partisans are called officially "brigand bands."

CENTRAL AMERICAN UNION

The Central American Federation collapsed on Jan. 29, the Provisional Federal Council sitting at Tegucigalpa, Honduras, dissolving voluntarily on that day, largely owing to the overthrow of the Herrera régime in Guatemala last December. The Provisional Government of General Orellana, who ousted Herrera, had repudiated the plan to become a member of the Federation. The flag of the Central American Union flying over Guatemala City was hauled down on Jan. 14 and the Guatemalan flag raised in its place. * * * General Orellana, it was announced on Jan. 26, would be a candidate of the Liberal Party for President of Guatemala. * * * Meanwhile officials of the Herrera Government abroad continued in office, and the ownership of \$1,000,000 deposited in the National City Bank, New York, in the name of Dr. Bianchi, Guatemalan Minister at Washington, was in dispute. The bank refused to disburse the money without a court order. * * * Manuel Dieguez, who was Consul General in New York, died suddenly on Jan. 11. Dr. Bianchi appointed Miguel Pardo to take charge, but Enrique Muñoz, who claimed to be acting for the new Government, took possession of the consulate, afterward removing the effects to another office. Thus there were two Guatemalan agencies in

New York, one representing a Government which had ceased to function and the other a Government not recognized by the United States. * * * Honduras on Feb. 11 resumed its status as a sovereign republic under its former Constitution, following the collapse of the federation.

CHILE

The identic notes sent on Jan. 17 by Secretary Hughes to the Ministers of Foreign Relations of Chile and Peru, by which President Harding extended to them an invitation to send representatives to Washington in order to reach an agreement on the unfulfilled clause of the Ancon Treaty, were answered after two days with acceptance, in the most appreciative terms, by both Peru and Chile. Although President Harding's note does not involve in any sense a suggestion of mediation by the United States, it clearly indicates, on the one hand, the possibility of using arbitration in case direct negotiations do not promise an understanding; while, on the other hand, the scope of the conferences is limited to finding a solution for the fulfillment of those articles of the Treaty of 1883 not yet complied with. Chile has already appointed Mr. Luis Izquierdo and Mr. Luis Aldunate as its plenipotentiaries in the negotiations.

Comparing the last two censuses the conclusion is reached that the foreign-born population of Chile has diminished by about 16,000 inhabitants since 1907. * * * The Minister of Bolivia, Señor Macario Pinilla, shortly before leaving Santiago, presented a demand for the extradition of former President Gutierrez-Guerra, who is at present a political refugee in Chile. The demand is based on charges of fraudulent bankruptcy of the banking institution founded by Señor Gutierrez. Claudio Pinilla, a brother of the Minister, but a political opponent to the present de facto government of Bolivia, and now in Santiago, has expressed his confidence that the Chilean Government will refuse the demand, considering that Gutierrez-Guerra had resigned his position as President of the bank a year before he assumed the Presidency of the Republic, and that the present first magistrate, Señor Saavedra, in his desire to persecute his legal predecessor, has gone so far as to amend the bank statute so as to build a foundation for his charges. * * * The Intendente (governor) of Santiago, Señor Mackenna, has succeeded in organizing a popular subscription for the purchase of the Colonial palace known as the Casa Colorada, with the purpose of converting it into a historical museum for the many relics and objects of art belonging to the families of the founders of the nation. * * * The Government of Argentina has communicated its agreement to the convention for a single management in the operation of the Chilean and Argentinean branches of the Transandean Railway. * * * A bill limiting the right of coastal trade to the national merchant marine has been amended by the Senate to include in that qualification any foreign firm which has established branches in Chile, and whose head has taken up resi-

dence in Chile and is actively engaged in commerce or industries.

CHINA

So far as actual results are concerned, the elevation of Liang Shi-yi on Dec. 25 to the Premiership at the dictation of General Chang Tso-lin, the "super-Tuchun" of North Manchuria, was a failure. The opposition of General Wu Pei-fu, one of the leaders of the Chihli faction and the strongest military leader at present in China, proved fatal to Liang Shi-yi's hopes; and, soon after General Wu sent Liang (Jan. 15) an ultimatum to resign under threat of a march on Peking, President Hsu Shi-chiang announced that he had granted a leave of absence to Liang, and had appointed Dr. W. W. Yen, the Foreign Minister, as Acting Premier (Jan. 23). Premier Liang and several members of his Cabinet were still technically on "sick leave" at the beginning of February, their attitude being that the President must either dismiss them or recall them to office. It was stated on Feb. 9 Premier Liang Shi-yi had "requested" an additional ten days' leave. Meanwhile, war was threatened between General Wu and General Chang, and the Chinese Premier found himself in a dilemma between the two. * * * A parade of 10,000 students in Peking on Dec. 19 was staged to protest against the Washington negotiations with Japan over the return of Shantung and to demand the abrogation of the twenty-one demands. Dr. Yen, who at that time was still the Foreign Minister, received representatives of the paraders and pointed out to them the importance of the Washington discussions. * * * The financial situation of the Government continued bad. The four-power consortium agreed toward the end of January that China should float a 14,000,000-tael domestic loan secured by the salt revenues. The consortium stipulated that the overdue Japanese loan of 20,000,000 yen should be redeemed in monthly instalments of \$700,000 from the salt surplus. The proceeds of the consortium loan were to be devoted to military and administrative expenses. Thus empowered, the Peking Government sought to raise the sum required, but an advance in discount and the refunding of small bank loans, together with other complications, reduced the available funds to 6,000,000 taels, insufficient even to enable the Government to pay the large totals of back salaries to Government officials. Meanwhile General Wu's reported seizure of the salt revenues in his Province of Hupeh (Jan. 22) led to preparations for the landing of British marines at Hankow to protect the salt administration office there (Jan. 28).

COLOMBIA

In the Presidential election, Feb. 12, the Conservative candidate, Señor Pedro Nel Ospina, obtained a majority of votes over the Liberal candidate, Don Benjamin Herrera. Dr. José Vicente Concha, who had been backed up by the Centre Conservative Party, withdrew at the last minute and lent his help to Señor Nel

Ospina. The Conservative candidate also, of course, had the backing of the authorities already in power, the police, the army and the clergy. Charges of fraud in some villages were made before the courts, but it was believed a recount would affect the announced result but little. It was thought in political circles that the showing made by the Liberals demonstrated that they must be reckoned with in the future. The election attracted much interest throughout Latin America, as representing a stride forward in democratic methods. Since 1885, when the Conservative Party went into power, the Liberals had abstained from participation in Presidential elections for alleged lack of guarantees. The election of Feb. 12 was held on account of the resignation of President Marco Fidel Suarez in November, 1921, caused by the opposition of Congress to his policies. Suarez was succeeded by Jorge Holguin as Provisional President. General Ospina was born in 1853 in the Presidential Palace at Bogotá, the son of former President Mariano Ospina. He was graduated as an engineer from the University of California. He has been Governor of the State of Antioquia, Representative in Congress and Senator, also President of the Council of State and Minister to the United States, England and Belgium.

CUBA

Prominent American capitalists paid a fortnight's visit to Cuba in January, with a view to possible large investments in the island. Among them were Percy Rockefeller, Guy Carey and Charles E. Mitchell, President of the National City Bank, New York, which already has a heavy lien on important sugar properties in Camaguey Province. They made a ten-day tour of the island and at its conclusion Mr. Mitchell addressed 200 of the principal business men and financiers at a luncheon given in his honor in Havana, saying the worst of Cuba's sugar crisis was over and admitting that Cuba was not being treated fairly in tariff regulations by the United States. On Jan. 27, with several others of the party, Mr. Mitchell returned to Miami by airplane and thence by train to New York, where he gave out an interview saying he believed the sugar industry in Cuba was bound to go through an evolution of combinations which would bring producing, manufacturing and distributing organizations under single managements. * * * A preliminary one-year loan of \$5,000,000 was made to Cuba on Jan. 25 by a syndicate of New York bankers headed by J. P. Morgan & Co., the proceeds to be used for pressing needs. Later, it was stated, a long term loan of \$50,000,000 would be made, provided the Cubans can cut their budget to a point where they can meet all expenses and take care of the additional burden of the loan. * * * The budget has already been cut in regard to supplying food to prisons, the alternative as stated in the Cuban House on Feb. 8 being either to pay \$300,000 at once or let the prisoners go hungry. * * * Private D. J. Honey, an American marine, shot and killed Ramon Garcia, a Cuban, on a ranch outside of Camaguey on Jan. 21, claiming he shot in self-de-

fense. The Cuban Government had already asked for the removal of the 375 marines at Camaguey, who had been sent there during the war to protect local sugar interests. On Jan. 26, Secretary Denby ordered their removal and they arrived on Feb. 7 at the United States naval station at Guantanamo. * * * Gayety of the Winter season in Cuba is considered a sign of returning prosperity. Mme. Frieda Hempel made her debut in concert at the Capitolio Theatre on Feb. 6, winning a sensational success. On the following day John Philip Sousa, who had been welcomed to Cuba by President Zayas himself, appeared with his famous band at the National Theatre. * * * Forty prominent Masons left New York on Feb. 11 for Havana to take part in the unveiling of a bronze tablet to Dr. Elisha Kent Kane, the Polar explorer, to be placed on a small house in Havana in which Dr. Kane died in 1857.

CZECHOSLOVAKIA

The Czechoslovak Government has signed an agreement with the Franco-American Standard Oil Company, giving it a monopoly for oil prospecting and well sinking, and also to some extent a trading concession for thirty years. A local company will be created with Czechoslovaks as majority stockholders. * * * A loan of 500,000,000 Czech crowns was granted to the Austrian Government as an advance on the credits negotiated by the latter with France and England. * * * The Federation of Trade Unions issued its annual report, stating that in the year 1920 the total membership amounted to 822,561 persons associated with one or other of the fifty-three unions. This means an increase from the preceding year of 94,056 members. * * * The housing situation in Czechoslovakia is acute and is receiving attention from the Government. Recently 2,375 houses, with accommodation for 7,910 families, have been erected at a cost of 632,000,000 crowns. A further program of 2,178 houses, accommodating 4,836 families, at the cost of some 400,000,000 crowns, is being carried out.

DENMARK

Commercial treaty negotiations between Denmark and Soviet Russia were broken off again in January. Foreign Minister Scavenius said at a Liberal meeting in Copenhagen that the whole policy of separate trade arrangements had broken down, and that the only real basis for trade with Russia was shown in Mr. Lloyd George's plan of thorough international co-operation. Though the Bolsheviks would probably be suspicious of such a policy, he added, unity among the other powers would compel the Soviet to yield, as Russia could exist no longer in isolation. Certain Danish newspapers substantially agreed with him. * * * Dr. Krebs was recognized by the Soviet as representative of the Danish Red Cross. He was to act as Dr. Fridtjof Nansen's deputy at Saratov in controlling distribution of the foodstuffs bought by the Red Cross in the Baltic to supply 4,000 Russian children with meals for the next five months. * * * The eightieth birthday of Dr.

Wilhelm Thomsen, Denmark's distinguished authority on Classical and Oriental philology, especially on the influence of East European languages on Scandinavian tongues, was celebrated Jan. 25 by greetings from the royal family and from Oxford University, where he formerly lectured. The Royal Scientific Society of Denmark arranged for a special meeting in his honor. * * * Denmark mourned the death, on Jan. 25, of her greatest advocate of world peace, M. Frederik Bajer, who was awarded the Nobel Peace Prize in 1908. He began his career as a cavalry officer in the Danish-German War of 1864, and afterward worked for international peace, republican government, and woman suffrage.

ECUADOR

Among the several festivities being prepared for the commemoration of the centennial anniversary of the battle of Pichincha, a victory by which Bolivar insured the independence of South America, the Government of Ecuador is organizing an agricultural exposition to be inaugurated on May 26. Official facilities in Custom Houses and railways will be tendered to every one who wishes to send products or manufactures for exhibition. Foreign concerns manufacturing agricultural implements, as well as those dealing in seeds or in live stock, are especially invited.

ENGLAND

Industrial reports for 1921 show in impressive figures the adverse influences of labor disputes and trade depression. Thus, according to a reliable computation, about 86,000,000 working days were lost through labor disputes, with about 1,800,000 workpeople involved. In the coal mining industry, the aggregate output for the year was estimated at 167,598,600 tons, and for the three months of the great strike only 179,100 tons. In shipping, the March, 1921, highest record of 3,798,593 tons under construction in the United Kingdom had been lowered by December, 1921, to 2,640,319 tons, a reduction of 1,158,274 tons in only nine months, while for the whole quarter ending in December only 55,000 tons of new vessels had been begun. In contrast with the foregoing adverse conditions, 1921 proved the healthiest year on record, the death rate being only 12.1 per 1,000, with infant mortality at 83 per 1,000, the lowest for any year except 1920. * * * On Jan. 26 the Labor majority on the Popular Borough Council, one of the poorest London districts already swamped by high local rates, doubled the dole allowed the unemployed to 91 shillings a week; this being more than breadwinners normally earned, but in line with the Labor Party's program for a modified form of Soviet government for the British metropolis. * * * At the reassembling of Parliament on Feb. 7, Premier Lloyd George voiced the national feeling when he called the Washington arms conference the greatest achievement for peace ever registered in history. * * * Prominent among deceased British subjects were Viscount Bryce, famous scholar and

former Ambassador to the United States, and Sir Ernest Shackleton, celebrated Antarctic explorer.

EGYPT

After the deportation of Zaglul Pasha (see *CURRENT HISTORY* for February, p. 866) a boycott manifesto was issued by his Nationalist Party on Jan. 23 modeled on Gandhi's non-co-operation movement in India. It included incitement of Government servants to insubordination and strikes, constituting a deliberate interference with public order. General Allenby retaliated the next day, arresting the signers of the manifesto and suspending four Cairo newspapers which published it. Among other points in the manifesto was one stating that "no Egyptian statesman should form a Ministry while the present policy obtains." Egypt was still without a Cabinet on Feb. 12. * * * On Jan. 29 the British Government issued a manifesto of its own, saying: "His Majesty's Government have explicitly stated their readiness to invite Parliament to terminate the protectorate, to recognize Egypt as a sovereign State and to agree to the re-establishment of an Egyptian Ministry of Foreign Affairs as soon as they were satisfied as to the following conditions: First, that imperial communications are assured; second, that Britain retain the right and power to afford protection to foreign communities; and, third, that Egypt is safeguarded against all foreign interference. As soon as an agreement satisfying these conditions has been drawn up, there will be no hesitation in inviting parliamentary sanction to such an accord."

* * * General Allenby was ordered to return to England to report on the situation, and Lloyd George in his address on foreign policy in the House of Commons on Feb. 7 said: "We are prepared to abandon the protectorate upon clear, fundamental issues." He called Egypt a "corridor country" between the eastern and western parts of the empire. It was abnormally placed with reference to the empire and the world. It was not a country to which self-determination could be granted without reference to any external conditions. * * * Despite the disturbed state of the country, there seems to be no apprehension on the part of tourists, who are flocking to the land of the Nile in greater crowds than ever before in history, 350 excursionists leaving New York alone on Jan. 28 and 1,280 on Feb. 4, raising the total since the beginning of the season to 3,390.

ESTHONIA

The Ministers of the Baltic States held a conference at Reval at the end of December, 1921, to discuss economic questions and to agree

[American Cartoon]

—Detroit News

IT'S A GIFT

upon a common plan for the resumption of commercial relations with Soviet Russia. Finland, Esthonia, Latvia and Lithuania were represented. Considerable progress was made, and it was decided to convoke at Riga a new conference to consider the various commercial treaties concluded by the Baltic States with Russia. The Esthonia-Finland treaty of Jan. 29 provides for reciprocal customs preference and almost amounts to a customs union.

The signing by Esthonia of an important commercial treaty with France was announced on Jan. 7. Under this treaty, France is granted most-favored-nation treatment for her exports to Reval, together with a rebate for wines, silks and perfumes. France grants Esthonia the minimum tariff for certain goods and rebates of from 15 to 60 per cent. for others. The mutual raising of the embargo on imports forms the subject of a special agreement.

FINLAND

The uprising of the Finnish East Karelians against the Russian Soviet Government is creating a most difficult domestic crisis for the Finnish Government. Thus far the firm yet tactful attitude of the Finnish Foreign Minister, M. Holsti, had averted an international explosion. The belligerent tone of M. Tchitcherine's various communications to the Finnish Government, however, has deepened the public resentment in Finland.

General Sergius Kamenev, Commander-in-Chief of the Soviet Army, announced on Feb. 8 that he had crushed the East Karelian insurrection

[American Cartoon]

—Providence Journal

STEADY, FRANCE!

on all fronts. He had made a similar announcement on Jan. 11, but on Jan. 24 the Karelians retook Kilmasjärvi, inflicting a severe defeat on the Soviet forces. General Kameney's later announcement was borne out by a dispatch stating that the last of the Karelian strongholds, Ukhta, had been captured on Feb. 7, and the rebel bands had been driven over the Finnish frontier. Women and children crossing into Finland were being cared for in internment camps by the American Red Cross. Neither the Karelian autonomy question nor the friction between Finland and Soviet Russia over it was settled. The insurrection was caused by Moscow's failure to live up to the Soviet guarantee of full autonomy for East Karelia under the protocol of the Dorpat Treaty. The East Karelians tried to throw off the Soviet yoke as represented by the dictatorship in their commune of Edvard O. V. Gylling, whom Finland regards as a traitor in her war of independence, and who has been charged with the authorship of the Bolshevik revolutionary plot in Sweden and Norway in 1921.

When the Finnish delegates to the mixed commission, created by the Dorpat Treaty to arrange its details, tried to bring up the Karelian question in committee in January, the Soviet authorities ordered them out of Moscow in so many hours. At the same time the Finnish Minister to Moscow, M. Gyllenbögél, went home and resigned, leaving the Secretary of the Legation, M. Alexis Tchernykh, as Acting Chargé d'Affaires. His explanation was that it was impossible for the legation to function under Moscow's treatment.

When Finland referred the Karelian question to the League of Nations, Estonia, Latvia, Lithuania, Poland and Rumania all sent to the League their endorsement of Finland's action.

The League appointed Poland as arbitrator between Finland and Soviet Russia, deputing to Poland the task of seeking out means of solving the Karelian question and securing approval of the autonomy promised to East Karelia. The endorsement by the Baltic States was made in defiance of Trotzky, who, in a speech on Jan. 16, had alluded to the "attempt of the so-called League of Nations" to intervene in the Russo-Finnish conflict, and declared: "The Russian Government rejects the application to Russia of the covenant's stipulations about outside powers. Any participation in such attempt will be considered an unfriendly act."

FRANCE

The new French Premier, Raymond Poincaré, on Jan. 19 received full support for his announced policies in the Chamber of Deputies by a vote of 472 to 107. The Premier's declaration that France would stay on the Rhine until Germany paid her reparations, restored the devastated provinces, and fulfilled the Versailles Treaty in respect to disarmament, punishment of war criminals, and other provisions, was cheered by the Deputies, and it was evident that this strongly Nationalist Chamber at last had a Premier after its own heart. M. Poincaré declared in favor of the projected Anglo-French alliance, but made it plain that France would not be represented at the Genoa economic conference agreed upon by Lloyd George with M. Briand at Cannes unless full guarantees respecting German and Russian demands were given. His speech was received with some misgivings in the British press and with a storm of vituperation in Germany, where his attitude was characterized as "pathological."

One of the new Government's first acts—the appointment of General Petain as Inspector General of the army, but virtually as a member of the Ministry of War, was attacked in the Chamber on Jan. 21, not only by the Socialists, but by André Lefevre, former Minister of War, as an attempt to militarize the Government. The Premier set himself at once to work out the details of the alliance with Great Britain, holding parleys with Lord Curzon on Jan. 16 and preparing data to enable Count de St. Aulaire, the French Ambassador in London, to take up the subject with Lord Curzon there. He early made clear his attitude that he was opposed to further continuance of the Supreme Council, and intended to return to the methods of the old diplomacy. In the subsequent exchanges of notes, running through January into February, Great Britain declined to give the proposed compact the form of a general military instrument or to extend the Versailles provisions to a guarantee of the left bank of the Rhine. Great Britain also insisted on solidarity in the Near East in respect to Turkey. While these discussions were still going on, Premier Poincaré came out with a firm declaration against French participation in the Genoa conference without the guarantees he had already outlined in the Chamber and which he now elaborated in detail (Feb. 2). On Feb. 8 he asked that the conference be postponed for three months. Despite this note the British Premier announced in

Parliament that the date set for the Genoa parley—March 8—still held, and the rift between the two nations widened. In speaking for the new French Army bill, which provides for an army of 630,000 effectives, and which was approved by the Finance and Army Commissions, in the Chamber on Feb. 7, M. Poincaré declared that France must be a "military power, but not a militarist." In public interviews he had declared that so far as French relations with Great Britain were concerned, it would be his aim to make France's international attitude that of an equal among equals.

GERMANY

There was a complete tie-up of Germany's railroads on Feb. 2 because the Government refused to give an immediate answer to the demand of the men for an increase of 50 to 70 per cent. in pay. An increase of 15 to 20 per cent. had already been granted on Oct. 1, 1921. An acute economic crisis resulted from the strike, which received sympathetic support from public utility workers in some of the larger cities, though the General Federation of Labor Unions strongly condemned it. The Government made firm efforts to resist, but the food situation grew so desperate that it was forced to capitulate by practically granting the demands. The strike lasted six days. The wage increase will entail an additional annual expense to the railroad budget of fully 50,000,000,000 marks.

Germany made her first payment of 31,000,000 gold marks Jan. 18 in accordance with the decision of the Reparation Commission at Cannes; the second was made ten days later, and the third also in ten days. The Germans also have agreed to deliver 5,700,000 tons of coal and coke each three months.

Congressman A. B. Houghton of Corning, N. Y., was nominated by the President as Ambassador to Germany on Jan. 18 and was promptly confirmed by the Senate. He was born at Cambridge, Mass., in 1863, graduated from Harvard, and studied at Göttingen and Berlin. His appointment was well received by the German press. * * * Dr. Andreas Hermes, Minister of Food, who was offered the German Ambassadorship to the United States, declined, as his party desired him to retain his post in the Cabinet. * * * Dr. Walter Rathenau, former German Minister of Reconstruction, has been appointed German Foreign Minister, thus relieving Dr. Wirth, the present Chancellor, of his dual rôle. His appointment was fiercely assailed by Hugo Stinnes. There is a bitter feud between the two and a wide difference in policies.

Germany's merchant fleet is being rebuilt with phenomenal speed, and the shipping in German harbors is already back to three-fourths of its pre-war dimensions. Some of the more enthusiastic predict that in four years Germany will have 5,000,000 tons of shipping, and so will have regained a merchant fleet equal to that which in 1914 ranked second among those of the nations of the world. The chief explanation for the boom is that the Government in paying 12,000,000,000 marks indemnity to shipowners

for losses under the treaty required that 90 per cent. of this be spent in building new ships in German shipyards and permitted only 10 per cent. to be used in new purchases, the buying back of ships or the chartering of foreign vessels.

—(Harris & Ewing)

ALANSON B. HOUGHTON

Member of Congress from New York, who has been named as United States Ambassador to Germany

In a letter written by the former German Crown Prince, dated Oct. 15, 1921, to his old teacher of political economy, he strongly condemned any agitation to restore the monarchy. He said that a republic for the present seemed to be the wish of a majority. He regarded all attempts such as the Kapp "putsch" as distinctly harmful. He expressed the hope that he might be permitted to return to Germany. * * * The main committee of the German student body gave a blow to anti-Semitism by deciding that membership in the student bodies in all colleges should be open to all German students regardless of race or religion. * * * The new tax plan, which is supported by a majority of the Reichstag, proposes: (1) A compulsory loan of one billion gold marks, bearing no interest for the first

three years, to cover the 1922 budget expenses except posts and railways; (2) no tax on post-war profits; (3) coal duty raised 40 per cent. and sugar duty increased to 50 marks; (4) an increase of $1\frac{1}{2}$ to 2 per cent. per 100 kilograms on sales. It is estimated that these new taxes will increase the receipts by 45,000,000,000 marks.

The German note to the Reparation Commission, in explaining the failure to meet reparation obligations in January and February, requests that Germany be relieved of all cash payments in 1922. The note points out the steps taken to increase revenues; it also asks for a reduction in cash payments and an increase in payments in kind. With the schedule of increased taxes, the note states, there will be a surplus of some 16,000,000,000 marks available for reparation payments.

GREECE

Recent events in Turkey have done nothing to improve the embittered feeling of the Greeks toward the Turks. By an order issued by Mustapha Kemal, the Turkish Nationalist leader, on Jan. 20, all the Greek residents of Konieh, in Anatolia, were deported to Erzerum. The Kemal authorities in Samsun, furthermore, on Jan. 30 arrested 300 Greek civilians and put them to death. On Feb. 6, Kemal Pasha had 22 Greeks hanged in Ak-Dagh; among the

THE POSITION OF GERMANY Between Bankruptcy and Bolshevism

murdered were a priest and a boy. Fourteen more Greeks were hanged at Samsun on Feb. 14. The Turkish authorities still nominally in power in Constantinople confiscated large quantities of Greek goods; Greek Consular agents, in trying to prevent the seizure, were ill-treated by the Turkish police, and a clash followed, which terminated only when the British police appeared on the scene and drove the Turks back. (Feb. 5.) * * * Desultory fighting between the Kemalist and Greek forces continued. A Turkish force of 250 horsemen on Jan. 27 attempted to enter the Greek lines in Asia Minor, and was repulsed. On Feb. 8 the Greek auxiliary cruiser Naxos captured the steamship Berkshire, bearing a cargo of coal and oil consigned to Mustapha Kemal. Greek reservists of the 1910 and 1911 classes in Macedonia and the Aegean islands were mobilized on Feb. 4. * * * A widely ramified Kemalist conspiracy was discovered by the Greeks in Smyrna. The Greek Government ordered that the harbor of Smyrna should be

closed between sunset and sunrise. Plotting was also laid bare in Athens, and Colonel Jafar Tayar, the former Turkish commander of Adrianople, who was captured when that city fell, was banished to the Peloponnesus on Jan. 25 for espionage. * * * A mass meeting attended by fully 10,000 people was held in Adrianople on Feb. 8; Greek, Turkish, Armenian and Jewish speakers declared that they and their compatriots would resist to the bitter end any Entente attempt to transfer that province back to Turkey. * * * The Thracian Deputies in the Greek National Assembly on Feb. 2 presented a memorandum to the Ministers of Great Britain, France, Italy and the United States, asking that Thrace should not be separated from Greece under any circumstances. * * * The conviction of the Rev. Meletios Metataxis by the Greek Ecclesiastical Court on the ground of usurpation of the Metropolitan throne of Athens in 1917 was confirmed by the Greek Government on Feb. 8. On the same day Metataxis, who is considered by his followers as the legally elected Ecumenical Patriarch, arrived in Constantinople. All the Greek officials, as well as the allied and American Commissioners, were conspicuous by their absence from the reception of welcome tendered him.

HAITI

Professor Pierre Hudicourt, a member of The Hague Court of Arbitration and a native of Haiti, told the National Popular Government League in Washington on Feb. 2 how his country is being bled by financial sharks and lesser grafters, with very little incidental benefit in the way of public improvements. He charged John A. McIlhenny, financial adviser to the Republic of Haiti, appointed by President Wilson, with being interested in a scheme to force upon Haiti a loan of \$14,000,000, which the people there do not want. He said McIlhenny gets \$10,000 a year and \$6,000 for traveling expenses from the Haitian Government for doing work which the Haitians do not want done. The National City Bank of New York, the Haitian-American Sugar Corporation and R. E. Forrest, President of the West Indies Trading Company, he said, were interested in the loan. He continued: "The proposition is made to the Haitian Government that the National City Bank shall loan it \$14,000,000, of which the Haitians would get \$12,880,000, for it is to be sold at 92. Out of this the railway interests represented by Vice President Farnham of the National City Bank are to get \$1,621,500 immediately in payment for a railway which the Haitians never bargained for. The Americans who have invaded Haiti propose to pay off the French debt of \$6,668,980 and the \$965,000 of internal debt. Of the proposed loan there will be left \$1,545,800. This, if the plans of the schemers go through, is to be devoted to irrigation projects and roads, not for the Haitians, but for the benefit of the American land-grabbers. I am here to protest against a treaty imposed by military pressure against the wishes of the people." He added: "The Haitian gourde, which was worth \$1 in American money, Admiral Caperton has arbitrarily fixed at 20 cents. The sugar and cotton

and other interests may pay their labor little more than 20 cents a day. By the most brutal and arbitrary methods these interests, working through the United States Government, have forced a new treaty, providing complete control of my country's finances and a Receiver General, who is a carpet-bagger from Louisiana. The country is now in complete vassalage." * * * Dr. Hudicourt was summoned before the Senate Investigating Committee on Feb. 8 and repeated his charges substantially as given above in his address of Feb. 2. Senator King on Feb. 6 introduced a resolution calling on the Secretary of State to inform the Senate by what authority a loan of \$14,000,000 was being negotiated in behalf of Haiti. * * * Brig. Gen. John H. Russell, it was stated on Feb. 8, would go as High Commissioner to Haiti to clear up the situation involving American occupation. Dr. Hudicourt protested against the appointment of a High Commissioner, especially a military man, declaring it would amount to the establishment of a protectorate. He described President Dartiguenave as the "rubber stamp" of the American forces of occupation.

HOLLAND

The Permanent International Court of Justice on Feb. 8 announced the acceptance by the Queen of the Netherlands, the Queen Mother and the Prince Consort of its invitation to be present at the meeting of the tribunal, Feb. 15, in the Great Hall of Justice in the Peace Palace, The Hague, to inaugurate the commencement of its functions. The municipality arranged a gala play at the Royal Theatre for Feb. 17, in honor of the opening, and presented to the Court seven inscribed crystal inkstands with a letter assuring the Judges of the city's unsparring efforts to make their stay agreeable. The costume adopted for the Judges comprised black velvet robes, lined with black silk, with ermine collars; black velvet birettas were also included, similar to those worn by Judges in French courts. Although the main lines of internal organization had been laid down, many details remained incomplete. * * * On Feb. 10 Jonkheer Van Karnebeek, Dutch Minister of Foreign Affairs and President of the last League of Nations Assembly, addressed the States-General. He urged that the League should keep close to reality and follow its own essential aims. It need not, he said, be feared that the Supreme Council would eclipse the League from the world's sight. Competition between the two was disappearing. It was, however, undesirable for the Supreme Council to dissolve and leave to the League the burden of all questions of international dissension. The League should continue its efforts to persuade all nations to join, such universal co-operation being necessary for its success. Minister Van Karnebeek praised the work of the United States in the Washington conference. Holland, he said, had attended only in its colonial interests in connection with the Pacific question, and had not been invited on disarmament. He stressed the importance to Holland of the Four-Power Treaty, which respects Dutch colonial possessions. He also paid warm tribute in the House to the new Interna-

tional Court of Justice, and announced the forthcoming negotiations with Belgium regarding the Treaty of 1839, expecting soon a satisfactory solution. * * * Dutch commercial interests viewed with alarm the progress of the Stinnes interests in the Dutch East Indies.

HUNGARY

A great Carlist demonstration was held on the occasion of release from prison of the Legitimist leaders. When some of them appeared in Parliament they were loudly cheered and a dinner was given in their honor. M. Rakovsky, the ex-King's temporary Premier, proposed Charles's health, and Count Apponyi promised to take the leadership of the Carlist movement. * * * Count Bethlen, the Premier, and Count Banffy, the Foreign Minister, have been challenged to a duel by Count Sigray, one of the Carlist leaders recently freed from prison, on account of statements made in the White Book, published in connection with the Carlist coup, which Count Sigray regarded as injurious to his honor. * * * A wild scene took place in the Diet on Jan. 20, when a Legitimist Deputy delivered a violent attack on Regent Horthy. He was howled down by partisans of the Regent, one of whom rushed at him and struck him in the face. A general turmoil ensued, in which blows were showered right and left, and even a revolver was produced. A number of duels resulted and M. Gaal, the Speaker, who himself participated in the affray, resigned. * * * According to The Westminster Gazette's Geneva correspondent, the debts of the ex-King Charles had been paid before he left Switzerland.

ICELAND

Anglia is the name of a new society formed to promote intellectual intercourse and goodwill between the Icelandic people and the English-speaking world. Reykjavik is its headquarters; the British Consul stationed there is its President, and Mr. Snaebjorn Jonsson is its Secretary. Anglia's first task is to establish a lectureship in English at the University of Iceland, and to appoint a lecturer from England. This cultural enterprise is in pursuance of the Icelanders' endeavors to break their insular exclusiveness, since the separation of Iceland from Denmark as a sovereign State, by seeking relations with other countries besides Denmark, especially England and America. * * * A resolution, in which the United States Senate would express its profound regret at Spain's "reported threats" of creating prohibitive tariff duties on certain Icelandic products, in retaliation for Iceland's adoption of prohibition, was introduced on Feb. 2 by Senator Jones of Washington.

INDIA

With the capture of Varlan Kunnath Kunhamed Haji, principal leader of the insurgent Moplahs, the Mohammedan uprising in the Malabar district was regarded as overcome.

The extent of the movement was made evident in a statement of figures given out on Jan. 24, from which it was gathered that 2,266 Moplahs were killed, 1,625 wounded, 5,688 captured and 38,256 voluntarily surrendered. * * * Of infinitely more potential gravity, the Gandhi campaign of non-co-operation continued to inflame the Hindu mind into resistance to British rule. It was reported that agitators were exciting the ignorant masses with assertions similar to those which stimulated the Indian Mutiny of 1857. Among notable figures to join Mr. Gandhi's civil disobedience volunteers was Mrs. Sairojini Naidu, head of the woman's movement in India and a poet of distinction. * * * Early in February Mr. Gandhi delivered what was practically an ultimatum, in the form of a letter, to the Viceroy, in which he offered to postpone mass civil disobedience for reconsideration of the whole subject, if the Viceroy would liberate all political prisoners within seven days and restore liberty of association and freedom of the press. The India Office replied in an official communication of Feb. 7, in which Mr. Gandhi's terms were set aside as beyond even discussion, far less acceptance, and he was warned that stern rule would be introduced, to uphold the principles of civilized government. * * * Meanwhile arrests and rioting continued on an increasing scale in several parts of India. The most serious to date was the storming of the police post at Chauri on Feb. 4 by Indian Nationalist Volunteers and the killing of at least seventeen officials. On Feb. 10 conditions in the region of Madras were reported as decidedly worse, the police having been compelled to fire into a mob of 10,000 persons at Tiruvannamall. * * * The tour of the Prince of Wales through Southern India, up to Nagpur, which he entered in state, and thence to Bhopal was reported as entirely successful. His visit to the last named native State, ruled over by the Begum, or Queen, was made memorable by the granting of a constitution on the British plan. * * * On Feb. 11 the Working Committee of the National Congress of India adopted a resolution deploring the recent outbreak at Chauri-Chaura and calling for suspension of the "civil disobedience order" until the wave of violent feeling had passed. Another resolution ordered the cessation of activities provocative of arrests and imprisonment. The situation was considered so menacing that all Europeans in Madras, according to latest advices, were being enrolled as special constables, by order of the Government. * * * On Feb. 13 the strike on the East Indian Railway was continuing to spread, assuming most serious proportions at Allahabad, whence an armored train went to investigate the trouble between there and Cawnpore, where stations, in charge of Indians, had been deserted by their entire staffs.

IRELAND

Following upon the successful establishment of the Provisional Government, the transfer of executive powers went forward without interruption. On Jan. 16 Dublin Castle was handed over by Lord Fitzalan, the Lord Lieu-

tenant. On Jan. 19 custody of the Irish Post Office was turned over to Provisional Government Postmaster General, J. J. Walsh. * * * Mayoralty election returns of Jan. 20 placed opponents of the treaty in office in Dublin, Cork, Limerick and Sligo, seated a Nationalist for Derry, and elected a candidate in favor of a direct vote on the treaty in Drogheda. The boycott against Ulster was called off by the Dail Eireann Cabinet on Jan. 24 as the result of a conference between Michael Collins and Sir James Craig, in which the latter agreed to remove the impositions of religious and political tests in Ulster. * * * Sitting in Paris, the Irish Race Congress, whose avowed object it is to work for full recognition of an Irish republic, on Jan. 27 elected Eamon de Valera President, and decided to open an office for the Central Committee at the Mansion House, Dublin, on the invitation of the Lord Mayor of that city. * * * Meanwhile evacuation of Ireland by British troops went on until, on Jan. 31, more than 12,000 had departed. No manifestation either of popular rejoicing or regret attended the passing of the British troops. * * * During the transfer of authority the criminal element took occasion to perpetrate country-wide crime, so that the Irish Republican Army was compelled to reimpose the rigid British curfew law, this time welcomed by the law-abiding public. * * * On Feb. 2 a deadlock occurred between Ulster Premier Sir James Craig and Michael Collins of the Free State Provisional Government during negotiations at City Hall, Dublin, for a settlement of the Ulster boundary question. After the meeting, Sir James Craig issued a statement saying that the discussion was almost entirely confined to the subject of a boundary commission. He pointed out, however, the serious difference in the two viewpoints, viz., that, though Ulster understood it was merely a boundary line question, the other side contended that large territories were involved. With the arrival of Sir James Craig in London on Feb. 3, and the summoning of Provisional Government leaders to the English capital by Premier Lloyd George, it was at once seen that a new crisis had developed in Irish affairs. Conferences on Feb. 5 and 7 merely indicated a wide impasse between the two sides. Premier Lloyd George, however, stated in the House of Commons on Feb. 7 that the boundary controversy might be postponed advisedly until after the framing of the Irish Constitution. * * * The Irish Free State bill, designed to put into effect the terms of the Anglo-Irish treaty, was introduced into the House of Lords on Feb. 9. * * * On Feb. 8, parts of Ulster became subject to wild raiding by Irish Republican bands from over the border, caused, it was said, by the British failure to release all Irish prisoners; result, police attacked, bridges blown up, 100 Ulster citizens kidnapped. The Ulster Government at once took measures to obtain release of the captives and to patrol the border with a large armed force to prevent further Sinn Fein incursions. On Feb. 10 Mr. Lloyd George made representations to Mr. Collins on the increasing

[American Cartoon]

—Los Angeles Times

"The Harp That Once Through Tara's Halls"

gravity of the situation, and was assured that the captives would be gradually released. * * * On the afternoon of Feb. 11, four Ulster special constables were shot to death in the railroad station at Clones, in the Ulster Free State territory near the border, a number wounded and others of a party of twenty captured by a party of Irish Republican Army men with rifles and a machine gun. The aggressors then fled before a shot could be fired by those whom they surprised. Sir James Craig, Premier of Ulster, addressed an urgent remonstrance to Premier Lloyd George, Winston Churchill and Viscount FitzAlan, demanding immediate action. On his arrival in Belfast from London, Sir James Craig announced that he had been assured of the immediate dispatch to Belfast of four additional battalions of troops. The Unionist prisoners recently kidnapped were still held. * * * On Feb. 13 Michael Collins cabled to Thomas W. Lyons, National Secretary of the American Association for the Recognition of the Irish Republic, Washington, D. C., that the Republican extremists in Ireland were planning a coup d'état to overthrow the Provisional Government. Orders countermanding the evacuation plans were received from London at Dublin and Bantry, and the withdrawal of the British troops from parts of Ireland was stopped.

ITALY

Italy had a new Cabinet crisis on Feb. 2, when Signor Bonomi and all his colleagues resigned prior to the taking of a vote of confi-

[German Cartoon]

Wahre Jakob, Stuttgart

THE SECRET

"This key, Messrs. Europeans, is the solution of the reparation problem. It is the key of my safe."

dence, Premier Bonomi preferring this solution to certain defeat. Important groups in the Chamber had passed over to the opposition because of objection to various Government policies. The causes of the majority defection were of both domestic and foreign origin, including the failure of the Italian delegation at Washington to have Italy included in the four-power Pacific treaty, the similar exclusion of Italy from the Anglo-French Treaty drafted (though not subsequently signed) at Cannes, and the Government's course in the recent Banca di Sconto failure. The most important cause of all, perhaps, was popular opposition to the Bonomi Cabinet's apparent desire to extend an olive branch to the Vatican on the occasion of the Pope's death. [See page 938.] Much dissatisfaction was expressed by the anti-Catholic groups over the Government's action in sending Minister of Agriculture Mauri, one of the Catholic members of the Cabinet, to the Vatican to convey condolences, and the half-masting of flags on the public buildings. Even the Catholic groups, however, were alienated from the Government, owing to its failure to have a eulogy of the late Pope read from the tribune of the Chamber by Signor de Nicola, its President, as had been promised. The exit of the Ministry at the opening of the conclave for the election of a new Pope created a great sensation in Rome. * * * The King, meanwhile, though not accepting at once the resignation, began a series of conferences with several ex-Premiers, including Orlando, Giolitti, Nitti, also with de Nicola and others, in an attempt to find a successor to Premier Bonomi. Signor de Nicola declined the post. Signor Orlando tried to form

a coalition Cabinet but failed. Despairing of any other solution, the King on Feb. 9 then summoned Premier Bonomi to the Quirinal and asked him to present himself again before Parliament for a vote of confidence. The result had not been made known when these pages went to press.

JAPAN

The results of the Washington Arms Conference had a wide reaction in Japan. Baron Takahashi, the Japanese Premier, in an address before the Diet on Feb. 7, and also in a special interview on the day following, extolled the results attained from the viewpoint of Japan's national interests and world peace. In answer to attacks upon the five-power naval treaty and the Pacific fortifications agreement, the Premier admitted that the results had not been complete, but declared that the main purpose, "to minimize the possibilities of warfare in the future and insure national development along more peaceful and productive lines," had been accomplished. He was followed by Foreign Minister Uchida, who repeated his strong assurances already given to the Diet on Jan. 21 regarding the evacuation of Siberia by Japanese troops: this withdrawal, he said, would take place as soon as the negotiations with Chita at Dairen had been completed, and the safety of Japanese nationals assured. Intense satisfaction over the results of the Washington discussions was shown throughout the commercial circles, which looked forward to an unprecedented era of prosperity in industrial and commercial development, access to raw materials and improved foreign trade relations, now that the hostility to the United States and the Chinese trade boycott were to be overcome. The Naval Department had formally ordered the dockyards to stop work on the eight battleships and battle cruisers which had been on the ways. * * * The Kokuminto Party introduced a bill in the Diet to cut down the army one half, and to confine conscription to one year (Jan. 25). * * * The advocates of universal suffrage were showing renewed activity. Plans were forming for the presentation of a new suffrage bill by various Parliamentary groups. Suffrage leaders on Dec. 26 ascribed the assassination of ex-Premier Hara to his failure to secure suffrage reform. Ozaki Yukio pointed out that of a total male adult population of 15,000,000 only 3,000,000 enjoyed the suffrage, viz., only 20 per cent. This issue, he declared, was far more important than the five-five-three naval ratio, and Japan could never hope to take her place among the progressive nations of the world until this situation was changed. Government opposition remained unchanged. * * * Prince Yamagata, one of the last of the Elder Statesmen, died in Tokio on Feb. 1, at 83 years of age. A great statesman and diplomat, a born aristocrat of immense popularity, his death was universally deplored.

JUGOSLAVIA

Owing to rumors that the visit of the ex-Empress Zita to her invalid son, the Archduke

Robert, at Zürich was merely a pretext for staging another Carlist coup d'état in Hungary, the Yugoslav Government took all precautions to intervene in case of a Hapsburg restoration attempt and ordered the mobilization of the army. At the same time the Government communicated with the Council of Ambassadors. This body took up the matter of Zita's mission, with the result that the Swiss Government asked the ex-Empress to cut short her stay in Switzerland by two days.

LIBERIA

Liberia has approved the draft of the agreement for the loan of \$5,000,000 which the United States promised to make to her during the war, but the draft has not received the requisite sanction of Congress. Of the \$5,000,000 only about \$35,000 was actually advanced. On the other hand Liberia suffered severely for joining the Allies, her capital, Monrovia, having been bombarded by a German submarine.

MEXICO

President Obregon characterized the ruling of Justice Donnelly of New York, dismissing a suit for \$500,000, brought by the Mexican Government on the ground that the Mexican Administration had not been recognized by the United States, as an injustice which puts a premium on fraud and tends to restrict trade, as there is no legal recourse if contracts are violated. * * * Thomas F. Lee, Executive Director of the National Association for the Protection of American Rights in Mexico, who wrote a letter promising aid to any "aggressive Mexican" in an attempt to overthrow Obregon, was forced to resign when the facts became public late in January. * * * Two resolutions were introduced in Congress to investigate charges that American interests were seeking to prevent recognition of Obregon, and President Harding, on Feb. 7, let it be known that he would welcome such investigation. * * * Norway, on Jan. 18, recognized Obregon. * * * A decree signed by President Obregon allows American citizens to enter Mexico without passports after Feb. 1. * * * Miguel Alesseo Robles was appointed Secretary of Commerce and Industry, and General Francisco Serrano Minister of War on Feb. 11. * * * Mexican oil export taxes set for payment Dec. 25 and postponed to Jan. 25 were postponed indefinitely; the amount involved is more than \$14,000,000. The original purpose of these oil export taxes was to enable Mexico to adjust her defaulted bond interest, and negotiations have been in progress to that end, the chief point of dispute being the amount of the bonds issued by Victoriano Huerta, which the Mexican Government will admit as valid. * * * An increase in Government taxes on all alcoholic beverages from 16 to 32 per cent. led to an inquiry as to President Obregon's views on prohibition. He replied that, though he thought a dry State would be a good thing for Mexico, he personally believed in eliminating vice through education rather than force. * * * A few revolutionary movements in Mexico have

been reported, one by General Francisco Murguía, who crossed the border from the United States with fourteen men, and another by General Miguel Aleman, who took refuge in the hills below Vera Cruz. * * * Revolutionists on Feb. 9 burned two bridges on the railroad between Juarez and Chihuahua City, about thirty miles from the former, and also destroyed parts of the track between Chihuahua City and Torreon. * * * Major José Anaya, a Federal army officer, connected with General Aleman's movement, was convicted and executed on Feb. 2. * * * Despite the efforts of the Rockefeller Foundation, yellow fever became epidemic at Vera Cruz in January; 116 deaths out of 217 cases were reported. * * * Racing was resumed in Mexico City on Jan. 15, after an interlude of ten years, under the auspices of the International Jockey Club. President Obregon and his Cabinet attended as the club's guests. * * * Mexico has placed a ban on motion pictures which contain Mexican "villains" or incidents that may portray Mexican life unfavorably, and has notified motion-picture companies that any pictures made by those who produce films derogatory to Mexico will also be prevented from entering Mexico and the companies will not be allowed to do business in Mexico.

NICARAGUA

A Sergeant of Marines and four Managua policemen were killed in a fight on Jan. 24, when the police overtook the Sergeant and three marine Corporals who had been reported as deserters from the marine detachment the previous day. This was the second disturbance in a few weeks, and the Navy Department, therefore, on Jan. 27 ordered the entire force of 100 men relieved by a new detachment from Haiti. In future, marines will be kept at the Managua barracks only for short periods. The American Minister has asked the Government for space on which to erect a canteen, dance hall, motion-picture theatre and other buildings to keep the marines away from Managua City. A petition was presented to the Nicaraguan Congress asking the Government to negotiate with the United States for the withdrawal of the marines.

NORWAY

King Haakon opened the Storting Jan. 26 by reading the speech from the throne, in which he stated that the friendly relations with foreign powers were unchanged, and said that the mining legislation for Spitzbergen had been handed to the powers concerned in September, 1921. Negotiations were to be opened with Finland regarding Norwegian privileges in Petchenga, recently ceded to Finland by Russia. The Government was to submit to the Storting bills for a State monopoly of the importation of cereals, flour, brandies and wines; for compulsory arbitration in labor conflicts, and for reform of the foreign Consular Service. The Communists were conspicuous by their absence. * * * The Norwegian Labor Party's annual report in January showed a loss of 41,000 members through the defeat last Summer of the ill-advised general strike

of organized labor against inevitable labor adjustments. This loss was one-third of the party's strength. * * * The Government estimated a cut of 76,000,000 kroner in its expenditures for the coming year. Civil service salaries are reduced by 33,000,000 kroner. No new taxes will be needed to balance the budget. * * * In

[American Cartoon]

—Detroit News

Which Is Safer, Weapons or Friends?

view of improved financial conditions, the Bank of Norway, Jan. 27, applied for Government permission to reduce its extraordinary issue of notes further by 25,000,000 kroner, the intention being to cancel this emergency issue as soon as possible. * * * Norway's recognition of the Oregon Government of Mexico was reported Jan. 18 by the Mexican Chargé d'Affaires at Christiania. * * * The appointment of Dr. Fridtjof Nansen, High Commissioner of the League of Nations' International Commission for Russian Relief, as an honorary member of the Moscow Soviet was reported in a Reuter dispatch Feb. 7. In recognition of his work for war prisoners in Russia the Danish Interparliamentary Groups Committee unanimously decided, Jan. 28, to propose to the Norwegian Storting's committee that the Nobel Peace Prize for 1922 be awarded to Dr. Nansen.

PERSIA

The new Persian Cabinet, as announced by the Persian Legation in London, Jan. 26, is composed as follows:

MOCHIR-OL-DOWLEH, Prime Minister and Minister of the Interior.

HAKIM-OL-MOLK, Minister of Foreign Affairs.

SARDAR-SEPAHI, Minister of War.

NAYER-OL-MOLK, Minister of Education.

SARDAR-MOAZZAM, Minister of Justice.

ETTELA-OS-SALTAMEH, Minister of Post and Telegraph.

ABD-OS-SALTAMEH, Minister of Public Works.

MOHR-OL-MOLK, Acting Minister of Finance.

The League of Nations has secured protection for the women and children working in the carpet factories of Persia. Protests addressed to

the Persian Government by the International Labor Office of the League resulted in an order forbidding the employment of children under 10 years of age in the carpet-making houses of Kerman, Persia, and the establishment of an eight-hour working day, as reported in the Labor Office Official Bulletin, issued in Geneva. The International Labor Office had received many complaints that women and children were compelled to work long hours for small wages. Atrophy of their arms and legs and other physical disorders resulted from the uncomfortable posture the workers had to assume. Following is the text of a message sent in December by the Persian Foreign Minister in reply to the League protests:

I have the honor to inform you that, pending definite measures on this subject, Kerman local authorities and others have been requested to enforce the following articles:

Engagement of workers to be effected with complete liberty on both sides.

Eight-hour day.

Prohibition of employment of boys and girls under age of 10 years.

Permission for workers to leave factory at midday for rest.

Provision of healthy sites and pure air for factories.

Preparation by local authorities of comfortable and suitable seats for women and children to allow work in normal positions, &c.

Authorities also requested to regulate wages and welfare of workers.

POLAND

Poland faces a new year of her existence as an independent republic full of hope and confidence. M. Skirmunt, Foreign Minister under the Ponikowski Cabinet, on Jan. 5 drew a most favorable picture of the political situation. The Government's efforts of the last year to establish peace with all her neighbors had been successful. The relations with Rumania, Czechoslovakia and France were fraternal. The rapprochement with Czechoslovakia was a guarantee of peace for all Central Europe. As for Lithuania and Russia, M. Skirmunt said:

"I do not lose hope that Polish-Lithuanian relations will also be harmonized, as the whole Polish Nation desires. It will be the same for Russia." Three days later the plebiscite elections occurred in Vilna, resulting in a sweeping victory for the Polish Unionists in the Vilna Assembly. Subsequently, however, the League of Nations refused to accept these elections, as undertaken without its sanction, and the whole dispute between Poland and Lithuania as to the disposition of the Vilna territory was turned back to the Polish and Lithuanian representatives for a new solution by agreement. Poland still hopes for an adjustment. * * * Late in January the Warsaw Government was preparing to open negotiations with Soviet Russia for the conclusion of a commercial treaty. Meanwhile representatives of the Russian Co-operatives have been permitted by the Polish Government to make purchases in Poland, and they have opened accounts in Warsaw banks for this purpose. The Polish customs authorities are facilitating the export of goods so purchased. * * * Repatriation from Russia of Polish nationals continues. Up to the end of 1921 some 400,000

Poles had been repatriated under the Riga treaty. Over 1,000,000 still remain in Russia. * * * The Ponikowski Cabinet, which replaced the Witos Peasant Government in September, 1921, and which it was thought would be in office only for a short time, still remains in the saddle, though M. Skirmunt as Foreign Minister is exposed to the attacks of the Peasant Party in the Diet Commission for Foreign Affairs. * * * One of the strongest men in the Ponikowski Cabinet is M. Michalski, the Minister of Finance, who is accomplishing miracles in rehabilitating Poland's finances. Marked reduction in note issues and extensive economies through elimination of non-essential Government bureaus, which will result in the saving of billions of marks annually, were reported by the Minister. The value of the mark was rising. * * * Minister of War Sosnkowski presented a bill on Jan. 10 providing for a peace-time army of 250,000, deemed by him necessary in view of Poland's lack of strategical boundaries, exclusive of the Carpathians in the south. As soon as Russia and Germany were actually on a peace footing, he said, the Polish Army might be reduced. * * * The Alcohol law passed by the Diet on Jan. 28 bans the sale of beer containing over 2½ per cent. of alcohol.

RUMANIA

After the brief interlude of the Také Jonesco Ministry, which was formed on the retirement of General Averesco, the Liberal Party, absent from power since 1919, was restored to ascendancy under the leadership of Premier Ion Brătianu, who also retains the Portfolio of War. * * * The members of the Liberal Cabinet are as follows:

VINTILA BRĂTIANU, Minister of Finance.
M. VIATOIANU, Minister of the Interior.
M. DUCA, Minister of Foreign Affairs.
M. SASSO, Minister of Industry.
M. ANGELESCU, Minister of Public Instruction and temporarily of Commerce.
M. CONSTANTINESCU, Minister of Agriculture.
M. BANU, Minister of Public Worship and temporarily of Public Works.
M. MARZESCU, Minister of Labor.
M. FLORESCU, Minister of Justice.
M. INCULETZ, Minister for Bessarabia.
M. NESTOR, Minister for Bukovina.
M. ZIGREA, Minister for the Minorities.
M. MOSCUI, Minister of Transport.
M. COSMA, Minister for Transylvania.

One of the most important items in the program of the new Cabinet is public economy. For this the Foreign Minister, M. Duca, set the pace by abolishing six legations at minor European capitals and the legation at Cairo.

RUSSIA

The famine situation in Russia continued to occupy the front rank of national problems. The American Relief Administration toward the end of January had reached the point where it could save children dying from hunger in Saratov, the worst famine district. With the \$20,000,000 appropriation by Congress in its hands, it began to lay plans for an extension of its work to adult feeding. Colonel Haskell, who heads the famine relief work in Russia, declared on Jan. 13 that his organization would exercise the same control

over adult feeding as it had done in the case of the starving children. Subsequently, Colonel Haskell stated that by March 5,000,000 adults and 2,000,000 children would be sustained on American grain. The question of railway transportation was serious, but he thought the Russian railroad system would be adequate to the task.

Tchitcherlin, the Soviet Foreign Minister, publicly expressed in Moscow toward the end of January, his and Russia's full appreciation of the "grandiose relief" being extended by the United States to the famine sufferers, which, he said, "has found a deep-felt echo in Russia." Director Walter L. Brown, European Director of the American Relief, stated that 150,000 tons of food would reach Russia monthly. In addition to large supplies to be purchased in the United States by the Soviet Government itself, an additional pledge by the Soviet Ukrainian Republic to purchase to the value of \$2,000,000 was signed in London on Feb. 2. Dr. Fridtjof Nansen declared in Geneva on Jan. 26 that 15,000,000 persons must die of starvation unless greater efforts were made to cope with the situation. At least 19,000,000 were suffering, he said.

The seriousness of the famine situation, despite all relief measures, led the Soviet Government to adopt a measure which indicates that the internal struggle has but just begun. The Central Executive Committee on Feb. 9 resolved to empower the Minister of Justice to seize the wealth of all religious bodies and sects for famine relief. Archbishop Yevdokim of Novgorod had just issued an appeal to all true believers to "lend to the Lord" their possessions to aid those dying of starvation, adding that even church wealth should be sacrificed in this time of terrible need. Until the famine gave the Soviet Government this opportunity it had made no attempt at expropriation, though it had done all in its power to discredit the Church, whose influence notwithstanding, on the Russians—the most religious people in the world—has steadily grown. Considerable mystery surrounds the action of the Archbishop in yielding up the Church's treasures to its bitterest foe. The decree extends also to Moslem mosques and Jewish synagogues.

The Ukrainian delegation to Angora left Ineboli, on the Black Sea, on Jan. 2 bearing the Turco-Ukrainian treaty concluded with Mustapha Kemal. Under this treaty, the Ukrainian and Turkish Nationalist Governments mutually recognize each other's sovereignty and boundaries, and agree to protect each other's rights on the Black Sea and its tributaries, and in the straits. * * * The Congress of Oppressed Far Eastern Peoples opened in Moscow on Jan. 21.

SANTO DOMINGO

Horace G. Knowles, former United States Minister to Santo Domingo, in an address before the Foreign Policy Association in New York, on Jan. 28, said: "I charge that the United States either formed a scheme or took part in one whereby the Dominican people were to be deprived of the right to elect a President. A corrupt deal was proposed in the United States Legation in Santo Domingo City to a man

accused of improper action at or some time prior to the occupation, whereby he would use his influence and improper force to bring about the election of another man for President who was proposed in the American Legation and was present at the time the deal was made. The United States used its armed force to coerce duly elected members of the Dominican Government to vote against their will and conscience for that man as President. None of the reasons given for American intervention was true. In violating the territory and seizing the Government, coercing, oppressing and ruling its people, our Government is violating all the essentials and ideals of democracy."

SCOTLAND

A manifesto was forwarded on Jan. 15 by The Scottish Home Rule Association to the British Government, offering congratulations on the Irish settlement, and demanding that immediate attention be given to a measure of self-government "suited to the needs and circumstances of Scotland and satisfactory to the Scottish people."

SIBERIA

The power of the "White" Government of Vladivostok, or the Priamur Government, as it is sometimes called, seems to be growing. On Jan. 30, Francis B. Kirby, a member of a British engineering concern in Vladivostok, and the author of an article on the Far Eastern Republic at Chita, which appeared in the June (1921) CURRENT HISTORY, p. 476, cabled the editors of this magazine as follows:

"A momentous change in the trend of events has occurred in the evolution of the Vladivostok Government, which, cleansed of Semenov influences, is seriously taking root in the Maritime region. The influence of the Vladivostok Government now extends a hundred versts beyond Khabarovsk, in which area the population is genuinely sympathetic, owing to the successful, conscientious efforts to restore order and rehabilitate public services, although terribly handicapped financially. * * * Chita's authority is crumbling before the White advance, owing to the fact that the population is sick of communism despite superior odds."

The capture of Khabarovsk by the Vladivostok forces and that of Tsitsihar by the Japanese have now been followed by the taking of Blagoveshchensk, capital of the Amur Province, according to Moscow advices dated Jan. 20. Information received by the Chita delegation in Washington early in February was to the effect that the Japanese were reinforcing their garrison in the neighborhood of Vladivostok, 500 soldiers having recently arrived. The Priamur Government was preparing "a new offensive against Chita from Khabarovsk as a base. The Chita authorities continued to charge the Japanese with complicity with Merkulov, head of the Priamur Government, in his attempt to overthrow the Far Eastern Republic, the alleged object being to find further pretexts for keeping the Japanese forces in Siberia. This both the Japanese and the Vladivostok authorities

have denied. The negotiations between Japan and Chita at Darlen (Dalny) continue, but the deadlock caused by the refusal of the Chita representatives to discuss economic questions until the Japanese consent to withdraw has so far been unresolved. The Japanese have accused the Far Eastern negotiators of "insincerity," pointing to official utterances at Chita to confirm this view. A curious phase of the situation is seen in the protest sent by Vladimir S. Kolesnikov, Foreign Minister of the Priamur Government in Washington on Jan. 20, to the Japanese Government, declaring against the granting of any forest, land, fishing or other concessions to the Chita delegates, against the delivery of any arms or the facilitating of any attempt of Chita to chastise and beat back the Vladivostok forces. Such concessions, rightly belonging to the Vladivostok Government, would not be recognized, said the protest. * * * Chita advices by wireless to Moscow at this time state that the Vladivostok Government had leased the Ussuri Railway line from Vladivostok to Khabarovsk to Japanese business interests.

SOUTH AFRICA

Rhodesia wants to join the Union of South Africa, but authoritative opinion in the Orange Free State is opposed to its admission at the present time, preferring that the Rhodesians should first have a few years' experience in governing themselves before joining the Union, with its two European races, its bi-lingual systems (English and Dutch) and other many-sided and intricate problems. * * * General Christian De Wet, Commander-in-Chief of the Boer forces in the war of 1899, died at his home in Dewetsdorp on Feb. 3. After the Boer War, during which he eluded capture by the British forces for many months, he became a member of the first Parliament of the Orange River colony in 1907 and after the outbreak of the great war he headed a rebellion against the Union of South Africa, which was suppressed by General Botha, and De Wet was captured, convicted of treason in June, 1915, and sentenced to six years' imprisonment, but released after six months. * * * A strike in the South African Rand mines, which sadly interfered with the production of the world's gold supply for several weeks, appeared to be reaching a climax early in February. Heavy dynamite explosions occurred on Feb. 9 between Ptrex and Anzie and two electric cable standards were blown up. Three violent explosions near the Kleinfontein railway station were also reported. Several arrests were made. The Right Rev. W. J. Carey, Bishop of Bloemfontein, who was appointed only last year and was a naval Chaplain during the war, suggested that two employees be elected annually to the Boards of Management, assuring fair play to the workers. A moderate section repudiated their leaders and selected delegates to ask Premier Smuts to consider the appointment of an arbitration court. The Premier consented to receive them, but their opponents locked up the delegates until they promised not to visit the Premier. A large meeting of miners on Feb. 5 requested the mem-

bers of Parliament then in Pretoria to proclaim a Provisional Government and declare a republic. A meeting of 4,000 miners in Johannesburg on Feb. 12 rejected Premier Smuts's plea urging them to return to work, voted in favor of continuing the strike and against taking any further ballots on the question of returning to work.

SPAIN

The battle royal between the army juntas (military committees) and Señor de la Cierva, the Minister of War under the Maura Cabinet (see February CURRENT HISTORY) led to a Cabinet crisis early in January. The Cabinet resigned on Jan. 11, following the presentation by Señor de la Cierva to the King of a decree tantamount to dissolution of the juntas. When the King refused to take action Señor Maura and his entire Cabinet laid down their portfolios. Intense excitement was caused in Madrid over this situation, brought about by the juntas' violent attacks upon de la Cierva for the policy followed by him in the campaign in Morocco, notably his refusal to take dictation from them in regard to the choice of those in command. Stirred by the gravity of the event, the King consulted a wide range of party opinion. Meanwhile, it became more and more evident that the junta leaders feared to bring down on themselves the 'reprobation of the whole nation by continuing the fight for supremacy with the civil authorities, and the Infantry Committee, which was the main belligerent, found itself deserted by the other military groups. On Jan. 16 the crisis was resolved by the King's summoning Señor Maura and informing him that the consensus of party opinion was in favor of his recall, with his entire Cabinet. Señor Maura resumed office, but only after receiving the submission in writing of the committee still recalcitrant. This dramatic dénouement of the five days' crisis means that the civil power has won predominance, at least for the time being, over the military elements, which have been the cause of ten changes of government since 1917. * * * The military operations in both the eastern and western zones of Morocco still remain favorable to the Spanish forces. The River Kert, west of Melilla, was crossed Jan. 9, and Anual and Abaran were expected to fall soon. The operations in the western zone, aimed to link the line from the Mediterranean to the border of the French zone, were progressing favorably, though attended by hard fighting over a most difficult terrain. Rais Uli, the chief foe of the Spaniards, who holds many Spanish prisoners, both officers and men, was reported at the end of January to have asked again for terms of surrender. There is no doubt that Spain will be glad to end the campaign if it can. So far it has cost Spain many thousands of lives, vast expenditures of money and much national prestige.

SWEDEN

In King Gustaf's address at the opening of the Riksdag in January, he cited the work of the

Washington disarmament conference as a most promising sign of better times. He praised its efforts as aiding toward the same end as the League of Nations. In emphasizing the economic troubles which Sweden shared with the rest of Europe, he said that only through the co-operation of all nations could the international problem of the world's reconstruction be worked out. To enable Sweden to take her part in its solution he requested the Riksdag's co-operation, his Majesty being forced by Sweden's industrial depression to ask for appropriations to relieve unemployment. There would be no increase in property and income taxes, he announced, but the tobacco tax would be increased and the Riksdag might have to draw on the State's reserve funds.

The Swedish Government extended the suspension period of gold payments, relieving the Swedish Riksbank of the obligation of redeeming bank notes with gold until March 31, and probably conserving the country's metals pending the receipt of revenues from increased taxes. American bankers with Stockholm connections say that Sweden is financially better off than her Scandinavian neighbors and that the Government has the situation firmly in hand. * * * Sweden's exceptionally cold Winter has tied up much shipping in her ice-locked ports and harbors, stopped the ferries from Trelleborg to Sassnitz, Prussia, and made it extremely difficult to keep up connection with Denmark. On Feb. 6 the steamer *Gladiator*, a powerful ice-breaker, arrived at Stockholm from Reval, Esthonia. It had sprung a leak under the ice pressure and had a narrow escape before it could deliver its consignment of Russian Soviet gold. It brought from Reval thirty-five to forty tons of gold, amounting to nearly 120,000,000 kroner, consigned by the Soviet Government to two Swedish banks; this was the largest amount of gold ever delivered in the Swedish capital. Most of it was to be forwarded to Western European countries. Up to Jan. 18 it had been reported that the Soviet Government had deposited in Sweden, all told, about £9,000,000, which would probably be exhausted in April.

The Swedish Red Cross relief expedition, under M. Ekstrand, was settled in the Samara district the last week in January, distributing 17,000 rations a day. M. Ekstrand telegraphed an urgent appeal to Prime Minister Hjalmar Branting for a dispatch of further provisions, as 40,000 rations a day were needed in the district. He reported cases of madness and cannibalism.

Trade treaty negotiations between Sweden and Soviet Russia, after repeated failures, culminated Feb. 9 in agreement between the Swedish and Russian delegates to proposals for a commercial treaty providing as a safeguarding measure for examination and adjustment by a German expert trade commission of certain agreements lately concluded in Russia.

Stockholm is successfully operating local schools for hundreds of unemployed, serving a free meal daily to each jobless pupil—prominent professors, architects and engineers are donating their services as lecturers.

SWITZERLAND

The Swiss Government has started the preparatory survey for the construction of a canal connecting the Rivers Rhine and Rhône. The canal would issue from the Rhône near Geneva and traverse the Lakes of Neuchâtel and Bienné before joining the Rhine, after coinciding for a distance with the course of the River Aar, at Coblenz. It is asserted that the potential electric power that will be derived from the sluices of the projected canal alone will pay for the enormous expenses of construction. * * * The lace and embroidery industry of Switzerland, one of the most important export trades, is showing a marked decline, owing to unsettled economic conditions the world over and the increase of costs of labor and raw materials. * * * The children of ex-King Charles of Hungary, with the exception of the Archduke Robert, now convalescing at Zurich after an operation for appendicitis, have left Switzerland on their way to join their parents in their Madeira exile.

TIBET

After a residence of eleven months in Lhasa, Mr. Bell, head of the British Mission to Tibet, returned to India and related some unique experiences. Mr. Bell was the first white man to attend the ceremony of initiation of new officials at the great festival of the Tibetan New Year. He was also invited by the monks to act as arbitrator in one of their quarrels with the army, which in the past had given rise to terrible massacres. Mr. Bell found that the Dalai Lama read the Indian newspapers, closely followed events in the outside world, and was a capable ruler. He further reported the Tibetans as contented and prosperous, but with an instinctive dislike for foreigners.

TURKEY

The Angora Assembly, in the middle of January, elected as Commissar for Public Works Fevzi Bey, Deputy for Diarbekir, and as Commissar for Defense, General Kiazim Pasha, formerly in command of the Ismid front. Both these men were regarded as extremists. Yusef Kemal Bey, the Commissar for Foreign Affairs,

[American Cartoon]

—Stockton (Cal.) Record

Shall We Permit This to Continue?
He Who Treads Upon the Constitution Shows
Disrespect to the American Flag

telegraphed his regrets to M. Aristide Briand, whose resignation as Prime Minister caused a good deal of anxiety in Angora. * * * On Feb. 3 a returned member of the French Mission to Angora said in an interview in Paris that Mustapha Kemal Pasha's anxiety for a settlement of the Angora understanding with France was emphasized by the daily dwindling of his ranks and the exhaustion of his treasury. Over 1,000 Nationalist functionaries had been paid nothing since July, 1920, and tribal chieftains had contributed only enough gold to pay for food for the army. Consequently, the Angora police winked at crimes, including the looting of stores, whose stocks, however, were so reduced, that, unless the Allies reach a settlement, Kemal would face a general strike and the possible desertion of his followers to Constantinople.

PUBLIC OPINION ON DISARMAMENT

AMERICAN public interest in the success of the Washington conference was revealed by a statement published on Jan. 17 by the Committee of General Information of the Advisory Committee to the American delegation. Up to Jan. 15 the committee had received opinions of the work of the conference from 13,878,671 people. These communications included 10,093,845 pleas for Divine guidance. More than 1,000,000 people reported themselves in favor of open sessions. Some 11,642,685 voiced their belief that the delegation should use its own judgment

in deciding how far world disarmament or limitation of armament should go; 271,926 favored limitation with "benevolence and liberality"; only 29,919 demanded complete disarmament. There were 12,798 who declared against any limitation, while 11,647 advised caution, and 8,454 demanded an increase in naval strength. Protests against alliances and ententes with Europe were received from 11,369; on the other hand, appeals for an association of nations were made by 1,098,905.

SLESVIG'S REUNION WITH DENMARK

BY H. BOLLEMOSE

To the Editor of Current History:

In your magazine for December, 1921, there is an article about the reunion of the northern part of Slesvig with Denmark. Marius Hansson writes (p. 476), "The Annexationists raised the cry of the old 'Ejderpolitiken'; and on p. 477, "In contrast with * * * stood a few fanatical Nationalists and Annexationists at home, who wanted Slesvig annexed as far south as the Ejder River, regardless of the free plebiscite."

It was not only a few fanatical Nationalists and Annexationists that disagreed with H. P. Hanssen's policy; but, as the voting in the council of the Voting Society of North Slesvig, in December, 1919, shows, a strong minority, very little smaller than the majority, there favored Mr. Hanssen and his work. Those Slesvig Danes who differed from him were called the Flensburg Group. This included T. Grau, the leader, and N. G. Gotthardsen, who, with H. T. Hanssen, were the three Danish candidates to the German Reichstag in 1912.

The foundation on which the present German-Danish boundary is fixed was laid at a meeting of the council of the Voting Society of North Slesvig. This meeting was held Nov. 16-17, 1918, in Aabenraa. H. P. Hanssen proposed that North Slesvig, down to the present boundary, should vote as a unit for Germany or Denmark, and if there should be a Danish majority (a foregone conclusion), the whole district should go to Denmark, even if everybody knew that there was a German majority in the town of Tönder and perhaps other parts of northwestern North Slesvig. This was considered a natural division that could not be broken up. Later there was to be held a separate plebiscite in a yet undecided area south of North Slesvig, which afterward became the Second Zone. On the other hand, the Flensburg Group, through N. G. Gotthardsen, proposed that a plebiscite should be held over the whole of Slesvig, but by districts. The Supreme Council of the Allies would

then divide Slesvig in accordance with the result of the vote, as was done later in the case of Silesia. The foregoing information is taken from H. P. Hanssen's own book, "Graensespørgemalet" ("The Boundary Question"), and I will leave it to American readers to decide for themselves as to whether any one has a right to call the men of the Flensburg Group, who disagreed with H. P. Hanssen, fanatical Nationalists and Annexationists.

True, after the vote in the Second Zone had given the Germans a majority, the Flensburg Group tried to get that district internationalized for fifteen years. But that was not a disagreement with the principle of self-determination. It was the principle used later in Upper Silesia, which for fifteen years will be ruled by a mixed commission. The plan was not accepted, and the Second Zone, including Flensburg, is now a part of Germany.

It is hard to understand what is meant by the statement that the case would have been lost if Mr. Hanssen had not foreseen the necessity of dividing Slesvig into three zones. On the contrary, he succeeded in eliminating Zone 3, South Slesvig. Even if there had been no zones in Slesvig, as the Flensburg Group desired, and if there had been a German majority in Slesvig as a whole, Denmark would have got the northern part, where there was a large Danish majority. Thus in Upper Silesia, where there is a German majority, Poland gets part of the country.

The article states that Flensburg has an adult population of 40,000, of which only 1,500 voted for restoration. The fact is that Flensburg contains over 60,000 inhabitants, of which 19,416 voted for Germany on March 14, 1920, and 7,589 voted for Denmark. Flensburg had a Danish majority when the Prussians conquered the town in 1864; then it became more and more Germanized. But since the end of the war, the Danish sentiment has been so strong a growth that the leading German, the Mayor of the city, Mr. Tødsen, some

time ago warned his countrymen that it was possible to lose Flensburg as a German city.

Finally, a few words about the Germanization of South Slesvig. The whole population there, with the exception of a very few immigrant Germans, is of pure Danish origin, exactly the same kind of people as the Danish-speaking, Danish-feeling natives of North Slesvig. But for various reasons the people of South Slesvig have adopted the German language and therewith, in a way, German sympathies; even though the Prussians never have been popular there. Yet even in South Slesvig the native people are here and there learning to see that they are living on old Danish

soil, and that Denmark is their mother country. For example, take the case of Detlef Thomsen, a farmer of the most southerly part of Slesvig. He was elected after the war a member of the German Reichstag, as a German, of course. Then, by studying Danish history, he became convinced that he was living in an old Danish land, and that he was really a Dane; therefore he wanted all Slesvig to go back to Denmark. He sacrificed his public position for his convictions and resigned his seat in the Reichstag. This case and many others prove that the time may come when all South Slesvig will wish to be reunited with Denmark.

Kelowna, B. C., Canada, Jan. 24, 1922.

THE PROHIBITION MOVEMENT IN CHILE

BY ERNESTO MONTENEGRO

North American editor of *El Mercurio*, Chile

THE Latin-American countries look to the United States not only as a great purchaser and producer of commodities, but even more eagerly as a source of inspiration for their political and social reforms. That this interest is beginning to be reciprocated by the more enlightened elements of the Northern Republic is evidenced by the numerous items on reform movements in Latin-American countries that find their way into the American press. The prohibition movement in Chile is an instance in point. For many years there has been a steadily increasing propaganda in Chile for the repression of alcoholism. This movement found expression some thirty years ago in a National Temperance League, and ten years later in the passage of a bill for the taxation and control of alcoholic beverages.

The law is now undergoing a thorough revision in Congress according to a carefully worked out plan, which was formulated in the course of lengthy discussions between representatives of the opposing interests, with the Government sitting at the meetings. In order to appreciate the spirit and the letter of the new bill, it

should be remembered that the factors which influence the problem in Chile are quite different from those which the American reformer has had to deal with. In the first place, there is a great disproportion in the relative value of the wine industry in Chile as compared with that in the United States. The real importance of this element of the problem may be understood by comparing it with the problem which the State of California had to solve when prohibition was imminent.

For many years Chile has had a surplus of wine, which for one reason or another has been unable to find a market abroad. The two main causes for this lack of demand are the want of standard qualities in the export product itself and the artificial obstacles in the form of tariff duties levied by neighboring countries. The lack of adequate reciprocity treaties is still a serious obstruction in this regard. At the same time it must be borne in mind that Chile has more than 500,000,000 pesos invested in vineyards alone and about 200,000,000 in machinery and buildings. Furthermore, the production of fine types of wine has been for more than sixty years

the pride of our great landowners, to such an extent that our historical family names are forever identified with certain wines.

This overproduction has served, of course, as a stimulus to an abnormal national consumption, putting it within easy reach of all. On the other hand, the problem of alcoholism in Chile resembles that of countries like France, rather than that of Northern Europe or the United States, where hard liquors are the prevailing evil. For, it seems to me, even though the wine habit and the whisky habit have no other difference than the quantity needed to produce intoxication, there are more hopes of effecting a national cure of a wine-drinking nation by slowly diminishing the alcoholic content of the less strong beverage.

The Chilean Government does not aim at a more profitable exploitation of drinking by means of a heavier tax; neither does it aim at a summary enforcement of prohibition. The whole spirit of the law can be summed up in the homeopathic formula: *Similia similibus curantur*. The project as it is presented is to limit the production of brandy to 2,000,000 litres for the first year, and to reduce this amount 10 per cent. at every vintage for five successive years; this means that by 1926 the production will be reduced to 1,000,000 litres for human consumption. The vineyards of the country are to be taxed according to their acreage, regardless of the amount they produce, and at the same time a different scale of taxation is to be introduced, based on the quality of the product in each zone. Two other very important measures are stipulated in the bill. One is the establishment of local prohibition in the nitrate region, leaving only to the ports far distant from the working districts the privilege of receiving and consuming a limited quantity of alcoholic drinks; the other forbids the sale of liquor in the mining districts of Central and Southern Chile, where several American plants are situated, and in the Magellan territory, where the wool and meat industries are located.

The influence of the reformers in shaping the bill is plainly visible in the provisions for social uplift and economic compensation. For instance, 50 per cent. of the taxes on vineyards will be devoted to the buying of bonds for the reimbursement of wine growers who decide to uproot their vines and try

a new agricultural venture. The distillers who wish to abandon their business will also be compensated and their plants turned over by the Government to industrial purposes. There will be a substantial subsidy for the production of industrial alcohol such as can be used for motive power.

The other 50 per cent. of the taxation on vineyards will be used for temperance propaganda, for stimulating the exportation of standardized wines and for research work to improve the methods of production of fuel alcohol. The fruit industry will also receive protection from the same source in the form of subsidies for the exportation of the natural product as well as for its manufacture into non-alcoholic beverages.

One of the most significant features of the Chilean prohibition movement is that it has succeeded in engaging the active cooperation of many labor societies, among them the longshoremen of the northern ports, who in some instances have opposed the unloading of liquor shipments. To many observers this attitude appears to have been inspired by religious and temperance workers from the United States, although to more cynical onlookers the sabotage had all the earmarks of a demonstration staged by the manufacturers of more poisonous beverages in the very ports where the demonstrations were held.

At any rate, it looks as if Chile, the Latin-American country where the liquor interests are most powerful, will have the honor of leading in a South American movement toward prohibition.

Correcting an Injustice to the Reuter Agency

In February CURRENT HISTORY MAGAZINE, in an article by Burnet Hershey on Hugo Stinnes, this sentence appeared: "He [Hugo Stinnes] controls the Reuter Bureau, The Associated Press of Germany." CURRENT HISTORY wishes to express to its readers and to the Reuter Agency its regrets and apologies for this unfortunate error. The long-established Reuter News Agency is an English organization of the highest repute, and is not in any way associated with Hugo Stinnes or with any other German or German organization.—EDITOR CURRENT HISTORY.

Reduction in Price War Volumes

PUBLISHED BY THE NEW YORK TIMES COMPANY

Into these volumes are concentrated the vivid romance, the richest literature, the basic facts, the official documents, the glorious achievements and the thrilling triumphs of the four years of war and after.

The War Volumes of The New York Times are unique in literature. They record the most important events in modern history. They were written, not by historians far from the scene of action, but by the very men who directed the great struggle.

The Great Battles Reported by:

General Pershing
Marshal Joffre
Marshal Foch
Sir Douglas Haig
Von Hindenburg
General Cadorna
General Allenby
General Petain
Newton D. Baker
Marshal French

The Eloquent Speeches and Famous Documents of

Woodrow Wilson
Theodore Roosevelt
Lloyd George
Sir Edward Grey
Bethmann Hollweg
Count Czernin
Arthur Balfour
President Poincare
Robert Lansing
Herbert Asquith

Stirring Narratives and Articles by:

H. G. Wells
Bernard Shaw
Arnold Bennett
Maurice Maeterlinck
Rudyard Kipling
John Galsworthy
Pierre Loti
Philip Gibbs
Guglielmo Ferrero
Romain Rolland

*These and a host of others of international fame
you will find represented in the War Volumes.*

Each of the War Volumes Contains:—

*A narrative of the war, up
to the date of the volume,
written by an American
Historian.*

*The salient speeches of the
statesmen.*

*The historic diplomatic docu-
ments.*

*Reviews of the military,
economic and political sit-
uations by international
experts.*

*The official reports of the
great campaign written by
the Commanding Generals.*

*The richest literature of the
war by the world's most
eminent authors.*

*Charts, maps, diagrams and
international cartoons.
Each volume contains 600
pages of authoritative, in-
teresting data and docu-
ments.*

*96 pages of war photographs,
in rotogravure.*

*The twentieth volume con-
tains text of the Peace
Treaty, a Cumulative In-
dex, a Gazetteer of Names
and Places, etc.*

*Three bindings: Cloth, three-
quarter leather, full leather.*

*Sold on very easy terms of
payment.*

Reduced in Price

A substantial reduction in the price of the volumes was made Sept. 1. The cloth set of 20 volumes, sold before at \$87.50, is now offered postpaid at \$66.66, 10% cash and \$5 a month for 12 months.

Vigilance

THE VALUE TO THE PUBLIC of the Bell System service is based on the reliability, promptness and accuracy of that service.

As quality of service depends upon the economic operation of all telephone activities, vigilance begins where work begins. Science and engineering skill enter into the selection of all raw materials; and into the adapting and combining of these materials to the end that the finished product may be most efficient in operation and endurance, and produced at the least cost.

A series of progressive tests are made at every step during the transformation of these materials into telephone plant and equipment. And

when all these complicated devices, with their tens of thousands of delicately constructed parts, are set in operation they are still subjected to continuous, exhaustive tests.

As the best of materials and the most complete machinery is of little value without correct operation, the same ceaseless vigilance is given to the character of service rendered in providing telephone communication for the public.

Such constant vigilance in regard to every detail of telephone activity was instrumental in upholding standards during the trials of reconstruction. And this same vigilance has had much to do with returning the telephone to the high standard of service it is now offering the public.

Current History Magazine

From January, 1922, to April,
1923, Inclusive, for Four Dollars

CURRENT HISTORY MAGAZINE, the monthly periodical of *The New York Times*, occupies a unique position in the magazine field. It is a compendium of present-day history. It relates the chief events occurring within the 30 days preceding publication, in all the countries of the world, presenting the facts without bias, or editorial comments. In procuring facts it has at its command the extraordinary news gathering facilities of *The New York Times* in all parts of the world.

The news of the world which appears each day in the newspapers is necessarily fragmentary. The province of CURRENT HISTORY MAGAZINE is to authenticate what appears in the daily press from fundamental sources and to present consecutive and accurate accounts of these great events transpiring in any part of the globe.

This narration of facts is supplemented by special contributions on present-day events written by eminent and informed authorities in the different countries.

Each issue is a cyclopedia of the world of today.

Substantial improvements have been made in the physical appearance of the publication: these will be continued so as to reach typographically the highest American standards.

The magazine will be profusely illustrated.

Works of the Western Electric Company; the manufacturing department of the Bell System

Economical Equipment

Forty years ago the management of the Bell Telephone System organized for a supply of the apparatus which it foresaw would be required in the development of its new industry—telephone service.

The telephone in some countries is the luxury of the rich, but in America it is used by practically all the people. This universal service is due in large measure to foresight in engineering and manufacture.

Switchboards with millions of parts, other apparatus of highest efficiency, and all necessarily of complex and intricate design, cables and wires and a multitude of technical devices enable our country to lead the world in telephone service.

All this telephone equipment is

made in a factory which is recognized throughout the world as having the largest production and the highest standards of workmanship and efficiency.

This factory, controlled through stock ownership by the American Telephone and Telegraph Company, has been for forty years the manufacturing department of the Bell System; with the result that the associated companies secure equipment of the highest development, made of the best materials, produced in accordance with the requirements of the public, and with the certainty of moderate costs.

Economy in the Bell System begins with the manufacture of equipment.

They are r
Am I how legged Am. No You are cross eyed in
the legs-

FORTY-THREE years ago Alexander Graham Bell, the inventor of the telephone, wrote this inspired forecast: "It is conceivable that cables of telephone wires could be laid underground or suspended overhead, communicating by branch wires with private dwellings, country houses, shops, manufacturers, etc., and a man in one part of the country may communicate by word of mouth with another in a distant place."

At the right, an old print of Bell lecturing on telephony, 1877

Foresight

More than forty years ago, when the telephone was still in its experimental stage, with but a few wires strung around Boston, the men back of the undertaking foresaw a universal system of communication that would have its influence upon all phases of our social and commercial life.

They had a plan of organization capable of expansion to meet the growth they foresaw; and their wisdom is borne out by the fact that that plan which they established when telephones were numbered by dozens is efficient now when telephones are numbered by millions.

This foresight has advanced the scientific development of the art of telephony to meet the multiplied public

requirements. It has provided for funds essential to the construction of plant; for the purchase of the best materials on the most advantageous terms; for the training of employees to insure skilled operators; for the extension of service in anticipation of growth, with the purpose that no need which can be foreseen and met will find the Bell System unprepared.

The foresight of the early pioneers has been developed into a science during the years which have elapsed, so that the planning of future operations has become a function of the Bell System. This is why the people of the United States have the most efficient and most economical telephone service in the world.
